Overview

Costpoint 7 introduces an enhanced security framework. This framework requires a different setup for users and user groups than the one used for Client/Server users in earlier versions of Costpoint. Security data is stored in a different set of tables.

A Costpoint 6.x Client/Server user cannot log into Costpoint 7 until the user has been recreated in Costpoint 7. To simplify the task of re-creating users and user groups, Deltek has developed the Migrate Users Utility.

The utility lets you:

- Migrate users and user groups
- Migrate user and user group rights
- Reset Costpoint user passwords or assign new passwords to users who do not have any

You do not need to run this utility or migrate/recreate the security setup for users or user groups that were created in the Costpoint 6.x Web version. Setup for these users/user groups will be preserved during the upgrade to Costpoint 7.

The Costpoint menu structure has been improved in version 7. Several new modules have been added and some existing applications are now part of different modules. Therefore, you will need to review all users' module/application rights after user migration.

For a full listing of these changes, see [Appendix C: List of Applications That Were Moved between Costpoint 6.x and 7.0.](#)

When to Use the Migrate Users Utility

The Migrate Users Utility can be used either immediately after the upgrade to Costpoint 7.0 or later, at any point when an administrator needs to move additional users from the Costpoint 6.x Client/Server database to Costpoint 7. The process of migrating users, groups, and user rights can be done at one time for all users or incrementally over time as additional groups in the organization are migrated to Costpoint 7. Also, an administrator can always create new users directly through Costpoint 7. Using the Migrate Users Utility is not mandatory; although, it should make the migration process easier.

Administrators are encouraged to learn about the new security features in Costpoint 7—in particular, the ability to assign a user to multiple groups—before migrating or creating users.

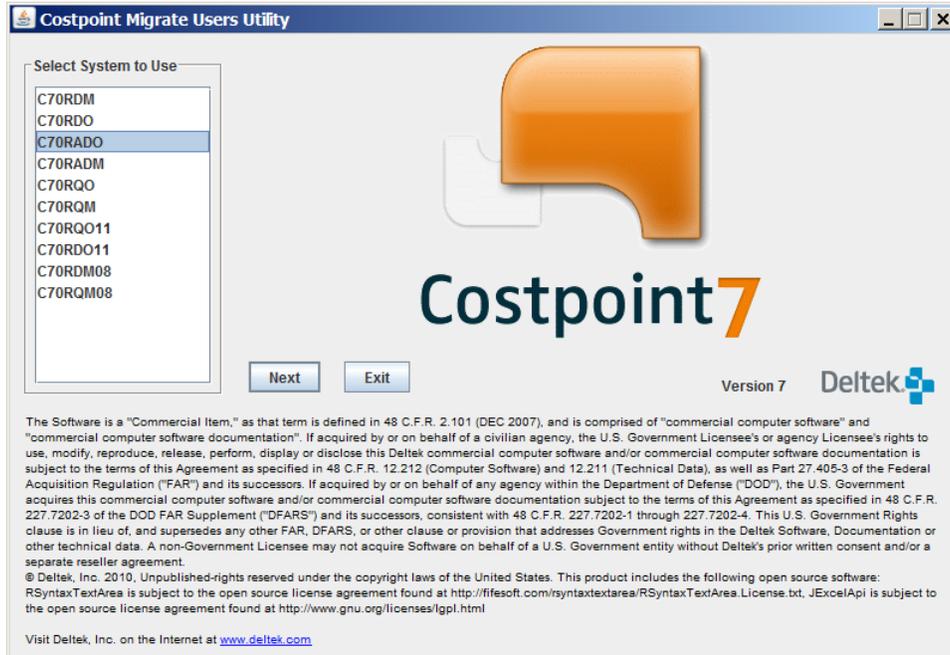

For Additional Information

Refer to the Appendices at the end of this guide for additional information:

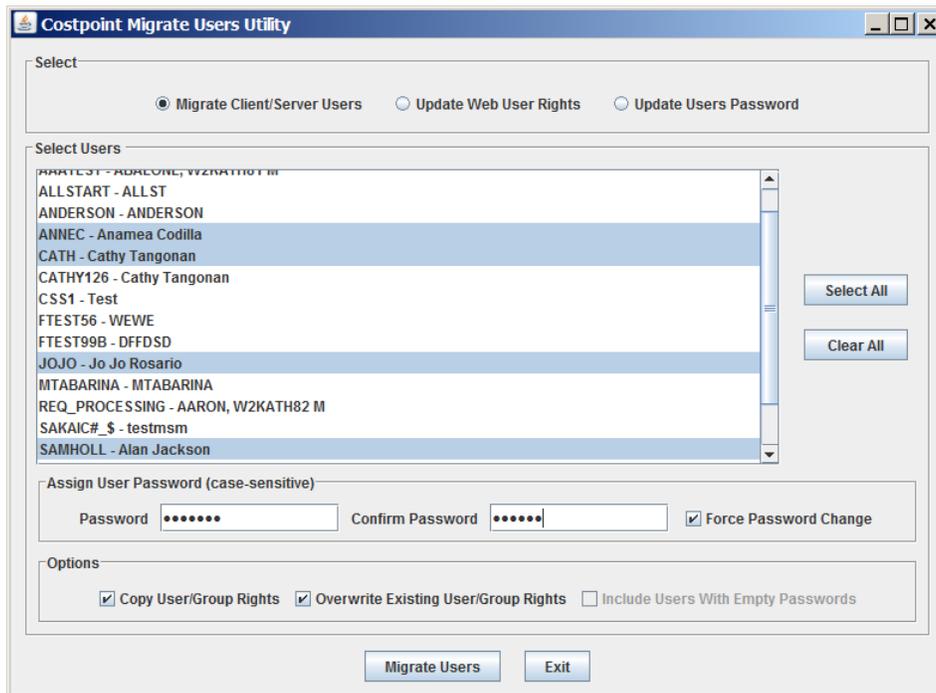

- Appendix A: User Group Rights Conversion Matrix — How user group rights are translated from Costpoint Client/Server to Costpoint 7 during the migration process
- Appendix B: User Rights Conversion Matrix — How user rights are translated from Costpoint Client/Server to Costpoint 7 during the migration process
- Appendix C: List of Applications That Were Moved between Costpoint 6.x and 7.0

Migrate Users

1. Run the **CPWebMigrateUsersUtility.cmd** batch file. It should be located with the other Costpoint command files in the \deltek\costpoint\71\bin folder.
2. Select the system that you want to use for the migration, and click **Next**.

3. Select the **Migrate Client/Server Users** option at the top of the screen, and then select the user(s) that you want to migrate.

You can **CTRL+click** on the list to select specific names, or you click **Select All** to select the entire list

4. In the **Assign User Password** section, enter a password for the users in the **Password** field, and re-enter the password in the **Confirm Password** field. This password gives users access to Costpoint 7. If you don't provide a password on this screen, you will need to assign a password to each user later, before the user can log into Costpoint 7.

You can also use the **Maintain User** application in Costpoint 7 to set up and change user passwords.

5. (Optional) Select the **Force Password Change** check box to force users to change their passwords after their first login.
6. (Optional) Select **Copy User/Group Rights** if you want to migrate the rights associated with users and the user groups to which they belong. If you select this option:
 - A user's individual rights from Costpoint Client/Server will be copied to the same user in Costpoint 7.
 - A user group's rights in Costpoint Client/Server will be copied to the same user group in Costpoint 7.

Review the appendices at the end of this document for more details about how data is migrated.

7. (Optional) Select **Overwrite Existing User/Group Rights** if you want to overwrite already existing user rights and user group rights on the Costpoint 7 side. If you select this option, the first step in the migration process will be to delete any rights that exist on the Costpoint 7 side.

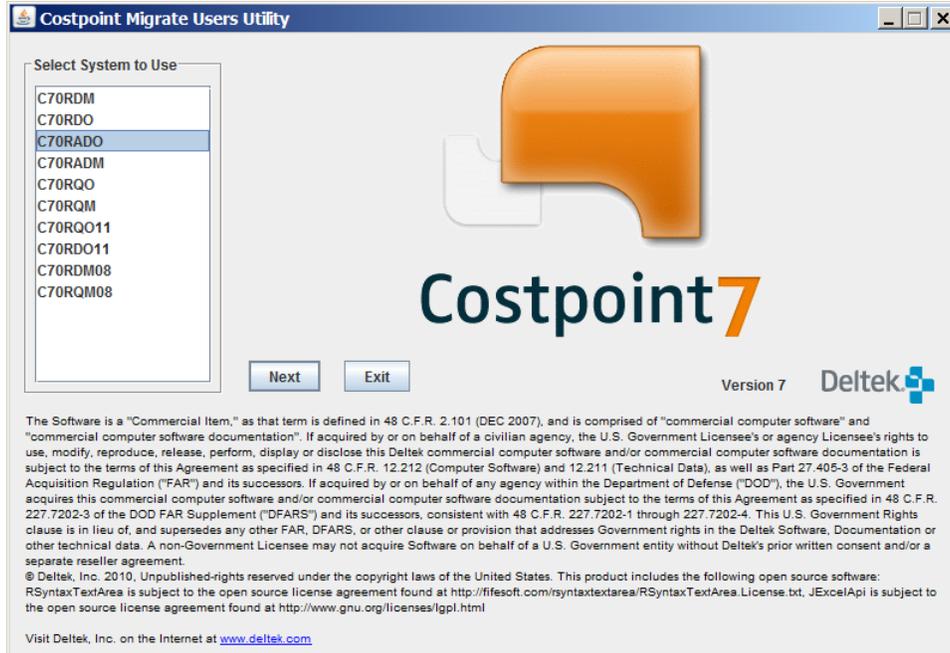

Be careful when you use this option because you may inadvertently reset and refresh group rights. For example, assume that users A and B both belong to Group X. User A was migrated earlier and now you are ready to migrate user B. Selecting this option means that the rights for Group X will also be reset and refreshed, affecting user A.

Review the appendices at the end of this document for more details about how data is migrated.

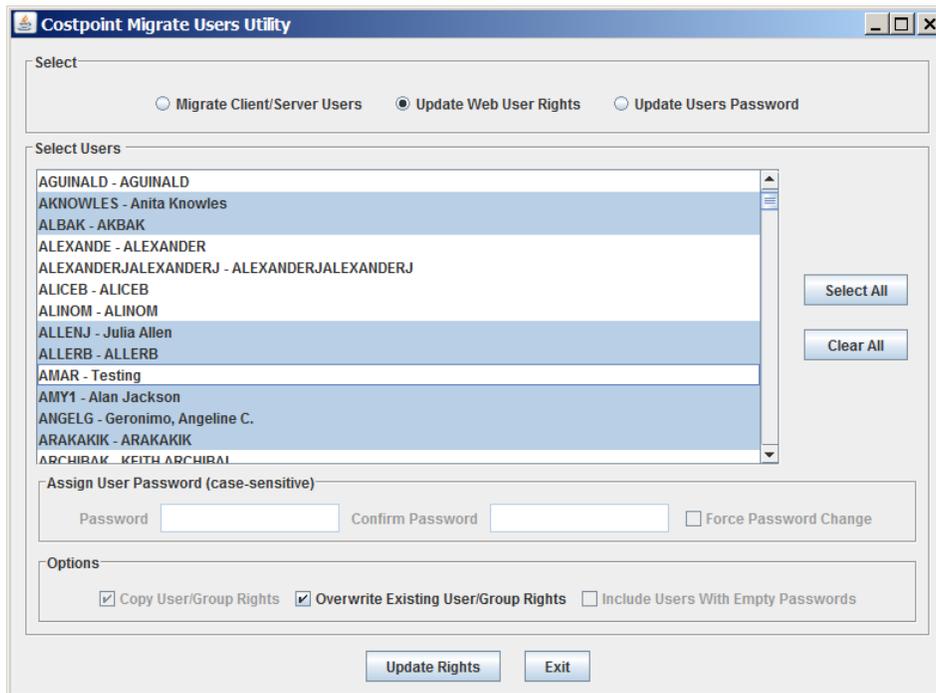

8. Click **Migrate Users**.
9. Click **Exit**.

Update Rights

1. Use the command file CPWebMigrateUsersUtility.cmd to start the utility.
2. Select the system that you want to use, and click **Next**.

3. Select the **Update Web User Rights** option at the top of the screen. This option is useful if additional user rights or group rights have been assigned to a Costpoint Client/Server user and you wish to update the Costpoint 7 user with these additional rights.

4. Select the user(s) whose rights you want to copy from Costpoint Client/Server.

You can **CTRL+click** on the list to select specific names, or you click **Select All** to select the entire list

5. (Optional) Select **Overwrite Existing User/Group Rights** if you would like to overwrite already existing user rights and user group rights on the Costpoint 7 side. If this is the case, the first step in the migration process will be to delete the rights on the Costpoint 7 side.

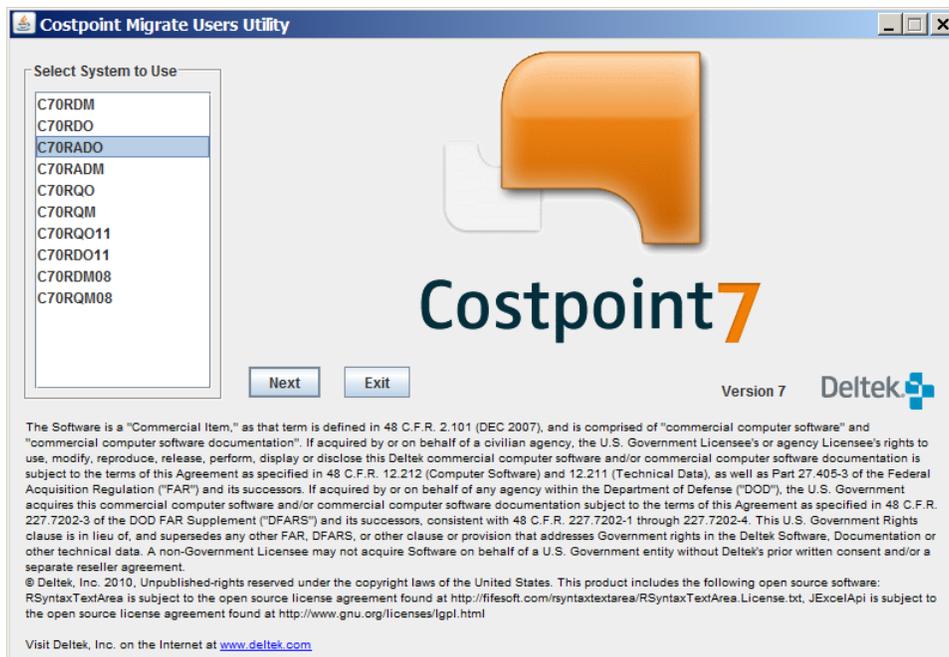

Be careful when you use this option because you may inadvertently reset and refresh group rights. For example, assume that users A and B both belong to Group X. User A was migrated earlier and now you are ready to migrate user B. Selecting this option means that the rights for Group X will also be reset and refreshed, affecting user A.

Review the appendices at the end of this document for more details about how data is migrated.

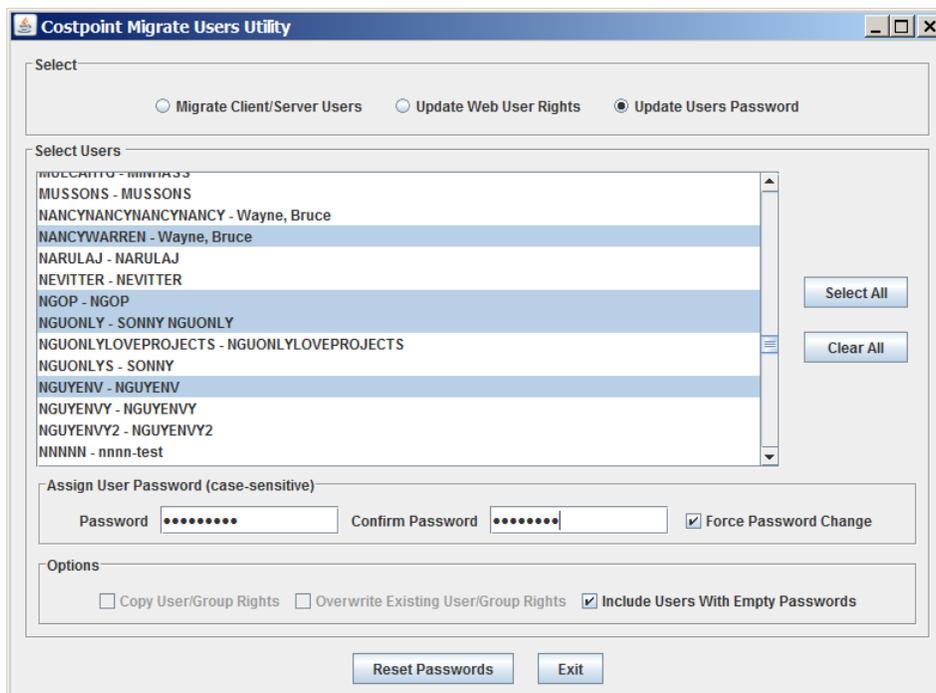

6. Click **Update Rights**.
7. Click **Exit**.

Reset and Assign User Passwords

1. Use the command file CPWebMigrateUsersUtility.cmd to start the utility.
2. Select the system that you want to use, and click **Next**.

3. Select the **Update Users Password** option at the top of the screen.

4. Select the user(s) who need their passwords reset or assigned.

You can **CTRL+click** on the list to select specific names, or you click **Select All** to select the entire list

5. In the **Assign User Password** fields, enter a password for the users in the **Password** field, and re-enter the password in the **Confirm Password** field.

You can also use the **Maintain User** application in **Costpoint 7** to set up and change user passwords.

6. (Optional) Select the **Force Password Change** check box to force users to change their passwords after their first login.
7. (Optional) Select **Include Users with Empty Passwords** if you would like to reset the password for all users with blank passwords, not just those users you selected.
8. Click **Reset Passwords**.
9. Click **Exit**.

Data Transferred by the Utility

The Migrate Users Utility follows these rules to transfer data.

- Data from the following tables is transferred:

From Costpoint 6.1	To Costpoint 7.0
USER_ID	W_USER_UGRP_LIST
USER_COMPANY	W_USER_COMPANY
USER_GRP*	W_USER_GRP_USERS
USER_MRIGHTS_OVRD*	W_MODULE_RIGHTS
USER_RIGHTS_OVRD*	W_APP_RIGHTS
USER_GRP_MRIGHTS*	W_MODULE_RIGHTS
USER_GRP_RIGHTS*	W_APP_RIGHTS

*Data is transferred only if you selected the **Copy User/User Group Rights** option.

- The Client/Server groups **ALL**, **SETUP**, and **EVERYONE** are not copied.
- A user is automatically assigned to the group **EVERYONE**.
- User Client/Server group(s) are transferred only if you select the **Copy User/User Group Rights** option.
- A user will be assigned to the Client/Server group only if you select the **Copy User/User Group Rights** option.
- Client/Server application/module rights are transferred only if you select the **Copy User/User Group Rights** option and either one of the following is true:
 - The user does not have any rights already set up in Costpoint Web.
 - The **Override Existing Rights** option is selected.
- If a user already exists in Costpoint 7 and you select the **Copy User/User Group Rights** option, only user rights will be copied. User preference data entered through Costpoint Web (either in Costpoint Web 6.1 or Costpoint 7) will be retained.
- If you select the **Copy User/Group Rights** option:
 - A user's individual rights from Costpoint Client/Server are copied to the same user in Costpoint 7.
 - A user group's rights in Costpoint Client/Server are copied to the same user group in Costpoint 7.

If you select both the **Copy User/User Group Rights** and **Override Existing Rights** check boxes, the Migration Utility will remove Costpoint 7 users who are already assigned to the same user group. **This is the expected behavior.**

The contents of a group (users assigned to a group) are treated as part of overall security rights; therefore, if you select **Override Existing Rights** during user migration, **all** security rules for migrated users will be overwritten, including group content.

- In Costpoint 7, a number of applications were moved from one module to another. During the migration process, the utility will add an additional rights row(s) for such applications to the user (or user group) if the rights row(s) for the applications do not already exist.

For a complete list of applications that moved between modules, see [Appendix C: List of Applications That Were Moved between Costpoint 6.x and 7.0](#).

- For example, the Set Up Sales Group Abbreviations (PDMSALES) application was moved from the Product Definition (PD) module to the Sales Order Entry (OE) module. If a user had read-only rights to the PD module in Costpoint Client/Server, then during the migration (in addition to a module row), a new application-level rights row will be created to grant the user rights to the Set Up Sales Group Abbreviations(PDMSALES) application.
- The System Administration (SY) module was split into two modules: SY and Security (SS). During the migration process, the utility will create two module rows (one for SY and one for SS) for each SY module rights row for each user (or user group) that had rights to the SY module in Costpoint Client/Server. In addition, the Product Interfaces (AO) module was eliminated and all applications were reassigned to other modules. Therefore, any existing AO module rights will be converted into rights rows for individual applications.

Appendix A: User Group Rights Conversion Matrix

This table illustrates how user group rights are translated from Costpoint Client/Server to Costpoint 7 during the migration process.

Client/Server (CP 6.1)		Costpoint 7	
Module Rights	Application Rights	Module Rights	Application Rights
Full		Full	
Read-Only		Read-Only	
Partial		No Row Created	
	Full		Full
	Read-Only		Read-Only
	No Rights		No Row Created
	No Row		No Row Created
Partial - Optimistic		No Row Created	
	Full		Full
	Read-Only		Read-Only
	No Rights		Deny
	No Row		Full
No Rights		No Row Created	

Appendix B: User Rights Conversion Matrix

This table illustrates how user rights are translated from Costpoint Client/Server to Costpoint 7 during the migration process.

Client/Server (CP 6.1)		Costpoint 7	
Module Rights	Application Rights	Module Rights	Application Rights
Full		Full	
Read-Only		Read-Only	
Partial		No Row Created	
	Full		Full
	Read-Only		Read-Only
	No Rights		Deny
	No Row		Deny
Partial - Optimistic		No Row Created	
	Full		Full
	Read-Only		Read-Only
	No Rights		Deny
	No Row		Full
No Rights		No Row Created	

Appendix C: List of Applications That Were Moved between Costpoint 6.x and 7.0.

This table lists applications that were moved from one module to another in Costpoint 7 (as compared to the Costpoint 6.1 Client/Server version).
