

Deltek Costpoint 7.1.7.1 Release Notes (Build 7.1.7.1009)

Welcome to the **Deltek Costpoint 7.1.7.1 Release Notes**, which describe the new features and enhancements introduced in this release.

Software Issues Resolved

Framework

Runtime >> Server

Defect 1327970: On the Manage Warehouses (INMWHSE) screen, you could not save the transaction if you had hyphens or dashes in your legacy Location ID fields. This issue affects you if you use MR 7.1.6 or higher.

Materials

Purchasing >> POMPOVCH >> Enter PO Vouchers

Defect 1332951: Vouchers sometimes showed multiple FX rates, causing multiple functional amounts. Different FX rates displayed in the Voucher History Inquiry screen between the PO Voucher Detail and Currency lines. Different functional amounts were then in the General Ledger. To avoid this you could make sure to not change the rates when lines are present. If a change is needed, delete and reenter the lines
