BOE Pro 3.6.101.0 Release Notes

Release Date: December 17, 2025

Welcome to the **BOE Pro 3.6.101.0 Release Notes**, which describe the new features, enhancements, and fixes introduced in this release.

New

- An AI-powered formula generation feature has been introduced to improve the formula confirmation process. This enhancement automatically deselects invalid formulas, renames them for clarity, and suggests appropriate resources based on formula content.
- A new auto-numbering feature for PBS elements and tasks has been added, allowing automatic assignment of sequential numbers based on proposal hierarchy. This feature is controlled by a toggle in the proposal settings, and it dynamically updates as users reorder elements.
- A new single bulk import functionality has been implemented for managing the PBS, RAM groups, and workflow assignments. This feature streamlines the process of setting up proposal structures and includes detailed process reports for error handling.
- A new feature has been added to allow setting default values for custom task fields. Users can now designate a single default value for each custom task field, which automatically populate when creating new tasks.
- Global resource field support has been enhanced to ensure all default field values are loaded with each proposal and available for CER calculations. This update maintains data integrity while allowing administrators to control field visibility and editability.
- The BOE Pro text editor has been upgraded to use Lexical editor technology, improving support for tables, fonts, and formatting. This update ensures consistent formatting when copying from Microsoft Word documents, submitting to ProPricer Contractor Edition, and printing proposals.
- BOE Pro 3.6.101.0 is compatible with ProPricer Contractor Edition 9.6.101.0 and Authorization Server Pro 3.6.101.0.

Enhancements

- A new Access All Proposals permission is available for user roles. This permission automatically grants users access to all proposals and proposal templates in the system, simplifying access management for high-visibility roles.

Fixes

- ProPricer Contractor Edition no longer allows tasks and task-level BOE text from BOE Pro submitted proposals to be changed in that application. For these tasks, the BOE text and

attachments, BOE Source, and PBS level summary field are now read-only in ProPricer CE.

- Resolved an error that occurred when attempting to submit a proposal using the Add with New Version option.
- Fixed an issue where BOEs could not be finalized when the BOE Validation Step was defined in the workflow.
- Resolved a problem where the instruction box in the External System Integration settings would resize unexpectedly after pressing enter.
- Corrected an issue where BOEs remained locked after syncing with ProPricer Contractor Edition, even when data was modified.
- Fixed incorrect validation message titles when entering wrong ProPricer Contractor Edition credentials.
- Corrected the display of the Find/Replace BOE Sections Text option in the proposal breadcrumb menu to ensure it is fully visible.
- Fixed an issue where the Apply button in Workflow settings was clearing BOE Section and Estimates Validation steps unintentionally.
- Corrected the behavior of BOE Section and Estimates validation step options to prevent editing before workflow grid changes are applied.
- Resolved a problem where copied tasks with estimates were not displaying the estimates until the page was refreshed.
- Fixed an issue where long names were breaking the breadcrumb look and feel.
- Implemented trimming of blank spaces at the beginning and end of proposal names, consistent with ProPricer Contractor Edition behavior.
- Corrected the display of Total Non-Labor Cost Not Assigned in the Total Hours/Units/Cost Summary grid to show accurate values.
- Fixed an issue where chart labels with maximum character length were overflowing outside the chart area instead of being truncated in the Workflow Progress view.
- Removed the RAM administrator validation that was restricting the Add button for PBS elements and Tasks in BOE View and Estimates View.
- Corrected a formula error in BOE View that was incorrectly handling decimals without lead numbers.
- Fixed an issue where filtering the RAM assignment list was inadvertently removing all users from the selection.

- Corrected the Group by Assigned column in the CERs grid to display Yes/No instead of True/False.
- Added the missing close button after using the Get CER Data function in BOE View and CER View.
- Fixed an issue where the delete icon remained enabled after deleting an estimate in the Estimate List.
- Resolved the display of double lock and unlock BOE icons when creating PBS elements and tasks in BOE View.
- Fixed a continuous loading issue in CER View when removing access to CER Task Assignment in permissions.
- Corrected the grammar in RAM tooltips to use “have” instead of “has” when referring to multiple users.
- Removed Estimate Redistribution (ER) results from the list of options to choose from in Estimate Redistribution.

Tech Debt

- The BOE Pro Help website is now available in the Deltek Learning Hub (DLH). It is accessible from the menu in BOE Pro.
- The breadcrumb menu has been updated to implement improved resizing functionality.
- Token Refresh and Inactivity Timeout features have been implemented to enhance security and user session management.
