Support Updates

The following updates are announced for Maconomy 2.6.2.

Update	Date	Description
Netherlands – DAF	09/05/2025	Compliance with DAF version 4.0
Denmark - SAFT	05/16/2025	New DSAFT report and some notes on Currency name and mapping.
BO 4.3 SP4 Patch 7	02/21/2025	From 2.6.2 CU 16, Business Object 4.3 SP4 Patch 7 is certified for 2.6.2 Maconomy and BPM.
BO 4.3 SP4 Patch 6	02/21/2025	From 2.6.2 CU 16, Business Object 4.3 SP4 Patch 6 is certified for 2.6.2 Maconomy and BPM.

Overview

The Maconomy 2.6.2 Cumulative Update (CU) 25 release includes all the software issues resolved and enhancements that were made in this version.

Custom Programs Affected

Sometimes an update can cause custom programs and reports to stop working as expected. Before applying this update, consider whether you have any custom programs or reports in the application areas affected by the update. If so, contact Deltek Customer Care at <http://support.deltek.com> before you install the update.

Download the Cumulative Update

1. From Internet Explorer, go to <https://dsm.deltek.com>.
2. Click **Run Deltek Software Manager**.
3. Log in using your Deltek Customer Care Connect credentials.
4. In the left pane of the Deltek Software Manager, expand your Deltek product.
5. Expand the Cumulative Updates folder for your product, and select the update to download.
6. Click **Download** at the bottom of the screen.

Check Whether or not the Cumulative Update Is Installed

To check that the update is installed, complete the following steps:

1. On the Maconomy toolbar, click **Help » About**.
2. On the About Deltek Maconomy dialog box, click the **Details** button.

Technical Considerations

Statutory Updates

For further information on Statutory installation and updates, see the **Deltek Maconomy BPM Statutory Guide**.

More Information

If you have any questions, please contact Deltek Customer Care at <https://support.deltek.com>.

Cumulative Update 25 – June 12, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected issues where Enable E-Invoicing and Send To Pagero values were not initially derived for new Company Customers and where error messages failed to display in the Absence workspace. (2619926, 2677828)

Support Cases Resolved In This Release

- 2619926 — E-Invoicing and Send To Pagero Not Derived Initially
- 2677828 — Error Messages Not Displaying in Absence Workspace

Software Issues Resolved

General Application

E-Invoicing and Send To Pagero Not Derived Initially

Deltek Tracking: 2619926

When you create a Company Customer for the first time, the system does not automatically derive values for **Enable E-Invoicing** and **Send To Pagero**, so you must set them manually. Previously, the system always derived the **Enable E-Invoicing** value from Customers or Companies. Now, this value is derived only when the **Enable E-Invoicing** field in Customers or Companies is changed.

Error Messages Not Displaying in Absence Workspace

Deltek Tracking: 2677828

When you encountered an error while working with table records in the Absence workspace, subsequent error messages would not display, even though errors occurred. This prevented you from seeing important information about what went wrong with your current action. This is now fixed.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 25

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 22.

Cumulative Update 24 – May 01, 2026

Key Impact

This section flags bugs considered high importance, including:

- Corrected incorrect tax settlement entries when reconciling credit memos using Payment Date and resolved failures in processing the GoBD Client Transactions report with large data volumes. (2610936, 2620076)

Support Cases Resolved In This Release

- 2501377 — Tax Date for Zero-Invoice Tax Settlement Entries
- 2610936 — Incorrect Tax Settlement Entries for Credit Memo Reconciliation
- 2620076 — Client Transactions Report Failed with Large Data Volumes

Software Issues Resolved

Finance

Tax Date for Zero-Invoice Tax Settlement Entries

Deltek Tracking: 2501377

Previously, tax settlement entries created from zero invoices incorrectly used the invoice date as the tax date. This error is now corrected.

Incorrect Tax Settlement Entries for Credit Memo Reconciliation

Deltek Tracking: 2610936

Previously, when using Payment Date as the tax method, reconciling a credit memo with an invoice and posting the credit memo on a new journal did not generate the correct tax settlement entries. This error is now corrected.

BPM and Statutory Reporting

Client Transactions Report Failed with Large Data Volumes

Deltek Tracking: 2620076

When you generated the **Client Transactions** report in GoBD with large volumes of data, the report failed to process, preventing you from accessing the transaction information you needed. This issue is now resolved, and the report now handles high data volumes successfully.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 24

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 22.

Cumulative Update 23 – January 30, 2026

Key Impact

This section flags bugs considered high importance, including:

- Incorrect population of Pagero timestamps after failed invoice sends and failure to store long Pagero access tokens, leading to authentication errors. (2538516, 2538517)

Support Cases Resolved In This Release

- None.

Software Issues Resolved

Integrations

Incorrect Pagero Timestamps After Failed Invoice Send

Deltek Tracking: 2538516

When you sent an invoice through Pagero and it failed due to a background task error, the system still filled in the **Sent to Pagero Date** and **Send to Pagero Time** fields. This error is corrected.

Access Token Too Long to Store

Deltek Tracking: 2538517

When you tried to send an invoice using a Pagero access token longer than 255 characters, the system saved only a part of the token. This caused a 401 Unauthorized error. This error is corrected.

After installing the CU, you must authenticate every Pagero Company again.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 23

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 22.

Cumulative Update 22 – October 31, 2025

Key Impact

This section flags bugs considered high importance, including:

- Correction includes missing parameter check for categoryid analyzer REST API parameters. (2483894)

Support Cases Resolved In This Release

- 2325129 — Job Selection Dropdown Issue in Reallocate Entries To Wizard
- 2379523 — Prompts Not Passed When Locale Is Not English
- 2406880 — Correct Line Count Display in Approval Center Warning Message
- 2429963 — Missing Text Lines in Peppol XML
- 2134929 — Overflow Error During Invoice Printing After Job Entry Reallocation

Software Issues Resolved

Time & Expense

Overflow Error During Invoice Printing After Job Entry Reallocation

Deltek Tracking: 2134929

Previously, when reallocating job entries with quantities containing small decimal values, an overflow error could occur during invoice printing if the remainder after reallocation was expected to be zero. This error is now corrected.

General Application

Job Selection Dropdown Issue in Reallocate Entries To Wizard

Deltek Tracking: 2325129

In the Reallocate Entries tab of the WIP Invoice workspace, the Reallocate Entries To wizard's job selection dropdown incorrectly selected values due to a problem with the auto-submit functionality. This issue is now corrected.

Missing Parameter Check for categoryid Analyzer REST API Parameters

Deltek Tracking: 2483894

A parameter check for categoryid Analyzer REST API parameters was missing. This is now fixed.

Internal Error Encountered in Workspace List View

Deltek Tracking: 2492794

While working in workspaces in list view, if you used the **Search or Sort** field at the top of the workspace, clicked the browser's back button, and then clicked the browser's forward button, Maconomy displayed

the following internal error message: "Cannot read properties of undefined (reading operator)." This is now fixed.

Finance

Correct Line Count Display in Approval Center Warning Message

Delttek Tracking: 2406880

Previously, when using the **Approve All** action in the **Approval Center** workspace, the warning message displayed an incorrect number of lines pending approval. This error is now corrected, and the message accurately reflects the total number of lines to be approved.

Integrations

Missing Text Lines in Peppol XML

Delttek Tracking: 2429963

When you generated order invoices or credit notes, text lines were not included in the Peppol XML file. This error is corrected by enabling ZEROTEXT functionality for order mappings.

BPM

Prompts Not Passed When Locale Is Not English

Delttek Tracking: 2379523

Previously when the selection criteria parameter values were localized to another language, they were not passed on from the main BPM report to its subreports. You then needed to reinput the missing criteria values on the subreports. This issue was caused by link parameters that were not recognized by the localized subreports. This error is corrected.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 22

The Workspace Client from CU 22 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 21 – September 05, 2025

Key Impact

This section flags bugs considered high importance, including:

- Corrections to Sweden's SIE report to exclude prior-year transactions, Norway's SAFT export to include zero-balance customers with activity, and removal of unnecessary database null-checks. (2413205, 2413371, 2432073)

Support Cases Resolved In This Release

- 2267729 — Clicking Button Within Time-Picker Element Expanded Height of Parent Row
- 2413371 — Norway - SAFT: Missing Customers in Master File
- 2420059 — Scrollbar Navigation Closes List Unexpectedly

Software Enhancements

BPM

Netherlands - DAF: Dutch Audit File Version 4.0 Update

Deltek Tracking: 2340355, 2339913

The Maconomy Dutch Audit File (DAF) data export has been updated to comply with the DAF version 4.0 released by the Dutch government. The update includes reducing the total number of XML fields from 250 to only 90 fields, as well as modifying existing fields to enhance the functionality and usability of the audit file.

Software Issues Resolved

General Application

Unnecessary Database Null-Checks

Deltek Tracking: 2432073

Previously, Maconomy sometimes applied database null-checks to columns that were never null. This error is corrected.

Scrollbar Navigation Closes List Unexpectedly

Deltek Tracking: 2420059

Using the scrollbar navigation on a dropdown list will no longer close it unless an item in the list has been selected, or the user clicks outside the list.

Clicking Button Within Time-Picker Element Expanded Height of Parent Row

Deltek Tracking: 2267729

Occasionally, a dropdown for specifying time would be sized incorrectly such that it took up the same height as its surrounding context. This is now corrected.

Integrations

Invoice Rounding Issues in Peppol Format

Deltek Tracking: 2254232

When users applied rounding to invoices, the system mapped both the total amount and the payable amount to the same field. This caused mismatches in the Peppol XML file, resulting in validation errors. A calculated field was added to provide the total amount before rounding, ensuring the invoice totals matched Peppol's expected format.

Incorrect Error Message for InvoiceLine Mapping

Deltek Tracking: 2414187

When you mapped the **InvoiceLine** field in a Peppol Order Credit Memo, the system incorrectly showed the error message "InvoiceLine can only be used under 'cac:InvoiceLine'", even though the field was placed correctly. This error is corrected.

Empty Branch Element in Peppol File

Deltek Tracking: 2418274

When you included a branch element in the Peppol mapping with only optional leaves, the branch element was not omitted from the Peppol file even if all leaves were omitted. This resulted in an empty branch element being included in the Peppol file, causing the validation of the Peppol file to fail. This error was corrected.

BPM

Sweden – SIE: Exclude Prior-Year Transactions

Deltek Tracking: 2413205

Previously, the Standard Import/Export (SIE) report included #VER and #TRANS transactions from previous fiscal years when the Number of Previous Years field was set to a value greater than zero. This error is corrected such that the report now includes only transactions from the current fiscal year.

Norway - SAFT: Missing Customers in Master File

Deltek Tracking: 2413371

Previously, customers with no opening and closing balances but who had a transaction within the selected period that resulted in a net value of zero were excluded from the Norway Standard Audit File – Tax (NSAFT) data export. This error is corrected.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 21

The Workspace Client from CU 21 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 20 – July 11, 2025

Key Impact

This section flags bugs considered high importance, including:

- Corrected setting the bank reconciliation amount to match the base amount only when currencies align. (2413666)

Support Cases Resolved In This Release

- 2408433 — Non-Zero Invoice Incorrectly Assigned Zero-Invoice Number
- 2265973 — Scrollbar Navigation Closes List Unexpectedly
- 2404828 — Change to Default Text Matching Strategy

Software Issues Resolved

Time & Expense

Non-Zero Invoice Incorrectly Assigned Zero-Invoice Number

Deltek Tracking: 2408433

When you created a non-zero invoice with charges, it was incorrectly assigned a zero-invoice invoice number. This issue is now fixed.

General Application

Validator on Mandatory Fields

Deltek Tracking: 2410134

When you changed the record value on a mandatory field in a table, the validator icon did not update correctly. This error has been fixed.

Scrollbar Navigation Closes List Unexpectedly

Deltek Tracking: 2265973

Using the scrollbar navigation on a dropdown list will no longer close it unless an item in the list has been selected, or the user clicks outside the list.

Change to Default Text Matching Strategy

Deltek Tracking: 2404828

When conducting a search in the web client, the default text matching strategy has been updated to use the "startsWith" operator instead of "contains" for improved efficiency. Consequently, all string columns in list views will now default to the "startsWith" operator. Searches initiated from the workspace's top search field, as well as string fields within cards and tables, will adhere to this new functionality, unless the search term is prefixed with an asterisk (*), which will revert the behavior to "contains."

This global default is configurable by editing the textMatching property in the settings.json file.

Finance

Amount in Bank Account Currency Is Set to the Paid Amount in Base

Deltek Tracking: 2413666

Previously, Maconomy could generate a bank reconciliation line whenever a payment file or a check was created. The amount in bank reconciliation currency is determined using the payment amount. Maconomy will post the payment to the bank account once it has been approved in payment reporting. Maconomy will adjust the amount in bank reconciliation currency to match the base amount paid. This update should only be performed if the currency is the same. This error is corrected.

Important TPU Notes for CU 20

The Workspace Client from CU 20 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 19 – May 16, 2025

Key Impact

This section flags bugs considered high importance, including:

- Corrected errors include Mapped Tax Codes in Norway - Tax Return, and out-of-sync data in some large tables. (2278419, 2349231)

Support Cases Resolved In This Release

- 2278419 — Norway - Tax Return: Mapped Tax Codes Displaying Under Unmapped Tax Codes
- 2297768 — Asset List: Negative Values Instead of Zero
- 2345562 — MPL Compiler Not Failing Validation of Layout with Errors
- 2349231 — Incorrect Data Displayed in Tables
- 2377726 — Inconsistent Data After Using Card Action

Software Enhancements

BPM

Denmark: Standard Audit File-Tax Report

DelteK Tracking: 2285211, 2285226

You can now generate the Denmark Standard Audit File-Tax (DSAFT) report, which is a statutory requirement by the Danish Bookkeeping Act to make way for digital tax reporting and ensure compliance with the Danish Tax Agency (*Skattestyrelsen*) regulations and digital bookkeeping system. For more information about the DSAFT workspace, refer to the [Deltek Maconomy BPM Country Reports Guide](#).

Note: On Maconomy 2.6.2, the Standard Audit File-Tax report uses **Currency Name** (for example, Danish Krone) instead of **Currency ISO** (For example, DKK). As a workaround, you can set the currency name value to the same currency ISO value. The universe object path for **Currency Name** is as follows:

- Finance\Company\Company General Information\Currency

Currently, there is no mapping for fields on the company and bank information structure. We are actively working on a resolution and will provide an update shortly.

Software Issues Resolved

General Application

MPL Compiler Not Failing Validation of Layout with Errors

DelteK Tracking: 2345562

Previously, the MPL compiler did not flag certain syntax errors. For example, the following code snippet was accepted as valid despite not having a closing bracket (>) present:

```
<var helloVar {"Hello World! "}
```

This error is corrected and the MPL compiler now reports all syntax errors.

Incorrect Data Displayed in Tables

Deltek Tracking: 2349231

Tables with a large number of lines may have displayed out of sync data. For example, it would show data in a table corresponding to a previously selected record, or an old version of the table data for the current record. This error is corrected.

Inconsistent Data After Using Card Action

Deltek Tracking: 2377726

When you included a card action in the "refreshAfterActions" list in a configuration file for a container, the web client refreshed the container each time this action was used. This was typically used with actions that caused the card record to disappear, such as a journal's **Post** action or an invoice selection's **Print Invoice** action. However, if the card record did not disappear for such an action, the result of the applied action was not considered in the data displayed, leading to a corrupted state. This error is corrected.

Missing Analyzer Reports After Relogin

Deltek Tracking: 2341550

Analyzer Reports were occasionally missing after you relogged in as a different user, then relogged in again as the first user with access to said reports. This is now corrected.

BPM

Norway - Tax Return: Mapped Tax Codes Displaying Under Unmapped Tax Codes

Deltek Tracking: 2278419

The unmapped table in the Tax Return report, which previously caused conflicts on the SQL server due to internal errors when handling float data types, has been removed. Additionally, the NSAFT-GL option list is scheduled to be deprecated. For new entries, you can create a new tax code on the NSAFT option list instead of on the NSAFT-GL option list.

Previously, the purpose of the unmapped table was to show which tax codes were not being mapped as NSAFT or NSAFT-GL. However, you can have a tax code and G/L tax code with the same name, which is then mapped to different standard tax codes (via an Option List). Since an **Option List Name** (which you supply with a tax code name) should be unique, the NSAFT-GL option list was created as a workaround. However, this caused many-to-one-to-many relations (or fan traps) that necessitated the use of Minus/Except on the WebI query.

Asset List: Negative Values Instead of Zero

Deltek Tracking: 2297768

Previously, the Asset List report displayed incorrect values for closed assets due to errors on the Measure objects definitions. This error is corrected.

The Workspace Client from CU 19 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 18 – April 25, 2025

Key Impact

This section flags bugs considered high importance, including:

- This release includes improved performance in the bank reconciliation table refresh, and corrected errors including a system error that occurred when crediting an invoice, and the default import user setting not used as indicated. (2344399, 2362914, 2349270)

Support Cases Resolved In This Release

- 2362914 — System Error When Crediting Invoice

Software Issues Resolved

Time & Expense

System Error When Crediting Invoice

Deltek Tracking: 2362914

Multiple partial reallocations of a job entry followed by invoicing of the job entry could lead to a posting error if the invoice is subsequently credited. This error is corrected.

General Application

Default Import User Setting Not Utilized

Deltek Tracking: 2349270

Previously, the **Default Import User** setting in the System Information was not utilized by data import packages. This meant that imports were always executed as the default background task user. This error is corrected.

Finance

Improved Performance in Bank Reconciliation Table Refresh

Deltek Tracking: 2344399

Previously, the bank reconciliation table refreshed automatically each time a new line was added. While this ensured that lines were always sorted, it resulted in significant performance overhead, especially when handling a large number of lines. This issue is now fixed.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 18

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 17.

Cumulative Update 17 – March 21, 2025

Key Impact

This section flags bugs considered high importance, including:

- Corrected information in the SIE export file header. (2256897)

Support Cases Resolved In This Release

- 2295919 — Missing Finance Updates in Intercompany Journal
- 2295958 — Error Message When Allocating Fixed Asset
- 2340159 — Error in Approving Inventory Transaction

Software Issues Resolved

General Application

Maconomy Server Memory Consumption on Tree-Table Dialogs

Deltek Tracking: 2335615

Due to excess memory consumption in the Maconomy server executable when processing large tree-table dialogs, there was an increased risk that a server instance could run out of virtual memory address space if it was repeatedly tasked with processing such tree-table dialogs. This error is corrected.

Finance

Missing Finance Updates in Intercompany Journal Posting

Deltek Tracking: 2295919

Previously, there was an issue that caused customer reconciliations created from general journals to not update finance periods during posting. This error is now corrected.

Error Message When Allocating Fixed Asset

Deltek Tracking: 2295958

Previously, customer received an error message when trying to allocate a fixed asset purchase order to a vendor invoice. This error is corrected.

Incorrect Link of Reversed Tax Settlement Entry to Approved Tax Settlement

Deltek Tracking: 2310147

Previously, when using the "payment date as tax date" method, reopening a payment with a settled tax settlement entry would incorrectly link reversal tax settlement entries to approved tax settlements, falsely implying a refund from the tax authority. This error is corrected, and reversal entries are now correctly managed to prevent incorrect links to approved tax settlements.

Trade & Misc.

Sales Order Invoice Period

Deltek Tracking: 2254233

When you created a Sales Order invoice, the Invoice Period still appeared even though the Standard Calculation was set to Optional and there was no value in the **Start Date** and **End Date** fields. This error has been corrected. The invoice period now only appears in Sales Order invoices when a start and end date are identified.

Error in Approving Inventory Transaction

Deltek Tracking: 2340159

Previously, you cannot approve an item shipment transaction if you specified a value in the **FIFO Batch No.** field. This error is corrected.

BPM

Incorrect Join between Tables in Job Invoicing Universe

Deltek Tracking: 2092623

Previously in the Job Invoicing universe, an incorrect join through the CompanyNumber column of the derived JobInvoiceOnAccount table and PaymentCustomer table was found. This error is corrected by updating the join between the CompanyNumber column of the JobInvoiceOnAccount derived table and the SettlingCompany column of the PaymentCustomer table.

SIE: Incorrect Company Information in Header

Deltek Tracking: 2256897

Previously, the SIE export file header displayed the company information of a different company instead of the company named in the Selection Criteria. This error is corrected.

This bug was reported as a known issue for 2.6.3.

Note: Currently, there is an issue when running the report two times or more in a row, such as accidentally clicking the **Generate Report** button twice or clicking the **Generate Report** button too soon (while a report is still being generated due to large amount of data). This can result in incorrect or missing fields in the report. It is recommended to give ample time for a report to finish before generating a new one.

Certification: BusinessObjects 4.3 SP4 Patch 7

Deltek Tracking: 2307224

BusinessObjects (BO) SP4 Patch 7 is certified for use with Maconomy 2.6.2.

Refer to the [Product Support Guide](#) for more details.

Norway - SAFT: Update Report to XSD Schema 1.30

Deltek Tracking: 2288800

The Norway Standard Audit File - Tax (NSAFT) report has been updated to comply with new requirements set by the Norwegian Tax Authority (Skatteetaten or SKATT) for company tax filing. The report must now contain data for up to one financial year or less, so you must now select a calendar month and calendar year within the same fiscal year. The file name format has also been updated to adhere to guidelines.

In addition, changes related to XML tags within the report are as follows:

- The **<AuditFileVersion>** tag is set to 1.30.
- The date format for the **<AuditFileDateCreated>** tag has been updated from yyyy-MM-dd(+/-)hhmm to yyyy-MM-dd(+/-)hh:mm.
- The **<StandardAccountID>** tag has been removed from the report.
- The **<TaxAmount>** tag is now replaced by **<DebitTaxAmount>** and **<CreditTaxAmount>**, and these amounts are added to the tax information structure.

-
- The **<GroupingCategory>** and **<GroupingCode>** tags are now mandatory.
 - The sequence of elements under the **<TaxCodeDetails>** tag and the **<BankAccountStructure>** tag has been changed.
 - The opening debit/credit balance and the closing debit/credit balance are now detailed under a new structure, **<BalanceAccount>**, for both customer and supplier.
 - Voucher tags, **<VoucherType>** and **<VoucherDescription>**, have been added.

There are also updates regarding data types for several elements in the xsd-schema. These include the following:

- Address, city, and region: from **SAFmiddle1textType** to **SAFlongtextType**
- Address number and postal code: from **SAFshorttextType** to **SAFmiddle2textType**
- Address street name and additional address detail: from **SAFmiddle2textType** to **SAFlongtextType**
- Company header: from **SAFmiddle2textType** to **SAFlongtextType**
- Header user ID and account grouping category: from **SAFmiddle1textType** to **SAFlongtextType**
- Tax code: from **SAFmiddle1textType** to **SAFmiddle2textType**

Software Issues Resolved

Time & Expense

BeforeInvoicedOnJobCurrencyVar and NowInvoicedOnJobCurrencyVar Had Different Values Between Print Invoice and Print Draft

Deltek Tracking: 2255794

On draft and final invoices, the **BeforeInvoicedOnJobCurrencyVar** and **NowInvoicedOnJobCurrencyVar** fields provide information about previously invoiced and currently invoiced amounts on the job. In some cases involving main job invoicing and blanket invoicing, these values were incorrect or inconsistent between draft and final invoices. This issue has been fixed.

System Error SignForTotalAmountRegistered Appeared for Closed Job Entries

Deltek Tracking: 2310301

When you changed the invoice layout rule for a job, the system error **SignForTotalAmountRegistered** could appear for closed job entries, even when they were not being reopened. This issue has been fixed.

General Application

Notifications Not Recalculated as Scheduled

Deltek Tracking: 2322442

Maconomy did not recalculate notifications at the scheduled time. This is now corrected.

Internal Error Encountered When Filtering for Records with Empty Date Fields

Deltek Tracking: 2325140

In any workspace list view or search window, filtering for lines with empty date fields resulted in Maconomy displaying the following error: "Invalid expression in the 'restriction' parameter. Check the server log for details." This is now corrected.

Workspace Client Wizard Error

Deltek Tracking: 2306467

The Workspace Client would highlight any text containing the character "@" as a link or email address. This is now fixed.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 16

The Workspace Client from CU 16 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 15 – December 20, 2024

Key Impact

This section flags bugs considered high importance, including:

- A sales posted error is now corrected. (2165853)

Support Cases Resolved In This Release

- 2165853 — Sales Order Posting Error
- 2278506 — Error Creating Peppol XML File

Software Enhancements

Integrations

Pagero OAuth URL Change

Deltek Tracking: 2221811

Pagero has introduced new OAuth2 token endpoints and will deprecate the old one by February 1, 2025. To ensure seamless integration between Pagero and Maconomy, you must update the `url.pageroauthurl` setting in the `extension.ini` file to <https://sso.pageroonline.com/oauth/v2> when enabling e-Invoicing in Maconomy.

Software Issues Resolved

Integrations

Sales Order Posting Error

Deltek Tracking: 2165853

When you attempted to post a journal from a sales order invoice, an error occurred due to a discrepancy in the enterprise currency. This issue originated from an incorrect calculation of the exchange rate variance on the blanket invoice. The error is now corrected.

Error Creating Peppol XML File

Deltek Tracking: 2278506

When you click the **Create Peppol File** action for invoices with a non-integer tax rate, no file was generated. This is now fixed.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 15

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 14.

Cumulative Update 14 – November 29, 2024

Key Impact

This section flags bugs considered high importance, including:

- Corrected errors include an error that occurred when you scrolled away from a new line in a table-based workspace. (2263482)

Support Cases Resolved In This Release

- 2134110 — Correct Tax Handling and Separate Journal for Customer Reconciliation
- 2263482 — ArrayIndexOutOfBounds Error

Software Issues Resolved

General Application

Handling Null Values in Outer Joins

Deltek Tracking: 2272041

Maconomy uses the ISNULL function on MS SQL Server and the NVL function on Oracle in SELECT and WHERE clauses of statements to handle possible null values that may occur due to outer joins. This may lead to degraded performance because databases cannot fully utilize indexes when using these functions. To better handle null values without compromising performance, you can include the following line in the MaconomyCustom.ini file:

```
[ServerConfig]
UseDbFunctionsToHandleNullValuesInOuterJoins=false
```

Attempt to Apply State Parameters to an Empty Response in a Single-Container

Deltek Tracking: 2274356

When working in the Jobs workspace, you could encounter an error when switching between invoiceable and non-invoiceable jobs with the Customer tab open. This is now corrected.

ArrayIndexOutOfBounds Error

Deltek Tracking: 2263482

When users working in various table-based workspaces (such as Bank Reconciliation) scrolled away from a new line, this resulted in a user interface redrawing error that caused ArrayIndexOutOfBounds exceptions. This is now fixed.

Finance

Correct Tax Handling and Separate Journal for Customer Reconciliation

Deltek Tracking: 2134110

Maconomy now correctly marks tax as due when automatically reconciling credit memos using the "Payment Date" tax method. Customer reconciliation is posted in a separate journal for improved accuracy.

Important TPU Notes for CU 14

The Workspace Client from CU 14 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 13 – November 01, 2024

Key Impact

This section flags bugs considered high importance, including:

- The redundant role name in the notification title is corrected. (2256029)

Support Cases Resolved In This Release

- None.

Software Issues Resolved

General Application

Redundant Role Name in Notification

Deltak Tracking: 2256029

Notification items on the top right corner of the screen no longer show the role name of the user.

Consultants / Admin

Important TPU Notes for CU 13

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 12.

Cumulative Update 12 – October 9, 2024

Key Impact

This section flags bugs considered high importance, including:

- Corrected errors include a Vendor Invoice reallocation error, and a long text support loading error. (2128723, 2239190)

Support Cases Resolved In This Release

- 2222391 – Vendor Invoice Reallocation Error Fix
- 2239190 – Loading Error Due to Missing Long Text Support
- 2216360 – Omitting Mask Status Numbers in Calendar Configuration Caused a 'Cannot Read Properties of Undefined (Reading 'Color')' Error
- 2241606 – Error Encountered in Workspaces

Software Issues Resolved

General Application

Empty Columns Array Caused an Error

Deltek Tracking: 2240022

When guarded by a condition, an empty array of columns in a form layout would cause the following error: "Cannot read properties of undefined (reading 'configuration')". This is now fixed.

Omitting Mask Status Numbers in Calendar Configuration Caused a 'Cannot Read Properties of Undefined (Reading 'Color')' Error

Deltek Tracking: 2216360

When the mask property for web client calendars did not cover all possible outcomes, an exception occurred. This error is now fixed.

Internal Error During Job Creation

Deltek Tracking: 2221624

Users searching for a field value then saving the changes could encounter one of the following errors:

- "You are not allowed to modify records fields which you have sliced out."
- "Cannot send field values to the "X" container for fields that were excluded from the pane."

This issue is now fixed.

Error Encountered in Workspaces

Deltek Tracking: 2241606

When users sorted on a table column and then hid the column using either the "Hide Column" or "Customize Columns" features, the Workspace Client would occasionally crash with the following indexing error: "Error updating record data: Record of size n doesn't match collection of size n...". This is now fixed. The Workspace Client now reverts to default sorting when users hide the sort column.

Configure Behavior Switch to Revert Previous Bug Fix

Deltek Tracking: 2245745

Previously, a fix was implemented to correct an error wherein the extension framework returned empty data when accessing a custom container by a non-existing key (Deltek Tracking: 2100885). This fix is now reverted, but it can be reenabled by a switch in the configurations file of the coupling service. The reason for this conditional reverting is that some extensions that use the Maconomy extension framework incorrectly, albeit slightly, might result in the system crashing.

To allow updates to the extensions, the switch temporarily reenables the old (but incorrect) behavior of the extension framework. Once relevant extensions are updated, the switch should be set to reapply the original fix.

Note: From version 2.2.4, the behavior switch is not available, and the bug fix (Deltek Tracking: 2100885) is still implemented. This enforces the correct behavior, and the Java extension must be fixed prior to this.

To enable or disable the bug fix, go to the settings.ini file (in the coupling-service configuration). The switch is found in the following line:

behavior.switch.custom-root-containers-signal-non-existing-key-by-exception

Set this line to **True** to apply the original bug fix (Deltek Tracking: 2100885). If you set this line to **False** (or do not specify any value), the previous bug behavior persists, but Java extensions not affected by the bug should work.

Time & Expense

Loading Error Due to Missing Long Text Support

Deltek Tracking: 2239190

An error would display when loading the following workspaces:

- WIP Invoice
- Invoice On Account
- Draft Invoices
- Customer Invoicing
- Invoicing example workspace

This occurred when the **Enable Long Text Emulation in Workspaces** system parameter was enabled because long text support was missing in the aforementioned workspaces. This error is corrected.

Finance

Vendor Invoice Reallocation Error Fix

Deltek Tracking: 222391

Previously, users encountered a posting error when reallocating a vendor invoice to a job with a fixed exchange rate. This error is now corrected.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 12

The Workspace Client from CU 12 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Cumulative Update 11 – September 6, 2024

Key Impact

This section flags bugs considered high importance, including:

- Fixed issue caused by reverting job invoice allocation. (2195921)

Support Cases Resolved In This Release

- 2195921 – Reverting Job Invoice Allocation Resets Amount for Invoicing on Account
- 2198809 – Incorrect Handling of Revenue Recognition in WIP Reports

Software Issues Resolved

General Application

People Planner Integration Fails Due to BO Java Libraries

Deltek Tracking: 2202779

The Business Objects (BO) 4.3 Java libraries introduced in Maconomy 2.6.2 changed the behavior of the standard AES encryption cipher such that it caused People Planner integration to fail.

This error is corrected so the standard implementations of all affected ciphers have higher priority than the cipher implementations included in the BO library.

Extension Framework Returns Empty Data When No Record Found

Deltek Tracking: 2100885

Customers with custom containers implemented could experience internal server errors if the container was accessed through REST API using a non-existing container key. In addition, if such a custom container was used with Background Tasks, and the background task attempted to create a new table row relative to a non-existing container key, the background task would fail with no rows created. For extension developers, in such a state, the container previously responded with a card pane containing no data. This error is corrected so that an exception occurs instead.

Double-Clicking Part of a Field Value Selected More than the Clicked Part

Deltek Tracking: 2197013

When you double-clicked a job number or part of an address (for example), the web client selected more than what you clicked. This is now corrected.

Performance Improvements to Web Client Tables

Deltek Tracking: 2197546

Minor performance improvements are now applied to tables in the web client.

Autosubmit Attribute Only Took Effect Once

Deltek Tracking: 2209754

The auto submit functionality did not save field changes if the user modified the same field more than once. This is now corrected.

No Border on Highlighted Islands in Regular Workspaces

Deltek Tracking: 2194975

When you pressed TAB to go to or select an island in a regular workspace, the web client did not highlight that island with a border once selected. This is now fixed.

Classcast Exception When Selecting a Filter Option From Overflow Menu

Deltek Tracking: 2210013

Users could not select any of the filter restrictions found at the top of a workspace when these were shown as a dropdown menu. This is now fixed.

Empty Workspace Tab Title in Workspaces

Deltek Tracking: 2193441

When you opened a workspace in the Workspace Client, the application occasionally did not display the workspace tab title. This is now corrected.

Time & Expense

Reverting Job Invoice Allocation Resets Amount for Invoicing on Account

Deltek Tracking: 2195921

When you reverted a job invoice allocation while invoicing an account, the amount for invoicing on account was set to zero. This has been corrected so that the amount for invoicing on account is not affected by the reversal of a job invoice allocation.

BPM

Incorrect Handling of Revenue Recognition in WIP Reports

Deltek Tracking: 2198809

Previously, entries of Revenue Recognition type were excluded from WIP calculations. This error is corrected.

People Planner

Prevent Modification of Imported Absences

Deltek Tracking: 2197860

By error, imported absence bookings from Maconomy were editable in the Resource Management workspace. This error is corrected.

*These files were released as part of a previous update but still apply to the latest CU.

Important TPU Notes for CU 11

The Workspace Client from CU 11 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 11

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU11 installation.

Cumulative Update 10 – August 09, 2024

Key Impact

This section flags bugs considered high importance, including:

- Resolved issues include a system error for Job Invoices (2177816), a Progress Evaluation error (2185766), and a REST API MDSL specification endpoint (2191457).

Support Cases Resolved In This Release

- 2177719 – Improved Vendor Invoice Search
- 2180285 – Submit Button for Vendor Invoices Now in Web Client and Allocation Dialog
- 2177816 – System Error for Job Invoices
- 2172257 – Overflow Error when Reallocating Job Entries
- 2185766 – Progress Evaluation Error
- 2179200 – Unable to Resubmit and Reapprove a User
- 2186713 – Web Client User Sessions on Oauth Expired and Did Not Reopen the Current Workspace upon Relogin

Software Issues Resolved

General Application

Web Client User Sessions on Oauth Expired and Did Not Reopen the Current Workspace upon Relogin

Deltek Tracking: 2186713

If you were using OAuth (Azure, OneLogin, or Okta) and your session expired, the web client did not reopen the current workspace upon relogin. This is now corrected.

Embedded URL Evaluated Even If the Tab Was Not Selected

Deltek Tracking: 2180202

If an external website was embedded in a section of the workspace that was currently inactive (for example, it was contained in an inactive tab or a minimized assistant), then it could be unnecessarily reloaded when the workspace refreshed. This problem is now fixed. The embedded website will only be refreshed when that section of the workspace becomes active.

Title Conversation Center: Users Could Not View a Conversation If They Had No Access to the Related Record

Deltek Tracking: 2181814

Users with no access to the record (for example, a job) related to a conversation were unable to open that conversation. In addition to this, when they clicked the speech bubble icon on the top right corner of the

screen, Maconomy did not correctly display their unread messages for that conversation in the dropdown. These are now corrected.

Performance Improvements to Web Client Tables

Deltak Tracking: 2177118

Minor performance improvements are now applied to tables in the web client.

Fields Unexpectedly Cleared When Clearing a Search Field

Deltak Tracking: 2178353

When users cleared a searchable field, Maconomy cleared the other fields related to this search. However, there are cases where searchable fields depend on each other and the parent field should not be cleared when the child field is cleared.

A common case is when the user selected an option list in one field and a value from that option list in another field. When the user clears that value, Maconomy should not clear the selected list, as the user probably wants to select another value from the same list. On the other hand, if the user clears the selected list or selects a different list, then Maconomy should clear the selected value.

You can now enable this behavior by making a change to the relevant containers JSON file. For example, to enable it for the **Option List 1** and **Selected Value 1** fields in the TimeRegistration container, perform the following steps:

1. Identify the foreign-keys that are used for performing the searches in those fields. Unless a foreign-key is explicitly specified in the workspace layout, then the first available foreign-key is used. In this case, these are "OptionListNumber1_OptionList" (for selecting the option list) and "TheOption_1" (for selecting a value from the option list).
2. Edit the configuration for the TimeRegistration container - in Application/Platform/Containers/JobCost/TimeRegistration.json - and add the following "foreignKeys" section:

```
{
  "containers": [
    {
      "TimeRegistration": {
        "table": {
          "foreignKeys": {
            "OptionListNumber1_OptionList": {
              "controls": [
                "TheOption_1"
              ]
            }
          }
        }
      }
    }
  ]
}
```

The above configuration specifies that:

- whenever a field belonging to "OptionListNumber1_OptionList" is cleared, or a value is selected from a dropdown using foreign-key, then all fields belonging to "TheOption_1" are cleared; and

-
- whenever a field belonging to "TheOption_1" is cleared, then no fields belonging to "OptionListNumber1_OptionList" are cleared.

Notification Recalculation Spawned Too Many Threads

Deltek Tracking: 2187410

Clicking the **Refresh** icon on the To-Dos pane of the Workspace Client resulted in an ever increasing rate of recalculation of the to-dos list. This is now corrected.

REST API MDSL Specification Endpoint Not Found

Deltek Tracking: 2191457

Default shortname is no longer available on Maconomy and the RESTful Specifications Web Server is updated to version 2.0 in which a container specification is acquired via URL in the following format:

http://<server>/specifications/<shortname>/mdsl/<container>

Time & Expense

System Error for Job Invoices

Deltek Tracking: 2177816

In some cases, job invoices could have different amounts in company base currency and customer standard currency, even when those currencies are the same. This caused a system error when trying to reconcile the A/R entry.

Overflow Error when Reallocating Job Entries

Deltek Tracking:

When you attempted to reallocate job entries from expense sheets on a transferred job with the **Update Prices on Amount Registrations upon Job Reallocation system parameter** enabled, an internal overflow error occurred.

Progress Evaluation Error

Deltek Tracking: 2185766

An overflow error could occur when you evaluated progress. This error is corrected.

Finance

Improved Vendor Invoice Search

Deltek Tracking: 2177719

Maconomy will no longer give an error when trying to search for fully allocated vendor invoices with reallocations between tax amount and amount without tax.

Submit Button for Vendor Invoices Now in Web Client and Allocation Dialog

Deltek Tracking: 2180285

The **Submit** button for vendor invoices is now available in the web client and the Vendor Invoice Allocation dialog. This applies when allocating tax on a vendor invoice that was originally posted without a tax code and tax amount.

Integrations

Unable to Resubmit and Reapprove a User

Deltek Tracking: 2179200

When you used the **Copy User Role** action to add a new role to an already submitted and approved user in **Setup » Users** workspace, the **Submit** action was disabled, preventing resubmission and reapproval of the changes. This error is corrected.

People Planner

Performance

Memory consumption and load times have been reduced to improve the performance of the Web Components.

This improves performance for the initial load, navigating to past and future periods, and when expanding multiple resource and event rows to see assignments.

Consultants / Admin

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 10

The Workspace Client from CU 10 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 10

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU10 installation.

Cumulative Update 09 – July 12, 2024

Key Impact

This section flags bugs considered high importance, including:

- Posting error due to tax on subscription order now resolved. (2168124)
- Internal server error after Extender deployment is corrected. (2167269)

Support Cases Resolved In This Release

- 2167269 – Internal Server Error After Extender Deployment
- 2162011 – Log Out from an OAuth Session Did Not Support Switching Accounts

Software Issues Resolved

General Application

Internal Server Error After Extender Deployment

Deltek Tracking: 2167269

Previously, a race condition may occur after extender deployment when one process had a file handle to a file in the ContainerDefinitions while another process attempted to remove the ContainerDefinitions folder with content. This error is corrected.

Translation Markers (T\$) Missing in Several Layouts

Deltek Tracking: 2168233

A number of workspaces had terms that were not translated when switching languages. This was caused by missing translation markers (T\$) in the layouts, and is now corrected.

Including a Column More than Once Broke Subtotal Calculation

Deltek Tracking: 2163624

Including the same column more than once while also using subtotals in an Analyzer report broke the subtotal calculation for that column. This is now fixed.

Internal Error: Cannot read properties of null: reading 'GetFullYear'

Deltek Tracking: 2164451

When you entered a date using the format "3/" in a date field, Maconomy displayed an error message. This is now corrected.

Exceptions in Dialog Group Extraction

Deltek Tracking: 2165327

This fix resolved an issue where dialogs for 'installation information' and 'change password' were previewed when selecting relevant workspaces.

Infinite Scroll Was Broken in List View

Deltek Tracking: 2165794

When you attempted to scroll down the list view dropdown, infinite scroll did not activate, making it impossible for you to view other entries. This issue is now fixed.

Misaligned Calendar Titles

Deltek Tracking: 2155953

Weekday titles were not aligned with dates in the calendar widget. This error is now corrected.

Log Out from an OAuth Session Did Not Support Switching Accounts

Deltek Tracking: 2162011

Users logging out from Maconomy using Single Sign On (Azure, OneLogin, or Okta) were unable to switch accounts. This is now corrected.

Missing Focus Upon Opening the Customize Columns Dialog

Deltek Tracking: 2162647

When you open the Customize Columns dialog, the cursor now appears by default in the Search field for Available columns.

Invalid Field Values Sent to Server Upon Card Update

Deltek Tracking: 2162706

Some values (such as numbers or dates) that are typed into a field need to be transformed into a different format before they are sent to the server. An improvement has been made which ensures that this transformation is always applied.

Dialog Group Import Required Extra Dialog Members for Documentation Workspaces

Deltek Tracking: 2163293

The 'documentRevisions' dialog is now added to the import for any 'document' type bindings. In addition, the import can now be used to update as well as create dialog groups.

Time & Expense

Missing Fields in Workspace Client Approval Center

Deltek Tracking: 2163367

When you accessed the Approval Center standard layouts in the WSC, the **Show Substitute Lines** and **Show Super Approver Lines** fields were not available. This error is corrected.

Finance

Posted Balance Error on Taxed Invoice

Deltek Tracking: 2168124

Previously, attempting to reconcile an invoice with tax on a subscription order caused a posting issue. This error has now been corrected.

People Planner

Multiple Logs When Importing Projects

Deltek Tracking: 2163661

When importing projects from Maconomy, there were multiple logs about being unable to find the same object. This occurred if part of the master data was not yet imported/updated and caused performance issues. This error is corrected.

Page Tooltip in Web Components

Deltek Tracking: 2163662

The page tooltip is now removed from all People Planner Web Components to optimize performance.

Bookings Appeared to be Unsaved

Deltek Tracking: 2170025

When a user modified bookings in the Web Components, the color of the values did not change to black to indicate that they were saved. This error occurred if no language code was passed in the URL and the user had no specified default language code. This error is corrected to use the language code specified in the web.config file from the web server for this scenario.

Web Components Refresh Error

Deltek Tracking: 2171710

When you changed the view or date, the Web Components would refresh the grid view, even when not needed. This error is corrected. Due to this fix, the **Available** and **Total** columns are now hidden by default in standard layouts in new People Planner installations.

Test Connection Button

Deltek Tracking: 2168866

You can now test the connection in the About page of the Web Components. When you click the new **Test Connection** button, this makes a callback to the server and displays the following statistics regarding your request:

- **Total:** Total time spent to request and receive a response from the server
- **Client:** Time spent by the browser before making a request to the server
- **PP Web Server:** Time spent by the PP web server to process the request (including SQL server requests)
- **PP SQL Server:** Time spent by the PP web server to contact the PP SQL Server
- **Network:** Time spent before the request reached the PP server, as well as the response time of the PP server received by the browser.

New Database Index

Deltek Tracking: 2177024

A database index for resource property assignments is added to the People Planner database.

Expand All Performance Improvements

Deltek Tracking: 2178433, 2178434

Performance when expanding all records in either the Project Gantt (PG) or Resource Gantt (RG) has been significantly improved.

Important TPU Notes for CU 09

The Workspace Client from CU 09 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 09

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU9 installation.

Cumulative Update 08 – June 14, 2024

Key Impact

This section flags bug considered high importance, including:

- Performance improvements in tables and SQL-Server. (2155468, 2145191)

Support Cases Resolved In This Release

- 2155468 – Performance Improvement on SQL-Server
- 2155571 – MaconomyServer: Memory Retention Issue on SQLServer Version

Software Enhancements

People Planner

Improved Matching of Events to Tasks in Actuals Import

Deltek Tracking: **2104904**

Improvements have been made to how actuals are mapped to events with an identical task-activity number combination. When you run an actuals import via Maconomy REST API and the system finds multiple matching events, by default it uses the first on the list. By enabling this feature, it is first checked if any of the assignments already exist. If so, that is used instead of the first on the list.

To support this functionality, the **Match actuals line-events on employee assignment** setting is added to the Early Adopter tab in the Admin Tool.

Attention: This is an early adopter feature and should only be used under specific direction from Deltek.

Software Issues Resolved

General Application

Performance Improvements to Web Client Tables

Deltek Tracking: **2145191**

Minor performance improvements are now applied to tables in the web client.

Performance Improvement on SQL-Server

Deltek Tracking: **2155468**

Previously, posting could take a longer time on Microsoft SQL Server. This problem could occur if finance entries were joined or summarized, and the summarized entry had a zero amount. This issue is now fixed.

MaconomyServer: Memory Retention Issue on SQLServer Version

Deltek Tracking: 2155571

Previously, executing "raw" SQL statements on the SQLServer version of MaconomyServer resulted to unwanted memory retention. SQL statements are mostly used in various add-on functionalities, such as custom extensions or email alert distribution. Memory retention can cause operations performed by the MaconomyServer process to fail with a memory allocation error. This issue is now corrected.

Java Analyzer Substituted Columns Using the Last Element of the Prefixed Column IDs

Deltek Tracking: 2154208

During saving of Analyzer reports, the Java Analyzer occasionally substituted columns using the last element of the prefixed column IDs. This is now corrected.

Embedded Row Would Load Target URL Even When Query Parameters Were Not Yet Fully Resolved

Deltek Tracking: 2159350

In workspaces that contained an embedded iframe, the content of the iframe could be refreshed too often if the source URL depended on data in the workspace. This unnecessarily strained both the server hosting the content and the user's browser. This issue is now fixed.

Issues with the Dialog Group Imports Tool

Deltek Tracking: 2159548

When you search by role, the tool now attributes only the most relevant roles to a dialog. In addition, older Analyzer reports now have dialog group members assigned to them.

People Planner

Refresh Data Error

Deltek Tracking: 2153514

When you changed the page number in the Web Components, the Resource Management workspace did not refresh the prefetching of referenced data. This caused an excessive amount of SQL queries. This error is corrected.

Expand Assignments Performance Optimization

Deltek Tracking: 2156316

Prior to this correction, the Web Components would load slowly if you expanded all assignments in the PG or RG. Loading time is now faster due to performance improvements.

Capacity Filter for Budget Type Resources

Deltek Tracking: 2157789

The capacity filter in the Resource Management workspace did not work on budget resources. This error is corrected. The filter now applies equally to both individual and budget type resources.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 08

The Workspace Client from CU 08 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 08

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU8 installation.

Cumulative Update 07 – May 17, 2024

Key Impact

This section flags bug considered high importance, including:

- Certain headers in Excel export were blank. (2124728)

Support Cases Resolved In This Release

- 2121673 — System Error in Invoicing
- 2125271 — Removal of Move Actions in API and Web Client
- 2124728 — Empty Headers in Excel Export

Software Issues Resolved

Time & Expense

System Error in Invoicing

Deltek Tracking: 2121673

A system error appeared in situations where the number invoiced on a job entry was zero but the billing price invoiced was a different value. The system allows for job entries to have a positive number invoiced and a negative billing price invoiced. This correction prevents the error from appearing again on such occasions.

Removal of Move Actions in API and Web Client

Deltek Tracking: 2125271

In the Approve Time Sheet Lines and Approve Expense Sheet Lines reference workspaces, the move line up and down buttons were shown by error in the web client. An error would occur if you tried to use these actions. This error is corrected by hiding the actions in the web client. This was done by removing the actions from the API.

The following dialogs are affected by this:

- ApproveExpenseSheetLines
- ApproveTimeSheetLines
- DailyTimeSheetLineExpenses
- DailyTimeSheetLineMileage
- TimeSheetLineExpenses
- TimeSheetLineMileage

General Application

Field Search Results Were Occasionally Invalidated

Deltek Tracking: 2119849

When users started a search from a field, the displayed search results would sometimes be outdated if a field related to the search was edited.

For example, if a **Local Spec. 1 List** field was updated, then the search results shown for **Local Spec. 1 Name** could be incorrect.

This issue is now fixed.

Empty Headers in Excel Export

Deltek Tracking: 2124728

Headers that used the titleValue and titleSource properties were empty in the Excel export. This is now fixed.

People Planner

Work Hours Deleted in Import

Deltek Tracking: 2100764

When importing calendars, some of a resource's work hours were deleted by error. This error is corrected.

Assignment Error in Actuals Import

Deltek Tracking: 2121746

An error occurred during an actuals import if there was an assigned draft resource on the event that was blocked. This error is corrected.

Import Project Performance Improvements

Deltek Tracking: 2125151

If you changed the start and/or end date of a project in Maconomy, reimporting it to People Planner could take a long time. Performance is now improved to make reimports faster.

RM View Error

Deltek Tracking: 2126594

Prior to this correction, an error would display when you tried to access the RM view page in the web client. This would occur if you had a larger amount of assignments when using the **Booked in Visible Period or New** assignment filter, and there were bookings in the visible period. This error is corrected.

Expand Task Error

Deltek Tracking: 2131863

When opening a task on a project without a name, the Resource Overview did not expand the assignment for the task. Instead, it would stay on the loading page infinitely. This error is corrected.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 07

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 06.

Important People Planner Notes for CU 07

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU7 installation.

Cumulative Update 06 – April 19, 2024

Key Impact

This section flags bugs considered high importance, including:

- Analyzer rows truncated and prevented users from entering precise times. (2107544)

Support Cases Resolved In This Release

- 2108543 — Edited Subjob Name Clears Sales Person Field
- 2109035 — Sum Line Description Change Error

Software Enhancements

General Application

Option to Configure Assistants as Open by Default

Deltek Tracking: 2115019

Companies can now customize their workspaces such that assistants are open by default when users go to a workspace. To enable this option, add the following property to the JSON file of each assistant:

```
"expanded": true,
```

Software Issues Resolved

Time & Expense

Overflow Error for Repeated Reallocations

Deltek Tracking: 2105985

Repeated partial reallocations of a job entry could result in the job entry having a non-zero open billing price, but the quantity was so close to zero that you may get an overflow error upon recalculation of unit price in the **Close All** action in Job Invoice Allocation or Invoice Selection. This error is corrected.

Allow Drafts for Invoicing Groups with Different Debit or Credit Type

Deltek Tracking: 2106417

For jobs set up with the Split by Invoicing Group set to Yes on the selected job parameter for invoice selection, Maconomy collects the main and subjobs and creates a draft for each invoicing group. Beginning with 2.6.1 CU 14, an error would occur if drafts did not all have the same debit credit type, such as if some are draft invoices and others draft credit memos. This should not happen, and the error is now corrected.

Edited Subjob Name Clears Sales Person Field

Deltek Tracking: 2108543

When you changed the name of a subjob in **Jobs » Home » Subjobs**, the value in the **Sales Person** field for that job was removed. This error is corrected.

Sum Line Description Change Error

Deltek Tracking: 2109035

Previously, users without permission to change or view time costs encountered the error message: "Cost cannot be manually changed on a sum line" when attempting to change the description on a sum line within a job or opportunity budget. This error is now corrected.

General Application

Superfluous Space Added When Using Copy/Paste in the Web Client

Deltek Tracking: 2114919

When users pasted a project number (from an email, for example) into the filter search, the web client would add an extra space at the end. The search would then result in the web client displaying the following message: "No search results were found". The search query is now trimmed such that trailing and ending spaces are removed.

Web Analyzer Comparison Operators for Time Did Not Work

Deltek Tracking: 2107544

Users could not enter precise times in Analyzer row selections (for example, 11:22:33); Maconomy would truncate the seconds to 00. This is now fixed.

Increase Bottom Padding for Actions in Assistants

Deltek Tracking: 2107842

The bottom padding for actions in assistants is now increased. The size of the buttons is also adjusted.

KPIs Did Not Show Data After Workspace Refresh

Deltek Tracking: 2107855

In certain situations, KPIs did not display data after the user refreshed the workspace. This is now corrected.

Bars Not Shown in Bar Chart

Deltek Tracking: 2107903

In some situations, bar charts did not display one of the bars. This is now fixed.

Incorrect Sort Order Indicators for Tables in Web Analyzer Output

Deltek Tracking: 2091559

When looking at tables in web Analyzer output, you could not tell if columns were sorted differently from the visual order. This is now corrected.

Missing Localization of Analyzer Operator Popup Descriptions

Deltek Tracking: 2096696

Localized Analyzer operator popup descriptions are now available in the web client.

Foreign-Key “Primary” Binding Did Not Support “Reversed” Mode

Deltek Tracking: 2102879

You can now use a reversed primary foreign-key binding in workspaces. For example:

```
"binding": {  
  "foreignKey": "primary",  
  "reversed": true  
},
```

People Planner

Perspective Error

Deltek Tracking: 2107381

Perspectives would not load if you were using an old layout with a Sum footer. This error is corrected.

Period View Refresh Error

Deltek Tracking: 2107735

By error, the Web Components would refresh if you clicked on the currently selected period view. The refresh was a performance issue but had no effect on data displayed in the Web Components. This error is corrected.

Translation Errors for Days and Months

Deltek Tracking: 2117257

Prior to this fix, the days of the week in the Web Components day view could not be translated from English to other languages.

Month names were translated based on the user's browser language settings, instead of the language parameter parsed from the Maconomy WSC or web client, or the user language in the People Planner database.

These errors are corrected. Both the day and month names are now translated according to the language in the URL. If no language is parsed from the WSC or web client, the user language specified in the database is used.

**These files were released as part of a previous update but still apply to the latest CU.*

Important TPU Notes for CU 06

The Workspace Client from CU 06 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 06

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU6 installation.

Cumulative Update 05 – March 22, 2024

Documentation Note: We have updated the format of this CU Release Note for clarity and convenience:

- Added a **Key Impact** section to highlight the most important elements of this release.
- Moved and renamed the Release Summary table and other Admin-related contents to the end of this section.

Key Impact

This section flags bugs considered high importance, including:

- A UX issue impacted Maconomy web client by requiring a double-click instead of a single-click. (2097657).

Support Cases Resolved In This Release

- 2097657 — Double-Click Required to Set Focus in Form Fields
- 2102898 — Error in Filter for Jobs and Absence Requests

Software Enhancements

General Application

New User Setting for Decimal Places

Deltek Tracking: 2088788

Users can now set the number of decimal places for real fields in the web client. To override the company-wide setting, edit the new **Number of decimals** field found in the Formats & Language tab of the My Settings dialog.

Note that user preference does not override workspace-specific settings.

Software Issues Resolved

General Application

Internal Error When Entering "@Text" in Conversation

Deltek Tracking: 2098206

When the user pressed ENTER on an empty list of employees, Maconomy displayed an error message. This issue is now corrected.

No Support for Dynamic Visibility of Actions Based on Enabledness (isActionEnabled)

Deltek Tracking: 2088119

A new expression language function, "isActionEnabled", is now added. This function takes a string with an action name as a parameter and returns a Boolean value indicating whether the action is enabled.

For example:

```
{
  "actions": [
    {
      "T$title": "Submit",
      "source": "JobsCard.SubmitJob",
      "visible": "isActionEnabled('JobsCard.SubmitJob') "
    },
    ...
  ]
}
```

The action name can be qualified with a pane name (as in the previous example). If an unqualified name is specified (as in the following example), then the pane currently in context will be used:

```
isActionEnabled('SubmitJob')
```

Limitations:

- In order to evaluate whether an action is enabled, data needs to be loaded into the target pane; the function will return *false* if the target pane has no data. Note that the function itself does not initiate loading of data. If that is required, an expression should reference some field in the target pane. For instance: "not isEmpty('JobsCard.JobNumber') and isActionEnabled('JobsCard.SubmitJob')".

-
- In wizards, the "Host" keyword may refer to the action on which the wizard is defined. However, the *isActionEnabled* function does not currently support that keyword; instead, the actual name of the action needs to be given. For example, use "isActionEnabled('Host.CopyJob')" rather than "isActionEnabled('Host')".

Wizards in a Disconnected Host Pane Did Not Work Correctly

Deltek Tracking: 2092295

A wizard defined in a pane which was not used to show any fields in the workspace would not open correctly. This error is now fixed.

CU4 Regression: Non-Backward Compatible API Changes

Deltek Tracking: 2094135

2.6.2 CU4 introduced an API regression which involved a slight non-backward compatible schema change. Specifically, a set of illegal JSON constructs that the JSON validator used to silently ignore now appeared as errors in both the Extender and the web client. Deltek has resolved the issue by allowing these constructs and silently ignoring them again. They will be deprecated in a later service pack.

Double-Click Required to Set Focus in Form Fields

Deltek Tracking: 2097657

A UX regression where interaction with form fields across the entire application was affected. Specifically, the application required a double-click rather than single-click to set focus in a field. In CU 18, we restore the original functionality to single-click.

Menu Items Disappeared After Refreshing Browser

Deltek Tracking: 2098380

When users refreshed their browser while in the Conversation Center, menu items would disappear. This is now corrected.

Error in Filter for Jobs and Absence Requests

Deltek Tracking: 2102898

When searching from inside a filter, an error would previously occur stating that there was an Error in "foreign key search field value callback: no mapping for key '<someFieldName>' when searching on the **Main Job No.** column in the filter for Jobs and Absence Requests. This error is corrected.

Integrations

Filter Showing Employee Information Without Field Restrictions

Deltek Tracking: 2089008

A new filter, ShowEmployeesHR, was introduced in the Employees workspace. This filter showed the employees' information without field restrictions.

BPM

NSAFT: Incorrect Amount in Tax Information for Intercompany Entries

Deltek Tracking: 1998307

Previously, the Norwegian Standard Audit File - Tax (NSAFT) report displayed an incorrect tax amount for intercompany entries. This error is corrected such that the amount is now calculated using the currency amount of the tax multiplied by the exchange rate from the finance entry.

People Planner

Decimal Setting Error

Deltek Tracking: 2083357

By error, the decimal setting for bookings was sometimes not followed in People Planner. For example, if you set the decimal to zero, the system in some scenarios showed the number with decimals anyway. This error is corrected.

Increase WebserviceTimeoutSeconds Value

Deltek Tracking: 2105478

In the Admin Tool, the maximum value you can enter for the WebserviceTimeoutSeconds setting is now 30,000 seconds.

Imported Absence Booking Error

Deltek Tracking: 2091237

When you imported an absence from Maconomy, you could edit the booking in People Planner. This should not be possible and the error is now corrected.

Performance Issues When Expanding Assignments

Deltek Tracking: 2099383

Expanding assignments with several booking categories and changing the zoom factor was sometimes slow. This error is corrected.

Consultants / Admin

Important TPU Notes for CU 05

The Workspace Client from CU 05 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 5

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU5 installation.

Cumulative Update 04 – Feb. 23, 2024

Key Impact

This section flags bugs considered high importance.

- 2054563 – User Information Universe: Incorrect Current User and Current Role Objects
- 2068872 – Dutch Audit File: Excluded First Entry on Each Journal

Security Updates

- None.

Performance Improvements

- None.

Support Cases

- 2080311 – Approving Time and Expense Sheets After Change of Supervisor
- 2068872 – Dutch Audit File: Excluded First Entry on Each Journal

Important TPU Notes for CU 4

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 02.

Important People Planner Notes for CU 4

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU4 installation.

Software Enhancements

General Application

Exporting List of Dialogs Required for Workspace Access

Deltek Tracking: 2085061

This release introduces a tool for quickly extracting the list of dialogs to which the web client requires access. The tool can extract a list either by workspace (installed on the system) or by user role (defined by the web client menu). This list is exported as a text file that can then be imported into Maconomy.

Access to these dialogs is necessary for access to workspaces in the web client. Deltek will use this tool to generate a Groups import file that corresponds to the selected roles or workspaces, which can then be used as a starting point for web client implementations. Customers can also use this tool when migrating their users to the web client, ensuring that their users have the required dialog access to workspaces.

Accessing the Dialog Group Imports Tool

You can access the tool using either of two ways:

- From the web client login page – Press CTRL + SHIFT and click the link that displays under “Deltek Maconomy”.
- From within the web client, after logging in - In the address bar, replace “workspace/[workspace name]” with “tools” and then press ENTER.

Maconomy loads the tool on the same browser tab. You can then navigate to the Dialog Group Imports tab.

Software Issues Resolved

Time & Expense

Approving Time and Expense Sheets After Change of Supervisor

Deltek Tracking: 2080311

Prior to a change of supervisor, if you had submitted a time or expense sheet and it was not yet been approved, the new supervisor would gain access to those timesheets whereas the former supervisor typically would lose access. Since it is the former supervisor who is in the best position to approve such time sheets, this is not ideal. This is now changed so that when you change the supervisor on an employee revision, this "handover" of access to time and expense sheets only takes place within the period covered by the employee revision. For example, if you change the supervisor in the Employees workspace on the current revision, the handover of access will be for the period covered by the current revision. A weekly time sheet will be affected by this if the start date belongs to the period of the employee revision. An expense sheet will be affected if it has one or more lines with entry date in the period of the employee revision, or if it has no lines and has not yet been submitted and the employee revision is the current revision.

General Application

Grid Fields in Some Workspaces Were Not Reenabled

Deltek Tracking: 2072239

When a user clicked an action that changed the open state of a record, the web client occasionally did not reenable editing of unit fields in a grid. This is now corrected.

Menu Group With No Workspaces Appeared for Users With Restricted Access

Deltek Tracking: 2072243

The menu would display menu groups that did not contain any items. This is now corrected.

Clicking Previous/Next Arrows Beside Search Filter Returned User to the First Record

Deltek Tracking: 2074628

The search filter found at the top of some workspaces (for example: Job Home, Expenses) would occasionally display the incorrect record. This issue occurred when:

- The record initially selected by the user was not listed on the first page of search results (that is, the first 25 records).
- The user edited some fields and saved the changes, or clicked an action.

When the user tried to navigate using the **Previous/Next** arrow buttons, the search filter would incorrectly revert to the first record on the list.

This has been improved; the search filter now loads the same number of records as previously shown in the search filter dropdown.

Invalid Filename When Exporting Tables for A/R Entries

Deltek Tracking: 2075845

When exporting tables, users found that the default filename occasionally contained invalid characters. These characters are now stripped away.

Missing Option to Expand the Table Footer by Default

Deltek Tracking: 2075846

It was not possible to configure the table footer as open by default. This is now fixed; the **expanded** attribute for table footers is now available.

No Height Attribute for Embedded Rows

Deltek Tracking: 2075847

It is now possible to configure the minimal height in pixels of an embedded row.

Blinking Focus When Using Autofill From Browser

Deltek Tracking: 2079297

In some situations, the cursor would blink between various fields and leave the browser unresponsive. This error is now corrected.

Unsupported Field Type for Searches in Reference Workspaces

Deltek Tracking: 2083748

Several Job Cost reference workspaces used date fields as part of their primary search. This field type is not supported, so these searches are no longer based on date fields.

Statutory / BPM

User Information Universe: Incorrect Current User and Current Role Objects

Deltek Tracking: 2054563

In previous releases of Maconomy 2.6.2 after transitioning from BO Views to AX Views, the Current User object from the User Information universe displayed all user name and user role data instead of only the user name and user role of the currently logged in user. In addition, the Current Role object displayed the current user object value instead of the role name value. These errors are corrected.

Dutch Audit File: Excluded First Entry on Each Journal

Deltek Tracking: 2068872

Previously, the first entries of each journal beside the first journal were excluded from the <transactions> section on the generated report. This error is corrected.

People Planner

Number of Decimals Setting in People Planner

Deltek Tracking: 2071340

A feature introduced in People Planner 4.5 allowed for the **No. of decimals shown on posts** setting in the Admin tool to be overwritten by the functionality to derive local settings from Maconomy. This fix adds two settings to the Admin tool to enable you to choose when the number of decimals should be overwritten. These settings include:

- **Allow override of 'Number of decimals shown on amount values'**
- **Allow override of 'Number of decimals shown on posts'**

You can find these settings in **System Settings » Web Component**.

Unable to Export Project Manager Values

Deltek Tracking: 2082274

The values in the Project Manager column were missing when you exported information from the Web Components to an Excel spreadsheet. This error is corrected.

Import Actuals Error

Deltek Tracking: 2082797

Importing actuals would fail if the IIS OS had TLS 1.x disabled. This error is corrected.

Unable to Load Web Components

Deltek Tracking: 2085657

Users were unable to access the Budgeting Assistant, Progress Evaluation Assistant, or Resourcing workspace due to an error. This error is corrected.

Unable to Save Bookings

Deltek Tracking: 2088814

When you tried to save a booking using the Workspace Client or the IE browser, the application would freeze. This error is corrected.

Cumulative Update 03 – Jan. 26, 2024

Support Cases

- 2059248 – Cannot Create Lines in Data Import Packages
- 2065460 – Disable Draggable Field Values

Important TPU Notes for CU 3

There are no new TPU files for this release. Additionally, there is no need for a new Workspace Client. You should continue to use the Workspace Client from CU 02.

Important People Planner Notes for CU 3

Due to a security vulnerability, People Planner has updated a third-party dependency. As this dependency affects most of the People Planner assemblies, Deltek recommends full installation of this CU.

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU3 installation.

Software Issues Resolved – Application (APU)

Absence Allowance Error When Two Absence Calendar Lines for Same Employee Approved Concurrently

Deltek Tracking: 2062462

An employee may submit two or more absence calendar lines for approval. By error, Maconomy may approve both without accurately deducting the use of allowance for the absence type. The error occurs only when absence calendar lines are approved concurrently, such as by a background task. This error is now corrected.

Web Client Workspaces Use Incorrect Employee Container

Deltek Tracking: 2066687

Previously, in a few web client workspaces, the employee information box was based on an HR container. This means you can only get the information if you have HR access to the particular employee. This error is now corrected.

Software Issues Resolved – Technology (TPU)

Cannot Create Lines in Data Import Packages

Deltek Tracking: 2059248

Previously, you were unable to create data import package lines when a default import-as user was specified on the data import package. This error is corrected.

Execution Threads Cannot be Paused on SQL Server

Deltek Tracking: 2064072

For customers running SQL Server databases, it was previously not possible to pause a background task execution thread. This error is corrected.

Software Issues Resolved – BPM

Norway Tax Return: Multiplied Amounts Due to NSAFT Option List

Deltek Tracking: 2030172

Previously, when both the **NSAFT** option list and the **NSAFT-GL** option list were applied to the report, the data export displayed an amount that was multiplied when the Tax Code was mapped to only one option list, and only the **NSAFT** option list was considered for the report. This error is corrected.

Software Issues Resolved – Web

Disable Draggable Field Values

Deltek Tracking: 2065460

Browsers: Chrome, Safari, and Firefox

The ability to drag values from fields or table cells is now disabled. To reenable the old functionality, set the **draggableFieldValues** property in Settings.json to **true**.

Shared Record Was Sometimes Changed When Navigating Between Workspaces

Deltek Tracking: 2067222

Browsers: Chrome, Safari, and Firefox

Workspaces which use the *shared record* functionality (where the same record, for example, the same job, would stay selected when switching between workspaces) would lose the correct record selection after users navigated via internal links. This error is now fixed.

Autolinker Converted Texts Missing "www." Into Links

Deltek Tracking: 2063072

Browsers: Chrome, Safari, and Firefox

URL recognition in user-entered text is now more conservative. Simple strings like "deltek.com" are no longer recognized as URLs. However, strings such as "www.deltek.com" are still recognized and converted into links.

Software Issues Resolved – People Planner

Slow Retrieval of List of Failed Projects

Deltek Tracking: 2010710

When importing projects to People Planner, getting a list of the failed projects that need to be reimported took a long time. Performance improvements have been made to correct this.

Book Recurring Dialog Error in Windows 11

Deltek Tracking: 2024746

The Book Recurring dialog would not display if you were using the Edge browser in Windows 11. This error is corrected.

Unable to Display Today's Line in Web Components

Deltek Tracking: 2037093

In Resource Plans and the Resourcing Overview, the line for the current date would not display during the initial loading of the Web Components. This error is corrected.

Slow Import of Users

Deltek Tracking: 2042673

Users experienced slow performance when importing users to People Planner. Optimizations have been made to prevent this issue from occurring.

Cumulative Update 02 – Jan. 05, 2024

Support Cases

- 2062036 – Customer Not Allowed to Be Used as Template
- 2053197 – Unable to Save Analyzer Reports if “Login Name” Was Different From User Name

Important TPU Notes for CU 2

The Workspace Client from CU 2 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Important People Planner Notes for CU 2

To install this CU, you can apply it to an existing People Planner installation by running the 4.5-CU2 installation.

Software Enhancements – Application (APU)

New Standard Conversation Types

Deltek Tracking: 2046476

Previously, Maconomy supported only four conversation types, limiting customers in their ability to introduce conversations for various entities. Maconomy introduces an expanded set of standard conversation types to provide users with increased flexibility in managing and customizing their workspace. The following conversation types are now available in the Conversation Types workspace:

- Contact Company
- Customer
- Customer Payment
- Expense Sheet
- Job Budget
- Mileage Sheet
- Opportunity
- Time Sheet
- Vendor

The new conversation types are not enabled by default and are not included in any workspaces. Customers interested in using these conversation types must enable these and add them to workspace layouts using the extension framework.

Software Issues Resolved – Application (APU)

Customer Not Allowed to Be Used as Template

Deltek Tracking: 2062036

Previously, the Customer option was not allowed to be used as template customers show up in the search window when selecting parent customer in the Web Client. This error is corrected.

Software Issues Resolved – Technology (TPU)

Network Latency Performance Issue

Deltek Tracking: 2055276

A performance issue was identified when a Java extension set up a progress bar with frequent progress updates in the Workspace Client. Frequent progress updates on networks with high latency resulted in significant performance overhead and caused the tracked operation to run considerably slower than on a low-latency network.

Progress updates from Java extensions are now throttled to perform at most 1 update every 2 seconds. This ensures that any difference in network latency on these updates will only have a negligible impact on the performance of the tracked operation.

Specialization Error on System Messages

Deltek Tracking: 2057900

A serialization error in the Workspace Client communication protocol meant that active system messages were not displayed during login.

The error was not shown in the client UI, but an error message was written to the user-specific Workspace Client log file containing the text *"ERROR c.m.c.main.local.McMessageHandler - Error getting messages from server [...]"*.

This error is corrected.

Default Title for Calendar Navigation Incorrectly Referred to Fixed Field Name

Deltek Tracking: 2054771

The hardcoded reference to a "DateVar" field, used for showing a default title in workspaces which use calendar navigation, is now removed.

Dropdown Column Filters Exposed Other Fields That Should Not Be Shown

Deltek Tracking: 2056842

In the Workspace Client released with Maconomy 2.6.2 CU1, the entries displayed with enumeration dropdown fields in filter panes were too verbose. This is now corrected.

Email Address With .Law Domain Not Validated

Deltek Tracking: 2058452

When underlining links, the Workspace Client did not recognize certain email domains (for example, ".law"). This is now fixed.

Software Issues Resolved – Web

Job Transfer Workspace Used Card Layout Rather Than Wizard

Deltek Tracking: 2019403

Browsers: Chrome, Safari, and Firefox

The Job Transfer workspace is now aligned with other workspaces; it now utilizes a wizard for the central action (that is, **Approve Transfer**).

Error When Opening Wizard Led to Empty Window

Deltek Tracking: 2042241

Browsers: Chrome, Safari, and Firefox

If an error occurred while the web client was opening a wizard, the wizard window would display as blank and could not be closed. This is now fixed.

Users Not Associated With an Employee Unable to Log In

Deltek Tracking: 2050241

Browsers: Chrome, Safari, and Firefox

When a user with no employee number tried to log in to the web client, Maconomy displayed error messages. This is now corrected.

Unable to Save Analyzer Reports if “Login Name” Was Different From User Name

Delttek Tracking: 2053197

Browsers: Chrome, Safari, and Firefox

The Web Client Analyzer could not save analyzer reports if the current user's login and user names were different. This is now corrected.

Exiting Edit Mode When Highlighting Entire Values on Text Fields

Delttek Tracking: 2054565

Browsers: Chrome, Safari, and Firefox

When users clicked on a text field to edit it, highlighted the entire current value, and then moved their pointer outside of the containing group, the containing group exited edit mode. This issue is now corrected.

Replaced Non-ASCII Characters in Filenames of Uploaded Files

Delttek Tracking: 2061297

Browsers: Chrome, Safari, and Firefox

When users uploaded files with filenames that included non-ASCII characters, Maconomy replaced these characters with question marks. This error is now corrected.

Software Issues Resolved – People Planner

Error on People Planner REST API Response in MyPlan

Delttek Tracking: 2049382

If you were using a system with the default language set to Norwegian, an error occurred where the People Planner REST API could not convert the date and time values on MyPlan bookings. This error is corrected.

Imported Task Line Values for Subprojects

Delttek Tracking: 2055387

When you imported a main project and its subprojects to People Planner, the task lines of the subproject inherited the values from its main project. This error is corrected and task lines now inherit values from its parent project (which is the subproject).

Cumulative Update 01 – Dec. 01, 2023

Release Summary

New files released	Filesize	Checksum
apu.22.sp102.cu001.0629824.zip	1504418 KiB (1.4 GiB)	MD5: 589eb3d20cdaaeb3b97a28ceaa709759

Support Cases

- 2005063 – Error Message in Time Sheet Approval
- 2022316 – Rederive Employee Category on Timesheet Lines
- 2005388 – Incorrect Definition of Gross Margin % in Job Budgeting Universe
- 2043534 – Popup Container Specification Missing Fields

Important TPU Notes for CU 1

The Workspace Client from CU 1 is required for this update.

Deltek recommends that you always install the latest version of the Workspace Client in order to ensure compatibility with the most recent CUs.

Software Enhancements – Application (APU)

Taxes for On Account Reconciliation

Deltek Tracking: 2035328

This feature provides additional functionality to make it easier to calculate taxes for on account reconciliation. This includes the ability to remove the limit on the on account tax reconciliation and the ability to do split tax itemization.

Calculation of Tax on Account Reconciliation

This feature introduces a new way to calculate the tax on account reconciliation on a job invoice.

Maconomy's current calculation has so far applied an upper limit on the on account reconciliation so as to not reconcile more tax than what is invoiced. If, for example, you have 1000.00 net on account with 80.00 tax net on account and invoice T&M of 1000.00 with 60.00 in tax (so a lower tax rate than the invoice on account), then Maconomy would suggest an on account reconciliation of 1000.00 and 60.00 tax, leaving the invoice on account with an open amount of 0.00 and open tax of 20.00. The logic behind this has been that even though the full amount of 1000.00 is reconciled and the tax of the invoice on account is 8% in this example, the tax on account reconciliation is reduced to 60.00 so as to not produce a credit memo.

However, the disadvantages of this behavior are that (1) if you include an itemization of tax by tax rate then the line for the tax rate of 8% will show an amount of -1000.00 with tax -60.00, not -80.00 as you might expect, and (2) there is no easy way in Maconomy to credit an invoice on account that only has open tax.

This new feature allows you to disable this limit on the tax on account reconciliation. It is controlled with the new **Tax On Account Reconciliation limited by Tax of T&M** job parameter attribute. By default, the parameter's default value is **Yes**, which corresponds to the standard behavior on existing job parameters, as well as when you create a new job parameter. When the new attribute is set to **No**, Maconomy calculates tax on account reconciliation by applying the tax code(s) of the invoice on account that is being reconciled, without limiting it by the tax being invoiced T&M. The effect can be summarized as follows:

- The tax amount shown in the tax itemization will be what you expect from the tax rate.
- Approving invoice selection where total billing price is positive can generate a credit memo when the on account reconciliation is against on account invoices with higher tax rate than the T&M being invoiced.
- On account reconciliation will *not* give rise to invoices on account that have open tax but no open amount.
- If the WIP equals the amount net on account, you can print an invoice or credit memo which closes *both* the WIP and the invoices on account.

Separate Tax Itemization Lines for On Account Reconciliation

The tax itemization on job invoices presents the total amount and tax amount for each tax code. This includes on account reconciliation and can therefore be hard to interpret when there are multiple tax codes, such as when there is a transition from one tax rate to another. To improve this, you can now set up and configure Maconomy to present the tax itemization of the account reconciliation on separate lines.

This new functionality is enabled by setting the new **Separate Tax Itemization Lines for On Account Reconciliation** job parameter attribute to **Yes** on the relevant job parameters of the On Account Reconciliation type.

The prints for job invoices and job credit memos are extended with two new fields:

VATItemizationTextVar and **UseVATItemizationTextVar**. The first has one of two values that can be configured in Language Texts using the two records with **TaxItemization** in the **Key 1** field. The second, **UseVATItemizationTextVar**, is true or false and used in new original print layouts to control whether to use the existing layout for tax itemization or the new layout using **VATItemizationTextVar**. The **UseVATItemizationTextVar** field has the true value when the tax itemization has lines both for what is invoiced and lines for what is reconciled on account and when the feature is enabled.

The new original print layouts for Print Job Invoice and Print Job Credit Memo to use (or use as basis for custom layouts) have the **TaxItemizationText** internal name.

Note: This feature is currently not supported when you print draft invoices or draft credit memos.

Software Issues Resolved – Application (APU)

Error Message in Time Sheet Approval

Deltek Tracking: 2005063

Previously, approving a time sheet line that you have access to could be interrupted by an error message, "There is no access to Time Sheet (employee no.>,period start date>)" if you did not have access to the time sheet despite having access to the time sheet line. This error is corrected.

Error Message Appeared After Posting Previous Journal

Deltek Tracking: 2046515

Previously, an error "Data changed by another user" appeared when creating a new journal after the previous journal was posted. This error is now corrected.

Only Lines with Open Entries Option in Job Invoice Allocation

Deltek Tracking: 2015645

In the Job Invoice Allocation workspace, the **Only Lines with Open Entries** option is now located in the Entries tab to align with the layout of other workspaces in the web client.

Rederive Employee Category on Timesheet Lines

Deltek Tracking: 2022316

Maconomy can now rederive the employee category when creating timesheet lines. The **Always Rederive Employee Category on New Time Sheet Lines** system parameter is added to support this feature. This system parameter is disabled by default.

Unable to Save Purpose Field Value

Deltek Tracking: 2025913

When you applied selection criteria in the Surcharge Rules workspace, the value entered in the **Purpose** field was not saved as part of the selection criteria. This error is corrected.

Software Issues Resolved – Technology (TPU)

Workspace Client Occasionally Crashed While Rendering Tables

Deltek Tracking: 2032703

When users edited, scrolled through, or interacted with tables in the Workspace Client, the application would occasionally crash with an internal error. This issue is now addressed.

Popup Container Specification Missing Fields

Deltek Tracking: 2043534

When retrieving a popup container specification using the Maconomy RESTful Containers Web Service released with Maconomy 2.6.1, the list of fields included occasionally only mentioned the field value and not the fields ordinal and title (and from version 6.0, hidden). This led to Web Client issues. The abbreviated popup container specifications were only meant to be utilized by the Workspace Client but a shared cache made them occur in the REST API as well. This error is corrected.

Missing Endpoints for Kerberos SSO Negotiation

Deltek Tracking: 2031641

The authentication requirement mistakenly removed from the root resource of version 1 of the Authentication Web Service is re-added. Furthermore, in version 2.1 of the Authentication Web Service, an endpoint is added to the root resource. This allows the client program to similarly trigger negotiations in a Kerberos SSO system. The new endpoint is referred to by an auth:login hyperlink and is described in more detail in version 2.7 of the Programmer's Guide for the Maconomy RESTful web services.

Software Issues Resolved – BPM

Incorrect Definition of Gross Margin % in Job Budgeting Universe

Deltek Tracking: 2005388

Previously, the Gross Margin % object had an incorrect definition so if the billing price was zero, it resulted to a database query error stating "Divisor is equal to zero...". This error is corrected.

Software Issues Resolved – Web

Edited Fields Modified by the Backend Upon Saving Reflected Incorrect Values

Deltek Tracking: 2032428

Browsers: Chrome, Safari, and Firefox

When users edited a table field and the server updated that same field's value upon saving, the web client would display the incorrect value for the field. This error is now fixed.

Error When Navigating Back to Main Menu

Deltek Tracking: 2046529

Browsers: Chrome, Safari, and Firefox

When you navigated back to the main menu from a workspace listed under a submenu, the scroll bar would move to the top of the menu. This is now corrected. The scroll bar now remains where you last placed it.

Users Could Not Reset Password When 2FA Was Enabled

Deltek Tracking: 1973431

Browsers: Chrome, Safari, and Firefox

Users can now reset their passwords even when 2FA is enabled on their application.

About Deltek

Better software means better projects. Deltek delivers software and information solutions that enable superior levels of project intelligence, management and collaboration. Our industry-focused expertise makes your projects successful and helps you achieve performance that maximizes productivity and revenue. www.deltek.com
