Overview

The Maconomy 2026.1 Cumulative Bundle (CB) 06 release includes all the software issues resolved and enhancements that were made in this version.

Custom Programs Affected

Sometimes an update can cause custom programs and reports to stop working as expected. Before applying this update, consider whether you have any custom programs or reports in the application areas affected by the update. If so, contact Deltek Customer Care at <http://support.deltek.com> before you install the update.

Download the Cumulative Bundle

1. From Internet Explorer, go to <https://dsm.deltek.com>.
2. Click **Run Deltek Software Manager**.
3. Log in using your Deltek Customer Care Connect credentials.
4. In the left pane of the Deltek Software Manager, expand your Deltek product.
5. Expand the Cumulative Bundles folder for your product, and select the update to download.
6. Click **Download** at the bottom of the screen.

Check Whether or not the Cumulative Bundle Is Installed

To check that the update is installed, complete the following steps:

1. On the Maconomy toolbar, click **Help » About**.
2. On the About Deltek Maconomy dialog box, click the **Details** button.

Technical Considerations

Statutory Updates

For further information on Statutory installation and updates, see the **Deltek Maconomy BPM Statutory Guide**.

More Information

If you have any questions, please contact Deltek Customer Care at <https://support.deltek.com>.

Cumulative Bundle 06 – June 26, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected issues with the conversion of schedule rule parameters for subrules during Maconomy upgrades and resolved workspace opening failures in Vendor Entries, Journal Entries, and Customer Entries caused by an unnecessary pane. (2687125, 2700148)

Support Cases Resolved In This Release

- 2687125 — Schedule Rule Parameters for Subrules
- 2698411 — Containers API Protobuf Data Values Deserialization
- 2700148 — Workspace Opening Error
- 2705653 — E-Invoicing and Send To Pagero Not Derived Initially
- 2709630 — Unnecessary Server Request in Tree Table Workspaces

Software Enhancements

Web Client Framework

Displaying Week Numbers in Date Pickers

Deltek Tracking: 2676789

The new **showWeekNumbers** Boolean property allows you to configure date pickers to display week numbers. If you enable this property, your date pickers will look identical to the calendar you can access via the Date Selector link at the top of some workspaces.

Setup Instructions

The calendar at the top of select workspaces always displays week numbers.

To enable week numbers in date pickers, add the **calendar** property to your settings.json file, with **showWeekNumbers** set to **true**.

```
"calendar" {  
  "showWeekNumbers": true  
}
```

Table Details Component

Deltek Tracking: 2685976

For select workspaces, customers can now opt to use the version of the workspace with the new Table Details component enabled.

In workspaces that include this component, you can select a table line or record, and Maconomy displays its associated entries below the main table. The layout includes a draggable splitter that allows you to resize or collapse either section, and Maconomy persists the splitter position across sessions.

This enhancement will be utilized in standard workspaces in a future release.

Setup Instructions

Customers can adopt this component as an alternative workspace design in supported areas.

Software Issues Resolved

Finance

Workspace Opening Error

Deltek Tracking: 2700148

Previously, an error occurred when opening the **Vendor Entries**, **Journal Entries**, and **Customer Entries** workspaces due to an unwanted pane loading within the workspace. The fix removes the unnecessary pane, allowing the workspaces to open successfully.

General Application

E-Invoicing and Send To Pagero Not Derived Initially

Deltek Tracking: 2705653

When you create a Company Customer for the first time, the system does not automatically derive values for **Enable E-Invoicing** and **Send To Pagero**, so you must set them manually. Previously, the system always derived the **Enable E-Invoicing** value from Customers or Companies. Now, this value is derived only when the **Enable E-Invoicing** field in Customers or Companies is changed.

Unnecessary Server Request in Tree Table Workspaces

Deltek Tracking: 2709630

When you opened a workspace that used tree tables, such as the Progress Evaluation workspace, an unnecessary server request occurred to load table records. This resulted in slower workspace load times. This is now corrected.

Rest API

Data Entry Loading Error

Deltek Tracking: 2685440

Sometimes, when loading a data entry through the Maconomy RESTful Containers Web Service turned into a long-running operation, no done event was published on the SSE channel, and the result was not made available to the client. This issue has now been fixed.

Containers API Protobuf Data Values Deserialization

Deltek Tracking: 2698411

In the Containers API, deserialization of real data values stored in Protobuf format as part of a container instance state has been fixed to ensure correct preservation of very high-precision values.

System Admin

Schedule Rule Parameters for Subrules

Deltek Tracking: 2687125

Due to an error in data conversion, schedule rule parameters belonging to subrules were not converted correctly when upgrading Maconomy application. This issue has been corrected.

Web Client Framework

Error Messages Not Displaying in Absence Workspace

Deltek Tracking: 2677865

When you encountered an error while working with table records in the Absence workspace, subsequent error messages would not display, even though errors occurred. This prevented you from seeing important information about what went wrong with your current action. This is now fixed.

Export Dialog Did Not Offer Clear Choices

Deltek Tracking: 2701490

When you opened the Export dialog, the available options for what to export were unclear and not intuitive. The Export dialog now provides two clear choices: **Displayed rows only** and **All matching rows**. You can configure the default selection at the Platform level or the Workspace level, with the Workspace setting taking precedence over the Platform default.

Conversations Icon Remained Visible When Disabled

Deltek Tracking: 2705861

When you disabled conversations by setting the 'enabled' property to false in Application/Shell/Conversations.json, the conversations icon continued to appear in the navbar and the system continued to send polling requests for unread messages. This issue is now resolved.

Web Client Retained Incorrect Field Values

Deltek Tracking: 2709856

When you modified certain fields in the web client, the application would sometimes retain the previous values instead of updating them to reflect changes made by the Maconomy business logic, resulting in incorrect data being displayed. This is now fixed.

People Planner

Invalid Project Causes Load Failure

Deltek Tracking: 2721694

In project management workspaces, after enabling **Show Only Projects** and **Job Display**, selecting a job that had not yet been transferred for resourcing caused the Web Components not to reload correctly.

This could result in the page loading indefinitely or displaying a web error. This issue also occurred when using a saved private layout that retained the project display state. This error has been corrected.

Export Favorites to Maconomy Fails in Oracle Environment

Deltek Tracking: 2737209

An issue occurred where the **Export Favorites to Maconomy** scheduled task failed to complete. This occurred for projects with existing favorites in Maconomy and when People Planner was using an Oracle database. Instead of completing successfully, the task returned an error during execution. This has been resolved, and the export now completes as expected without errors.

Important People Planner Notes for CB 06

To install this CB, you can apply it to an existing People Planner installation by running the 4.10-CB6 installation.

Cumulative Bundle 05 – May 22, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected issues that allowed saving workspaces with invalid mandatory fields, caused stale data when running actions with unsaved changes, prevented proper avatar configuration, showed unclear error messages for import failures, triggered unnecessary data reloads in search, truncated special characters in titles, and generated errors when updating image references via universe cursor. (2638734, 2652539, 2654698, 2659329, 2664851, 2668881, 2669477)

Support Cases Resolved In This Release

- 2652539 — Action in Workspace with Unsaved Changes

Software Issues Resolved

General Application

Non-Informative Error Message When Simple Export Fails

Deltek Tracking: 2659329

When you run an import in the Simple Import workspace without write access to DataImportPackages, the system shows a non-informative error message. Previously, this message did not explain the cause or how to resolve the issue. The system now displays a clear error message that explains the missing setup. This error is corrected.

Able to Save Empty Value for Mandatory Fields

Deltek Tracking: 2638734

When you used the keyboard save shortcut to save a workspace with empty mandatory fields, the workspace was saved in an invalid state even though the save button was disabled. Additionally, mandatory enum fields could be set to an empty value due to the save button's disabled state flickering momentarily. These issues have been fixed, and mandatory fields are now properly validated before saving.

Action in Workspace with Unsaved Changes

Deltek Tracking: 2652539

When you ran an action in a workspace that contained unsaved changes, some data did not refresh correctly, resulting in stale or incomplete information being displayed. This is now corrected.

Special Characters with Diacritical Marks Cut Off in Island Titles

Deltek Tracking: 2668881

When you created or viewed an island with a title containing special characters with diacritical marks (such as accented letters), the characters were cut off or not displayed completely in the island title, resulting in truncated or incomplete text. This is now fixed.

Analyzer Reports Undo Action Reverted All Previous Changes

Deltek Tracking: 2678974

When you opened multiple analyzer reports, made a change to the last opened report, and then clicked **Undo**, all changes made to the previously opened reports were also reverted, resulting in loss of unsaved work. This is now fixed.

System Admin

Error When Updating Image References via Universe Cursor

Deltek Tracking: 2669477

Updates performed via a universe cursor triggered an error in the image reference counting code. This issue has been fixed.

Web Client Framework

Unable to Set Avatar Image as Read-Only in Record Heading Area

Deltek Tracking: 2654698

When you configured the avatar in the record heading area, the "open" property was not available. This property has now been added to the avatar configuration options, allowing you to control the avatar's behavior.

Search Filter No Longer Reloads Unnecessary Data

Deltek Tracking: 2664851

When you opened the search dropdown, the search filter sometimes unnecessarily reloaded data from the server instead of reusing the already loaded data, resulting in slower performance and increased server requests. This issue is now resolved.

CSV and TSV File Line Break Standardization

Deltek Tracking: 2678964

When you exported data to .csv or .tsv files from the Web Analyzer, the files used inconsistent line break conventions that could cause formatting issues when opened in certain applications. The line break convention has been standardized to use LF (line feed) line breaks, ensuring consistent file formatting across all platforms.

Analyzer: Incomplete Alert Message When Importing Invalid File

Deltek Tracking: 2678965

When you imported an invalid file, the alert message and error log contents were incomplete, making it difficult to identify the specific issue with the file. This has been fixed, and you now receive complete information about the import error.

Analyzer: Import Error Message for Report Layout Files

Deltek Tracking: 2678967

When you imported a report layout file (.xro) from the Other Actions > Import menu, and a report layout with the same name already existed in the MY REPORTS menu under a different Analyzer report

template, an incorrect or incomplete error message appeared instead of a clear explanation of the conflict. This is now corrected.

People Planner

Tooltip Values Not Updating Across Bookings

Deltek Tracking: 2673370

Tooltip values in the Assignment Gantt were not refreshed across related bookings after editing a single entry. When a resource was assigned to multiple tasks and bookings existed on the same date, updating one booking did not update the **Other bookings** and **Available** values in the tooltip for the corresponding booking on another task.

All related booking tooltips now display consistent and updated values after changes are made.

Important People Planner Notes for CB 05

To install this CB, you can apply it to an existing People Planner installation by running the 4.10-CB5 installation.

Cumulative Bundle 04 – April 24, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected issues where employee profile images in the Web Client displayed only thumbnails instead of full-size images, image reference counts were calculated incorrectly under certain conditions, and Oracle CI–configured systems encountered ORA-43915 collation errors triggered by specific MQL macros. (2645655, 2645672, 2647199)

Technical Considerations

Job Risk Management Workspace Customization Impact

The Job Risk Management workspace has been flattened so that actions and status fields are now shown at the top of the workspace instead of under the first tab. As part of this change, several workspace files were moved, renamed, or removed. Review any customizations to the affected files before upgrading and update them as needed.

Files moved or renamed:

- Risks/JobRiskManagement_Risks_Tab_Card to JobRiskManagement_Card
- Risks/JobRiskManagement_Risks_Tab_SelectionCriteria to JobRiskManagement_SelectionCriteria
- Risks/JobRiskManagement_Risks_Tab_Table to JobRiskManagement_Table
- Risks/JobRiskManagement_Risks_Tab_Table_Assistant to JobRiskManagement_Table_Assistant
- Risks/Wizards/* to Wizards/* for CloseRiskWizard, CopyRisksFromJobWizard, and ReopenRiskWizard

Files removed:

- Risks/JobRiskManagement_Risks_Tab.json
- Risks/JobRiskManagement_Risks_Tab_Actions.json

Also, fields in the Risk Management table and assistant are now editable only when the risk is not closed.

Support Cases Resolved In This Release

- 2647008 — Fixed Memory Leak During Database Commit and Rollback Operations
- 2647199 — Error on Oracle CI Systems

Software Issues Resolved

General Application

Employee Profile Images Display

Deltek Tracking: 2645655

When viewing employee profile images in the Web Client, only the thumbnail version of certain images displayed instead of the full-size image. This issue has been resolved.

Image Reference Count Calculation Corrected

Deltek Tracking: 2645672

When the system calculated the number of references to a given image, the count could be incorrect under certain conditions. This has been fixed.

New Absence Request Wizard Layout Not Displayed Properly

Deltek Tracking: 2558960

When you opened the Create Absence Request wizard, the layout was broken and displayed incorrectly. This issue is now resolved.

Level Selector Displayed in Tree Tables with Only One Level

Deltek Tracking: 2621421

When you viewed a work breakdown structure with only one level, the UI component to select the maximum number of levels in the tree table was unnecessarily displayed, resulting in confusion about available options. This is now corrected.

Columns with the Same Identifier Rendered Incorrectly

Deltek Tracking: 2624089

When two columns shared the same source property but had different types or visibility conditions, the columns were rendered incorrectly. This issue is now resolved.

Clear Button Displayed Text and Icon

Deltek Tracking: 2625900

When you clicked the **Clear** button in the advanced search, the button displayed both text and an icon instead of displaying only the icon. This is now corrected.

Load Package in Data Import Package Workspace Was Missing

Deltek Tracking: 2626051

When you attempted to load an existing data import package (.mip-file) to create a corresponding package in Maconomy, the system did not provide this functionality. This is fixed, and you can now load the contents of an existing data import package and create a corresponding package in Maconomy.

Hungarian Date Format Caused Validation Error

Deltek Tracking: 2639075

When you entered a date in Hungarian format in date or date-time fields, a validation error occurred because the format includes a trailing period that the system did not recognize. This is now fixed.

Untitled Columns Not Shown in Customize Columns Dialog Box

Deltek Tracking: 2640832

When you opened the Customize Columns dialog box, columns without a title were not visible in the list, preventing you from adding them to your view. This is now fixed; these columns now appear as "Untitled" followed by the field name.

Project Management

Actions in Job Risk Management Workspace Should Be Shown at the Top

Deltek Tracking: 2623063

The actions and status fields for Job Risk Management were previously located under the first tab. They have now been moved to the top right next to the record area of the workspace. For information about related customization impact, see [Technical Considerations](#).

Actions in QuoteWorkspace Should Be Shown at the Top

Deltek Tracking: 2623086

The actions and status fields for Quote were previously located under the first tab. They have now been moved to the top right next to the record area of the workspace.

Actions in Estimating Workspace Should Be Shown at the Top

Deltek Tracking: 2623091

The actions and status fields for Estimating were previously located under the first tab. They have now been moved to the top right next to the record area of the workspace.

Actions in Job Invoice Allocation Workspace Should Be Shown at the Top

Deltek Tracking: 2623124

The actions and status fields for Job Invoice Allocation were previously located under the first tab. They have now been moved to the top right next to the record area of the workspace.

System Admin

Fixed Memory Leak During Database Commit and Rollback Operations

Deltek Tracking: 2647008

An issue was identified where the Maconomy server experienced a memory leak, particularly during database commit and rollback operations. This was observed when processing REST requests but could also occur during any operation involving a high number of database commits or rollbacks. The issue has been resolved to prevent excessive memory consumption and improve server stability.

Error on Oracle CI Systems

Deltek Tracking: 2647199

When a system was configured for Oracle CI, some MQL macros could cause an Oracle error: ORA-43915: unable to determine collation.

This issue has been fixed.

Maconomy Server Login Memory Consumption

Deltek Tracking: 2637046

When users logged in and out of Maconomy, the server did not release unused memory, resulting in higher memory consumption over time. This has been fixed.

Note: The release is currently missing a CU installer due to certificate issues.

Cumulative Bundle 03 – March 27, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected the missing approval-action evaluation for super approvers in the Timesheet Status workspace and the missing CreatePaymentSelections table that previously prevented payment details from displaying. (2591430, 2601158)

Support Cases Resolved In This Release

- 2575508 — Removing Job Causes Invalid Reference on Blanket Invoice Copy
- 2591424 — Intercompany Cash Payment Posting Did Not Close All Customer Entries
- 2592766 — Intercompany Price Lookup for Imported Resource Allocations Versus Budget Lines
- 2601158 — Missing CreatePaymentSelections Table
- 2608440 — Circular Dependency Bug Appeared When Scrolling in Table and Changing the Viewport Size
- 2610846 — Tax Date for Zero-Invoice Tax Settlement Entries
- 2603315 — Conditional Tabs in Workspaces Showed Incorrect Data
- 2611004 — Empty Card After Card Action Removed Current Record

Software Issues Resolved

General Application

Duplicate Opportunities in Smart Summaries

Deltek Tracking: 2541006

When you generate Customer or Company Customer smart summaries, duplicate opportunities appear in the output. This error is corrected.

Pagero Sent Invoice Mode

Deltek Tracking: 2588780

Prior to this fix, when invoices were sent to Pagero from a test environment, they were transmitted in Test mode, which caused Pagero to deliver them to end customers. This error has been corrected. Invoices sent from a test environment are now transmitted in Certification mode, ensuring that Pagero does not deliver them to end customers.

Columns With Same Identifier Rendered Incorrectly

Deltek Tracking: 2590583

Columns configured with the same source did not render correctly. This is now fixed.

Conditional Tabs in Workspaces Showed Incorrect Data

Deltek Tracking: 2603315

When you navigated between records in a workspace with conditional tabs, the tabs did not update to display the latest data or displayed incorrect data. For example, when you navigated to a different timesheet in the Weekly Time Sheets workspace, the day-of-week tabs under Check-In did not refresh, and when you selected a line in the Time Sheet Status workspace, the Time Sheet Lines assistant did not show the corresponding data. This is now corrected.

CSV Exports Did Not Use YYYY-MM-DD Format

Deltek Tracking: 2605473

When you exported data to CSV from the web client or Analyzer, dates appeared in ISO instant format instead of the standard ISO local date format (YYYY-MM-DD), which could cause confusion or require reformatting before using the data in other applications. This is now corrected.

Pane Field Selection Cleared When Switching Workspaces

Deltek Tracking: 2605498

When you navigated between workspaces, an error message occasionally appeared saying "Field 'X' does not exist on pane 'Y'." This issue is now resolved.

Checkbox Styling Needed Updates

Deltek Tracking: 2607502

When you viewed a table column in the web client with no checkboxes selected, the column appeared empty and its purpose was unclear. Additionally, checking a box required two clicks: one to reveal the checkbox and another to check it, instead of a single click. These issues are now fixed.

Missing Line Numbers on Tables and Tree Tables

Deltek Tracking: 2607503

When you viewed tables or tree tables, line numbers were missing, making it difficult to reference specific rows. This is now corrected.

Workspace Search Field Did Not Autofocus on First Row

Deltek Tracking: 2607504

When you used keyboard navigation in search fields, unexpected behavior occurred, such as keys not responding as expected or focus moving to unintended locations. This is now fixed to ensure keyboard commands work reliably in search fields.

Circular Dependency Bug Appeared When Scrolling in Table and Changing the Viewport Size

Deltek Tracking: 2608440

When you performed certain actions, an NG0200 error about a circular dependency in the dependency injection system occurred randomly, preventing you from completing the task. This is now fixed.

Active/Editable Line and Hover Effect Unclear in Tables

Deltek Tracking: 2609761

When you viewed tables, the active row and hover effect were difficult to distinguish from other rows, making it hard to identify which row you were editing. This is now fixed.

KPI Boxes with Text Were Left-Aligned

Deltek Tracking: 2610670

When you viewed KPI boxes with text, the text in some cases appeared left-aligned instead of centered, resulting in inconsistent formatting.

Switching Table Cells Required Two Tab Key Presses

Deltek Tracking: 2610761

When you pressed the Tab key to navigate to the next table cell, it required two presses instead of one, resulting in unexpected navigation behavior.

Empty Card After Card Action Removed Current Record

Deltek Tracking: 2611004

When running a card action that caused the record to vanish, a different record from the filter was not automatically selected and displayed in the card. One such instance was in the Invoice Editing tab of the WIP Invoice workspace. If multiple drafts were shown in this tab, then printing a draft as an invoice would make it vanish, but the card would remain empty despite another draft being selected in the list of drafts. This error is now fixed.

Misaligned Title and Info Bubble

Deltek Tracking: 2615496

When you hovered over row and column components, the info bubble appeared in an inconsistent or misaligned position. This is now fixed.

Missing Actions to Load Lines from Import File and Perform Bulk Attach in Data Import Package Workspace

Deltek Tracking: 2616145

It was not possible to load an existing data import package from a .mip-file. This workflow is now supported via the Create Data Import Package wizard.

Project Management

Removing Job Causes Invalid Reference on Blanket Invoice Copy

Deltek Tracking: 2575508

When you removed a job that was set up for blanket invoice, an invalid reference error occurred in the Blanket Invoicing or Customer Invoicing workspaces.

Intercompany Price Lookup for Imported Resource Allocations Versus Budget Lines

Deltek Tracking: 2592766

When you imported resource allocations from People Planner, prices did not depend on dimensions specified on the employee, even when those dimensions were used on job price lists or job specific price lists. Price lookup now uses the G/L dimensions derived from both the job budget line and the employee.

For backwards compatibility, a new system parameter **Employee Dimensions for Resource Allocation Price Lookup** is introduced. To include G/L dimensions from the employee when looking up prices for imported resource allocations, enable this system parameter and select the **Overwrite** checkbox for the relevant dimensions on the employee.

Finance

Intercompany Cash Payment Posting Did Not Close All Customer Entries

Deltek Tracking: 2591424

Previously, when you posted a general journal entry for an intercompany cash payment that included multiple customer entries, some customer entries were not closed during posting. This error is now corrected.

Approval Action Unavailable for Super Approvers in Web Client

Deltek Tracking: 2591430

Previously, super approvers defined on the approval-hierarchy header could not approve time sheets in the **Timesheet Status** workspace because the system did not recognize them as eligible approvers. This was caused by the approval-action availability logic not evaluating the super approver configured on the hierarchy header.

This issue is now corrected, and the **Approve** action is enabled for super approvers in the **Timesheet Status** workspace only. No other workspaces are affected by this change, and the **Reject** and **Reset** Approval actions remain unchanged and are not enabled for super approvers.

Missing CreatePaymentSelections Table

Deltek Tracking: 2601158

Previously, payment information was not displayed when line approval was unavailable because the system could not reference the missing **CreatePaymentSelections** table. This issue is corrected, and the correct table is now used to retrieve and display payment details.

Tax Date for Zero-Invoice Tax Settlement Entries

Deltek Tracking: 2610846

Previously, tax settlement entries created from zero invoices incorrectly used the invoice date as the tax date. This error is now corrected.

System Admin

No APM Log Entry Upon Web Client Logout

Deltek Tracking: 2522415

When you logged out of the Web Client, no 'Auth:Logout' APM log entry was recorded, resulting in incomplete audit logs. This issue has been fixed.

Updated Java Version for Coupling Service

Deltek Tracking: 2583614

The Java Runtime Environment (JRE) used by the Coupling Service has been upgraded from version 1.8.0_345 to 1.8.0_472.

Cumulative Bundle 02 – February 12, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected crash "Internal Error" when running Analyzer report. (2589792)

Support Cases Resolved In This Release

- 2581304 — Error When Switching Workspaces While Using Between Restriction
- 2587494 — Progress Columns Could Not Be Removed From Tables
- 2579674 — Dates in Excel Export Affected by Time Zone Variations

Software Issues Resolved

General Application

Document Link Color Now Displays Correctly

Deltek Tracking: 2568280

A document link within a row on a table was displayed in the default black text instead of the expected blue hyperlink color, making it appear non-interactive. This issue has been resolved, and document links now correctly appear in blue to indicate they are clickable.

Problematic Line Wrapping in Assistants

Deltek Tracking: 2577455

Very narrow record headers made it difficult for users to read the contents. This is now fixed.

Currency on Amounts Incorrectly Positioned

Deltek Tracking: 2577473

When you viewed amounts with certain region settings, the currency symbol or code was positioned incorrectly. This is now fixed.

Unfilled Mandatory and Error Fields in Collapsed Islands and Tabs Were Hard To Find

Deltek Tracking: 2577485

It is now easier to locate fields containing errors in collapsed islands and tabs.

Dates in Excel Export Affected by Time Zone Variations

Deltek Tracking: 2579674

In some cases, the user's browser time zone affected Excel exports, resulting in incorrect dates. This issue is now resolved.

List in Customize Columns Dialog Box Scrolled Up After Add or Remove Action

Deltek Tracking: 2580301

The list in the Customize Columns dialog box no longer scrolls to the top after you click the **Add Column** or **Remove Column** action. The vertical scroll bar maintains its position.

Search Filter Loaded Only Primary-Key Fields for Binding

Deltek Tracking: 2580440

The search filter incorrectly loaded the fields referenced in the workspace; this made it impossible to include fields from the search filter in the layout. This issue is now fixed.

Error When Switching Workspaces While Using Between Restriction

Deltek Tracking: 2581304

When you used the "between"-operator in list view searches, the web client would return an error after you switched between workspaces. This is now corrected.

Loading Spinner Not Shown While Web Client Was Initializing

Deltek Tracking: 2586370

The loading spinner now displays while the web client is initializing.

Progress Columns Could Not Be Removed From Tables

Deltek Tracking: 2587494

You can now remove progress bar columns from tables using the Customize Columns dialog box.

Crash "Internal Error" When Running Analyzer Report

Deltek Tracking: 2589792

When you ran an Analyzer report, an internal error caused the application to crash due to the inject function being used in the wrong context. This is now fixed.

Missing Loading Indicator in KPI Boxes

Deltek Tracking: 2590370

When you loaded KPI boxes, the loading indicator did not appear. This is now corrected.

Difficult to Copy Cell or Field Contents

Deltek Tracking: 2590373

You can now click a table cell to select and copy its content.

Cumulative Bundle 01 – January 30, 2026

Key Impact

This section flags bugs considered high importance, including:

- An issue preventing users from adding new lines in Print Layouts or attaching documents to newly added lines. (2567003)

Support Cases Resolved In This Release

- 2543845 — Remove Zero Lines Action Missing in Web Client
- 2565222 — Error Message Text Was Truncated
- 2567003 — Unable to Add Lines and Attach Files to New Lines in Print Layouts
- 2553503 — Workspace Loading Issue
- 2554982 — Error on New Lines in Tables

Software Issues Resolved

General Application

Error Message Text Was Truncated

Deltek Tracking: 2565222

Important information in the error message was truncated due to the Entry text being too long in errors A-80abecf7 and A-4ec61752. This has now been corrected by truncating the Entry text in the error message.

Unable to Add Lines and Attach Files to New Lines in Print Layouts

Deltek Tracking: 2567003

Users were unable to add new lines in the Print Layouts workspace and Print Layout reference workspace. In some cases, you could add a line but attempting to attach a document to it triggered an error.

Workspace Loading Issue

Deltek Tracking: 2553503

When quickly switching between workspaces, it was possible for a workspace to display a loading indicator without ever completing the loading of data. This issue is now fixed.

Error on New Lines in Tables

Deltek Tracking: 2554982

An error message would sometimes display when you inserted a new line in a table. This issue has been fixed.

Unable to Create Analyzer Report Links

Deltek Tracking: 2557385

You could not create links to analyzer reports from workspaces. This error has been corrected.

Menu Items Disappeared After Search

Deltek Tracking: 2572708

When you enabled and used the search bar in a specific way, some menu items disappeared intermittently. Maconomy did not remember or restore the menu's expansion state after a search operation. This is now fixed.

Menu Search Results Not Properly Ranked by Relevance

Deltek Tracking: 2574180

The menu search did not prioritize exact or closest-matching results at the top of the list. This is now corrected.

Table Row Selection Caused Unintended Scrolling and Data Mismatch

Deltek Tracking: 2576360

When selecting a row in shorter tables (for example, those with only 3–5 rows), the table would sometimes scroll to a different row automatically. This caused a mismatch between the selected row and the data shown in associated panes. This is now corrected.

Key/Mouse Navigations Caused Blank Spaces in Tables

Deltek Tracking: 2576361

Certain rapid keyboard and mouse navigation actions occasionally caused blank spaces to appear in tables. This is now fixed.

Project Management

Remove Zero Lines Action Missing in Web Client

Deltek Tracking: 2543845

The **Remove Zero Lines** action was missing in the Budgeting and Estimating workspaces. It is now available.

People Planner

Indented Budget Lines Under a Sum/Text Budget Line Not Imported via REST v3

Deltek Tracking: 2569238

In Maconomy, budget lines that are underneath a budget line of the Sum/Text Line Type can either be indented by one level or left at the same level of indentation as the Sum/Text budget line.

Budget lines that were indented are not imported via REST v3. Only the Sum/Text budget line was imported and became a Summary event in People Planner.

Last Send for Resourcing Timestamp Not Set when Importing Using REST v3

Deltek Tracking: 2570249

When importing a project from Maconomy and using the Maconomy REST v3 web service, the Last Send for Resourcing timestamp was not set in Maconomy.

User-Defined Column Order in Column Chooser Not Applied

Deltek Tracking: 2572536

In the Web Admin Tool, when you added and rearranged columns in the column chooser, the system did not apply the changes and placed new columns at the end. This error has been corrected, and the Column Chooser now properly reflects the user-defined ordering of columns.

File Upload Setting Error

Deltek Tracking: 2564527

Prior to this fix, the Web Admin Tool allowed users to save the File Upload settings when ClamAV was selected as the File Scanner type, without providing a server or port. No warning message appeared, and the settings were saved successfully despite the missing required fields. This error has now been corrected.
