Deltek Defect Tracking Number:

869285

Issues Resolved:

**Description:** A posting submitted from the parameter screen through the Batch Mode menu selection may not complete fully due to timing considerations. It is possible that the trigger that controls the cleanup process may fire prematurely causing the movement of the JE transactions to the history tables to appear missed. This happens because the cleanup process removes the posting sequence number from the JE transactions. Since the posting sequence is prematurely removed when the app reaches the code that moves the JE transactions to history, they are missed. This scenario is difficult to reproduce but can be avoided by using the Job Server to submit jobs for batch processing.

**Customers Impacted:** All Costpoint 7.0.1 users.
