## Framework

Deltek Defect Tracking Number:

761145

Issues Resolved:

**Description:** Content Management Integration (CMI): The SharePoint query used to get the ID of the latest document in the library returned the wrong value. Costpoint needs the ID of the last document in the library in order to correctly calculate SharePoint query segments. For libraries where the number of documents is over the threshold number (5,000), CMI divides the library into segments and each segment is queried individually. This problem manifests as Costpoint's inability to find freshly uploaded document in the SharePoint library, but the issue is most likely a bug in SharePoint and this fix is a workaround.

**Customers Impacted:** This defect affects clients with SharePoint libraries containing more than 5,000 documents.

**Workaround Before Fix:** You could re-index the library, but there is no guarantee it will resolve the issue.
