

## Coming soon: A New and Improved User Interface!

Costpoint 7 introduced a modern technology platform that you have been able to take advantage of in recent years. During that time the platform has allowed Deltek to deliver several new modules and 1000s of new features to industry. While these capabilities unlock efficiencies and solve key problems for our customers there has been a rising call to focus on the daily interactions of your broader user base. The expectation is higher than ever for a modern user experience that is on par with the powerful features and technology of Costpoint. We have heard you and have been investing in an evolved Costpoint user experience to make the solution more intuitive and productive than ever before. As we engage with you and your peers it has become increasingly important that we focus on making Costpoint easier to use, learn, and master so that your company and your employees can maximize the investment you have made in Costpoint. We are excited to announce the next phase in our journey together to improve the Costpoint user experience and in doing so make your users more productive. After listening to all of the feedback we believe this focus on improving the user experience will not only make your users more productive but will help you attract and retain the top talent that is so vital to your business.

### Commitment to Improving the Costpoint User Experience

Deltek is committed to ensuring that every user has a positive experience using Costpoint. We have invested in a team of usability experts dedicated to finding ways to continually improve the experience for our users. We will release improvements incrementally, over time, as part of the Costpoint continuous delivery model. In the future you can expect to see an improved user experience on your desktop and mobile device, with new dashboards, visualizations for easier navigation, and reduced clicks. The first phase of these changes will include a new, modern user interface (UI) that will improve your experience working within Costpoint.

### What is included in the first phase?

Later this year, we will be releasing several improvements to the Costpoint user interface (UI). These changes are intended to bring focus to what is most important to our users in the moment, making it easier and more efficient to navigate the system. For example, we will be introducing new color, background and icon styles to highlight where you are in the system and actions available to complete. These improvements will also provide users with a cleaner, crisper and modern looking interface. With this first phase, in order to minimize the amount of change management within your organization, we are not changing any of the functionality for your users – only look and feel is changing. Below is an example of the changes you can expect to see in the coming months.

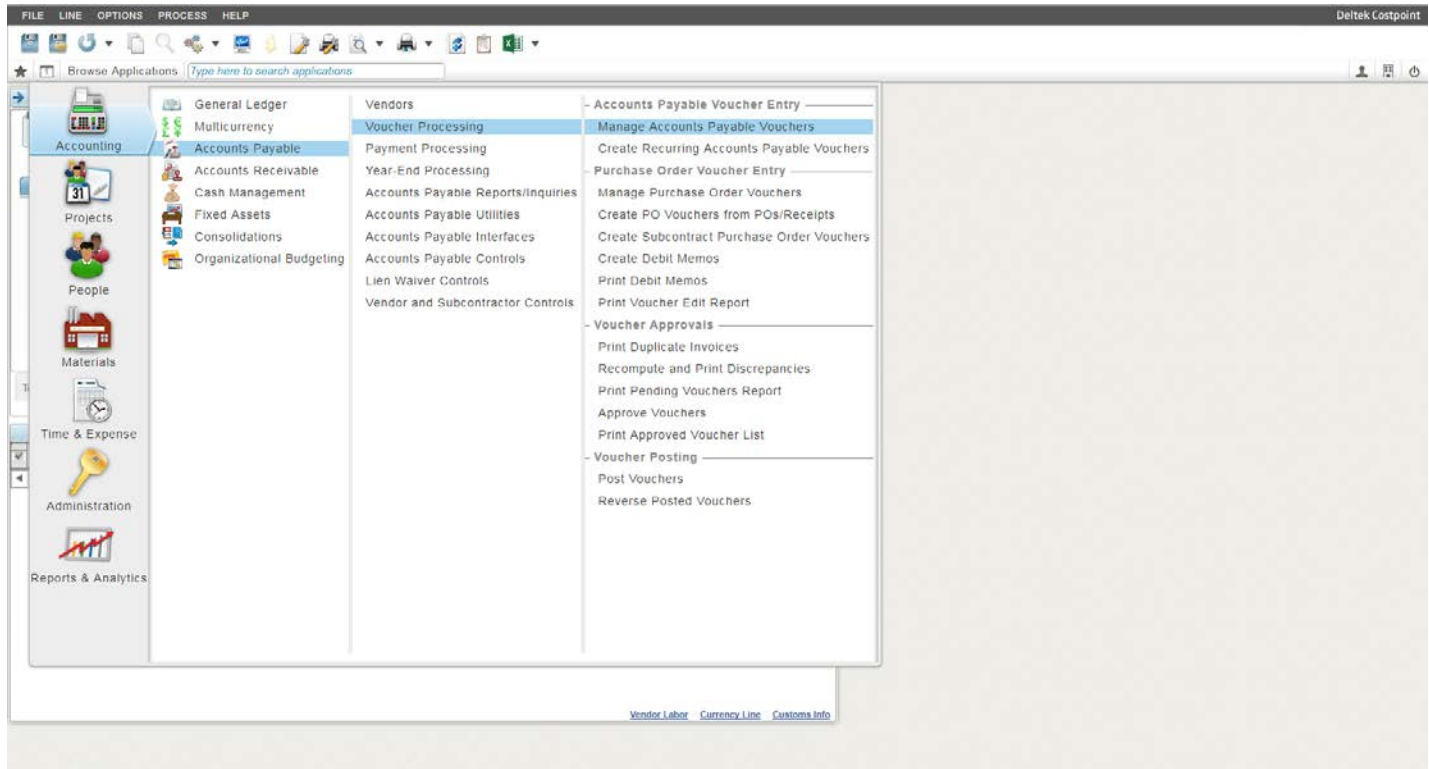

### When should I plan for the improved user interface?

Scope and dates are subject to change but the user interface improvements are targeted to be released this summer. Keep an eye out for future updates including release dates, videos and FAQs via your Costpoint Cloud Portal and [Deltek Support Center](#).

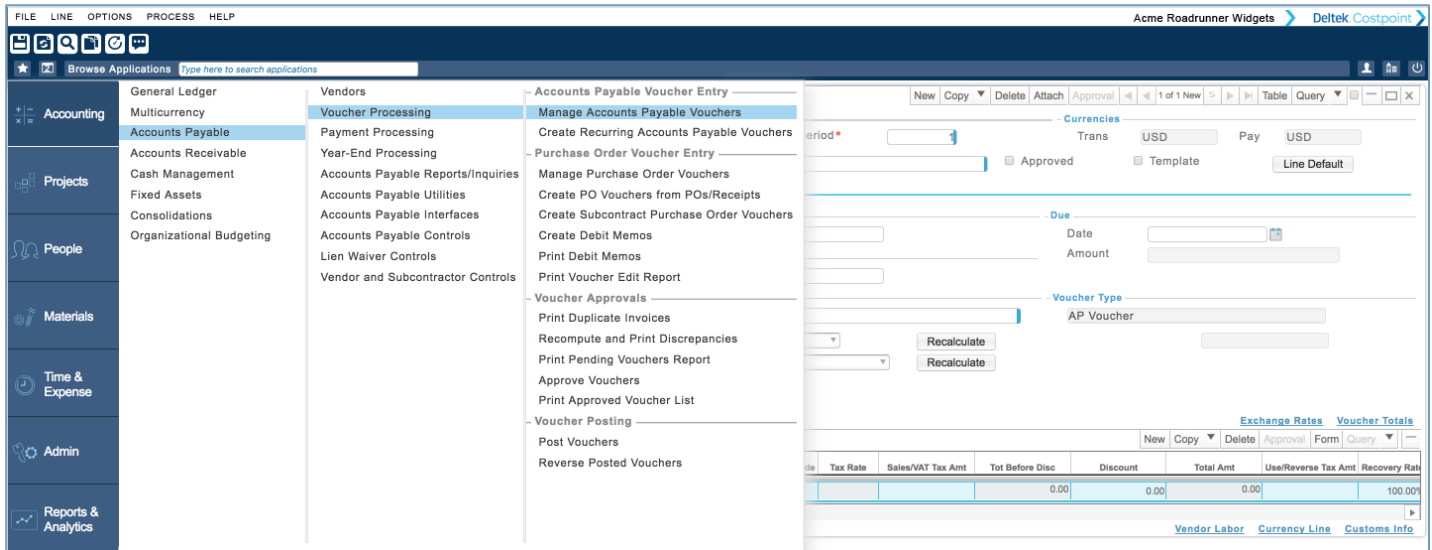

## Ready for a sneak peak?

A picture is worth 1,000 words so we thought it was important to give you a preview of what the new experience within Costpoint will look like. Our intention is to both modernize the user experience but minimize the impact on your user community.
