About this Guide

Welcome to the Costpoint Business Intelligence 8.2.15 Setup Guide for Costpoint Cloud Customers.

This guide is used after you receive administrative rights to Costpoint BI and will walk you through the initial setup of Costpoint BI so your environment is secured before you allow users into Costpoint BI to run and create reports and Dashboards and leverage the built-in security features in Costpoint Business Intelligence.

Prerequisites

Before you can complete the procedures described in this guide, you (logged in as your Costpoint Administrator) should have received Costpoint Access from Deltek and access to applications related to Costpoint Business Intelligence (ERCOGNOS) which are Manage BI Settings (BIMCERSETTINGS) and Manage Current Reporting Period (BIMRPTCURPD).

These BI-related applications are located in:

- **Reports & Analytics** » **Business Intelligence**
- **Reports & Analytics** » **BI Controls** » **Manage BI Settings**
- **Reports & Analytics** » **BI Controls** » **Manage Current Reporting Period**

Overview

In the post provisioning phase, we explain the new security design and how to set up your users to establish the appropriate security settings for your organization.

The steps in the setup phase are:

- Check the Model Security Configuration
- Complete the Capabilities Security Template
- Complete the Object Security Template
- Complete the Security Template
- Assign Users to Costpoint User Groups
- Set Up Current Reporting Period
- Copy the Smart AI Folder to Company Content
- Validate User Groups
- Have Users Run and Validate Reports
- Check extensions

Check the Model Security Configuration

The Costpoint, Costpoint Planning, and TE Model security are enabled by default. If you do not want to apply it, you can disable model security in Costpoint's Manage BI Settings (BIMCERSETTINGS) screen. The best practice is to keep the model security on.

Note: Skip this procedure if you want to use model security for your Costpoint Business Intelligence implementation. Remember that model security utilizes settings in Costpoint, Costpoint Planning, and/or T&E. If model security is set to Yes, you must have the necessary setup in place to retrieve any data using the models that have data-level security. For example, when Costpoint model security is enabled, each user must have an assigned organization security group, Time & Expense requires functional roles, and Planning has its own security setup. In addition, parts security is always applied in Business Intelligence when it is used in Costpoint regardless of whether model security is enabled or not.

To disable Model Security:

1. Log in to Costpoint and launch the Manage BI Settings (BIMCERSETTINGS) screen (**Reports and Analytics** » **BI Controls** » **Manage BI Settings**).
2. Select **No** in the corresponding fields where you want to disable security.

Field	Description
Enable CP and Planning Model Security	Select **No** to disable model security for the Costpoint and Costpoint Planning models. Model security is enabled by default. **Note:** If you select **No**, only Model Security is disabled. Capability and Object Security are still in place in Costpoint Business Intelligence. If Parts Security is applied in Costpoint, they are implemented as well regardless of the settings for model security.
Use CP Organization Security By Module	Select **No** to disable organization security in the new secure models which are: ▪ Accounts Receivable ▪ Accounts Payable ▪ Employee ▪ General Ledger ▪ Labor ▪ Manufacturing ▪ Materials ▪ Procurement ▪ Projects ▪ Subcontractor
Use Project Roles Security	Select **No** to disable project roles security.
Enable T&E Model Security	Select **No** to disable model security for the Time & Expense model.

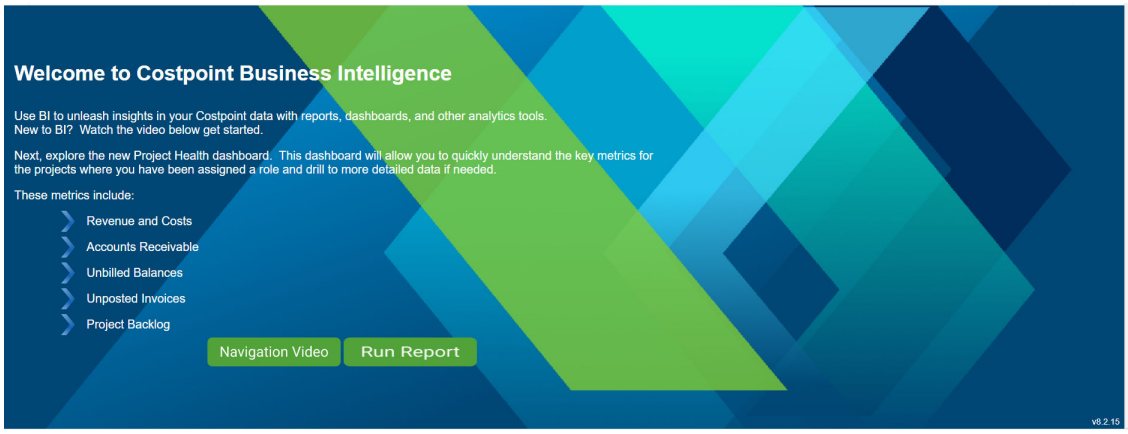
3. Click **Save**.

Assign Costpoint Business Intelligence Rights to the Administrator

In order to access Costpoint Business Intelligence, the Administrator will need to be assigned to CER groups in Costpoint Security.

It is recommended that you as Administrator assign yourself initially to CER__Admin and then to CER__ALL.

You as Administrator should then open Business Intelligence to make sure you can access the initial Costpoint Business Intelligence Welcome Screen.

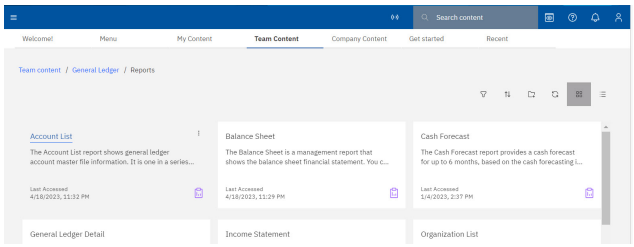


Note: You will see the Costpoint BI version displayed on the lower right-hand side of the Welcome screen.

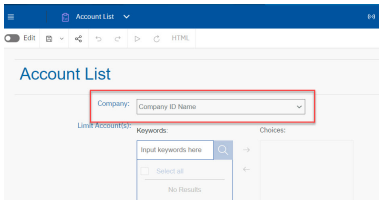
Then, click the **Team Content** tab, and you should see the full content.

Then, run a report to ensure that you can access Costpoint data. Here is how you can run an Account List Report:

First, navigate to the report. In **Team Content**, click **General Ledger** » **Reports** » **Account List**.



Then, select the **Company** from the Prompt Page and click **Finish**. The resulting report will show your account structure and validates you are connecting to your Costpoint data.



Now, you are ready to add functional users for Capabilities, Object, and Project Role Security, where applicable. There is a spreadsheet that accompanies the documentation that makes it easier to set up your user.

Capability Security

For each Costpoint BI or CER user role, a set of capabilities are assigned that designate the secure features or functions that an end user can perform.

There is a Costpoint BI user role included in your deployment for each Deltek license type. The table below displays the key functions available with each of the licenses.

Costpoint BI User Role Capabilities

Component	CER Consumer*	CER User*	CER Advanced Lite	CER Advanced User*	CER Developer	CER Web Admin	CER Cloud Admin
Interactive Viewer - Running, Viewing, and Subscribing to Reports	•	•	•	•	•		•
Running and Viewing Dashboards	•	•	•	•	•		•
Authoring Dashboards		•	•	•	•		•
Using AI Assistant		•	•	•	•		•
Using Explorations			•	•	•		•
Interactive Report Authoring			•	•	•		•
Using Event Studio			•	•	•		•
Creating Data Modules				•	•		•
Creating Data Sets				•	•		•
Uploading Excel				•	•		•
Creating Custom SQL				•	•		•
Using Framework Manager					•		•
Using Administration Console						•	•

CER Consumer* - Legacy license

CER User* - Only sold with bundles

CER Advanced User* - Customers can assign a regular or lite version of the CER Advanced User

Note: The CER Consumer user has the least rights, basically someone who can only run and interact with existing reports and dashboards. While you may not own this type of license and have CER Users **(in Bundles)** instead, you can use CER Consumer group to limit the capabilities of CER Users who you do not want to create dashboards. The total # of users in CER Consumer and CER User groups should not exceed the purchased licenses for CER User. This CER Consumer user is also not allowed to copy or move content. However, they can create views and shortcuts of objects in alternate locations..

Likewise, you can allocate CER Advanced users to the group CER Advanced Lite to restrict users from creating Data Modules and Data Sets, uploading Excel files, and creating Custom SQL. Again, the total users in the two groups cannot exceed the purchased licenses of CER Advanced Users.

Costpoint cloud customers own the Advanced Costpoint Business Intelligence Bundle where the:

- Total number of licenses matches the number of employees in the Costpoint license
- 95% of users are CER users
- 5% are CER Advanced users
- Plus 1 CER Administrator
- Additional licenses can be purchased on an a la carte basis. Additional user licenses typically bought, are CER Web Administrator or CER Developers.

For Costpoint on-premises or those who use a hosted environment, there are a la carte licenses available in addition to the Costpoint Business Intelligence Bundle.

- A la Carte Licenses:

- Advanced CER Users
- CER Developers
- CER Web Admins
- CER Administrators
- A la Carte Licenses can be purchased as Restricted or Full Use
  - Restricted: Deltek Data Sources Only (Excel data as a source is allowed)
  - Full Use: Other 3rd Party data can be used as data sources

License Types

Every Costpoint Business Intelligence user should be assigned to one Costpoint BI user role based on the functions they can perform and the license purchased. Costpoint BI roles are depicted by the prefix CER.

The Security Planning Template has been provided for planning your capability security to help ensure license compliance.

- **Consumer (CER__CONSUMER):** This user has the least rights, basically someone who can only run and interact with existing reports and dashboards. While you may not own this type of license and have Costpoint BI users instead, you might want to limit the capabilities for some individuals who you do not want to access dashboards. CER Consumer users are not allowed to copy or move content. Instead, they can create views and shortcuts of objects in alternate locations.
- **CER User (CER__USER):** This user is someone who can run and interact with reports and can also create dashboards.
- **Advanced CER User (CER__ADV):** In addition to the capabilities of the Costpoint BI user, this type of user can create and share reports using interactive authoring and access the data module. **Advanced CER User Lite (CER__ADV_LITE)** is also available and is similar to **Advanced CER User**, but with some limited capabilities such as the inability to use data modules, upload MS Excel, and create SQL.
- **CER Developer (CER__DEV):** This type of user is not included in the typical Costpoint BI bundles but can be purchased separately. In addition to all the capabilities of the Advanced CER user, a developer can use Framework Manager, which allows for custom data model creation.
- **CER Administrator (CER__ADMIN):** Typically, one Administrator license is provided in a Costpoint BI bundle. This user has access to all Costpoint BI capabilities. The CER Administrator also manages the overall BI security through the Manage BI Settings (BIMCERSETTINGS) screen where you can either enable or disable security.

For initial setup, you might not want to set up every user versus a sample of users who will be initially testing the system; you can always go back and add other users later.

Interactive Viewer enables a user to interact with the report output (even without report authoring capabilities).

Reports can run in limited interactivity or full interactivity mode. When a report is set to run with limited interactivity, the report runs in the Costpoint BI Viewer. Report viewers can answer

prompts, drill up, drill down, and drill through. When a report is set to run with full interactivity, the report runs in the Costpoint BI interactive viewer. By clicking various icons in the report object toolbar that appears when an object is selected, the functions that you can perform on the report are Sort, Group, Summarize, Drill, Add Calculations, Filter, and Interact with Charts. Hide or Swap rows and columns in a crosstab report.

For example, you can:

- Change the sort order of a data container
- Set or edit filters
- Change the aggregation
- Group a column
- Change the type of a data container, that is, from a list to a chart
- Save the changes as new report
- Interact with charts

AI Assistant is an embedded assistant in Costpoint BI, leveraging IBM's Watson that supports text-based input where you can gain quick insights into data and simplify analytics. In just a few steps, you can access key data sources, create visualizations, and drag them onto the Exploration or Dashboard canvas.

Explorations offer a flexible workspace where to explore data from a data module or an uploaded excel data. There is also the option to explore an existing visualization from a dashboard, story, or report. Correlated insights are represented by a green icon with a number on either the x-axis or y-axis of a visualization. The system analyzes the data and identifies interesting items. The relationship diagram plots these fields based on a statistical evaluation of related items. The relationship diagram is not a picture of the data model. However, the model might be an influencing factor in the analysis.

Interactive Report Authoring is a web-based report authoring tool that enables developers to construct professional multi-query reports.

Interactive Dashboard Viewing: Costpoint BI provides dashboards and stories to communicate identified insights and analysis. By leveraging this capability, you can view and interact with dashboards and stories by filtering, selecting within or changing visualizations, or drilling through and to reports.

Interactive Dashboard Authoring: Costpoint BI provides dashboards and stories to communicate identified insights and analysis. Authors can create dashboards and stories from a blank canvas or using the AI Assistant in using Packages, Data Modules, or uploaded Excel files and share with Dashboard Users.

Dashboards & Stories: A dashboard helps monitor events or activities at a glance by providing key insights and analysis about the data on one or more pages or screens. A story however, is a type of view that contains a set of scenes that are displayed in sequence over time. Stories are similar to dashboards because they also use visualizations to share revealed insights. Stories differ from dashboards because they provide an over-time narrative and can convey a conclusion or recommendation.

Event Studio is a web-based product for creating and managing agents that monitor data and perform tasks when the data meets predefined thresholds. It can be used to notify your key decision makers of events as they happen, in order to make timely decisions. You also have the

ability to create agents that monitor your organization's data to detect occurrences of business events. An event is a situation that can affect the success of a business.

Data Module: Costpoint BI provides web-based, self-service data modeling capabilities. Data modeling can help fuse many sources of data together, including relational databases, Microsoft Excel spreadsheets, text files, and so on. Using these sources, a data module is created that can then be used in reports, dashboards, or explorations. Enhance a data module by creating calculations, defining filters and navigation paths, and more. After saving a data module, other users can access it to create BI content. Save the data module in a folder that users, groups, and roles have appropriate permissions to access.

Data Sets are customized collections of data items that are used frequently. As updates are made to the data set, the dashboards, stories, or explorations that use that data set are also updated for the next time. You can create data sets from Framework Manager Packages or data modules, and use as sources to create dashboards, stories, explorations, and data modules. It's not an option to create a report directly from a data set. However, to use the data from the data set in a report, create a data module from the data set, and then use the data module as a source for a report.

Excel Upload: To conduct a quick analysis or create simple visualizations with data files (Excel, delimited files), users can upload the files to Costpoint BI on their own. The data files must meet size and structure requirements, and the data in the files must be in a simple columnar format. Pivot tables or crosstabs are not supported.

Framework Manager is used to create business model of metadata derived from one or more data sources. It is a Windows-based tool which is used to publish the business models to Cognos BI in the form of packages which can be used for analytical reporting and analysis.

Administration Console: BI Administrators can perform server administration, data management, security and content administration, activities management, and services administration.

> **Note:** Administration capabilities are limited in the Cloud since Deltek Cloud Operations will perform certain tasks.

Detailed Capabilities by Role

User Roles have unique sets of capabilities assigned to them upon installation. You should assign users to roles that are appropriate to their function in the organization.

The succeeding table display the detailed capabilities for users.

For entries with an asterisk (*), it signifies that Everyone has the capability. If you establish new Roles, they will receive this capability.

For entries that are indicated as OPTIONAL, you may assign the capability to user roles based on the need of your organization and will still be compliant with Deltek licensing.

Complete the Capabilities Security Template

The Capabilities Template is part of the Security Planning Template which is included in the documentation for this release.

To complete the Capabilities Security Template:

1. Launch the Security Planning Template and open the Capabilities Security tab.
2. Enter the number of licenses purchased by license type.
3. List all Costpoint Business Intelligence users by name.
4. Designate the role or license each user belongs to.
5. Save the completed template for reference later.

Object Security

Deltek delivers content in the form of packages, reports, and dashboards organized in folders under **Team Content**.

This content comes secured using Costpoint BI or CER user groups included in your deployment. The user groups are based on Costpoint domains. The succeeding table describes the user groups that have permissions to the objects in the Deltek content. The permissions of most parent folders or packages will apply to any content contained within.

For example any user assigned to the **CER Accounting All Secure** user group will be able to see secure Accounting content found on the **Team Content** tab.

The permissions for all Deltek folders are set as 'RUN only' to prevent changes or modifications to the pre-established value-add which ensures a smoother upgrade path in the future. Customization of the Deltek content must be saved in the **Company content** folder.

> **Note:** Because future Costpoint Business Intelligence upgrades may overwrite the Deltek folders, it is best practice to use the **Company content** folder to store customization.

Permissions	CER Accounting	CER Accounting AU Secure	CER Accounts Payable Secure	CER Accounts Receivable Secure	CER All	CER Billing Secure	CER CPI Administration	CER Contracts	CER Employee Secure	CER Executive Secure	CER Expense Secure	CER Fixed Assets	CER General Ledger Secure	CER HR	CER Human Resources Secure	CER Labor Secure	CER Manufacturing Secure	CER Materials	CER Materials Manufacturing AU Secure	CER Materials Secure	CER Payroll Secure	CER People	CER Planning (Projects)	CER Planning (Projects) Secure	CER Procurement Secure	CER Projects	CER Projects Secure	CER Subcontract Mgmt Secure	CER Time & Expense	CER Time Secure	Everyone

Time					Run																								Run	Run	Custom (E,T)

A user must belong to at least one of these groups in order to see any Deltek content. A single user can be assigned to multiple groups. Use the Security Planning Template to plan which objects a user should have access to. If a user is assigned to one of these groups, they have access to all the reports and models for those objects. Please consider this before adding someone to one of the Object groups.

If a user is not assigned to any of the Object groups, they will only see content that is shared in the **Company content** folder using custom object security groups in use by their organization. This folder is managed by the administrator or other users designated by the administrator who can give rights to users or user groups to copies of dashboards/reports or custom dashboards/reports.

Company Content

Cloud users are required to have the **Company content** folder to store custom content that is only accessible to them.

The Company content folder is included in your navigation pane that you can use for your company's own folder structure.

Administrators have full rights to this folder where they can assign and manage permissions.

Complete the Object Security Template

The Object Security Template is part of the Security Planning Template which is included in the documentation for this release.

To complete the Object Security template:

1. Launch the Security Planning Template and open the Object Security tab.

2. List all Costpoint Business Intelligence users by name.
3. Designate the user group that each user belongs to.
4. Save the completed template for reference later.

Model or Row Level Security

This security could also be called data security as it limits the data that is available to an end user based on Costpoint, Costpoint Planning, and Time & Expense settings.

There are different aspects of model security.

1. **Organizational Security**: Restricts data based on the user's organization rights established in Costpoint or Costpoint Planning. In this type of security, the project data for the owning or performing organization are secured. If Organizational security is not established in Costpoint or Costpoint Planning, Costpoint Business Intelligence models will not be able to restrict data by organization or company.

   For data models that use Planning as source, Costpoint Business Intelligence uses information from the Planning setup.

   > **Note:** Multi-company security for Costpoint and Costpoint Planning is not enforced in Costpoint Business Intelligence.

2. **Labor Suppression**: Restricts the ability to see labor rates and dollars at the employee level using the labor suppression flag settings in Costpoint. In Costpoint Business Intelligence, the rate/cost of employees are hidden in reports when Labor Suppression is in use. See the Labor Suppression section for how to leverage this capability.
3. **Project Role Security**: Restricts project data based on the user's assigned project role.
4. **Parts Security**: Restricts part data in support of International Traffic in Arms Regulation (ITAR).
5. **Functional Role**: Restricts data based on user's functional role as established in Time & Expense.

Matrix for Secure Models

Different types of model and/or row level security are applied to the secure models or package in Costpoint Business Intelligence with the exception of the Fixed Assets and Administration.

Row and Organization Security Matrix

Package	Module Security Profile	Organization	Project/PM	Labor Suppression	Functional Role		Parts
					BI	TE	
Accounts Payable	AR	Performing Org					
Accounts Receivable	AP	Owning Org			✓		
Administration							
Billing	BL	Owning Org			✓		
Contracts Reporting	CN and OP	Owning Org					
Employee	EM	Security Org		✓			
Expense						✓	
Fixed Assets							
General Ledger	GL	Performing Org		✓			
Human Resources	HB	Security Org					
Labor	LD	Security Org		✓			
Manufacturing	PC	Org may vary					✓
Materials	IN	Org may vary					✓
Payroll	PR	Security Org		✓			
Procurement	PO	Org may vary					✓
Project Reporting	PJ	Owning Org		✓	✓		
Project Planning Reporting		Owning Org	✓	✓			
Subcontractor Management	SM	Owning Org					
Time						✓	

The Fixed Assets and Administration models have object and capability security.

Organization Security

There are models in Costpoint Business Intelligence that can leverage the Organization Security settings in Costpoint. If model security is turned on, a user MUST be assigned an Org Security Group or they will not see any data. If you do not want org restrictions on the user, you would assign them to an “All Orgs” security group that has access to all organizations.

Once a user is set up and assigned an Org Security Group ID, they will have access to all the projects that are linked to that organization. An Org Security Group ID is linked to an Org Security Profile by module. For Costpoint Business Intelligence to determine the security to apply, it looks for the profile associated with a specific module. The Row and Organization Security Matrix in the Matrix for Secure Models section shows the corresponding model security profile for each secured package.

To apply the Organization security by module, you must also set the following two conditions on the Manage BI Settings screen:

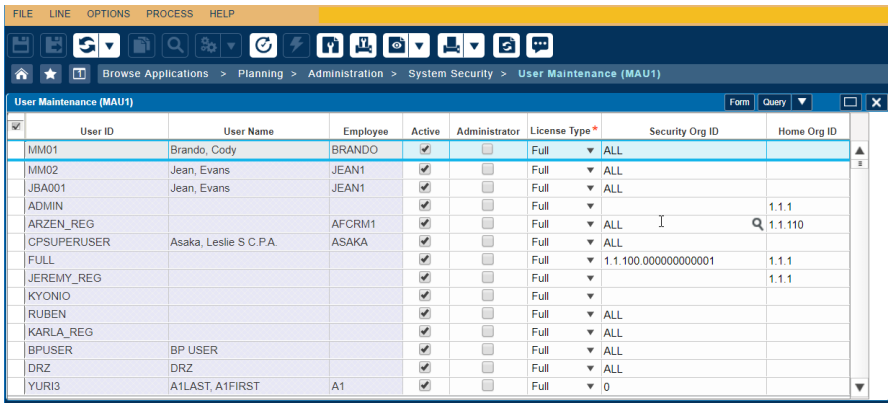
- **Enable CP and Planning Model Security** is set to **Yes** and
- **Use CP Organization Security by Module** is set to **Yes**

In case the **Enable CP and Planning Model Security** is set to **Yes** and the **Use CP Organization Security by Module** is set to **No**, organization security will still apply for the secure packages which are listed in the following table. The type of module and organization used per package are presented as well.

Organization Security in Costpoint Planning

The Project Planning model in Costpoint Business Intelligence leverages the Organization/Project Security settings in the Costpoint Planning module. Costpoint Planning (formerly known as Budgeting and Planning) has distinct security settings related to the Planning content and does not use the Costpoint Organization Security used in the core Projects model.

The Project Planning models leverage the Organization Security set up in the User Maintenance application shown below. Once a user is set up and given a Security Org ID, they will have access to all the projects that are owned by that Organization.



User ID	User Name	Employee	Active	Administrator	License Type *	Security Org ID	Home Org ID

Note: Currently, security in Planning only applies to existing projects and not new business projects. Users will still be able to see all new business projects.

Procedures in Setting Up Organization Security

There are several procedures in setting up the Organization Security.

- Activate/Deactivate the Organization Security by Module
- Manage Organization Security Profiles
- Manage Organization Security Groups
- Update the Organization Security Profiles
- Assign the Organization Security Group to Users
- Apply Organization Security

Warning: Follow the procedures in setting up the Organization Security when you use Model Security in Costpoint BI. If you do not use Model Security, you can skip the Organization Security procedures. Costpoint BI follows the Capability and Object security instead.

Activate/Deactivate the Organization Security by Module

Deltek recommends that you also enable organization security by module when the **Use CP Organization Security By Module** is set to **Yes** on the Manage BI Settings (BIMCERSETTINGS) screen.

To apply organization security, you must first enable the modules and applications of which you want to apply this type of security through the Activate/Inactivate the Organization Security by Module (SYSMORGFN) screen.

To enable organization security in the modules and applications:

1. Go to **Admin** » **Security** » **Organizational Security** » **Activate/Inactivate Organization Security By Module**.
2. In the **Modules** table window, search for the module that you like to apply organization security. Select the **Apply Org Security** check box for that module.
   The applications for the selected module will appear in the **Applications** table window.
3. In the **Applications** table window, search for the application that you like to apply organization security. Select the **Apply Org Security** check box for that application.
   Repeat this step until organization security is set for all the applications in the module.
4. Click **Save**.
5. Repeat steps 2 to 4 until organization security is set in all necessary modules and applications.

> **Note:** To know more about the description of the fields on the Activate/Inactivate Organization By Module screen, see the Costpoint online help. You can access the help by pressing **SHIFT+F1** or go to **Help » Help** menu while the said screen is being displayed.

Manage Organization Security Profiles

Next step is to create organization security profiles and assign the organizations where they will be applied. You will need to create the profiles and use them when you establish the organization security groups.

For example, there are two top-level organizations in a company, Apple & Bartlett and ACME.

The ALLAB org security profile is assigned to Apple & Bartlett that has access to all organizations that start with 1 org ID, while ALLACME is assigned to ACME that has access to 2.

Profile ID	Profile Name	Relation	Org ID	Org Name	Apply Org Security
ALLAB	All Orgs in Apple & Bartlett	Begins with	1	Apple & Bartlett, Inc.	Yes

Profile ID	Profile Name	Relation	Org ID	Org Name	Apply Org Security
ALLACME	All ACME	Begins with	2	ACME	Yes
ORG101	Org 101 R&D	Equals	1.01	A&B Research & Development	Yes
ORG102	Org 102 Marketing	Equals	1.02	A&B Marketing	Yes
ORG201	Org 201 R&D	Equals	2.01	ACME Research & Development	Yes

ORG101 and ORG102 are organizations within Apple & Bartlett, while ORG201 belongs to ACME.

Create the Organization Security Profiles

Create the Organization Security Profiles through the Manage Organization Security Profiles screen.

To create the organization security profiles:

1. Go to **Admin** » **Security** » **Organizational Security** » **Manage Organization Security Profiles**.
2. Click **New** to start adding a profile.
3. Enter the **Profile ID** and **Profile Name**. Select the **Apply Org Security** check box and the **Rights Application Method**.

   Tip: Press **SHIFT+F1** or go to **Help** » **Help** menu to know more about the description of the fields on this screen.
4. On the **Assign Organizations to Profile** table window, click **New**.
5. Enter the Organization of which you want to apply this organization security profile.
6. Click **Save**.
7. Repeat steps 2 to 6 until all organization security profiles are added.

Manage Organization Security Groups

In this procedure, you will assign organization security profiles to each module by creating organization security groups.

Using the Apple & Bartlett and ACME examples, let us create org security groups. For example, the Engineering group in Apple & Bartlett may only see information for the Research & Development group. We will use the ORG101 org security profile for all modules.

Organization Security Profile				
Profile ID	**Profile Name**	**Relation**	**Org ID**	**Org Name**
ORG101	Org 101 R&D	Equals	1.01	A&B Research & Development

Organization Security Group				
Org Sec Group	**Name**	**Module**	**Org Sec Profile**	**Profile Name**
ENGAB	Engineering Group for A&B	*All modules*	ORG101	Org 101 R&D

Another group in Apple & Bartlett, the Federal Division group, may see all projects in the organizations. In this case, we can use the ALLAB org security profile and assign to all modules.

Organization Security Profile				
Profile ID	**Profile Name**	**Relation**	**Org ID**	**Org Name**
ALLAB	All Orgs in Apple & Bartlett	Begins with	1	Apple & Bartlett, Inc.

Organization Security Group				
Org Sec Group	**Name**	**Module**	**Org Sec Profile**	**Profile Name**
FEDDIV	Federal Division	*All modules*	ALLAB	All Orgs in Apple & Bartlett

Create the Organization Security Group

Use the Manage Organization Security Groups screen to set up the groups.

To set the organization security groups:

1. Go to **Admin** » **Security** » **Organizational Security** » **Manage Organization Security Groups**.
2. Click **New** to start adding an organization security group.
3. Fill out the fields on screen. Press **SHIFT+F1** to open the help and to know more about these fields.
4. In the **Organization Security Profile to Assign** field, select a profile. Click the **Assign Profiles** button to apply the selected profile to all modules in Costpoint. This button also populates the **Assign Profiles to Modules** table window.

5. In the **Assign Profiles to Modules** table window, see if you like to change any of the profiles assigned to a module.
6. Click **Save**.
7. Repeat steps 2 to 6 until all Organization Security Groups are created.

Update the Organization Security Profiles

After updating and creating new organization security profiles, you need to run the Update Organization Security Profiles screen process.

To update the organization security profiles:

1. Go to **Admin** » **Security** » **Organizational Security** » **Update Organization Security Profiles**.
2. Click **New** to create a record for the update.
3. Fill out the screen and click **Save**.
4. Go to **Process** » **Action Menu** » **Update Org Security Profiles**. Wait until the process completes.

Assign the Organization Security Group to Users

Use the Manage Users screen to assign organization security groups to users.

The organization security groups that you will assign to users should already exist and have been entered through the Manage Organization Security Groups screen.

To assign an organization security group to a user:

1. Go to **Admin** » **Security** » **System Security** » **Manage Users**.
2. Enter or select, the **User Name** that you like to assign to an organization security group.
3. Click the **Company Access** subtask and click **New** to add a line.
4. Enter the details including the **Org Security Group ID** that you like to assign to the user.
5. Click **Save**.
6. Perform steps 2 to 5 for the other users.

Apply Organization Security

Next, enable organization security in Costpoint through the Configure System Settings (SYMSETNG) screen. The Configure System Settings screen controls the Costpoint settings and is separate from Costpoint BI. The system settings in Costpoint BI is controlled through the Manage BI Settings (BIMCERSETTINGS) screen.

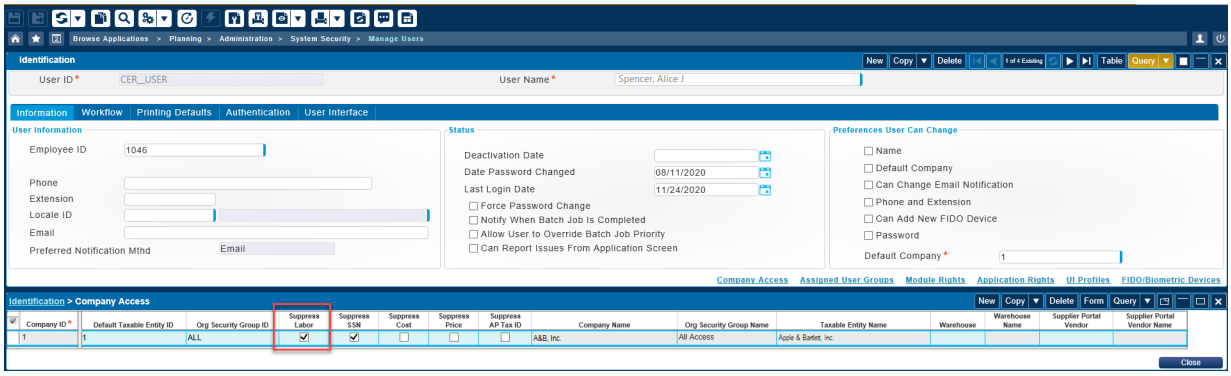
To turn on organization security in Costpoint:

1. Go to **Admin** » **System Administration** » **System Administration Controls** » **Configure System Settings**.

2. Select the **Apply Organization Security** check box.
3. Click **Save**.

Labor Suppression

Labor Suppression is applied to several packages in Costpoint BI. If it is enabled, labor information is hidden on screen or when you print reports. As an example, the Project model will suppress labor if the Suppress Labor flag is checked for the user and the Costpoint and Planning model security is turned on. It is important that at least one Org is assigned to the Org Security Group. If no orgs are assigned, the user will not be able to see any data.

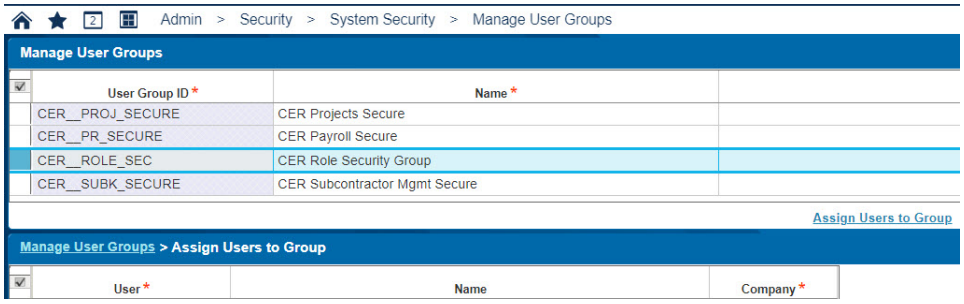


See the Matrix for Secure Models to see the other packages where Labor Suppression is applied.

Project Roles Security

Project Roles Security allows you to set up functional roles that are not only limited to a Project Manager. Functional roles can be assigned to users in Costpoint which can then secure the corresponding project data in BI.

Several functional roles can be assigned to a user such as, the Project Manager role. In order to limit the BI data to only the projects that the Project Manager owns, you must assign the user to the CER__ROLE_SEC user group.



Project Roles Security further enhances the implementation of Project Manager Security that was available in past Costpoint BI versions.

Project Roles Security is applicable to the Accounts Receivable, Billing, and Project Reporting packages.

Project Manager Security vs. Project Roles Security

Project Manager Security was introduced in Costpoint BI 8.1 and earlier. Beginning in Costpoint 8.2.9, the more comprehensive Project Roles Security was implemented that enhances PM security along with other benefits.

The following table summarizes the differences between the PM Security and Project Roles Security.

Project Manager Security	Project Roles Security
Project Manager is the only project role available	Multiple project roles can be defined
Project Managers are limited to project data found on their assigned project level	When configured, Project Managers and other project roles can view project data for their level and those at the lower levels
To enable Project Manager Security, Organization Security must be enabled too	Project Roles Security and Organization Security can be enabled separately
Project Manager Security is followed over Organization Security. For example, Project Managers assigned to a project in another organization may still see data even when Organization Security is enabled	Organization Security is followed over Project Manager Security. For example, when Organization Security is enabled, Project Managers and other project roles will not see project data outside their organization.
Uses Employee ID	Uses User ID which means that report data are not only limited to employees

Improvements in Project Roles Security

Access to secure project data has been greatly enhanced by Project Roles Security. There are several significant improvements and the major ones are described in the succeeding sections.

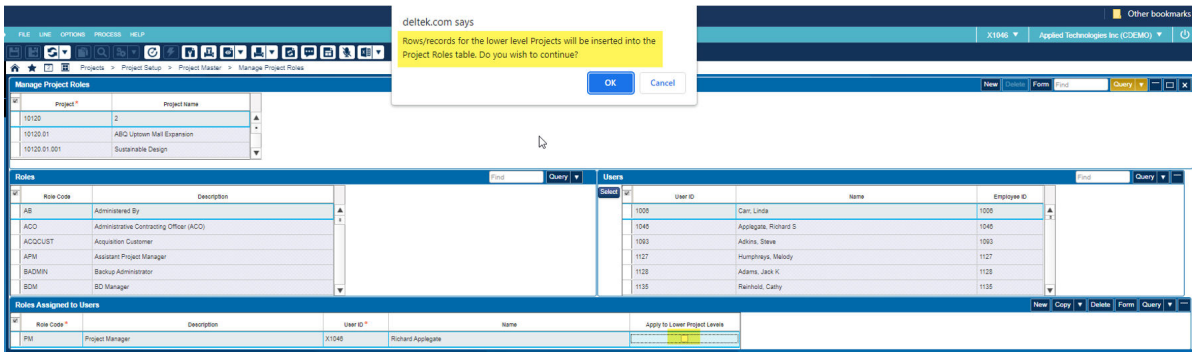
Viewing Project Data in Multiple Project Levels

If the necessary configurations are set, any project role, including project managers, can view project data at their level and in the lower project levels.

For example, Richard Applegate is the Project Manager for **Project 10120**.

Richard also oversees the projects in the lower levels and needs to view the corresponding project data. To do this, his project role setting needs to be configured to have this type of access

On the Manager Project Roles screen in Costpoint (**Projects** » **Project Setup** » **Project Master**), make a query for **Project 10120** and modify Richard's assigned user role to also access the lower levels of his project through the **Apply to Lower Level Projects** checkbox.



After you apply the configurations and log out and back in to Costpoint BI, the report now shows project data for all lower-level projects for Richard.

Project ID	Project Name	Project ID Name	Project Long Name	Project ID Long Name	Organization ID	Organization Name	Employee ID	Project Manager Name	Customer ID	Customer Name	Company ID
10120	2	10120 - 2	Construction and Design	10120 - Construction and Design	01.01.02	Construction Management	1046	Applegate, Richard S	100008	BND Engineering, Inc.	1

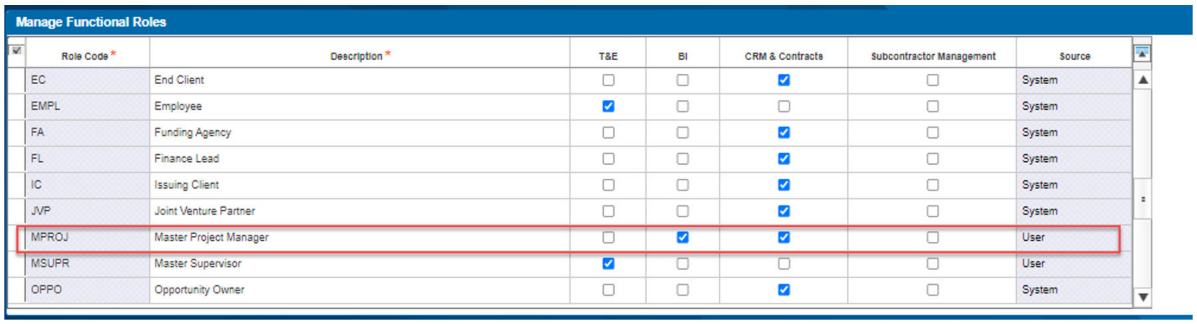
10120.03.999	System Design	10120.03.999 - System Design	System Design	10120.03.999 - System Design	01.01.02	Construction Management	1014	Arnold, Deborah	100008	BND Engineering, Inc.	1

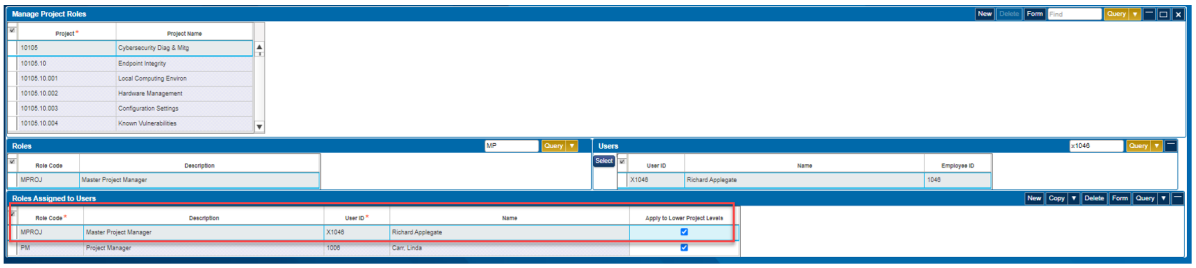
Viewing Project Data for a Different PM

In some cases, there are Costpoint BI users who oversee multiple projects that have different project managers. Let us assign the Master Project Manager Role for these users.

For example, Richard has a Master Project Manager Role who oversees some projects but does not directly manage them. First, the Master Project Manager Role must be marked as a functional role used in Costpoint BI. Do this on the Manage Functional Roles screen in **Admin** » **System Administration** » **System Administration Controls**.



And then, add Richard as a Master Project Manager to Project 10105 and apply to lower levels. Do this on the Manage Project Roles screen.



When the report is generated, Richard now sees project data for Project 10105 in addition to his original Project 10120. He sees project data for the organization he belongs and his project role.

Project ID	Project Name	Project ID Name	Project Long Name	Project ID Long Name	Organization ID	Organization Name	Employee ID	Project Manager Name	Customer ID	Cu

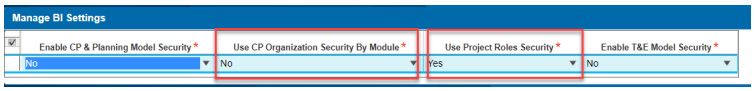
Organization Security and Project Roles Security Work Independently

Starting in Costpoint BI 8.2, Organization Security and Project Roles Security can be controlled independently.

For example, Organization Security can be turned off while Project Roles Security is turned on.

On the Manage BI Settings screen found in **Reports & Analytics** » **BI Controls** » **Manage BI Settings** , Organization Security and Project Roles Security have different switches.



To illustrate, if the Organization Security is turned off and Project Roles Security is turned on, Richard in our example will see more project data because the filter for organizations has been turned off. He will still see those projects where he has an assigned role, but now he also sees project data for those outside his organization.

Project ID	Project Name	Project ID Name	Project Long Name	Project ID Long Name	Organization ID	Organization Name	Employee ID	Project Manager Name	Customer ID	Customer Name	Company ID	Company Name	Project Abbrv	Project Type Desc	Project Classification	Active (Y/N)	Billable Project (Y/N)

Note: Deltek recommends that the **Enable CP & Planning Model Security** and the **Use CP Organization Security By Module** switches are in sync. The first switch controls the application of the overall organization security, while the latter controls organization security by module.

Key Points in Project Roles Security

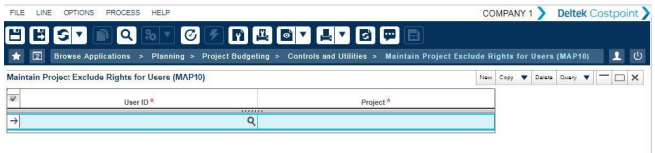
Some pointers to remember when applying Project Roles Security.

- **CER__PM_MGR** user group has been replaced by **CER__ROLE_SEC**. Project Roles Security uses the **CER__ROLE_SEC** user group.
- Project Roles Security does not overwrite Organization Security when it is enabled. When model security is turned on, Organization Security is enabled.
- If both Organization Security and Project Roles Security are turned on, then conditions for both types of security need to be met for users to see project data.

Project Security in Costpoint Planning

For Projects Security in Costpoint Planning, there is currently no way to limit the projects to only the projects that the PM owns.

However, there is a way to exclude specific projects from a user's list using the following screen. Once a user and a project is added here, they will no longer be able to access that project.



In the Planning folder, there is no specific capability for project security; however, organization security and project exclusion can, in effect, limit what a user sees relating to projects.

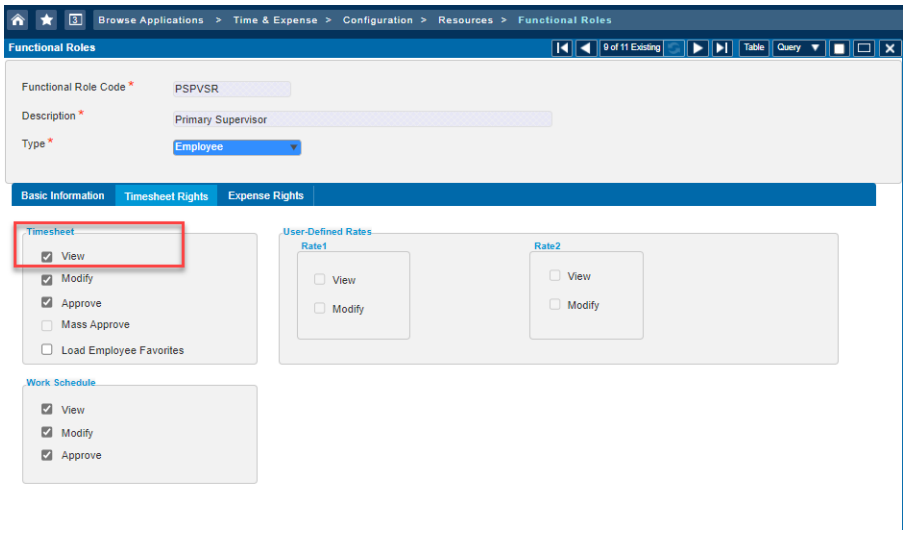
Note: Project Manager Security only shows the project WBS elements where they are assigned as PM, so if there are multiple PMs assigned to a single project structure, those PMs will not see the entire project.

Functional Roles Security

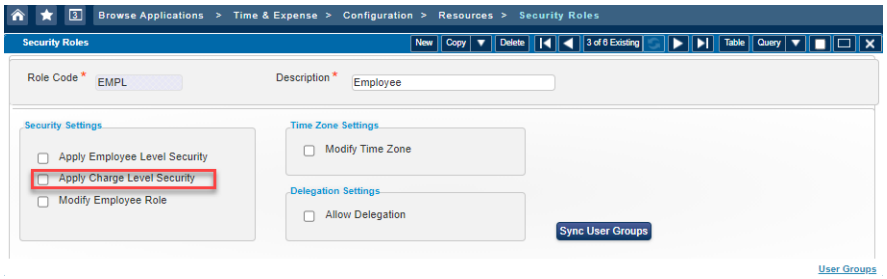
Functional Role security is currently supported in the Time model.

As a resource manager using Time & Expense, certain functional roles may be assigned such as having rights to view timesheets or see data for assigned projects. The data in reports are based on the configuration made on screens where functional roles are set up. Some examples of these screens are the Functional Roles (ADMFUNCTIONALROLE) and Security Roles (ADMSECURITYROLE).

On the Functional Roles screen, timesheet rights may be set up for each type of role.



On the Security Roles screen, you can limit data access of employees to projects assigned to them through the **Charge Level Security** check box.



When the **Apply Charge Level Security** check box is selected, the user for the functional role, for example Employee, will be restricted to projects where Employees have rights.

A user may be assigned to multiple roles over a single project. When this happens, Costpoint BI will check if the user has rights to view timesheets for the project and will grant access if needed.

Sample Scenario: Functional Role Security

For example, Alice is assigned to a functional role that has rights to view timesheets of select employees and projects.

Alice can see the timesheets for the following employees and projects:

Employees
EMPL = Phil
EMPL = Niki

Projects
PROJ = 0001
PROJ = 0003

The records in the database are the following:

Timesheet Date	EMPL	PROJECT	ACCT	HRS	Charge Level Security = Y	Charge Level Security = N
3/1/2020	Phil	0001	50-100	20	O	#
3/1/2020	Phil	0002	50-100	20	O	#
3/15/2020	Phil	0001	50-100	40	O	#
3/1/2020	Rick	0003	50-100	40	#	#
3/15/2020	Rick		50-100	40		
3/1/2020	Niki		50-100	10	O	O
3/1/2020	Niki	0005	50-100	30	O	#
3/15/2020	Niki	0002	50-100	40	O	#
3/1/2020	Heather	0001	50-100	20	#	#
3/1/2020	Heather	0002	50-100	20		#
3/15/2020	Heather	0005	50-100	30		#
3/15/2020	Heather		50-100	20		

- O - When Charge Level Security is applied, Alice will see all the rows of data for her employees Phil and Niki, plus all the rows of data for her projects 0001 and 0003.
- # - When Charge Level Security is NOT applied, Alice will have access to all projects plus rows of data for her employees.

Note: If all transactions require projects, Alice will see all records when charge level security is not applied.

Parts Security

The International in Arms Regulations or ITAR controls the export of defense and military technologies.

ITAR information includes the list of military and defense components and parts stored in databases, which are sensitive data that government contractors and developers work on. Costpoint BI supports Parts Security in report and dashboards, so as to restrict data to only those who need to access them.

Parts Security is enabled through the Configure Product Definitions Settings screen (PDMITMRU) in **Materials** » **Product Definition** » **Product Definition Controls**. Select the **Use Part Data Security Controls** check box to enable Parts Security.

When Parts Security is enabled, the user must also belong to an active Security Group that is defined through the Manage Security Groups screen (PDMSCGRP) in **Materials** » **Product Definition** » **Part Data Security**. Part data are not accessible to inactive Security Groups.

Assign Users to Costpoint User Groups

After completing the plan and templates for the various security elements, you can start with the actual configuration set up by first assigning users to user groups.

Use the completed Security Planning Template as reference when you perform this procedure.

To assign existing Costpoint users to CER User Groups:

1. Log on to Costpoint and open Manage User Groups (SYMGRP) screen.
2. Query the CER User Group to which you want to assign existing users.

   Note: The CER User Groups in Costpoint start with 'CER__'. Take note of the double underscore.
3. Once the CER User Group has been selected, click the **Assign Users to Group** subtask.
4. Click the **New** button in the **Assign Users to Groups** table window.
5. Enter or select the user and enter the **Company**.
6. Click the **New** button in the **Assign Users to Groups** table window.
7. Enter the default super user, for example, CPSUPERUSER, and enter the **Company**.

   Note: The super user or CPSUPERUSER should be assigned to all CER User Groups as well. See the Costpoint BI User Group List topic as reference of all available CER User Groups.
8. Click **Save & Continue**.

9. Repeat steps 2 to 8 until you have assigned all users to the CER User Groups.

Costpoint BI User Group List

The CPSUPERUSER must be added to all CER User Groups.

Note: The succeeding table includes legacy user groups. If you are new to Costpoint BI, you can skip adding users to these legacy groups. If you are an existing Costpoint BI user, you can skip adding users to these legacy user groups if you are not using the legacy package content.

Project Roles Security Setup

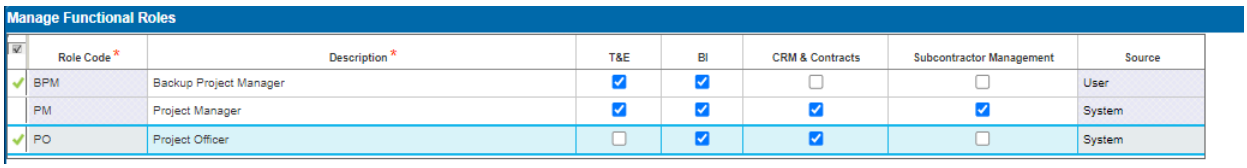
Project Roles Security is set up through different screens in Costpoint.

Assign Functional Roles

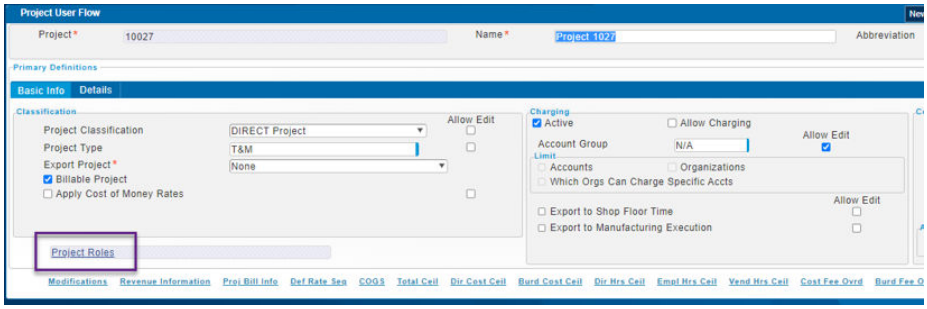
You can assign functional roles through the Manage Functional Roles and Manage Project User Flow screens.

To assign functional roles:

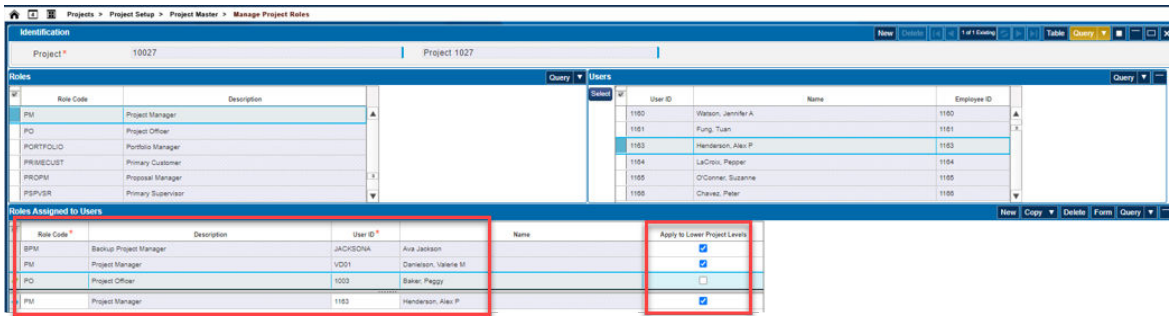
1. In Costpoint, select **Admin** » **System Administration** » **System Administration Controls** » **Manage Functional Roles**.
2. Add the functional roles on the Manage Functional Roles screen and select the corresponding **BI** check box. Click **Save**.



3. In Costpoint, select **Projects** » **Project Setup** » **Project Master** » **Manage Project User Flow**.
4. Click the **Project Roles** subtask.



5. Add roles to the project. Click **Save**.



Note: Multiple users can be assigned to the same roles. Users who are assigned to the top level will automatically see all levels below. You can also assign users to lower levels.

Enable Project Role Security

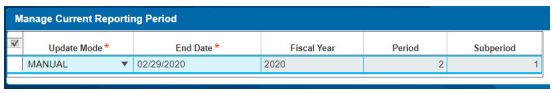
You can turn on the switch for Project Role Security through the Manage BI Settings screen.

To turn on Project Role Security:

1. In Costpoint, select **Report & Analytics** » **BI Controls** » **Manage BI Settings** .
2. Select **Yes** in the **Use Project Roles Security** drop-down list to enable Project Roles Security. Click **Save**.

Set Up Current Reporting Period

Use the Manage Current Reporting Period (BIMRPTCURPD) application in Costpoint to set up the period that Costpoint Business Intelligence will use in reporting.



To set up the Costpoint Business Intelligence current reporting period:

1. In Costpoint, launch the Manage Current Reporting Period (BIMRPTCURPD) application (**Reports & Analytics** » **BI Controls** » **Manage Current Reporting Period**).

2. Enter the relevant information in the fields of the screen.

Field	Description
Update Mode	Select either **Auto** or **Manual**. Deltek recommends that you select **Manual**, so you can set the **End Date**, **Fiscal Year**, **Period**, and **Subperiod** of your choice. **Note:** It is recommended that you use the **Manual** setting since the administrator can then control when the reports and dashboards run when the current period is finished, which can vary period to period. This setting controls reports and dashboards that use the field **Current Period or Year** settings. This means you do not need to reset the field each month when you access the data. If you select **Auto** in the **Update Mode** field, the default values set on the Manage Current Reporting Period screen are based on the values of your accounting periods in Costpoint. The **End Date** is set to the closest end date to today's date. For example, if today's date is July 10, 2021, the end date will be **July 31, 2021**. This is because it is the closest end date and is greater than July 10, 2018. Do note however that the **End Date**, **Fiscal Year Period**, **Period**, and **Subperiod** fields may not display the corresponding period dates, but Costpoint BI will consider the system date in report and dashboard creation. Note that the current period screen in Planning should also set to the same period. This screen is found at **Planning** » **Administration** » **Administration Controls** » **Maintain Current Period**. This setting controls the updating of the reporting tables and is separate from the Costpoint Business Intelligence Current Period.
End Date	Enter the end date for the current reporting period .
Fiscal Year	Enter the fiscal year for the current reporting period.
Period	Enter the period for the current reporting period.
Subperiod	Enter the subperiod for the current reporting period.

3. Click **Save**.

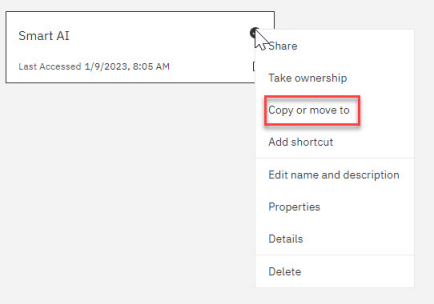
Copy the Smart AI Folder to Company Content

Copy Smart AI from **Team Content** to **Company Content** to provide Smart AI content to qualified users.

Log in as CER__ADMIN or administrator.

To copy Smart AI from Team Content to Company Content:

1. In Costpoint BI, click the **Team Content** tab. And then, click **Smart AI Admin**.
2. Click the action menu for **Smart AI** and click **Copy or move to**.



3. On the **Copy or move: Smart AI** dialog box, copy the folder into this location: **Company Content** » **[Your tenant folder]** » **Smart AI**.

   Note: Copying the Smart AI folder into the tenant folder allows the administrator to update or replace Smart AI content in the future. This tenant folder with the correct permissions may already exist for new users. Existing users must manually create a subfolder under **Company Content** and add CER__ADMIN with **Full** and Everyone with **Read** permissions. To assign permissions, click **Action Menu** » **Properties** » **Permissions** tab on the Smart AI folder.

4. Click **Copy** and a confirmation message appears when the folder has been successfully copied.

   Smart AI uses data sets as source for dashboards and reports. Deltek recommends that you regularly refresh the content of data sets. To know more about data sets and the procedure to refresh them, see Data Set within this document.

Data Set

You can leverage data sets when you have data that are frequently used in reports or dashboards.

Using data sets also improve performance when generating reports and dashboards, since data comes from in-memory processing and not directly from the database. An administrator can use the pre-built jobs that refresh the data of data sets or set schedules as to when to refresh the data that will align with your report generation activities.

You cannot create reports directly from data sets, but you can create a data module from a data set. And then, use that data module as source for your report. You can also use data sets for dashboards and explorations.

The key building blocks are data sets of two categories, dimensional and transactional. Data Sets are extractions of data from Costpoint into a file format, while it is called Parquet format, which is similar to a flat file, rows and columns of data that are stored in a highly compressed and indexed format. For Smart AI, the sources are the standard Costpoint BI packages.

The Parquet format is great for performance when querying this data for a report, dashboard or exploration. In the Smart AI model, dimensional data sets are based on the key architectural components (Project, Account, Company/Organization) of Costpoint as well as other attributes (Customer, Vendor, fiscal periods, and others) that will help define the actual data in Costpoint.

The actual data is contained in the transactional data sets which include the measures and metrics that are important to understand performance. Examples of transactional data sets are General Ledger detail, labor detail, PSR data, and so on. These data sets will include Hours and Dollars that relate to the dimensional data. So where a General Ledger line will have an account number, the dimensional Account data set will include fields such as the Account Name, Account Levels, and Active Flag to expand the analysis of the data.

Data Sets are refreshed on a regular basis, typically creating a job that is scheduled to update multiple data sets periodically which is usually on a daily basis. The job will run the data set update to query Costpoint and update the data.

Note: When you refresh data sets, the data loaded comes from the current environment. For example, if you want to use Smart AI in your test environment, create a separate copy of the Smart AI folder and data sets in addition to the production copy. In this way, when you refresh the data sets in the test environment, the data sets in production will not be affected.

To learn more about data set refresh, see the Refresh Data Sets, Schedule Data Set Refresh, or Create a Job to Refresh Data Sets sections in the Costpoint Business Intelligence 8.2.15 Post Installation and Configuration Guide or the Cloud Setup Guide.

Pre-Built Jobs in Smart AI

Jobs that can refresh all transactional and dimensional data sets are available in Smart AI. To get the latest data for Smart AI and its dashboards, you need to refresh your data set.

The pre-built jobs to refresh data sets are located in **Team content** » **Smart AI Admin** » **Smart AI** » ***Jobs***. These jobs are categorized into two:

- **Refresh All Dimensional Data Sets Job**: Dimensional data sets contain descriptive information or attributes. They also contain information that some may also refer to as maintenance tables. Examples of these are list of Accounts, Organizations, and Projects.
- **Refresh All Transactional Data Sets Job**: Transactional data sets are information in business transactions. For example, the Purchase Order data set contains information such as the items ordered, the number of items, the amount, needed date, and delivery date.

In Smart AI, the dimensional and transactional data sets are listed in the following table.

Dimensional Data Sets	Transactional Data Sets
Accounts	AR Summary Data
Companies	GL Summary Data
Customers	Labor History Data
Employee Certifications	Planning Data
Employee Degrees	Project Summary (PSR) Data
Employee Salary Information	Purchase Order Data
Employee Skills	Receipt Data
Employee UDEFs	Resource Management Data
Employees	
GL Financial Statement Lines	
Items	
Organizations	
Planning Project UDEFs	
Planning Projects	
Project UDEFs	
Projects	
Relative Fiscal Periods	
Resources	
Subperiods	

To run a job, right-click the job and select **Run as**. And then, follow the prompts on the dialog box that will display and click **Run**.

Refresh Data Sets

If you only need to refresh one or few data sets and not all, you can do so by selecting the data sets individually. An alternative method to refresh all data sets is done through the pre-built jobs. See the Pre-Built Jobs in Smart AI section in this guide for details.

Log on as a Costpoint BI Administrator (CER__ADMIN) with full access to database tables.

To refresh individual data sets:

1. In Costpoint BI, go to the location of the data sets in Smart AI. For example: **Company Content** » **[Your tenant folder]** » **Smart AI** » **Smart AI** » ***Data Sets***.

   Note: The tenant folder is available to cloud users only.

2. Right-click **AR Summary Data** and select **Refresh**.

   Note: You can also click **Properties** of the data set and refresh the schedule based on your desired frequency.

3. Repeat step 2 with the other data sets until you have refreshed those that you need.

   The other data sets are:

   - GL Summary Data
   - Labor History Data
   - Planning Data
   - Project Summary (PSR) Data
   - Purchase Order Data
   - Receipt Data
   - Resource Management Data

Schedule Data Set Refresh

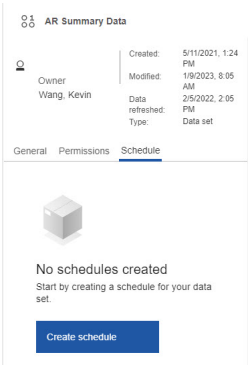
To avoid frequent data refresh, Deltek recommends to have a standard schedule to refresh data during off business hours.

To schedule data set refresh:

1. Go to the location of the data set that you like to apply a data set refresh schedule. For example, **Company content** » **[Your tenant folder]** » **Smart AI** » ***Data sets*** » **AR Data set**.

   Note: The tenant folder is available to cloud users only.

2. Right -click **AR Data set** and then select **Properties**.
3. Click the **Schedule** tab. Click **Create schedule**.



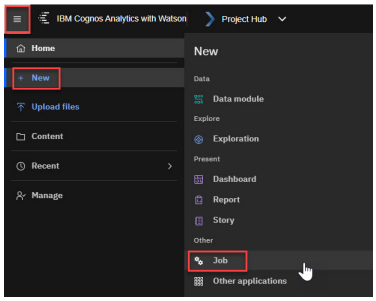
4. Enter the schedule of the data refresh and click **Save**.

Create a Job to Refresh Data Sets

You can create a job that refreshes one or more data sets. Schedules can be established so that the job can run automatically.

To create a job to refresh data sets:

1. On the main screen of Costpoint BI, click the **Open menu** icon (☰) and then click **+ New** and select **Job** .



2. On the **New job*** screen, click the **Start by adding some steps** icon.
3. On the **Add job step** dialog box, go to **Company content** » **[Your tenant folder] >** » **Smart AI** » ***Datasets***.

   Note: The tenant folder is available to cloud users only.

4. Select each data set that you want to include in the job to add in them in the **Job steps to add** field. Click the **Add job steps** button.
5. Leave the **Run options** with values:

   Run order = **Run in sequence** and **Continue on error** is **enabled**.
6. Click the **Save** icon on top of the screen to save your job.
7. On the **Create a new job** dialog box, select a location where you want to save the job and enter a name. Click **Save**.

   The **Run now** button and **Schedule** link display after saving. You have the option to either run the job or schedule it to run some other time.

Smart AI Security

Smart AI covers different areas of Costpoint. Your access are configured by the system administration during installation.

The user groups and the Smart AI areas that are accessible to each are summarized below.

	Smart AI Admin	Smart AI Admin >> Smart AI	Smart AI Admin >> Smart AI >> *Data Modules*	Smart AI Admin >> Smart AI >> *Data Modules* >> Dimensions	Smart AI Admin >> Smart AI >> *Data Modules* >> Dimensions >> Relative Time	Smart AI Admin >> Smart AI >> *Data Sets*	Smart AI Admin >> Smart AI >> *Data Sets* >> Dimensions	Smart AI Admin >> Smart AI >> *Jobs*	Smart AI Admin >> Smart AI >> Executive	Smart AI Admin >> Smart AI >> People	Smart AI Admin >> Smart AI >> Planning	Smart AI Admin >> Smart AI >> Procurement	Smart AI Admin >> Smart AI >> Projects

Smart AI Data Modules Security

Each Smart AI data module uses at least one of the security methods in Costpoint BI: Organization, Project, or Labor Suppression.

The following table displays the applied security for each transactional data module.

Smart AI Data Module Security Matrix

Package	Organization	Project/PM	Labor Suppression	Functional Role	
				BI	TE
Accounts Receivable	✓	✓	✓	✓	
General Ledger	✓		✓		
HR Management	✓		✓		
Labor History	✓		✓	✓	
Planning	✓	✓	✓		
Project Summary (PSR)	✓			✓	
Purchase Orders	✓				
Resource Management		✓			

Validate User Groups

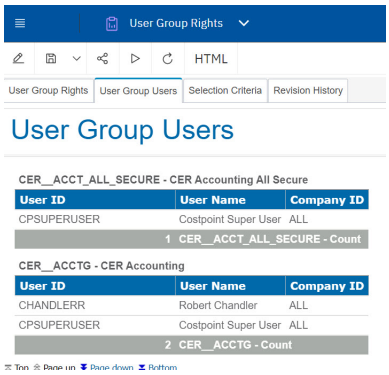
After you complete the steps in the post-installation phase, check the list of users per user group in Costpoint Business Intelligence against your accomplished Security Planning Template.

To perform this procedure, you must have access to the **User Group Rights** report in **Team Content** » **Costpoint Administration** » **Security**.

> **Note:** If you do not have access to the **User Group Rights** report, you can also use the **Print User Group Rights Report** (SYRGRPR) in Costpoint which is located in **Admin** » **Security** » **Security Reports/Inquiries** » **Print User Group Rights Report**.

To validate the users in user groups:

1. In Costpoint Business Intelligence, click **Team Content** » **Costpoint Administration** » **Security** and run the **User Group Rights** report.
2. On the prompt screen, enter **CER__** in the **User Group(s):** field. Click **Search**.
3. Select all the user groups that start with **CER__** that you have created and click **Insert** to transfer them to the selection box on the right.
4. Click **Finish**.
5. On the report, click the **User Group Users** tab.
6. Compare the list of users in the report to the list of users that are in your Security Planning Template. Check if all users are accounted for.



Hidden Packages and Dashboards

For better generation and performance, some dashboards, for example, **Planning** and **Projects**, are now available in **Smart AI** which uses data modules as source of data. This new version leverages the features of Smart AI.

The dashboards and packages in Costpoint BI 8.0.x and beyond that uses dimensional data have been hidden but can be made visible by administrators for users especially if they have customized reports. Making these dashboards and packages visible is an optional step depending on the needs of your organization. Deltek recommends the use of the new versions of the dashboards and packages in Smart AI for ease of use.

Unhide Packages and Dashboards

To unhide packages and dashboards, you should show hidden entries in Costpoint BI first in **Profile and Settings**.

You should have administrator rights to perform this procedure.

To unhide packages and dashboards:

1. On the upper right-hand side of the Costpoint BI screen, click the **Personal menu** icon () and click **Profiles and settings**.
2. Click the **Settings** tab.
3. Click the **Show hidden entries** toggle to enable it.
4. Go to the package or dashboard that you want to unhide. For example, click **Team content** » **Planning**. Right-click the **Dashboards** folder and select **Copy or move to**.
5. On the dialog box, select a destination within **Company content** that you like to copy the folder into.
6. Click **Copy**.
   A confirmation message appears when the folder has been successfully copied.
7. Go to the location of the copied dashboard or package folder in **Company content** and right-click **Properties**.
8. On the **Properties** screen, click **Advanced** and clear the **Hide this entry** check box.

Have Users Run and Validate Reports

Once you have data in your Costpoint database and your users have watched the Overview and Navigation training videos from the Help menu, they should perform a few steps to validate reports.

Users should:

- Make sure they have rights to the areas that have been granted to them
- Run some of the standard reports in their area and validate the results
- Schedule Reports
- View Dashboards
- Save a report to "My Content" folder

.

Completing these steps finishes the initial setup of Costpoint Business Intelligence.

Upload Company Logos (Optional)

Your company logo can be incorporated into BI reports and dashboards by filing a service request.

To learn more about requesting a company logo upload, see KB Article #77411.

About Deltek

Better software means better projects. Deltek delivers software and information solutions that enable superior levels of project intelligence, management, and collaboration. Our industry-focused expertise makes your projects successful and helps you achieve performance that maximizes productivity and revenue.
