Deltek Costpoint HotFix Readme

Release Date: April 28, 2017

Costpoint 7.1.1 Framework Update 028

Framework Update 028 has been released to enable you to update the BIRT runtime libraries required for the latest system JAR update.

In addition, this framework update now detects the version of the Java Development Kit (JDK) configured with Costpoint and automatically installs and configures Costpoint to use JDK 8 if version 7 of JDK is detected. JDK 7 is no longer supported.

The framework update installer performs the following:

- Detects current configured version
- Prompts the user to proceed with installing the update
- Prompts the user with the default installation directory of C:\Oracle\[jdk version]
- Creates a backup of CPWebSetEnv.bat
- Modifies CPWebSetEnv.bat to set JAVA Home
- Installs JDK
- Backs up cacerts
- Prompts the user to re-install the Costpoint service
- Updates the JDK location for the INT.TRUST_NAME property (for example, INT.TRUST_NAME=C:\oracle\jdk1.8.0_77/jre/lib/security/cacerts)

These enhancements require DeltekCostpoint711FrameworkUpdate028.exe.

More information about this release is on the following page.

Custom Programs Affected:

Sometimes an update can cause custom programs and reports to stop working as expected. Before applying this update, consider whether you have any custom programs or reports in the application area affected by the update. If so, contact Deltek Customer Care at http://support.deltek.com before you install the update.

To Download the HotFix/Feature Update:

1. From Internet Explorer, go to https://dsm.deltek.com.
2. Click **Run Deltek Software Manager**.
3. Log in using your Deltek Customer Care Connect credentials.
4. In the left pane of the Deltek Software Manager, expand your Deltek product.
5. Expand the Hot Fixes folder for your product, and select the update to download.
6. Click **Download** at the bottom of the screen.

To Install the HotFix/Feature Update:

Refer to the installation instructions posted on Deltek's Customer Care Connect site, https://deltek.custhelp.com.

- For Costpoint 7.1.1 updates, refer to Knowledge Base article 79232.

- For Costpoint 7.0.1 updates, refer to Knowledge Base article 73769.

- For Costpoint 7.0 updates, refer to Knowledge Base article 67722.

Before you install this update, please review all previous updates in the Knowledge Base article. You may need to install prerequisite programs or database patches (described in the Knowledge Base article) prior to installing this update. Note that when you download an update using Deltek Software Manager (DSM), all dependent files are automatically downloaded.

To Check to See if the HotFix is Installed:

1. Open the application that was updated.

2. Click **Help** > **About Costpoint** from the Costpoint toolbar. This will display a screen that shows you the latest update JAR for the application that is open, as well as the latest system JAR and all patches applied to the system.

To Check to See if the Feature is Installed:

1. Click **Help** > **About Costpoint** from the Costpoint toolbar.

2. Open the Features subtask and click the Feature that was just installed.

3. Open the Applications subtask. Check the list of applications and their corresponding application jars and see if they are correct and have been successfully deployed (highlighted in green).

4. Open the Patches subtask. Check the list of patches and see if they are correct and have been successfully deployed (highlighted in green).

More Information:

If you have any questions, please contact Deltek Customer Care at https://support.deltek.com.
