Deltek

Deltek Costpoint Enterprise Reporting 8.0

Reports Guide

September 1, 2020

This edition published September 1, 2020.

Contents

Overview

Costpoint Business Intelligence is a suite of applications that addresses the performance management needs of clients who are using the Cognos Business Intelligence platform with the Deltek Costpoint, Deltek Time and Expense, Deltek Costpoint Planning, and Deltek Shop Floor Time products.

Costpoint Business Intelligence 8.0 provides the capability to plan, monitor, analyze, and understand how your business is performing and take appropriate actions to improve profitability and overall company value. The Costpoint Business Intelligence 8.0 release offers complete and robust data models and developed reports. This provides a path for upgrading to future versions, and follows a standard software development lifecycle process that includes tracking and updating customer-requested enhancements and fixes.

Before You Begin

You must be running the correct versions of Costpoint, Deltek Time and Expense, and Deltek Costpoint Planning to properly run the reports discussed in this guide.

To use the reports discussed in this guide, you must be running at least one of the following:

- Deltek Costpoint 8.0
- Deltek Shop Floor Time 1.3 or 2.0

Also, Costpoint Business Intelligence 8.0 leverages Cognos Analytics 11.1.x

If you use Costpoint 7.0.1 or 7.1.1 and want to upgrade to Cognos Analytics 11.1.x, it is possible to upgrade your Cognos application and remain on a Costpoint 7.0.1 or 7.1.1 compatible CER version. However, Costpoint Business Intelligence 8.0 only supports Costpoint 8.0 or higher. The most recent Costpoint Enterprise Reporting version with Costpoint 7.0.1 compatibility is CER 7.1.4. The most recent version with Costpoint 7.1.1 is CER 7.2.3.

> **Attention:** For more information, see *Deltek Costpoint Business Intelligence 8.0 Installation Guide for New Users* or the *Deltek Costpoint Business Intelligence 8.0 Installation Guide for Users Upgrading from an Earlier Version*.

About This Guide

This guide describes the predefined reports provided with Costpoint Business Intelligence.

These reports were developed for a baseline Costpoint implementation without consideration of a company's specific implementation.

This guide includes the following information for each report:

- Report description
- Prompt screen illustration
- Prompt descriptions
- Sample reports

Use this document as a resource for becoming familiar with the predefined reports and for planning modifications to those reports to tailor them for your particular needs.

Deltek revises this document regularly to provide the most up-to-date technical information and instructions. You can download the most recent version using the Products Download page of the Deltek Customer Care Connect Web site.

Reports Included in this Release

Costpoint Business Intelligence 8.0 includes reporting and analytics for a variety of subject areas.

These subject areas include:

- Accounts Payable
- Accounts Receivable
- Contracts
- Costpoint Enterprise Reporting
- Costpoint Enterprise Reporting for Budgeting and Planning
- Costpoint Enterprise Reporting for Costpoint Administration
- Costpoint Enterprise Reporting for Fixed Assets
- Costpoint Enterprise Reporting for Human Resources and Payroll
- Costpoint Enterprise Reporting for Project Manufacturing
- Costpoint Business Intelligence for Shop Floor Time
- General Ledger
- Incurred Cost Submission (ICS)
- Materials
- Manufacturing
- Planning
- Procurement
- Projects
- Sarbanes-Oxley (SOX)
- Time
- Executive

Alerts and Workspaces

Costpoint Business Intelligence contains three sample alerts and two workspaces.

The three alerts provide samples of how to configure basic alerts. The alerts are:

- **Purchase Requisition** — Alerts when a purchase requisition is approved or rejected.
- **Funded Value** — Alerts when a project's revenue reaches 90% of its funded value.

- **Accounts Receivable** — Alerts when A/R is past due more than a set number of days (default is 90 days) or is past due more than a set amount (default is $10,000).

Workspaces include the Organization Manager Workspace and the Project Manager Workspace.

> **Note:** In Cognos Analytics 11, you can no longer edit or create new Workspaces, but you can still view existing Workspaces created in Cognos 10.x.

Viewing Reports and Internet Explorer Cache

When you view a report in the Cognos Viewer and select **Run HTML** as the display option, depending on your browser cache settings, you may not get minute to minute report updates of data that has changed in the Costpoint database.

Your report may not include vouchers that have just been posted.

If you need to access something that has just changed in the database, do one of the following:

- If viewing your data using the **Run HTML** option, empty all your temporary Internet files and then view the report again, selecting the **Run HTML** option.
- View the report selecting the **Run PDF** or **Run Excel**. When you view a report in Cognos Viewer in PDF for Excel format, the information included on the report is always the most up-to-date information available.

Entering Keywords in Keywords Search Fields

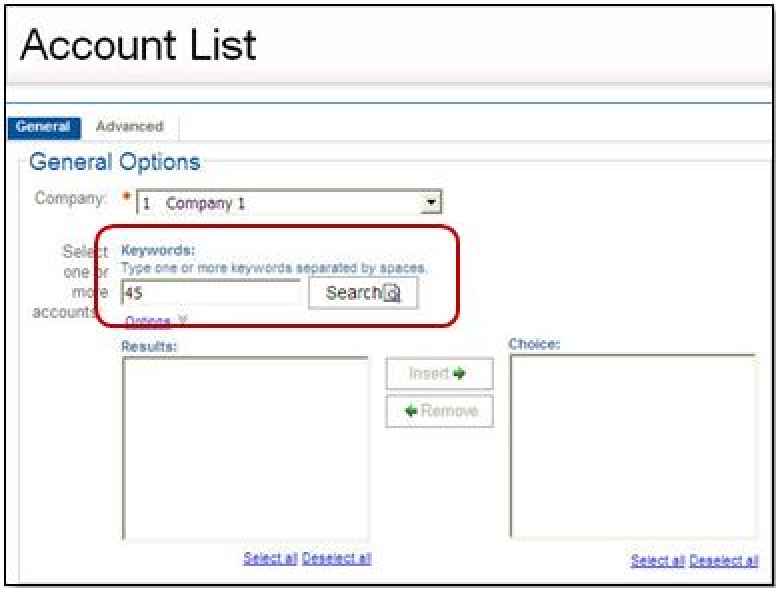
You can use these procedures to search for a variable (such as an account ID) to include on a report using the **Keywords** field.

Many reports in this report set include prompts that allow you to enter a keyword, partial keywords, or groups of keywords to search for results such as accounts, organizations, or projects to include on the report. This section explains in general terms how to use this **Keywords** field to return the results you are looking for.

To search for a variable (such as an account ID) to include on a report using the Keywords field:

1. In the **Keywords** search field of the selected reports prompts page (for example, the **Select one or more Accounts** field on the Account List prompt page), enter the entire ID or name, or a portion of one or more IDs or names.

   In this example, we have entered **45** in the **Keywords** field.



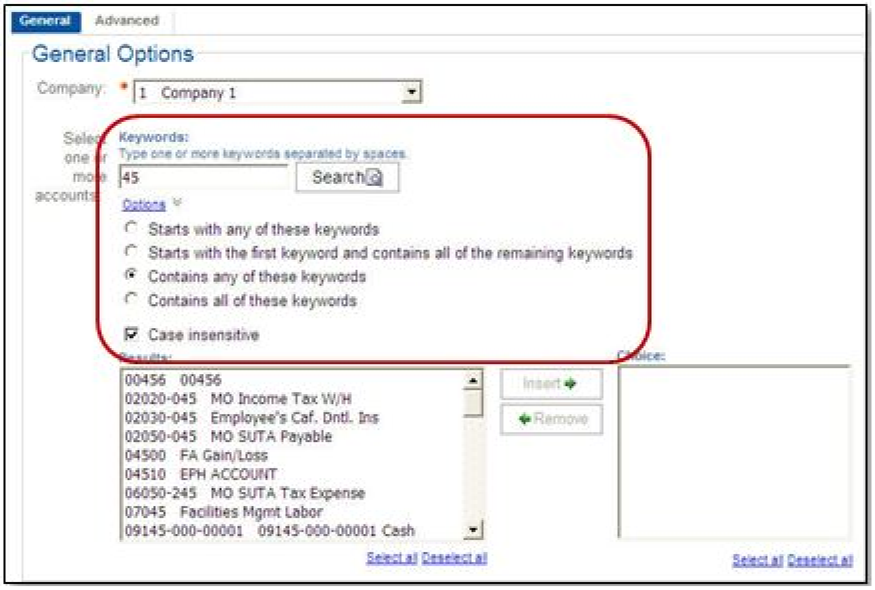
2. Click the **Options** link to display search options.

   If you do not display options and run the search without specifying an option, the default option is **Starts with any of these keywords**. This means that the value or values entered in the **Keywords** field is interpreted as the beginning of the IDs or names that will be searched on.

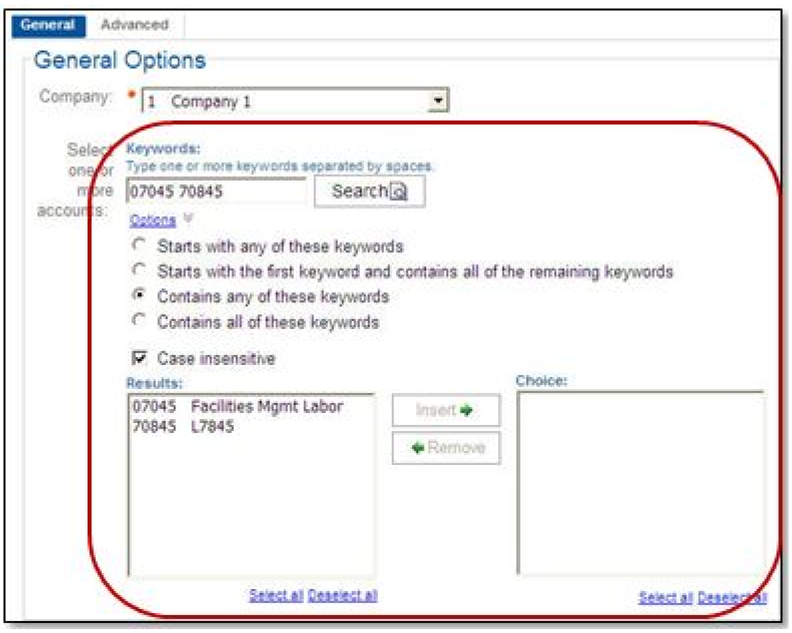
3. Set search options by selecting one of the following:

   - Starts with any of these keywords
   - Starts with the first keyword and contains all of the remaining keywords
   - Contains any of these keywords
   - Contains all of these keywords

   In this example, we have selected **Contains any of these keywords**. Notice that in the list of results returned in the **Results** area, each listing contains the number 45 somewhere in the account ID or name.



4. If you would like to search on more than one complete or partial keyword, separate each individual entry with a space.
   In this example, we are searching for two complete Account IDs: 07045 and 70845. Each entry is typed into the **Keywords** field and separated by a space.



5. Select the **Case insensitive** option if you want the search program to ignore case when performing the search.
6. Click the **Search** button to retrieve the IDs or names you are searching for.
   Results display in the **Results** area.
7. Select the items to include from the list of returned items, and click **Insert**.

8. When you are finished setting all report prompts, click **Run Report**.

IBM Cognos Analytics

Your system administrator sets up access to reports via Cognos Analytics, a Web page that provides a single access point to all corporate data available in the Cognos environment.

On this Web page, business users can access reports and dashboards. You can do the following with reports from Cognos Analytics:

- Schedule a report or a group of reports to run at a specific time.
- Distribute reports to other users.
- Print a report.
- Select the language used when a report is run.
- Set prompt values.
- Maintain the history of a report.
- Maintain different versions of a report.
- Create report views.

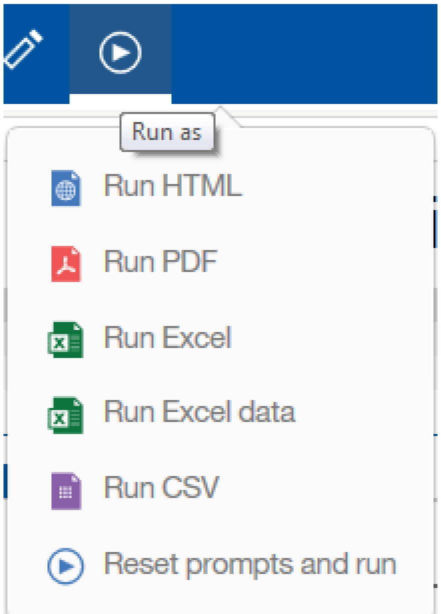
Running Reports

In Cognos Analytics, you can run reports in several ways.

For example, if you click on the hyperlinked report link, you will either run the report new, if no pre-set options are saved for the report, or view the report with pre-set options.

Although all Deltek reports are shipped without saved options, as you tailor reports to your needs, you may decide to save report options for some or all reports. For example, to use alerts, you must pre-set report options for the Project Percent Complete or Accounts Receivable Aging reports.

The Deltek recommended procedure for running reports is to click the **Run as** icon for the selected report.



Clicking this icon for a selected report ensures that you are running a new version of the report, rather than viewing a report with saved options.

Performance Issues Using Multiple Databases

The Costpoint Business Intelligence 8.0 release provides access to several databases which are Costpoint, Time & Expense, Costpoint Planning, and Shop Floor Time.

Deltek recommends that you use caution when creating reports that access several databases to avoid performance issues, especially when the amount of data involved is extensive.

Accounts Payable

Use the Accounts Payable reports to view a list of vendors and their classifications designated as small businesses.

This section displays sample prompt screens and sample reports for the following:

- 1099 Exceptions
- Vendor History by EEOC Classification

Certain accounts payable reports are drill-thru only, meaning that they are not intended to be run on their own, but accessed by clicking links from other, parent reports.

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Accounts Payable Framework Manager models, in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_APModel.xlsx.

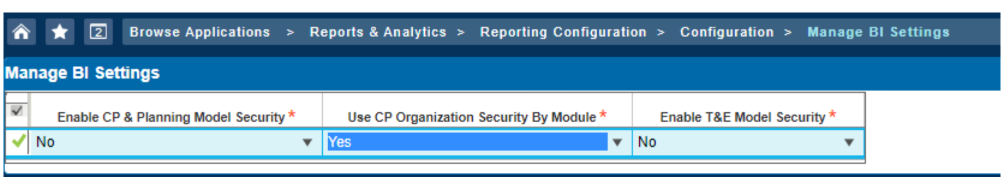
Model Security

The Procurement data model includes Costpoint Organizational Security.

Organizational Security

If Organizational security is turned on and set up in Costpoint with security profiles, groups, and users under **Admin** » **Security**, then it can be used in the Costpoint Business Intelligence models. To do so, select **Yes** in the **Use CP Organization Security By Module** field in **Manage BI Settings (BIMCERSETTINGS)**.

Organizational Security will prevent users from seeing data that is related to unauthorized organizations on any standard or custom reports or dashboards.



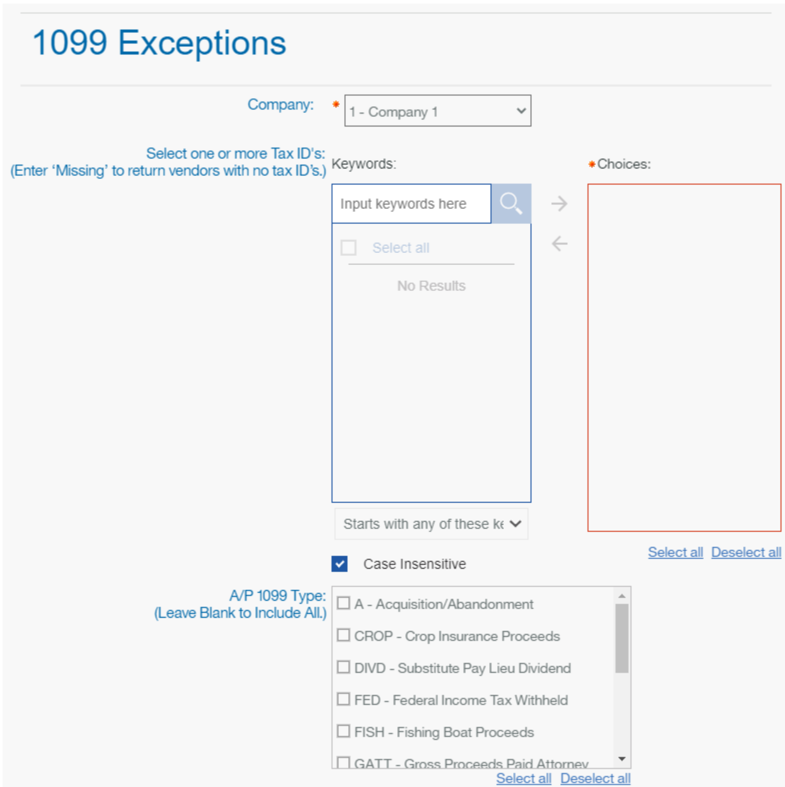
1099 Exceptions Report

The 1099 Exceptions report provides a list of the 1099 vendors that have missing or incomplete tax IDs.

This report should be run before the 1099s are printed to identify potential errors.

Prompts

Use the prompts to run the 1099 Exceptions report.



Prompt Message	Description
Company	Select one company from the list.
Select one or more tax ID's (Enter **Missing** to return vendors with no tax ID's.)	Enter a portion of one or more tax IDs or the text **Missing** in the **Keywords** field to search for vendors with incomplete tax IDs. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
AP 1099 type (Leave blank to include all.)	Select the AP type. For example: ▪ **A**: Acquisition/Abandonment ▪ **FED**: Federal Income Tax Withheld

Sample Report

Sample 1099 Exceptions report.

1099 Exceptions

1 - Company 1

Vendor	Vendor Name	A/P 1099 Type	A/P 1099 Type Description	Vendor Tax ID
GORDON	GORDON'S TEST VENDOR	NONEMP	Non-Employee Compensation	92-123456789
JFREGVEN001	JFREGVEN001 NAME	NONEMP	Non-Employee Compensation	992-22-1223
JSR1099CROP	JSR1099CROP	CROP	Crop Insurance Proceeds	987-654-321
PROUTY	DIANE PROUTY	NONEMP	Non-Employee Compensation	999-99-9996
WOLF	JOYCE WOLF	NONEMP	Non-Employee Compensation	999-99-9997
			Vendor ID Count	5

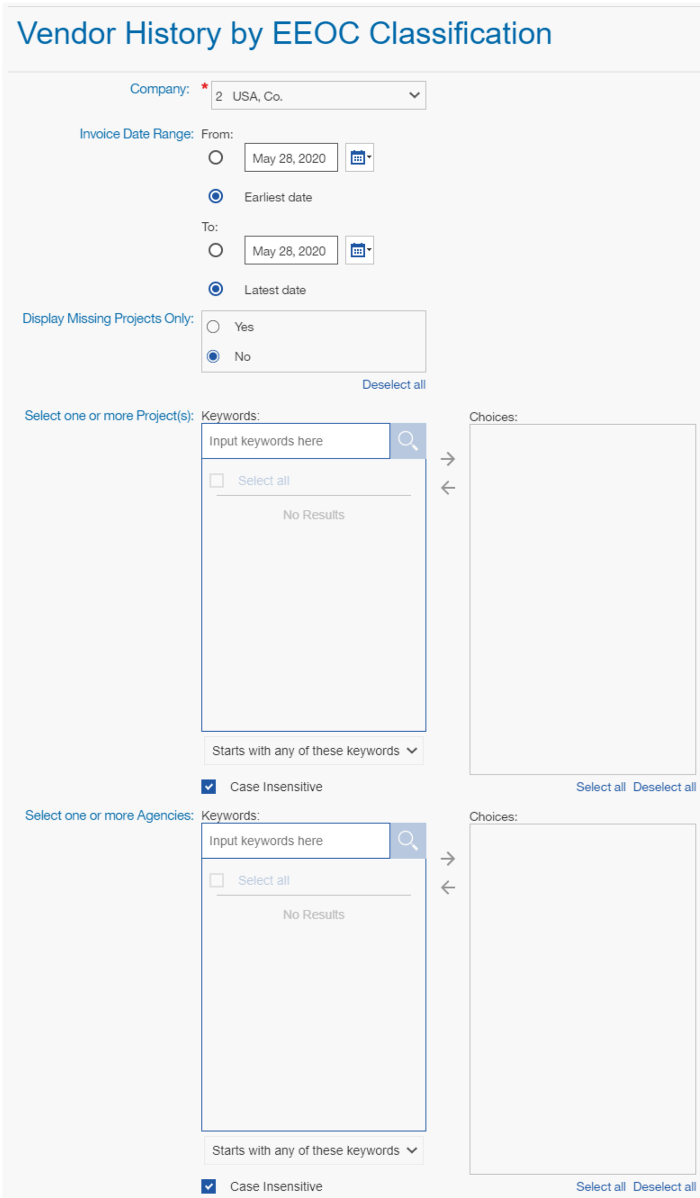
Vendor History by EEOC Classification

The Vendor History by EEOC Classification report provides a list of vendors and the classifications for those vendors who are designated as a Small Business (SB) in Costpoint.

Amounts from the Accounts Payable area are spread across the classification columns to display activity. Federal Contractors can use this information to help complete forms SF 294 and SF 295.

Prompts

These are Vendor History by EEOC Classification prompts.



Prompt Message	Description
Company	Select one company from the list.
Invoice start date	Enter the invoice start date to use or click the calendar icon to select the date.
Invoice end date	Enter the invoice end date to use or click the calendar icon to select a date.
Display Missing Projects Only	Select **Yes** if you only want the report to display data for vouchers that are not linked to a project.

Prompt Message	Description
	Select **No** if you want the report to display data for all vouchers selected by your entries in the prompt fields.
Select one or more Projects	Enter a portion of one or more project IDs in the **Keywords** field and click **Search** to list IDs to include on the report. Instructions for using the **Keywords** field are available in the **Entering Keywords in the Keywords Search Fields** section in the Overview.
Select one or more Agencies	Enter a portion of one or more agency IDs in the **Keywords** field and click **Search** to list IDs to include on the report. Instructions for using the **Keywords** field are available in the **Entering Keywords in the Keywords Search Fields** section in the Overview.

Note: To optimize the display of project IDs in **Select one or more projects**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

As you are able to change this limit, decreasing the limit will result to performance improvement. Increasing it, on the other hand, will process the query at a much longer time.

Sample Report

This is a sample of the Vendor History by EEOC Classification report.

Vendor History by EEOC Classification

Accounts Receivable

The Accounts Receivable folder includes the Accounts Receivable Aging Report. Unlike the legacy version of this report in the Costpoint Enterprise Reporting folder, this new report uses the secured Accounts Receivable model.

Model Information - Accounts Receivable

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Accounts Receivable framework model in spreadsheet format.

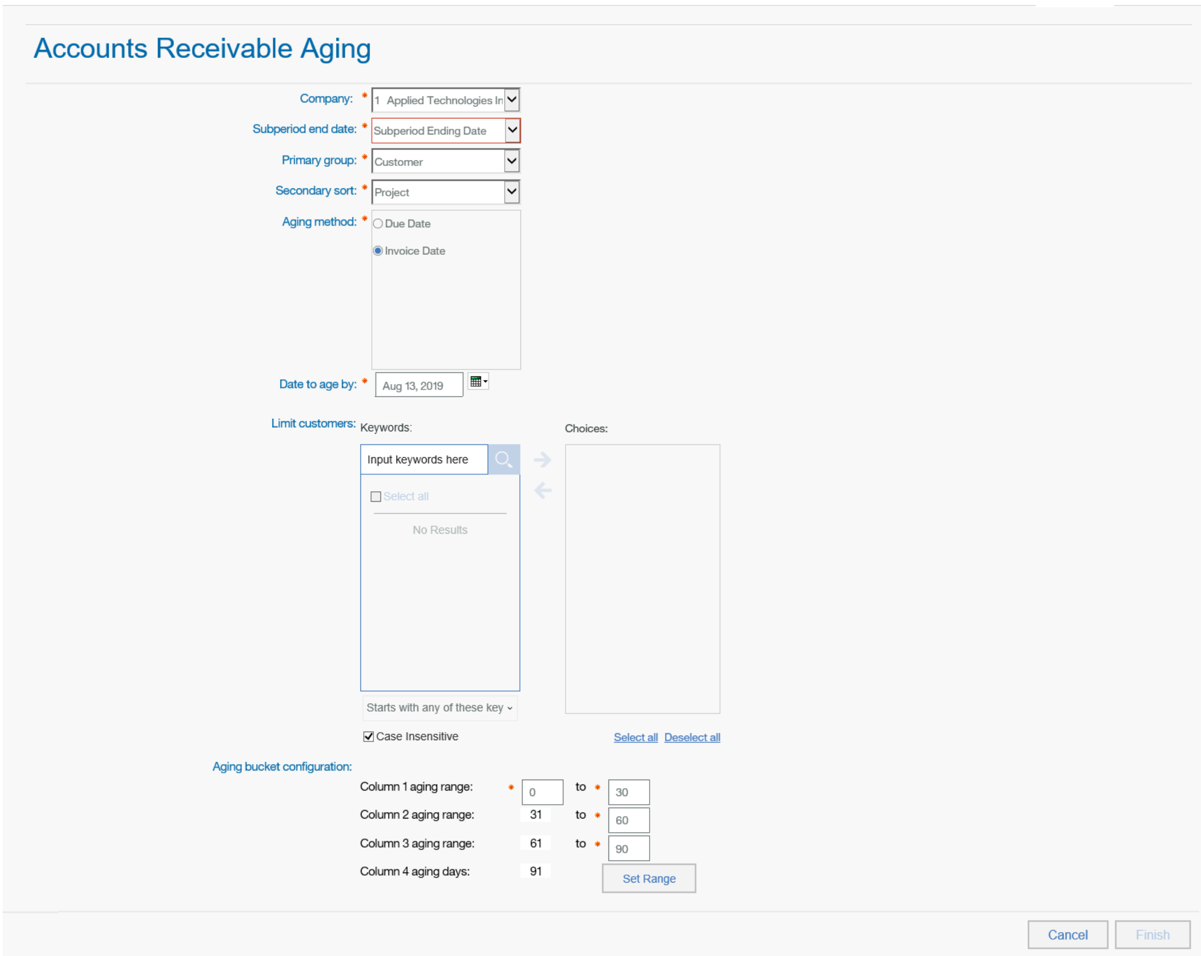
The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_AccountsReceivableModel.xlsx.

Accounts Receivable Aging Report

The new Accounts Receivable Aging Report is similar with the legacy version where it provides a list of all unpaid or partially paid invoices.

Prompts

The Accounts Receivable Aging Report prompts includes selections such as company, subperiod end date, and aging bucket configuration.



Prompt Message	Description
Company:	Select the Company that you want to display in the report.
Subperiod end date:	Enter or select the subperiod end date.
Primary group:	Select any option from the following list: ▪ Customer ▪ Customer Type ▪ Organization ▪ Project

Prompt Message	Description
	▪ Project Manager ▪ Project Type ▪ Reorganization
Secondary sort:	Select any option from the following list to use as the secondary sort on the report: ▪ Customer ▪ Customer Type ▪ Organization ▪ Project ▪ Project Manager ▪ Project Type ▪ Reorganization
Aging method:	Select one of the following options to age by: ▪ Due Date ▪ Invoice Date
Date to age by	Enter or select the date to use when determining which aging column the receivable amount belongs in, based on the number of days before this date the invoice date or due date (selected in the previous prompt) falls.
Limit customers:	In the **Keywords** field, enter a portion of one or more names or IDs to narrow the primary group you selected in the previous field. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Column 1 aging range:	Enter a range to age by in the following three columns. You can edit the default ranges as necessary as long as date ranges do not overlap from column to column . Defaults from **0** up to **30**.
Column 2 aging range:	Enter the column range for aging. Defaults from **31** up to **60**.
Column 3 aging range:	Enter the column range for aging. Defaults from **61** up to **90**.
Column 4 aging range:	This defaults to the last number in **Column 3 aging range** plus one.

Prompt Message	Description
Set range:	When you edit the default ranges, click this button to reset the first numbers in columns 2, 3, and/or 4.

Contracts

The Contracts folder includes dashboards, packages, and report templates that cater to Costpoint Contract Managements users.

Similar with the reports in the Planning folder, the report templates in Contracts are interactive which you can modify during run-time.

Note: The Contracts package requires a license to Contract Management in Costpoint.

Model Information - Contracts

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Contracts framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_ContractsModel.xls.

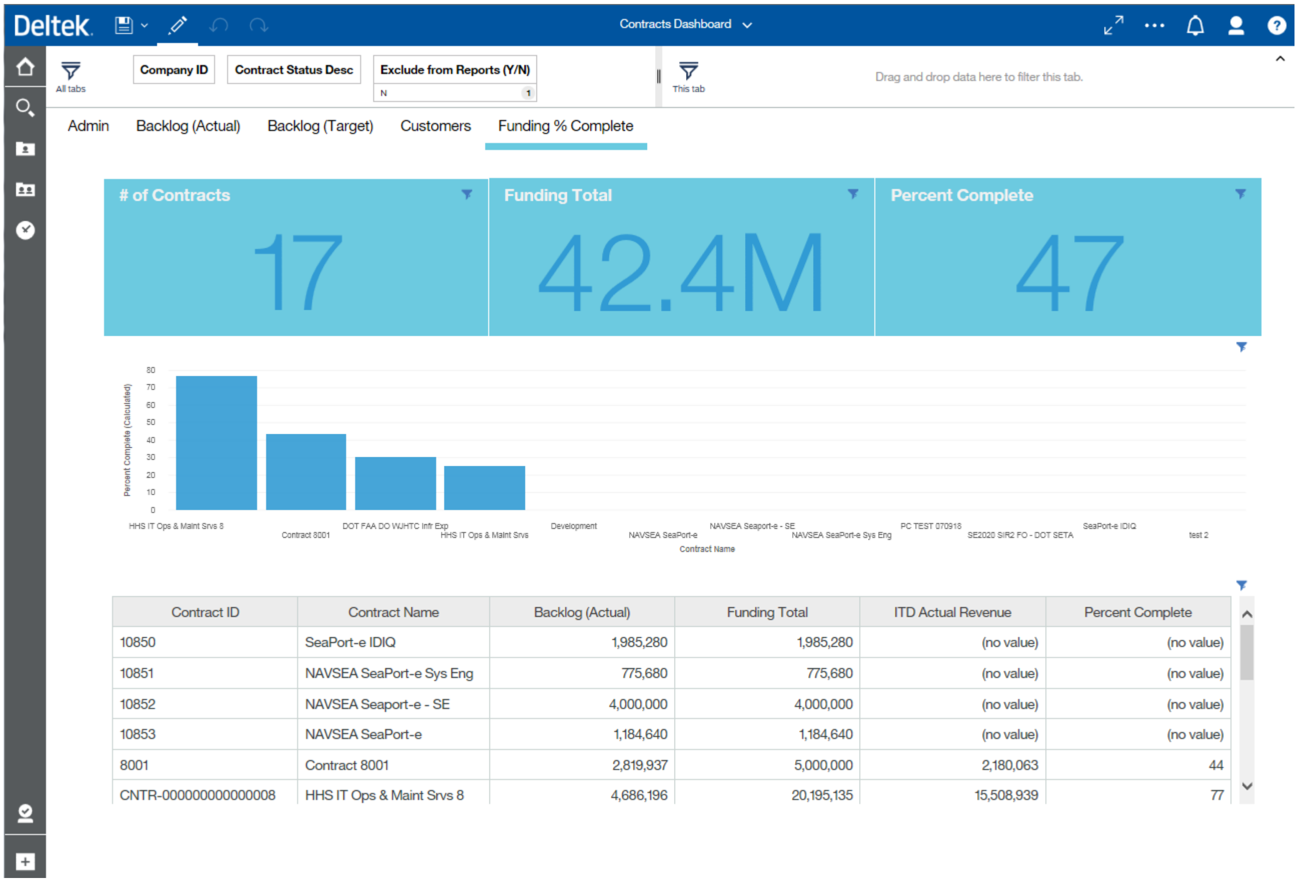
Contracts - Dashboard

The template dashboards for Contracts allow you to create and share interactive analytical dashboards that uses the Costpoint Contracts Management data.

Contracts Dashboard

Use the Contracts Dashboard to see the percentage completion of contracts. It helps you identify fund limitation issues ahead of time if there are any.

The dashboard shows you the backlogs in contracts, the volume of contracts per primary customer, and the volume of contracts by contract administrator that can help in analyzing the workload and responsibilities for the team.

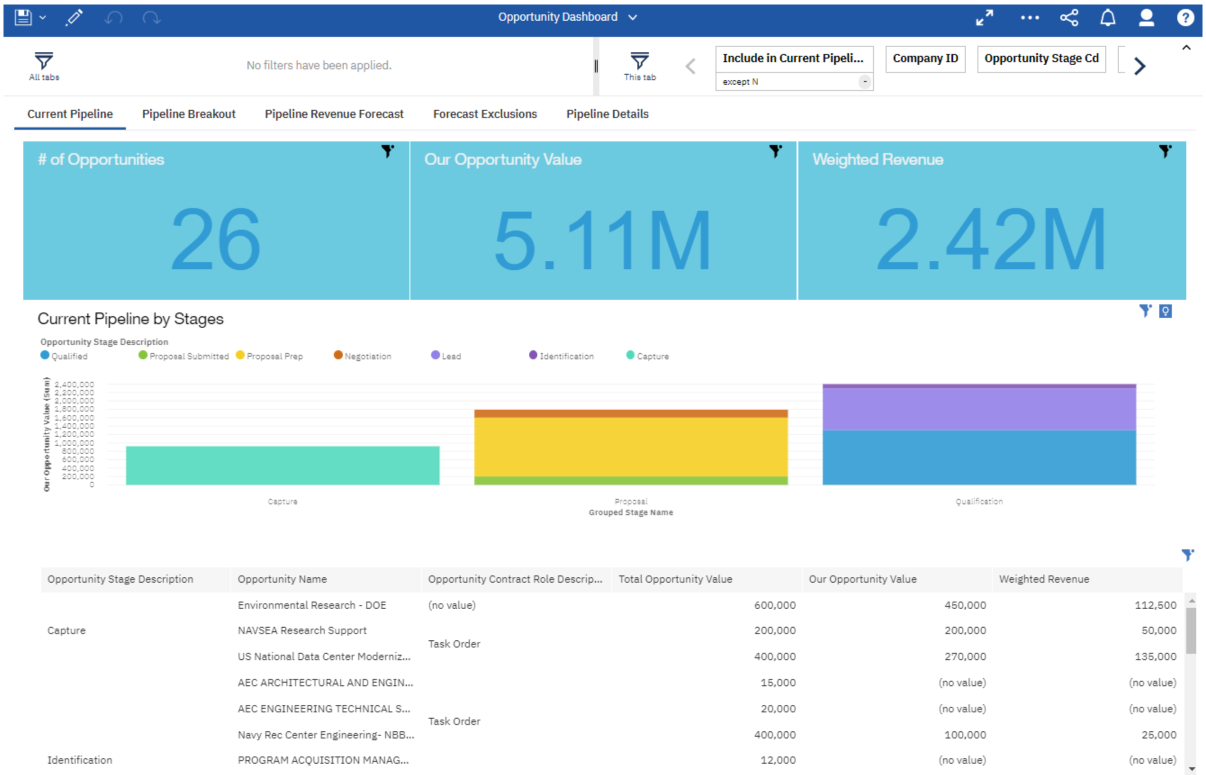


There are five tabs on this dashboard and they are:

- **Admin** - this tab shows the volume of contracts per contract administrator.
- **Backlog (Actual)** - this tab displays the backlog of contracts that helps you determine if you need to notify the client that additional funding is needed.
- **Backlog (Target)** - similar with **Backlog (Actual)**, this tab displays the backlog of contracts for the target amount.
- **Customers** - this tab displays the volume of contracts by primary customer. This tells you which customer has the majority of the contracts, that helps you determine where your company can invest in the future.
- **Funding % Complete** - this tab displays the percentage of completion of contracts based off a specified percentage amount.

Opportunity Dashboard

The Opportunity Dashboard displays consolidated metric views for the Opportunities module.



The dashboard contains the following tabs:

- **Current Pipeline:** This tab displays the detailed list of opportunities based on specified pipeline stages. This provides the sales team a visual representation of the value of the opportunities broken out by each of the stages to help determine where to prioritize efforts to close deals.
- **Pipeline Breakout:** This tab displays the summary of opportunity pipeline amounts broken out by stage based on the anticipated award date. This lets you assess future revenue for the company.
- **Pipeline Revenue Forecast:** This tab displays the Opportunity Value and Weighted Revenue, spread evenly over months. The Opportunity Value Forecast Spread displays the estimated start date and estimated dates of the opportunities, and evenly spreads the opportunity value over the months. The Weighted Revenue Forecast Spread displays the estimated start date and estimated completion dates of the opportunities, and evenly spreads the weighted revenue over the months.
- **Forecast Exclusions** This tab displays the opportunities that require additional data before they can be included in the Revenue Forecast. Required data may include the start date, end date, or the Our Opportunity Value/Weighted Value data.

- **Pipeline Details:** This tab displays the summary of opportunity pipeline amounts that are grouped and shows the total percentage by each stage.

Contracts - Packages

The report package in Contracts is Contracts Reporting.

Contracts - Reports

There are six template reports in Contracts that you can use or customize.

The template reports in Contracts are:

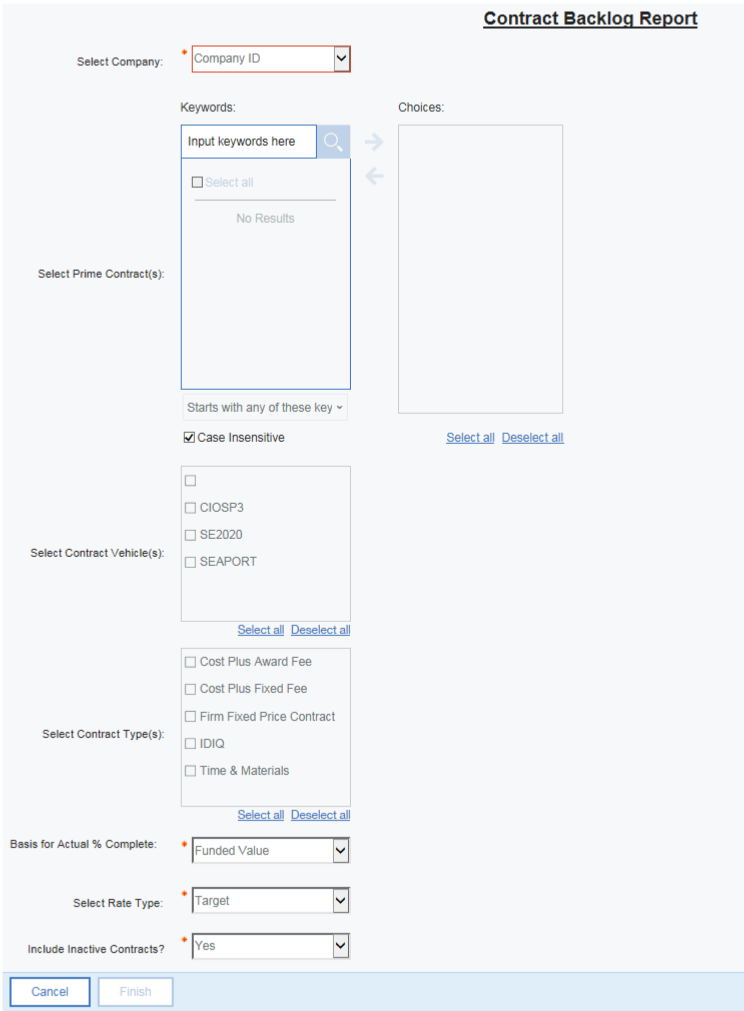
- **Contract Backlog Report** - Created from the Contracts model, this report shows contract backlog and funded percent complete for each contract.
- **Contract Drill Thru** - This report displays the contract details of a customer, such as activities, projects, and subcontracts.
- **Contract Vehicle Report** - Created from the Contracts model, this report shows the task orders that have been assigned to a specific vehicle and the corresponding award values. Task orders per vehicle are also displayed.
- **Customer Inquiry** - Created from the Contracts model, in this report you can see the information about a customer and further broken down into different areas which are opportunities, contracts, projects, and others. Drill-thru reports are included in the report.
- **Opportunity Current Pipeline Report** - This report displays all your current pipeline data that helps you assess the opportunities that you can work on and the probability to win each.
- **Opportunity Days Open Report** - This report displays the opportunities that you won and lost as well as the number of days the opportunity has been open. The information helps you to determine the number of days you spend on opportunities.
- **Opportunity Win/Loss Report** - This report displays the opportunities that your company won and lost, as well as the individual weighted revenue and totals. This helps you assess if you company is pursuing the right types of opportunities.

Contract Backlog Report

Use the Contract Backlog Report to determine the amount of money left on each contract and whether action needs to be done due to contract overruns.

Prompts

The prompts for the Contract Backlog Report includes the selection for company, contracts, contract vehicle, contract type, and others .



Prompt Message	Description
Select Company:	Select the Company that you want to display in the report.
Select Prime Contract(s):	Select the contracts that you want to display in the report. In **Keywords**, enter one or more characters for which you want to search to retrieve contract information from. To narrow the search, select one of the following in the dropdown field. ▪ **Starts with any of these keywords**

Prompt Message	Description
	▪ **Starts with the first keyword and contains all of the remaining keywords** ▪ **Contains any of these keywords** ▪ **Contains all of these keywords** If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click the arrow to list the matching contracts in **Choices**.
Select Contract Vehicle(s):	Select the contract vehicle that you like to include in the report.
Select Contract Type(s):	Select the types of contract that you like to include in the report.
Basis for Actual % Complete:	Select the basis for the actual percentage completion which can either be **Funded Value** or **Contract Value**.
Select Rate Type	Select the type of rate which can either be **Target** or **Actual**.
Select Inactive Contracts?	Indicate if you like to include inactive contracts (**Yes**) or not (**No**).

Customer Inquiry Drill-Thru Reports

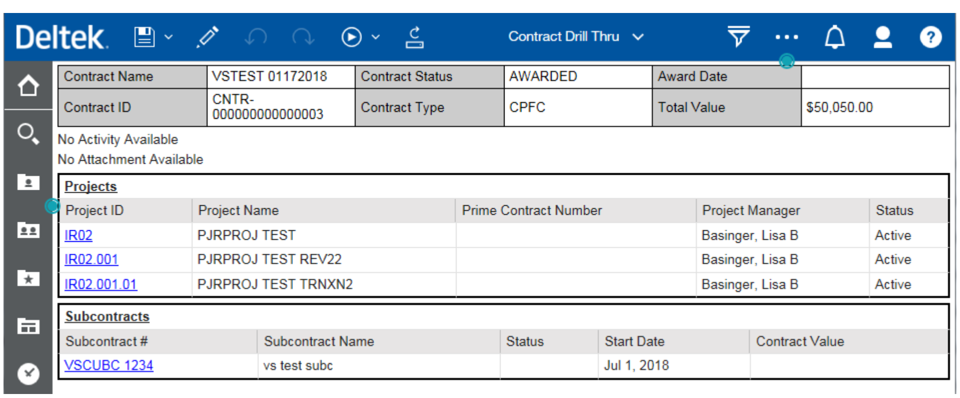
There are several drill-thru reports available in the Customer Inquiry report where you can see details about contracts, opportunities, projects, subcontracts, and organizational conflict of interest (OCIs).

Because drill-thru only reports are not run on their own, users do not need to enter prompt information for these reports. Information needed to run the report is retrieved based on the parent report such as the Customer Inquiry report. No user input is required.

Contract Drill-Thru

The Contract Drill-Thru report displays the contract details of a customer such as activities, projects, and subcontracts.

This is a sample Contract Drill-Thru report.



Contract Name	VSTEST 01172018	Contract Status	AWARDED	Award Date

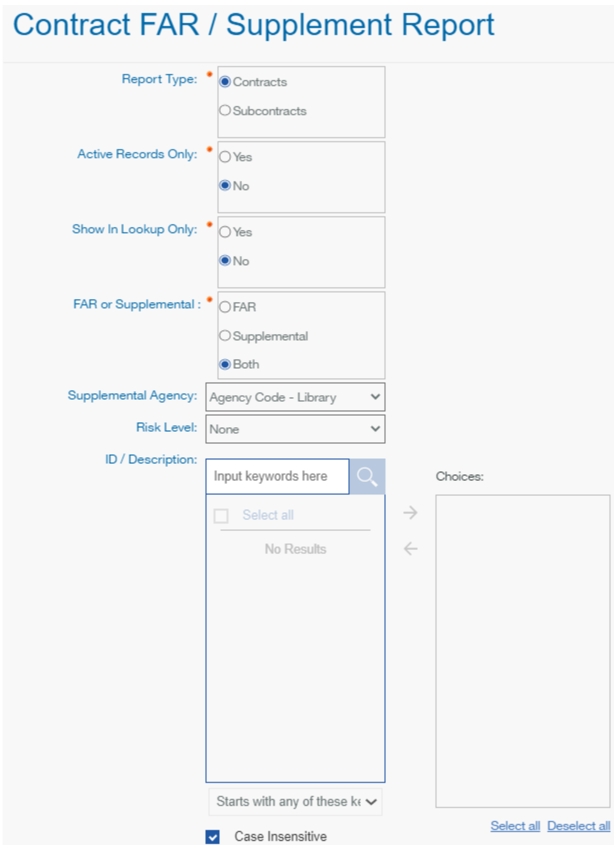
Contract FAR/Supplement Report

The Contract FAR/Supplement report displays the Federal Acquisition Regulations (FAR) and/or supplemental information for contracts and subcontracts.

Prompts

Use the prompts to filter results for the Contract FAR / Supplement report.



Prompt Message	Description
Report Type	Select to display records for contracts or subcontracts in the report.
Active Records Only	Indicate whether to display only active contract records (**Yes**) or not (**No**).
Show in Lookup Only	Indicate whether to display only the results that have Show in Lookup marked for FAR and/or Supplemental records (**Yes**) or not (**No**).
FAR	Indicate whether to include FAR clauses (**Yes**) or not (**No**).
Supplemental	Indicate if you want to include Supplemental clauses (**Yes**) or not (**No**).
ID / Description	Select the records that you want to display in the report.

Prompt Message	Description
	In **Keywords**, enter one or more characters for which you want to search to retrieve information from. To narrow the search, select one of the following in the drop-down field: ▪ **Starts with any of these keywords** ▪ **Starts with the first keyword and contains all of the remaining keywords** ▪ **Contains any of these keywords** ▪ **Contains all of these keywords**
Risk Level	Select the risk level.
Filter By	Choose to organize records in the report by FAR or Supplemental data.

Sample Report

This is a sample Contract FAR/Supplement report.

Contract FAR / Supplement Report

Contract ID Name	Contract Type	Contract Status	Contract Administrator	Prime Contract No	Customer	Start Date	End Date	Primary Agency
CNTR-000000000000002 - NETCENTS 2 IDIQ	IDIQ	Awarded		FA877109R0028		08/01/2018	12/31/2020	AIR FORCE

Click the contract or subcontract to view the FAR and supplement clauses for that record.

Costpoint Enterprise Reporting Packages

This chapter includes descriptions of reports in the Costpoint Enterprise Reporting package, along with the report prompts.

The reporting packages include the following report categories:

- Accounts Payable Reports
- Accounts Receivable Reports
- Basic Information Reports
- Billing Reports
- General Ledger Reports
- Procurement Reports
- Projects Reports
- Purchasing Reports
- Drill Thru Only CP Reports
- Time and Expense Reports
- Drill Thru Only TESS Reports

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Costpoint Business Intelligence Framework Manager models, in spreadsheet format.

The names of the spreadsheet files for Costpoint Business Intelligence 8.0 are listed below:

- DeltekCostpointBusinessIntelligence80_AccountsReceivableModel.xlsx
- DeltekCostpointBusinessIntelligence80_CPAdministrationModel.xls
- DeltekCostpointBusinessIntelligence80_BudgetingPlanningModel.xls
- DeltekCostpointBusinessIntelligence80_ContractsModel.xls
- DeltekCostpointBusinessIntelligence80_Model_CP711.xls
- DeltekCostpointBusinessIntelligence80_CP711_FixedAssetsModel.xls
- DeltekCostpointBusinessIntelligence80_GeneralLedgerModel.xlsx
- DeltekCostpointBusinessIntelligence80_HRPRModel.xls
- DeltekCostpointBusinessIntelligence80_ICS-CoreModel.xls
- DeltekCostpointBusinessIntelligence80_ICS-PresentationModel.xls
- DeltekCostpointBusinessIntelligence80_PlanningModel.xls

Accounts Payable Reports

Use the Accounts Payable reports to view a list of the 1099 vendors that have missing or incomplete tax IDs and a list of vendors and their classifications designated as small businesses.

This section displays sample prompt screens and sample reports for the following:

- 1099 Exceptions
- Vendor History by EEOC Classification

Certain accounts payable reports are drill-thru only, meaning that they are not intended to be run on their own, but accessed by clicking links from other, parent reports.

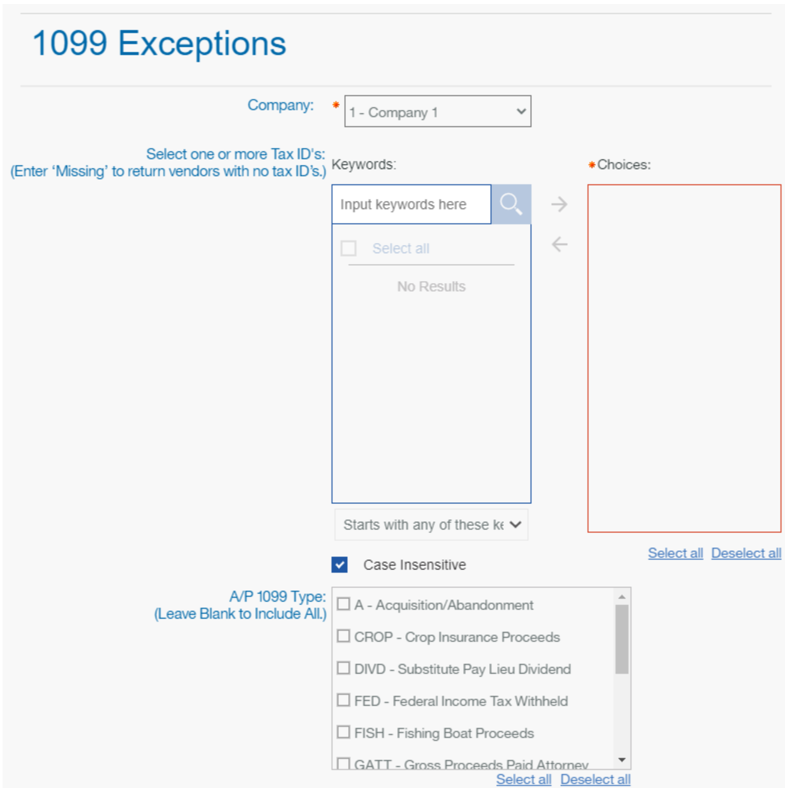
1099 Exceptions Report

The 1099 Exceptions report provides a list of the 1099 vendors that have missing or incomplete tax IDs.

This report should be run before the 1099s are printed to identify potential errors.

Prompts

Use the prompts to run the 1099 Exceptions report.



Prompt Message	Description
Company	Select one company from the list.
Select one or more tax ID's (Enter **Missing** to return vendors with no tax ID's.)	Enter a portion of one or more tax IDs or the text **Missing** in the **Keywords** field to search for vendors with incomplete tax IDs. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
AP 1099 type (Leave blank to include all.)	Select the AP type. For example: ▪ **A**: Acquisition/Abandonment ▪ **FED**: Federal Income Tax Withheld

Sample Report

Sample 1099 Exceptions report.

1099 Exceptions

1 - Company 1

Vendor	Vendor Name	A/P 1099 Type	A/P 1099 Type Description	Vendor Tax ID
GORDON	GORDON'S TEST VENDOR	NONEMP	Non-Employee Compensation	92-123456789

JSR1099CROP	JSR1099CROP	CROP	Crop Insurance Proceeds	987-654-321
PROUTY	DIANE PROUTY	NONEMP	Non-Employee Compensation	999-99-9996
WOLF	JOYCE WOLF	NONEMP	Non-Employee Compensation	999-99-9997
			Vendor ID Count	5

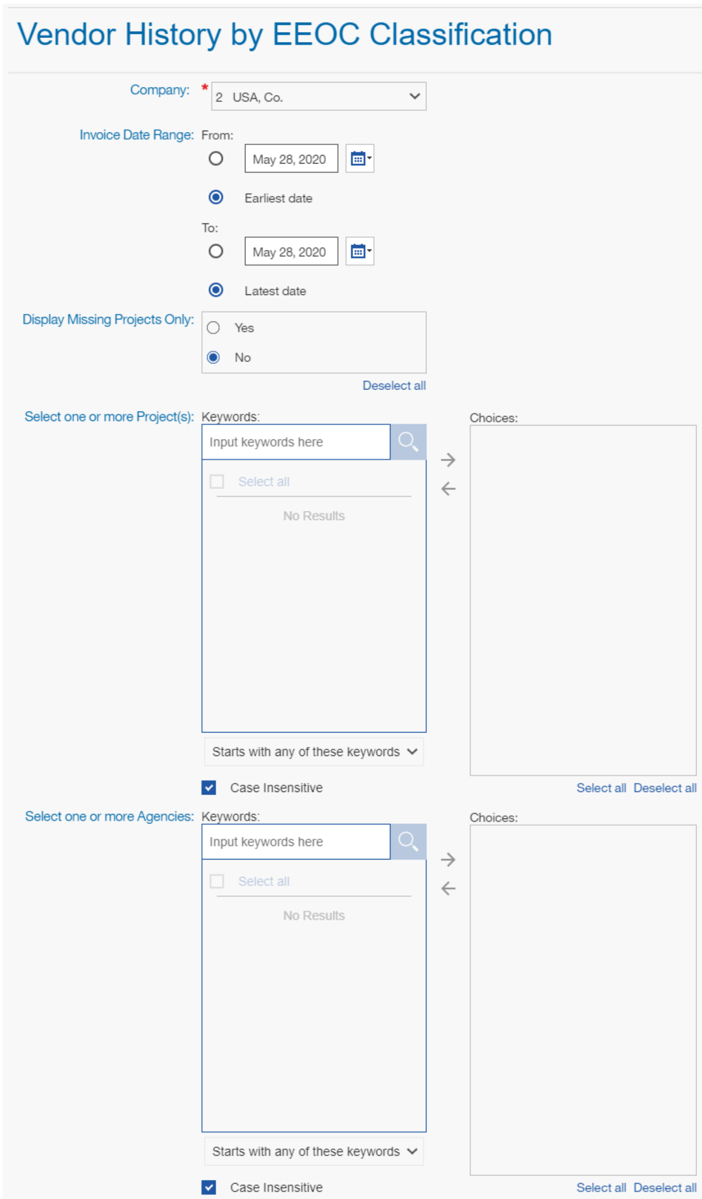
Vendor History by EEOC Classification Report

The Vendor History by EEOC Classification report provides a list of vendors and the classifications for those vendors who are designated as a Small Business (SB) in Costpoint.

Amounts from the Accounts Payable area are spread across the classification columns to display activity. Federal Contractors can use this information to help complete forms SF 294 and SF 295.

Prompts

Use the Vendor History by EEOC Classification prompts to run the Vendor History by EEOC Classification.



Prompt Message	Description
Company	Select a company from the list.
Invoice start date	Enter the invoice start date to use or click the calendar icon to select the date.

Prompt Message	Description
Invoice end date	Enter the invoice end date to use or click the calendar icon to select a date.
Display Missing Projects Only	Select **Yes** if you only want the report to display data for vouchers that are not linked to a project. Select **No** if you want the report to display data for all vouchers selected by your entries in the prompt fields.
Select one or more Projects	Enter a portion of one or more project IDs in the **Keywords** field and click to list IDs to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more Agencies	Enter a portion of one or more agency IDs in the **Keywords** field and click to list IDs to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in **Select one or more projects**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

As you are able to change this limit, decreasing the limit will result to performance improvement. Increasing it, on the other hand, will process the query at a much longer time.

Accounts Receivable Reports

Use the Accounts Receivable reports to view a list of all unpaid or partially paid invoices and graphical representation of Accounts Receivable Aging data.

This section displays sample prompt screens and sample reports for the following reports:

- Accounts Receivable Aging
- A/R Charts

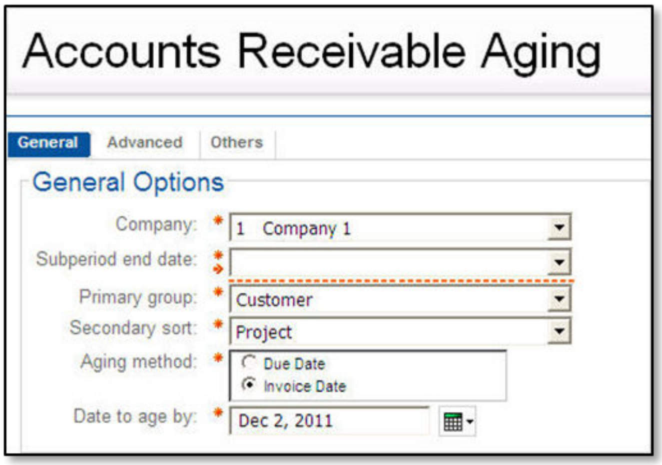
Accounts Receivable Aging Report

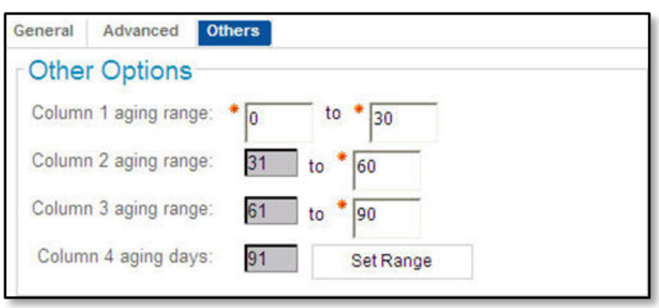
The Accounts Receivable Aging report is a management report that provides a list of all unpaid or partially paid invoices.

The report ages the amounts based on an option of invoice date or due date. The report contains drill-through functionality that allows you to view more detailed information about the outstanding amounts. This report can be used as a drill-thru report from the A/R Charts report, or as a standalone report.

Prompts

These are Accounts Receivable Aging prompts.





Prompt Message	Description
Company	Select one company from the list.
Subperiod end date	Enter or select the subperiod end date.

Prompt Message	Description
Primary group	Select any option from the following list: ▪ Customer ▪ Customer Type ▪ Organization ▪ Project ▪ Project Manager ▪ Project Type ▪ Reorganization
Secondary sort	Select any option from the following list to use as the secondary sort on the report: ▪ Customer ▪ Customer Type ▪ Organization ▪ Project ▪ Project Manager ▪ Project Type ▪ Reorganization
Aging method	Select one of the following options to age by: ▪ Due Date ▪ Invoice Date
Date to age by	Enter or select the date to use when determining which aging column the receivable amount belongs in, based on the number of days before this date the invoice date or due date (selected in the previous prompt) falls.
Limit customers	Enter a portion of one or more names or IDs in the **Keywords** field to narrow the primary group you selected in the previous field. Instructions for using the **Keywords** field are available in the **Entering Keywords in the Keywords Search Fields** section in the Overview.
Column 1 aging range	Enter a range to age by in the following three columns. You can edit the default ranges as necessary as long as date ranges do not overlap from column to column. Defaults from **0** up to **30**.
Column 2 aging range	Enter the column range for aging. Defaults from **31** up to **60**.

Prompt Message	Description
Column 3 aging range	Enter the column range for aging. Defaults from **61** up to **90**.
Column 4 aging days	This defaults to the last number in **Column 3 aging range** plus one.
Set Range	When you edit the default ranges, click this button to reset the first numbers in columns 2, 3, and/or 4.

Basic Information Reports

This section displays sample prompt screens and sample reports for the Basic Information reports.

Basic Information reports include the following:

- Account List
- Customer Master Information
- Employee Basic Information
- Organization List
- Reorganization Structure
- Vendor Employee
- Vendor Master

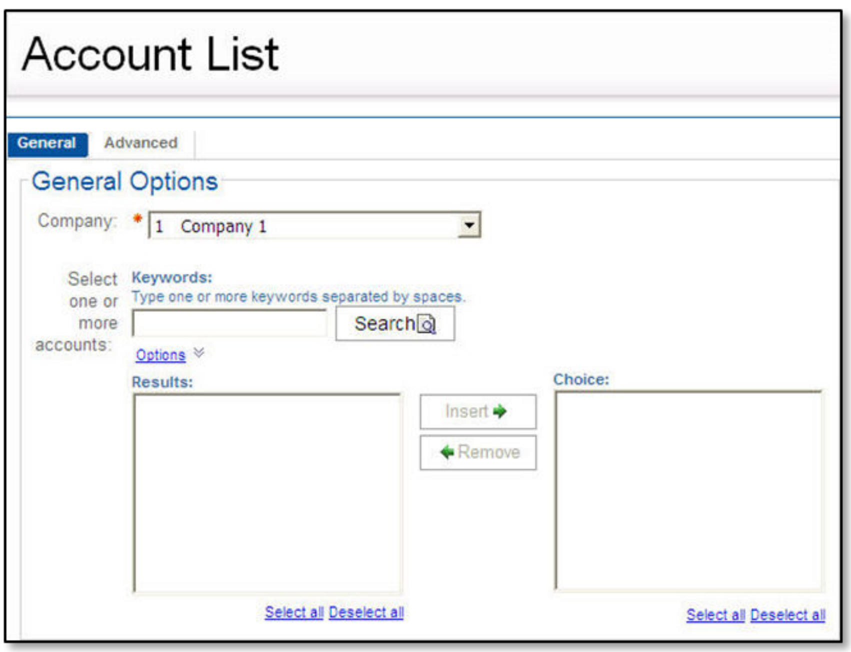
Account List

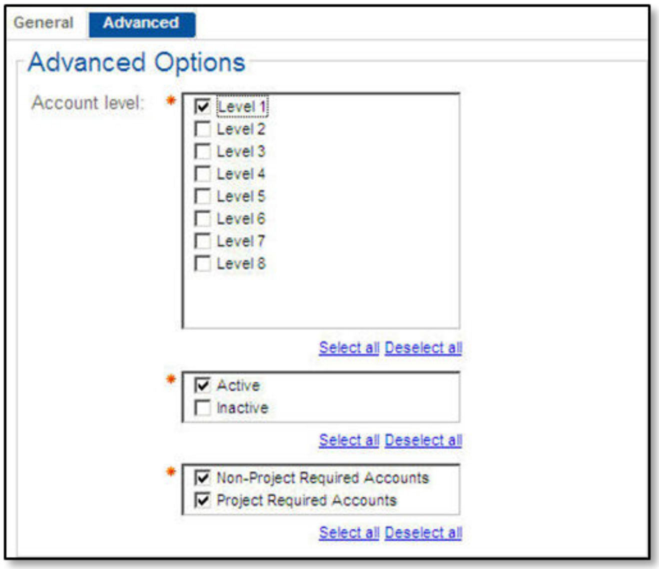
The Account List report displays general ledger account master file information.

It is one in a series of reports called master reports. This report provides a basic listing of the account structure. It can be used as a stand-alone report, or as a drill-thru target from other reports, like the Balance Sheet and Income Statement.

Prompts

Use the Accounts List prompts to run the Account List report.





Prompt Message	Description
Company	Select one company from the list.
Select one or more accounts	Enter a portion of one or more account IDs in the **Keywords** field and click to list accounts to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Account level	Select the account level at which you want the report printed. All lower levels will be rolled up for the report.
Account status	Select one of the following options: ▪ **Active**: Include accounts currently in use on the report. ▪ **Inactive**: Include accounts not currently used on the report.
Project required	Select one of the following options: ▪ **Non-Project Required Accounts**: Include accounts with the **Project Required** option unchecked. ▪ **Project Required Accounts**: Include accounts with the **Project Required** option checked, which indicates that whenever the account is used, a project must be charged.

Sample Report

								Account ID Count	3

Page 1 of 1

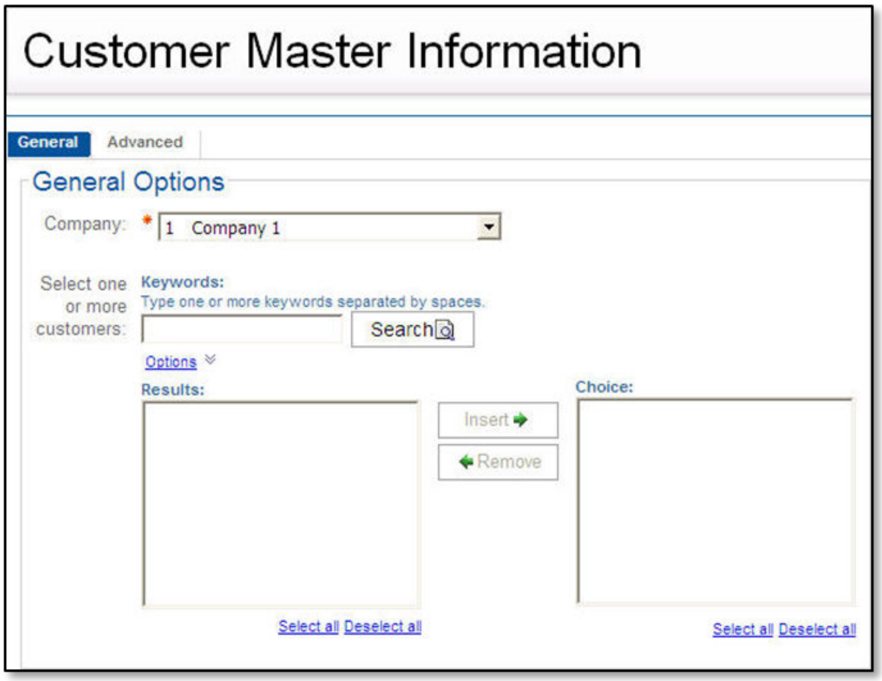
Customer Master Information Report

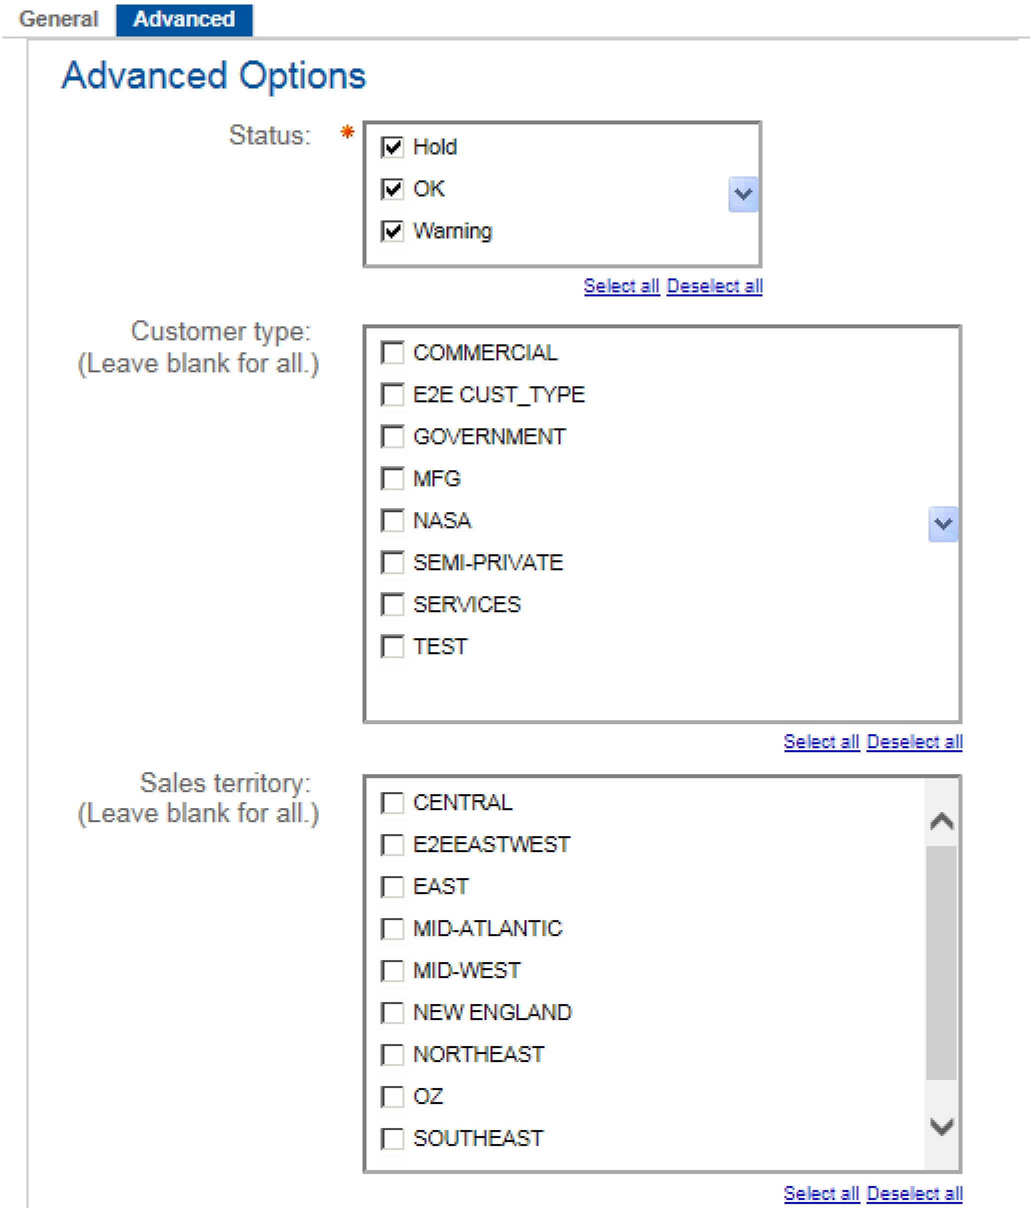
The Customer Master Information report can be used as a drill-through report from reports with a customer field.

This report provides a list of customers with the relevant master file information.

Prompts

Use the Customer Master Information prompts to run the Customer Master Information report.





Prompt Message	Description
Company	Select one company from the list.
Select one or more customers	In the **Keywords** field, enter a portion of one or more customer IDs and click to list customers to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
Status	Select a customer status to filter the report results by one or more of the following statuses: ▪ **Hold**: Include customers whose sales order processing has been suspended. ▪ **OK**: Include customers with credit in good standing. ▪ **Warning**: Include customers whose sales orders are still being processed, but whose orders are marked with a warning message during sales order entry indicating the customer's credit status.
Customer type	Select one or more types of customers to include on the report.
Sales territory	Select the territory or territories of customers you want to include on the report. Territories are established in the Sales Territories table in Costpoint Accounts Receivable.

Sample Report

Sample Customer Master Information report.

Customer Master Information

1 Company 1

Page 1 of 1

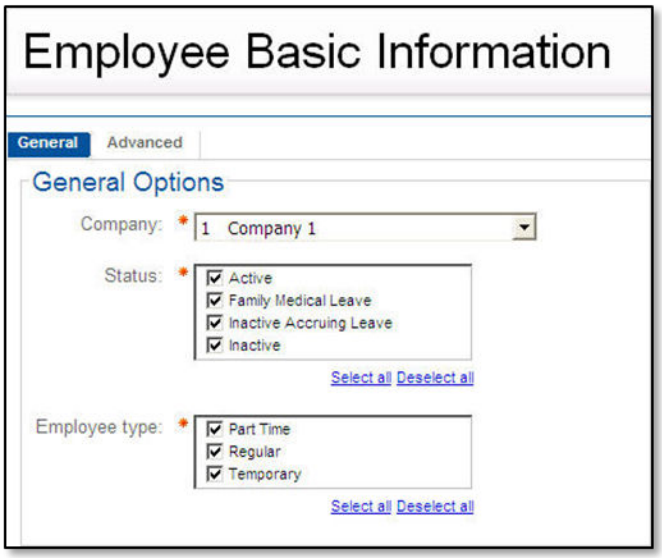
Employee Basic Information Report

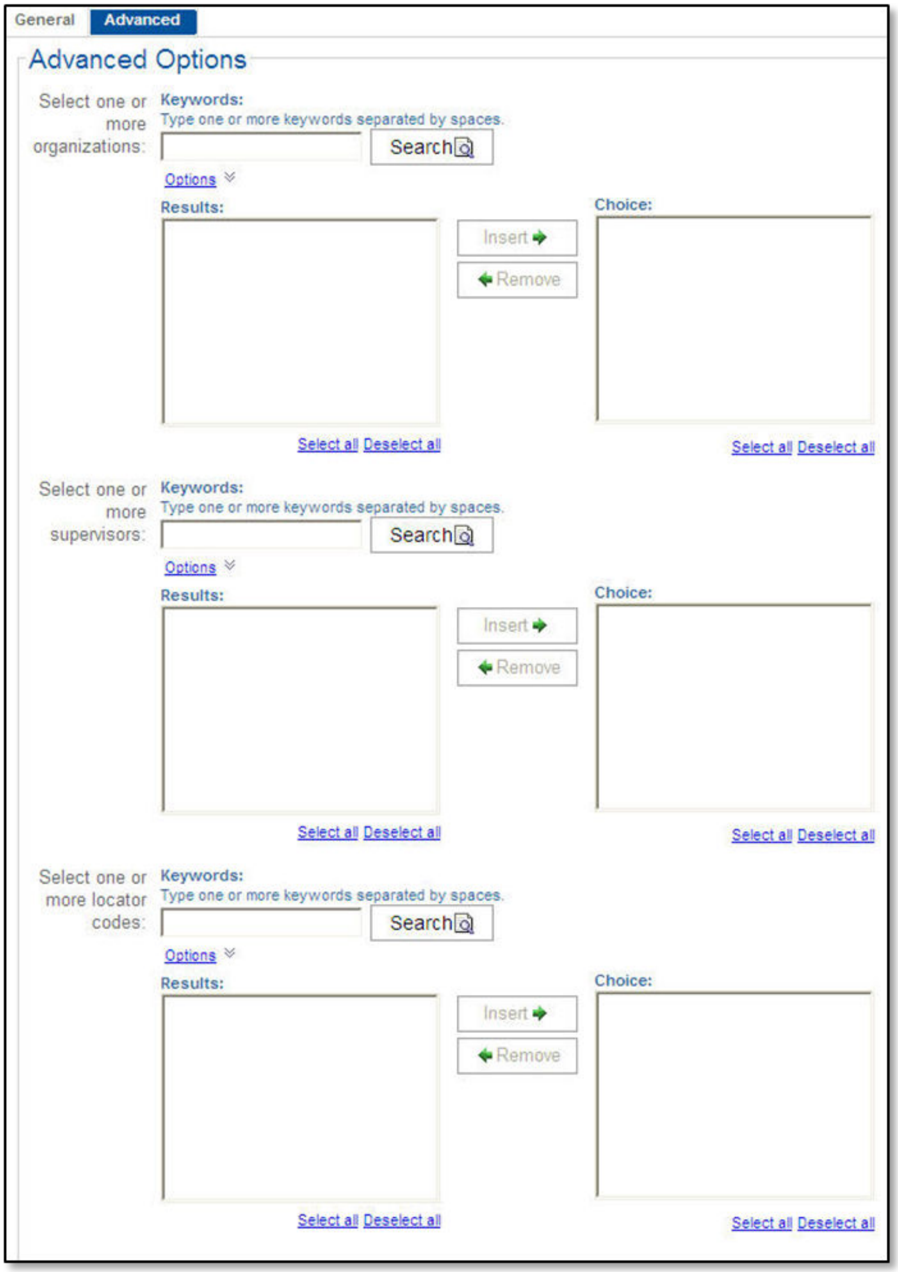
The Employee Basic Information report displays employee basic information (excluding salary related information).

It is one in a series of master information reports. This report can also be used as a drill-thru target from other reports.

Prompts

Use the Employee Basic Information prompts to configure the Employee Basic Information report.





Prompt Message	Description
Company	Select a company from the list.
Status	Select one or more of the following employee statuses to narrow the list of employees to include on the report: ▪ Active

Prompt Message	Description
	▪ Family Medical Leave ▪ Inactive Accruing Leave ▪ Inactive
Employee type	Select one or more of the following employee types to narrow the list of employees to include on the report: ▪ Part Time ▪ Regular ▪ Temporary
Select one or more organizations	Enter a portion of one or more organization IDs in the **Keywords** field and click to list organizations to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more supervisors	In the **Keywords** field, enter a portion of one or more supervisor names and click to list supervisors to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more locator codes	In the **Keywords** field, enter a portion of one or more locator codes and click to list codes to use as filters for employee's to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. A locator code is an optional field that can be defined for an employee. It is used only in the employee record and not maintained or validated anywhere else in Costpoint. It is used typically as a way to organize how checks or leave status is printed (set up locator codes and print checks or leave status in groups, sorted by locator code).

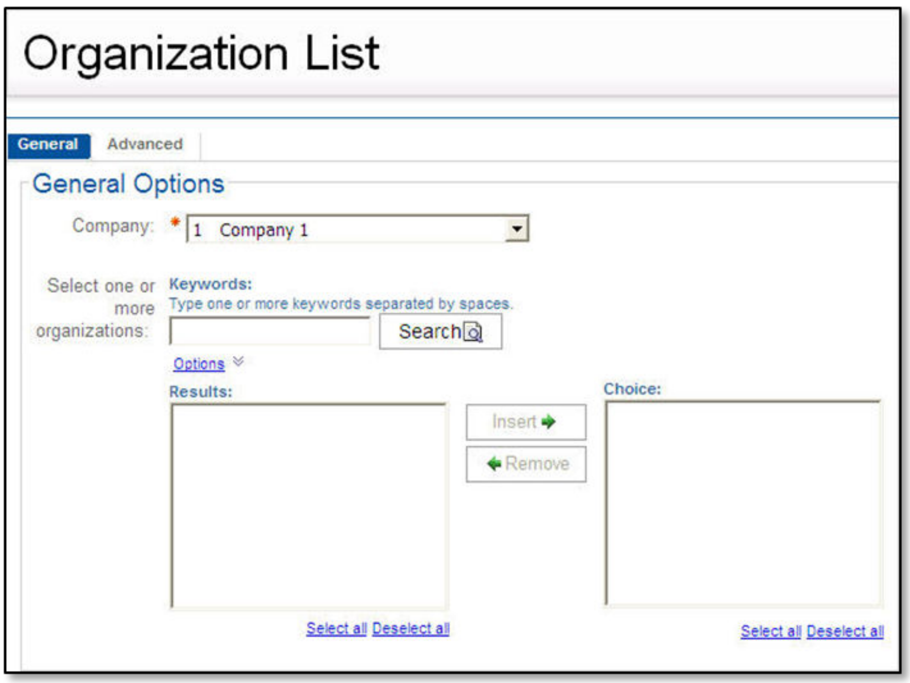
Organization List Report

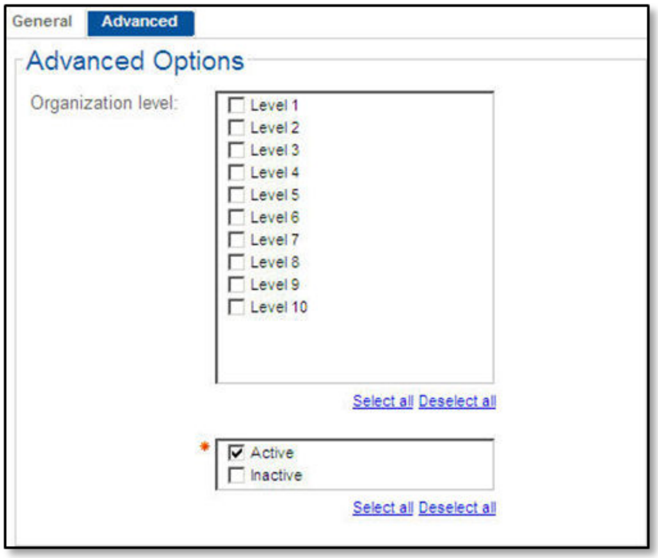
The Organization List report displays organization setup information, which allows you to review the organization structure set up in Costpoint.

This report can be used as a stand-alone report and can also be used as a drill-thru target from other reports, such as the Balance Sheet, Income Statement, Project Master Report, Project Status Report, and Aged Open Billing Detail Report.

Prompts

Use the Organization List prompts to run the Organization List report.





Prompt Message	Description
Company	Select one company from the list.
Select one or more organizations	In the **Keywords** field, enter a portion of one or more organization IDs and click to list organizations to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Organization level	Select the level of organization at which you want the report printed. All lower levels will be rolled up for the report.
Active/Inactive	Select one of the following: ▪ **Active**: Includes organizations that are active, meaning available to receive charges. ▪ **Inactive**: Includes organizations not available to receive charges.

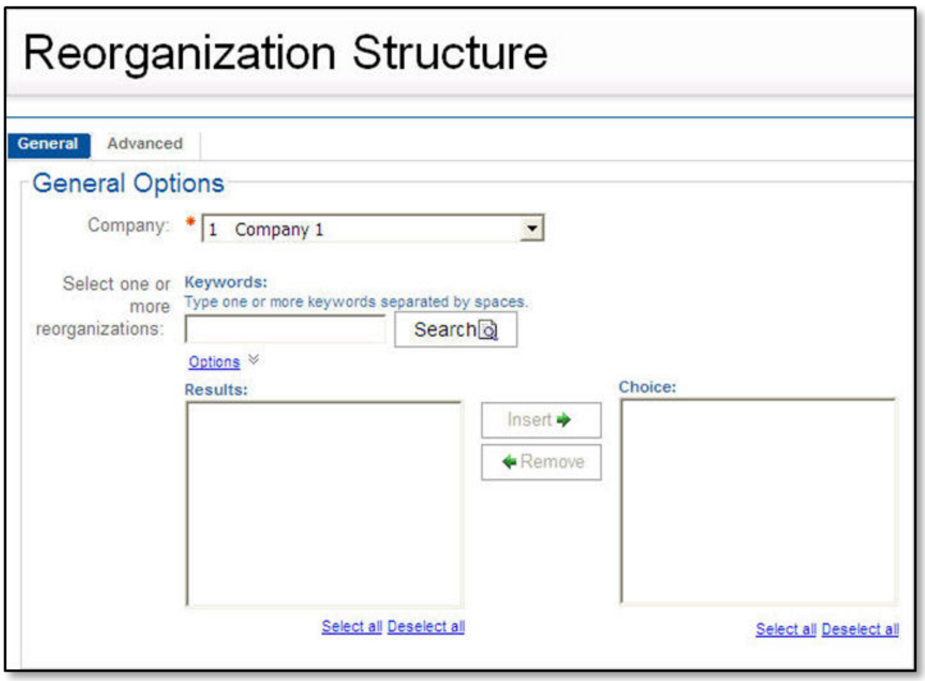
Reorganization Structure

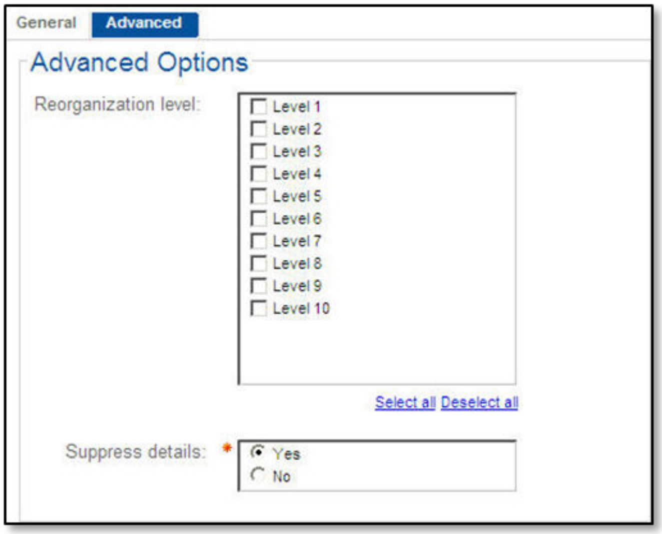
The Reorganization Structure report is a list report that displays reorganization setup information, which allows you to review the reorganization structure set up in Costpoint.

This report can be used as a standalone report. It can also be used as a drill-thru target from other reports, such as the Income Statement and Balance Sheet.

Prompts

Use the Reorganization Structure prompts to run the Reorganization Structure report.





Prompt Message	Description
Company	Select a company from the list.
Select one or more reorganizations	Enter a portion of one or more reorganization IDs in the **Keywords** field and click to list reorganizations to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Reorganization level	Select the level of reorganization at which you want the report printed. All lower levels will be rolled up for the report.
Suppress details	Select one of the following: ▪ **Yes**: Suppress all the organization information on the report, and just display the reorganization details. ▪ **No**: Display both Organization and Reorganization information.

Billing Reports

This section displays sample prompt screens and sample reports for the Billing reports.

Billing reports include the following:

- Aged Open Billing Detail
- Milestone Invoice
- Pre-Bill Report
- Standard Invoice with Backup
- Zero Rate Billing Exception Report

Aged Open Billing Detail Report

The Aged Open Billing Detail report is used to age transaction detail items that have not been billed.

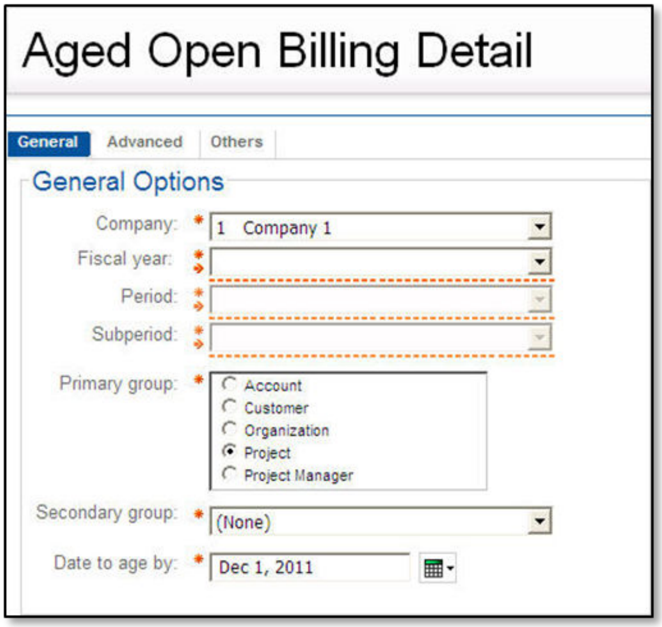
This report identifies those projects that are not billing in a timely fashion and can help limit the amount of exposure for unbilled transactions. Aged Open Billing Detail is updated when transactions against billable projects are posted. The subperiod ending date is the basis for aging the unbilled transactions.

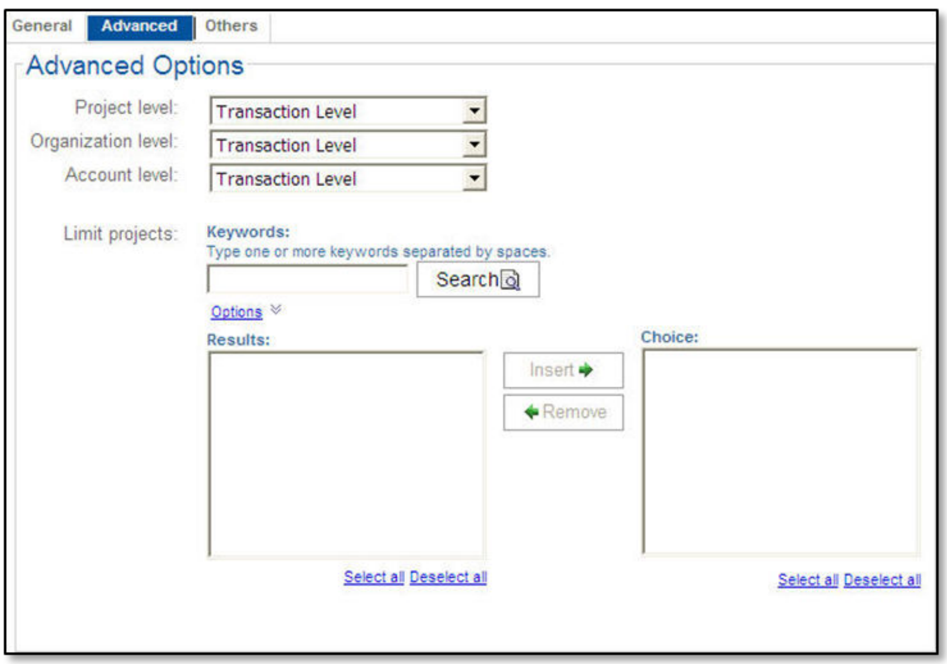
This report enables you to link to the following information to drill through to more detail, as indicated in this table.

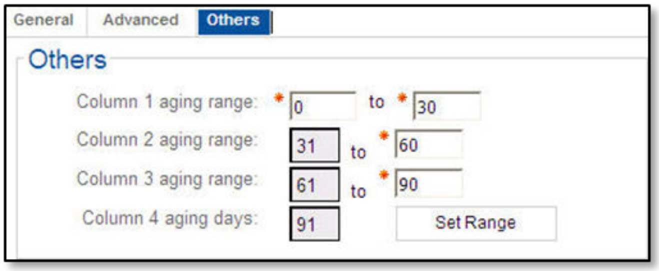
Name of Report That Opens (Drills Through) from the Aged Open Billing Detail Report	How to Open the Report
Project Master Report	This report displays when you click on a project.
Organization List Report	This report displays when you click on an organization.

Prompts

Use the Aged Open Billing Detail prompts to configure the Aged Open Billing Detail report.







Prompt Message	Description
Company	Select the company to use when running the report.
Fiscal year	Select the desired fiscal year.
Period	Select the period number.
Subperiod	Select the subperiod number.
Primary group	Select the primary grouping for the report: ▪ Account ▪ Customer ▪ Organization ▪ Project ▪ Project Manager
Secondary group	Select a secondary sort option: ▪ None ▪ Account ▪ Customer ▪ Organization ▪ Project ▪ Project Manager
Date to age by	Enter or select the date to age by.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report. Select **Transaction Level** to include all levels of detail.
Organization level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report. Select **Transaction Level** to include all levels of detail.
Account level	Select the account level at which you want the report printed. All lower levels will be rolled up for the report. Select **Transaction Level** to include all levels of detail.

Prompt Message	Description
Limit projects	In the **Keywords** field, enter a portion of one or more IDs or names to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Column 1 aging range	Enter a range to age by in the following three columns. You can edit the default ranges as necessary as long as date ranges do not overlap from column to column. Defaults from **0** up to **30**.
Column 2 aging range	Enter the column range for aging. Defaults from **31** up to **60**.
Column 3 aging range	Enter the column range for aging. Defaults from **61** up to **90**.
Column 4 aging days	This defaults to the last number in **Column 3 aging range** plus one.
Set Range	When you edit the default ranges, click this button to reset the first numbers in columns 2, 3, and/or 4.

Milestone Bill

The Milestone Invoice report renders the milestone/percent complete invoice, which can be used as a template to create customized standard invoices.

Before You Run This Report

Deltek recommends that you perform certain tasks in Costpoint before running the Milestone Bill report.

Perform the tasks in the following list:

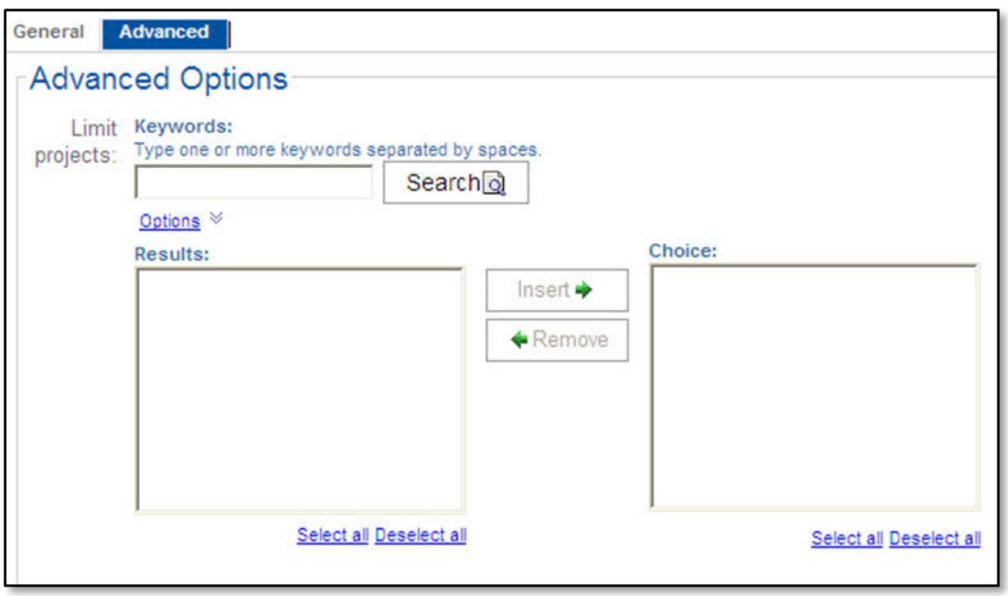
- Set up Project data, including any ceilings
- Set up Customer Information
- Establish Remit to and Bill to Addresses
- Maintain Sales/VAT Tax, if needed
- Set up Project Billing Info
- Maintain Project Sales Tax, if needed
- Set up Maintain/Percent Complete Bills with billing data

If you want to use the optional Billing Cycle or Billing Group prompts, you must perform the following steps within Costpoint to populate the necessary data. These options are optional both in Costpoint and on the report.

- **Billing Cycle** — To use Billing Cycle on the report, you must first select the **Use Billing Cycles** check box on the Configure Billing Settings screen. Then establish the Billing Cycle in **Projects** » **Billing** » **Billing Controls** » **Manage Billing Cycles**. Then link the Billing Cycle to the project via the Manage Project Billing Information screen.
- **Billing Group** — To use Billing Group on the report, select the **Assign Bills to User Groups** check box on the Configure Billing Settings screen. Establish the Billing Group in **Projects** » **Billing** » **Billing Controls** » **Manage Billing User Groups**. Then link the Billing User Group to the Project via the Manage Project Billing Information screen.

Prompts

Use the Milestone Bill prompts to run the Milestone Bill report.



Prompt Message	Description
Company	Select one company from the list.
Primary group	Select an option to use as a primary grouping for the report: ▪ Billing Cycle ▪ Billing Group

Prompt Message	Description
	- Customer - Invoice - Project
Print status	Select the status of bills to include on the report: - Selected - Unselected
Limit projects	In the **Keywords** field, enter a portion of one or more IDs or billing cycles to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Pre-Bill Report

The Pre-Bill Report is used to review draft invoices and get a quick preview of the labor, non-labor, burdens, fees, over ceiling amounts, and retainage that are ready to be invoiced.

As part of the pre-bill review process, you will have the ability to view the data in summary or drill from the summary and view the detail.
Only invoices with a status of Unselected are available to be printed on the report.

Standard Invoice with Backup Report

The Standard Invoice with Backup report renders the standard invoice with current billable amounts, units, and Accounting Classification Reference Number (ACRN) data, including supporting schedules.

This format can be used as a template to create customized standard invoices.

This report is similar to the one that exists in Costpoint, with enhancements such as including any outstanding invoice amounts along with the current invoice transactions and amounts.

Before You Run This Report

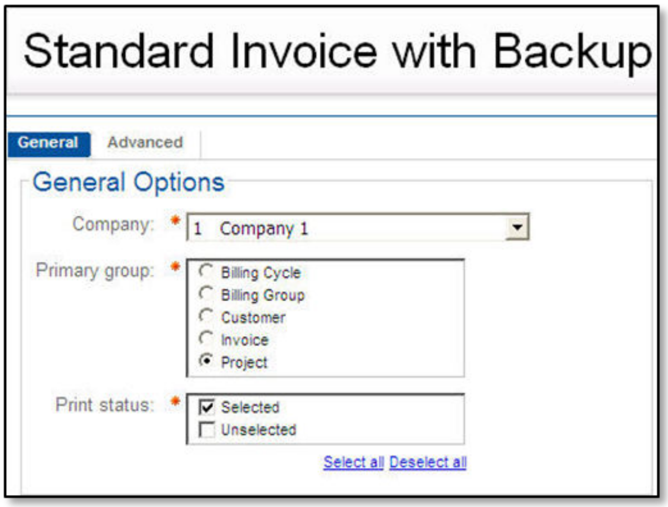
Certain tasks must be performed in Costpoint before you run the Standard Invoice with Backup report.

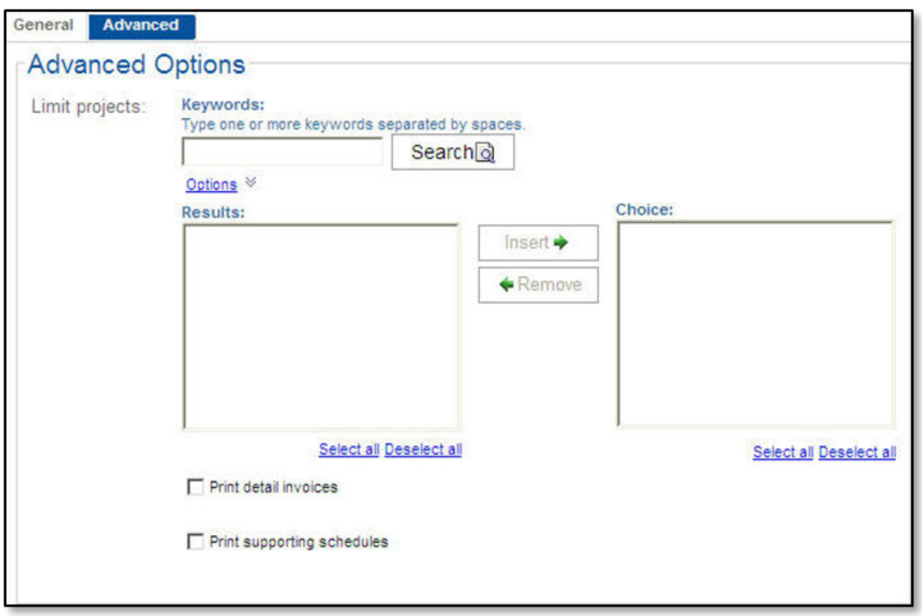
Perform the tasks in the following list:

- Set up project data, including any ceilings, overrides, units data, and PLC rates
- Set up cost pools and associated provisional rates
- Set up customer information
- Establish remit to and bill to addresses
- Set up generic billing formats
- Set up supporting schedule formats
- Set up project billing info
- Manage ACRN bills, if project is subject to ACRN billing requirements
- Use Manage Open Billing Detail to edit transaction records, if necessary
- Load labor rates, if necessary
- Update cash basis Information, if necessary
- Calculate billings
- Make necessary edits in Manage Standard Bills application
- Calculate ACRN billings
- Make necessary edits in the Manage ACRN Bills application

Prompts

Use the Standard Invoice with Backup prompts to run the Standard Invoice with Backup report.





Prompt Message	Description
Company	Select a company from the list.
Primary group	Select an option to use as a primary grouping for the report: ▪ Billing Cycle ▪ Billing Group

Prompt Message	Description
	▪ Customer ▪ Invoice ▪ Project Billing Group and Billing Cycle are optional in Costpoint. If you use these options and want to use them in your report, you must perform the following steps within Costpoint to populate the necessary data: ▪ **Billing Cycle**: To use Billing Cycle on the report, you must first select **Use Billing Cycles** check box on the Configure Billing Settings screen. Then establish the Billing Cycle in **Projects** » **Billing** » **Billing Controls** » **Manage Billing Cycles**. Then link the Billing Cycle to the project via the Manage Project Billing Information screen. ▪ **Billing Groups**: To use Billing Groups on the report, select the **Assign Bills to User Groups** check box on the Configure Billing Settings screen. Then establish the Billing Group in **Projects** » **Billing** » **Billing Controls** » **Manage Billing User Groups**. Then link the Billing User Group to the Project via the Manage Project Billing Information screen.
Print status	Select the status of bills to include on the report: ▪ Selected ▪ Unselected
Limit projects	In the **Keywords** field, enter a portion of one or more IDs or billing cycles to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Print detail invoices	Select this option to print the individual transactions lines that make up the overall bill.
Print supporting schedules	Select this option to print supporting schedules along with the bill.

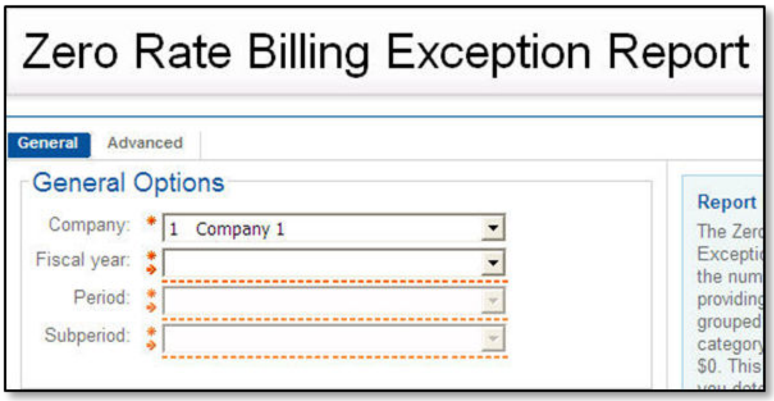
Zero Rate Billing Exception Report

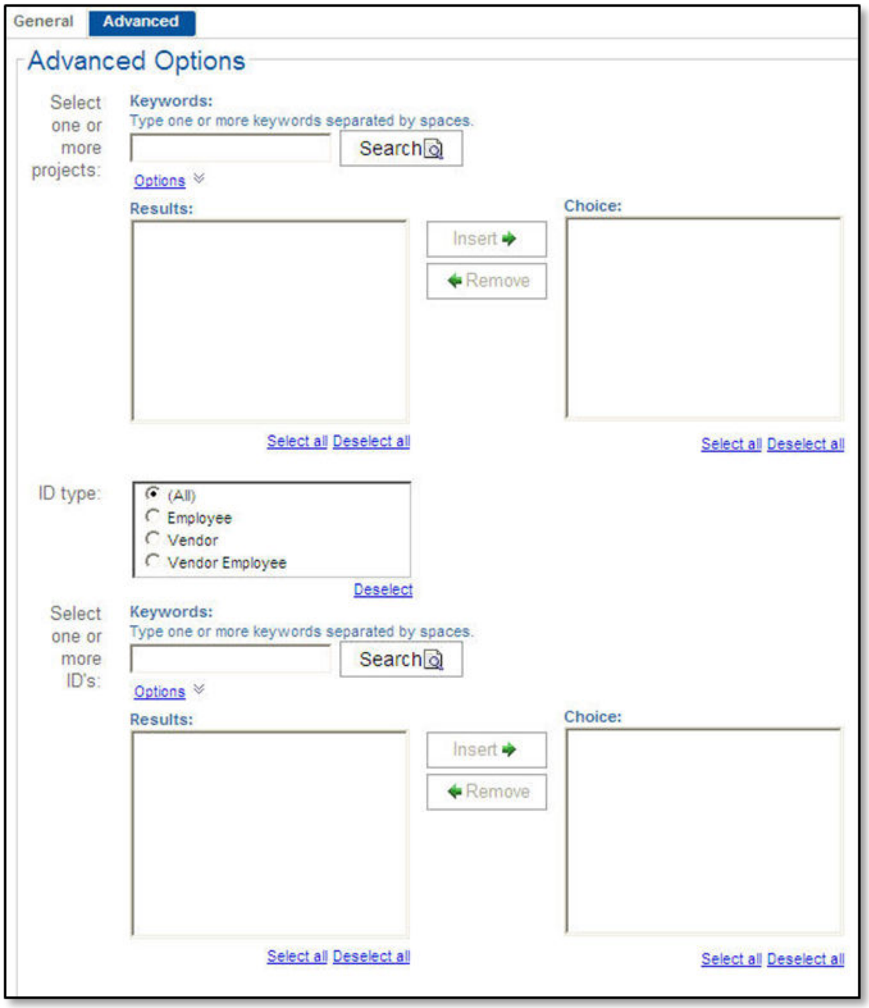
The Zero Rate Billing Exception report helps reduce the number of billing errors by providing a list of employees, grouped by project and labor category, with billing rates = $0.

This information can help you determine if there is an error in the billing rate, before invoices are calculated.

Prompts

Use the Zero Rate Billing Exception Report prompts to configure the report.





Prompt Message	Description
Company	Select the company to use when running the report.
Fiscal year	Select the desired fiscal year.
Period	Select the period number.
Subperiod	Select the subperiod number.
Select one or more projects	In the **Keywords** field, enter a portion of one or more project IDs and click to list IDs to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
ID type	Select an ID type:

Prompt Message	Description
	■ (All) ■ Employee ■ Vendor ■ Vendor Employee
Select one or more ID's	Select the ID from the list.

Note: To optimize the display of project IDs in **Select one or more projects**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

General Ledger Reports

This section displays sample prompt screens and sample reports for the General Ledger reports.

General Ledger reports include the following:

- General Ledger Detail
- Balance Sheet
- Cash Forecast
- Income Statement

General Ledger Detail Report

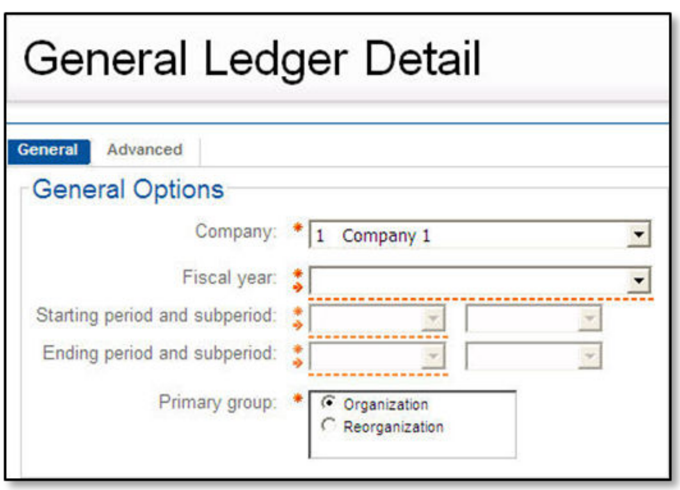
The General Ledger Detail report provides the details of the GL transaction information stored in Costpoint.

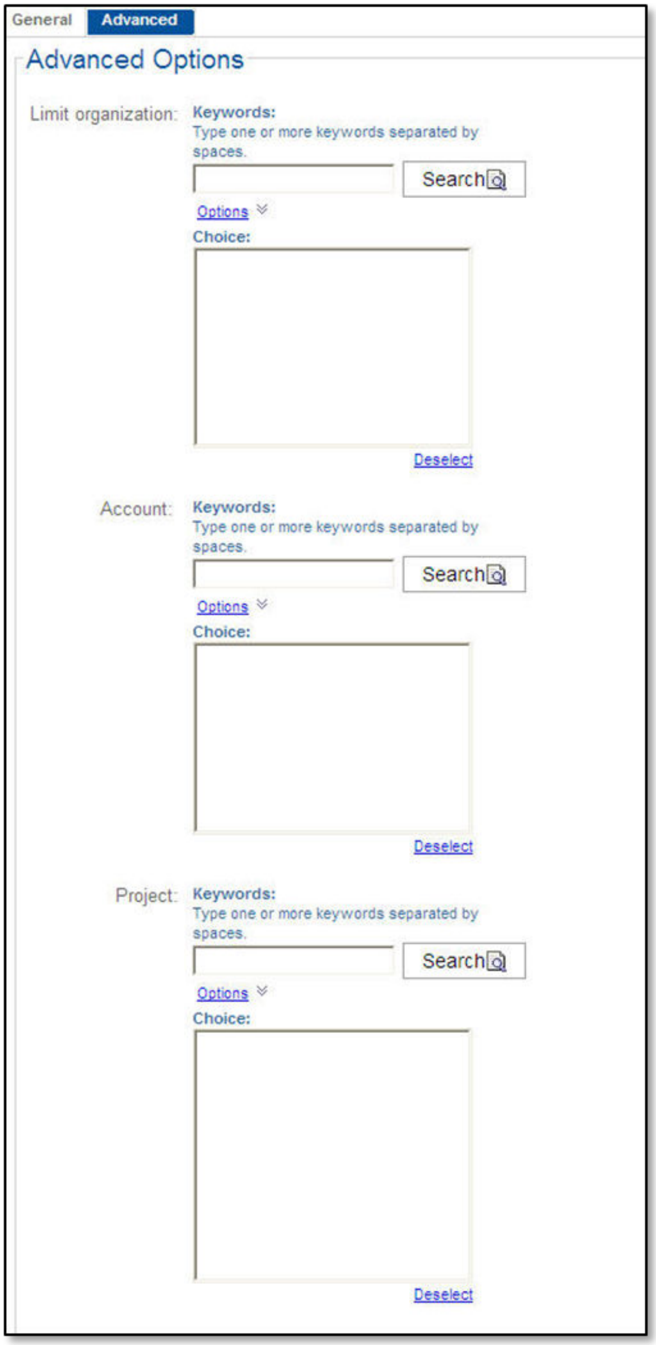
It can be used as a stand-alone report, or as a drill-through target from several other reports, such as the Balance Sheet, Income Statement, and Project Status Report, providing expense-related information.

Note: The General Ledger Detail report retrieves data from a database table designed to provide real-time, up to the minute results, while the Project Status Report, Balance Sheet, and Income Statement reports retrieve data from a database table designed to provide a snapshot of results for a particular point in time. Because of this, when you drill through from the Project Status Report, Income Statement, or Balance Sheet to the General Ledger Detail report, some results may vary.

Prompts

Use the General Ledger Detail prompts to run the General Ledger Detail report.





Prompt Message	Description
Company	Select the single company to use when running the report.
Fiscal year	Select the desired fiscal year.

Prompt Message	Description
Starting period and subperiod	Select the period to start the range. Select the subperiod to start the range. If adjustment subperiods are available for the selected period, they are displayed in the subperiod drop-down list including the adjustment subperiod type which can either be **Interim** or **Final**. For example: ▪ Interim adjustment subperiod 1 will display as **1 Adj Pd – Interim**. ▪ Final adjustment period 1 will display as **1 Adj Pd – Final**.
Ending period and subperiod	Select the period to end the period range. Select the subperiod to end the period range.
Primary group	Select an option to use for the report sort: **Organization** or **Reorganization**.
Limit organization	Enter a portion of a specific organization or reorganization that you want to include in the report based on the report sort you selected on the General tab. Click **Search**. In the search results, select one organization. For example, you know that the organization that you are looking for starts with an A. Enter **A** in the **Keywords** field, and then click **Search**. All organizations that start with A will be in the search results. Select one organization to include in the report.
Account	Enter a portion of a specific account ID in the **Keywords** field and click **Search** to list accounts that match your keyword. Select one account to include in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Project	Enter a portion of a specific project ID in the **Keywords** field and click **Search** to list projects that match your keyword. Select one project to include in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in **Project**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

Balance Sheet

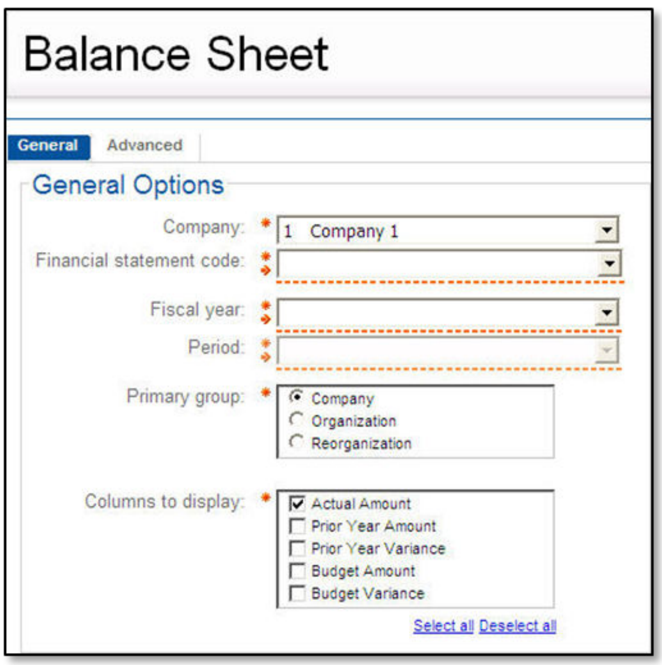
The Balance Sheet is a management report that displays the balance sheet financial statement.

You can view this report for any financial statement format selected and, for the current period only, you can drill through from a financial statement line item into transactional detail for the accounts that make up that line item.

> **Note:** The Balance Sheet retrieves data from a database table designed to provide a snapshot of results for a particular point in time, while the General Ledger Detail report retrieves data from a database table designed to provide real-time, up to the minute results. Because of this, when you drill through from the Balance Sheet to the General Ledger Detail report, some results may vary. To generate updated results, you can refresh the reporting tables before you run the report.

Prompts

These are Balance Sheet prompts.



Prompt Message	Description
Company	Select the single company to use when running the report.
Financial statement code	Select a financial statement code.
Fiscal year	Select the fiscal year for the report.
Period	Select the period. If adjustment periods are available for the selected fiscal year, they are displayed in the **Period** drop-down list including the adjustment period type which can either be **Interim** or **Final**. For example: ▪ Interim adjustment period 13 will display as **13 Adj Pd – Interim**. ▪ Final adjustment period 14 will display as **Adj Pd – Final**.
Primary group	Select the primary group to sort on: ▪ Company ▪ Organization ▪ Reorganization
Columns to display	Select columns to display: ▪ Actual Amount ▪ Prior Year Amount ▪ Prior Year Variance ▪ Budget Amount ▪ Budget Variance
Account information	Select to **Show** or **Hide** the account ID and name.

Income Statement

The Income Statement is a management report that displays profit and loss information by organization.

You can view this report for any financial statement format needed and, for the current period only, you can drill through from a financial statement line item into transactional detail for the accounts that make up that line item. For example, you can drill from the Income Statement to the General Ledger Detail report.

Note: The Income Statement report retrieves data from a database table designed to provide a snapshot of results for a particular point in time, while the General Ledger Detail report retrieves data from a database table designed to provide real-time, up to the minute results. Because of this, when you drill through from the Income Statement to the General Ledger Detail report, some results may vary.

When you include the **Prior Year YTD Amount** column in the report and you see zero values, it may be because there is no adjustment period for the prior year. You may need this information when you want to compare the current year YTD with the prior year YTD amounts. To fix this, you need to perform some steps using Costpoint.

Comparing Current YTD Amounts to Prior YTD Amounts

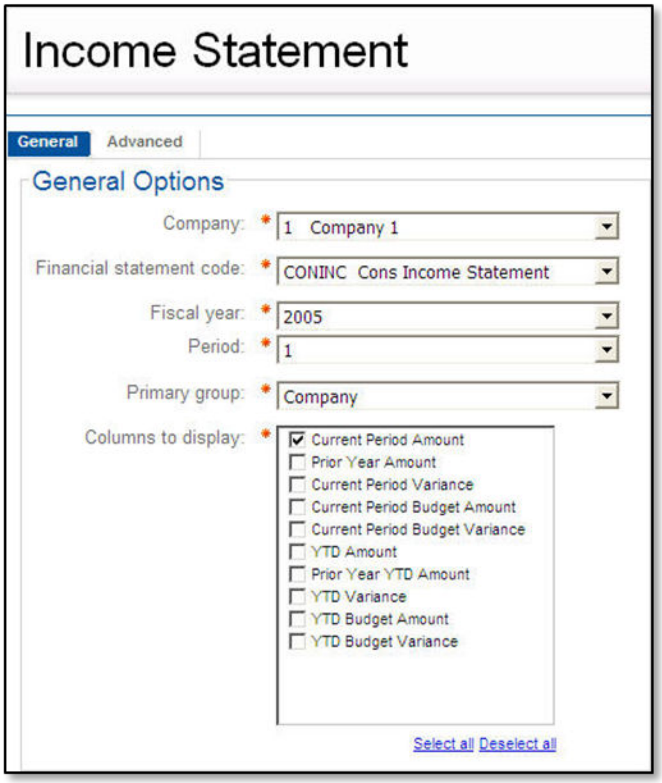
If the **Prior Year YTD Amount** column in the report contains zero values, you need to add the adjustment period for the prior year in Costpoint if you want to compare the current year YTD with the prior year YTD amounts.

To compare the current year YTD and the prior year YTD amounts:

1. Open Costpoint and add an adjustment period for the prior year.
2. Enter values for that adjustment period in the prior year.
3. Run the Create General Ledger Report Tables (GLPCRRPT) application to update the reporting tables.
4. In Costpoint BI, run the Income Statement report and check the **YTD Amount** and **Prior Year YTD Amount** values.

Prompts

These are Income Statement prompts.



Prompt Message	Description
Company	Select the single company to use when running the report.
Financial statement code	Select a financial statement code.
Fiscal year	Select the fiscal year for the report.
Period	Select the period. If adjustment periods are available for the selected fiscal year, they are displayed in the **Period** drop-down list including the adjustment period type which can either be **Interim** or **Final**. For example:

Prompt Message	Description
	▪ Interim adjustment period 13 will display as **13 Adj Pd – Interim**. ▪ Final adjustment period 14 will display as **Adj Pd – Final**.
Primary group	Select to insert page breaks after: ▪ Company ▪ Organization ▪ Reorganization
Columns to display	Select one or more options to determine information to display on the report: ▪ Current Period Amount ▪ Prior Year Amount ▪ Current Period Variance ▪ Current Period Budget Amount ▪ Current Period Budget Variance ▪ YTD Amount ▪ Prior Year YTD Amount ▪ YTD Variance ▪ YTD Budget Amount ▪ YTD Budget Variance
Account information	Select to **Show** or **Hide** the account ID and name.

Procurement Reports

This section shows sample prompt screens and sample reports for the Procurement reports.

Procurement reports include the following:

- Requisitions Pending
- Requisitions
- Buyer Requisition Worksheet

The Requisitions Detail report is drill-thru only, meaning it is not intended to be run on its own, but accessed by clicking links from other, parent reports.

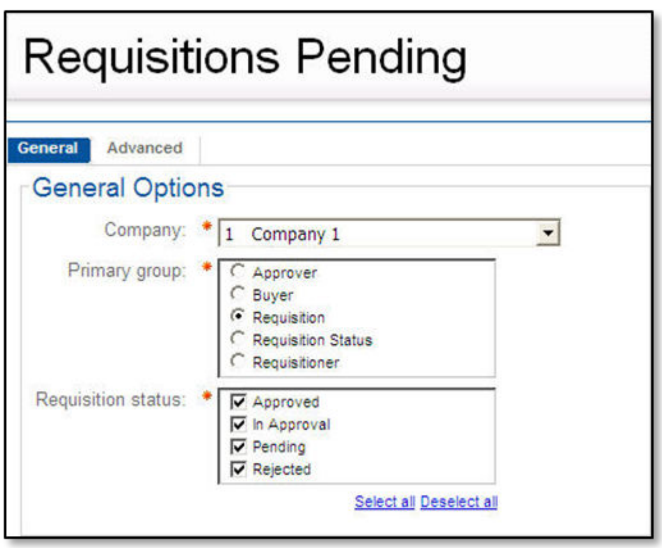
Requisitions Pending Report

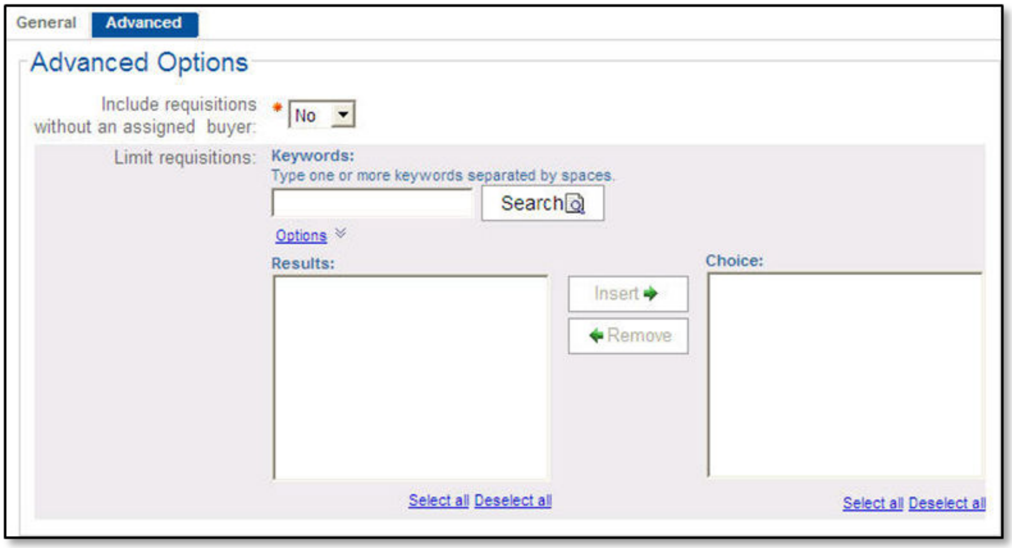
The Requisitions Pending report gives buyers and purchasing managers the ability to see requisitions for which purchase orders have not yet been generated.

It includes requisitions that are in a pending, in-approval, approved, or rejected status.

Prompts

Use the Requisitions Pending prompts to configure the report.





Prompt Message	Description
Company	Select the single company to use when running the report.
Primary group	Select the primary grouping for the report: ▪ Approver ▪ Buyer ▪ Requisition ▪ Requisition Status ▪ Requisitioner
Requisition status	Select the statuses of the requisitions to include: ▪ Approved ▪ In Approval ▪ Pending ▪ Rejected
Include requisitions without an assigned buyer	Select **Yes** to include only those requisitions without an assigned buyer.
Limit requisitions	Enter a portion of one or more IDs in the **Keywords** field and click **Search** to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

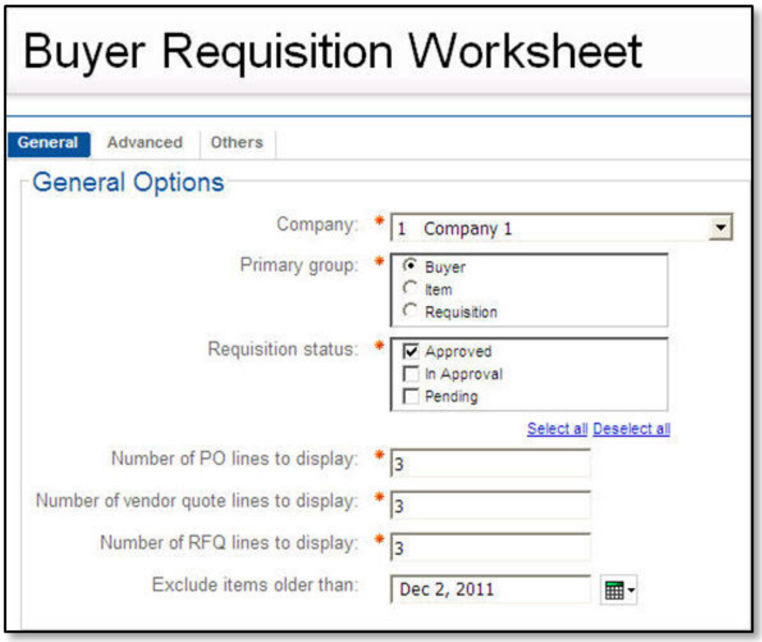
Buyer Requisition Worksheet

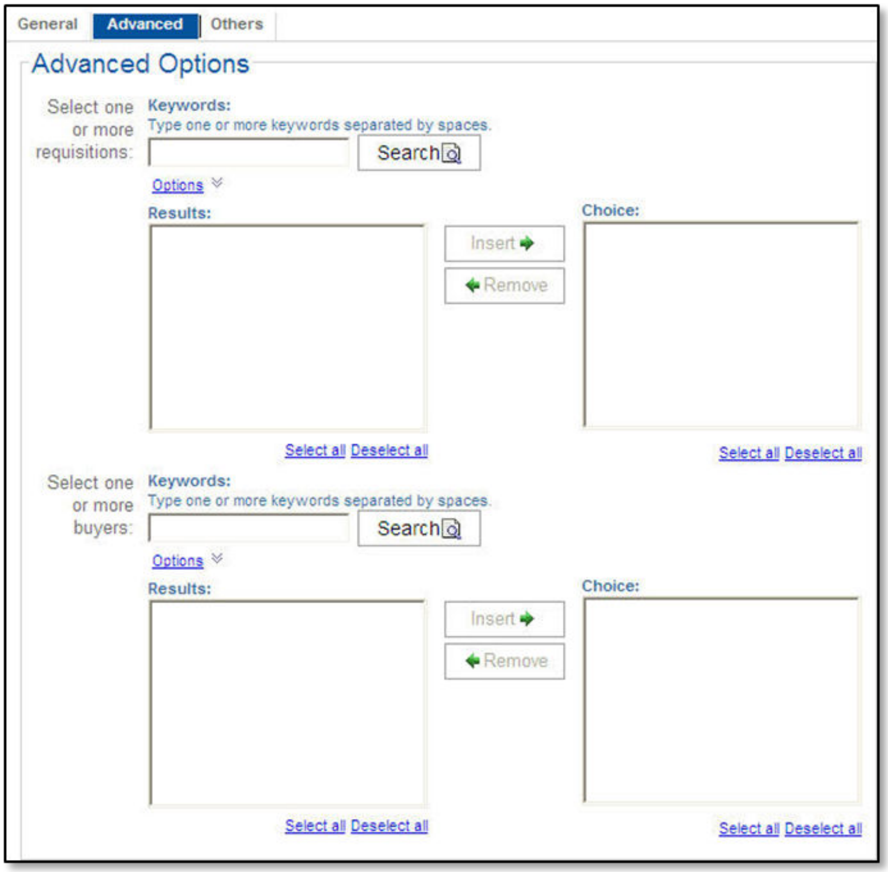
The Buyer Requisition Worksheet provides buyers with the critical information needed to make buying decisions.

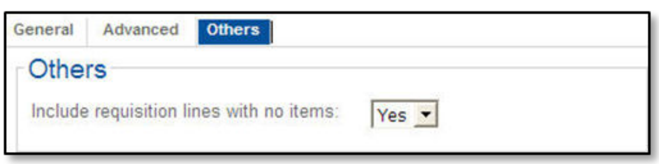
The buyer will be able to see past purchasing activity and approved vendor information for items listed on open, approved requisitions.

Prompts

Use the Buyer Requisition Worksheet prompts to configure the report.







Prompt Message	Description
Company	Select the single company to use when running the report.
Primary group	Select the primary group to sort on: ▪ Buyer ▪ Item ▪ Requisition
Requisition status	Select the status of the requisitions to include on the report: ▪ Approved ▪ In Approval ▪ Pending

Prompt Message	Description
Number of PO lines to display	Enter the number of purchase order lines to display.
Number of vendor quote lines to display	Enter the number of vendor quote lines to display.
Number of RFQ lines to display	Enter the number of RFQ lines to display.
Exclude items older than	Enter the date to exclude older objects.
Select one or more requisitions	Enter a portion of one or more requisition IDs in the **Keywords** field and click **Search** to return requisitions to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more buyers	Enter a portion of one or more buyer IDs in the **Keywords** field and click **Search** to return buyers to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Include requisition lines with no items	Select whether or not to include requisition lines with no items.

Projects Reports

This section shows sample prompt screens and sample reports for the Projects reports.

Projects reports include the following:

- Project Status Report
- Burdened Labor and ODC's
- Labor Detail
- Labor Utilization
- PLC Exception Report for Missing Rates
- Project Master
- Project Percent Complete Report

- Project Revenue Summary with Backlog
- Time & Expense Charge Activity Report

Project Status Report

The Project Status Report displays revenue, direct costs (labor and non-labor), indirect costs, and profitability by project.

This report allows the user to select any level of the project, account, and organization to be displayed.

Drill-through links provide more transactional detail for labor and non-labor charges, including voucher, purchase order, and requisition information. This drill-through to transactional detail applies to transactions in the current period only. Commitment detail can also be accessed from a drill-through link in this report.

This report enables you to link to the following information to drill through to more detail, as indicated in this table.

Name of Report That Opens (Drills Through) From the Project Status Report	How to Open this Report
General Ledger Detail	This report displays when you click the ODC account name. This will drill through to current period information only.
Voucher Detail	This report displays when you click the voucher number from the General Ledger Detail report.
Check Detail	This report displays when you click a voucher number from the Voucher Detail report.
Labor Detail	This report displays when you click the labor account name.
Organization List	This report displays when you click the project’s owning organization.
Project Master Report	This report displays when you click the project ID or project name.
Purchase Orders	This report displays when you click the total commitments column.

Note: For those using the alternate project option in the Cognos reports, it is important to understand that the Framework Manager model and Project Status Report were developed assuming that the option in Costpoint to include lower-level projects is set to **No**.

When this option is set to **Yes**, amounts in Costpoint roll up from the child project up to the parent project that is linked to the alternate project before the amounts roll up again to the reporting level of the alternate project. Since the Framework Manager models and the Project Status Report were developed with the assumption that this option is set to **No**, if you have linked projects, this double rollup of amounts does not pass through to the Project Status Report.

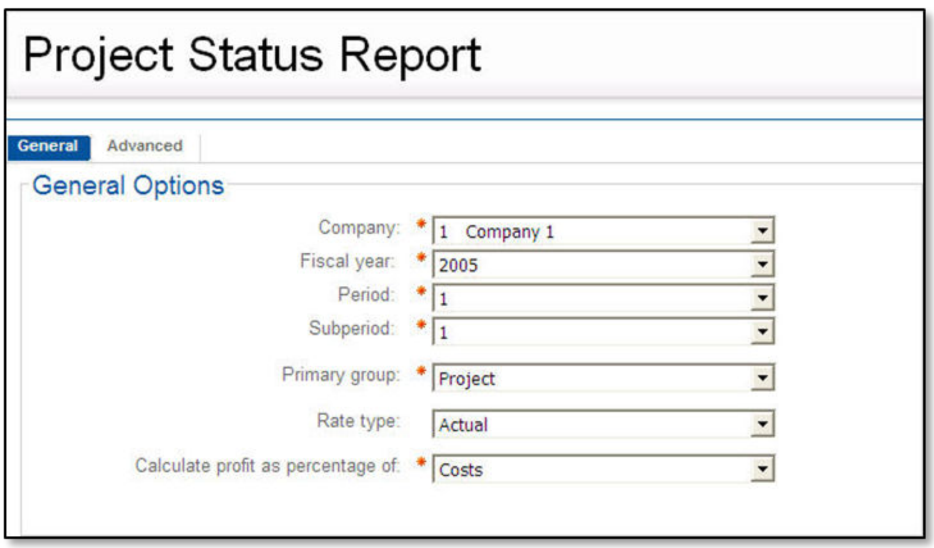
You determine whether or not to include lower-level projects from the Manage Alternate Projects screen in Costpoint.

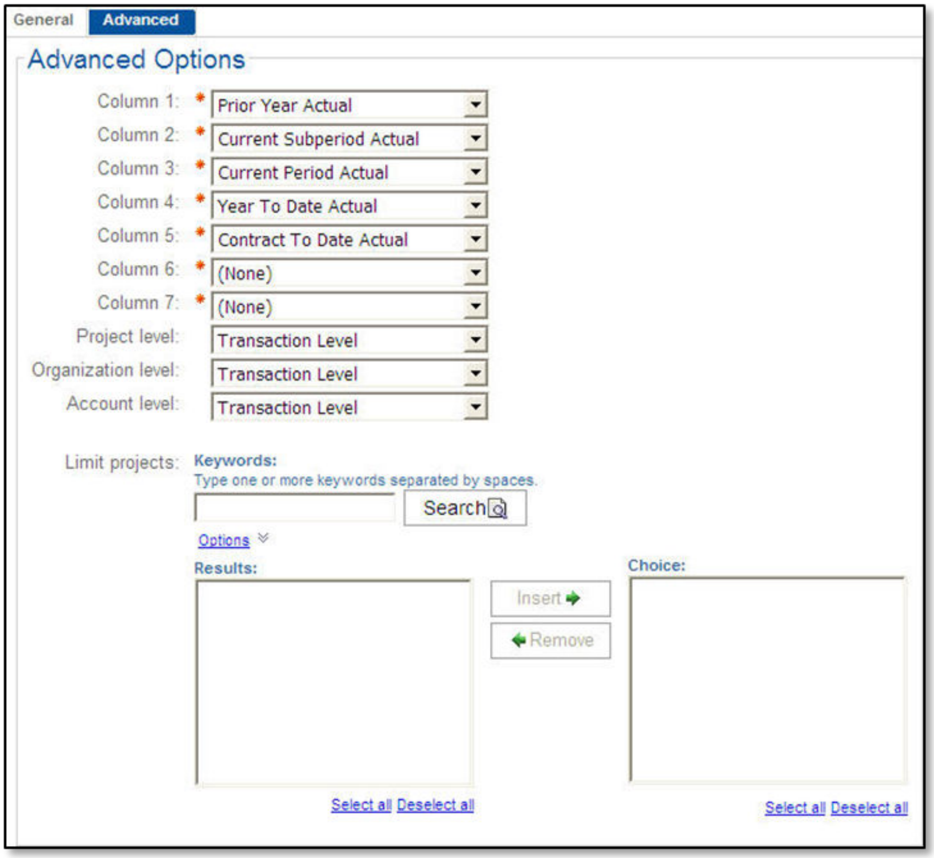
Note: The Project Status Report retrieves data from a database table designed to provide a snapshot of results for a particular point in time, while the General Ledger Detail report retrieves data from a database table designed to provide real-time, up to the minute results. Because of this, when you drill through from the Project Status Report to the General Ledger Detail report, some results may vary. To generate updated results, you can refresh the reporting tables before you run the report.

When you include the columns that pertain to prior year, those columns may display zero values on the report. This happens when there is no adjustment period for that prior year, thus, the report displays no values. To fix this, you need to open Costpoint and add a corresponding adjustment period in that prior year and update the reporting tables.

Prompts

Use the Project Status Report prompts to configure the report.





Prompt Message	Description
Company	Select the single company to use when running the report.
Fiscal year	Select the fiscal year.
Period	Select the period.
Subperiod	Select the subperiod.
Primary group	Select the primary grouping for the report: ▪ Alternate Project ▪ Customer ▪ Owning Organization ▪ Performing Organization ▪ Project ▪ Project Manager ▪ Reorganization
Rate type	Select the rate type to include:

Prompt Message	Description
	▪ **Actual**: Print the report using actual burden rates from the tables. ▪ **Target**: Print the report using target burden rates from the tables.
Calculate profit as percentage of	Select whether to calculate profit as percent of: ▪ Costs ▪ Revenue
Column 1-7	Select the data you want the report to display in each column.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Account level	Select the account level at which you want the report printed. All lower levels will be rolled up for the report.
Limit projects	Enter a portion of one or more IDs or names in the **Keywords** field to narrow the search for values you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Burdened Labor and ODC's Report

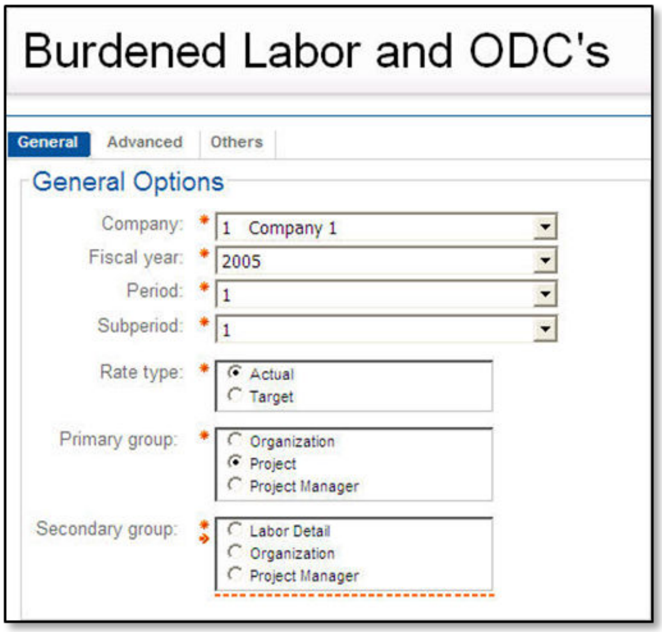
The Burdened Labor and ODC's report displays the burdened costs by resource for labor, and by account for non-labor, by project; information that was previously unavailable in Costpoint.

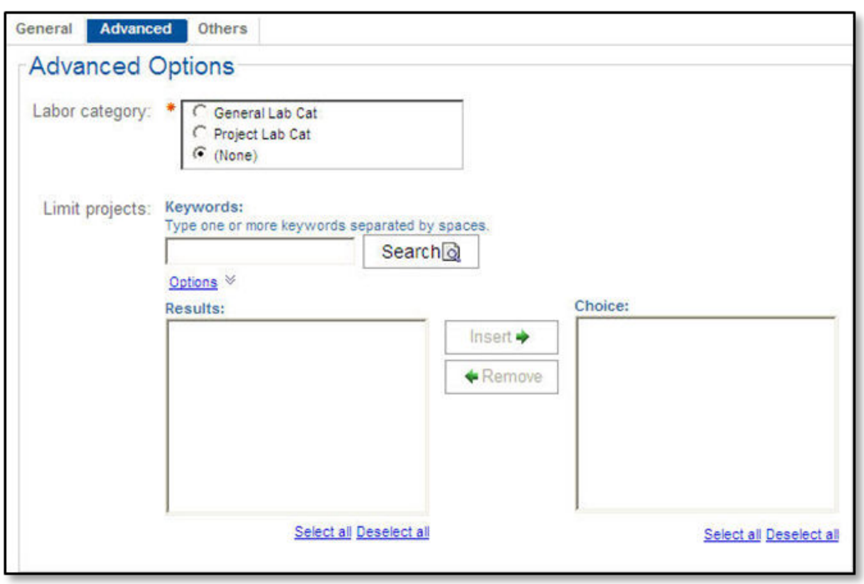
This report utilizes specific tables, which need to be created by a specific process in Costpoint, relating to Deltek Cobra integration. Refer to the user guide for more details about specific setup instructions before running this report.

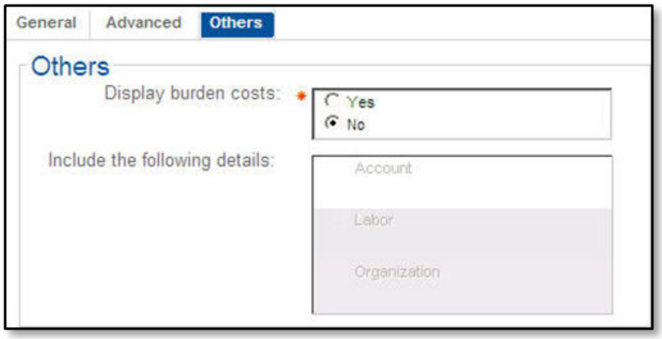
Note: Before you run this report, data that coincides with the prompts you select must exist in the CB_SUM and CB_BURD_SUM tables. These tables are populated during the Compute Cobra Burden Costs process, for projects that are identified as Cobra programs. This means that if you want to run a report that includes data for certain projects for Fiscal Year 2007, Period 10, Subperiod 1, you must first run the Compute Cobra Burden Costs process for these projects for Fiscal Year 2007, Period 10, Subperiod 1. A project is identified as a Cobra program by checking the **Cobra Program** check box on the Manage Project User Flow screen in Costpoint. This option can only be selected at the top level of the project and if selected, the entire project tree will be included in the Compute Cobra Burden Costs process.

Prompts

Use the Burdened Labor and ODC's prompts to configure the report.







Prompt Message	Description
Company	Select the company to use to run the report.
Fiscal year	Select the fiscal year.
Period	Select the period.
Subperiod	Select the subperiod.
Rate type	Select the rate type to include: ▪ **Actual**: Print the report using actual burden rates from the tables. ▪ **Target**: Print the report using target burden rates from the tables.
Primary group	Select the primary grouping: ▪ Organization ▪ Project ▪ Project Manager
Secondary group	Select a secondary sort, different from the primary, if desired: ▪ Labor Detail ▪ Organization ▪ Project Manager
Labor category	Select **General Lab Cat** or **Project Lab Cat** to add a column that displays the general labor or project labor category associated with the detail line. Select **None** to hide this detail.
Limit projects	Enter a portion of one or more project IDs or names in the **Keywords** field to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
Display burden costs	Select **Yes** to display detailed burden costs. Select **No** to hide this detail.
Include the following details	Select one of these options to display detail: ▪ Account ▪ Labor ▪ Organization

Labor Detail Report

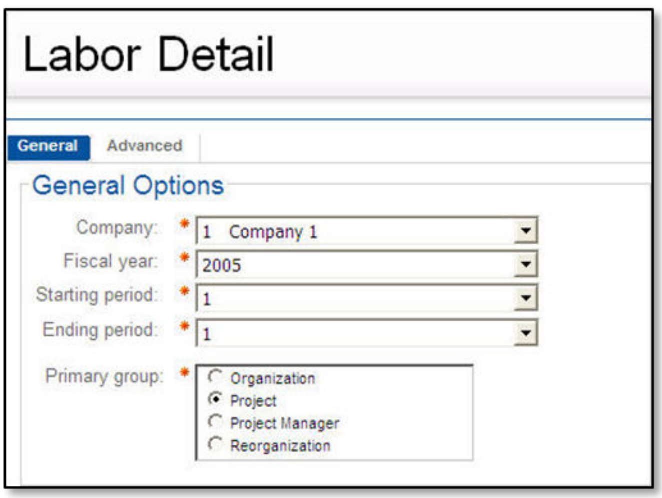
The Labor Detail report provides a detailed look at the labor activity related to a project.

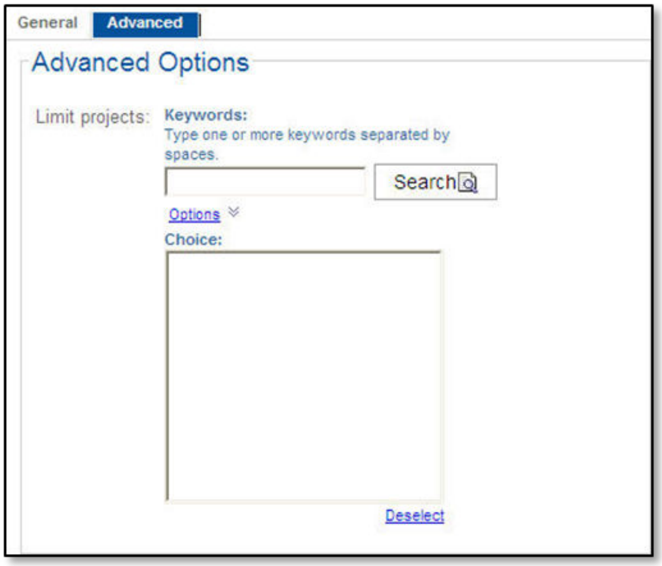
It can be used as a stand-alone report or as a drill-through target from other reports, like the Project Status Report.

> **Note:** The Labor Detail report retrieves data from one database table (Labor Summary) designed to provide a snapshot of results for a particular point in time, while the Project Status Report retrieves data from a different database table (PSR) also designed to provide a snapshot of results for a particular point in time. If the database tables were updated at different times, when you drill through from the Project Status Report, some results may vary. To ensure that drill-through data is the same as the parent Project Status Report, update the PSR and Labor Summary tables on the same schedule.

Prompts

Use the Labor Detail prompts to configure the report.





Prompt Message	Description
Company	Select one company from the list.
Fiscal year	Select the fiscal year.
Starting period	Select the starting period to use on the report.
Ending period	Select the ending period.
Primary group	Select the primary grouping: ▪ Organization ▪ Project ▪ Project Manager ▪ Reorganization
Limit projects	Enter a portion of one or more IDs or names in the **Keywords** field to display a list of records from the primary group so you can select the one you want to view on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in **Limit projects** when you select project as the primary group, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

Page 1 of 5

Labor Utilization Report

The Labor Utilization report is an analysis of the percentage of employee chargeable hours on direct projects compared to the total hours spent.

The report includes **Direct Hours** and **Indirect Hours** columns.

Direct Hours are those hours on projects where the Billable flag has been set to Yes. The flag is set through the **Billable Project** check box found on the Basic tab of the Manage Project User Flow screen. Direct hours also include hours within a project classification that has been marked as **Include as direct hours** on the Labor Utilization Report prompt screen check boxes. Because the definition of "direct" can vary from company to company, the report provides the flexibility to determine which types of projects to include in the Direct project classification.

Indirect Hours are those project hours where the Billable flag is set to No. Indirect hours also include those project classifications that were not chosen to be part of the **Include as direct hours** selection.

The **Total Hours** column on the report is the summation of both the direct and indirect hours.

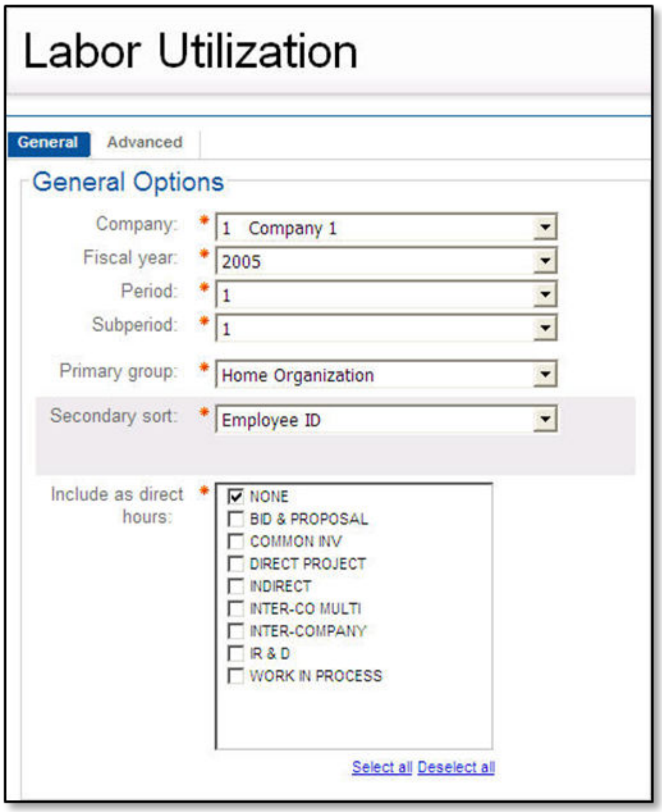
For example, let us use the following table.

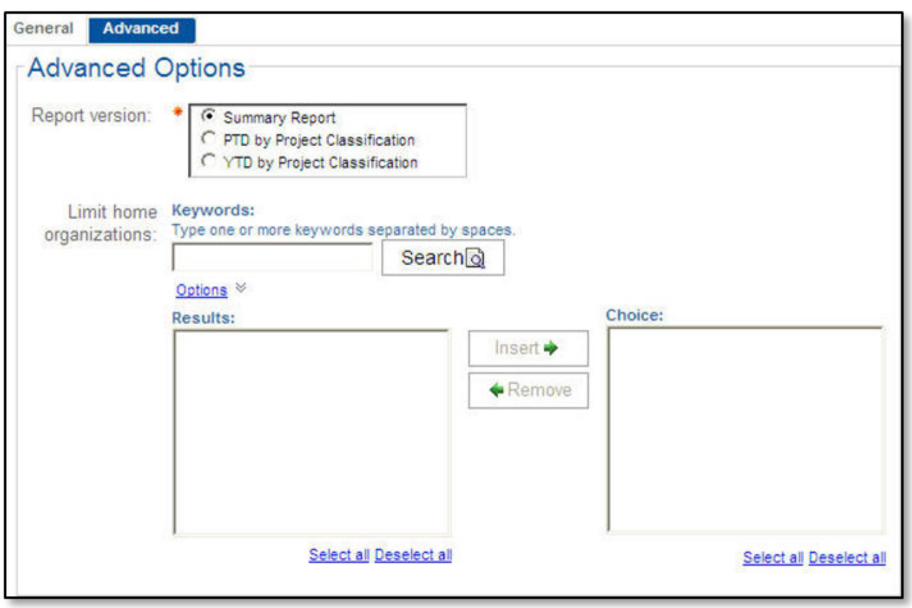
Project Classification	Billable Project (Y/N)
BID & PROPOSAL	N
BID & PROPOSAL	Y
COMMON INV	N
DIRECT PROJECT	Y
INDIRECT	N
INDIRECT	Y
INTER-COMPANY	Y
IR&D	N
WORK IN PROCESS	N
WORK IN PROCESS	Y

All hours where the **Billable Project** is set to **Y** are included in the Direct Hours calculation by default. Any project classification that has the **Billable Project** set to **N** could be added to Direct Hours and be removed from Indirect by using the check box prompt.

Prompts

Use the Labor Utilization prompts to configure the report.





Prompt Message	Description
Company	Select the company to use to run the report.
Fiscal Year	Select the fiscal year.
Period	Select the period.
Subperiod	Select the subperiod.
Primary group	Select the primary grouping: ▪ Employee ID ▪ Employee Name ▪ Home Organization
Secondary sort	Select the secondary sort: ▪ None ▪ Employee ID ▪ Employee Name
Include as direct hours	Select one or more options from the list. Click the **Select all** link to select all options.
Report version	Select one of the options for the report view: ▪ Summary Report ▪ PTD by Project Classification ▪ YTD by Project Classification
Limit home organizations	Enter a portion of one or more IDs or names in the **Keywords** field to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

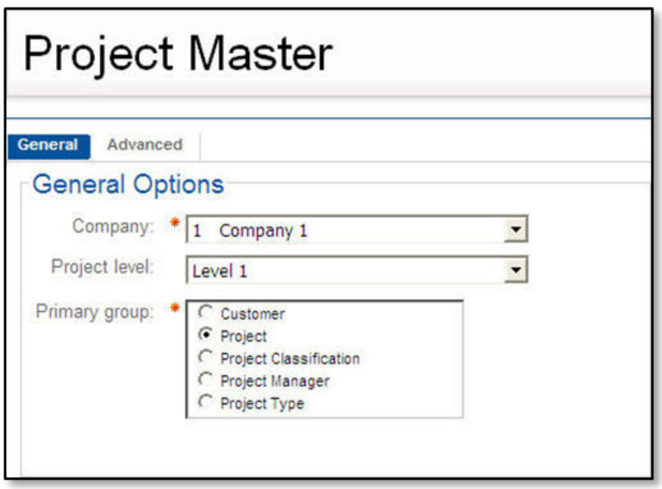
Project Master

The Project Master report is a one-page form report that contains project master file information.

Users can click links in this report to see more detailed information regarding the project. This report is used as a drill-through report from other reports, such as the Aged Open Billing Detail Report and the Project Status Report, and is intended to be a "snapshot" of a project. This report is divided into three sections: a section containing basic project information, one containing charging information, and another containing billing and revenue information. The report also displays the project hierarchy for the whole project structure.

Prompts

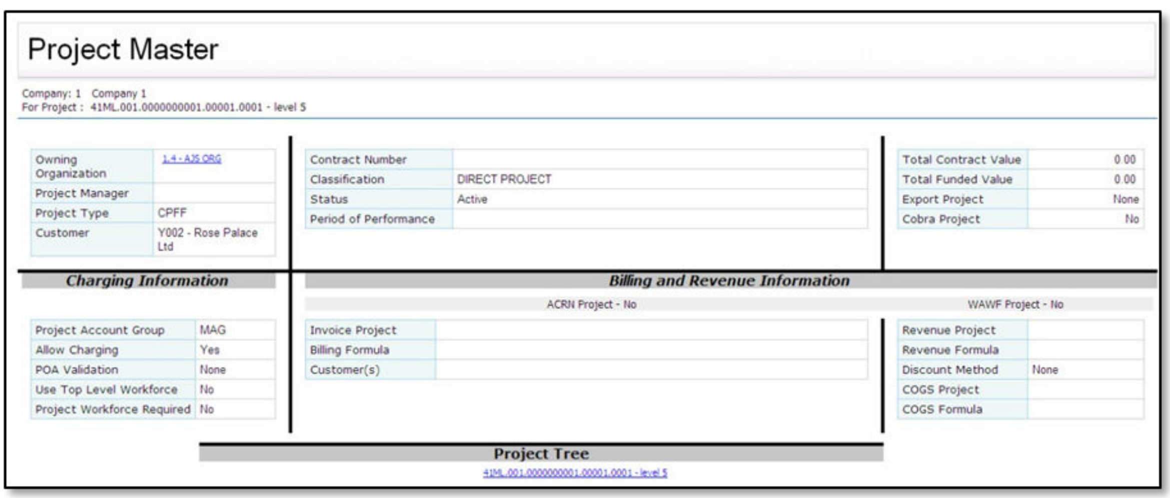
Use the Project Master prompts to configure the report.



Prompt Message	Description
Company	Select the company to use to run the report.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Primary group	Select the primary grouping: ▪ Customer ▪ Project ▪ Project Classification ▪ Project Manager ▪ Project Type
Limit projects	Enter a portion of one or more IDs or names in the **Keywords** field to narrow the primary group you selected in the previous field. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

Sample Project Master report.



Project Percent Complete Report

The Project Percent Complete Report provides a list of projects whose revenue has reached a certain percentage of their contract or funded value.

You can use this report to track how close a project is to reaching its value to ensure adequate funding is available to complete performance requirements or to prepare necessary documents for the government (for example, showing the contracting officer that 75% of funding has been reached).

This report provides drill-down capability to a lower, summary level of the percent complete report. You can drill from one summary level to another summary level until the end of the project tree is reached. Note that this drill is only a reflection of what is stored at a particular level and below. If amounts are stored at a higher level, they will not be reflected.

Note: For those using the alternate project option in the Cognos reports, it is important to understand that the framework manager model and Project Percent Complete Report were developed assuming that the option in Costpoint to include lower-level projects is set to **No**.

When this option is set to **Yes**, amounts in Costpoint roll up from the child project up to the parent project that is linked to the alternate project before the amounts roll up again to the reporting level of the alternate project. Since the framework manager models and the project status report were developed with the assumption that this option is set to **No**, if you have linked projects, this double rollup of amounts does not pass through to the Project Percent Complete Report.

You determine whether or not to include lower-level projects from the Manage Alternate Projects screen in Costpoint.

Before You Run the Report

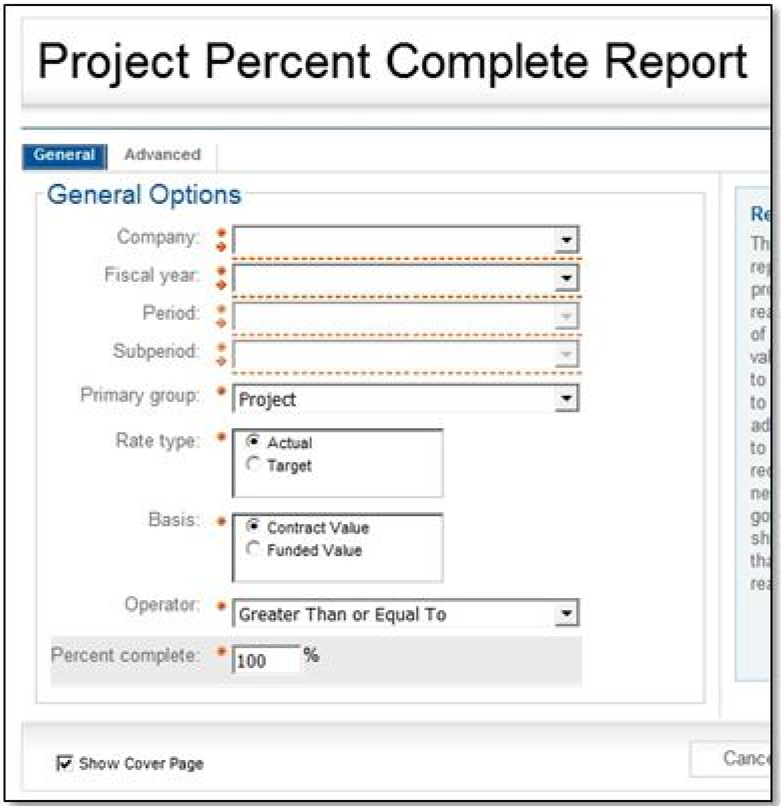
Certain steps must be performed before you run this report.

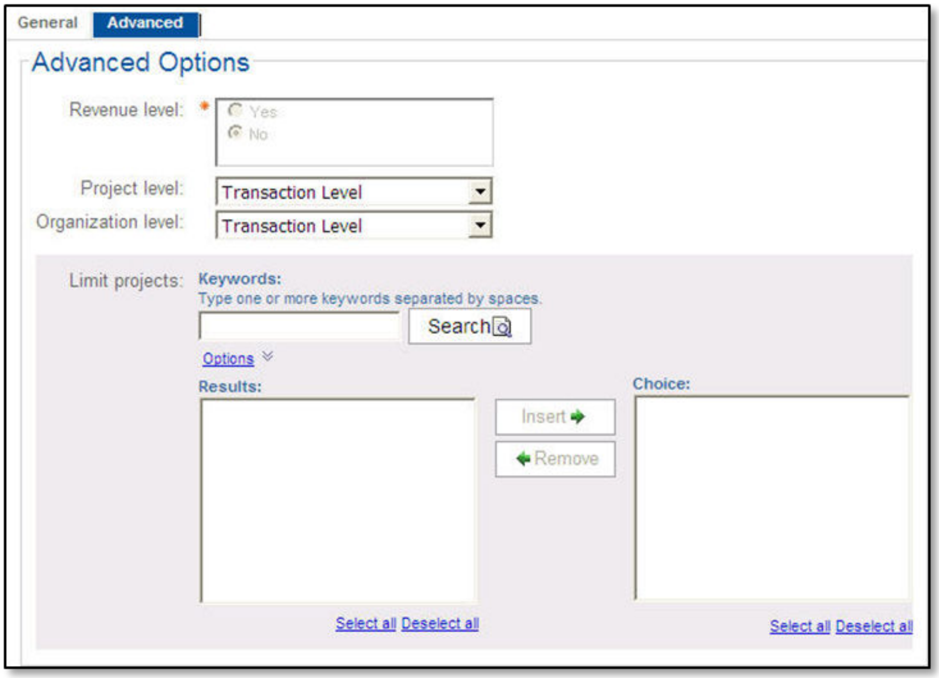
Perform the following steps:

- Update the Project Report tables
- Compute Burden
- Compute Revenue
- Update Project Status Reports
- Create Project Report Tables (with the **Revenue Summary** check box selected)

Prompts

Use the Project Percent Complete Report prompts to configure the report.





Prompt Message	Description
Company	Select the company to use to run the report.
Fiscal year	Select the fiscal year.
Period	Select the period.
Subperiod	Select the subperiod. If adjustment subperiods are available for the selected period, they are displayed in the **Subperiod** drop-down list including the adjustment period type which can either be **Interim** or **Final**. For example: ▪ Interim adjustment period 1 will display as **1 Adj Pd - Interim**. ▪ Final adjustment period 1 will display as **1 Adj Pd - Final**.
Primary group	Select the primary grouping for the report: ▪ Alternate Project ▪ Organization - Owning ▪ Organization - Performing ▪ Project

Prompt Message	Description
	▪ Project Manager ▪ Reorganization Reorganization, Alternate Project, and Project Manager are optional prompts that require some prior setup in Costpoint before you can use them. To use Reorganization, first establish Reorganization structure in **Accounting** » **General Ledger** » **Reorganizations**. To use Alternate Project, first establish alternate project structure in **Projects** » **Project Setup** » **Alternate Projects**. To use Project Managers, link project managers to projects on the Manage Project User Flow screen in Costpoint.
Rate type	Select the rate type to include: ▪ **Actual**: Print the report using actual burden rates from the tables. ▪ **Target**: Print the report using target burden rates from the tables.
Basis	Choose one of the following: ▪ **Contract Value**: Select this option to include projects on the report that compute and post revenue based on the signed value of the project. ▪ **Funded Value**: Select this option to include projects on the report that compute and post revenue based on the funded value of the project.
Operator	Select one of the following to indicate the relation to the percent complete: ▪ Greater than or Equal To ▪ Less than or Equal To ▪ Equal to ▪ None (Show All)
Percent complete	Enter a value as a percentage of total project work completed.
Revenue level	Select **Yes** to display project data at the revenue level.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Limit projects	Enter a portion of one or more project IDs in the **Keywords** field and click **Search** to list projects to include on the report.

Prompt Message	Description
	To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Project Revenue Summary with Backlog Report

The Project Revenue Summary with Backlog report provides revenue, cost, budget, and backlog information for an individual project or a group of projects.

This information can help with the analysis of project results. Users can view information on the report at the organization level and select the levels for organization and project. This report provides drill-down capability to a lower, summary level of the Project Revenue Summary with Backlog report. You can drill from one summary level to another summary level until the end of the project tree is reached. Note that this drill is only a reflection of what is stored at a particular level and below. If amounts are stored at a higher level, they will not be reflected.

Users can select the columns they want displayed out of the extensive list of project measures.

Note: For those using the alternate project option in the Cognos reports, it is important to understand that the framework manager model and Project Revenue Summary with Backlog Report were developed assuming that the option in Costpoint to include lower-level projects is set to **No**.

When this option is set to **Yes**, amounts in Costpoint roll up from the child project up to the parent project that is linked to the alternate project before the amounts roll up again to the reporting level of the alternate project. Since the framework manager models and the project status report were developed with the assumption that this option is set to **No**, if you have linked projects, this double rollup of amounts does not pass through to the Project Revenue Summary with Backlog Report.

You determine whether or not to include lower-level projects from the Manage Alternate Projects screen in Costpoint.

Before You Run the Report

Certain steps must be performed before you run this report.

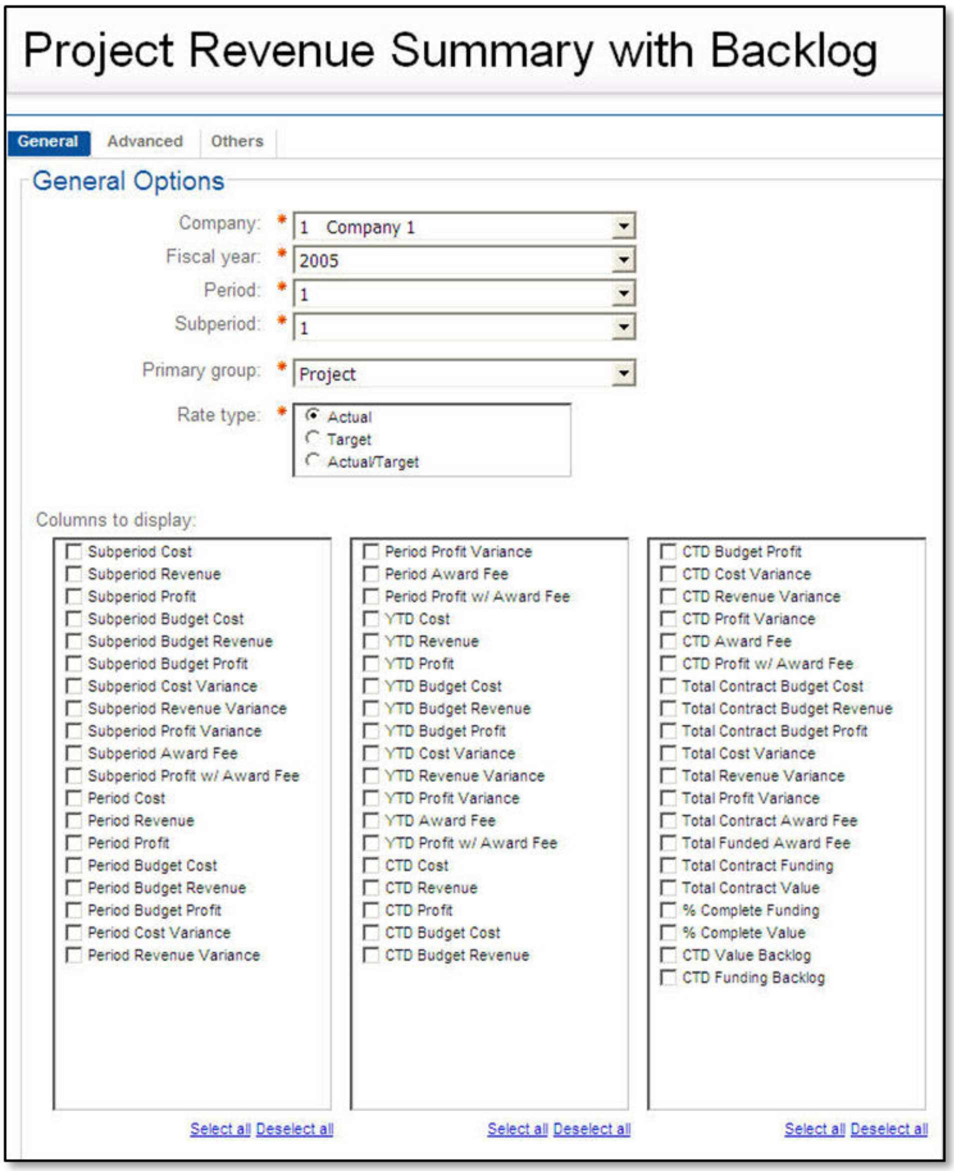
Perform the following steps:

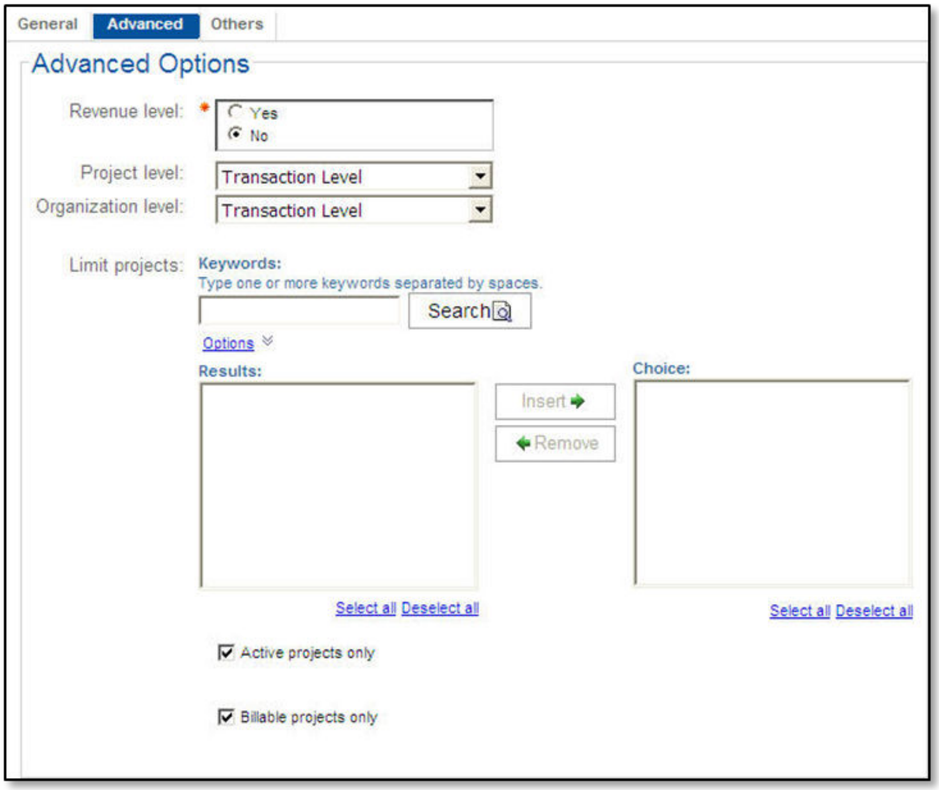
- Compute Burden
- Compute Revenue
- Update Project Status Reports
- Create Project Report Tables (with **Revenue Summary** selected)
- If you want to use budget data on the report, the following setup screens and processes should be run prior to updating and creating the project report tables:
  - If using Standard Budgeting (Budgeting and ETC Module)
    - Manage Project Total Budget or Manage Project Budgets by Period
    - Update Budget Report Tables
  - If using Advance Budgeting (Advanced Project Budgeting)
    - Manage Project Budgets and ETC
    - Create PSR Budget Report Tables

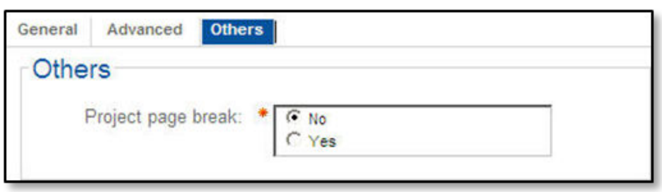
- If you are reporting a backlog, the **Contract Value** and/or **Funded Value** amounts must be entered on the Manage Modifications screen prior to updating and creating the project report tables.

Prompts

Use the Project Revenue Summary with Backlog prompts to run the report.







Prompt Message	Description
Company	Select the company to use to run the report.
Fiscal year	Select the fiscal year.
Period	Select the period.
Subperiod	Select the subperiod. If adjustment subperiods are available for the selected period, they are displayed in the **Subperiod** drop-down list including the adjustment period type which can either be **Interim** or **Final**. For example: ▪ Interim adjustment subperiod 1 will display as **3 Adj Pd - Interim**. ▪ Final adjustment period 1 will display as **Adj Pd - Final**.

Prompt Message	Description
Primary group	Select the primary grouping for the report: ▪ Alternate Project ▪ Organization - Owning ▪ Organization - Performing ▪ Project ▪ Project Classification ▪ Project Manager ▪ Project Type ▪ Reorganization Reorganization, Alternate Project, and Project Manager are optional prompts that require some prior setup in Costpoint before you can use them. To use Reorganization, first establish Reorganization structure in **Accounting** » **General Ledger** » **Reorganizations**. To use Alternate Project, first establish alternate project structure in **Projects** » **Project Setup** » **Alternate Reporting**. To use Project Managers, link project managers to projects on the Manage Project User Flow screen in Costpoint.
Rate type	Select the rate type to include: ▪ **Actual**: Print the report using actual burden rates from the tables. ▪ **Target**: Print the report using target burden rates from the tables. ▪ **Actual/Target**: Print the report using both actual and target burden rates from the tables.
Columns to display	Select the data you want to display from the list of columns.
Revenue level	Select **Yes** to display project data at revenue level. Select **No** and then select a project level in the next field to display data at project level.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Limit projects	Enter a portion of one or more project IDs in the **Keywords** field and click **Search** to list projects to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather

Prompt Message	Description
	than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Include	Select the types of projects to include: ▪ Active projects only ▪ Billable projects only
Project page break	Specify whether or not page breaks per project will be included in the report.

Sample Report

Sample Project Revenue Summary with Backlog report.

Time & Expense Charge Activity Report

The Time & Expense Charge Activity report allows you to run a report that will display hours entered, expenses charged, and billable amounts for employees, by project.

The information in this report is pulled from Deltek Time and Expense and includes information from both timesheets and expense reports. You have the option to include processed and/or unprocessed data in this report.

Before You Run the Report

Certain processes must be performed before you run this report.

Because this report contains sensitive labor information, you may decide to restrict it to selected individuals.

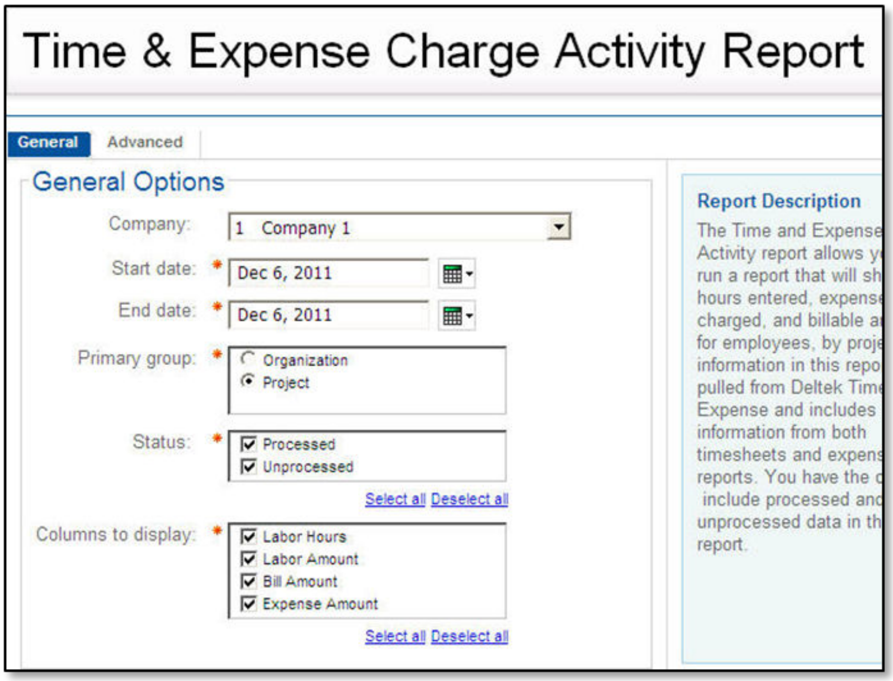
This report may contain Unposted (unprocessed) information, which may change any time new postings are made. Unprocessed Hours include both Open (O) and Sent (S) T&E.TS_CELL.S_CELL_STATUS_CD. Unprocessed Expenses include both Under Review (U) and Approved (A) T&E.EXP_RPT.S_EXP_RPT_STATUS_CD.

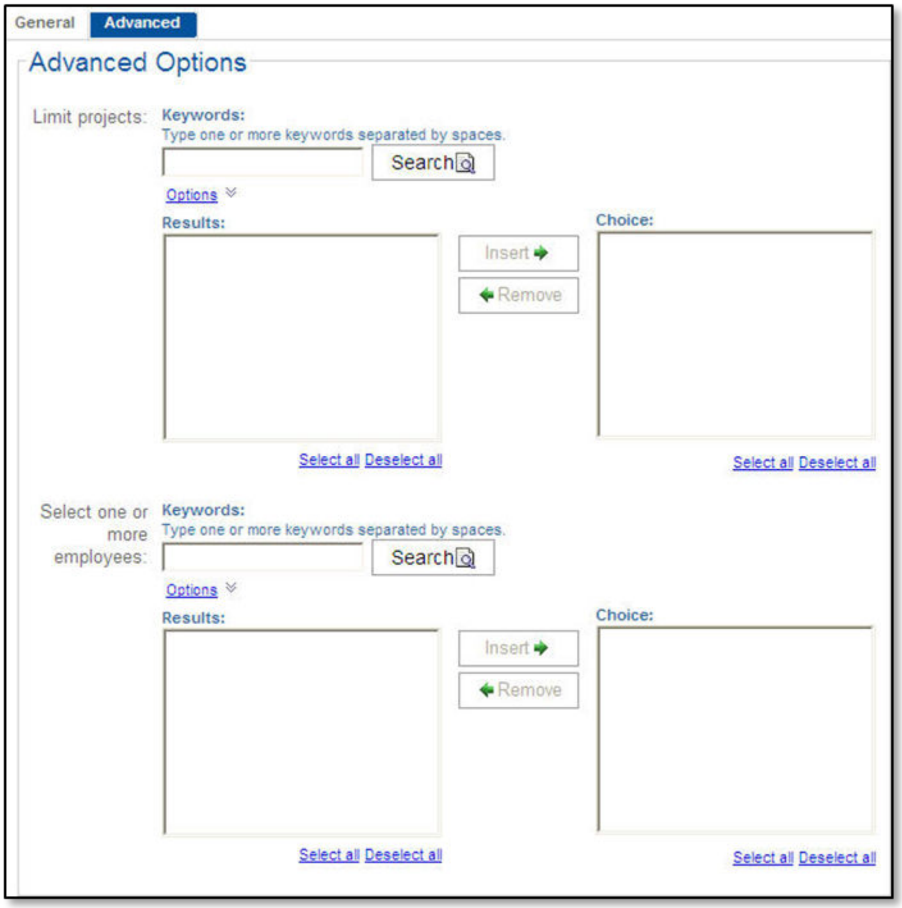
You must set up the following or run the following processes in Costpoint:

- You must be using both Time & Expense and Costpoint.
- The report is designed with the idea that the primary way to break out labor is PLC. However, the report will also function without PLCs.
- You should be using Billable Labor Rates. You must execute the Load Labor Rates process to populate the rates tables. You must also run the Retrieve Labor Rates process from **Projects** » **Budgeting and ETC** » **Budget Interfaces**.

Prompts

Use the Time & Expense Charge Activity Report prompts to configure the report.





Prompt Message	Description
Company	Select the Costpoint company to use to run the report.
Start date	Select a starting date.
End date	Select an ending date.
Primary group	Select **Organization** or **Project** to designate the major grouping for the report.
Status	Select one or both options for the type of labor to include on the report: ▪ Processed ▪ Unprocessed
Columns to display	Select the columns to include in the report: ▪ Labor Hours ▪ Labor Amount

Prompt Message	Description
	▪ Bill Amount ▪ Expense Amount
Limit projects	Enter a portion of one or more project or organization IDs in the **Keywords** field and click **Search** to list the projects or organizations to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more employees	Enter a portion of one or more employee IDs in the **Keywords** field and click **Search** to list employees to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in **Limit projects**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

Purchasing Reports

This section shows sample prompt screens and sample reports for the Purchasing reports.

Purchasing reports include the following:

- Purchase Order
- PO Commitments Detail

Certain purchasing reports are drill-thru only, meaning that they are not intended to be run on their own, but accessed by clicking links from other, parent reports.

Purchase Order

The Purchase Order report provides you with a basic purchase order format and the flexibility to customize the report by selecting the additional information you need at the header and line levels.

This report is written with US dollars as the currency.

Prompts

Use the Purchase Order prompts to configure the report.

PO Commitments Detail Report

The PO Commitments Detail report provides the details of the purchase order commitments that are shown on the Project Status Report and serves as a drill-through report for that report.

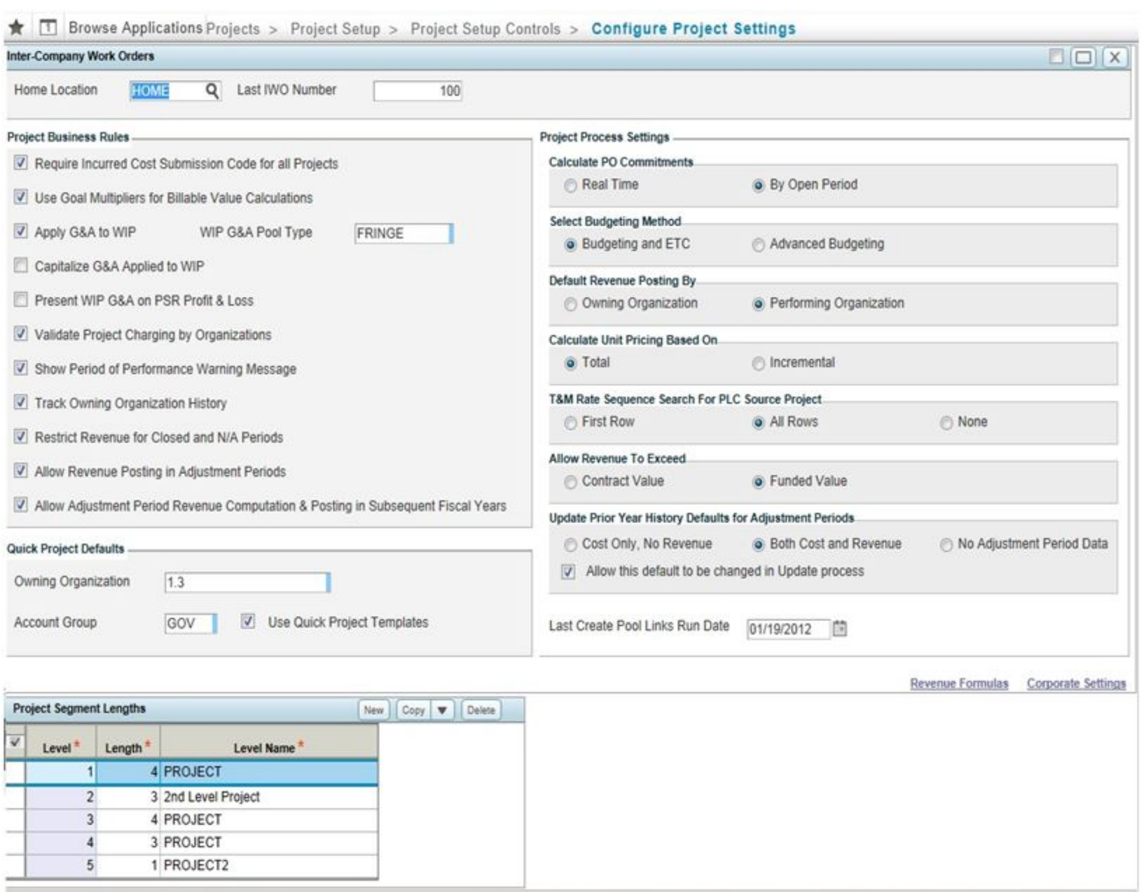
It can be used as a stand-alone report or as a drill-through target from other reports.

Before You Run This Report

You must establish how to calculate purchase order commitments from the Configure Project Settings screen in Costpoint before running the Purchase Order Commitments Detail Report.

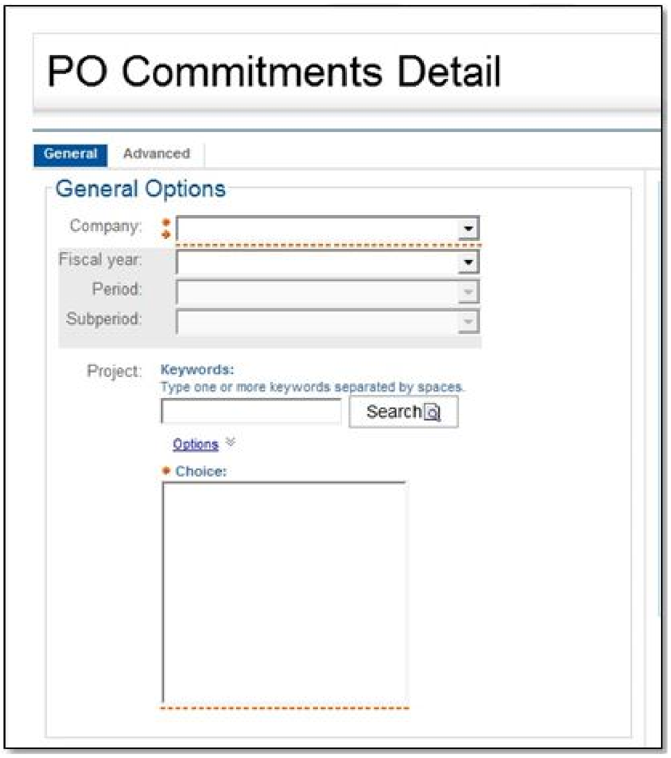
Options in the Calculate PO Commitments area are:

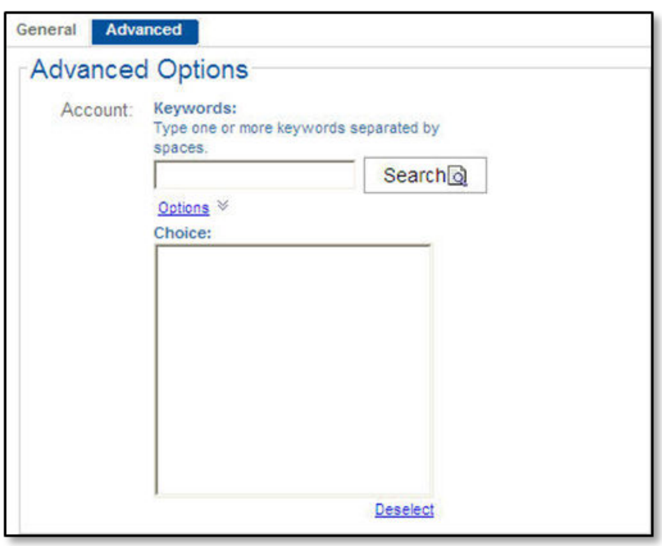
- **Real Time** — If this option is selected, the commitments data is stored in the PO_RT_COMMIT_SUM and PO_RT_COMMIT_DETL tables. When this method is selected, the report includes all transactions regardless of the transaction dates, so you do not need to enter prompt information for fiscal year, period, or subperiod.
- **By Open Period** — If this option is selected, the commitments data is stored in the PO_COMMIT_SUM and PO_COMMIT_DETL tables. When this method is selected, the report calculates by fiscal year, period, and subperiod, and you must enter information for these prompts, which display when you select a company.



Prompts

Use the PO Commitments Detail prompts to configure the report.





Prompt Message	Description
Company	Select the company to include on the report.

Prompt Message	Description
Fiscal year	Enter the fiscal year to use for the report. This option displays only if **By Open Period** is selected in the **Calculate PO Commitments** area of the Costpoint Configure Project Settings screen.
Period	Select the period to use for the report. This option displays only if **By Open Period** is selected in the **Calculate PO Commitments** area of the Costpoint Configure Project Settings screen.
Subperiod	Select the subperiod to use. This option displays only if **By Open Period** is selected in the **Calculate PO Commitments** area of the Costpoint Configure Project Settings screen.
Project	Enter a portion of one or more project IDs in the **Keywords** field and click **Search** to list projects to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Account	Enter a portion of one or more account IDs in the **Keywords** field and click **Search** to list accounts to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in **Select Project**, this prompts screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

Drill-Thru Only CP Reports

Certain reports included in the Costpoint Business Intelligence 8.0 release are drill-thru only, meaning that these reports are not run on their own, but accessed by clicking on links from other, parent reports.

This section is divided into four sections, based on the areas that include drill-thru reports:

- Accounts Payable
- Procurement
- Purchasing

This section provides descriptions of each of these reports, and indicates the parent reports from which these reports drill.

Accounts Payable

Use the Accounts Payable to generate Check Detail, Voucher Detail, and Posted PO Vouchers Drill Thru Only reports.

This section provides a description and a link to a sample for the following reports:

- Check Detail — Drill Thru Only
- Voucher Detail — Drill Thru Only
- Posted PO Vouchers — Drill Thru Only

Check Detail – Drill Thru Only

The Check Detail report provides the details of payments made by check for the accounts payable vouchers.

This report is not a stand-alone report. It can be used as a drill-through target only. By clicking on a voucher number in the Voucher Detail report, you can view the Check Detail.

Sample Report

Sample Check Detail report.

Check Detail

For Voucher Number 111107

Vendor ID	Vendor Name	Check Number	Check Date	Cash Account ID	Cash Organization ID	Amount Paid
AJENVEND1	JT VENDOR	26	11/07/07	01000-010	1	8,000.00

Page 1 of 1

Voucher Detail Report – Drill Thru Only

The Voucher Detail report provides the details of the accounts payable vouchers.

It is used as a drill-through target from the Project Status Report.

Sample Report

Sample Voucher Detail report.

Posted PO Vouchers — Drill Thru Only

The Posted PO Vouchers report lists all vouchers entered and posted against a purchase order from the PO Header and Line Detail report.

Voucher header, line, and line account information is displayed on this report. This report serves as a direct drill-through target from the PO Header and Line Detail report and several layers down from the Requisitions report.

Procurement

The procurement drill-through only report is the Requisition Detail — Drill Thru Only.

Requisition Detail Report — Drill Thru Only

The Requisition Detail report displays detailed information for a specific purchase requisition.

Information from the requisition header, requisition line, and requisition line account tables is displayed for a selected requisition or requisition line. This report can be used as a drill-through target from other reports, such as the Requisitions report, PO Header and Line Detail report, and Requisitions Pending report, but not as a stand-alone report.

Time and Expense Reports

This section shows sample prompt screens and sample reports for the Time and Expense reports.

Time and Expense reports include the following:

- Blanket Authorization
- Expense Analysis
- Time and Expense Reconciliation

Certain Time and Expense reports are drill-thru only, meaning that they are not intended to be run on their own, but accessed by clicking links from other parent reports.

Drill Thru Only TESS

This section provides descriptions and samples for the Time and Expense Drill Thru reports.

Time and Expense Drill Thru reports include the following:

- Allowable Expense Detail — Drill Thru Only
- Billable Expense Detail — Drill Thru Only
- Non-Billable Expense Detail — Drill Thru Only
- Over Ceiling Expense Detail — Drill Thru Only
- Unallowable Expense Detail — Drill Thru Only
- Under Ceiling Expense Detail — Drill Thru Only

Allowable Expense Detail Report — Drill Thru Only

The Allowable Expense Detail is a drill-through target report from the Expense Analysis Report.

This report shows the expenses that make up the Allowable section of the pie chart in the Expense Analysis report. This report displays details regarding those expenses that have been deemed allowable by Deltek Expense.

Sample Report

Over Ceiling Expense Detail Report — Drill Thru Only

The Over Ceiling Expense Detail report is a drill-through target report from the Expense Analysis Report.

This report shows the expenses that make up the Over Ceiling section of the pie chart in the Expense Analysis report. It displays details regarding those expenses that have been deemed over ceiling by Deltek Expense.

Note: The calculation for the Over Ceiling amount removes any Personal, Unallowable, or Other Lodging amounts that the user may have entered. These amounts do not display in this report.

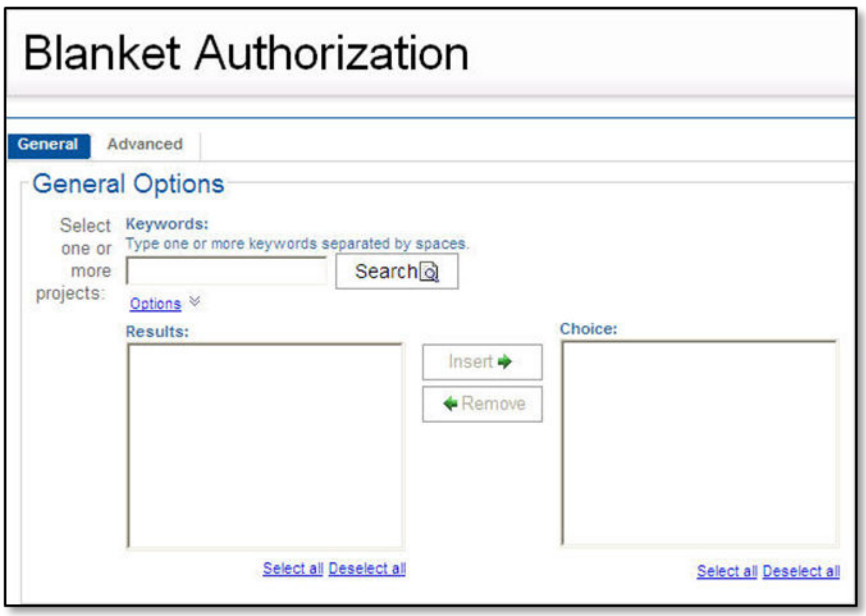
Blanket Authorization Report

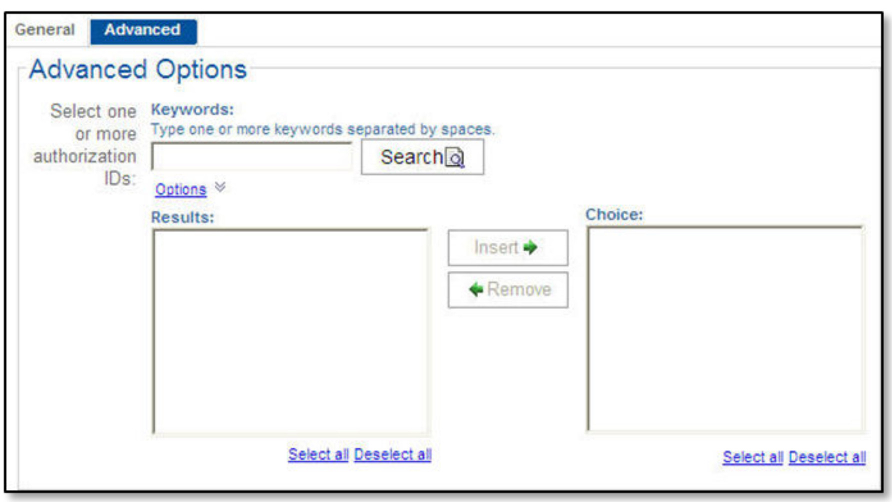
The Blanket Authorization report shows detailed information regarding blanket authorizations that have been entered in Deltek Expense.

A blanket authorization is a single authorization amount on a project that can cover one or more expense reports. This report details the expense reports that are tied to each blanket expense authorization and shows the calculated amount remaining on the blanket authorization.

Prompts

Use the Blanket Authorization prompts to configure the report.





Prompt Message	Description
Select one or more projects	Enter a portion of one or more project IDs in the **Keywords** field and click **Search** to list projects to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Expense Analysis Report

The Expense Analysis report provides a high-level graphical analysis of data in Deltek Expense.

It shows over and under ceiling, billable and non-billable, and allowable and unallowable charges so that management can see the magnitude of these charges and take corrective action. From the charts provided, you can drill through to see a more detailed breakdown of the categories.

This report enables you to link to information to drill through to more detail, as indicated in this table.

Name of Report That Opens (Drills Through) From The Expense Analysis Report	How to Open this Report
Allowable Expense Detail Report	This report displays when you click a charge in the allowable section of the Expense Analysis Report pie chart.
Unallowable Expense Detail Report	This report displays when you click a charge in the unallowable section of the Expense Analysis Report pie chart.
Billable Expense Detail Report	This report displays when you click a charge in the billable section of the Expense Analysis Report pie chart.
Non-Billable Expense Detail Report	This report displays when you click a charge in the non-billable section of the Expense Analysis Report pie chart.
Under Ceiling Expense Detail Report	This report displays when you click a charge in the under ceiling section of the Expense Analysis Report pie chart.
Over Ceiling Expense Detail Report	This report displays when you click a charge in the over ceiling section of the Expense Analysis Report pie chart.

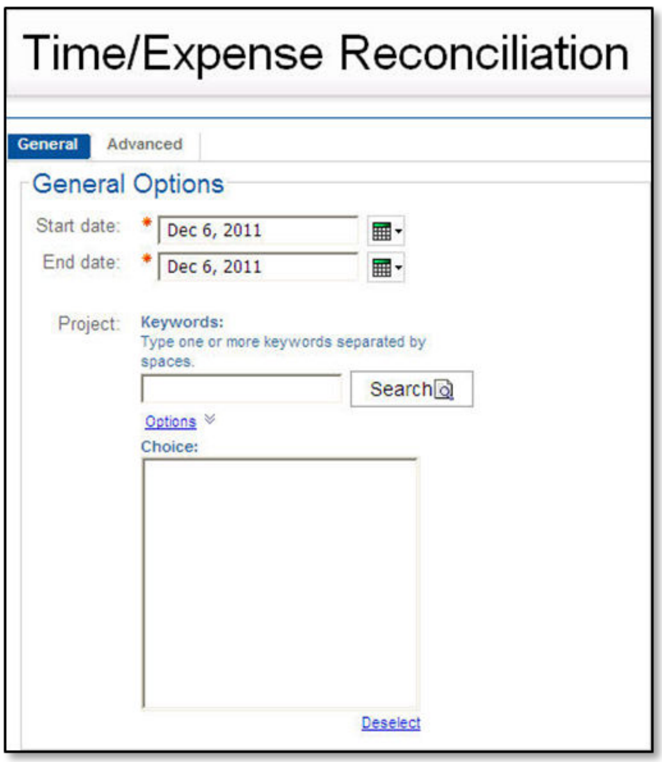
Time and Expense Reconciliation Report

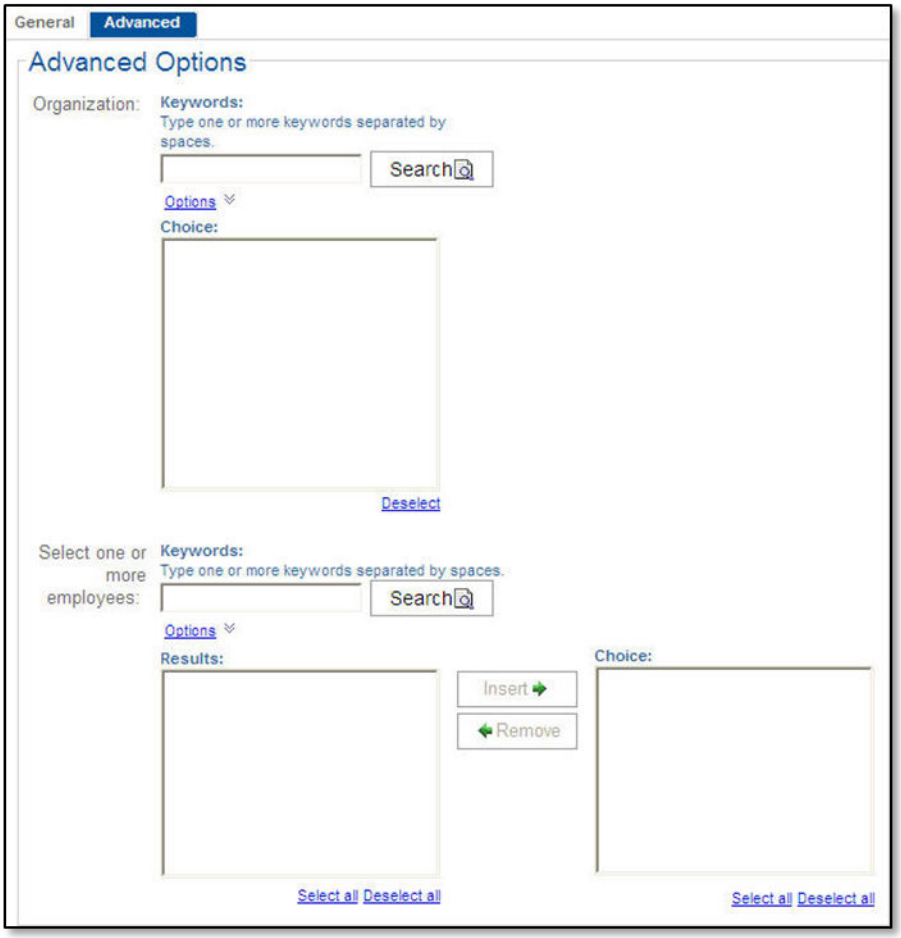
The Time and Expense Reconciliation report is an exception report that shows expenses charged to a project that do not have a corresponding labor charge, and therefore have been charged to the project in error.

This report finds these errors prior to their inclusion on an invoice to a client, which helps to prevent erroneous billings that are very costly to fix.

Prompts

Use the TE Reconciliation prompts to configure the report.





Prompt Message	Description
Start date	Enter a starting date.
End date	Enter an ending date.
Project	Enter a portion of one or more projects in the **Keywords** field and click **Search** to list IDs to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Organization	Enter a portion of one or more organizations in the **Keywords** field and click **Search** to list IDs to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
Select one or more employees	Enter a portion of one or more employee IDs in the **Keywords** field and click **Search** to list IDs to include on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

Sample Time/Expense Reconciliation report.

Time/Expense Reconciliation

Exception Report

For Project: 20002
For Jan 1, 2007 to Dec 31, 2007

The following days have Expenses charged to the selected Project and Labor charged to a different Project or no labor charges identified for the selected date:

Expense Project: 20002

	Date:	Employee:	Labor Project:
	January 26, 2007	Papel, Ira T. (10030)	No Project Entered
	February 15, 2007	Shaw, Thomas U. (10025)	No Project Entered
	February 16, 2007	Wilcox, Yasmine H. (10044)	No Project Entered

Costpoint Business Intelligence for Budgeting and Planning

This chapter includes descriptions of reports in Costpoint Business Intelligence for Budgeting and Planning.

The budgeting and planning reports in Deltek Costpoint Business Intelligence enable you to supplement standard Deltek reports for Costpoint Planning with the following:

- A set of predefined reports included in the reporting package
- Production reports that you create for your firm using IBM® Cognos® and the Budgeting & Planning Framework Manager model
- Ad hoc reports that you create for specialized or one-time reporting needs

This chapter also provides the following information:

- Overview of the Framework Manager model for Costpoint Business Intelligence for Budgeting and Planning
- Description of the optional security that you can implement to control access to data in Costpoint Business Intelligence for Budgeting and Planning
- Procedures for reconciling data on the Costpoint Business Intelligence reports with data in Costpoint Planning

Costpoint Business Intelligence for Budgeting and Planning includes the following template reports:

- Burdened Labor Costs by Project
- Labor Utilization
- Labor Utilization Drill-through
- Labor Variance by PLC
- Pending Charges Detail Report
- Project Labor Hours Status
- Project Report with Labor Detail
- Project Status Cost Summary
- Project Subcontractor Status
- Real Time Project Status Report
- Revenue Forecast
- T&M Profitability

Update Reporting Tables

You need to turn on the Update feature for populating the reporting tables for Costpoint Budgeting and Planning.

With this feature turned on:

- When you commit a budget, the tables populate with updated Budget data only.
- When you run a refresh process, the tables populate with Actuals and Budget data that has not been updated.

Enable Update of Reporting Tables

To populate the reporting tables in Planning, configure the Update CER Reporting Tables option in the Planning configuration settings.

To enable the feature in updating reporting tables for Costpoint Planning:

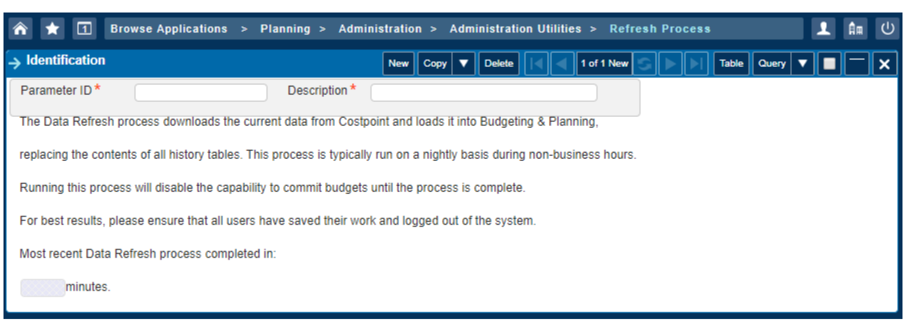
1. In Costpoint, launch the Configuration Settings (MAM10) application found in **Planning** » **Administration** » **Administration Controls** » **Configuration Settings (MAM10)**
2. Open the **General** tab.
3. Select **All Projects** or **Active Projects** in the **Update CER Reporting Tables** drop-down list.
4. **Save**.

Refresh Process

The Data Refresh process downloads the current data from Costpoint and loads it into Budgeting and Planning.

This process is usually scheduled to run nightly when Planning is used on a regular basis. To perform an off-schedule refresh, you can use the Refresh Process utility in the Planning module.

Note: Refer to the Costpoint online Help for more information about running the Refresh Process utility.



Model Information

Included in the documentation for this release is detailed information about the structure, table inclusion, and relationships (joins) for the Costpoint Business Intelligence for Budgeting and Planning Framework Manager model, in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_BudgetingPlanningModel.xls.

Report Package

The template reports in Costpoint Business Intelligence for Budgeting and Planning are published in a single package: Project Budgets.

Reporting Areas

The Framework Manager model for Costpoint Business Intelligence for Budgeting and Planning has several reporting areas.

These reporting areas are listed in the following table.

Reporting Area	Purpose
Project Status Trend	Generate reports that display either or both of the following types of data: Current status of existing projects using current period, YTD, and ITD actual hours and amounts. (ITD and YTD values are through the latest closed fiscal period. They do not include the current period in Costpoint Planning.) Projected (trended) performance for existing and new business projects for up to 36 future fiscal periods using data from the baseline budget or the most recent budget or estimate at completion (EAC).
Project Status Details	Generate detailed reports on project actual and budgeted performance using detail data from all past, current, and future fiscal periods and subperiods. Data from all budget and EAC versions is available.
General Ledger Detail	Generate reports that display or summarize actual Costpoint transaction detail for existing projects. This reporting area contains no budget data. It is commonly used for drill-through reports.
A/R Header History	Generate reports that display current Costpoint AR invoice balance information for existing projects. This reporting area contains no AR history and no budget data. It is commonly used for drill-through reports.

Reporting Areas and the Template Reports

In addition to serving as starting points for your custom reports, the template reports included with Costpoint Business Intelligence for Budgeting and Planning provide a variety of examples of how to use the reporting areas in the Framework Manager model.

The following table lists the template reports that use each of the reporting areas.

Reporting Area	Template Reports that Use the Reporting Area
Project Status Trend	▪ Project Subcontractor Status ▪ Project Labor Hours Status ▪ Project Status Cost Summary ▪ Project Report with Labor Detail ▪ Revenue Forecast ▪ T&M Profitability
Project Status Details	▪ Labor Utilization ▪ Labor Utilization (drill through report) ▪ Labor Variance by PLC
General Ledger Detail	None
A/R Header History	None

Project Status Trend Reporting Area

The Project Status Trend reporting area enables you to report both on the current status of projects and on their projected performance, based on budget, for up to 36 future periods.

You can display report columns containing the following actual performance information:

- Hours and amounts for the current period in Costpoint Planning
- Hours and amounts year to date through the latest closed fiscal period
- Hours and amounts inception to date through the latest closed fiscal period

These values are directly available as measures. You do not need to set up your reports to calculate them.

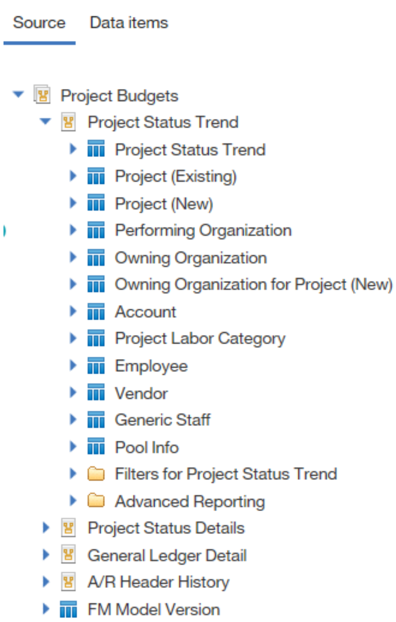
In addition, you can include report columns for project budget data for the current period and up to 36 future periods. That budget data can come from the baseline budget, from the most recent budget version or EAC, or from both the baseline budget and the most recent budget or EAC version (to provide a comparison of the two, for example).

Information from budget versions other than the baseline budget and the most current budget or EAC is not available in this reporting area. If you need to report on other budget versions, you can do so using the Project Status Details reporting area that gives you access to data from all budget versions.

Note that this reporting area has no time-related attributes for filtering actual performance data (for a range of fiscal periods, for example.) All actual hours and amounts are period to date for the current period, year to date for the current year through the last closed period, or inception to date through the last closed period.

Structure

Cognos Analytics displays the Project Status Trend reporting area as shown.



The Project Status Trend query subject, the first item listed in the reporting area, is the fact table. If you expand that node of the tree, the list displays the identifier and attribute fields, followed by a series of folders that contain the measures, the actual and budget data fields. The other query subjects provide additional data related to the data in the fact table that you may want to use or display in your reports.

The Filters for Project Status Details folder contains the pre-built filters for the reporting area.

The Advanced Reporting folder contains the query subjects and fields that you can use to implement rollups by project level and organization level, to report based on home organization, or to report based on reorganization.

Project Status Details Reporting Area

The Project Status Details reporting area enables you to generate detailed reports on project actual and budgeted performance using detail data from all past, current, and future fiscal periods and subperiods.

Unlike the Project Status Trend reporting area, the Project Status Details reporting area stores data by rows instead of columns. So while the Project Status Trend reporting area limits you to a maximum of 36 future periods, the Project Status Details reporting area gives you access to virtually an unlimited number of past and future fiscal periods. (Despite this difference between the two reporting areas, advanced users can pivot the data in the Project Status Details table to present it in period columns for a trended view.)

Another difference between this reporting area and the Project Status Trend reporting area is that the Project Status Details reporting area provides access to data in all budget or EAC versions. This enables you, for example, to use a filter to specify the budget version you want for the report or to select two budget versions that you want to compare.

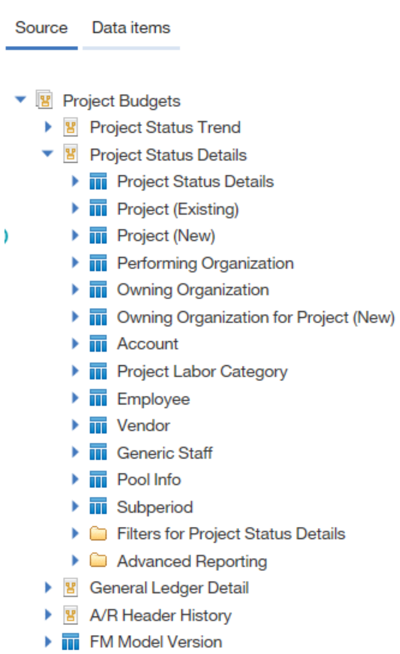
> **Note:** The pre-built filters that Deltek provides in the Framework Manager model for the Project Status Details reporting area include a filter for selecting the current budget version.

In addition, this reporting area includes time-related attributes, so you can filter data based on fiscal year, period, and subperiod. Be aware, however, that if you want to see year-to-date or inception-to-date amounts or hours, you must set up the reports to calculate them from the detailed records.

> **Note:** The pre-built filters that Deltek provides in the Framework Manager model for the Project Status Details reporting areas include filters for selecting current period data only or future periods data only.

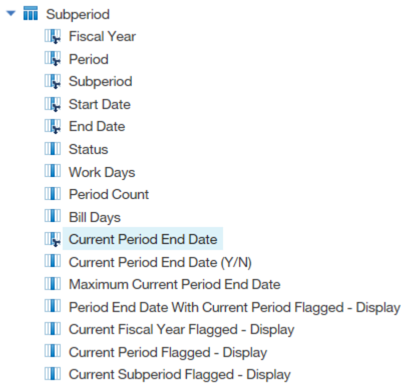
Structure

The Cognos Analytics displays the Project Status Details reporting area as shown.



The Project Status Details query subject, the first item listed in the reporting area, is the fact table. If you expand that node of the tree, the list displays the identifier and attribute fields, followed by a Measures folder that contains the hours and amount fields.

The other query subjects provide additional data related to the data in the fact table that you may want to use or display in your reports. Of special note is the Subperiod query subject. It not only lists accounting period information but also provides a yes/no flag that identifies the current open period.



The following is a sample output from this query subject:

Fiscal Year	Period	Subperiod	Start Date	End Date	Status	Work Days	Period Count	Bill Days	Current Period End Date	Current Period End Date (Y/N)
2010	5	1	05/01/10	05/31/10	HISTORY	21	5	21		N
2010	6	1	06/01/10	06/30/10	HISTORY	22	6	22		N
2010	7	1	07/01/10	07/31/10	HISTORY	22	7	22		N
2010	8	1	08/01/10	08/31/10	HISTORY	22	8	22		N
2010	9	1	09/01/10	09/30/10	HISTORY	22	9	22		N
2010	10	1	10/01/10	10/31/10	HISTORY	21	10	21		N
2010	11	1	11/01/10	11/30/10	HISTORY	22	11	22		N
2010	12	1	12/01/10	12/31/10	HISTORY	23	12	23		N
2011	1	1	01/01/11	01/31/11	CURRENT	21	1	20		N
2011	2	1	02/01/11	02/28/11	CURRENT	20	2	20		N
2011	3	1	03/01/11	03/31/11	CURRENT	23	3	23		N
2011	4	1	04/01/11	04/30/11	CURRENT	21	4	21		N
2011	5	1	05/01/11	05/31/11	CURRENT	22	5	21		N
2011	6	1	06/01/11	06/30/11	CURRENT	22	6	22		N
2011	7	1	07/01/11	07/31/11	CURRENT	21	7	20	07/31/11	Y
2011	8	1	08/01/11	08/31/11	CURRENT	23	8	23		N
2011	9	1	09/01/11	09/30/11	CURRENT	22	9	21		N
2011	10	1	10/01/11	10/31/11	CURRENT	21	10	21		N

The Filters for Project Status Details folder contains the pre-built filters for the reporting area.

The Advanced Reporting folder contains the query subjects and fields that you can use to implement rollups by project level and organization level, to report based on home organization, or to report based on reorganization.

Existing Projects and New Business Projects

Both the Project Status Trend reporting area and the Project Status Detail reporting area give you the option to include existing projects, new business projects, or both.

In contrast, the General Ledger Detail and A/R Header History reporting areas only include data for existing projects.

If you include new business projects on a report, keep the following in mind:

- New business projects do not have the same set of attributes that existing projects have.
- You cannot roll up data for new business projects based on project or organization levels.

Note: The pre-built filters that Deltek provides in the Framework Manager model for the Project Status Trend and Project Status Details reporting areas include filters for selecting existing projects, new business projects, or both.

Major and Minor Group Numbers

You can use the Major and Minor Group Numbers to include or exclude data categories and select and group data that was identified by the Major Group Numbers.

Records in the Project Status Trend reporting area and the Project Status Detail reporting area include the following attribute fields to enable you to include or exclude categories of data from your report:

- Major Group Number
- Minor Group Number

Major Group Number

Use the **Major Group Number** attribute field in filters to include or exclude the data categories from the reports.

The following table lists the categories of data that you can include or exclude from the reports:

Data Category	Major Group Number
Revenue	1
Direct costs	2
Indirect costs by resource	3
Indirect costs by pool	4

For example, to include revenue, direct costs, and indirect costs by resource on a report, use a filter that selects records with 1, 2, or 3 as the **Major Group Number** value.

You can also group data on a report based on the value in **Major Group Number**.

To include indirect costs on a report, use a filter that selects records with one, but not both, of the indirect costs values in **Major Group Number**. If you select both, the report will include duplicate records, and the indirect costs will be overstated.

Minor Group Number

The **Minor Group Number** attribute field provides a way to select and group subsets of the data identified by the **Major Group Number** values.

Each **Minor Group Number** value is only valid for a single **Major Group Number** value.

Major Group Number/ Description	Valid Minor Group Number/Description
1 – Revenue	**0** – Actual revenue **1** – Labor revenue **2** – Non-labor revenue
2 – Direct costs	**3** – Direct labor costs **4** – Direct non-labor costs
3 – Indirect costs by resource	**5** – Indirect labor costs **6** – Indirect non-labor costs
4 – Indirect costs by pool	**7** – Indirect labor costs **8** – Indirect non-labor costs

For example, to include only labor revenue, direct labor costs, and indirect labor costs by resource on a report, use a filter that selects records with one of the following sets of values:

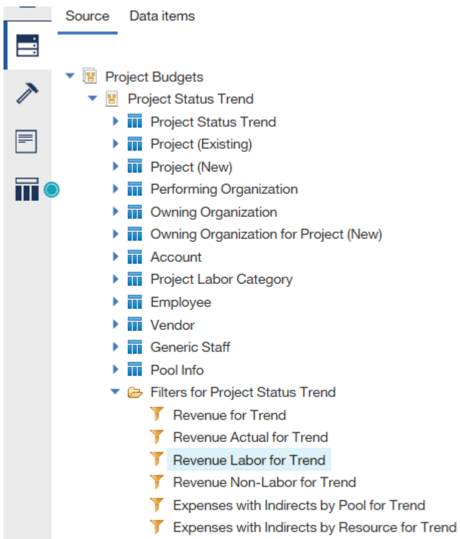
- 1 as the **Major Group Number** value and 1 as the **Minor Group Number** value
- 2 as the **Major Group Number** value and 3 as the **Minor Group Number** value
- 3 as the **Major Group Number** value and 5 as the **Minor Group Number** value

Pre-Built Filters and Major and Minor Group Numbers

In most cases, you do not need to set up your own filters to take advantage of major and minor group numbers.

Instead you can use the pre-built filters that Deltek provides in the Framework Manager model for the Project Status Trend and Project Status Details reporting areas.

To view and select from the list of filters in Cognos Analytics, expand the reporting area in the **Source** tab of the **Data** pane and expand the Filters for… folder. The filter name indicates the categories of data that the filter selects for inclusion in the report.



Project Access

Costpoint Business Intelligence provides access to budgeting and planning data based on the existing projects (actual projects set up in Costpoint) to which the user is granted access in Costpoint Planning.

When you define a user's access to project data in Costpoint Planning, you can grant or deny access to the whole project tree, or to any individual branch or project ID in the project tree.

Project security applies only to transaction and budget data. It does not apply to the projects themselves or their attributes (project type or project manager, for example). As a result, the following are true:

- You can create ad hoc queries and reports in Cognos that return master file data for projects to which Costpoint Planning security does not give you access. However, you cannot create queries that return transaction or budget data for those projects.
- For reports that enable you to select the projects that are included, you can select any projects at any project level. You are not restricted to the projects to which you have access. However, the data on the reports will not include any actual or budget hours or amounts for projects to which you do not have access. (If you do not have access to any of the selected projects, the report displays only **No Rows Found**.)

  Example: You do not have access to the level 1 project, 1000. You also do not have access to the level 2 project 1000.01, but you do have access to 1000.02. When you generate a Revenue Forecast report, you can generate it at level 1 for project 1000. However, the values rolled up for 1000 will be partial values because they only include data for 1000.02. Data for 1000.01 is excluded because you do not have access to that project.

New Business Project Access

Project security applies only to actual projects set up in Costpoint.

It does not apply to budget data for new business projects set up in Costpoint Planning. All Costpoint Business Intelligence for Budgeting and Planning users can view data for all available new business projects.

All new business projects may not be available, however. The data only includes new business projects that are designated as "shared" in Costpoint Planning. (Proposals are never included in the data.)

Organization Access

The Framework Manager model for the budgeting and planning data in Costpoint Business Intelligence only includes project budget data.

It does not include organization budgets. Because of this, security for this data is based only on access to projects. There is no security based on organization access.

Labor Cost Access

Costpoint Business Intelligence users have complete access to labor cost information for the projects to which they have access.

Burdened Labor Costs by Project

Use the Burdened Labor Costs by Project Report to see burdened costs charged or budgeted to a project as well as burdened costs against the budget for the current period, year to date, and inception to date timeframes.

Data from this report comes from Deltek Costpoint Planning and it displays the following:

- Project ID and Name
- Account Level based on selection
- Account ID and Name
- Current Period Actual, EAC, and Variance
- Year to Date Actual, EAC, and Variance
- Inception to Date Actual, EAC, and Variance
- Subtotal by Account
- Subtotal by Account Level
- Total by Project

Options

You can select options on how you want the data in the Burdened Labor Costs by Project Report to display.

When you generate the report, you can select the company or the project to which you want to see the data.

Prompts

Use the Burdened Labor Costs by Project Report prompts to configure the report.

Prompt Message	Description
Company:	Select the company that you want to display in the report.
Rate Type:	Select the Rate Type that you want to display in the report.
Project level:	Select the level of project that you want to display in the report.
Limit projects:	Select the project(s) that you want in the report. To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Labor Utilization Report

Use the Labor Utilization report to review forecasted labor utilization for labor resources to identify potential under- or over-utilization issues.

For each resource, the report displays forecasted labor utilization rates for the current period in Costpoint Planning and for the five periods following that one. (The report excludes vendor resources.)

The report also provides labor utilization rates for those six periods for each organization as a whole.

Drill-Through Report

If you identify a resource that is under- or over-utilized, you can click the resource link in the **Resource** column to drill through to the Labor Utilization drill report to quickly see the projects on which the resource is currently scheduled to work and the budgeted hours for each project for the next six fiscal periods.

> **Note:** The Labor Utilization drill report also displays labor utilization rates. Those rates are always calculated based on labor hours. As a result, if you calculated labor utilization rates based on cost on the Labor Utilization report, the rates on the drill report may not match those on the main report.

Labor Utilization Rate Calculation

Costpoint Business Intelligence calculates labor utilization rates by comparing a resource's budgeted hours or cost for a fiscal period to the standard hours for that period or to the cost of the standard hours.

Standard hours for a fiscal period are 8 hours per work day, multiplied by the number of business days in the period, less any holidays or other excluded days.

Cost for an employee is calculated based on his or her hourly rate and does not include labor burden. For generic resources, the report uses the average hourly rate. You can view the average hourly rate on the Maintain Generic Staff report in Costpoint Planning.

Budget Used

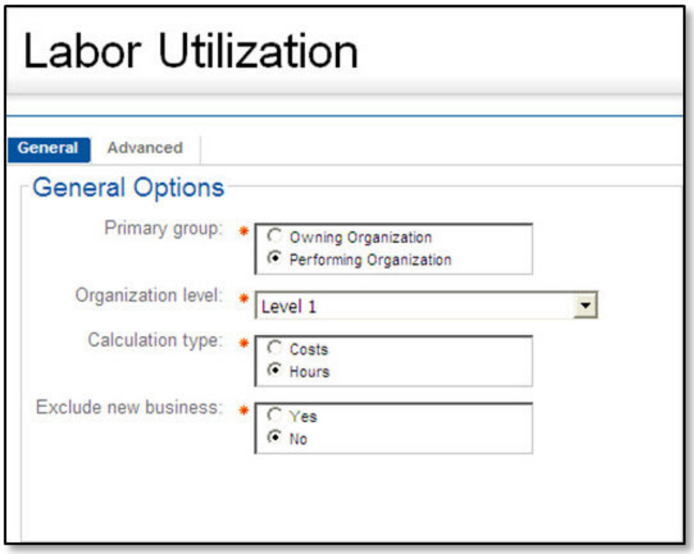
Budgeted hours and cost for this report come from the most recent budget version.

Reconcile Report Data

Refer to Reconcile Labor Utilization with Drill Through in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

Use the Labor Utilization prompts to configure the report.



Prompt Message	Description
Primary group	Indicate if you want the report to group data by owning organization or by performing organization.
Organizational level	Select the level of the organization structure at which you want to review labor utilization rates. The report rolls up all data to that level.
Calculation type	Indicate if you want the report to calculate labor utilization rates based on labor cost or labor hours.

Prompt Message	Description
Exclude new business	Select **Yes** to exclude new business (non-backlog) projects from the calculation of labor utilization rates. Select **No** to include new business projects in the calculation of labor utilization rates.
Organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Labor Utilization Drill Report

You can click a resource ID on the main Labor Utilization report to drill through to the Labor Utilization drill report to quickly see the projects on which the resource is currently scheduled to work and the budgeted hours for each project.

This report offers another level of detail to help you analyze utilization issues that you identify on the main report.

The Labor Utilization drill report displays the resource's budgeted hours for each project for the current period in Costpoint Planning and for the next five fiscal periods following the current period. For each period, the report also provides the resource's total budgeted hours for all projects, the standard hours, and the labor utilization rate. (Budgeted hours come from the most recent budget version.)

> **Note:** The Labor Utilization drill report always calculates labor utilization rates based on labor hours. As a result, if you calculated labor utilization rates based on cost on the Labor Utilization report, the rates on the drill report may not match those on the main report.

Your selection in the **Exclude new business** prompt for the main report determines whether or not the drill report displays new business (non-backlog) projects along with the existing projects.

Sample Report

Sample Labor Utilization drill through report.

Labor Variance by PLC Report

Use the Labor Variance by PLC report to review actual and budgeted employee labor hours for a single existing project at any project level, broken down by project labor category (PLC).

For each PLC for the project, the report displays the following for a selected fiscal period and for the year to date:

- Actual hours
- Budget hours
- Variance (Budget hours – Actual hours)
- Variance percentage (Variance / Budget hours)

The report provides totals for all columns for the project as a whole.

> **Note:** The standard version of this report is filtered to display employee labor hours only. It does not include subcontractor or consultant labor hours. If you want to display all labor hours, you can modify the Labor for Details filter expression to match the following: **[DeltekBP].[Labor for Details]** or **[DeltekBP].[Non-Labor for Details]**.

Budgets

If different budget versions exist for the selected project tree, the report uses only the most current budget version.

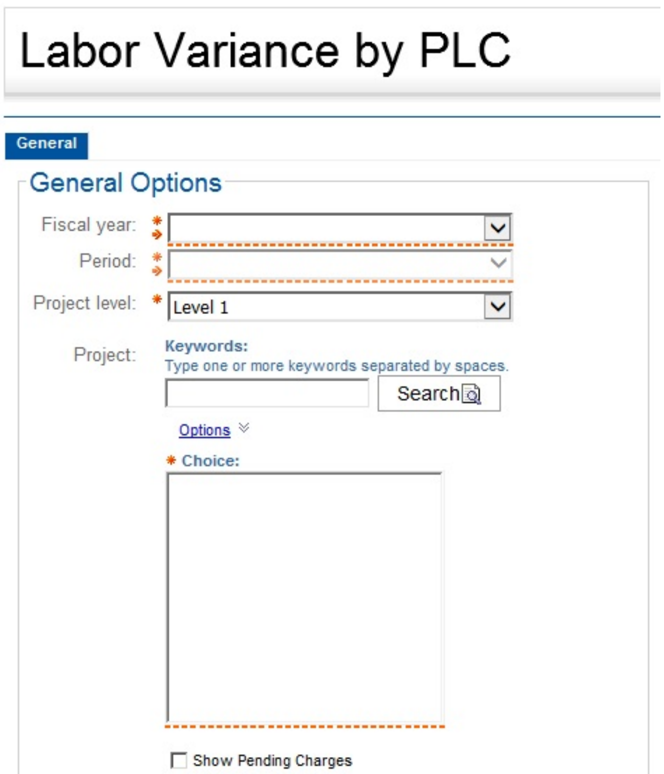
Reconcile Report Data

You can reconcile data on this report with data in Costpoint Planning.

View Reconcile Labor Variance by PLC in the Appendix to reconcile data on this report with data in Costpoint Planning.

Prompts

Use the Labor Variance by PLC prompts to configure the report.



Prompt Message	Description
Fiscal year	Select the fiscal year for which you want to generate the report.
Period	Select the fiscal period for which you want to generate the report.
Project level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Project	Select one project at the level specified in the Project level prompt.

Prompt Message	Description
	In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching projects in Choice. In Choice, select the project for which you want to generate the report.
Show Pending Charges	Select this check box to include pending charges in the report. If selected, columns for ITD will be displayed. Also, the pending hours will be part of the **Actual** columns in the report. In addition, a note will be displayed that will indicate that pending hours are included in the report.

Pending Charges Detail Report

Use the Pending Charges Detail Report to view the detail of labor, expense report and other direct expenses that are in a pending state, those charges that are not yet posted to the project.

This report displays in detail every pending charge broken out by:

- Labor Hours
- Employee Expenses

- Other Direct Costs

In addition, the report includes the following:

- Resource/Vendor ID
- Resource/Vendor Name
- Project Labor Category/Account
- Charge Date
- Pending Hours
- Pending Cost with Burden

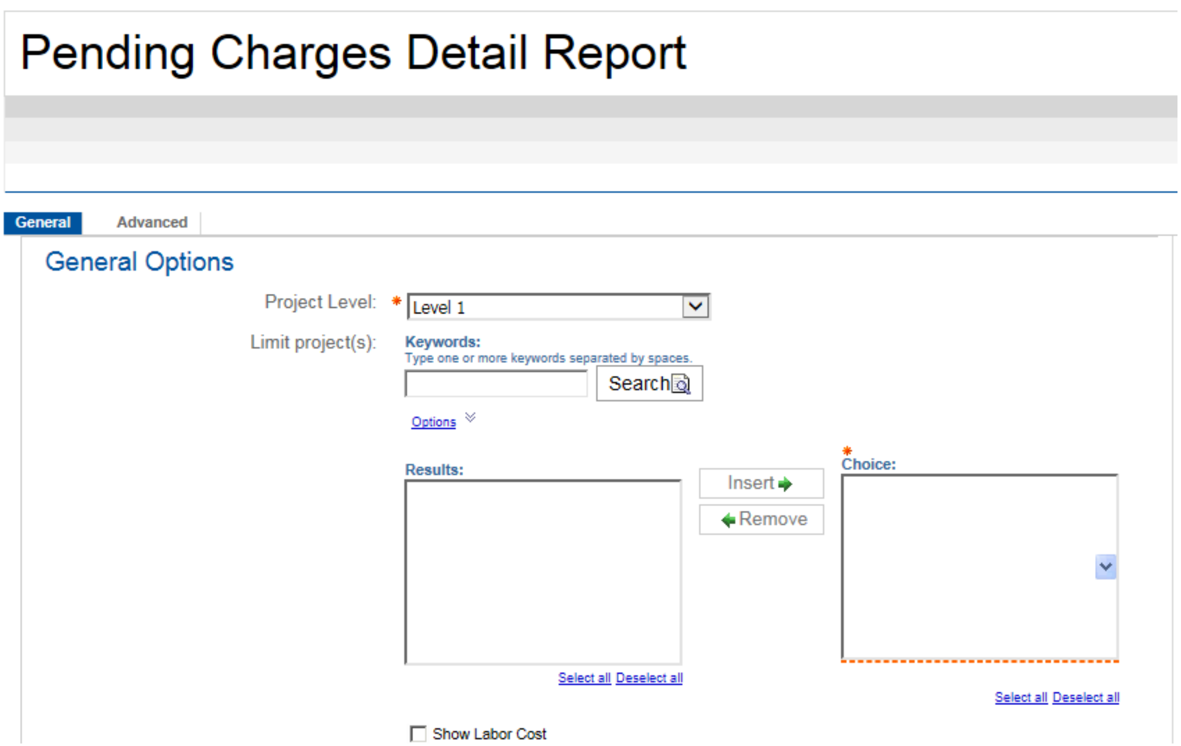
Options

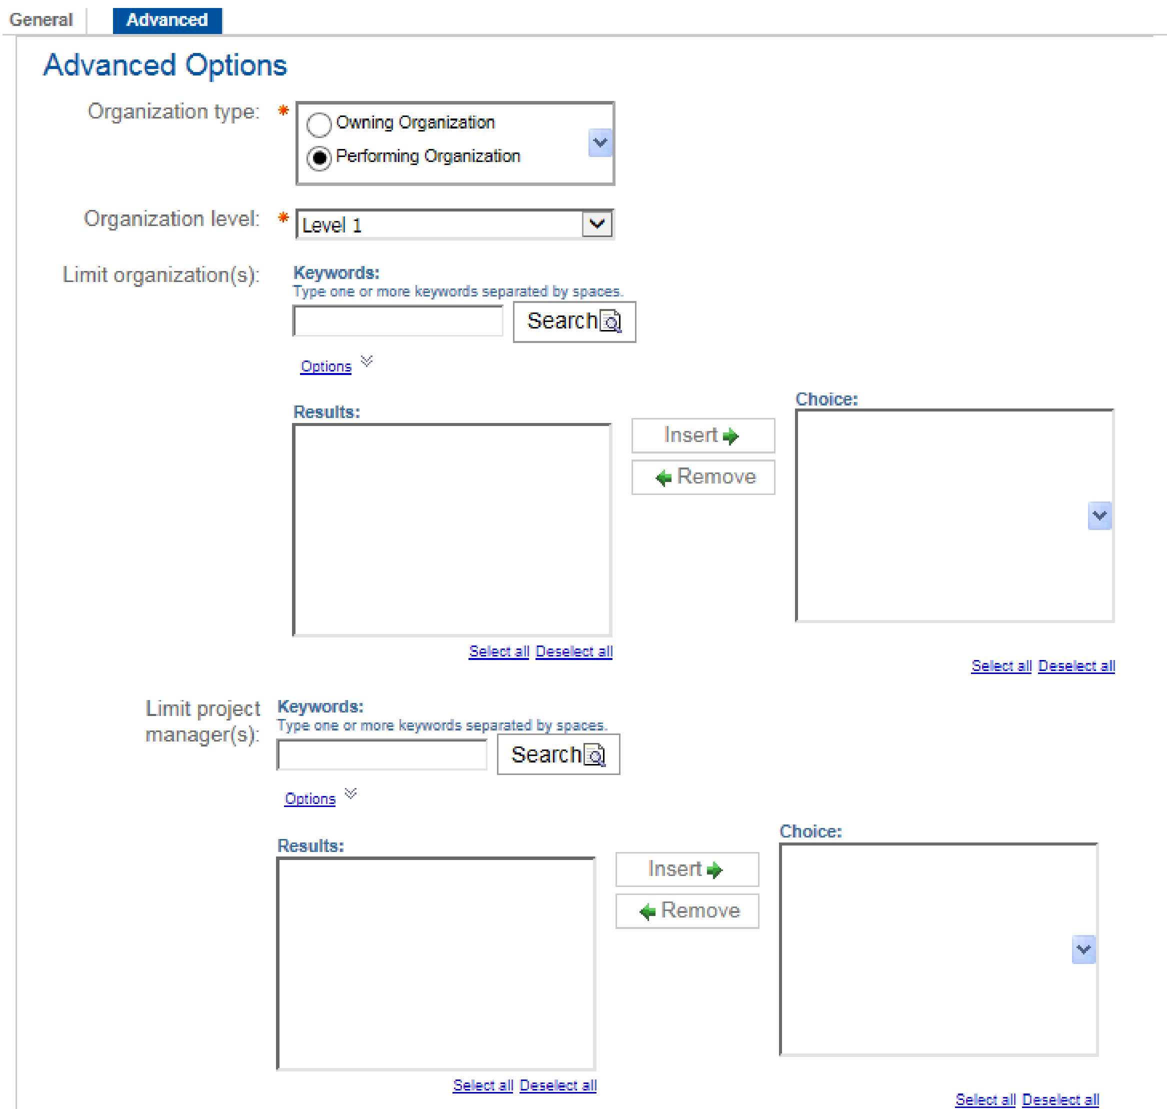
You have the option whether to show Labor Cost in detail or not. There might be cases where you want to remove Labor Cost for security purposes.

Cost detail is hidden by default.

Prompts

Use the Pending Charges Detail Report prompts to configure the report.





Prompt Message	Description
Project Level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Limit project(s)	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces.

Project Labor Hours Status Report

Use the Project Labor Hours Status report to monitor and manage labor hours at the resource level for existing projects.

To provide the most up-to-date picture, the report includes all unposted timesheet hours from Deltek Time Collection.

For each resource, the report displays the following:

- Inception-to-date (ITD) actual hours through the period preceding the current period in Costpoint Planning
- Unposted hours
- Actual hours for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Budget hours for the current fiscal period in Costpoint Planning (<current period end date> **Forecast** column)
- Estimate-at-completion (EAC) hours
- Hours spent to date (ITD actual hours + Unposted hours + Current period actual hours)
- Hours remaining (EAC hours – Hours spent to date)

The report displays subtotals for each project level and totals for the report as a whole.

Options

When you generate this report, you can enter all or part of a project ID.

The report then includes all projects with IDs that begin with the characters that you enter.

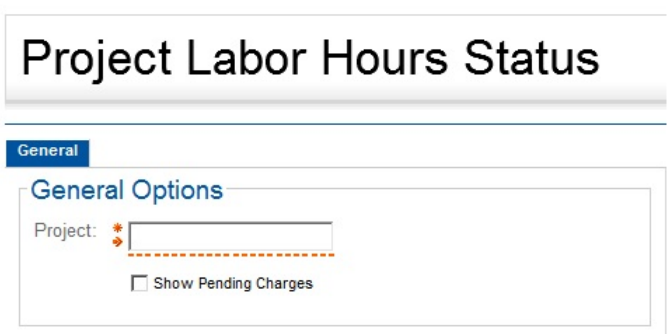
Reconcile Report Data

You can reconcile data on this report with data in Costpoint Planning.

View the Reconcile Project Labor Hours Status topic in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Project Labor Hours Status prompts.



Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.

Prompt Message	Description
Show Pending Charges	Select this check box to include pending charges in the report. If selected, the following are displayed: ▪ Pending charges (in hours) for each employee ▪ **ITD Plus Pending** column that has the ITD Actual Hours plus pending hours ▪ Hours Spent to Date which are pending hours in addition to ITD and Current Month Actual

Sample Report

Sample Project Labor Hours Status report with pending charges.

Project Report with Labor Detail

Use the Project Report with Labor Detail to view, for individual resources, an analysis of project labor hours to date and forecasted hours through the completion of the project.

In addition, the report displays the costs related to the labor hours shown in the detail section, the related revenue, and the resulting profit or loss.

For each resource for the project, the report displays the following:

- Inception-to-date (ITD) actual hours through the period preceding the current period in Costpoint Planning
- Actual hours for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Budget hours for the current fiscal period in Costpoint Planning (<current period end date> **Budget** column)
- Budget hours for each of the next six fiscal periods following the current period in Costpoint Planning

- Remaining budget hours beyond the next six fiscal periods (**Through Completion** column)
- Total estimate-to-complete (ETC) hours
- Total forecast hours (ITD actual hours + Total ETC hours)
- Total estimate-at-completion (EAC) hours

For each project, the report also provides the totals listed below. These are broken down into the same report columns as the resource labor costs (ITD actual, period budgets, remaining budget, and so on):

- Total labor hours
- Total labor cost
- Total labor burden
- Total labor cost with burden
- Other direct costs with burden
- Total cost
- Total revenue
- Profit or loss

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Select the project level at which you want to review labor detail.
- Select the projects, at the selected project level, that you want to include on the report.

Forecast Amounts

In most cases, amounts in the **Total Forecast** column match those in the **Total EAC** column.

If the EAC for a project in Costpoint Planning is not up to date, for example, those amounts may be different. In that case, the amounts in **Total Forecast**, which the report calculates from ITD actual amounts and from budget amounts, may provide more accurate approximations of the expected completion amounts.

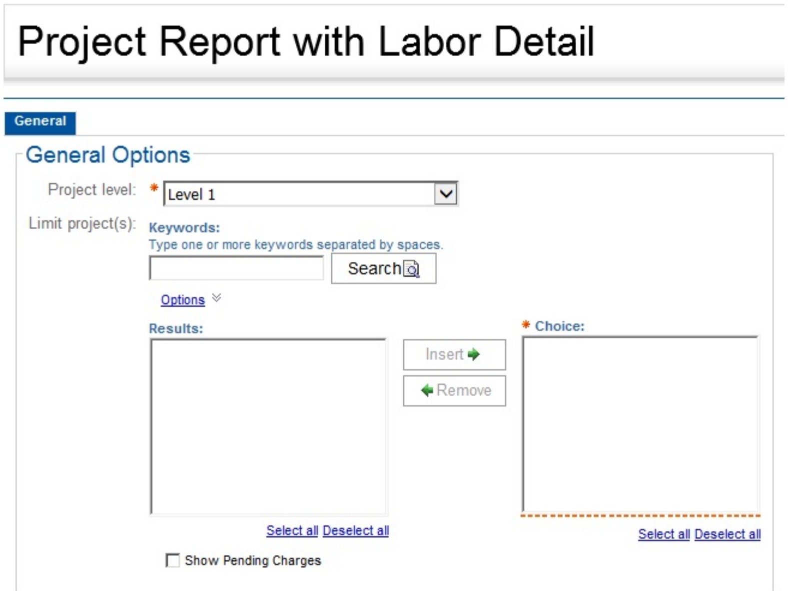
Reconcile Report Data

You can view guidelines on how to reconcile data on this report with data in Costpoint Planning.

Use Reconcile Project Report with Labor Detail for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Project Report with Labor Detail prompts.



Prompt Message	Description
Project level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Limit project(s)	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching projects in Results. Select the projects in Results that you want to include and click **Insert** to move them to Choices. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one.

Prompt Message	Description
	When you generate the report, it includes only records for the projects in Choices.
Show Pending Charges	Select this check box if you want to display the pending charges. If selected, the **Pending Charges** column will display which includes the hourly detail by employee, labor cost, labor burden, other direct cost with burden and revenue. In addition, the **ITD Plus Pending** column will be included in the report that displays the total of ITD previous Period plus Current Month Actuals amount plus pending charges.

Sample Report

Sample Project Report with Labor Detail including pending charges.

Overall															

Project Status Cost Summary Report

Use the Project Status Cost Summary report to monitor the cost status of the projects for an organization or set of organizations by comparing estimate-at-completion (EAC) cost amounts, as of the current fiscal period, to total baseline budget cost amounts.

For each project, the report displays the following:

- Inception-to-date (ITD) actual burdened cost through the period preceding the current period in Costpoint Planning
- Estimate-to-complete (ETC) burdened cost
- Forecast burdened cost (ITD actual burdened cost + ETC burdened cost)
- Total baseline budget burdened cost

- Variance between forecast cost and baseline budget cost (Total baseline budget burdened cost – Forecast burdened cost)
- Variance percentage (Variance / Total baseline budget burdened cost)

To call your attention to potential issues, the report highlights negative or positive variances greater than $25,000 and variance percentages of 5 percent or more.

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Group projects based on owning organization or performing organization.
- Specify the organization level to which you want to roll up the data.
- Select the project level to which you want to roll up the data.
- Select the organizations, at the specified organization level, that you want to include on the report.
- Select the projects, at the specified project level, that you want to include on the report.

> **Note:** If you do not filter the report for specific projects, and if costs for any projects have been charged to, or budgeted at, a higher project level than the project rollup level you specify on the prompts page, the report displays the total of those additional costs in a separate detail row without a project ID. It also includes those costs in the organization subtotals so those subtotals reflect the total costs for the organization.

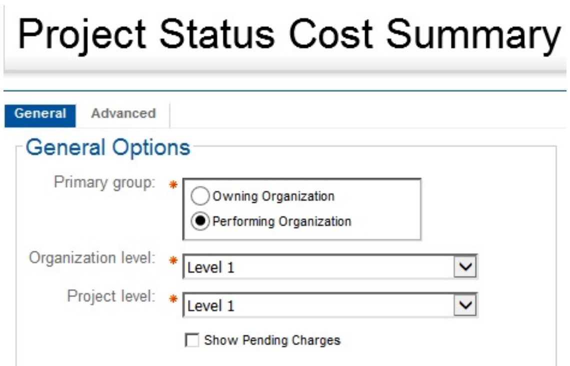
Reconcile Report Data

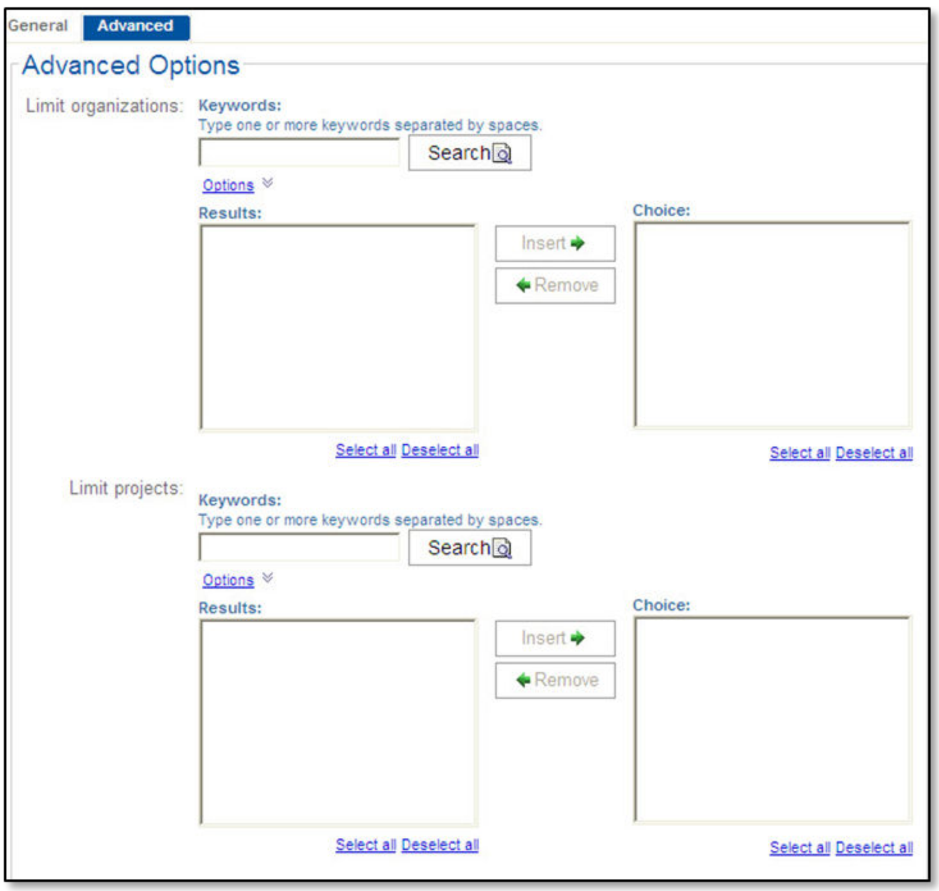
These are guidelines on how to reconcile data on this report with data in Costpoint Planning.

You can use Reconcile Project Status Cost Summary for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Project Status Cost Summary prompts.





Prompt Message	Description
Primary group	Indicate if you want the report to group data by owning organization or by performing organization.

Prompt Message	Description
Organization level	Select the level of the organization structure at which you want to review project costs. The report rolls up all data to that level.
Project level	Select the project level at which you want to review project costs. The report rolls up all data to that level.
Show Pending Charges	Select this check box if you want to display the pending charges. If selected, a column with pending charges will be included in the report with the total of all charges for labor plus burden, and other direct costs plus burden. Also, a column for ITD Plus Pending (total of ITD amount plus pending charged) will display.
Limit organizations	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching organizations in Results. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.
Limit projects	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching projects in Results.

Prompt Message	Description
	Select the projects in Results that you want to include and click **Insert** to move them to Choices. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the projects in Choices.

Project Subcontractor Status Report

Use the Project Subcontractor Status report to monitor and manage subcontractor labor and other subcontractor costs for existing projects. To provide a more complete picture, the report includes the cost of unfulfilled materials and services commitments from Costpoint.

> **Note:** This report only includes costs identified as subcontractor costs in Costpoint Planning. It does not include other direct costs.

For each subcontractor resource, the report displays the following:

- Inception-to-date (ITD) actual burdened cost through the period preceding the current period in Costpoint Planning

- Actual burdened cost for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Burdened commitment cost
- Total cost to date (ITD actual burdened cost + Current period actual burdened cost + Commitment burdened cost)
- Estimate-at-completion (EAC) burdened cost
- Balance remaining (EAC burdened cost – Total cost to date)

The report displays subtotals for each project level and totals for the report as a whole.

Options

When you generate this report, you can enter all or part of a project ID.

The report then includes all projects with IDs that begin with the characters that you enter.

Reconcile Report Data

There are guidelines on how to reconcile data on this report with data in Costpoint Planning.

You can use Reconcile Project Subcontractor Status for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Project Subcontractor Status prompts.

Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.

Page 1 of 1

Revenue Forecast Report

Use the Revenue Forecast report to review projected revenue for one or more organizations for the next six fiscal periods based on data for both existing projects and new business projects.

You can control how firm the forecasted revenue amounts are by specifying a minimum win probability for new business projects.

For each project, the report displays the following:

- Win probability (100 percent for all existing projects)
- Contract value
- Forecast revenue amounts for the next six fiscal periods following the current period in Costpoint Planning

For each organization, the report displays backlog revenue, non-backlog revenue, and total forecast revenue subtotals for each of these columns, along with totals for the report as a whole.

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Group projects based on owning organization or performing organization.
- Specify the organization level to which you want to roll up the data.
- Select the project level to which you want to roll up the data.
- Specify a minimum win probability. Only projects with a higher win probability than this percentage are included.
- Exclude or include new business projects.
- Select the organizations, at the specified organization level, that you want to include on the report.

Contract Value

There are different contract values for backlog projects and new business projects.

For backlog projects, the contract value is calculated as Project Value Fee + Project Value Costs.
For new business projects, the contract value is the total revenue budget.

Project Rollup Notes

The report rolls up revenue for backlog projects to the project level that you specify on the prompts screen.

Note the following about the project rollup option:

- The report does not roll up revenue for new business projects. Those amounts are always displayed at the level they are entered in Costpoint Planning.
- If you do not filter the report for specific projects, and if revenue for any projects has been budgeted at a higher project level than the project rollup level you specify on the prompts page, the report displays the total of that additional revenue in a separate detail row without a project ID. It also includes that revenue in the organization subtotals so those subtotals reflect the total projected revenue for the organization.

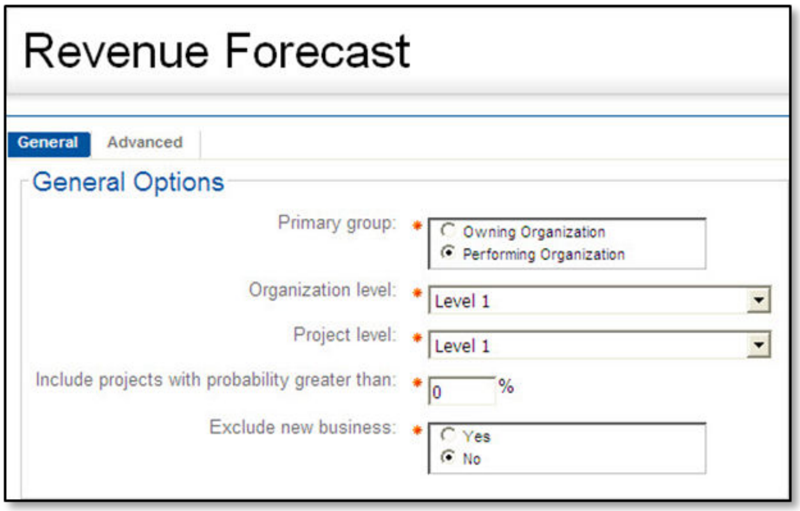
Reconcile Report Data

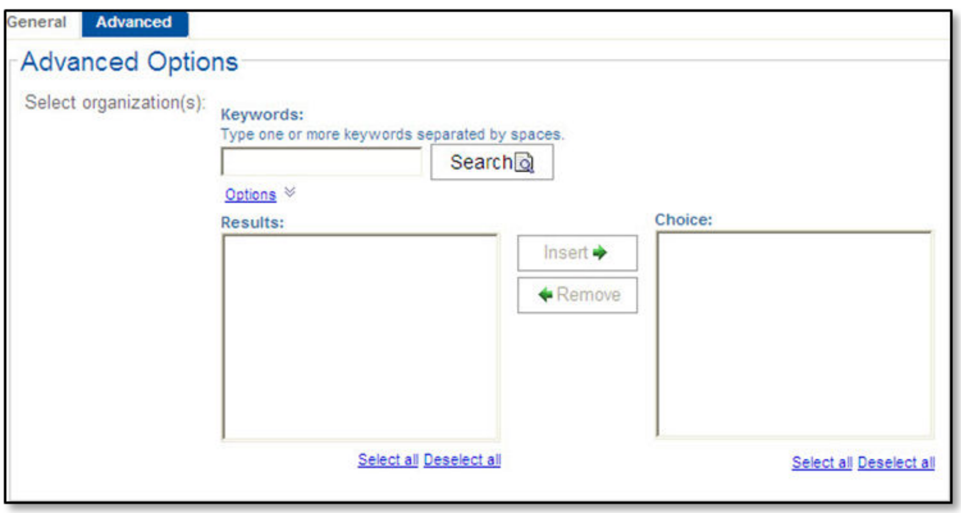
There are guidelines on how to reconcile data on this report with data in Costpoint Planning.

You can use Reconcile Revenue Forecast for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Revenue Forecast prompts.





Prompt Message	Description
Primary group	Indicate if you want the report to group data by owning organization or by performing organization.
Organization level	Select the level of the organization structure at which you want to review project costs. The report rolls up all data to that level.
Project level	Select the project level at which you want to review project costs. The report rolls up all data to that level.
Include projects with probability greater than	Enter a win probability cutoff percentage. Only projects with a win probability greater than your entry are included on the report.

Prompt Message	Description
Exclude new business	Select **No** to include new business projects on the report. The report includes new business projects that satisfy the probability requirement you specify in **Include projects with probability greater than**. Select **Yes** to exclude all new business projects from the report.
Select organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching organizations in Results. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.

T&M Profitability Report

Use the T&M Profitability report to review actual employee contributions to revenue and profit for existing Time and Materials (T&M) projects through the current fiscal period in Costpoint Planning, along with projected contributions for the next six fiscal periods.

Employees are grouped by project and by project labor category (PLC).

For each employee, the report displays the following revenue, burdened cost, and profit amounts:

- Inception-to-date (ITD) amounts through the period preceding the current period in Costpoint Planning
- Projected amounts for the current period in Costpoint Planning (<current period end date> **Budget** column)
- Projected amounts for the next five fiscal periods
- Projected amount beyond the next six fiscal periods (ETC amount – Sum of the projected period amounts)
- Estimate-to-complete (ETC) amount
- Estimate-at-completion (EAC) amount
- Forecast amount (ITD amount + ETC amount)

Options

When you generate this report, you can enter all or part of a project ID.

The report then includes all projects with IDs that begin with the characters that you enter.

Revenue Amounts

The report calculates employee revenue amounts for a PLC using the PLC billing rate.

The report uses the following calculation for the employee revenue amounts: Employee's actual or budgeted hours for the PLC × PLC billing rate.

Forecast Amounts

In most cases, amounts in the **Forecast** column match those in the **EAC** column.

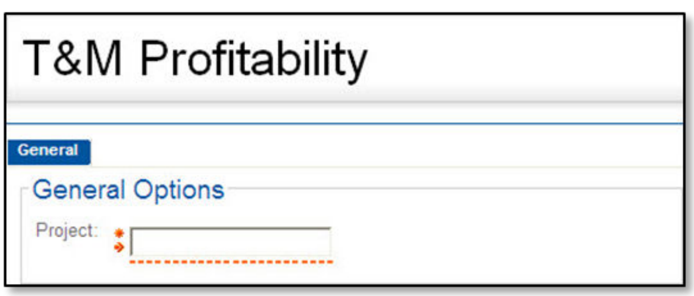
If the EAC for a project in Costpoint Planning is not up to date, for example, those amounts may be different. In that case, the amounts in **Forecast**, which the report calculates from ITD actual amounts and from budget amounts, may provide more accurate approximations of the expected completion amounts.

Reconcile Report Data

View Reconcile T&M Profitability in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are TM Profitability prompts.



Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.

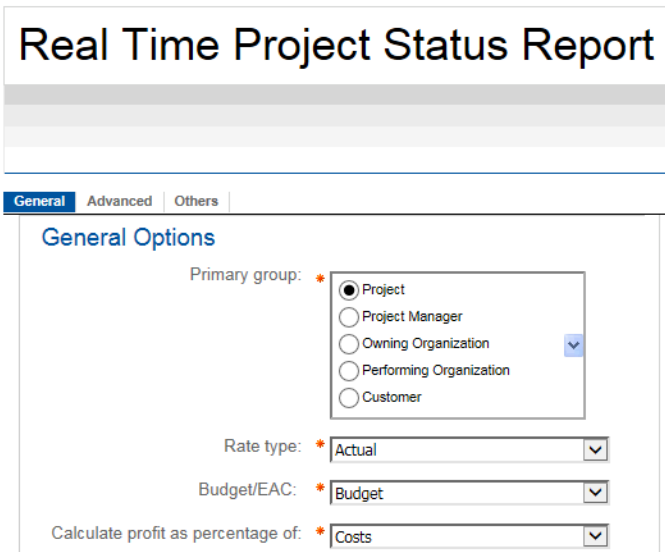
Real Time Project Status Report

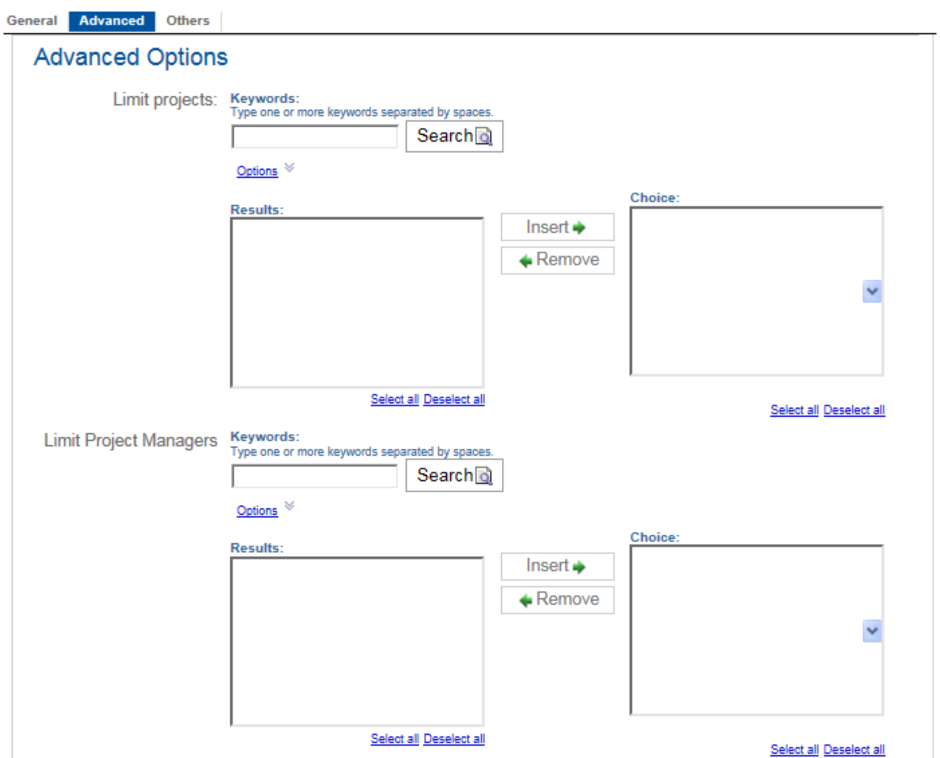
Use the Real Time Project Status Report to view the most current status of a project or group of projects versus the budget or estimate to complete.

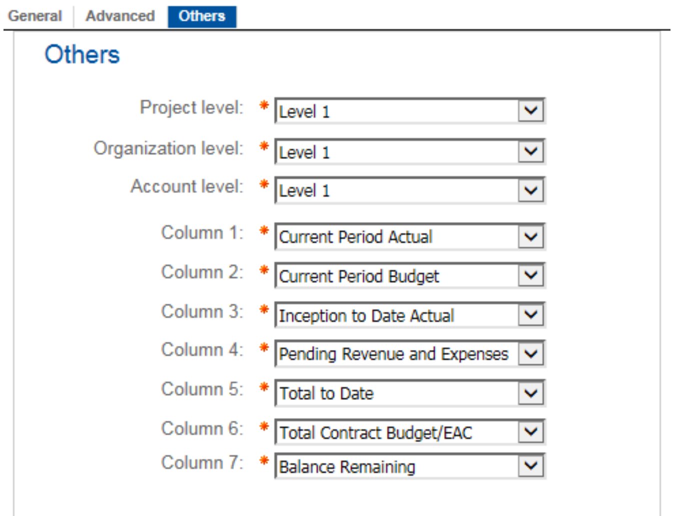
If you are entering your budgets and estimate to complete forecasts in the Costpoint Planning module and calculating the pending charges in that module, you can get a real time status of projects. The report includes real time calculations of your revenue, labor, non-labor, and burdens compared to your most recent baseline budget or estimate at completion (EAC) forecast.

Prompts

These are Real Time Project Status Report prompts.







Prompt Message	Description
Primary group	Select the primary grouping for the report: ▪ Project ▪ Project Manager ▪ Owning Organization ▪ Performing Organization ▪ Customer
Rate type	Select either **Actual** or **Target** to indicate if you want to use actual rates or target rates in the report.
Budget/EAC	Select either **Budget** or **EAC** to indicate if you want to use budget or EAC forecast in the report.
Calculate profit as percentage of	Select whether to calculate profit as percent of **Costs** or **Revenue**.
Limit projects	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching projects in Results.

Prompt Message	Description
	Select the projects in Results that you want to include and click **Insert** to move them to Choice. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the projects in Choice.
Limit Project Managers	Use this option to limit the report to selected project managers. (If you make no selections, the report includes all project managers.) In **Keywords**, enter one or more characters for which you want to search to retrieve project managers. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching project managers in Results. Select the project managers in Results that you want to include and click **Insert** to move them to Choice. To select multiple project managers that are together in the list, click the first project manager in the group and then press SHIFT as you click the last one in the group. To select multiple project managers that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the project managers in Choice.
Project level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Account level	Select the account level at which you want the report printed. All lower levels will be rolled up for the report.
Column 1-7	Select the data you want the report to display in each column.

Costpoint Business Intelligence for Costpoint Administration

This chapter includes descriptions of the report in the Costpoint Business Intelligence for Costpoint Administration, along with the report prompts and sample report.

Model Information

The structure of the Costpoint Business Intelligence for Costpoint Administration model is included in the documentation for this release in spreadsheet form.

The name of that spreadsheet file is DeltekCostpointBusinessIntelligence80_CPAdministrationModel.xls.

Report Package and Folder

The report in Costpoint Business Intelligence for Costpoint Administration is published in the Security folder.

There is one report package in Costpoint Business Intelligence for Costpoint Administration and that is the Administration package. The one report for the Costpoint Business Intelligence for Costpoint Administration is in the Security folder.

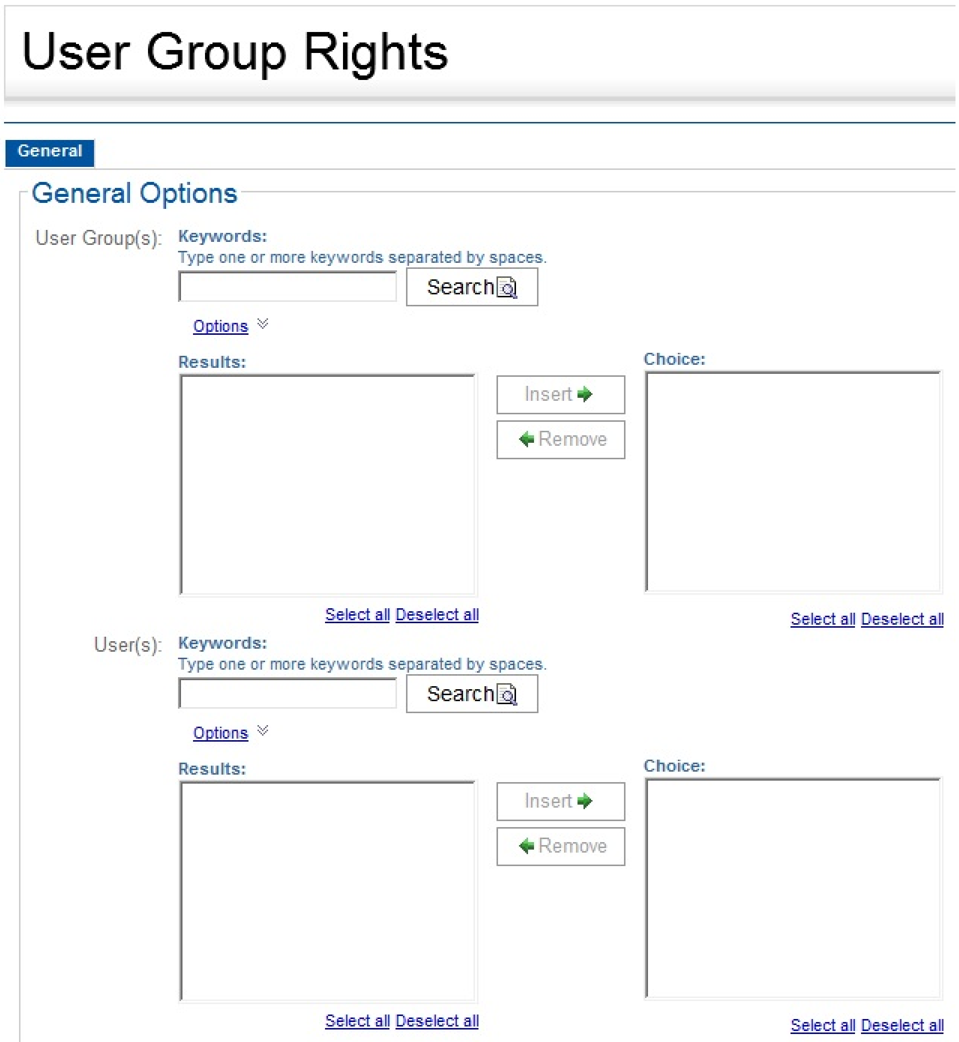
User Group Rights Report

There are several prompts for the User Group Rights Report.

The User Group Rights report contains the user groups and the users that belong to each along with their access rights.

Prompts - User Group Rights Report

The prompts for the User Group Rights Report include the User Groups and Users.



Prompt Message	Description
User Group(s)	Enter a portion of one or more accounts in the **Keywords** field to be included in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
User(s)	Enter a portion of one or more accounts in the **Keywords** field to be included in the report.

Prompt Message	Description
	To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

The User Group Rights Report has three tabs when viewed on screen—Cover Page, User Group Rights, and User Group Users.

This is a sample User Group Rights page.

Costpoint Business Intelligence for Fixed Assets

This chapter includes descriptions of the report in the Costpoint Business Intelligence for Fixed Assets package, along with the report prompts and sample report.

Model Information

The structure of the Costpoint Business Intelligence for Fixed Assets model is included in the documentation for this release in spreadsheet form.

The name of that spreadsheet file is DeltekCostpointBusinessIntelligence80_CP711_FixedAssetsModel.xlsx.

Report Package

The report in Costpoint Business Intelligence for Fixed Assets is published in a single package: Fixed Assets.

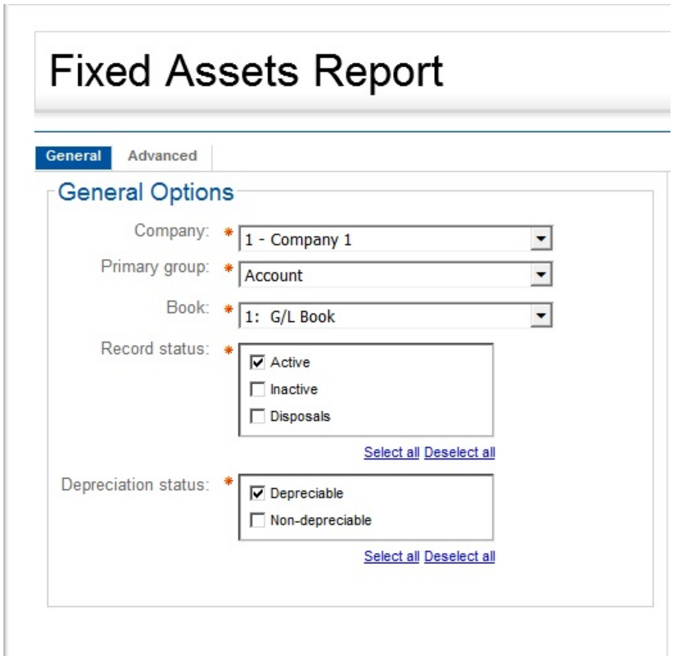
Fixed Asset Report

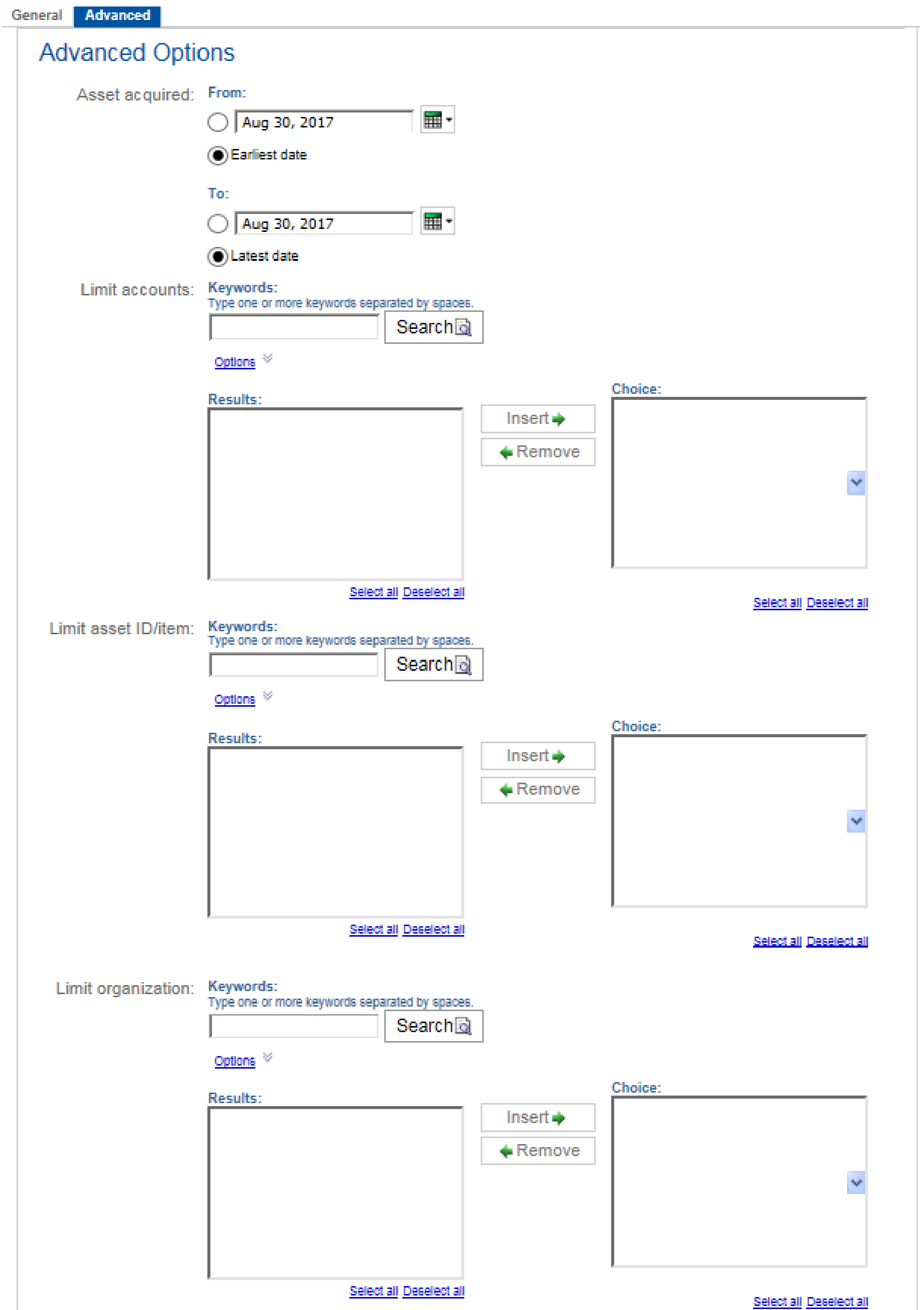
This section shows a sample prompt screen and output of the Fixed Asset Report.

This report contains the total cost, accumulated depreciation, book value, and percentage of depreciation of fixed assets.

Prompts

The prompts for the Fixed Asset Report includes the Company ID, Book, Depreciable Status Code, Group, and Status Code.





Prompt Message	Description
Company	Select the ID of the company that you want to be included in the report.
Primary group	Select the group to be included in the report.
Book	Enter the book that you want to get data from.

Prompt Message	Description
Record status	Select the status code of the fixed assets that you want to be in the report.
Depreciation status	Select the Depreciable Status code which can either be **Depreciable** or **Non-depreciable**.
Asset acquired from and to	Specify the date range of the fixed asset. The depreciation computation will be based on the dates entered.
Limit accounts	Enter a portion of one or more accounts in the **Keywords** field to be included in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit asset ID/item	Enter a portion of one or more asset IDs/items in the **Keywords** field to be included in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit organization	Enter a portion of one or more organizations in the **Keywords** field to be included in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

The Fixed Asset Report has both a summary and detailed report.

This is a sample summary of the Fixed Asset Report.

Costpoint Business Intelligence for Human Resources and Payroll

This chapter includes descriptions of reports in Costpoint Business Intelligence for HR and Payroll.

The human resources and payroll reports in Costpoint Business Intelligence enable human resources and payroll professionals to supplement standard Deltek Costpoint® reports for the Human Resources and Payroll modules with the following:

- A set of predefined reports included in the reporting package
- Production reports that you create for your firm using IBM® Cognos® and the Human Resources and Payroll framework manager model
- Ad hoc reports that you create for specialized or one-time reporting needs

The Costpoint Business Intelligence for HR and Payroll include the following reports:

- Attrition and Retention
- EEO-1 Worksheet
- EEO-4 Worksheet
- Employee Benefits Profile
- Employee Change Report
- Employee Information
- New Hire / Termination
- VETS-4212 Worksheet
- Employee Earnings
- HR Payroll Labor Reconciliation

Costpoint Setup Prerequisites

Certain tasks must be performed in Costpoint before you run the human resources and payroll reports.

The following must be in place in Costpoint before running the human resources and payroll reports:

- Payroll module, Human Resources module, or both.
- EEO setup, functional job titles, and detail job titles (required for the EEO-1 Worksheet, EEO-4 Worksheet, and VETS-4212 Worksheet).
- Audit file tracking for basic employee information and salary information and history. This is required for the Employee Change report.

Model Information

Included in the documentation download is detailed information about the structure, table inclusion, and relationships (joins) for the Costpoint Business Intelligence for Human Resources and Payroll Framework Manager model, in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_HRPRModel.xls.

Attrition and Retention Report

The Attrition and Retention report enables you to monitor turnover trends for your company so you can manage employee retention more effectively.

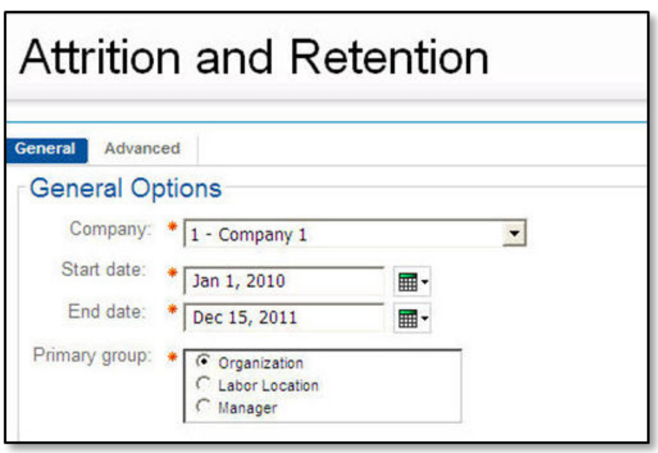
The report displays the following for the reporting period you specify on the prompts screen:

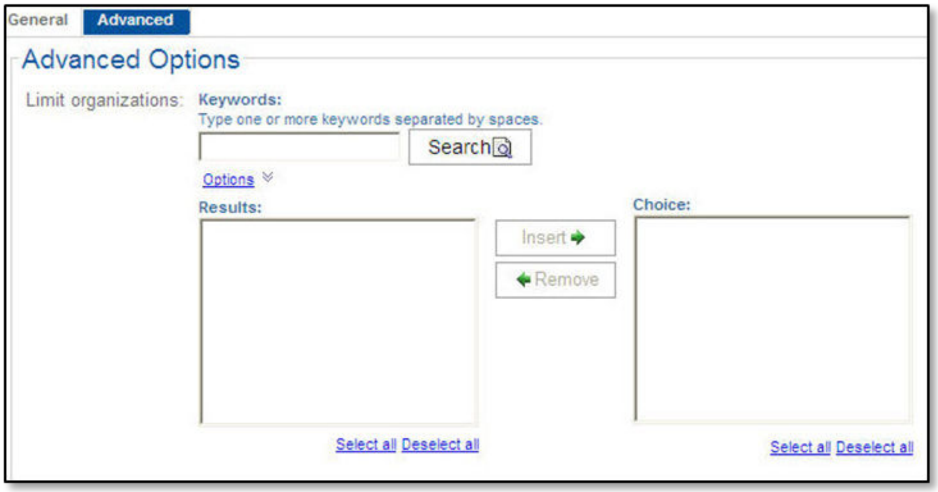
- Total non-terminated employees at the end of the reporting period
- Number of new hires during the period
- Ratio of new hires to total non-terminated employees
- Number of terminations during the period
- Ratio of terminations to total non-terminated employees

You can break down this information by organization, labor location, or manager.

Prompts

Use the Attrition and Retention prompts to configure the report.





Prompt Message	Description
Company	Select the company for which you are generating the report.
Start date	Select the starting date for the date range. The report includes employees either hired or terminated within the date range you specify.
End date	Select the ending date for the date range. The report includes employees either hired or terminated within the date range you specify.
Primary group	Select one of the following options for grouping data on the report: ▪ Organization ▪ Labor Location ▪ Manager On the Advanced tab, you can also filter the report based on this selection.
Limit organizations/labor locations/managers	This Advanced tab option varies depending on your selection in **Primary group**. Use this option to limit the report to selected organizations, labor locations, or managers. (If you make no selections on the Advanced tab, the report includes all values for the selected grouping option.) To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

EEO-1 Worksheet Report

Use the EEO-1 Worksheet to gather the data you need to complete the EEO-1 report (Employer Information Report) for submission to the Equal Employment Opportunity Commission and the Department of Labor.

The worksheet provides a count of employees, as of the date you specify, for each combination of job category and race code, and it displays the total number of employees for each job category and for each race code. You can generate the worksheet for all or selected organizations.

Prerequisites

Certain tasks must be performed in Costpoint before you run the EEO-1 Worksheet Report.

The EEO-1 Worksheet only provides accurate data if the following have been done in Costpoint:

- The standard job titles your company uses have been set up on the Manage Functional Job Titles screen.
- Detail job titles have been set up on the Manage Detail Job Titles screen.
- Employees have been assigned detail job titles and can be seen on the View Salary Information and History screen.
- The race ethnicity codes used by your company have been mapped on the EEO-1 Code Mappings subtask of the Manage Race and Ethnicity Codes screen.

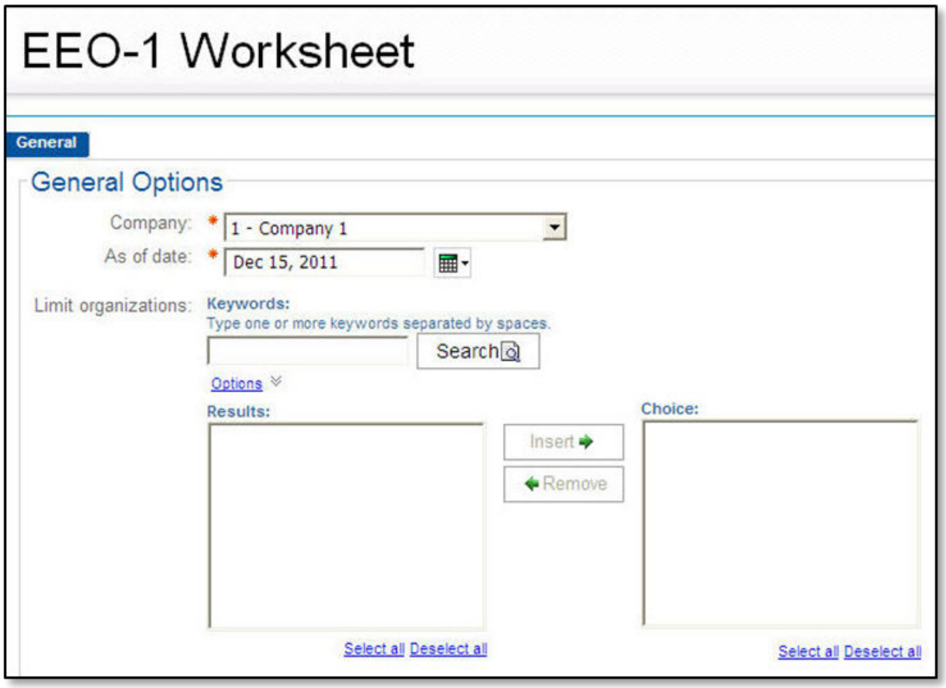
Generating Historical Versions

Because this report only uses the current EEO job categories and race codes, you cannot use it to see historical EEO information

If you need to review historical data, use the equivalent standard report in Costpoint.

Prompts

Use the EEO-1 Worksheet prompts to configure the report.



Prompt Message	Description
Company	Select the company for which you are generating the report.
As of date	Enter or select the date as of which you want to report EEO-1 data. The worksheet displays the employee counts as of this date.
Limit organizations	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

EEO-4 Worksheet Report

Use the EEO-4 Worksheet to gather the data you need to complete the EEO-4 report (State and Local Government Information Report) for submission to the Equal Employment Opportunity Commission and the Department of Labor.

The worksheet provides a count of employees for each combination of job category, salary range, and race code, as of the date you specify. It also displays the total number of employees for each job category-salary range combination and for each race code. You can generate the worksheet for all or selected organizations.

Prerequisites

Certain tasks must be performed in Costpoint before you run the EEO-4 Worksheet Report.

The EEO-4 Worksheet only provides accurate data if the following have been done in Costpoint:

- The standard job titles your company uses have been set up on the Manage Functional Job Titles screen.
- Detail job titles have been set up on the Manage Detail Job Titles screen.
- Employees have been assigned detail job titles and can be seen on the View Salary Info and History screen.

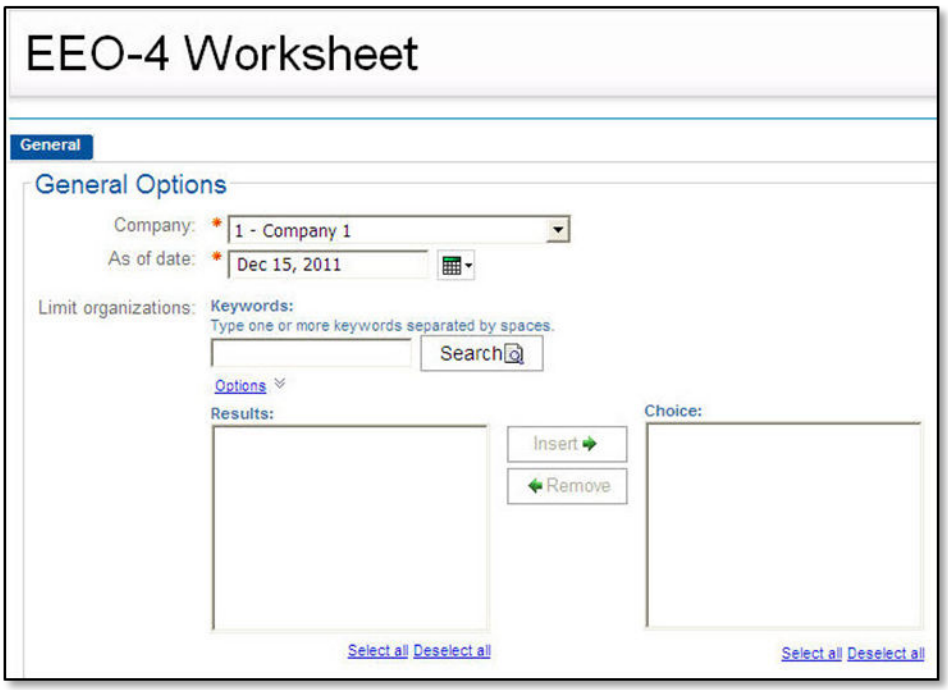
Generating Historical Versions

Because this report only uses the current EEO job categories and race codes, you cannot use it to see historical EEO information.

If you need to review historical data, use the equivalent standard report in Costpoint.

Prompts

Use the prompts to configure the EEO-4 Worksheet report.



Prompt Message	Description
Company	Select the company for which you are generating the report.
As of date	Enter or select the date as of which you want to report EEO-4 data. The worksheet displays the employee counts as of this date.
Limit organizations	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Employee Benefits Profile Report

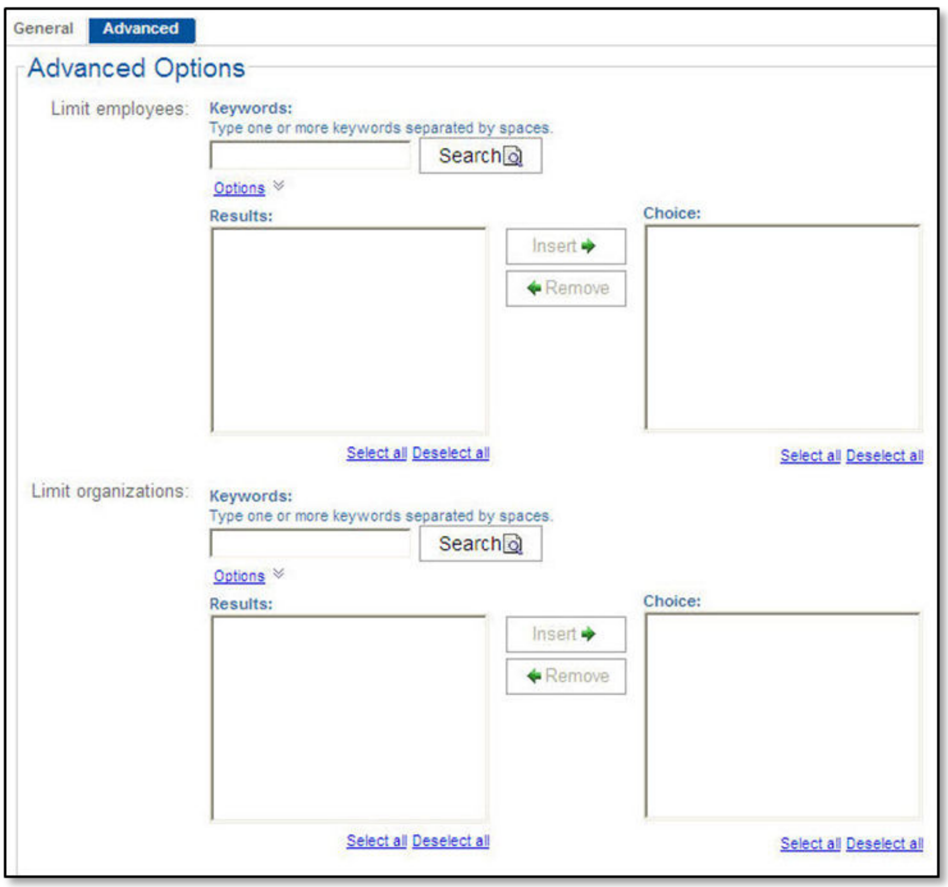
The Employee Benefits Profile report provides a simple way to review employee benefit selections and coverage start and end dates.

The report displays the following for the employees and organizations that you select on the prompts screen:

- Benefits plan code
- Benefits package code
- Package description
- Benefit type code
- Coverage option code
- Effective date
- End date

Prompts

These are Employee Benefits Profile prompts.



Prompt Message	Description
Company	Select the company for which you are generating the report.
As of date	Enter or select the date as of which you want to report employee benefits data. The worksheet displays employee benefits in effect on this date.

Prompt Message	Description
Limit employees	Use this option to limit the report to selected employees. (If you make no selections, the report includes all employees.) In **Keywords**, enter one or more characters for which you want to search to retrieve employees. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching employees in Results. Select the employees in Results that you want to include and click **Insert** to move them to Choices. To select multiple employees that are together in the list, click the first employee in the group and then press SHIFT as you click the last one in the group. To select multiple employees that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the employees in Choices.
Limit organizations	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching organizations in Results. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.

Employee Change Report

The Employee Change Report provides an audit trail of additions, changes, and deletions of basic employee information and employee salary information and salary history.

The report has a separate section for each of these types of information. You have the option to include either or both of the sections when you generate the report.

Use this report as a tool for tracking what changes were made and who made them, for monitoring the accuracy of data entry, and for restoring information that was incorrectly changed or deleted.

For the date range and employees you specify on the prompts screen, this report displays a row for each version of each employee record that was added, modified, or deleted during the reporting period.

Because the report has many columns, we recommend that you generate the report as a Microsoft® Excel® spreadsheet and work with the data in Excel.

> **Note:** If you use the Import Employee Data application in Costpoint to load employee information, that process does not update the Employee Information Audit table (EMPL_ADT). As a result, those updates do not display on this report.

Prerequisites

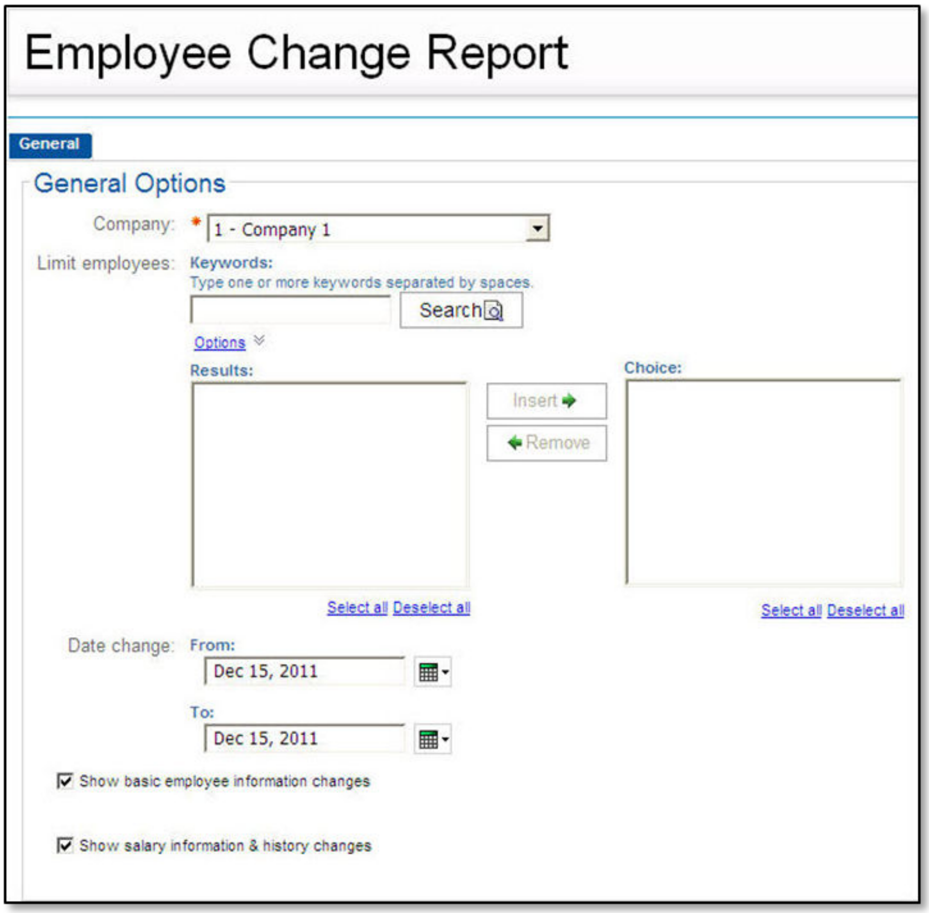
Data is only available for this report if auditing is activated on the Configure Payroll Settings screen in Costpoint.

To make full use of this report, select both of the following under **Enable Audit File Tracking** on that screen:

- Basic Employee Information
- Employee Salary Information

Prompts

These are Employee Change Report prompts.



Prompt Message	Description
Company	Select the company for which you are generating the report.
Limit employees	Use this option to limit the report to selected employees. (If you make no selections, the report includes all employees.) In **Keywords**, enter one or more characters for which you want to search to retrieve employees. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching employees in Results.

Prompt Message	Description
	Select the employees in Results that you want to include and click **Insert** to move them to Choices. To select multiple employees that are together in the list, click the first employee in the group and then press SHIFT as you click the last one in the group. To select multiple employees that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the employees in Choices.
Date change	Enter or select the starting date of the report date range in **From** and the ending date in **To**. The report includes records that were added, modified, or deleted within this date range. Note that if you enter a date range that is too restrictive, the report may only display one record for an employee, making it difficult to determine what information has changed. In that case, widen the date range enough that the report includes the previous version of the employee's information for comparison purposes.
Show basic employee information changes	Select this check box to generate the **Basic Employee Information** section of the report.
Show salary information & history changes	Select this check box to generate the **Salary Information and History** section of the report.

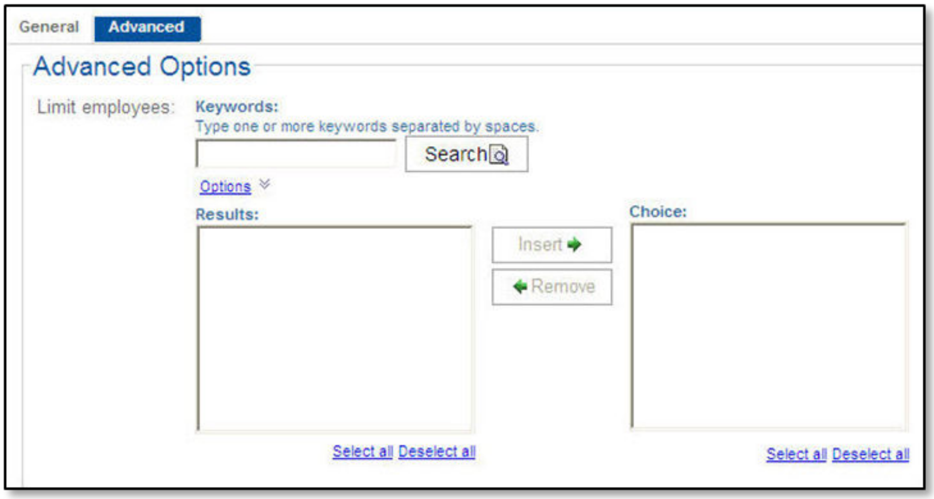
Employee Earnings Report

The Employee Earnings report offers a complete view of all employee earnings and deductions for the payroll dates and employees that you select on the prompts screen.

Prompts

These are Employee Earnings prompts.



Prompt Message	Description
Company	Select the company for which you are generating the report.
Starting pay period	Enter or select the starting pay period of the pay period range for the report. The report includes earnings information for pay periods in this range.
Ending pay period	Enter or select the ending pay period of the pay period range for the report. The report includes earnings information for pay periods in this range.
Limit employees	Use this option to limit the report to selected employees. (If you make no selections, the report includes all employees.) In **Keywords**, enter one or more characters for which you want to search to retrieve employees. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching employees in Results. Select the employees in Results that you want to include and click **Insert** to move them to Choices. To select multiple employees that are together in the list, click the first employee in the group and then press SHIFT as you click the last one in the group. To select multiple employees that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the employees in Choices.

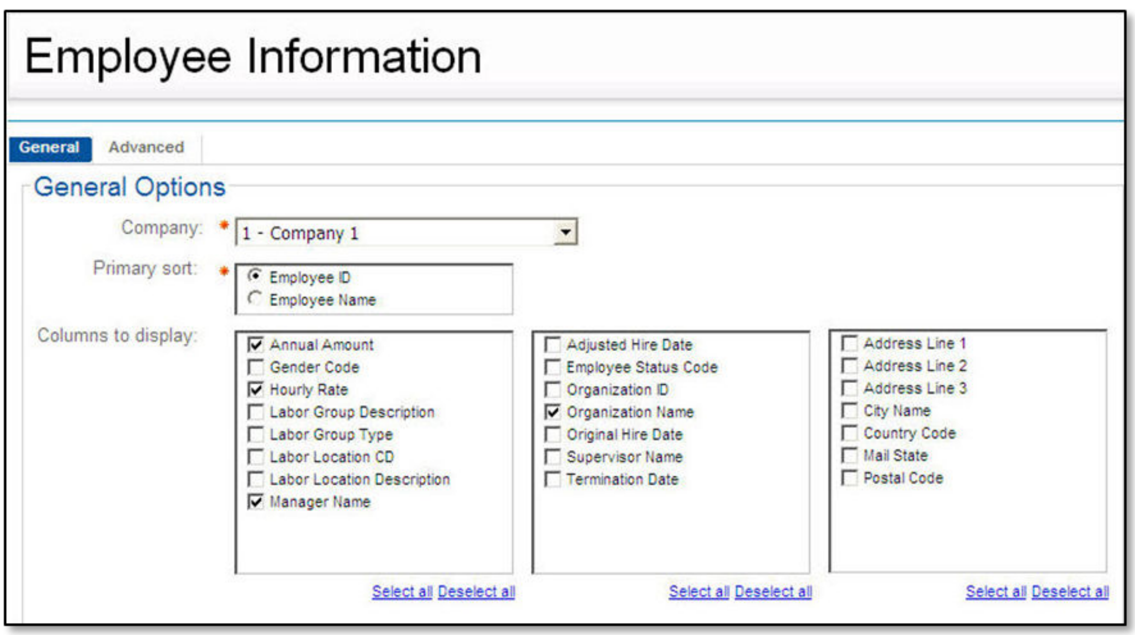
Employee Information Report

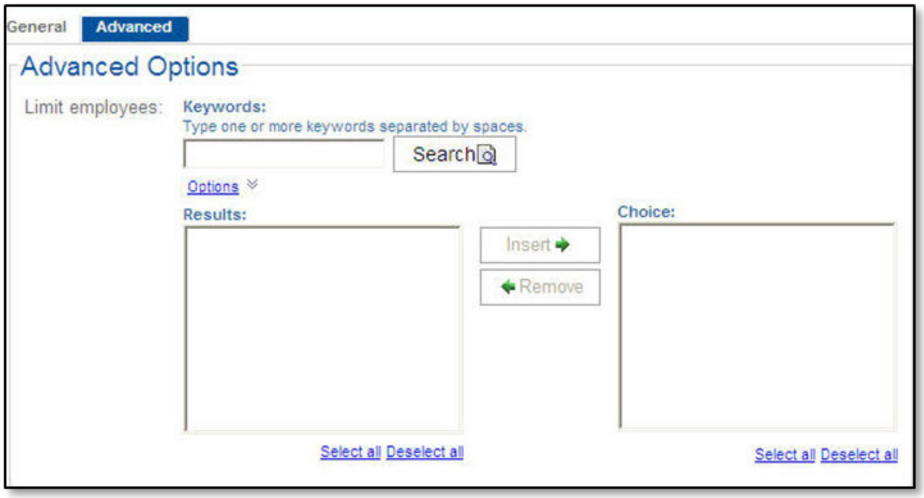
The Employee Information report provides a flexible option for reporting on basic employee data and employee labor information.

You select both the employees that you want to include and the data columns that you want the report to display for each employee. In addition, you can sort the report by either employee ID or employee name.

Prompts

These are Employee Information prompts.





Prompt Message	Description
Company	Select the company for which you are generating the report.
Primary sort	Select one of the following options to indicate how to sort the employee information: ▪ Employee ID ▪ Employee Name
Columns to display	Select the data items that you want the report to include. The report displays a column for each item.
Limit employees	Use this option to limit the report to selected employees. (If you make no selections, the report includes all employees.) In **Keywords**, enter one or more characters for which you want to search to retrieve employees. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching employees in Results. Select the employees in Results that you want to include and click **Insert** to move them to Choices. To select multiple employees that are together in the list, click the first employee in the group and then press SHIFT as you click the last one in the group. To select multiple employees that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the employees in Choices.

HR Payroll Labor Reconciliation Report

The HR Payroll Labor Reconciliation report enables you to audit calculated labor and calculated payroll to prevent under- or over-payments and ensure that the two agree.

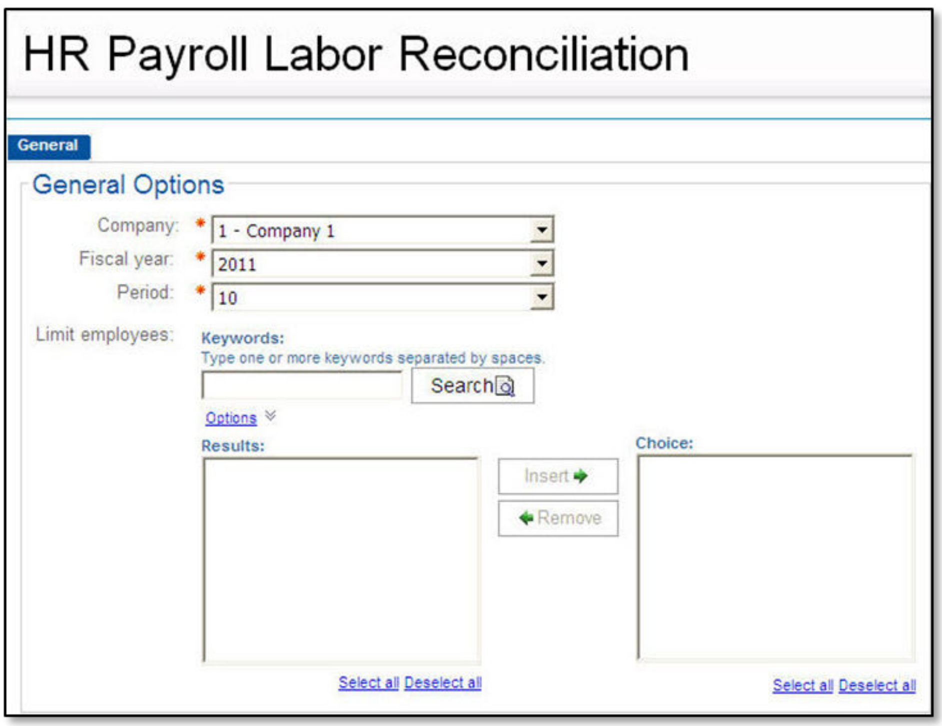
You select the fiscal period for which you want to generate the report and the employees you want to include.

Prerequisite

This report only provides valid data if you are using Costpoint Payroll.

Prompts

These are HR Payroll Labor Reconciliation prompts.



Prompt Message	Description
Company	Select the company for which you are generating the report.
Fiscal Year	Select the fiscal year for which you are generating the report.
Period	Select the fiscal period for which you are generating the report.

Prompt Message	Description
Limit employees	Use this option to limit the report to selected employees. (If you make no selections, the report includes all employees.) In **Keywords**, enter one or more characters for which you want to search to retrieve employees. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching employees in Results. Select the employees in Results that you want to include and click **Insert** to move them to Choices. To select multiple employees that are together in the list, click the first employee in the group and then press SHIFT as you click the last one in the group. To select multiple employees that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the employees in Choices.

New Hires Terminations Report

The New Hires/Terminations report is actually two reports that share the same prompt screen: the New Hires report and the Terminations report. You can generate either report alone or both at once.

The New Hires report lists employees hired during the date range you specify on the prompts screen. The list is grouped by organization and provides the following information:

- Employee's organization ID and name
- Employee ID and name
- Original hire date

The Terminations report lists employees terminated during the date range you specify on the prompts screen. The list is grouped by organization and provides the following information:

- Employee's organization ID and name
- Employee ID and name
- Original hire date
- Termination date

Prompts

These are New Hires/Terminations prompts.

Prompt Message	Description
Company	Select the company for which you are generating the report.
Beginning hire/termination date	Select the starting date for the date range. The report includes employees either hired or terminated within the date range you specify.

Prompt Message	Description
Ending hire/termination date	Select the ending date for the date range. The report includes employees either hired or terminated within the date range you specify.
Show new hires	Select this check box to generate the New Hires report.
Show terminations	Select this check box to generate the Terminations report.

Sample Report

VETS-4212 Worksheet Report

The worksheet provides employee counts for each combination of EEO-1 job category and type of qualified veteran.

If your firm is a federal contractor or subcontractor that is required to submit the VETS-4212 or VETS-4212A report annually to the Department of Labor, the VETS-4212 Worksheet provides the Costpoint data you need to complete those forms.

The worksheet also displays counts of employees hired in the past 12 months for each of those combinations, based on the reporting date you specify on the prompts screen.

Prerequisites

Certain tasks must be performed in Costpoint before you run this report.

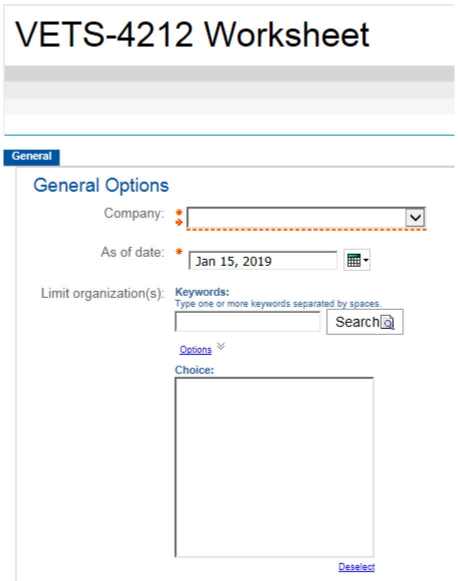
The VETS-4212 Worksheet only provides accurate data if the following have been done in Costpoint:

- The EEO report that applies to your company (EEO-1 or EEO-4) has been selected in the EEO Setup subtask on the Configure Affirmative Action Settings screen.
- The standard job titles your company uses have been set up on the Manage Functional Job Titles screen.
- Detail job titles have been set up on the Manage Detail Job Titles screen.
- Employees have been assigned detail job titles and can be seen on the View Salary Information and History screen.

If one or more employees do not have detail job titles assigned, the worksheet displays a row with **Unknown** in the **EEO 1 Description** column and the counts for those employees in the applicable columns.

Prompts

These are VETS-4212 Worksheet prompts.



Prompt Message	Description
Company	Select the company for which you are generating the report.
As of date	Enter or select the date as of which you want to report VETS-4212 data. The worksheet displays the employee counts as of this date.
Limit organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click **Options** to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching organizations in Results. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one.

Prompt Message	Description
	When you generate the report, it includes only records for the organizations in Choices.

Costpoint Business Intelligence for Project Manufacturing

This chapter includes descriptions of reports in Costpoint Business Intelligence for Project Manufacturing.

The Project Manufacturing reports in Deltek Costpoint Business Intelligence enable you to create a listing of inventory grouped by warehouse and location, project and part-rev, inventory abbreviation and part-rev, and part-rev and project. These reports also enable you to create a manufacturing and engineering indented bills of materials (BOM) reports for a selected range of assembly part numbers.

Model Information

Included in the documentation download is detailed information about the structure, table inclusion, and relationship (joins) for the Costpoint Business Intelligence Framework Manager model, in spreadsheet format.

The name of that spreadsheet file is DeltekCostpointBusinessIntelligence80_CP711_ProjectManufacturingModel.xlsx.

Project Manufacturing

This section shows sample prompt screens and sample reports for Project Manufacturing.

Project Manufacturing reports include the following:

- Audit Log Report
- Goods List Report
- Indented Bill of Materials (BOM) Report
- Item Vendors - Drill Thru Report
- MO Build-To Inv Abbrev - Drill Thru Report
- MO Component Shortage Report
- MO Pick List Report
- MO Production Status Report
- MRP Message Report
- Parts List Report
- Sales Order Status Report
- Services List Report
- Shipped Revenue Report
- Stock Status Report
- Stock Status 'As of' Report (Scheduled Job)

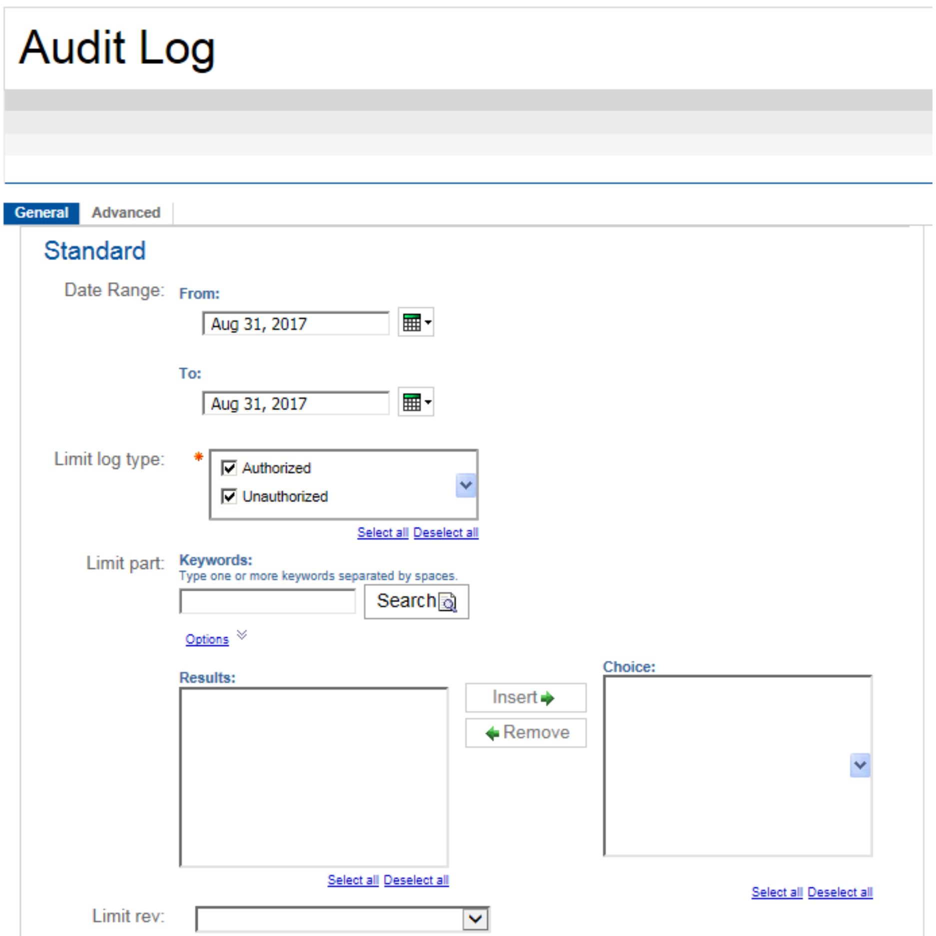
- Summarized Bill of Material (BOM) Report

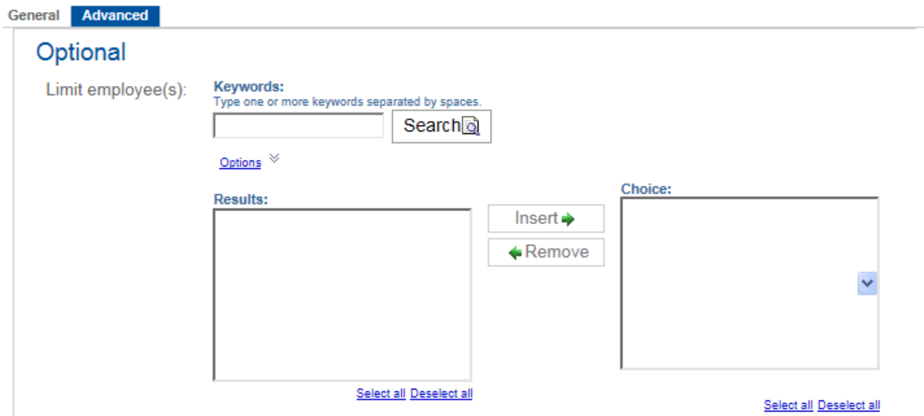
Audit Log

This report shows the audit log for part data security.

Prompts

Use the Audit Log prompts to configure the report.





Prompt Message	Description
Date Range From	Select the start date for the date range that will be included in the report.
Date Range To	Select the end date for the date range.
Limit log type	Select the log type to be included in the report which can be: ▪ Authorized ▪ Unauthorized
Limit part	Enter a portion of one or more parts in the **Keywords** field to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit rev	Select a revision from the drop-down list.
Limit employee(s)	Enter a portion of one or more employees in the **Keywords** field to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Indented Bill of Material (BOM) Report

The Indented Bill of Material report allows you to create a listing of indented BOM for a selected range of assembly part numbers.

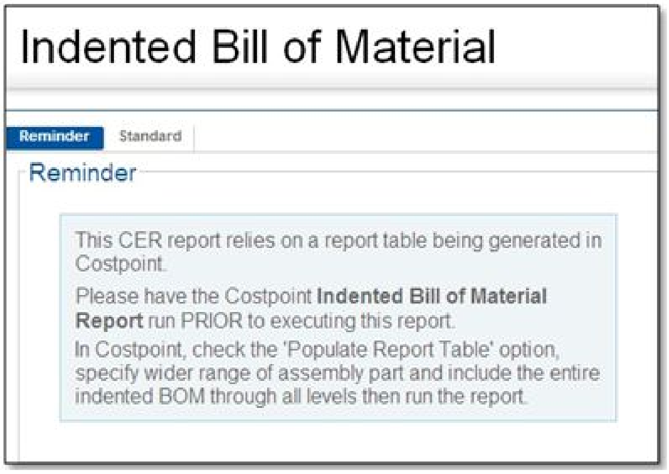
You can include the first-level components of the assembly or the entire indented BOM through all levels. You can use this report to print either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

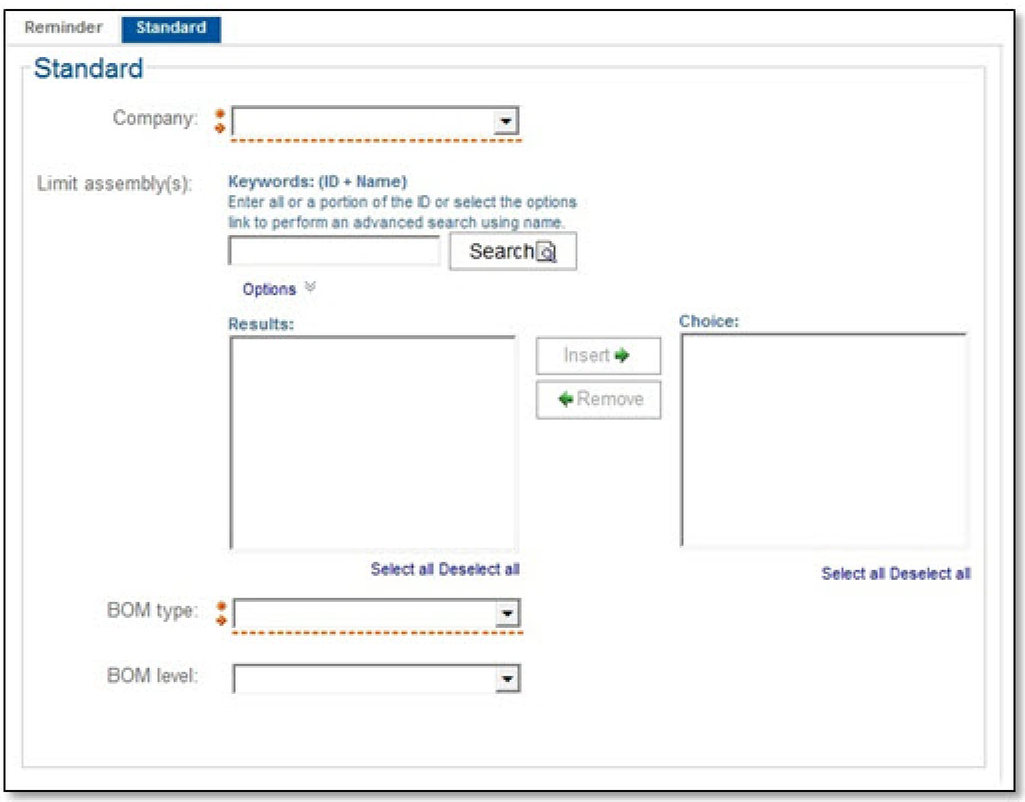
Warning: This report relies on a report table that is generated in Costpoint. You have to run Costpoint's Print Indented Bills of Material Report application prior to executing this report.

In Costpoint, when you run the Print Indented Bills of Material Report application, you must select **Update Indented Bills of Materials Report Table** on the Action menu to update the indented BOM table.

Prompts

Use the prompts to configure the Indented Bill of Material report.





Prompt Message	Description
Company	Select a company from the list.

Prompt Message	Description
Limit Assembly(s)	In the **Keywords** field, enter a portion of one or more assemblies to be added on the report. Click **Search**. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following: ▪ **Manufacturing**: Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ▪ **Engineering**: Select this option to print the EBOM for the selected assembly part. You can select either standard to provisional components for this BOM type.
Case Insensitive	Select this check box for BI to ignore the text case when searching keywords.
BOM Level	Select the BOM level at which you want the report printed. The available options are: ▪ **SINGLE**: Select this option to include level 1 in the report. ▪ **ALL**: Select this option to include all levels in the report.

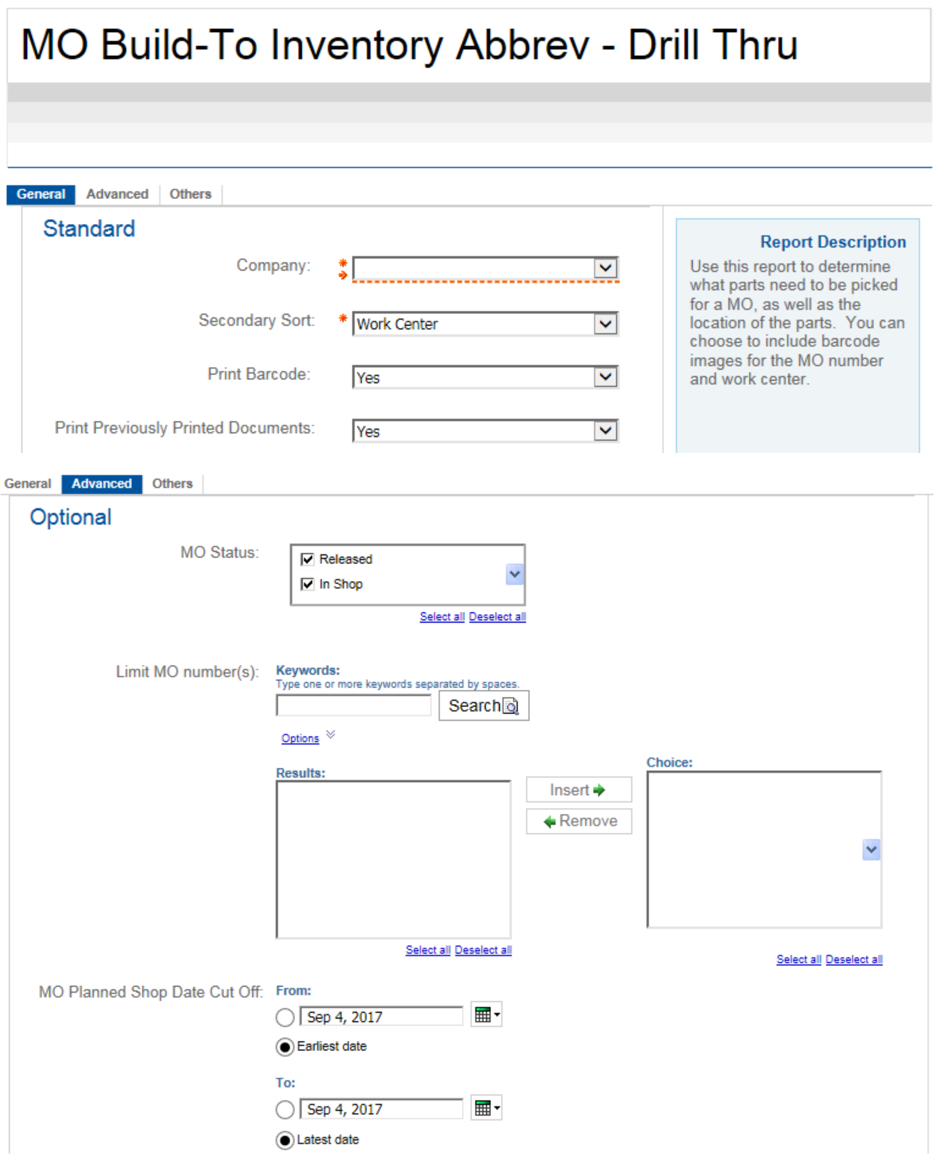
MO Build-To Inventory Abbrev - Drill Thru Report

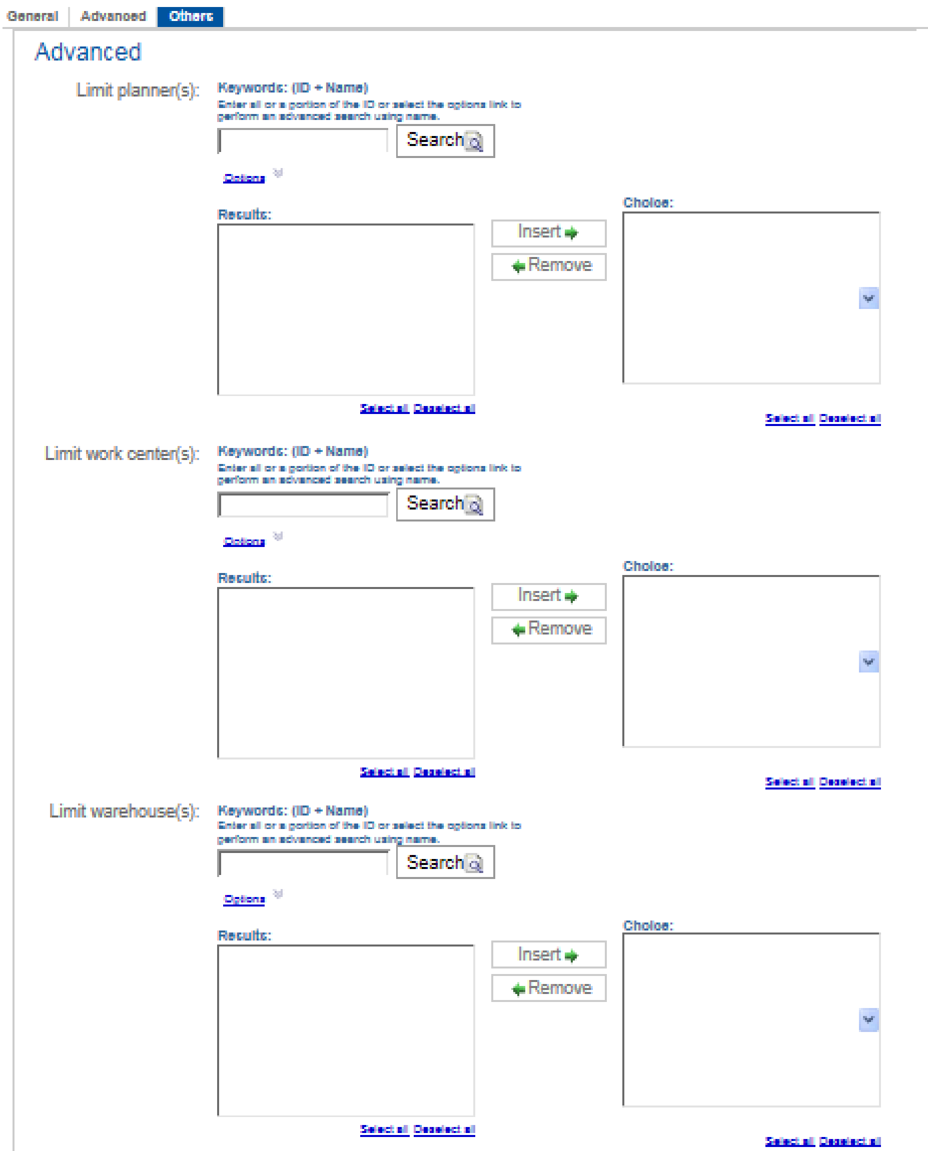
Use the MO Build-To Inventory Abbrev - Drill Thru report to determine what parts need to be picked for a manufacturing order (MO), as well as the location of the parts.

You can choose to include barcode images for the MO number and work center.

Prompts

Use the MO Build-To Inv Abbrev prompts to configure the report.





Prompt Message	Description
Company	Select a company from the list.
Secondary Sort	Select the secondary sorting criterion for the report. The available options are the following: ▪ Work Center ▪ Component Part ▪ Component Location

Prompt Message	Description
	- Line Number - Find Number
Print Barcode	Select the option to indicate if you want to print the barcode.
Print Previously Printed Documents	Select the option to indicate if you want to print previously printed documents.
MO Status	Select the status of the MO you want to include on this report. The available options are the following: - Released - In Shop All of the options are selected by default.
Limit MO Number(s)	In the **Keywords** field, enter a portion of one or more MO numbers to add on the report and then click . To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
MO Planned Shop Date Cut Off	In the**From:** field, enter the start cutoff date to use, or click the calendar icon to select the date. In the **To:** field, enter the end cutoff date to use, or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want any date filters to be applied. These are the default options.
Limit Planner(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more planners to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Work Center(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more work centers to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options,

Prompt Message	Description
	rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

MO Pick List

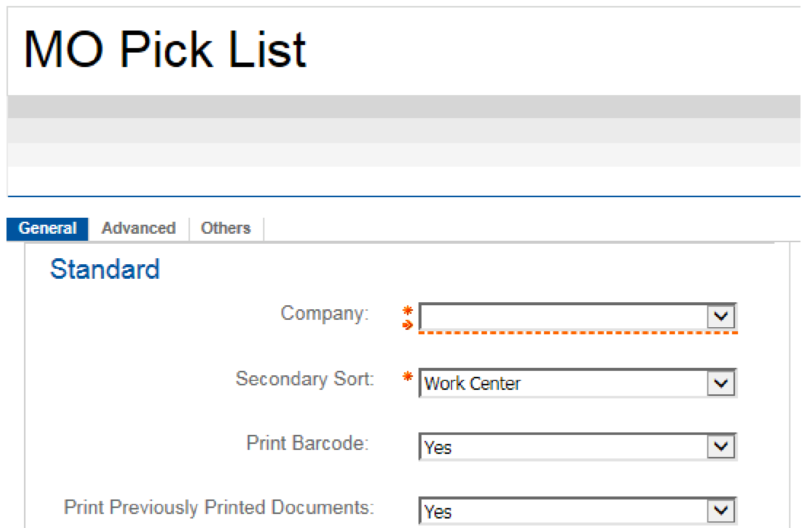
The MO Pick List report allows you to print the list of materials to be picked for a manufacturing order, the operations in the routings related to the manufacturing order, and the quantities completed, as well as the location of the parts.

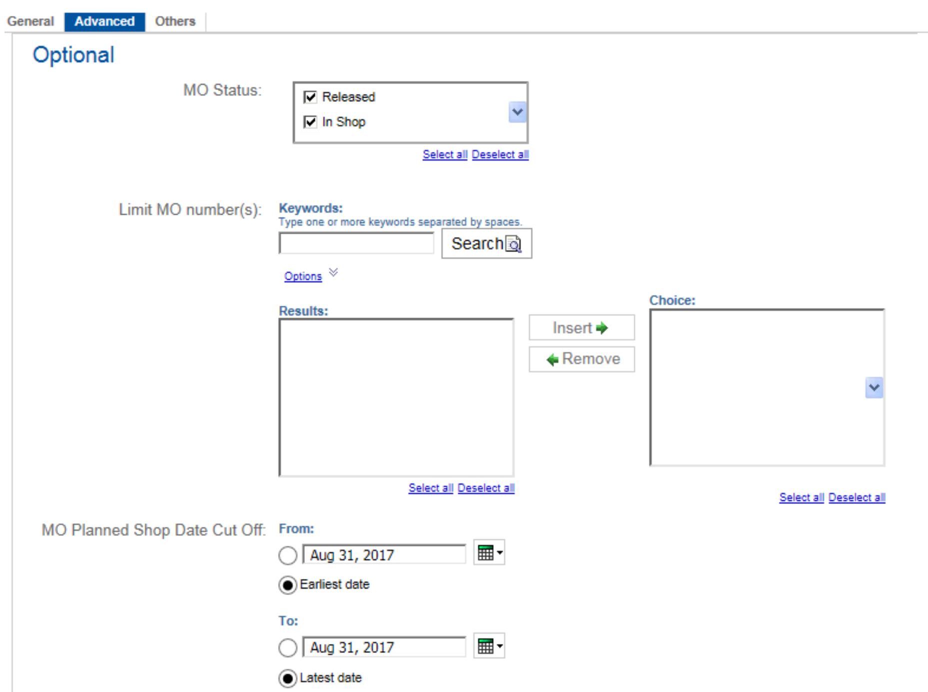
You can choose to include barcode images for the MO number and work center.

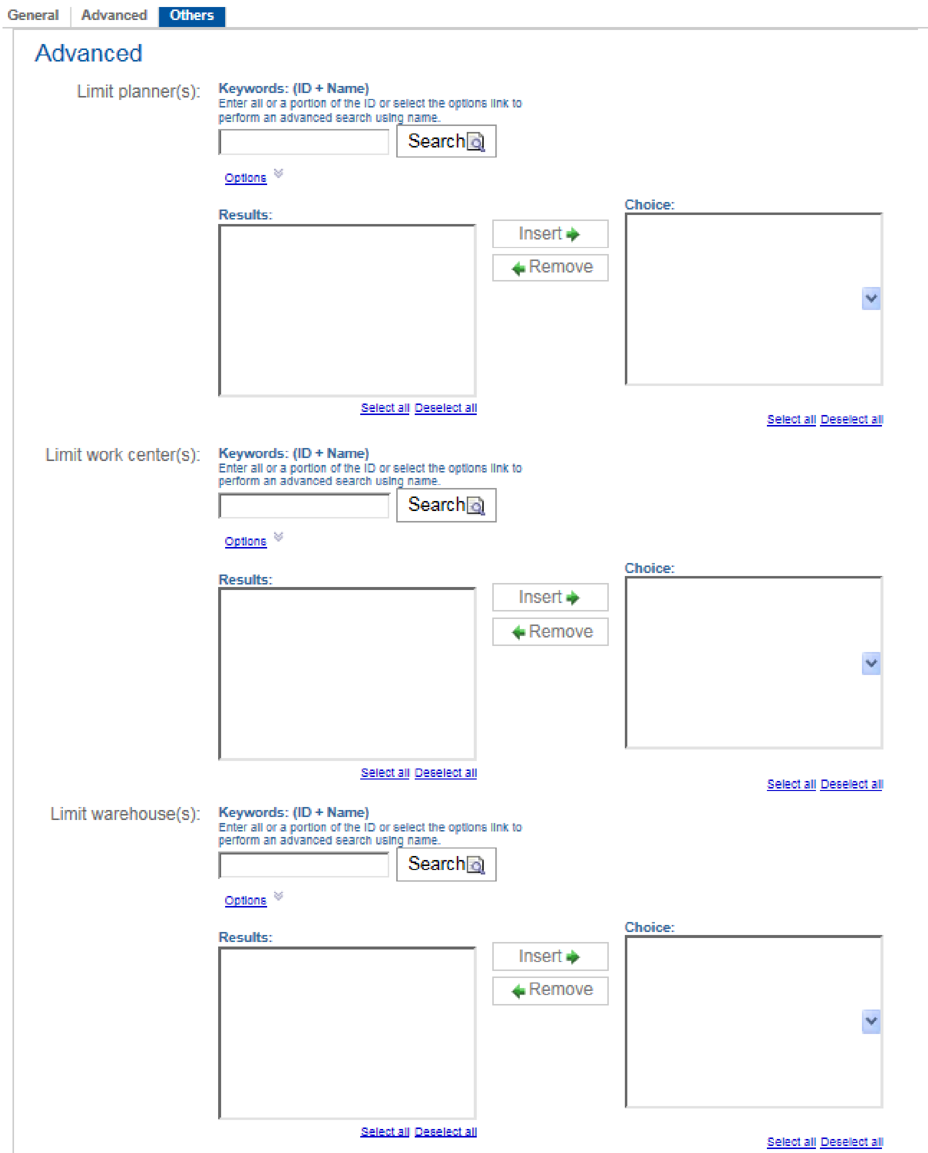
Note: Unless the barcode font is installed locally, as well as on the Cognos server, the barcode symbol will not be displayed when you view the report in HTML or Excel formats. This can only be viewed either in PDF or printed formats.

Prompts

Use the MO Pick List prompts to configure the MO Pick List report.







Prompt Message	Description
Company	Select one company from the list.
Secondary Sort	Select the secondary sorting criterion for the report. The available options are the following: ▪ Work Center ▪ Component Part ▪ Component Location

Prompt Message	Description
	▪ Line Number ▪ Find Number
Print Barcode	Select the option to indicate if you want to print the barcode.
Print Previously Printed Documents	Select the option to indicate if you want to print previously printed documents.
MO Status	Select the status of the MO you want to include on this report. The available options are the following: ▪ Released ▪ In Shop All of the options are selected by default.
Limit MO Number(s)	In the **Keywords** field, enter a portion of one or more MO numbers to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
MO Planned Shop Date Cut Off	In the **From:** field, enter the start cutoff date to use, or click the calendar icon to select the date. In the**To:** field, enter the end cutoff date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want to apply any date filters. These are the default options.
Limit Planner(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more planners to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Work Center(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more work centers to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses to add on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options,

Prompt Message	Description
	rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

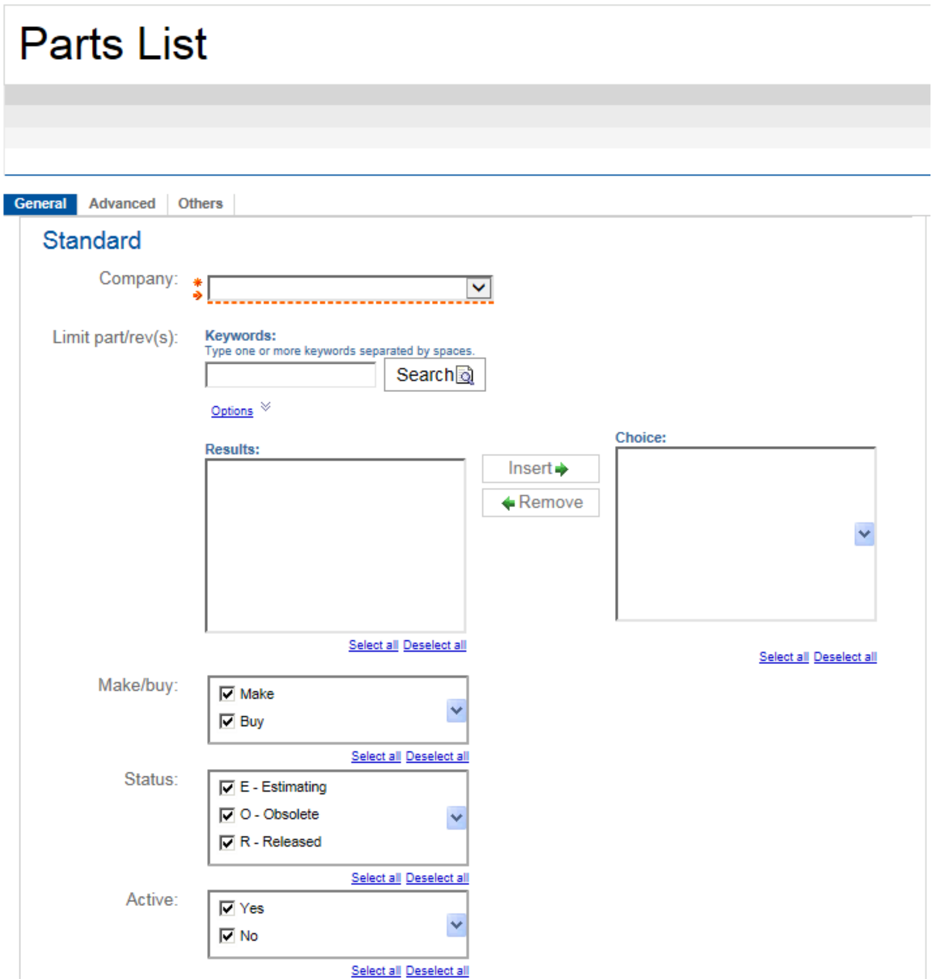
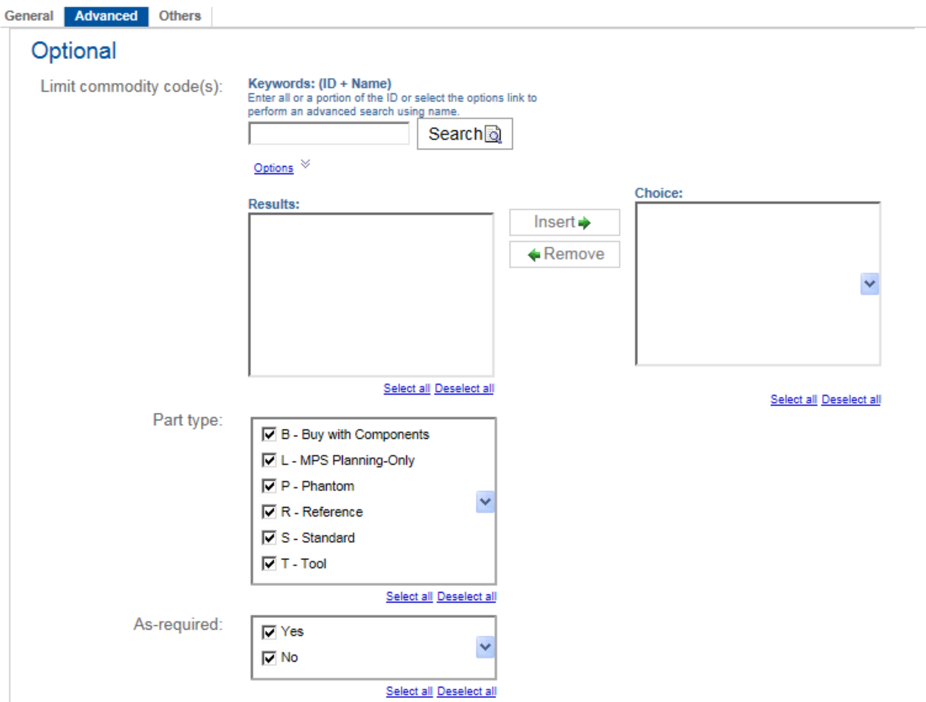
Parts List Report

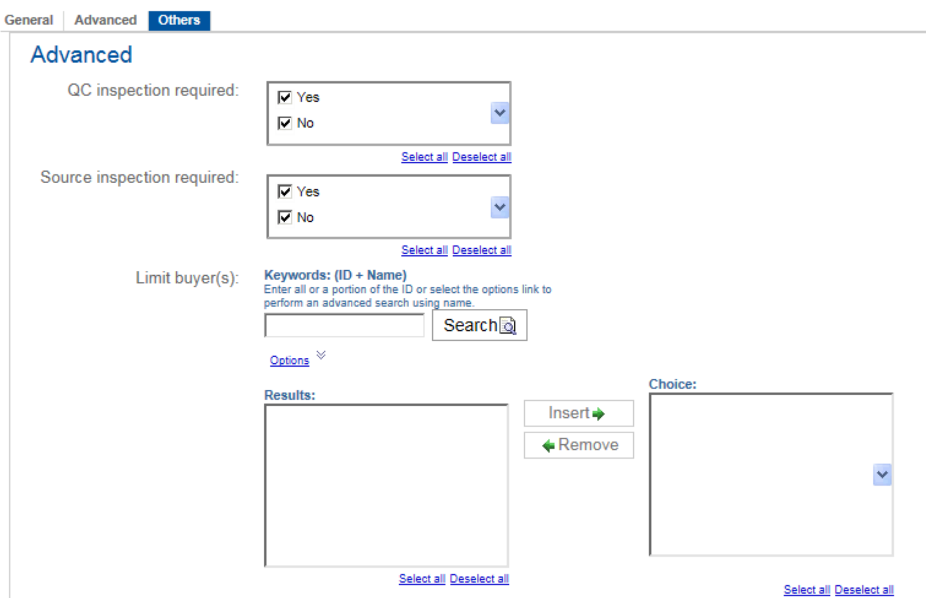
The Parts List report allows you to generate a listing of the characteristics of parts.

Prompts

Use the Parts List prompts to configure the report.







Prompt Message	Description
Company	Select a company from the list.
Limit part/rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to be added on the report.

Prompt Message	Description
	To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Make/buy	Select the option to indicate the component parts you want to include on this report. The available options are: ▪ **Make**: Manufactured ▪ **Buy**: Purchased Both options are selected by default.
Status	Select the status(es) of the parts you want to include on this report. The available options are the following: ▪ **E**: Estimating ▪ **O**: Obsolete ▪ **R**: Released All options are selected by default.
Active	Select the option to indicate whether or not the item is active. The **Yes** and **No** options are both selected as a default.
Limit commodity code(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more commodity code IDs to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Part type	Select the option to indicate the component part type you want to include on this report. The available options are the following: ▪ **B**: Buy with Components ▪ **L**: MPS Planning-Only ▪ **P**: Phantom ▪ **R**: Reference ▪ **S**: Standard ▪ **T**: Tool All options are selected by default.
As-required	Select the option to indicate which component parts you want to include on this report, based on whether or not the quantity

Prompt Message	Description
	per component part is flagged as "as required," since it would not be practical to specify the exact quantity for this part. Selecting **No** will include component parts whose exact quantity has been specified. Both options are selected by default.
QC inspection required	Select the option to indicate which component parts you want to include on this report, based on whether or not the parts have been mandatorily accepted or rejected by QC. Both options are selected by default.
Source inspection required	Select the option to indicate which component parts you want to include on this report, based on whether or not the parts have been mandatorily accepted or rejected by its source. Both options are selected by default.
Limit buyer(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more buyer IDs to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

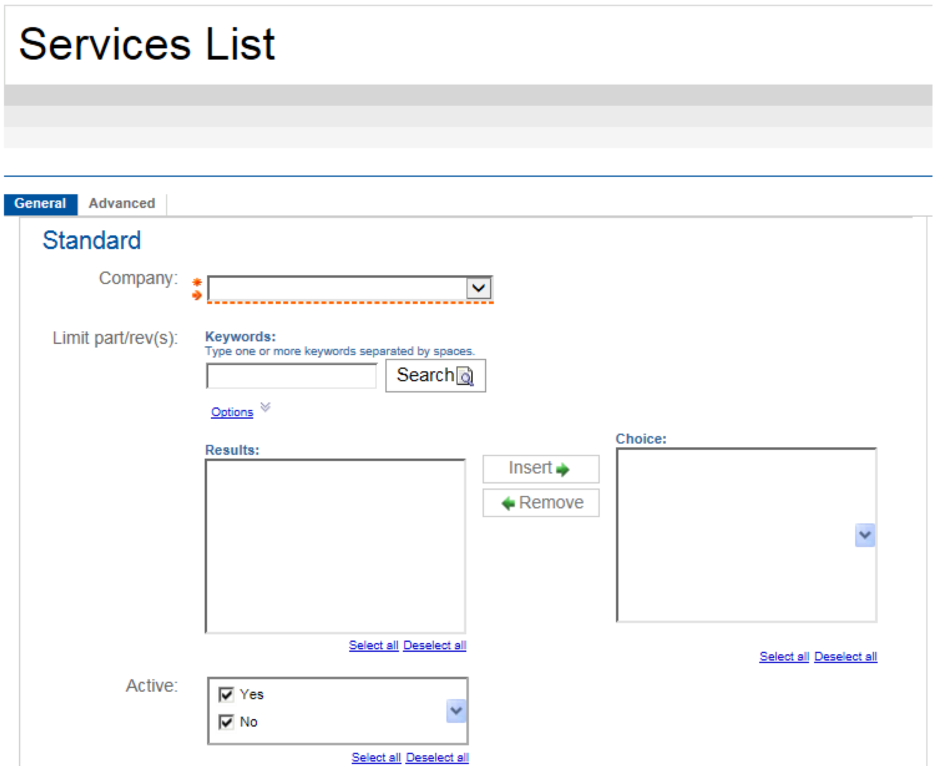
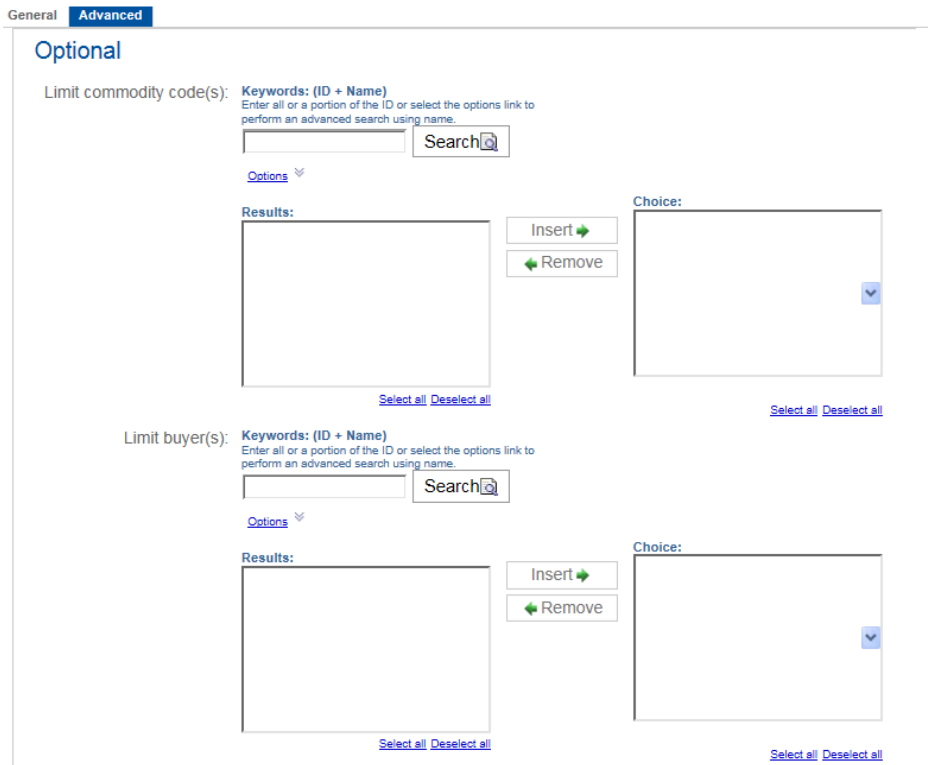
Services List Report

The Services List generates a list of items that are categorized as services. The list includes item classification and procurement information.

Prompts

Use the Services List prompts to configure the report.





Prompt Message	Description
Company	Select a company from the list.
Limit part/rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Active	Select the option to indicate whether or not the service is active. The **Yes** and **No** options are both selected as a default.
Limit commodity code(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more commodity code IDs to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit buyer(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more buyer IDs to be added on the report.

Prompt Message	Description
	To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Stock Status Report

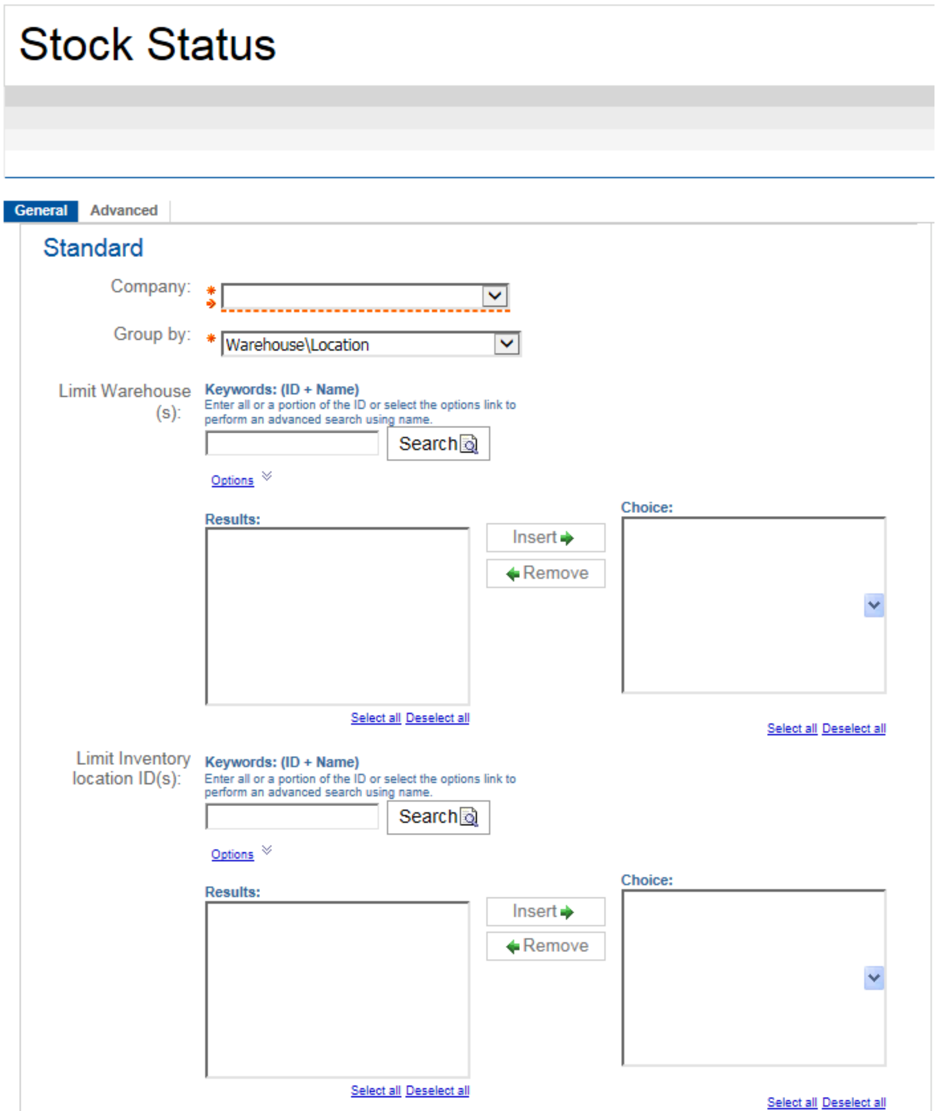
The Stock Status report provides a listing of inventory sorted by the following combinations: warehouse/location, project/part- revision, inventory abbreviation/part- revision, or part/revision/ project.

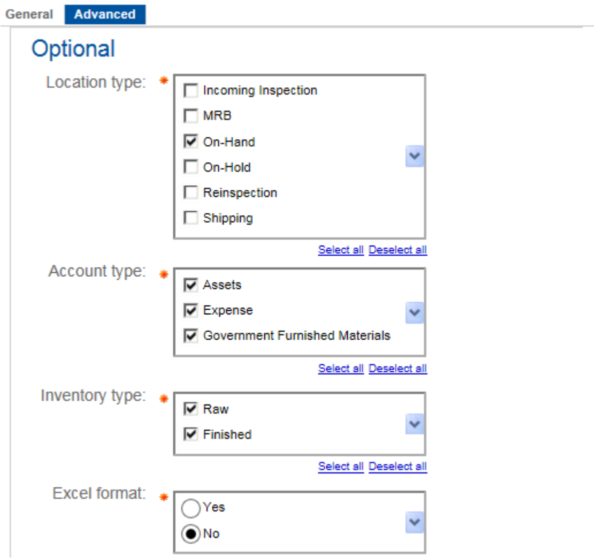
This report is generated real-time. The Excel output for the report excludes headers, footers, subtotals, and so on, making the data easier to manipulate. A drill-thru report is available to view serial/lot tracking information.

> **Note:** You can create Stock Status reports that can be exported to PDF and saved to a specified location. These jobs can be scheduled at recurring intervals and run on-demand. The exported PDF files contain date/time stamp information.

Prompts

Use the Stock Status prompts to configure the report.





Prompt Message	Description
Company	Select a company from the list.
Group by	Select the option to use for the report from the drop-down list. The options available are the following: ▪ **Warehouse\Location**: Select this option to print the report by warehouse and location. This is the default option. ▪ **Project\Part Rev**: Select this option to print the report by project and part/revision. ▪ **Inventory Abbreviation Code\Part Rev**: Select this option to print the report by inventory abbreviation code and part/revision. ▪ **Part Rev\Project**: Select this option to print the report by part/revision and project.
Limit Warehouse(s)/Project(s)/ Inventory Abbreviation Code(s)/Part\Rev(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses, projects, inventory abbreviation codes, or part/revisions to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Inventory location ID(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more inventory locations to be added on the report.

<table>
<tr><th>Prompt Message</th><th>Description</th></tr>
<tr><td></td><td>To narrow the search, click Options to select filter criteria. If you search by name, use one of the Contains... options, rather than the Starts with... options. If applicable, click the right-arrow to move your selected results to Choices.</td></tr>
<tr><td>Location Type</td><td>Select the location type you want to include on the report.
The location type is a system-defined code used to classify inventory records by locations. These system-defined location types are the following:
Incoming Inspection: Select this option to indicate that this location contains parts that have been received, but have not been accepted or rejected.
Materials Review Board (MRB): Select this option to indicate that this location contains parts that are within QC, and that the items do not meet the drawings. The items may be kept as they are, disposed, or returned to the vendor.
On-Hand: Select this option to indicate that this location contains parts that should be counted as available. This is the default option.
On-Hold: Select this option to indicate that this location contains parts that should not be counted as available.
Reinspection: Select this option to indicate that this location contains parts that have already been accepted or rejected but need to go back through that process.
Shipping: Select this option to indicate that this location contains parts that have been removed from stock for shipping.
The Shipping type and the On-Hold type are used in a similar fashion.
Location types that are not selected do not print.</td></tr>
<tr><td>Account Type</td><td>Select the account type(s) of the inventory records you want to include on the report.
The account types are the following:
Assets
Expense
Government Furnished Materials</td></tr>
</table>

Prompt Message	Description
	You can select more than one account type by pressing and holding the CTRL key and selecting the options you want to include on the report. Account types that are not selected do not print. All account types are selected by default.
Inventory Type	Select the inventory type of the inventory records you want to include on the report. The inventory types are the following: ▪ Raw ▪ Finished Both inventory types are selected by default.
Excel Format	Select the option to indicate if you want to produce a report version that has no headers, footers, and subtotals for easier sorting and manipulation. The default option is **No**.

Scheduling Stock Status 'As Of' Report

The Stock Status 'As Of' report is a Stock Status report that can be run at a point in time, exported to PDF and saved to a location that you have specified.

You can schedule the jobs to run on regular intervals as well as run the report on-demand. The reports have date/time stamp information. This will allow you to look back at report outputs for a specific date for historical purposes.

You can find the Report Generation Schedules folder from **Team content** » **Costpoint Enterprise Reporting for Project Manufacturing** » **Costpoint Project Manufacturing**. This folder contains the predefined scheduling jobs.

This section will help you to configure the output location, batch file, and Cognos server, to execute these jobs, and to run the renaming script.

The following are the steps in configuring your Stock Status 'As Of' reports:

Step 1: Customize the batch renaming script.
Step 2: Configure the IBM Cognos Analytics server.
Step 3: Execute job.

Step 1: Customize the Batch Renaming Script

The reports generated by the Cognos scheduler are given cryptic names.

For example, **Approver Settings** could potentially be generated as a file named 397_1163638261400.pdf. For each PDF file, the Cognos server also generates a descriptor file in XML format. This file contains the mapping of the generated PDF file name to the report's original name on the Cognos Server.

> **Note:** When the Cognos scheduler generates a report, it saves this PDF file to a "Work" subfolder at the output location you will specify in Step 2. Make sure to create these folders before you run your job.

Deltek provides a script which, when run, takes the mapping information from the XML file to rename the PDF files to their original report names. This script then also appends the date and time of the report generation to the end of the file name. There is then an option to delete these descriptor files upon completion of the renaming process.

To customize the batch renaming script for your firm, you must edit the renameFiles.bat file, as necessary. The areas to edit are in italics in the following sample.

Use the instructions provided in the batch file to determine the appropriate settings for your installation.

When you are finished, save the renameFiles.bat file. Make sure that the renameFiles.bat, renameFiles.java, and renameFiles.class files are saved to the desired output location.

> **Note:** Exclude special characters (> < " ' & + / ? % # , . : ; = [ ]) from the path and report names. The renaming script will not run if special characters exist in them.

```
@echo off
REM
```

```
REM    Please update the following information before executing the
program:

REM COGNOS_HOME:        (Your Cognos install directory)

set COGNOS_HOME=C:\Program Files\ibm\cognos\analytics

REM JAVA_HOME:        Combining Cognos_Home with this location
Rem                  should result in a folder location where
REM                  "bin" folder can be found. Make sure there
Rem                  is a java.exe inside the "bin" folder.

set JAVA_HOME=%COGNOS_HOME%\bin\jre6

set PATH=%JAVA_HOME&\bin;%PATH%
REM CMOUTPUT_LOCATION:        Location where your CRN server will
REM                  save files. This is the directory
REM                  where the files "renameFiles.bat",
REM                  "renameFiles.class" and
REM                  "renameFiles.java" should exist.

set CMOUTPUT_LOCATION=C:\STOCK_STATUS_ARCHIVES

REM WORK_LOCATION    Location where all files will be moved
REM                  before renaming them. By default, this
REM                  is the 'Work' subfolder of the
REM                  CM_OUTPUT_LOCATION. You can use
REM                  alternate code below for specifying another
REM                  location altogether. Just remember to "REM"
REM                  the line of code not in use.

set WORK_LOCATION=%CMOUTPUT_LOCATION%\WORK
REM                  set WORK_LOCATION=C:\test

REM                  Call the java program to rename the output file
REM                  -cp options specifies the classpath information
ie location of
REM                  renameFiles.class. The files (%1 and %2) that the
server will
REM                  pass to the batch file will be renamed

REM                  Set the last parameter of the code below to "Y"
or "y" for the
REM                  program to put files under a subfolder; "N" or
"n" otherwise
call "%JAVA_HOME%\bin\java" -cp "%CMOUTPUT_LOCATION%" renameFiles
"%WORK_LOCATION%" "%1" "%2" N

REM                   Delete the XML descriptor files
REM                   Remove "REM" from the line below if you want
descriptor files
REM                   deleted
REM                   del %WORK_LOCATION%\*.xml
```

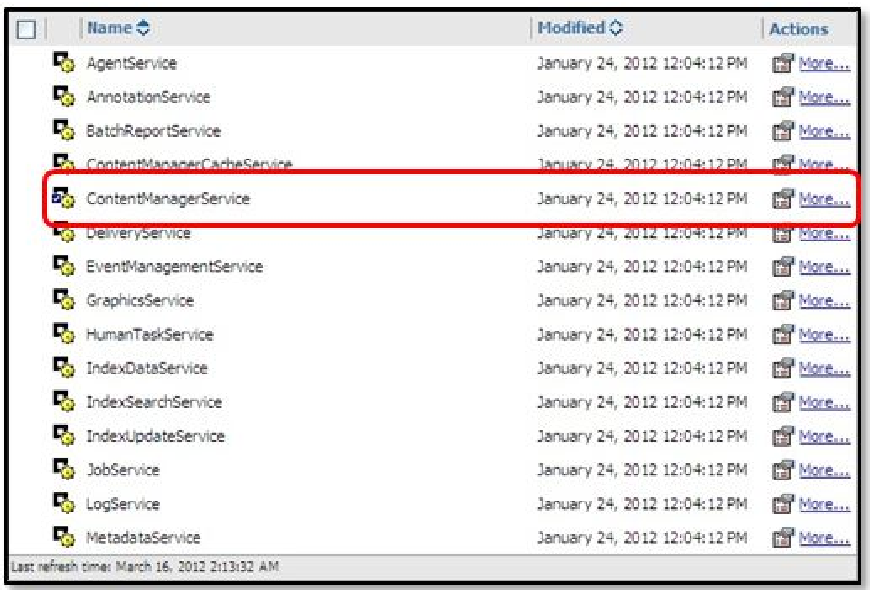
Step 2: Configure the IBM Cognos Analytics Server

You must log on to Cognos Analytics and set the server parameters in order to save the output of reports in the proper folder structure on the file system.

To set the server parameters:

1. From the Navigation bar, click **Manage** » **Administration Console**.
2. On the IBM Cognos Administration page, click the Configuration tab, select the **COSTPOINT** option, and click **Dispatchers and Services**.
3. Click the link for the dispatcher you want to configure.

4. Select **ContentManagerService** from the list of objects to configure.



5. Under the **Actions** column, click the **Set properties** button.
6. Click the Settings tab.
7. Under the **Value** column, click **Edit of Environment** » **Advanced Settings**.
8. Select the **Override the settings acquired from the parent entry** check box.
   A table displays, in which you can add parameters.
9. Under **Parameter**, enter **CM.OUTPUTLOCATION**.
10. Under **Value**, enter the file system location where you want to store report outputs (for example, **C:\Stock Status Archives**).

> **Note:** If you must specify a network location, use a mapped drive from your local machine. Do not use a UNC name.

11. Complete the following steps to add the batch renaming script file, which runs after a report output is saved to the target directory.
    a) Under **Parameter**, click an empty cell and enter **CM.OUTPUTSCRIPT**.
    b) In the corresponding **Value** cell, enter the location and the name of the script (for example, **C:\Output\renameFiles.bat**).
    c) Click **OK**.

12. Complete the configuration of Cognos Analytics Server:
    a) On the computer where you installed Content Manager, start IBM Cognos Configuration.
    b) In the Explorer window, under **Data Access**, click **Content Manager**.
    c) In **Save report outputs to a file system**, select **True**.
    d) From the menu, click **File** » **Save**.
    e) Restart the IBM Cognos service.

Step 3: Execute Job on Recurring Schedule

Browse to the job you want to run (Stock Status 'As Of').

To execute the job:

1. Click**Team content** » **Costpoint Enterprise Reporting for Project Manufacturing** » **Costpoint Project Manufacturing** » **Report Generation Schedules**.
2. Click the **More** icon (dotted vertical line) to the right of the Stock Status 'As Of' report, and select **Properties**.
3. Click **Job** » **Advanced**.
4. Under **Advanced**, do the following:
    a) Click **Set** to the right of **Properties** to edit the job and set parameters, and click **OK**.
    b) Click **Set** to the right of **Schedule Job** to set the desired schedule, and click **OK**.

After the job has completed running, browse to the specified output location to see the report.

> **Note:** There needs to be one instance of Stock Status in the "job" for every unique company number in Costpoint. This predefined job contains two (one for company 1 and one company 10). Clients will need to modify this job for their unique company numbers or add more companies.

Summarized Bill of Material Report

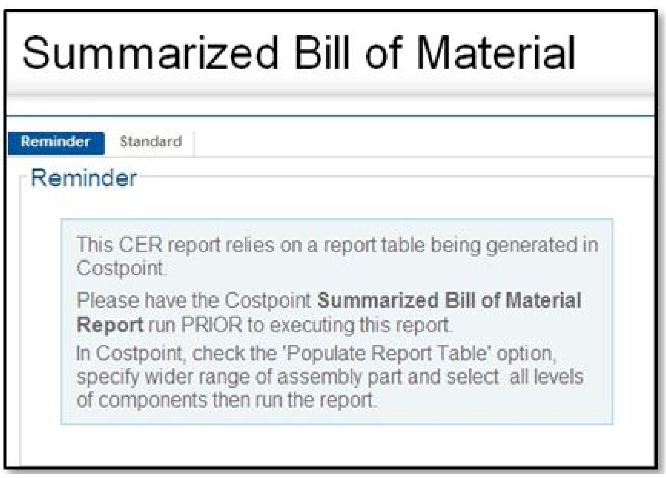
The Summarized Bill of Material report allows you to create a summarized listing of BOM for a selected range of assembly part numbers.

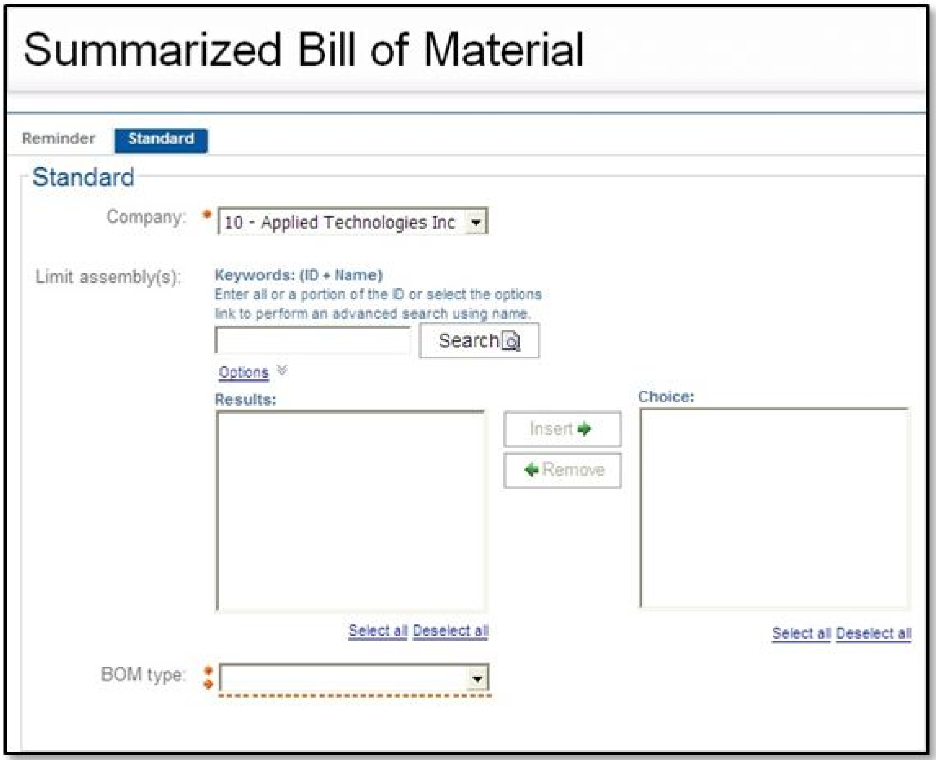
You can include the first level, specified levels, or all levels of components of the assembly. You can use this report to print a summary of either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

> **Note:** This Costpoint BI report relies on a report table that is generated in Costpoint. You have to run Costpoint's Print Summarized Bills of Material Report application prior to executing this report.
>
> In Costpoint, when you run the Print Summarized Bills of Material Report application, you must select **Update Summarized Bills of Materials Report Table** on the Action menu to update the summarized BOM table.

Prompts

These are Summarized Bill of Material prompts.





Prompt Message	Description
Company	Select one company from the list.
Limit Assembly(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more assemblies to be added on the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following: ▪ **Manufacturing:** Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ▪ **Engineering:** Select this option to print the EBOM for the selected assembly part. You can select either standard or provisional components for this BOM type.

Costpoint Business Intelligence for Shop Floor Time

This chapter includes descriptions of reports in the Costpoint Shop Floor Time package, along with the report prompts.

Model Information

Included in the documentation for this release is detailed information about the structure, table inclusion, and relationships (joins) for the Costpoint Business Intelligence for Shop Floor Time model, in spreadsheet format.

The name of that spreadsheet file is DeltekCostpointBusinessIntelligence80_ SFTModel.xlsx.

Report Package

The template report in Costpoint Business Intelligence for Shop Floor Time is published in a single package: Costpoint Shop Floor Time.

Costpoint Shop Floor Time Reconciliation Report

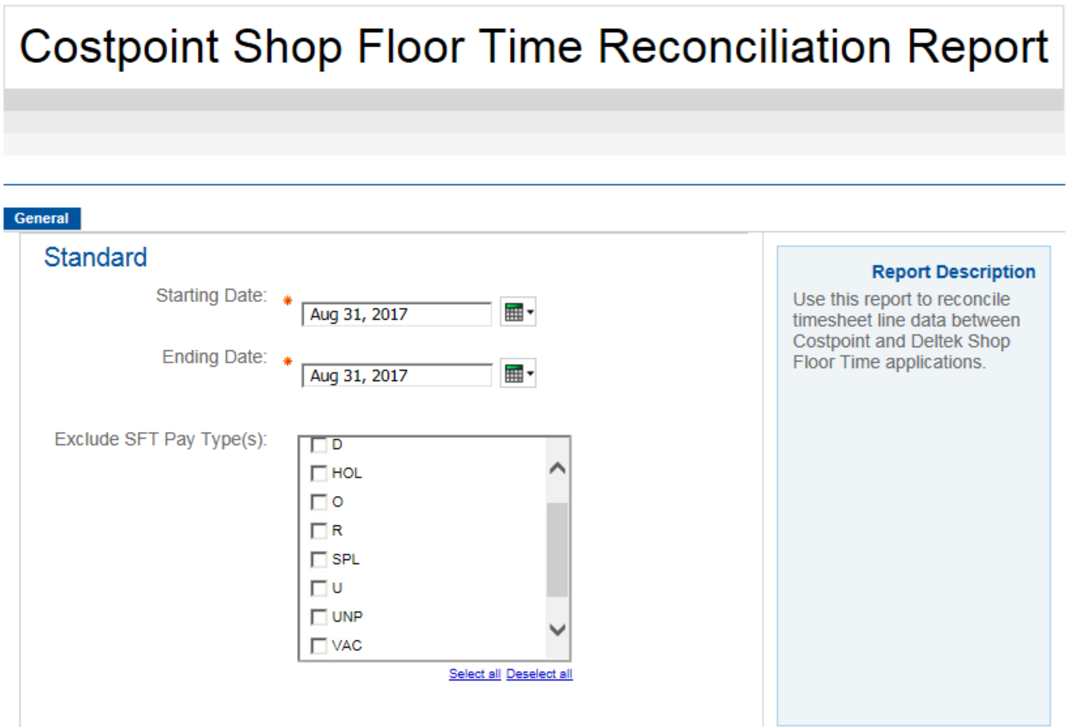
This section shows a sample prompt screen and output of the Costpoint Shop Floor Time Reconciliation report.

This report contains information about the discrepancies between the timesheet entries in Shop Floor Time and Costpoint including the timesheet variances (in hours).

> **Note:** This report only runs for on-premise Costpoint users.

Prompts

These are Costpoint Shop Floor Time Reconciliation Report prompts.



Prompt Message	Description
Starting Date	Enter the start date for the range of timesheets you would like to reconcile.
Ending Date	Enter the end date for the range.
Exclude SFT Pay Type(s)	Select the SFT pay type(s) that you want to be omitted in the report.

Sample Report

Sample Costpoint Shop Floor Time Reconciliation report.

Adding New Joins in the Costpoint Shop Floor Time Reconciliation Report

You may want to further customize your Costpoint Shop Floor Time Reconciliation Report by defining new join relationships. Do this in the Edit mode.

To add join relationships in the Costpoint Shop Floor Time Reconciliation report:

1. Open the Costpoint Shop Floor Time Reconciliation Report in Edit mode.
2. Click the **Queries** ( ) icon on the left-hand side of the screen.
3. Expand QUERIES and look for **Query 1**.
4. Expand **Query 1** and click**Join** (yellow boxes) .
5. On the **Join Relationships** dialog box, click a query object in the **CP TS DATA** box that you like to create a new join relationship from (for example, **Employee ID**).
6. Click the **New Link** button.
7. Click a query object in the **SFT DATA** box to link to (for example, **Pay Type**).

   Before joining, carefully examine the implications of joining (you do not want to create a loop join).
8. Click **OK**.

Configuring the Timesheet Line Source Code

Your organization may be using an automatic interface between Shop Floor Time and Costpoint.

This interface uses the Timesheet Line Source Code that makes the integration between the two systems possible. You can change the source code value in the Costpoint Shop Floor Time Reconciliation Report if needed.

Timesheet Line Source Code Values

If your organization uses the automatic interface, the Timesheet Line Source Code value should be **SFT**.

This is the default value for the source code in the Costpoint Shop Floor Time Reconciliation Report. However, if your organization uses the Import Timesheet function instead of the automatic interface, the Timesheet Line Source code value must be **AOPUTLTS**.

Changing the Source Code Value in the Costpoint Shop Floor Time Reconciliation Report

The default value for the source code in the Costpoint Shop Floor Time Reconciliation Report is **SFT**.

To change the Source Code value in the Costpoint Shop Floor Time Reconciliation report:

1. Edit the Costpoint Shop Floor Time Reconciliation Report.
2. Select **Queries** from the Navigation bar, and click the **CP TS DATA** query.
3. In the Detail Filters pane, double-click the appropriate filter for **Source Code**.
4. On the Detail Filter Expression dialog box, change the **Timesheet Line Source Code** text to either **SFT** or **AOPUTLTS**.

   > **Note:** For the automatic interface, **[Timesheet Line Source Code] = 'SFT'**.
   > For the Import Timesheet function, **[Timesheet Line Source Code] = 'AOPUTLTS'**.

5. Click **OK**, and save the report.

General Ledger

The General Ledger folder includes reports that use the secured General Ledger model that leverages the Organization Security and Labor Suppression configuration in Costpoint.

Model Information - General Ledger

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the General Ledger framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_GeneralLedgerModel.xlsx.

General Ledger - Reports

There are two reports that uses the secured General Ledger framework model.

These reports are:

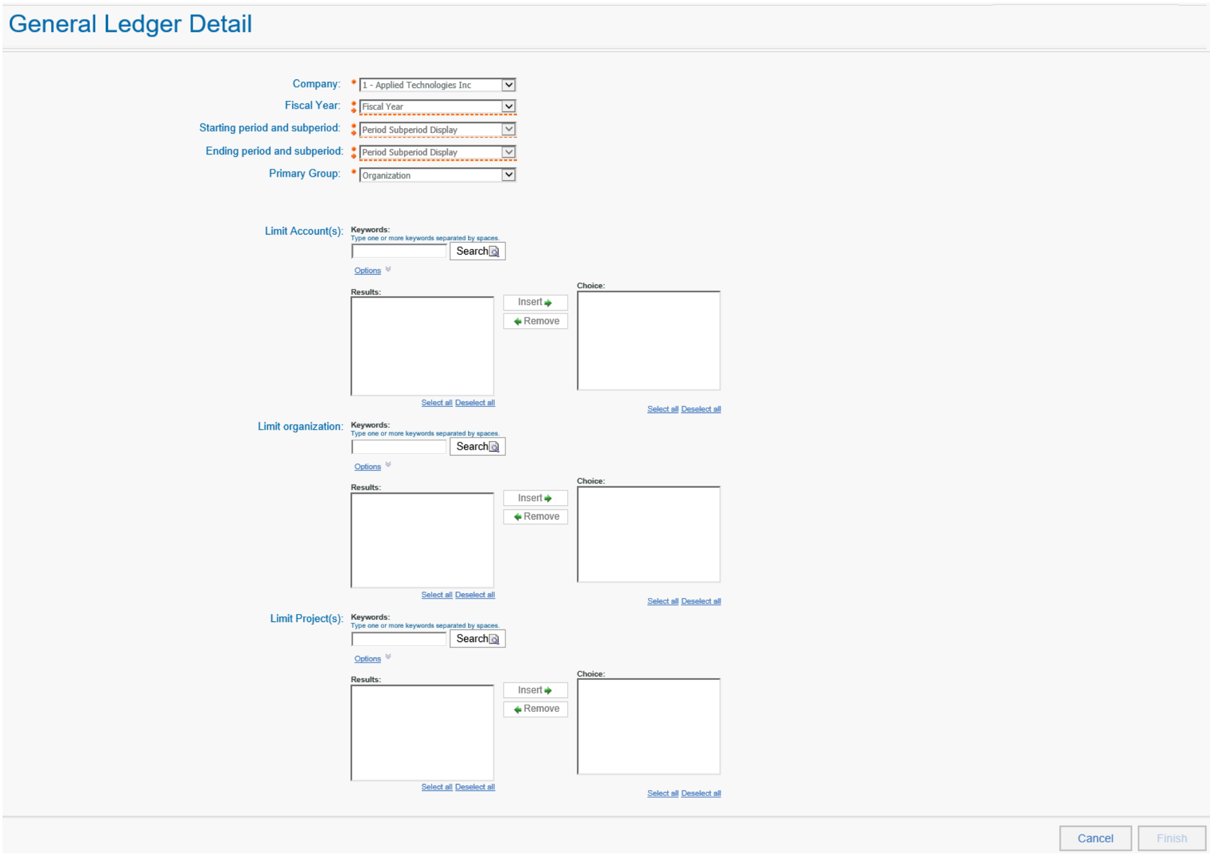
- General Ledger Detail
- Trended Income Statement

General Ledger Detail Report

The General Ledger Detail report provides the details of the GL transaction information stored in Costpoint.

Prompts - GL Detail Report

The GL Detail Report prompts have selections such as company, fiscal year, starting and ending period and subperiod.



Prompt Message	Description
Company:	Select the company that you want to display in the report.
Fiscal year:	Select the desired fiscal year.
Starting period and subperiod:	Select the period to start the range. Select the subperiod to start the range. If adjustment subperiods are available for the selected period, they are displayed in the subperiod drop-down list including the adjustment subperiod type which can either be **Interim** or **Final**. For example: ▪ Interim adjustment subperiod 1 will display as **1 Adj Pd - Interim**

Prompt Message	Description
	■ Final adjustment period 1 will display as **1 Adj Pd - Final**.
Ending period and subperiod:	Select the period to end the period range. Select the subperiod to end the subperiod range.
Primary group:	Select an option to use for the report sort: **Organization** or **Reorganization**.
Limit organization	Enter a portion of a specific organization or reorganization that you want to include in the report based on the report sort you selected on the General tab. Click **Search**. In the search results, select one organization. For example, you know that the organization that you are looking for starts with an A. Enter **A** in the **Keywords** field, and then click **Search**. All organizations that start with A will be in the search results. Select the organization to include in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Account	Enter a portion of a specific account ID in the **Keywords** field and click **Search** to list accounts that match your keyword. Select one account to include in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Project	Enter a portion of a specific project ID in the **Keywords** field and click **Search** to list projects that match your keyword. Select the project to include in the report. To narrow the search, click **Options** to select filter criteria. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Incurred Cost Submission Reports

The "Allowable Cost and Payment" clause (FAR 52.216-7) requires that companies prepare a proposal to include supporting data within six months after the end of its fiscal year.

This proposal is called an Incurred Cost Submission (ICS). FAR 42.705-1 refers companies to the “Model Incurred Cost Proposal” in Chapter 6 of the DCAAP 7641.90 for guidance on what is included in the final indirect cost rate proposal and supporting data. DCAA requests that companies include an index with their Incurred Cost Submission proposal. If certain schedules are not applicable, the company should note that on the index.

To assist companies in meeting this requirement, Incurred Cost Submission reports can be created from data in Costpoint. These reports assume that the user properly assigns the Incurred Cost Submission codes on the Government Information screen in Costpoint. Proper and accurate setup of pools is also assumed.

There are 28 schedules that may be included in an Incurred Cost Submission. Of those, 10 are optional and are included at the discretion of the company.

> **Note:** In this guide, the words report and schedule are used interchangeably.

This guide covers 13 required schedules that can be derived from Costpoint data normally stored and available in Costpoint. These reports were developed for a baseline Costpoint implementation without consideration of a company’s specific implementation. Within this document, you will find information about the reports that are available to assist with producing the Incurred Cost Submission schedules. Information includes report descriptions, Costpoint tables used, and user prompts for collecting information for tailoring the report. A sample screen shot for each report is also included.

Use this document as a guideline for understanding the tables that data is drawn from for each report.

> **Note:** All ICS reports should be run once a year after all the final costs have been captured for your company and you have closed the company’s financials for a given year. These reports are meant to assist in the year-end reporting due to requirements of the DCAA and other similar agencies and are not designed to tie out the pools exclusively. The information in these reports may not be comprehensive, but they can be used as starting points or templates for your custom reports.

Costpoint Setup Prerequisites

Certain tasks must be performed in Costpoint before you run the ICS report.

The following setup must be in place in Costpoint before running ICS reports:

- Costpoint must be reconciled between the General Ledger, Project Ledger, and Statement of Indirects.
- The Incurred Cost Submission Codes on the Manage Government Contract Information screen (**Projects** » **Project Setup** » **Project Master** » **Manage Government Contract Information**) must be completed.

- Pools must be properly identified in the **Pool Type** field on the Manage Cost Pools screen. Several of the schedules use the default Costpoint configured pool types to select and organize information, where pool type numbers 1, 2, 3, 4, and 6 are considered Overhead Type Pools. Pool type number 5 is, by default, considered a G&A Type Pool. You can modify the default Costpoint pool types from the Manage Allocation Groups screen. Note that if you make changes to the standard Costpoint configuration, you must also modify the Cognos Analytics reports accordingly.

  The default Costpoint pool types are:

  - **Pool Type 1** — FRINGE
  - **Pool Type 2** — OVERHEAD
  - **Pool Type 3** — MAT HANDLG
  - **Pool Type 4** — SUB CONTR
  - **Pool Type 5** — G&A
  - **Pool Type 6** — HM OFF G&A
- To run the ICS report, Schedule J, you must have the Costpoint Purchasing module. The Purchase Order area of this module is used as a source for subcontractor information on this schedule.

Security

Row-based security is not available for ICS reports in Costpoint Business Intelligence.

Deltek recommends that you set up role-based security in Cognos to provide access to the reports for the appropriate persons. Refer to the Cognos online documentation for information on how to implement role-based security.

Schedule A — Summary of Claimed Indirect Expense Rates

Schedule A is a summary of all the contractor’s indirect rates.

The pools and bases in Schedule A are linked to their respective schedules as shown in this table.

> **Note:** Schedule A uses the standard Costpoint pool types. If your company has modified these defaults, you must modify the report accordingly.

Function	From Schedule
Overhead	Schedule C
Occupancy	Schedule D
G&A	Schedule B
Claimed Allocation Bases	Schedule E

Prompts

These are Schedule A — Summary of Claimed Indirect Expense Rates prompts.

Prompt Message	Description

Schedule B — General and Administrative (G & A) Expenses

Schedule B contains the details of the contractor's general and administrative expenses.

These details include the following: account and organization balances from the G/L Trial Balance and any adjustments to the total incurred and the claimed amount. The G&A data in Schedule B are linked to their respective schedules as shown in this table.

> **Note:** Schedule B uses the standard Costpoint pool types. If your company has modified these defaults, you must modify the report accordingly. This report compares account and organization balances between POOL_SIE_SUPPORT and GL_POST_SUM. It is expected that the variance will be zero, but if there is a variance, this figure is reflected as an adjustment. For any adjustment, the report will generate a sequential number in the notes column. This number can be used as a reference for adding text explanations in a separate document.

Function	From Schedule
Occupancy	Schedule D
Direct Costs by Contract	Schedule H
IR & D/B&P	Schedule H

Prompts

These are Schedule B — General and Administrative (G&A) Expenses prompts.

Prompt Message	Description
Select the Company	Select the single company needed for the ICS.
Select the Fiscal Year	Select the desired fiscal year.
Select YTD Period Ending Number	Select the desired YTD period ending number.
For the Pool Base, Roll Up by Account or Organization?	Select the first sort option to use in this report. For example, selecting Account tells the report to sort by account first and then by organization.

Schedule D — Intermediate Pool Expenses

Schedule D contains the details of the contractor's intermediate pool expenses.

These details include the following: account balances from the G/L Trial Balance and any adjustments to the total incurred and the claimed amount. The pools and bases in Schedule D are linked to their respective schedules as shown in this table.

Note: This report compares account and organization balances between POOL_SIE_SUPPORT and GL_POST_SUM. It is expected that the variance will be zero, but if there is a variance, this figure is reflected as an adjustment. For any adjustment, the report will generate a sequential number in the notes column. This number can be used as a reference for adding text explanations in a separate document.

Schedule G — Reconciliation of Books of Account and Claimed Direct Costs

Schedule G is the reconciliation of direct costs to the General Ledger/Trial Balance.

This schedule shows the amounts of various direct costs, the account numbers, the amount accumulated in the General Ledger, any adjustments, and the amount claimed. Schedule of Direct Costs data found in Schedule G is linked to Schedule H.

> **Note:** This report compares account and organization balances between PROJ_SUM and GL_POST_SUM. It is expected that the variance will be zero, but if there is a variance, this figure is reflected as an adjustment. For any adjustment, the report will generate a sequential number in the notes column. This number can be used as a reference for adding text explanations in a separate document.

Schedule H — Direct Costs by Contract/Subcontract Applied at Claimed Rates

Schedule H is the schedule of claimed and unclaimed direct costs by contract or subcontract, including direct Independent Research and Development/Bid and Proposal (IR&D/B&P), Overhead, G&A, and COM at the claimed rates.

The pools and bases in Schedule H are linked to their respective schedules as shown in this table.

Function	From Schedule
Summary of Final Overhead Rates	Schedule A
Direct Costs/IR&D/B&P	Schedule H

Note: For contractors that have only a few government contracts, it is practical to list all their government contracts on this schedule. However, for contractors that have many government contracts and/or multiple delivery orders, it is more practical to use this schedule as a summary of direct costs by contract type and to provide the required details in supplemental schedules.

Schedule H-1— Government Participation in Indirect Cost Pools

Schedule H-1 presents a general overview of the extent that cost type and flexibly priced contracts participate in the absorption of indirect expenses.

Direct Costs by Contract/Subcontract data in Schedule H-1 is linked to Schedule H. Schedule H-1 is used to break down the final base pool amounts by ICS code and to show by percentage what contribution each pool makes in the absorption of indirect expenses.

Schedule I — Schedule of Cumulative Direct and Indirect Cost Claimed & Billed

Schedule I is a schedule of cumulative direct and indirect costs claimed and billed from inception to date.

This schedule has multiple uses. It can be used, for example, to identify contracts with work that has been physically completed and can be identified for closing, and contracts that may require billing adjustments due to over/under billing situations. The latest voucher number billed on a contract is included on this schedule for easy verification. The pools and bases in Schedule I are linked to their respective schedules as shown in this table:

Function	From Schedule
Direct Costs by Contract	Schedule H
Summary of Amounts on T&M Contracts	Schedule K

The **Subject to Penalty Clause** column, **Prior Years Settled Costs** column, and **Notes** column are highlighted to indicate that you must provide that information manually. You can export the report to a Microsoft Excel or Adobe Acrobat (PDF) file, and use the corresponding application to edit those columns. You must also update the totals in the **Total Cumulative Settled or Claimed** column to reflect your manual entries.

The dates in the **Date Costs Billed Through** column are the latest invoice dates in the fiscal year for which you generate the schedule.

Prompts

These are Schedule I — Schedule of Cumulative Direct and Indirect Cost Claimed & Billed prompts.

Prompt Message	Description
Select the Company	Select the single company needed for the ICS.
Select the Fiscal Year	Select the desired fiscal year.
Select YTD Period Ending Number	Select the desired YTD period ending number.
Select YTD Sub Period Ending Number	Select the desired YTD sub period ending number.
Select the Rate Type	Select either Actual or Target to indicate if you want to use actual rates or target rates.
Select the Project Level	Select the project level at which you want to generate the report. The report rolls up all activity to that level.

Note: The invoice number reflected in the report is the last invoice number posted in the BILL_INVC_HDR_HS table. If any manual invoice was posted (for example, Manual Bill, Milestone, Project Product, or Customer Product Bill) for the project, the invoice number may be null or incorrect. This report assumes all invoices are computed and posted in Costpoint.

Schedule J — Subcontract Information

Schedule J provides subcontractor information as follows: subcontract number, prime contractor number, subcontract point of contact and phone number, subcontract value, costs incurred in fiscal year, and award type.

The schedule provides identification of subcontracts awarded to companies where the contractor is the prime or upper-tier contractor. This information is required for all cost type, flexibly priced, T&M, and labor hour subcontract awards.

Note: The budgeted hours (if applicable) must have been entered in Costpoint for this report to run properly. To run Schedule J, you must have the Costpoint Purchasing module. The Purchase Order area of this module is used as a source for subcontractor information on this schedule.

Prompts

These are Schedule J — Subcontract Information prompts.

Prompt Message	Description
Select the Company	Select the single company needed for the ICS.
Select the Fiscal Year	Select the desired fiscal year.
Select YTD Period Beginning Number	Select the desired YTD beginning period number.
Select YTD Period Ending Number	Select the desired YTD period ending number.
Select Subcontract Expense Account ID (Optional)	In the **Keywords** field, enter one or more account IDs used for subcontractor expenses that you want to include on the report. Separate account IDs by spaces. Click the **Search** button to retrieve the account IDs. All account IDs that are retrieved by the search appear in the Results area. Select an account ID and click **Insert** to include that ID.

Schedule K — Summary of Hours and Amounts on T&M/Labor Hour Contracts

Schedule K provides a summary of hours and amounts incurred on T&M contracts.

This schedule is useful for in-house verification of total amounts and hours incurred or billed on T&M contracts when processing final vouchers.

Prompts

These are Schedule K — Summary of Hours and Amounts on T&M/Labor Hour Contracts prompts.

Prompt Message	Description
Select the Company	Select the single company needed for the ICS.
Select the Fiscal Year	Select the desired fiscal year.
Select YTD Period Ending Number	Select the desired YTD period ending number.
Select YTD Sub Period Ending Number	Select the desired YTD sub period ending number.
Select Subcontract Labor Accounts	In the **Keywords** field, enter one or more account IDs used for subcontractor expenses that you want to include on the report. Separate account IDs by spaces. Click the **Search** button to retrieve the account IDs. All account IDs that are retrieved by the search appear in the Results area. Select an account ID and click **Insert** to include that ID.
Select the Rate Type	Select either Actual or Target to indicate if you want to use actual rates or target rates.
Select the Project Level	Select the project level at which you want to generate the report. The report rolls up all activity to that level. Note that the report only includes projects for which the ICS code is entered at the project level you specify when you generate the report. In addition, the report gets the contract number from that level.

Schedule L — Reconciliation of Total Payroll to Total Labor Distribution

Schedule L reconciles labor costs from the general ledger to the quarterly IRS 941 tax returns for the contractor's fiscal year.

Total Labor is broken out into direct and indirect costs.

- **Direct Costs** — These are derived by determining which account/org combinations from POOL_COST_ACCT are not associated with a pool. The missing account/org combinations and their respective general ledger amounts for the fiscal year are then rolled up into one amount called Direct Costs.
- **Indirect Costs** — These are derived by determining which account/org combinations from POOL_COST_ACCT are associated with a pool. These account/org combinations and their respective general amounts are then broken down further by the pool type numbers from POOL_TYPE and then listed by their respective account names. The total of these costs are the Indirect Costs.

These total labor costs are then compared to the Quarterly 941 amounts and any current and prior year accruals and these balances should coincide.

> **Note:** The Quarterly 941 amounts and the Current and Prior Year Accruals used to arrive at the Total Payroll will need to be calculated manually offline in a separate spreadsheet and will not be represented in this report.

Some of the amounts found on this schedule are derived from the previous schedules. Reconciliation adjustments may include bonus or vacation accruals. The pools and bases in Schedule L are linked to their respective schedules as shown in this table.

Function	From Schedule
Overhead	Schedule C
G&A	Schedule B
Intermediate Pools	Schedule D
Direct Costs by Contract/ Subcontract	Schedule H

Prompts

Schedule O — Contract Closing Information

Schedule O is used to identify cost type, T&M, flexibly priced, and level of effort type contracts that will be closed after this current incurred cost submission is audited and the final indirect rates are agreed upon.

If the contract is not ready to close (for example, a contract modification is being pursued), the reasons should be included in a footnote to the schedule.

This schedule provides contract information including the period of performance, funded ceiling amount, and the funded fee. If there is a level of effort contract or flexibly priced contract, details of fee computation should be described along with the contract modification used.

The **Ready to Close** column and **Notes** column are highlighted to indicate that you must provide that information manually. You can export the report to a Microsoft Excel or Adobe Acrobat (PDF) file, and use the corresponding application to edit those columns.

> **Note:** The budgeted hours (if applicable) must have been entered in Costpoint for this report to run properly. You must create project report tables in Costpoint, specifically the labor summary, for this report to work properly.

Prompts

These are Schedule O — Contract Closing Information prompts.

Prompt Message	Description
Select the Company	Select the single company needed for the ICS.
Select the Fiscal Year	Select the desired fiscal year.
Select YTD Period Ending Number	Select the desired YTD period ending number.
Select YTD Sub Period Ending Number	Select the desired YTD sub period ending number.
Select the Project Level	Select the project level at which you want to generate the report. The report rolls up all activity to that level.

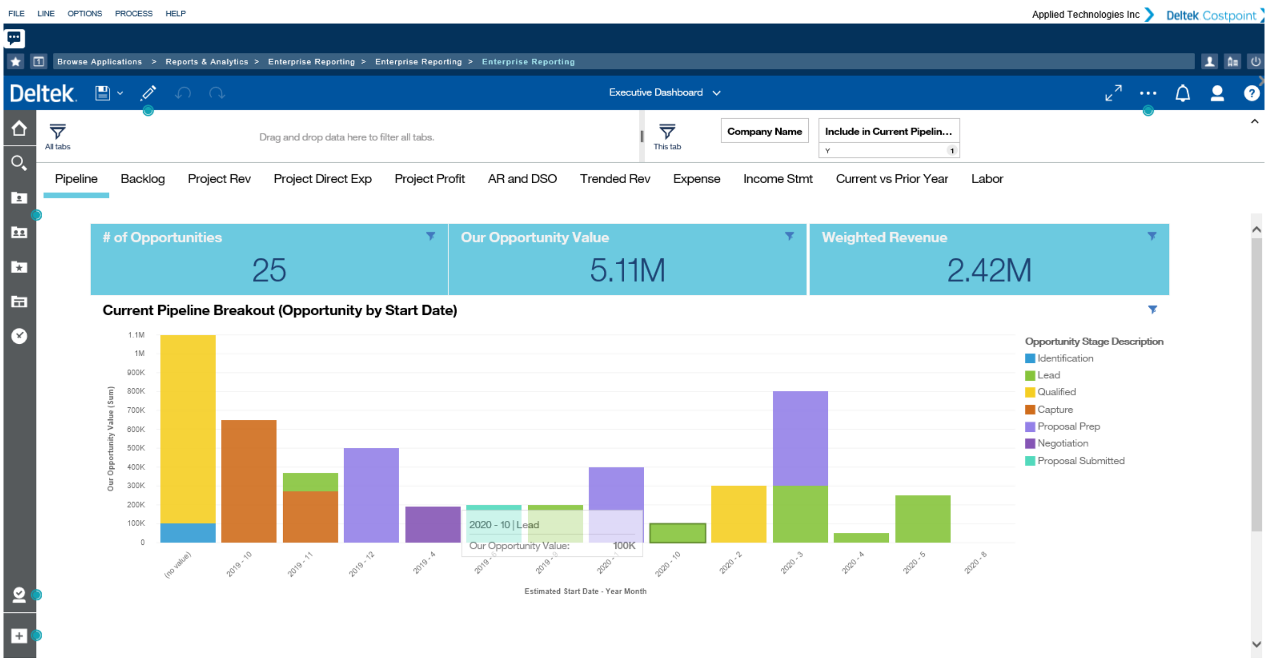
Executive

The Executive folder holds the Executive Dashboard that contains metrics that help senior management in decision making.

Executive Dashboard

The Executive Dashboard provides a high level insight into overall contract information that is useful to senior management.



The Executive Dashboard includes:

- **Pipeline and Backlog**: This area shows information about the number of opportunities and their corresponding values as well as funding and contract backlogs.

  On the Backlog tab, the Funding Backlog (Target) by Contract Type and Contract Backlog (Target) by Contract Type dashparts drill through to Contract details. To view the drill through report, right-click on the dashpart and click the Drill Through icon.
- **Project Rev, Project Direct Exp, and Project Profit**: The information in these areas are categorized by owning organization and by project manager. The project revenue, expenses, and profit against budget by project or project type are also displayed.
- **AR and DSO**: This area shows the outstanding accounts receivable and day sales outstanding by organization and by customer.
- **Trended Rev**: This area shows the actual vs budgeted and current period vs year-to-date revenue over a period of time.
- **Expense**: This area shows information such as expenses by project classification and top expense type categories.

- **Income Stmt**: This area is created from a Crosstab Report and is viewed as an overall Income Statement by quarter for the current fiscal year, providing line items based on the filtering criteria of Company Name, Org Level 2 ID Name, Org Level 3 ID Name, and Financial Statement Code set to P&L.
- **Current vs Prior Year**: This area provides bar charts comparing Prior Year Revenue, Direct Expense, Indirect Expense, and Profit to the Current Fiscal Year Revenue, Direct Expense, Indirect Expense and Profit.
- **Labor**: This area displays labor hours and amount by project class and organization as well as by project classification.

Users in the **CER__EXEC_SECURE** user group have exclusive access to the Executive Dashboard.

Data on the Executive Dashboard come from multiple packages including Project Reporting, Contracts, Accounts Receivable, and General Ledger. If one of the packages is not used, for example, Contracts, the dashboard may not display data.

Manufacturing

This chapter describes the reports and dashboard in the Manufacturing folder.

The Manufacturing reports in Deltek Costpoint Business Intelligence enable you to create a listing of inventory grouped by warehouse and location, inventory abbreviation and part-rev, and part-rev and project. These reports also enable you to create a manufacturing and engineering indented bills of materials (BOM) reports for a selected range of assembly part numbers.

> **Note:** If you use Multi-Company and do not separate your items by Company, your Company filters on reports and dashboards will show incorrect data in the Part selection. This will be resolved in a future release. You can determine whether you are separating items by Company in Configure Product Definition Settings (PDMITMRU). The**Separate Items By Company** checkbox must be selected to show the correct data in the Part section.

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Manufacturing framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_MFGModel.xlsx.

Model Security

The Manufacturing data model includes Costpoint Organizational Security and Part Security.

Organizational Security

If Organizational security is turned on and set up in Costpoint with security profiles, groups, and users under **Admin** » **Security**, then it can be used in the Costpoint Business Intelligence models. To do so, select **Yes** in the **Use CP Organization Security By Module** field in **Manage BI Settings (BIMCERSETTINGS)**.

Organizational Security will prevent users from seeing data that is related to unauthorized orgs on any standard or custom reports or dashboards.

Part Security

There is no specific BI setting for Part Security, so if Part security is turned on and set up in **Manage Security Groups (PDMSCGRP)** in Costpoint, then an unauthorized user will not have visibility into reports or data that contain unauthorized parts.

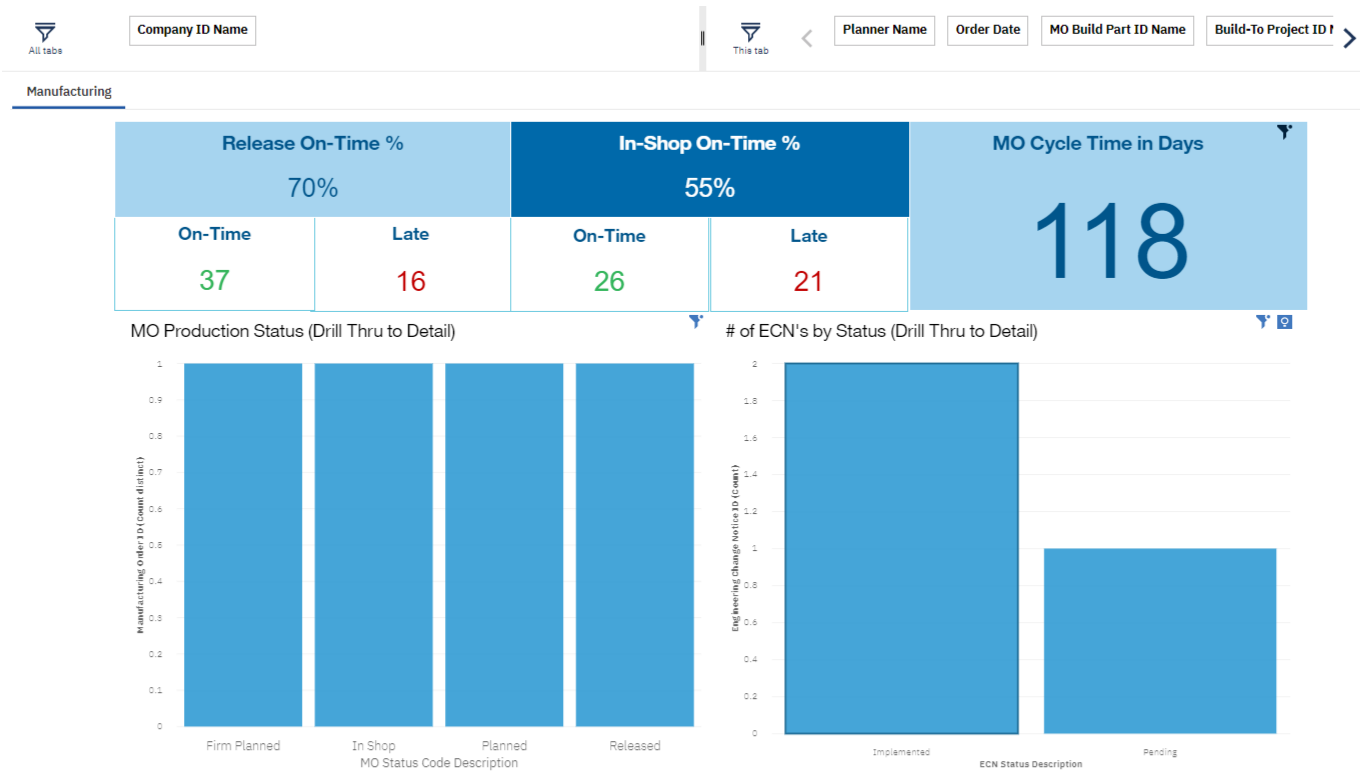
If the report contains a parent record with unauthorized parts linked to it, such as a build part or requirement on a Manufacturing Order, build part, or components on a Bill of Materials, then the entire parent record will not be visible to the user.

If the report contains unauthorized part records, such as a Part List or Stock Status, then those individual Part records will be suppressed from the report.

A warning displays on the prompt page of each report to let users know that Part Security will suppress report records with parts that are not authorized.

Manufacturing Dashboard

The Manufacturing Dashboard displays data for manufacturing orders (MOs) and Engineering Change Notices (ECNs).



The Manufacturing dashboard provides statistics for MOs in various stages of the manufacturing process, including:

- **Release On-Time & In-Shop On-Time %**: These key performance indicators (KPIs) let you monitor planner performance and see when they are on-time or late with moving MOs to these stages in the process. The Release Date vs Planned Release Drill Thru and In-Shop Date vs Planned In-Shop Date Drill Thru reports show you MO details grouped by planner to reveal the build part and the difference in days from planned to actual.
- **MO Cycle Time in Days**: This area shows the overall average number of days it takes an MO to complete from the date it was ordered to completion. This KPI adjusts as you interact with other areas on the dashboard, including filters by part, planner, and project.
- **MO Production Status (Drill Thru to Detail)**:This area shows where the in-process MOs are in the production, with a count for each status. Use the MO Production Status

Details Drill Thru report to see a breakdown of each status by planner and build part. You can also see the number of days the MOs have been in their current status, the planned due date, need date, and MO completion percentage.

- **# of ECN's by Status (Drill Thru to Detail)**: This area shows a count of in-process ECNS that are Approved, In-Approval, Pending, Implemented or Rejected. The ECN Impact to MOs Drill Thru report shows details on which Manufacturing orders may be impacted by an ECN on the build part or any component parts on the MO. This report guides you to see when the change is planned to be implemented and how that could affect your MO status and due date.

Manufacturing Reports

The Manufacturing folder includes seven reports.

Those reports are:

- Indented Bill of Materials Report
- MO Build-To Inv Abbrev Report
- MO Component Shortage Report
- MO Pick List Report
- MO Production Status Report
- MRP Message Report
- Summarized Bill of Material Report

Indented Bill of Materials Report

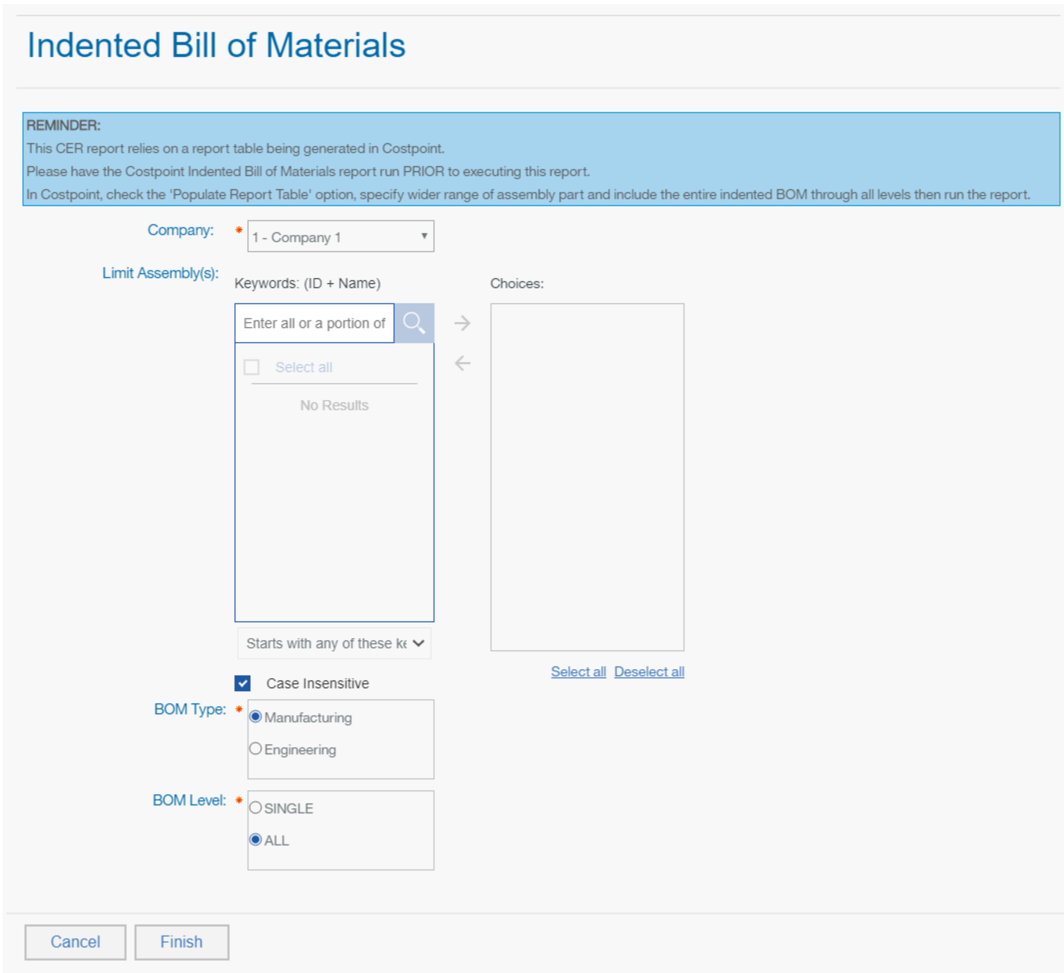
The Indented Bill of Material report allows you to create a listing of indented Bill of Material (BOM) for a selected range of assembly part numbers.

You can include the first-level components of the assembly or the entire indented BOM through all levels. You can use this report to print either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

> **Attention:** This report relies on a report table that is generated in Costpoint. You have to run Costpoint's Print Indented Bills of Material Report application prior to executing this report.
>
> In Costpoint, when you run the Print Indented Bills of Material Report application, you must select **Update Indented Bills of Materials Report Table** on the Action menu to update the indented BOM table.

Prompts

Use the Indented Bill of Material prompts to configure the report.



Prompt Message	Description
Company	Select one company from the list.
Limit Assembly(s)	In the **Keywords** field, enter a portion of one or more assemblies to add on the report and then click . To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following:

Prompt Message	Description
	▪ **Manufacturing:** Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ▪ **Engineering:** Select this option to print the EBOM for the selected assembly part. You can select either standard or provisional components for this BOM type.
Case Insensitive	Select this check box for BI to ignore the text case when searching keywords.
BOM Level	Select the BOM level at which you want the report printed. The available options are: ▪ **SINGLE:** Select this option to include level 1 in the report. ▪ **ALL:** Select this option to include all levels in the report.

Sample Report

This is a sample Indented Bill of Materials report.

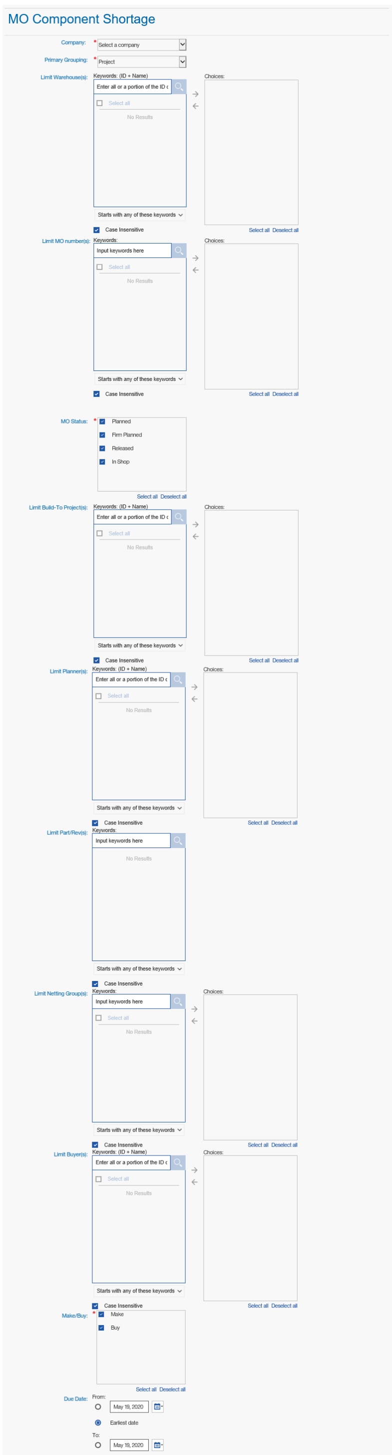
MO Component Shortage

The MO Component Shortage report allows you to print a listing of potential component and subassembly shortages for manufacturing orders.

A drill-thru report is available to provide a listing of detail requisition, purchase order, and manufacturing order data for the selected component.

Prompts

Use the MO Component Shortage report prompts to configure the report.



Prompt Message	Description
Company	Select one company from the list.
Primary grouping	Select the option to indicate how you want the components to be sorted and grouped. The available options are the following: ▪ Part ID ▪ Project ▪ Manufacturing Order
Limit Warehouse(s)	In the **Keywords** field, enter a portion of one or more warehouse IDs to be added on the report and then click . To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit MO Number(s)	In the **Keywords** field, enter a portion of one or more MO numbers to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
MO Status	Select the status of the MO you want to include on this report. The available options are the following: ▪ Planned ▪ Firm Planned ▪ Released ▪ In Shop All of the options are selected by default.
Limit Build-to Project(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more build-to project IDs to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit planner(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more planner IDs to add on the report.

Prompt Message	Description
	To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Part\Rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Netting Group(s)	Iin the **Keywords** field, enter a portion of one or more netting groups to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Buyer(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more buyer IDs to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Make/Buy	Select the option to indicate the component parts you want to include on this report. The available options are: ▪ **Make**: Manufactured ▪ **Buy**: Purchased Both options are selected by default.
Due Date	In the **From:** field, enter the due start date to use or click the calendar icon to select the date. In the **To:** field, enter the due end date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want any date filters to be applied. These are the default options.

MO Pick List Report

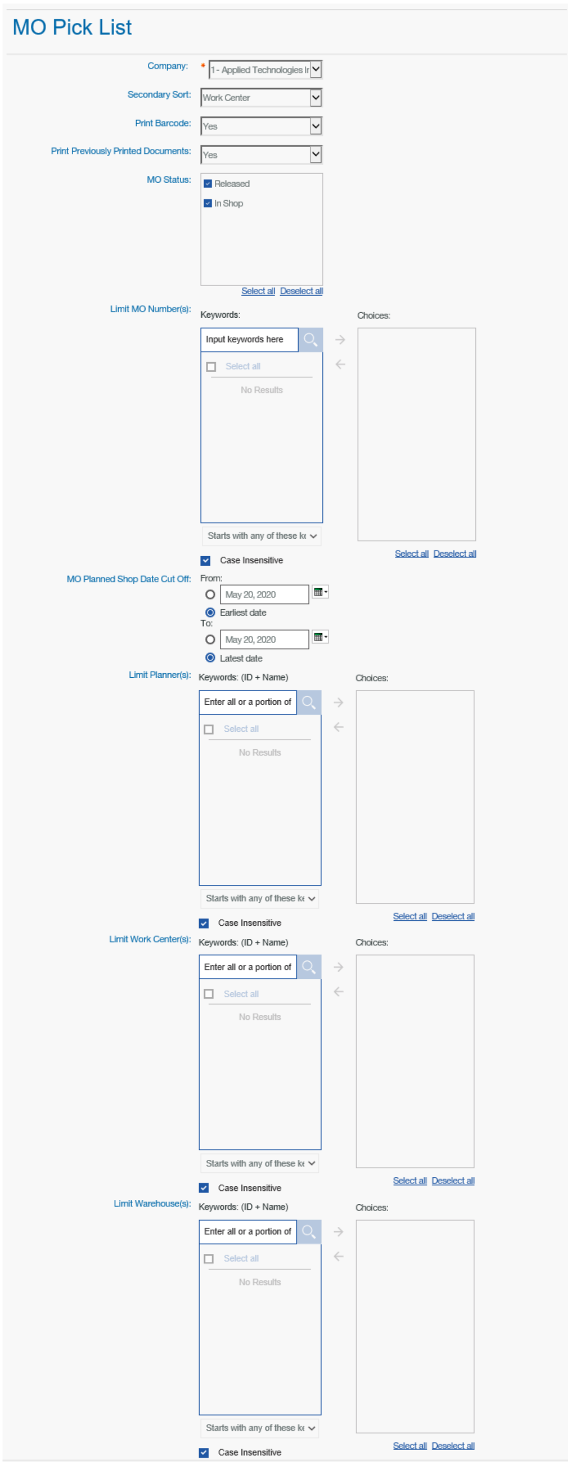
The MO Pick List report allows you to print the list of materials to be picked for a manufacturing order, the operations in the routings related to the manufacturing order, and the quantities completed, as well as the location of the parts.

You can choose to include barcode images for the MO number and work center.

> **Note:** Unless the barcode font is installed locally, as well as on the Cognos server, the barcode symbol will not be displayed when you view the report in HTML or Excel formats. This can only be viewed either in PDF or printed formats.

Prompts

Use the MO Pick List prompts to configure the MO Pick List report.



Prompt Message	Description
Company	Select one company from the list.
Secondary Sort	Select the secondary sorting criterion for the report. The available options are the following: ▪ Work Center ▪ Component Part ▪ Component Location ▪ Line Number ▪ Find Number
Print Barcode	Select the option to indicate if you want to print the barcode.
Print Previously Printed Documents	Select the option to indicate if you want to print previously printed documents.
MO Status	Select the status of the MO you want to include on this report. The available options are the following: ▪ Released ▪ In Shop All of the options are selected by default.
Limit MO Number(s)	In the **Keywords** field, enter a portion of one or more MO numbers to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
MO Planned Shop Date Cut Off	In the **From:** field, enter the start cutoff date to use, or click the calendar icon to select the date. In the **To:** field, enter the end cutoff date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want to apply any date filters. These are the default options.
Limit Planner(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more planners to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
Limit Work Center(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more work centers to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

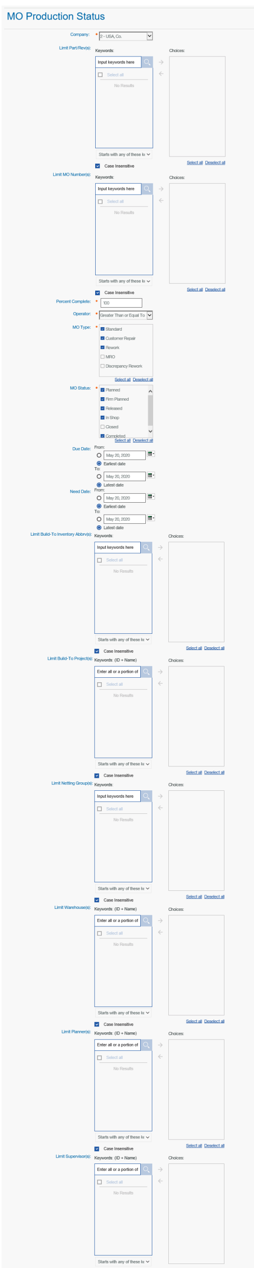
MO Production Status Report

The MO Production Status Report allows you to print information about manufacturing orders and the operations in the routings associated with the manufacturing order.

Prompts

Use the MO Production Status prompts to configure the MO Production Status report.



Prompt Message	Description
Company	Select one company from the list.
Limit Part\Rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit MO Number	In the **Keywords** field, enter a portion of one or more manufacturing order numbers to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Percent Complete	Enter the percentage of completion that you want to use as a filter for manufacturing orders in the report. For example, enter **100** if you want to include manufacturing orders that are 100 % completed.
Operator	Select the operator to use for the entered value in the **Percent Complete** prompt.
MO Type	Select the type of MO you want to include on this report. The available options are the following: ▪ Standard ▪ Customer Repair ▪ Rework ▪ MRO ▪ Discrepancy Rework
MO Status	Select the status of the MO you want to include on this report. The available options are the following: ▪ Planned ▪ Firm Planned ▪ Released ▪ In Shop ▪ Closed ▪ Completed Only the **Closed** option is not selected by default.

Prompt Message	Description
Due Date	In the **From:** field, enter the due date to use, or click the calendar icon to select the date. In the **To:** field, enter the end date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want to apply any date filters. These are the default options.
Need Date	In the **From:** field, enter the need start date to use, or click the calendar icon to select the date. In the **To:** field, enter the need end date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want to apply any date filters. These are the default options.
Limit Build-To Inventory Abbrv(s)	In the **Keywords** field, enter a portion of one or more build-to inventory abbreviations to to search on and select the abbreviations you want added to the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Build-To Project(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more build-to projects you want to add on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Netting Group(s)	In the **Keywords** field, enter a portion of one or more netting groups to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...**

Prompt Message	Description
	options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Planner(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more planners to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Supervisor(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more supervisors to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

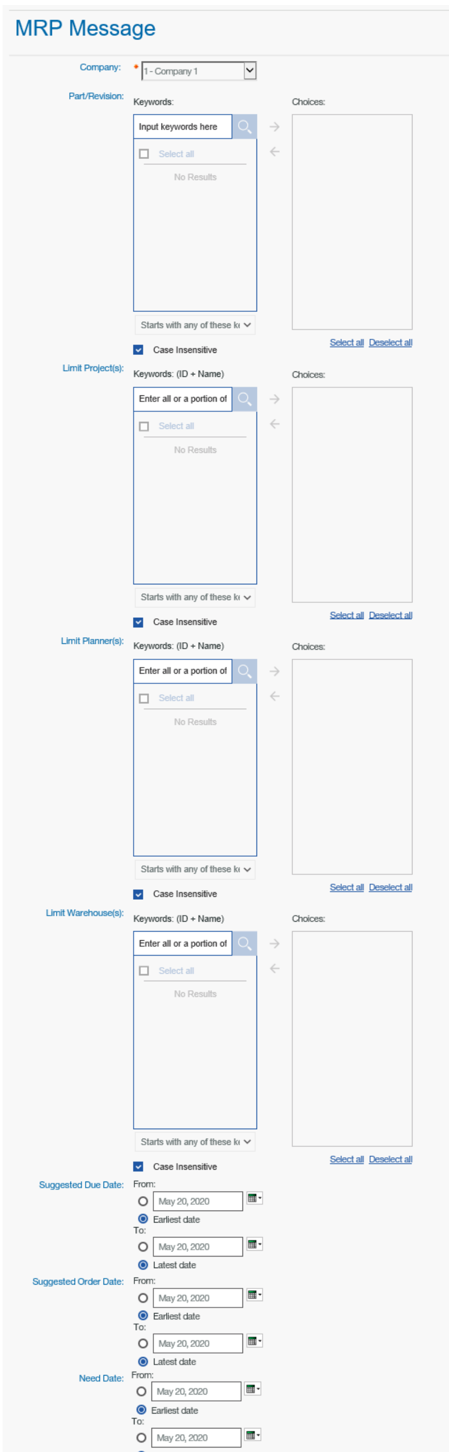
MRP Message Report

The MRP Message report allows you to print Material Requirements Planning (MRP) messages and use these to find potential problem areas by honing in on particular MRP action messages.

You can print messages for part/revision, projects, planners, and warehouses.

Prompts

Use the MRP Message prompts to configure the MRP Message report.



Prompt Message	Description
Company	Select a company from the list.
Part\Revision	In the **Keywords** field, enter a portion of one or more part/ revisions to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Project(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more projects to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Planner(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more planners to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Suggested Due Date	In the **From:** field, enter the suggested start date to use, or click the calendar icon to select the date. In the **To:** field, enter the suggested end date to use, or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want any date filters to be applied. These are the default options.
Suggested Order Date	In the **From:** field, enter the suggested order start date to use, or click the calendar icon to select the date. In the **To:** field, enter the suggested order end date to use, or click the calendar icon to select the date.

Prompt Message	Description
	Select **Earliest date** to indicate all dates or **Latest date** if you do not want any date filters to be applied. These are the default options.
Need Date	In the **From:** field, enter the suggested need start date to use or click the calendar icon to select the date. In the **To:** field, enter the suggested need end date to use or click the calendar icon to select the date. Select **Earliest date** to indicate all dates or **Latest date** if you do not want any date filters to be applied. These are the default options.

Summarized Bill of Material Report

The Summarized Bill of Material (BOM) report allows you to create a summarized listing of components for a given assembly.

This report allows you to select a range of assemblies.

You can include the first level, specified levels, or all levels of components of the assembly. You can use this report to print a summary of either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

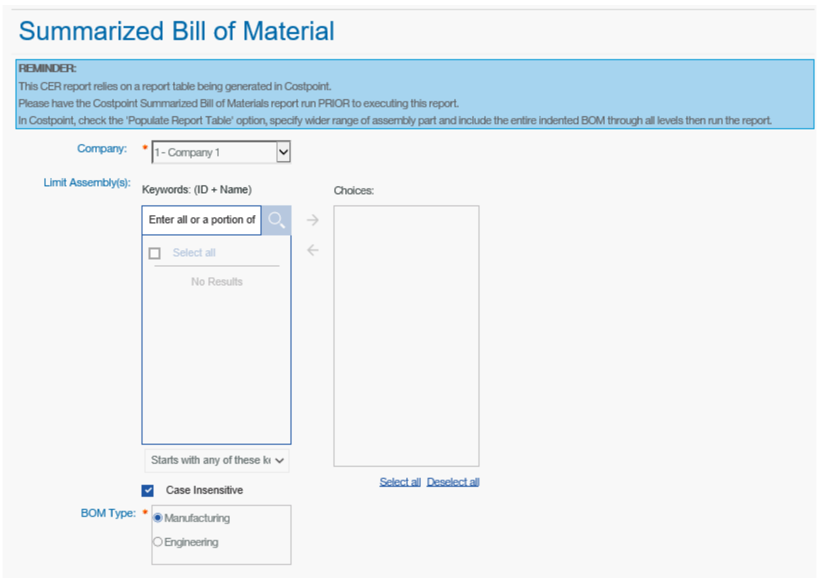
Note: This Costpoint BI report relies on a report table that is generated in Costpoint.

You have to run Costpoint's Print Summarized Bills of Material Report application prior to executing this report.

In Costpoint, when you run the Print Summarized Bills of Material Report application, you must select **Update Summarized Bills of Materials Report Table** on the Action menu to update the summarized BOM table.

Prompts

Use the prompts to configure the Summarized Bill of Material report.



Prompt Message	Description
Company	Select a company from the list.
Limit Assembly(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more assemblies to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following: ▪ **Manufacturing**: Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ▪ **Engineering**: Select this option to print the EBOM for the selected assembly part. You can select either standard or provisional components for this BOM type.

Sample Report

This is a sample Summarized Bill of Material report.

Materials

This chapter includes descriptions of the reports in the Materials folder.

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Materials framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_MaterialsModel.xlsx.

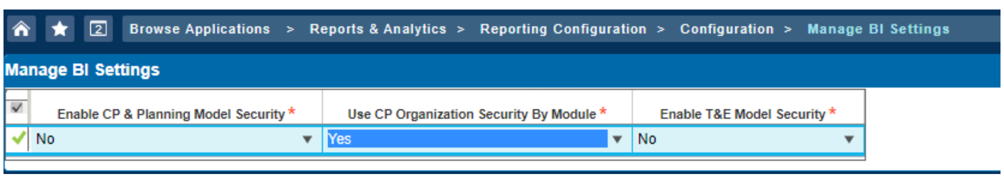
Model Security - Materials

The Materials data model includes Costpoint Organizational Security and Part Security.

Organizational Security

If Organizational security is turned on and set up in Costpoint with security profiles, groups, and users under **Admin** » **Security**, then it can be used in the Costpoint Business Intelligence models. To do so, select **Yes** in the **Use CP Organization Security By Module** field in **Manage BI Settings (BIMCERSETTINGS)**.

Organizational Security will prevent users from seeing data that is related to unauthorized organizations on any standard or custom reports or dashboards.



Part Security

There is no specific BI setting for Part Security, so if Part security is turned on and set up in **Manage Security Groups (PDMSCGRP)** in Costpoint, then an unauthorized user will not have visibility into reports or data that contain unauthorized parts.

If the report contains a parent record with unauthorized parts linked to it, such as a build part or requirement on a Manufacturing Order, build part or components on a Bill of Materials, then the entire parent record will not be visible to the user.

If the report contains unauthorized part records, such as a Part List or Stock Status, then those individual Part records will be suppressed from the report.

A warning displays on the prompt page of each report to let users know that Part Security will suppress report records with parts that are not authorized.

Materials Reports

The Materials area includes ten report templates that you can customize and use.

These reports are:

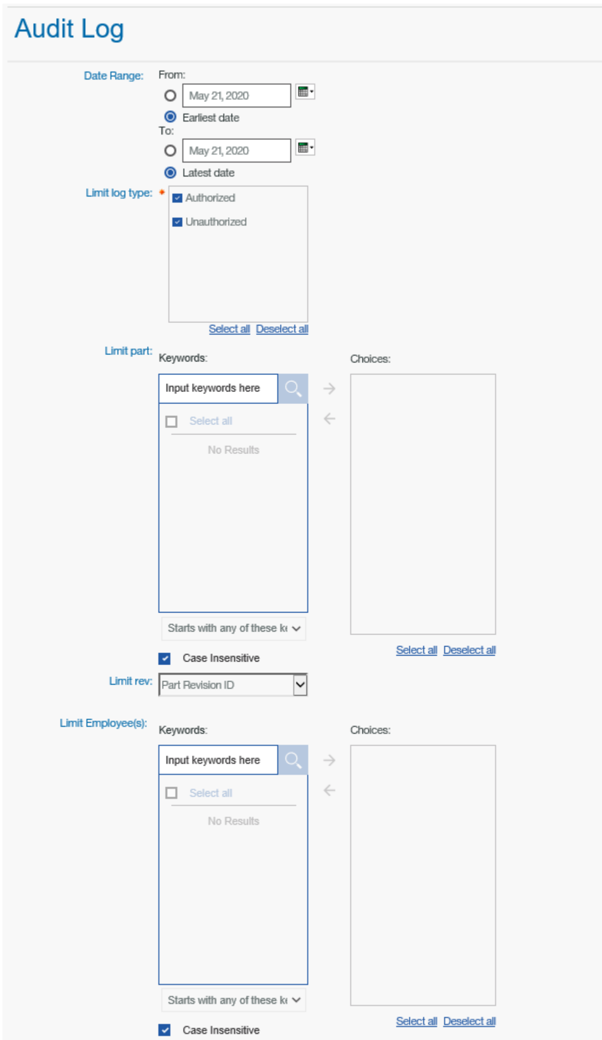
- Audit Log
- Goods List
- Indented Bill of Materials
- Item Vendors - Drill Thru
- Parts List
- Sales Order Status
- Services List
- Shipped Revenue
- Stock Status
- Summarized Bill of Material

Audit Log Report

The Audit Log report shows the audit log for part data security.

Prompts

These are the Audit Log prompts.



Prompt Message	Description
Date Range	Select the start date for the date range that will be included in the report. In the **From:** field, enter the start date assigned to audit logs or click the calendar icon to select the date. In the **To:** field, enter the end date assigned to audit logs or click the calendar icon to select the date. You can opt to select the **Earliest date** or the **Latest date** possible for the audit log dates.

Prompt Message	Description
Limit log type	Select the log type to be included in the report which can be: ▪ Authorized ▪ Unauthorized
Limit part	In the **Keywords** field, enter a portion of one or more parts to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit rev	Select a revision from the dropdown list.
Limit employee(s)	In the **Keywords** field, enter a portion of one or more employees to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report

This is a sample Audit Log report.

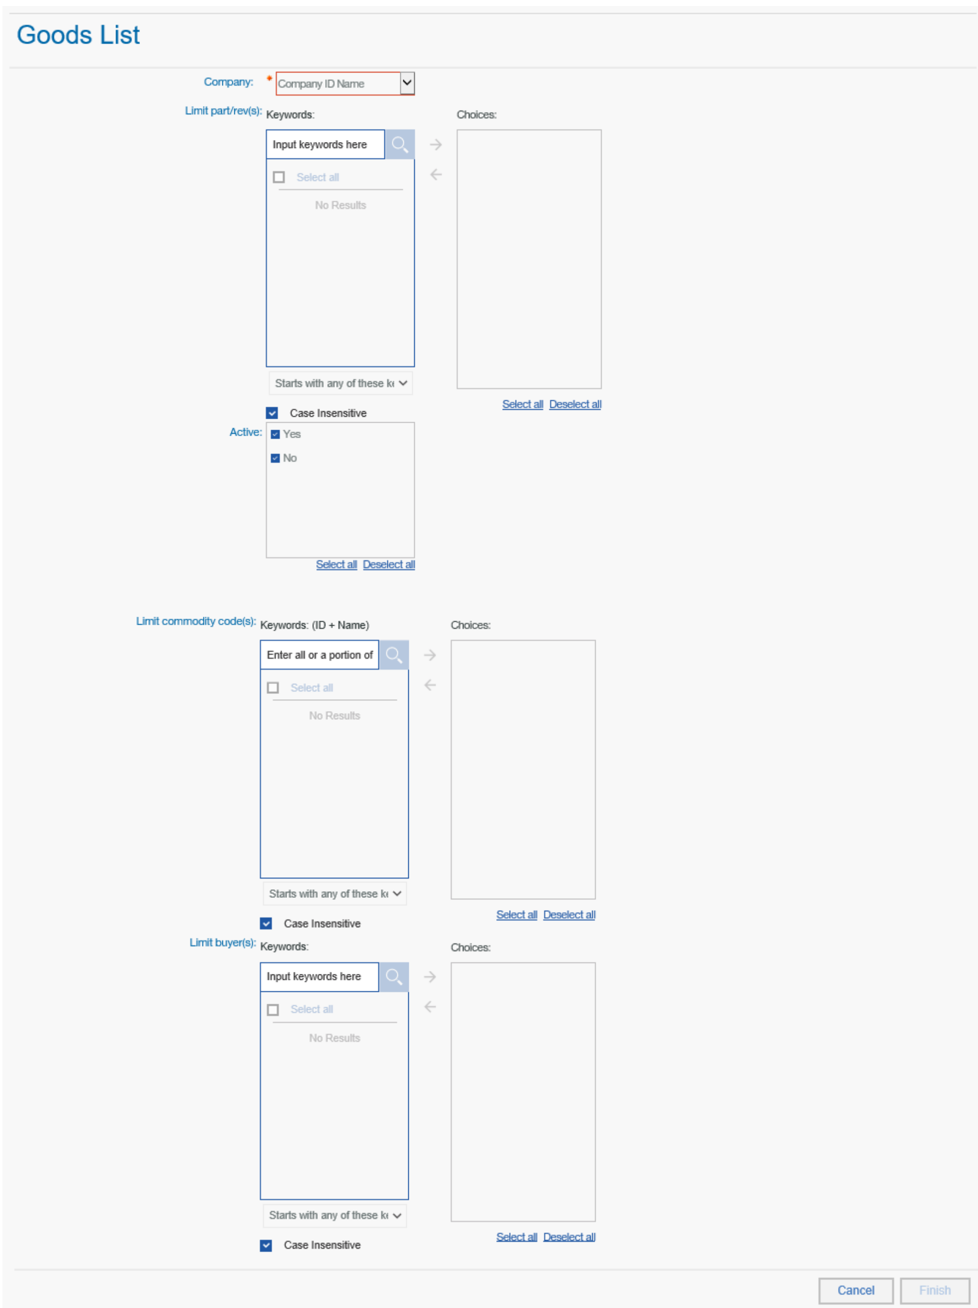
Goods List Report

The Goods List report allows you to generate a list of items that are categorized as goods.

Prompts

Use the Goods List prompts to configure the Goods List report..



Prompt Message	Description
Company	Select a company from the list.
Limit part\rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Active	Select the option to indicate whether or not the item is active. The **Yes** and **No** options are both selected as a default.
Limit commodity code(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more commodity code IDs to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit buyer(s)	In the **Keywords** field, enter a portion of one or more buyers to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Indented Bill of Materials Report

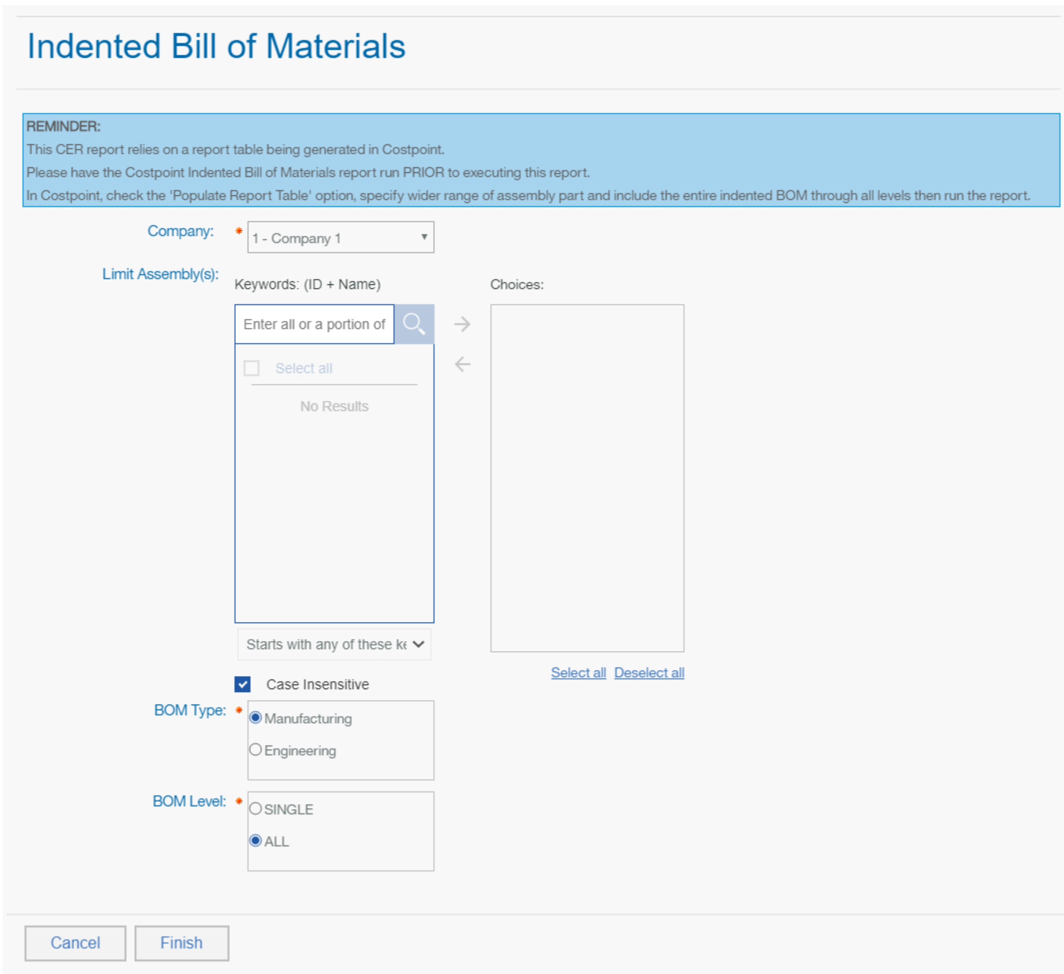
The Indented Bill of Material report allows you to create a listing of indented Bill of Material (BOM) for a selected range of assembly part numbers.

You can include the first-level components of the assembly or the entire indented BOM through all levels. You can use this report to print either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

> **Attention:** This report relies on a report table that is generated in Costpoint. You have to run Costpoint's Print Indented Bills of Material Report application prior to executing this report.
>
> In Costpoint, when you run the Print Indented Bills of Material Report application, you must select **Update Indented Bills of Materials Report Table** on the Action menu to update the indented BOM table.

Prompts

Use the Indented Bill of Material prompts to configure the report.



Prompt Message	Description
Company	Select one company from the list.
Limit Assembly(s)	In the **Keywords** field, enter a portion of one or more assemblies to add on the report and then click . To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following:

Prompt Message	Description
	■ **Manufacturing:** Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ■ **Engineering:** Select this option to print the EBOM for the selected assembly part. You can select either standard or provisional components for this BOM type.
Case Insensitive	Select this check box for BI to ignore the text case when searching keywords.
BOM Level	Select the BOM level at which you want the report printed. The available options are: ■ **SINGLE:** Select this option to include level 1 in the report. ■ **ALL:** Select this option to include all levels in the report.

Sample Report

This is a sample Indented Bill of Materials report.

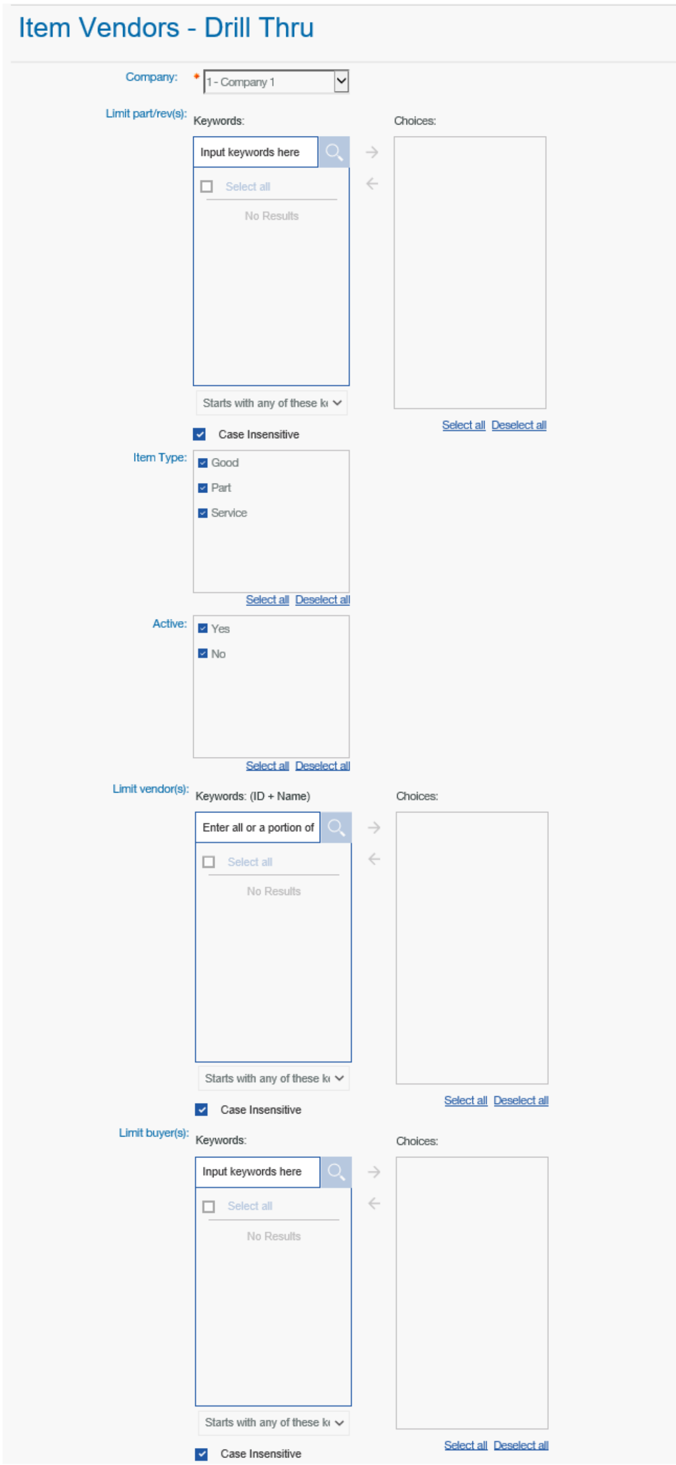
Item Vendors Report

The Item Vendors report allows you to create a listing of vendors that are assigned to items.

You can print this report for parts, services, or goods.

Prompts

Specify the prompts for the Item Vendors List.



Prompt Message	Description
Company	Select one company from the list.
Limit part/rev(s)	In the **Keywords** field, enter a portion of one or more part/revisions to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Item Type	Select the option to indicate the item type you want to include on this report. The available options are the following: ▪ Good ▪ Part ▪ Service All options are selected by default.
Active	Select the option to indicate whether or not the item is active. The **Yes** and **No** options are both selected as a default.
Limit vendor(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more vendor IDs to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit buyer(s)	In the **Keywords** field, enter a portion of one or more buyers to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

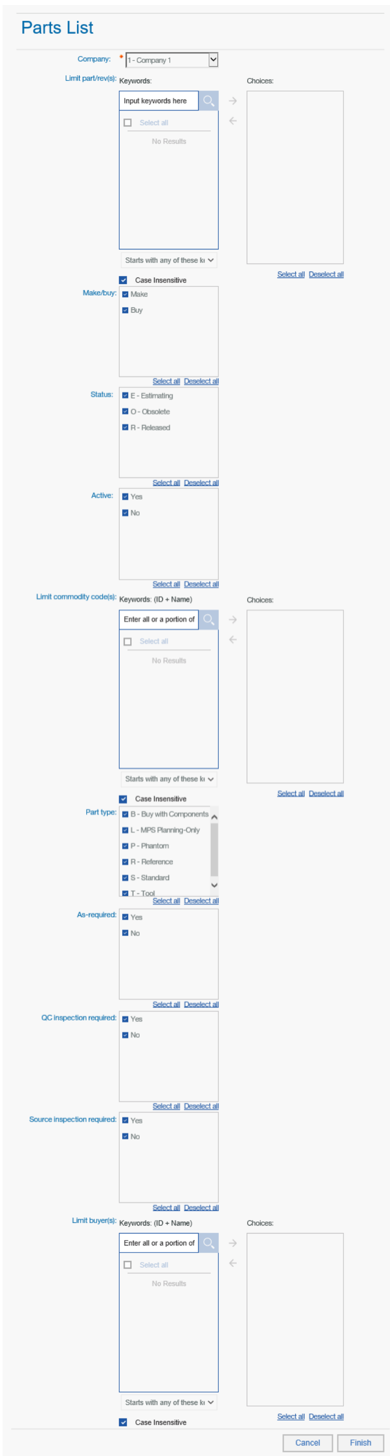
Parts List Report

The Parts List report allows you to generate a list of items that are categorized as parts.

Prompts

Select prompt values before running the Parts List report.



Prompt Message	Description
Company	Select one company from the list.
Limit part/rev(s)	In the **Keywords** field, enter a portion of one or more part/ revisions to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Make/buy	Select the option to indicate the component parts you want to include on this report. The available options are: ▪ **Make**: Manufactured ▪ **Buy**: Purchased Both options are selected by default.
Status	Select the status(es) of the parts you want to include on this report. The available options are the following: ▪ **E**: Estimating ▪ **O**: Obsolete ▪ **R**: Released All options are selected by default.
Active	Select the option to indicate whether or not the item is active. The **Yes** and **No** options are both selected as a default.
Limit commodity code(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more commodity code IDs to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Part type	Select the option to indicate the component part type you want to include on this report. The available options are the following: ▪ **B**: Buy with Components ▪ **L**: MPS Planning-Only ▪ **P**: Phantom ▪ **R**: Reference

Prompt Message	Description
	■ **S**: Standard ■ **T**: Tool All options are selected by default.
As-required	Select the option to indicate which component parts you want to include on this report, based on whether or not the quantity per component part is flagged as "as required." Selecting **No** will include component parts whose exact quantities have been specified. Both options are selected by default.
QC inspection required	Select the option to indicate which component parts you want to include on this report, based on whether or not the parts require inspection by Quality Control. Both options are selected by default.
Source inspection required	Select the option to indicate which component parts you want to include on this report, based on whether or not the parts require source inspection.. Both options are selected by default.
Limit buyer(s)	In the **Keywords: (ID + Name)** field, enter a portion of one or more buyer IDs to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Stock Status Report

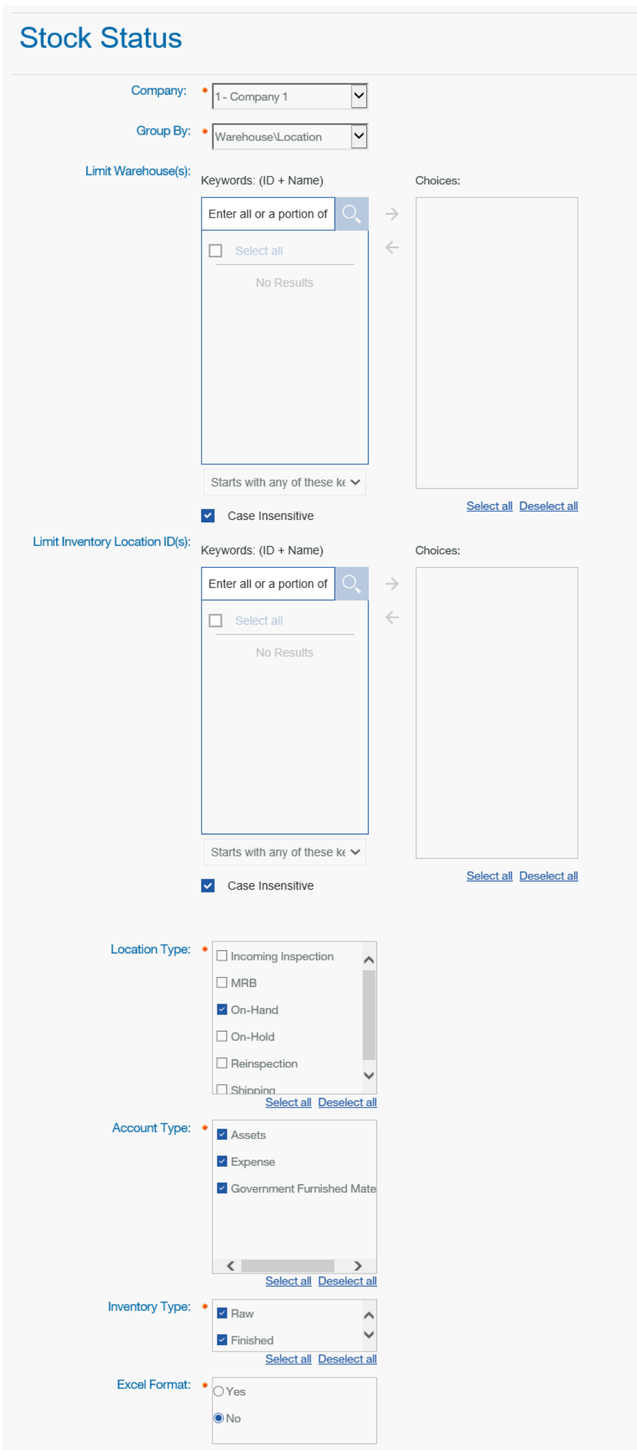
The Stock Status report provides a listing of inventory sorted by the following combinations: warehouse/location, project/part revision, inventory abbreviation/part revision, or part/revision/project.

This report is generated in real-time. The Excel output for the report excludes headers, footers, subtotals, and so on, making the data easier to manipulate. A drill-thru report is available to view serial/lot tracking information.

> **Note:** You can create Stock Status reports that can be exported to PDF and saved to a specified location. These jobs can be scheduled at recurring intervals and run on-demand. The exported PDF files contain date/time stamp information

Prompts

Use the Stock Status prompts to configure the Stock Status report.



Prompt Message	Description
Company	Select one company from the list.
Group By	Select the option to use for the report from the drop-down list. The options available are the following: ▪ **Warehouse\Location**: Select this option to print the report by warehouse and location. This is the default option. ▪ **Project\Part Rev**: Select this option to print the report by project and part/revision. ▪ **Inventory Abbreviation Code\Part Rev**: Select this option to print the report by inventory abbreviation code and part/revision. ▪ **Part Rev\Project**: Select this option to print the report by part/revision and project.
Limit Warehouse(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more warehouses, projects, inventory abbreviation codes, or part/revisions to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Limit Inventory Location ID(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more inventory locations to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Location Type	Select the location type you want to include on the report. The location type is a system-defined code used to classify inventory records by locations. These system-defined location types are the following: ▪ **Incoming Inspection**: Select this option to indicate that this location contains parts that have been received, but have not been accepted or rejected. ▪ **Materials Review Board (MRB)**: Select this option to indicate that this location contains parts that are within quality control, and that the items do not meet the

Prompt Message	Description
	drawings. The items may be kept as they are, disposed, or returned to the vendor. ▪ **On-Hand**: Select this option to indicate that this location contains parts that should be counted as available. This is the default option. ▪ **On-Hold**: Select this option to indicate that this location contains parts that should not be counted as available. ▪ **Reinspection**: Select this option to indicate that this location contains parts that have already been accepted or rejected but need to go back through that process. ▪ **Shipping**: Select this option to indicate that this location contains parts that have been removed from stock for shipping. The **Shipping** type and the **On-Hold** type are used in a similar fashion. Location types that are not selected do not print.
Account Type	Select the account type(s) of the inventory records you want to include on the report. The account types are the following: ▪ Assets ▪ Expense ▪ Government Furnished Materials You can select more than one account type by pressing and holding the CTRL key and selecting the options you want to include on the report. Account types that are not selected do not print. All account types are selected by default.
Inventory Type	Select the inventory type of the inventory records you want to include on the report. The inventory types are the following: ▪ Raw ▪ Finished Both inventory types are selected by default.
Excel Format	Select the option to indicate if you want to produce a report version that has no headers, footers, and subtotals for easier sorting and manipulation. The default option is **No**.

Summarized Bill of Material Report

The Summarized Bill of Material (BOM) report allows you to create a summarized listing of components for a given assembly.

This report allows you to select a range of assemblies.

You can include the first level, specified levels, or all levels of components of the assembly. You can use this report to print a summary of either manufacturing bills of material (MBOMs) or engineering bills of material (EBOMs).

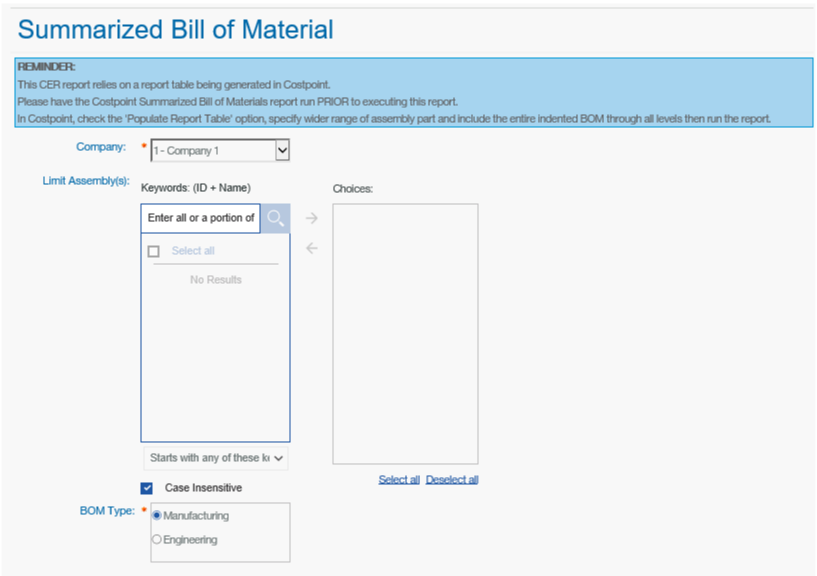
> **Note:** This Costpoint BI report relies on a report table that is generated in Costpoint.

You have to run Costpoint's Print Summarized Bills of Material Report application prior to executing this report.

In Costpoint, when you run the Print Summarized Bills of Material Report application, you must select **Update Summarized Bills of Materials Report Table** on the Action menu to update the summarized BOM table.

Prompts

Use the prompts to configure the Summarized Bill of Material report.



Prompt Message	Description
Company	Select a company from the list.
Limit Assembly(s)	In the **Keywords: (ID + Name)** field, enter a portion or the entire ID of one or more assemblies to be added on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
BOM Type	Select which type of bills of material (BOM) you want to include on this report. The available options are the following: ▪ **Manufacturing**: Select this option to print the MBOM for the selected assembly part. You can only select standard components for this BOM type. ▪ **Engineering**: Select this option to print the EBOM for the selected assembly part. You can select either standard or provisional components for this BOM type.

Procurement

This chapter includes descriptions of the dashboard and reports in the Procurement folder.

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Procurement framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_ProcurementModel.xlsx.

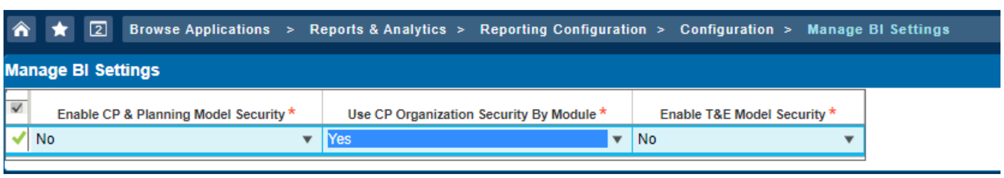
Model Security

The Procurement data model includes Costpoint Organizational Security and Part Security

Organizational Security

If Organizational security is turned on and set up in Costpoint with security profiles, groups, and users under **Admin** » **Security**, then it can be used in the Costpoint Business Intelligence models. To do so, select **Yes** in the **Use CP Organization Security By Module** field in **Manage BI Settings (BIMCERSETTINGS)**.

Organizational Security will prevent users from seeing data that is related to unauthorized orgs on any standard or custom reports or dashboards.



Part Security

There is no specific BI setting for Part Security, so if Part security is turned on and set up in **Manage Security Groups (PDMSCGRP)** in Costpoint, then an unauthorized user will not have visibility into reports or data that contain unauthorized parts.

If the report contains a parent record with unauthorized parts linked to it, such as a build part or requirement on a Manufacturing Order, build part, or components on a Bill of Materials, then the entire parent record will not be visible to the user.

If the report contains unauthorized part records, such as a Part List or Stock Status, then those individual Part records will be suppressed from the report.

A warning displays on the prompt page of each report to let users know that Part Security will suppress report records with parts that are not authorized.

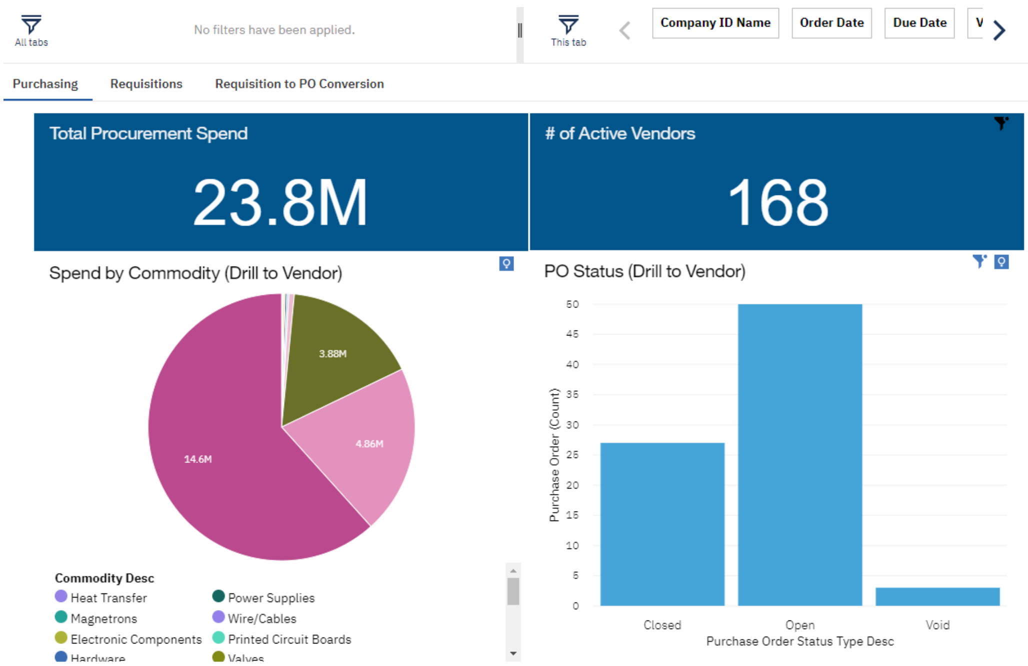
Procurement Dashboards

The template dashboards for Procurement allow you to create and share interactive analytical dashboards that use data from the Procurement package.

Procurement Dashboard (Header or Line Level Approval)

The Procurement dashboard displays analytics for both purchasing and procurement planning with requisitions.

The data provided is based on the Requisition Approval Assignments (Header or by Line) that are set in the Procurement Planning module.



The Procurement dashboard includes three tabs.

Purchasing Tab

- **Total Procurement Spend:** This report displays the total amount spent on procurement, organized by purchase order (PO) type. This information helps you track your spending for the year, whether you are above or below budget, and if you need to make adjustments.
- **# of Active Vendors:** This report displays the total number of vendors with an Active status, by Company ID. This number adjusts as you interact with other areas on the dashboard, providing visibility into your vendor count for multiple procurement scenarios.
- **Spend by Commodity (Drill to Vendor):** This report displays the total purchases by commodity code. To see which vendors you are using the most, you can drill through to view each commodity spend by vendor.

  Note: Lines without commodity are excluded. Alternatively, you can remove this filter.

- **PO Status (Drill to Vendor):** This report displays the number of purchase orders that are closed, open, and void. You can modify this view to show other PO statuses. Drill through to see the status count for an individual vendor.

Requisitions Tab

- **Requisitions Awaiting Approval by Approver:** This report displays the requisitions awaiting approval. Viewing requisitions that are In-Approval by the current approver can help you understand where the approval process has stalled and where to take action to move the requisitions through the pipeline.

  The drill-thru detail report allows you to select one or more approvers and see a list of requisitions that are in their bucket for approval. It also shows how many days the requisitions have been awaiting approval.
- **Requisition Status by Requisitioner:** This report displays a requisition status count for each requisitioner. The counts are for approved, pending, rejected, and in approval statuses.

Requisition to PO Conversion Tab

- **Approved Requisitions Awaiting PO Conversion by Buyer (Drill Thru to Detail):** This report displays the number of requisitions that have been approved but are awaiting conversion to a PO. This information is shown for each buyer so that you can analyze buyer performance.

  The drill thru detail report shows the date the requisition was approved, the number of days since approval, the target date to create the PO, and the number of days until or past the target release or place date. The number of unassigned requisitions are also provided and included in the drill thru report.

Procurement Reports

The Procurement folder contains five reports that use the Procurement framework model.

These reports are:

- Buyer Requisition Worksheet
- PO Commitments Detail
- Purchase Order
- Requisitions
- Requisitions Pending

Buyer Requisition Worksheet

The Buyer Requisition Worksheet provides buyers with the critical information needed to make purchasing decisions.

Use this worksheet to view past purchasing activity and approved vendor information for items listed on approved requisitions.

Prompts

Complete the required prompts to run the Buyer Requisition Worksheet.

Prompt Message	Description
Company	Select the company to use when running the report.
Primary group	Select the primary group to sort on: ▪ Buyer ▪ Item ▪ Requisition
Requisition status	Select the status of the requisitions to include on the report: ▪ Approved ▪ In Approval ▪ Pending
Number of PO lines to display	Enter the number of purchase order lines to display.
Number of vendor quote lines to display	Enter the number of vendor quote lines to display.
Number of RFQ lines to display	Enter the number of RFQ lines to display.
Exclude items older than	Enter the date to exclude older objects.
Select one or more requisitions	Iin the **Keywords** field, enter a portion of one or more requisition IDs and click to return requisitions to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more buyers	In the **Keywords** field, enter a portion of one or more buyer IDs and click to return buyers to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Include requisition lines with no items	Select whether or not to include requisition lines with no items.

PO Commitments Detail Report

The PO Commitments Detail report provides details of the purchase order commitments shown on the Project Status Report and serves as a drill-thru from that report.

You can run this report as a stand-alone report or as a drill-thru target from other reports.

Before You Run This Report

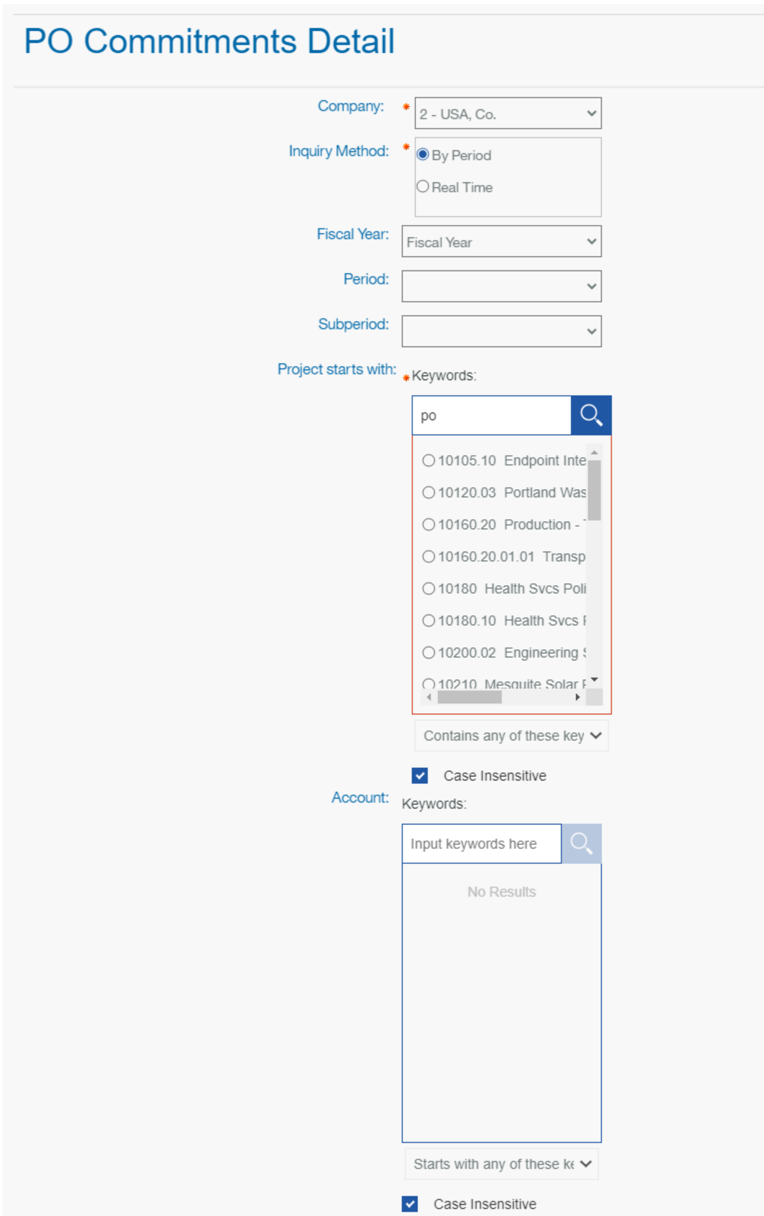
You must run **Print/Compute Purchasing Commitments** in Costpoint before running the Purchase Order Commitments Detail report.

The following options are available in the Compute/Print Purchasing Commitments screen in Costpoint:

- **Real Time**: If this option is selected, the commitments data is stored in the PO_RT_COMMIT_SUM and PO_RT_COMMIT_DETL tables. The report includes all transactions regardless of the transaction dates, so you do not need to enter prompt information for fiscal year, period, or subperiod.
- **By Open Period**: If this option is selected, the commitments data is stored in the PO_COMMIT_SUM and PO_COMMIT_DETL tables. The report calculates by fiscal year, period, and subperiod, and you must enter information for these prompts, which display when you select a company.

Prompts

Select values for the required prompts to run the PO Commitments Detail report.



Prompt Message	Description
Company	Select the company to include in the report.
Inquiry Method	Select **By Period** to show commitments for the fiscal year, period, and subperiod entered in the prompts. Use this option if

Prompt Message	Description
	the Print/Compute Purchasing Commitments was calculated By Period End Date. Select **Real Time** to show commitments for all purchase requisition/purchase order activity in Costpoint, regardless of the transaction dates. Use this option if the Print/Compute Purchasing Commitments was calculated by Real Time.
Fiscal Year	Enter the fiscal year to use for the report. This option displays only if you selected**By Period** for the **Inquiry Method** prompt.
Period	Select the period to use for the report. This option displays only if you selected **By Period** for the **Inquiry Method** prompt.
Subperiod	Select the subperiod to use. This option displays only if **By Period** is selected for the **Inquiry Method** prompt.
Project starts with	In the **Keywords** field, enter a portion of one or more project IDs and click **Search** to list projects to include on the report. Then, select a project. To narrow the search, select an option in the dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.
Account	In the **Keywords** field, enter a portion of one or more account IDs and click to list accounts to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Note: To optimize the display of project IDs in the **Project starts with** field, this prompt's screen limits the number of project IDs returned to 1000. Because of this, you should enter as much of the project ID as possible when you search for projects. If your search is too general, the projects you want may not be included in the 1000 that are returned.

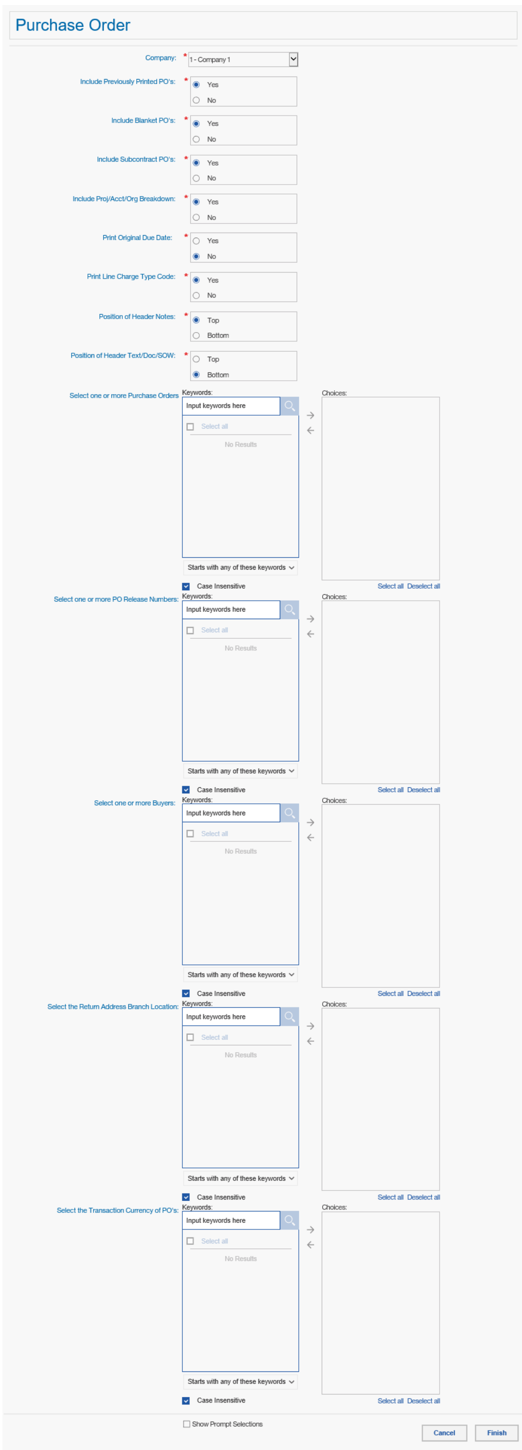
Purchase Order Report

The Purchase Order report uses a basic purchase order format.

This report provides the flexibility to select the additional information needed from the header and line levels to print on the report. The Purchase Order report is written with US dollars as the currency.

Prompts

Select values for the Purchase Order prompts to run the report.



Prompt Message	Description
Company	Select the company to use to run the report.
Include Previously Printed PO's	Select an option to specify whether or not POs that have been printed before will be included in the report.
Include Blanket PO's	Select an option to specify whether or not blanket POs will be included in the report.
Include Subcontract PO's	Select an option to specify whether or not subcontract POs will be included in the report.
Include Project/Acct/Org Breakdown	Select an option to specify whether or not the project account organization breakdown will be included in the report.
Print the Original Due Date	Select an option to specify whether or not the original due date will be printed.
Print Line Charge Type Code	Select **Yes** or **No** to specify whether the line charge type code will be printed.
Position of Header Notes	Specify where to place the header notes on the report. Select **Top** or **Bottom**.
Position of Header Text/Doc/SOW	Specify where to place the header on the report. Select **Top** or **Bottom**.
Select one or more Purchase Orders	In the **Keywords** field, enter a portion of one or more purchase order IDs and click **Search** to list purchase orders to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more PO Release Numbers	In the **Keywords** field, enter a portion of one or more PO release numbers and click to list PO release numbers to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select one or more Buyers	In the **Keywords** field, enter a portion of one or more buyer IDs and click to list buyers to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
Select the Return Address Branch Location	In the **Keywords** field, enter a portion of one or more address codes and click to list addresses to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select the Transaction Currency of PO's	In the **Keywords** field, enter a portion of one or more transaction currencies and click to list purchase orders to include on the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

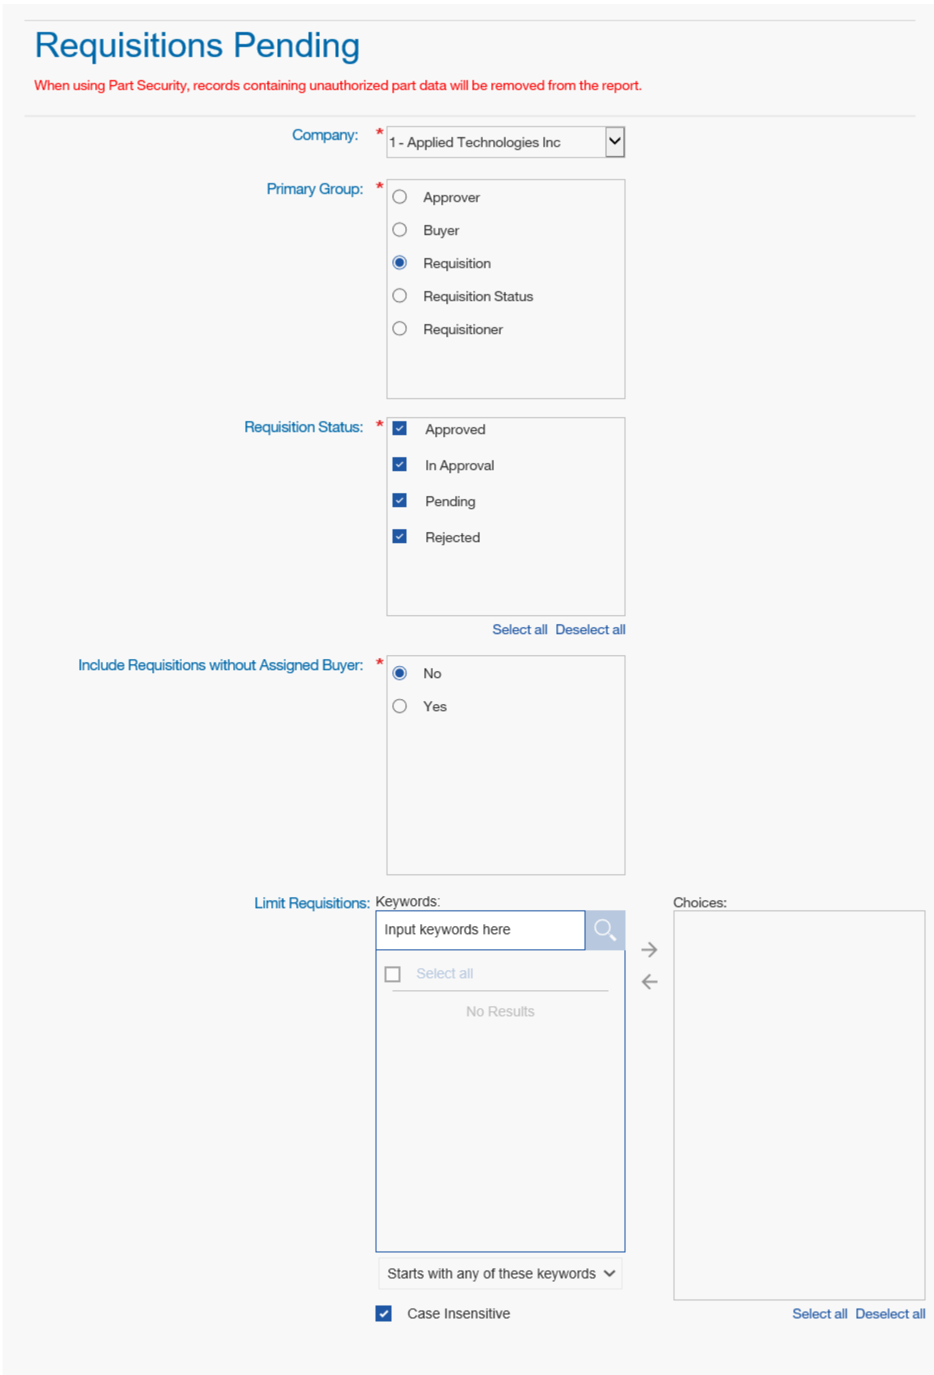
Requisitions Pending Report

The Requisitions Pending report gives buyers and purchasing managers the ability to see requisitions for which purchase orders have not yet been generated.

The report includes requisitions that are in a pending, in-approval, approved, or rejected status.

Prompts

Use the prompts to select data for the Requisitions Pending report.



Prompt Message	Description
Company	Select the company to use when running the report.
Primary Group	Select the primary grouping for the report: ▪ Approver ▪ Buyer ▪ Requisition ▪ Requisition Status ▪ Requisitioner
Requisition status	Select the statuses of the requisitions to include: ▪ Approved ▪ In Approval ▪ Pending ▪ Rejected
Include Requisitions without Assigned Buyer	Select **Yes** to include only those requisitions without an assigned buyer.
Limit Requisitions	Enter a portion of one or more IDs in the **Keywords** field and click to narrow the primary group you selected in the previous field. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Procurement Drill-Thru Reports

Certain reports are drill-thru only, meaning they are not intended to be run on their own, but accessed from the links in other parent reports.

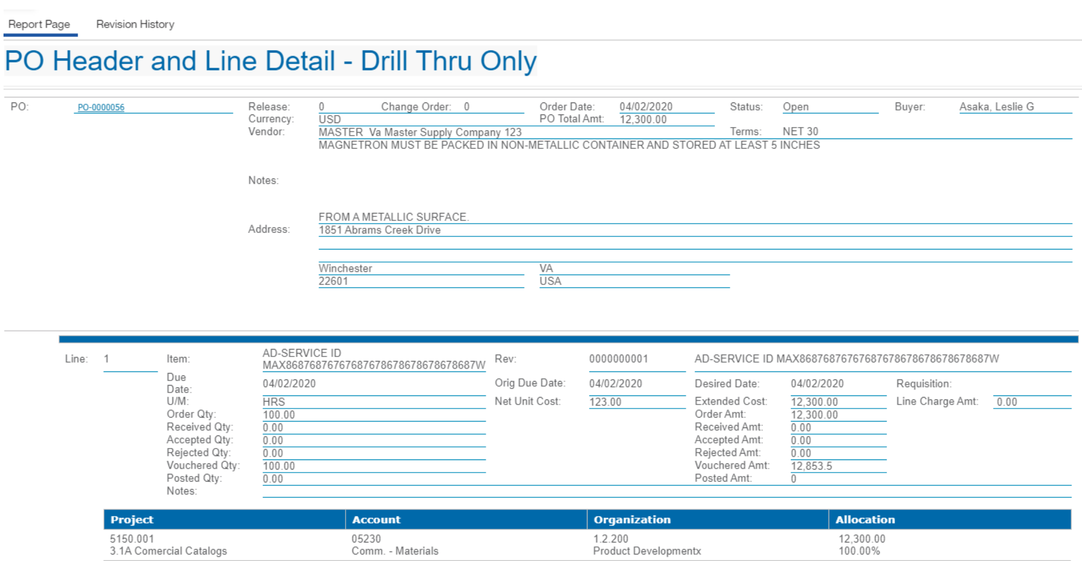
The necessary information that is retrieved to run the report is based on the parent report, such as the Requisitions Pending report. No input is required.

PO Header and Line Detail - Drill Thru Only

The PO Header and Line Detail report shows detailed information for a specific purchase order.

This report displays information from the Purchase Order header, Purchase Order line, and Purchase Order line account for a selected purchase order. Use this report as a drill-through from the Requisitions report.

This is a sample PO Header and Line Detail Drill-Thru report.



Requisition Detail

The Requisition Detail report displays detailed information for a specific purchase requisition.

Information from the requisition header, requisition line, and requisition line account tables is displayed for a selected requisition or requisition line. This report can be used as a drill-thru target from other reports, such as the Requisitions report and Requisitions Pending report, but not as a standalone report.

This is a sample Requisition Detail - Drill Thru Only report.

Planning

The Planning folder includes dashboards, packages, and report templates that cater to Costpoint Planning users.

Unlike the reports found in the Costpoint Business Intelligence for Budgeting and Planning folder, the report templates in Planning are interactive which you can modify during run-time.

Update Reporting Tables

You need to turn on the Update feature for populating the reporting tables for Costpoint Budgeting and Planning.

With this feature turned on:

- When you commit a budget, the tables populate with updated Budget data only.
- When you run a refresh process, the tables populate with Actuals and Budget data that has not been updated.

Enable Update of Reporting Tables

To populate the reporting tables in Planning, configure the Update CER Reporting Tables option in the Planning configuration settings.

To enable the feature in updating reporting tables for Costpoint Planning:

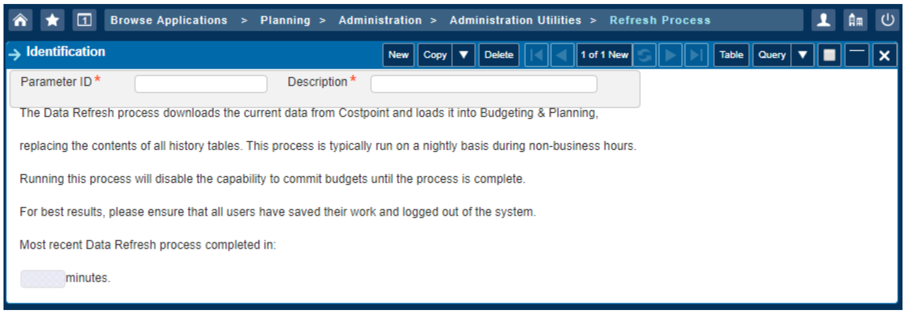
1. In Costpoint, launch the Configuration Settings (MAM10) application found in **Planning** » **Administration** » **Administration Controls** » **Configuration Settings (MAM10)**
2. Open the **General** tab.
3. Select **All Projects** or **Active Projects** in the **Update CER Reporting Tables** drop-down list.
4. **Save**.

Refresh Process

The Data Refresh process downloads the current data from Costpoint and loads it into Budgeting and Planning.

This process is usually scheduled to run nightly when Planning is used on a regular basis. To perform an off-schedule refresh, you can use the Refresh Process utility in the Planning module.

Note: Refer to the Costpoint online Help for more information about running the Refresh Process utility.



Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Planning framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_PlanningModel.xlsx .

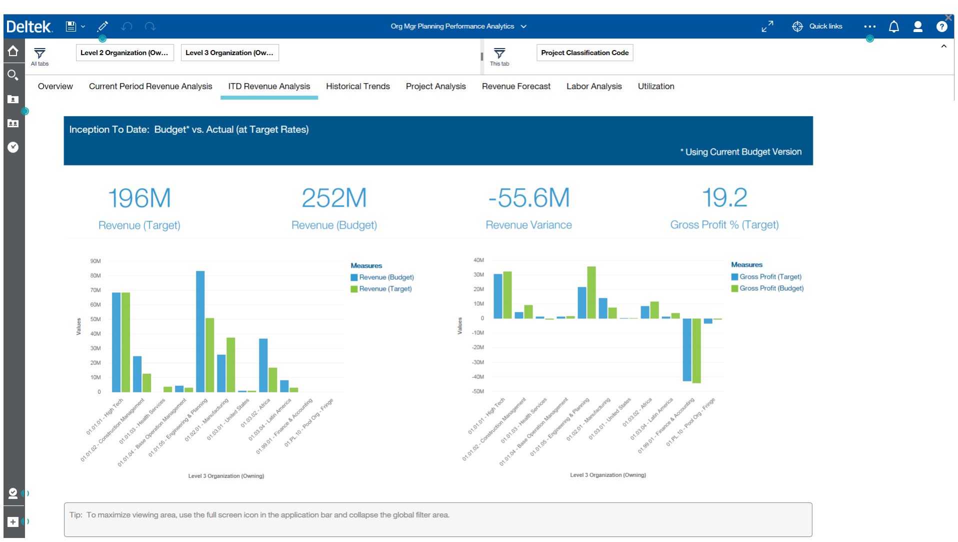
Planning Dashboards

The template dashboards for Planning allow you to create and share interactive analytical dashboards that use data from the Project Planning Analysis package.

Org Mgr Planning Performance Analytics

The Org Mgr Planning Performance Analytics Dashboard provides consolidated metric views of the Planning Domain, allowing you to view project performance, utilization, historical trends, and varying analysis.

This dashboard has 8 tabs that cover different views of the organization data.



- **Overview** - This tab shows year-to-date information based on the current year flag, so it will always show the YTD information through the current month which is controlled by your Costpoint Business Intelligence Administrator. The measures include Revenue, Profit, and Profit % as well as charts that compare actual revenue (at target rates) versus budgets.

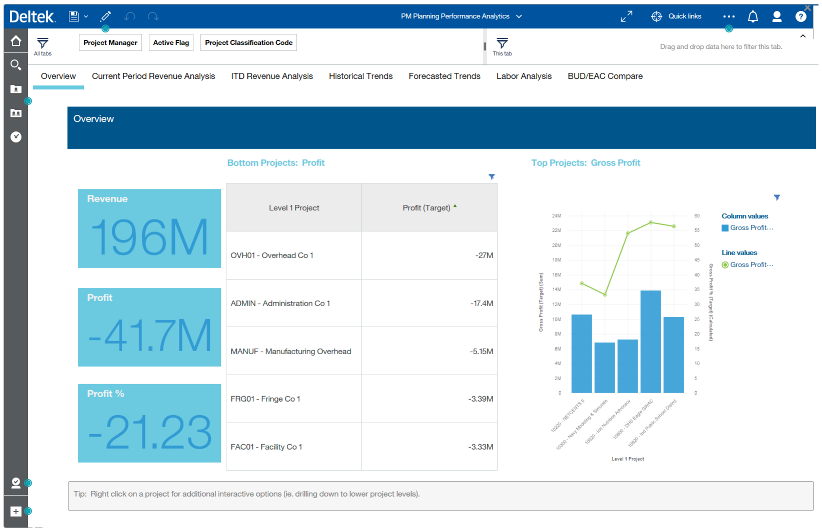
- **Current Period Review Analysis** - This tab focuses on the current period performance showing revenue versus budget and gross profit (that is, revenue less direct expenses). Tab specific filters include Level Organizations (Owning), Current Period Flag, and Project Classification Code (Common Inventory, Direct, Inter-Company, and Work in Process).
- **ITD Revenue Analysis** - This tab shows Inception To Date revenue for all projects to get an idea of historical performance showing revenue versus budget and gross profit. The dashboard is filtered for Direct Projects only. Note that all projects are shown whether Active or Inactive.
- **Historical Trends** - This tab shows comparison trends of actual versus current budget for each Organization at Level 3.
- **Project Analysis** - This tab goes deeper than the organization level to show project performance by Project Manager and percentage completion for the largest 10 projects. The % complete chart shows the top 10 projects labor cost to date and determines % of the total EAC budget for labor.
- **Revenue Forecast** - This tab shows the revenue forecast over the next 12 periods. Since the chart is using the relative time dimension for Future 12 Periods Trend, the timeframe will automatically shift after the current period is changed. Data shown here is color coded by Organization and can be drilled down to get more precise information for each individual Organization. This chart is only available on the Planning Dashboard, the information is not available in Costpoint Projects.
- **Labor Analysis** - This tab leverages the "tree map" visualization where each block is a level 1 project, the size of the block represents the number of hours spent in the current period. The color of each block represents the hourly variance from budget, the darker the color the larger the variance.
- **Utilization** - This tab provides a bar chart to show Labor Hours by Organization color coded by Project Classification. The bar chart can be drilled into to drive the widgets at the top of the dashboard containing data for Direct Hours, Indirect Hours, Total Hours, and % of Budget Hours Used. In the bar chart, Org level 3 is broken out by project classification to show the utilization by % of hours spent in each classification.

PM Planning Performance Analytics

Use the PM Planning Performance Analytics to review the performance of projects. If Project Security is applied, an individual will only see projects within the organizations they have access to.

When utilizing the Organization Security feature in Costpoint, you will only see projects that are a part of your organization.

When utilizing the Project Manager Security feature in Costpoint, users will only see the projects that they are assigned to as a PM.



There are 7 tabs in the dashboard that show different views of the project data. Note that all project results use Target Rates for actual results, and the budgets use the most current Budget or EAC version.

- **Overview** - This tab shows an incurred to date analysis for Revenue, Profit and Profit Percentages. It also provides a list report to show the Bottom 5 Projects based on profit and a bar chart to show the Top 5 Projects based on profit.
- **Current Period Revenue Analysis** - This tab focuses on the current period performance showing revenue versus budget and gross profit (that is, revenue less direct expenses).
- **ITD Revenue Analysis** - This tab shows Inception To Date revenue for all projects to get an idea of historical performance showing revenue versus budget and gross profit.
- **Historical Trends** - This tab shows comparison trends of actual versus budget for each project leveraging the Repeat (row) capability in Dashboards to automatically create a separate chart for each project at level 1.
- **Forecasted Trends** - This tab shows the revenue forecast for the next 12 periods based on the level 1 project. Since the chart is using the relative time dimension for Future 12 Periods Trend, the timeframe will automatically shift after the current period is changed.
- **Labor Analysis** - This tab leverages the "tree map" visualization where each block is an employee, the size of the block represents the number of hours spent on the project. The color of each block represents the hourly variance from budget, the darker the color the larger the variance.
- **BUD/EAC Compare** - This tab allows for an analysis of changes in the EAC or BUD versions.

Planning Packages

The report packages in Planning are Project Planning Analysis and Project Planning Reporting.

Planning Reports

There are three report templates for the Planning area and they are the BnP PSR Trending Analysis, Planning Revenue Summary Report Template and PSR Report Template.

Use the BnP PSR Trending Analysis report to show how the pre-determined time analysis dimension can be used for trending PSR data in a report.

Use the Planning Revenue Summary Template as a starting point when you create project reports from reporting views in Budgeting & Planning. It is easy to use and you can make your own reports based on it.

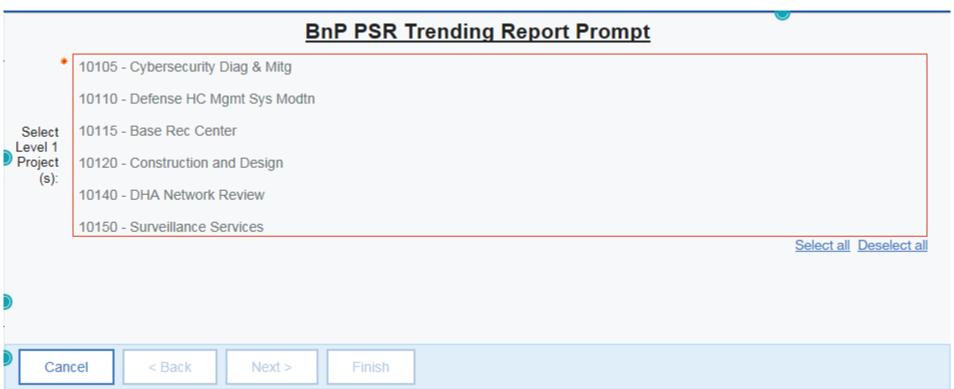
The PSR Report Template can be used when you want to create reports based on PSR Report tables in Budgeting & Planning. Similar with the Revenue Summary Report Template, you can modify it and customized based on the needs of your business.

BnP PSR Trending Analysis

The BnP Trending Analysis report uses the Planning Analysis model which leverages the pre-determined time analysis dimension that is useful for trending PSR data in a report.

Prompts

The prompt for the BnP PSR Trending Analysis includes the selection for project .



Prompt Message	Description
Select Level 1 Project(s)	Select the projects that you want to include in the report.

Burdened Labor Costs by Project

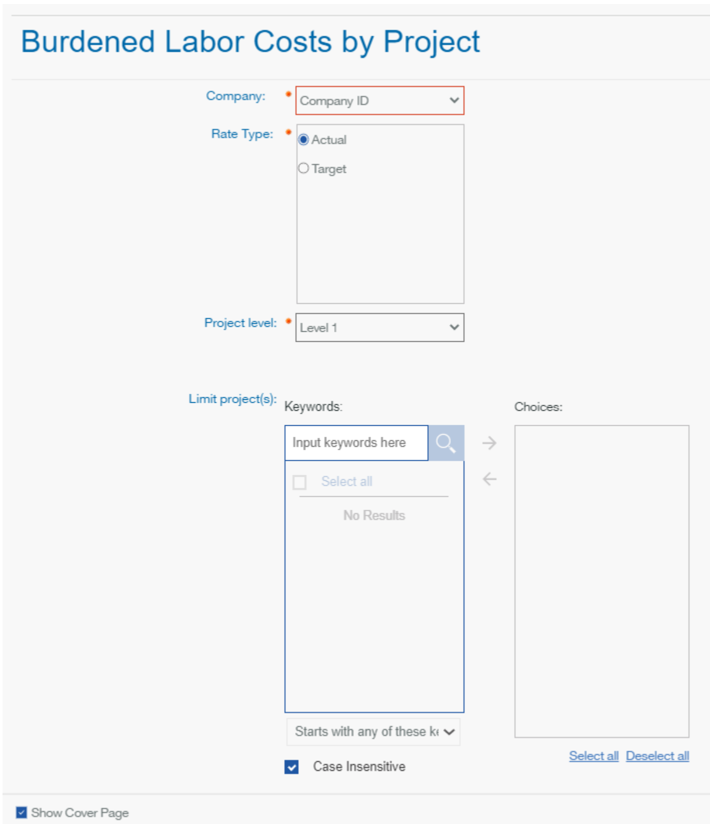
Use the Burdened Labor Costs by Project Report to see burdened costs charged or budgeted to a project as well as burdened costs against the budget for the current period, year to date, and inception to date timeframes.

Data from this report comes from Deltek Costpoint Planning and it displays:

- Project ID and Name
- Account Level based on selection
- Account ID and Name
- Current Period Actual, EAC, and Variance
- Year to Date Actual, EAC, and Variance
- Inception to Date Actual, EAC, and Variance
- Subtotal by Account
- Subtotal by Account Level
- Total by Project

Prompts

These are the Burdened Labor Costs by Project Report prompts.



Prompt Message	Description
Company	Select the company that you want to display in the report.
Rate Type	Select the Rate Type that you want to display in the report.
Project level	Select the level of project that you want to display in the report.
Limit projects	Select the project(s) that you want in the report. To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Labor Utilization Report

Use the Labor Utilization report to review forecasted labor utilization for labor resources to identify potential under- or over-utilization issues.

For each resource, the report displays forecasted labor utilization rates for the current period in Costpoint Planning and for the five periods following that one. (The report excludes vendor resources.)

The report also provides labor utilization rates for those six periods for each organization as a whole.

Labor Utilization Rate Calculation

Costpoint Business Intelligence calculates labor utilization rates by comparing a resource's budgeted hours or cost for a fiscal period to the standard hours for that period or to the cost of the standard hours.

Standard hours for a fiscal period are 8 hours per work day, multiplied by the number of business days in the period, less any holidays or other excluded days.

Cost for an employee is calculated based on his or her hourly rate and does not include labor burden. For generic resources, the report uses the average hourly rate. You can view the average hourly rate on the Maintain Generic Staff report in Costpoint Planning.

Budget Used

Budgeted hours and cost for this report come from the most recent budget version.

Reconcile Report Data

Refer to Reconcile Labor Utilization with Drill Through in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Sample Report

This is a sample of the Labor Utilization report.

Labor Utilization

Current Period End Date: 05/31/19

01 Applied Technologies, Inc

Resource	06/30/2019 Forecast	07/31/2019 Forecast	08/31/2019 Forecast	09/30/2019 Forecast	10/31/2019 Forecast	11/30/2019 Forecast	12/31/2019 Forecast	01/31/2020 Forecast	02/29/2020 Forecast	03/31/2020 Forecast	04/30/2020 Forecast	05/31/2020 Forecast
1023 - Jackson, Antoine (Employee)	102%	97%	93%	107%	89%	153%	112%	79%	86%	79%	79%	89%

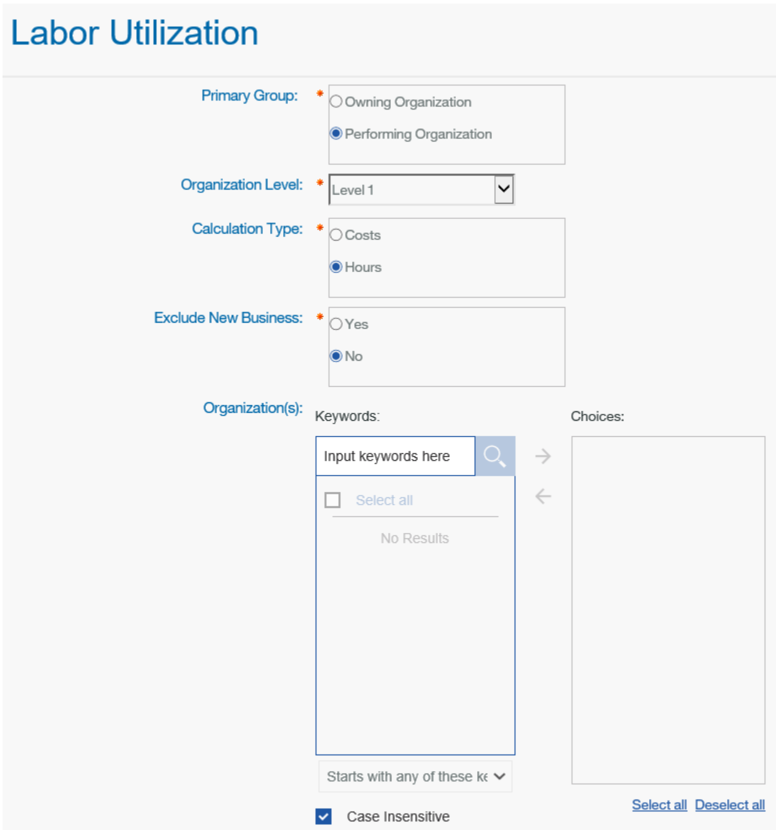
Prompts

Use the prompts to run the Labor Utilization report.



Prompt Message	Description
Primary group	Indicate if you want the report to group data by owning organization or by performing organization.
Organizational Level	Select the level of the organization structure at which you want to review labor utilization rates. The report rolls up all data to that level.
Calculation Type	Indicate if you want the report to calculate labor utilization rates based on labor cost or labor hours.
Exclude New Business	Select **Yes** to exclude new business (non-backlog) projects from the calculation of labor utilization rates. Select **No** to include new business projects in the calculation of labor utilization rates.
Organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.)

Prompt Message	Description
	To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Labor Utilization Drill Through

If you identify a resource that is under- or over-utilized, you can click a resource ID on the main Labor Utilization report to drill through to the Labor Utilization drill report to quickly see the projects on which the resource is currently scheduled to work and the budgeted hours for each project.

This report offers another level of detail to help you analyze utilization issues that you identify on the main report.

The Labor Utilization drill report displays the resource's budgeted hours for each project for the current period in Costpoint Planning and for the next five fiscal periods following the current period. For each period, the report also provides the resource's total budgeted hours for all projects, the standard hours, and the labor utilization rate. (Budgeted hours come from the most recent budget version.)

Note: The Labor Utilization drill report always calculates labor utilization rates based on labor hours. As a result, if you calculated labor utilization rates based on cost on the Labor Utilization report, the rates on the drill report may not match those on the main report.

Your selection in the **Exclude new business** prompt for the main report determines whether or not the drill report displays new business (non-backlog) projects along with the existing projects.

Labor Variance by PLC Report

Use the Labor Variance by PLC report to review actual and budgeted employee labor hours for a single existing project at any project level, broken down by project labor category (PLC).

For each PLC for the project, the report displays the following for a selected fiscal period and for the year to date:

- Actual hours
- Budget hours
- Variance (Budget hours – Actual hours)
- Variance percentage (Variance / Budget hours)

The report provides totals for all columns for the project as a whole.

Note: The standard version of this report is filtered to display employee labor hours only. It does not include subcontractor or consultant labor hours. If you want to display all labor hours, you can modify the Labor for Details filter expression to match the following: **[DeltekBP].[Labor for Details]** or **[DeltekBP].[Non-Labor for Details]**.

Budgets

If different budget versions exist for the selected project tree, the report uses only the most current budget version.

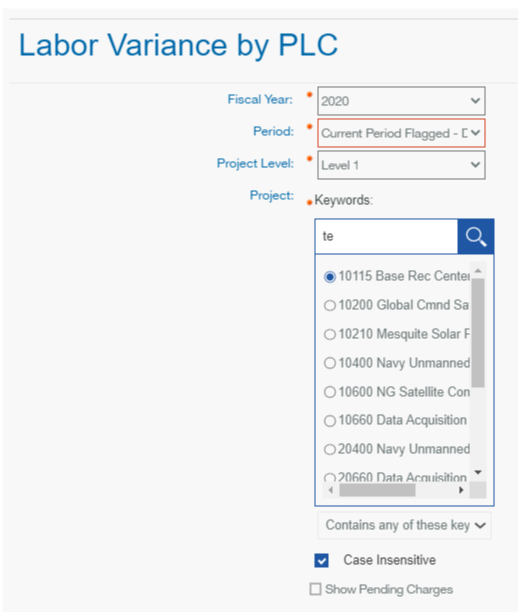
Reconcile Report Data

There are guidelines on how to reconcile data on this report with data in Costpoint Planning.

You can use Reconcile Labor Variance by PLC in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

These are Labor Variance by PLC prompts.



Prompt Message	Description
Fiscal year	Select the fiscal year for which you want to generate the report.
Period	Select the fiscal period for which you want to generate the report.

Prompt Message	Description
Project Level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Project	Select one project at the level specified in the Project level prompt. In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. Click in the dropdown list to specify how you want the search to match your entries with the IDs or names. (If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options.) Click **Search** to list the matching projects.
Show Pending Charges	Select this check box to include pending charges in the report. If selected, columns for ITD will be displayed. Also, the pending hours will be part of the **Actual** columns in the report. In addition, a note will be displayed that will indicate that pending hours are included in the report.

Sample Report

This is a sample of the Labor Variance by PLC report.

Labor Variance by PLC

(*Includes Pending Labor)

Pending Charges Detail Report

Use the Pending Charges Detail Report to view the detail of labor, expense report and other direct expenses that are in a pending state, those charges that are not yet posted to the project.

This report displays in detail every pending charge broken out by:

- Labor Hours
- Employee Expenses
- Other Direct Costs

In addition, the report includes the following:

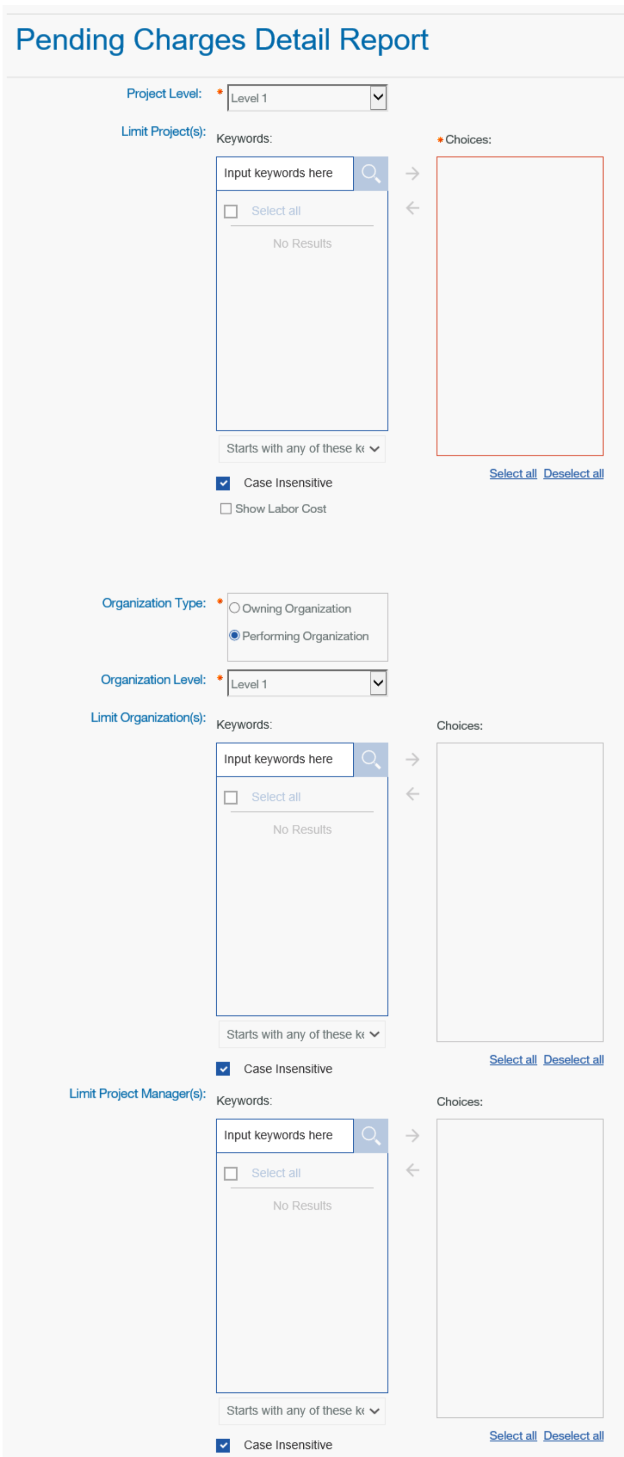
- Resource/Vendor ID
- Resource/Vendor Name
- Project Labor Category/Account
- Charge Date
- Pending Hours
- Pending Cost with Burden

You have the option whether to show Labor Cost in detail or not. There might be cases where you want to remove Labor Cost for security purposes.

Cost detail is hidden by default.

Prompts

Use the Pending Charges Detail Report prompts to configure the report.



Prompt Message	Description
Project Level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Limit Project(s)	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the projects in the results that you want to include and click the arrow to move them to Choices. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the projects in Choices.
Show Labor Cost	Select this check box if you want to display the pending cost detail with burden. However, the total burden cost always displays regardless of the selection in this check box.
Organization Type	Select the organization type that you want to include in the report. Valid options are: ▪ Owning Organization ▪ Performing Organization
Organization Level	Select the Organization level at which you want to generate the report.
Limit Organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...**

Prompt Message	Description
	options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.
Limit Project Manager(s)	Use this option to limit the report to selected project managers. (If you make no selections, the report includes all project managers.) In **Keywords**, enter one or more characters for which you want to search to retrieve project managers. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the project managers in Results that you want to include and click **Insert** to move them to Choices. To select multiple project managers that are together in the list, click the first project manager in the group and then press SHIFT as you click the last one in the group. To select multiple project managers that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the project managers in Choices.

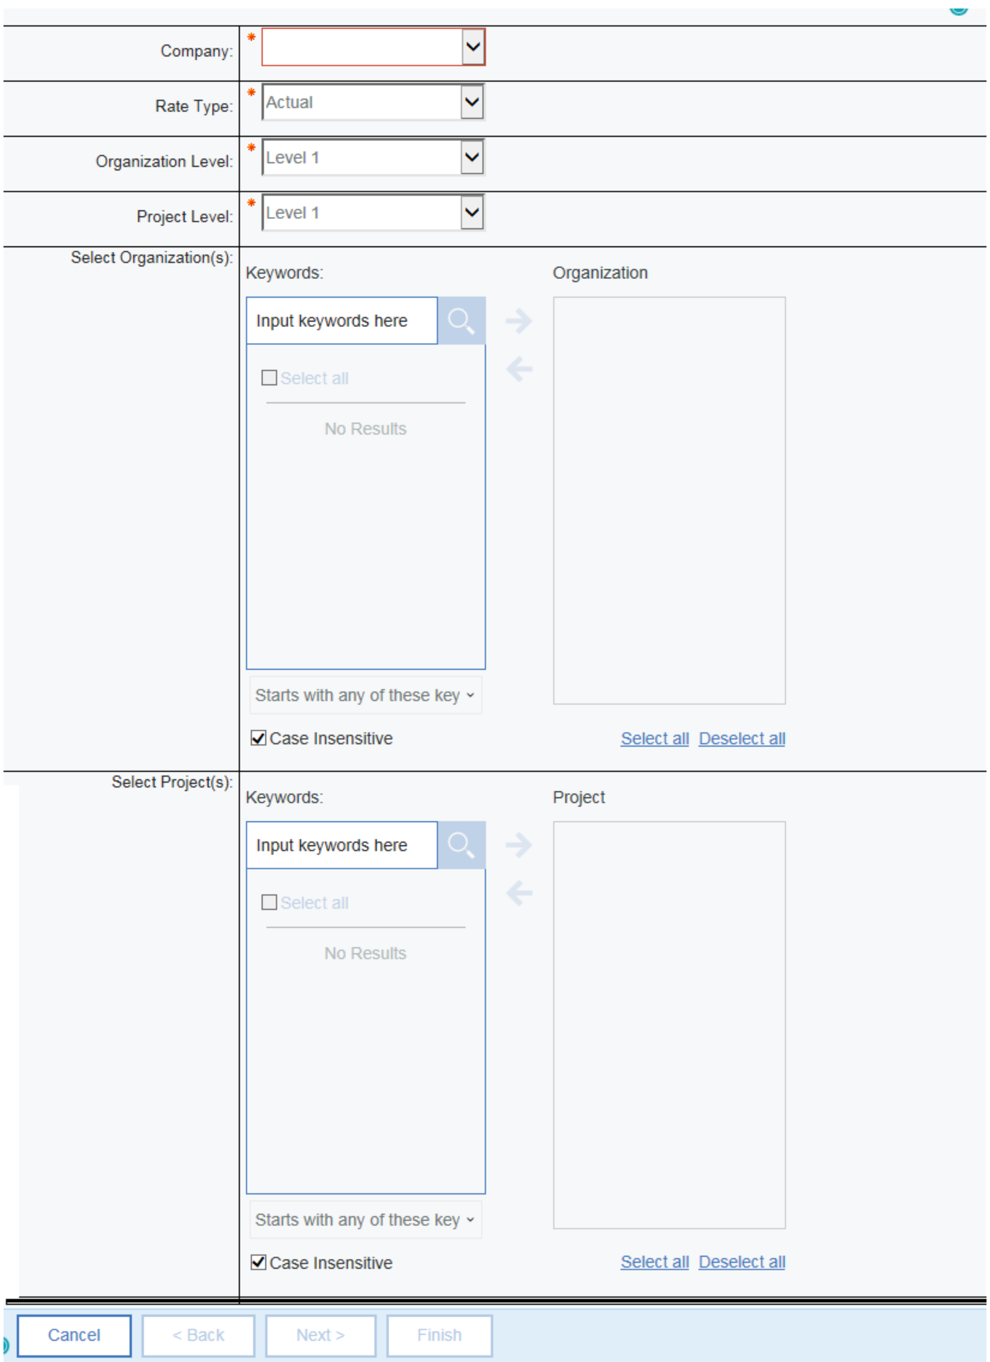
Planning Revenue Summary Report Template

The Planning Revenue Summary Report Template helps you to get started in creating project budgeting reports with data that comes from Costpoint Planning.

Prompts

The prompts for the Planning Revenue Summary Report Template include fields such as Rate Type, Organization Level, and others.



Prompt Message	Description
Company	Select the company that you want to display in the report.
Rate Type:	Select the Rate Type that you want to display in the report.
Organization Level	Select the organization level at which you want the report printed.
Project Level	Select the project level at which you want the report printed.
Select Organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select Project(s)	Similar with selecting organizations, select the projects that you want to include in the report.

Project Labor Hours Status Report

Use the Project Labor Hours Status report to monitor and manage labor hours at the resource level for existing projects.

To provide the most up-to-date picture, the report includes all unposted timesheet hours from Deltek Time Collection.

For each resource, the report displays the following:

- Inception-to-date (ITD) actual hours through the period preceding the current period in Costpoint Planning
- Unposted hours
- Actual hours for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Budget hours for the current fiscal period in Costpoint Planning (<current period end date> **Forecast** column)
- Estimate-at-completion (EAC) hours
- Hours spent to date (ITD actual hours + Unposted hours + Current period actual hours)
- Hours remaining (EAC hours – Hours spent to date)

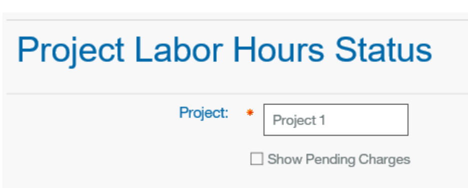
The report displays subtotals for each project level and totals for the report as a whole.

Reconcile Report Data

These are guidelines on how to reconcile Project Labor Hours Status data on this report with data in Costpoint Planning.

Prompts

Use the following prompts for the Project Labor Hours Status report.



Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.
Show Pending Charges	Select this check box to include pending charges in the report. If selected, the following are displayed:

Prompt Message	Description
	▪ Pending charges (in hours) for each employee ▪ **ITD Plus Pending** column that has the ITD Actual Hours plus pending hours ▪ Hours Spent to Date which are pending hours in addition to ITD and Current Month Actual

Sample Report

This is a sample of the Project Labor Hours Status report.

Project Report with Labor Detail

Use the Project Report with Labor Detail to view, for individual resources, an analysis of project labor hours to date and forecasted hours through the completion of the project.

In addition, the report displays the costs related to the labor hours shown in the detail section, the related revenue, and the resulting profit or loss.

For each resource for the project, the report displays the following:

- Inception-to-date (ITD) actual hours through the period preceding the current period in Costpoint Planning
- Actual hours for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Budget hours for the current fiscal period in Costpoint Planning (<current period end date> **Budget** column)

- Budget hours for each of the next six fiscal periods following the current period in Costpoint Planning
- Remaining budget hours beyond the next six fiscal periods (**Through Completion** column)
- Total estimate-to-complete (ETC) hours
- Total forecast hours (ITD actual hours + Total ETC hours)
- Total estimate-at-completion (EAC) hours

For each project, the report also provides the totals listed below. These are broken down into the same report columns as the resource labor costs (ITD actual, period budgets, remaining budget, and so on):

- Total labor hours
- Total labor cost
- Total labor burden
- Total labor cost with burden
- Other direct costs with burden
- Total cost
- Total revenue
- Profit or loss

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Select the project level at which you want to review labor detail.
- Select the projects, at the selected project level, that you want to include on the report.

Forecast Amounts

In most cases, amounts in the **Total Forecast** column match those in the **Total EAC** column.

If the EAC for a project in Costpoint Planning is not up to date, for example, those amounts may be different. In that case, the amounts in **Total Forecast**, which the report calculates from ITD actual amounts and from budget amounts, may provide more accurate approximations of the expected completion amounts.

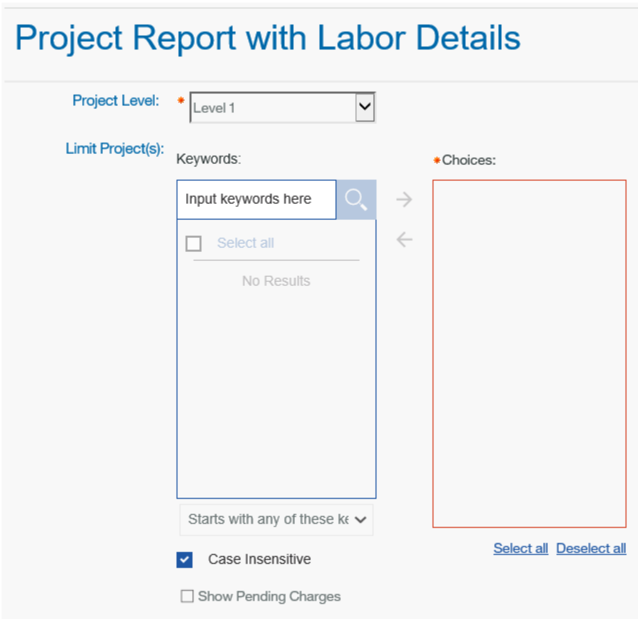
Reconcile Report Data

There are guidelines on how to reconcile data on this report with data in Costpoint Planning.

Refer to the Reconcile Project Report with Labor Detail topic in the Appendix section for more information.

Prompts

Use the following prompts to run the Project Report with Labor Detail report.



Prompt Message	Description
Project Level	Select the project level at which you want to generate the report. The report rolls up all data to that level.
Limit Project(s)	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the projects in Results that you want to include and click **Insert** to move them to Choices. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one.

Prompt Message	Description
	When you generate the report, it includes only records for the projects in Choices.
Show Pending Charges	Select this check box if you want to display the pending charges. If selected, the **Pending Charges** column will display which includes the hourly detail by employee, labor cost, labor burden, other direct cost with burden and revenue. In addition, the **ITD Plus Pending** column will be included in the report that displays the total of ITD previous Period plus Current Month Actuals amount plus pending charges.

Sample Report

This is a sample of the Project Report with Labor Detail report.

Project Status Cost Summary

Use the Project Status Cost Summary report to monitor the cost status of the projects for an organization or set of organizations by comparing estimate-at-completion (EAC) cost amounts, as of the current fiscal period, to total baseline budget cost amounts.

For each project, the report displays the following:

- Inception-to-date (ITD) actual burdened cost through the period preceding the current period in Costpoint Planning
- Estimate-to-complete (ETC) burdened cost
- Forecast burdened cost (ITD actual burdened cost + ETC burdened cost)
- Total baseline budget burdened cost
- Variance between forecast cost and baseline budget cost (Total baseline budget burdened cost – Forecast burdened cost)
- Variance percentage (Variance / Total baseline budget burdened cost)

To call your attention to potential issues, the report highlights negative or positive variances greater than $25,000 and variance percentages of 5 percent or more.

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Group projects based on owning organization or performing organization.
- Specify the organization level to which you want to roll up the data.
- Select the project level to which you want to roll up the data.
- Select the organizations, at the specified organization level, that you want to include on the report.
- Select the projects, at the specified project level, that you want to include on the report.

Note: If you do not filter the report for specific projects, and if costs for any projects have been charged to, or budgeted at, a higher project level than the project rollup level you specify on the prompts page, the report displays the total of those additional costs in a separate detail row without a project ID. It also includes those costs in the organization subtotals so those subtotals reflect the total costs for the organization.

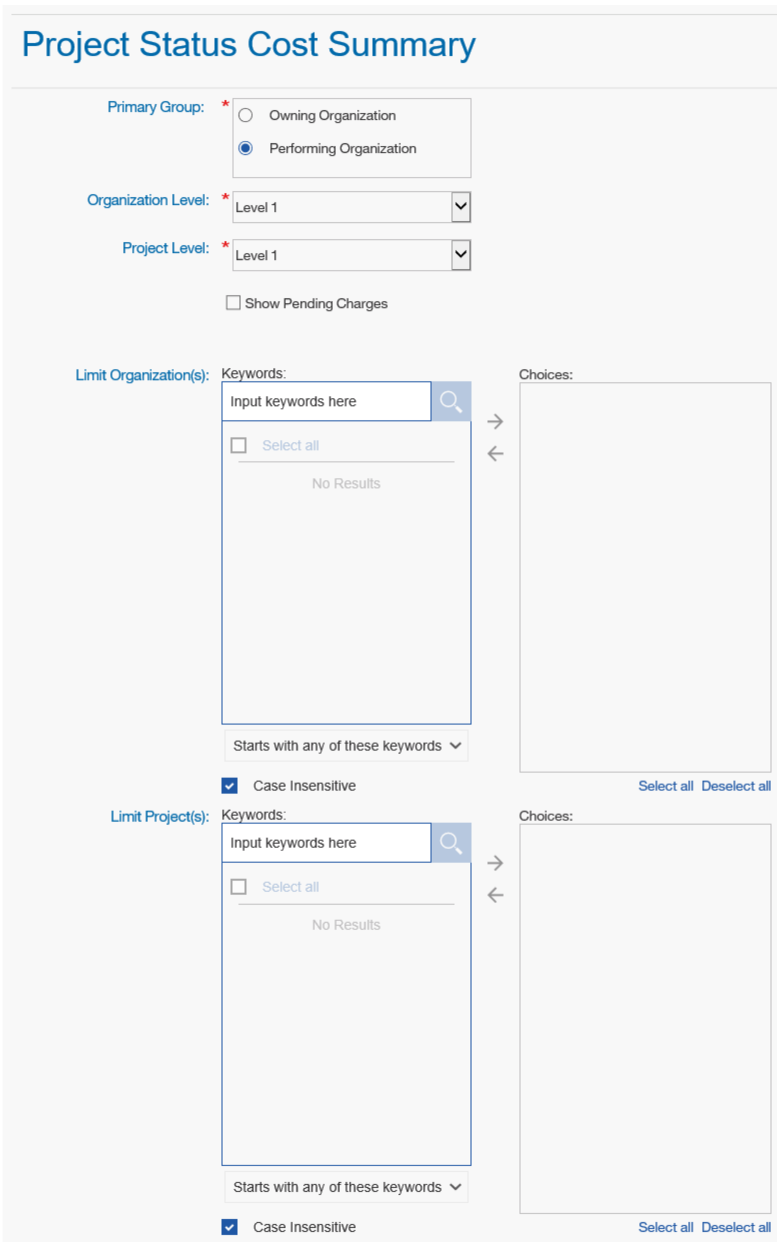
Reconcile Report Data

There are guidelines on how to reconcile data on this report with data in Costpoint Planning.

Refer to the Reconcile Project Status Cost Summary topic in the Appendix for guidelines.

Prompts

Use the prompts to run the Project Status Cost Summary report.



Prompt Message	Description
Primary Group	Indicate if you want the report to group data by owning organization or by performing organization.

Prompt Message	Description
Organization Level	Select the level of the organization structure at which you want to review project costs. The report rolls up all data to that level.
Project Level	Select the project level at which you want to review project costs. The report rolls up all data to that level.
Show Pending Charges	Select this check box if you want to display the pending charges. If selected, a column with pending charges will be included in the report with the total of all charges for labor plus burden, and other direct costs plus burden. Also, a column for ITD Plus Pending (total of ITD amount plus pending charged) will display.
Limit Organizations	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.
Limit Projects	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Prompt Message	Description
	Select the projects in Results that you want to include and click **Insert** to move them to Choices. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the projects in Choices.

Project Subcontractor Status Report

Use the Project Subcontractor Status report to monitor and manage subcontractor labor and other subcontractor costs for existing projects.

To provide a more complete picture, the report includes the cost of unfulfilled materials and services commitments from Costpoint.

Note: This report only includes costs identified as subcontractor costs in Costpoint Planning. It does not include other direct costs.

For each subcontractor resource, the report displays the following:

- Inception-to-date (ITD) actual burdened cost through the period preceding the current period in Costpoint Planning
- Actual burdened cost for the current period in Costpoint Planning (<current period end date> **Actuals** column)
- Burdened commitment cost

- Total cost to date (ITD actual burdened cost + Current period actual burdened cost + Commitment burdened cost)
- Estimate-at-completion (EAC) burdened cost
- Balance remaining (EAC burdened cost – Total cost to date)

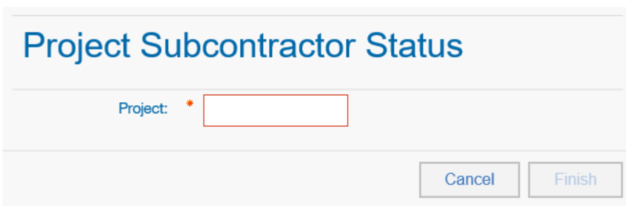
The report displays subtotals for each project level and totals for the report as a whole.

Reconcile Report Data

Use the Reconcile Project Subcontractor Status guidelines in the Appendix to reconcile data on this report with data in Costpoint Planning.

Prompt

Use the prompts to run the Project Subcontractor Status report.



Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.

Sample Report

This is a sample of the Project Subcontractor Status report.

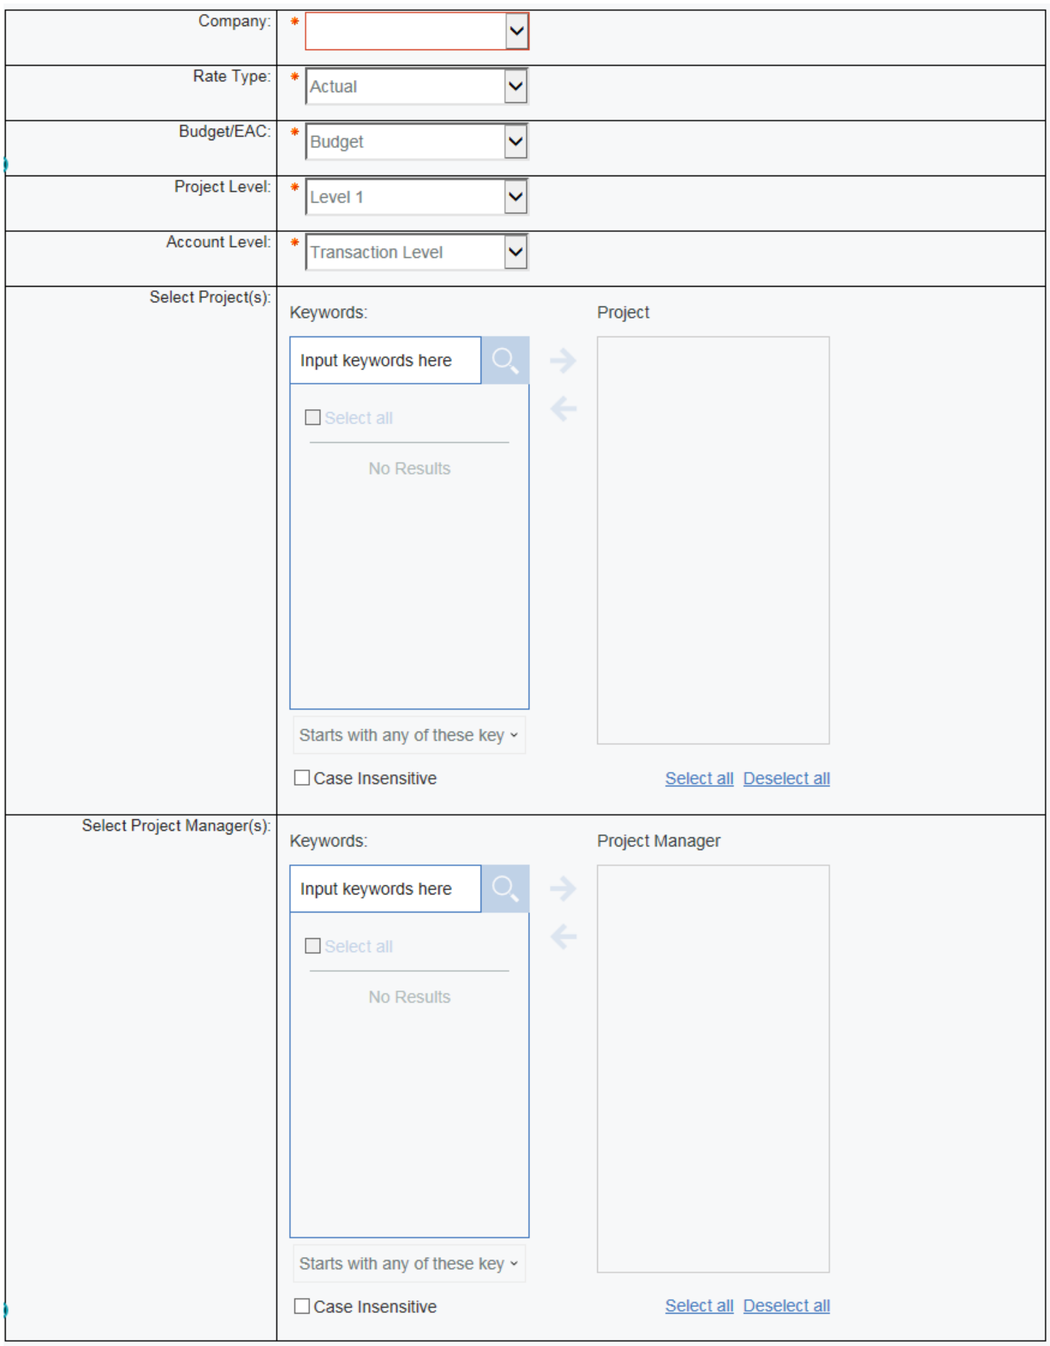
PSR Report Template

The PSR Report Template helps you to get started in creating reports based on PSR Report tables in Costpoint Planning.

Prompts

The prompts for the PSR Report Template include fields such as Company, Rate Type, Project Level, and others.



Prompt Message	Description
Company	Select the Company that you want to display in the report.
Rate Type	Select the Rate Type that you want to display in the report.
Budget/EAC	Select either **Budget** or **EAC** to indicate if you want to use budget or EAC in the report.
Project Level	Select the project level at which you want the report printed.
Account Level	Select the account level at which you want the report printed.
Select Project(s)	Select the projects that you want to include in the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select Project Manager(s)	Select the project manager(s) that you want to include in the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

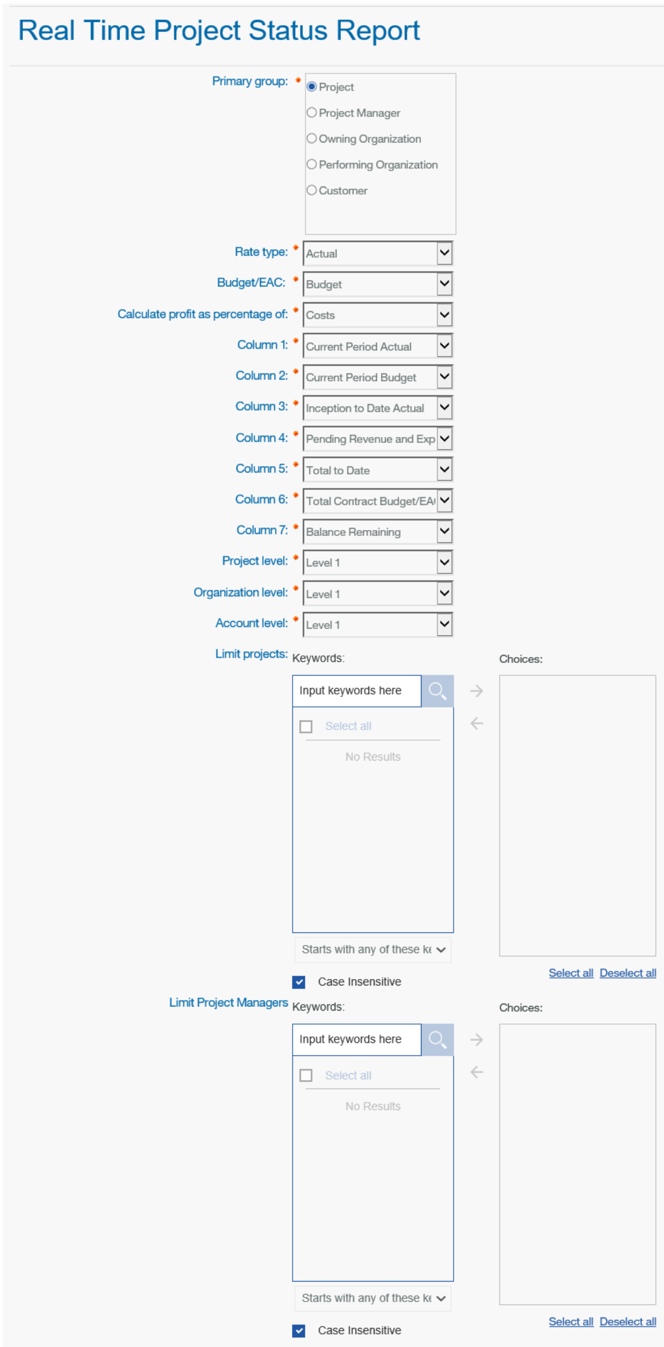
Real Time Project Status Report

Use the Real Time Project Status Report to view the most current status of a project or group of projects versus the budget or estimate to complete.

If you are entering your budgets and estimate to complete forecasts in the Costpoint Planning module and calculating the pending charges in that module, you can get a real time status of projects. The report includes real time calculations of your revenue, labor, non-labor, and burdens compared to your most recent baseline budget or estimate at completion (EAC) forecast.

Prompts

Use the prompts to run the Real Time Project Status report.



Prompt Message	Description
Primary Group	Select the primary grouping for the report: ▪ Project ▪ Project Manager ▪ Owning Organization ▪ Performing Organization ▪ Customer
Rate Type	Select either **Actual** or **Target** to indicate if you want to use actual rates or target rates in the report.
Budget/EAC	Select either **Budget** or **EAC** to indicate if you want to use budget or EAC forecast in the report.
Calculate profit as percentage of	Select whether to calculate profit as percent of **Costs** or **Revenue**.
Limit Projects	Use this option to limit the report to selected projects. (If you make no selections, the report includes all projects.) In **Keywords**, enter one or more characters for which you want to search to retrieve projects. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Click to list the matching projects in Results. Select the projects in Results that you want to include and click **Insert** to move them to Choice. To select multiple projects that are together in the list, click the first project in the group and then press SHIFT as you click the last one in the group. To select multiple projects that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the projects in Choice.
Limit Project Managers	Use this option to limit the report to selected project managers. (If you make no selections, the report includes all project managers.) In **Keywords**, enter one or more characters for which you want to search to retrieve project managers. The list displays values as a combination of ID and name, so you can search

Prompt Message	Description
	by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Click to list the matching project managers in Results. Select the project managers in Results that you want to include and click **Insert** to move them to Choice. To select multiple project managers that are together in the list, click the first project manager in the group and then press SHIFT as you click the last one in the group. To select multiple project managers that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the project managers in Choice.
Project Level	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization Level	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Account Level	Select the account level at which you want the report printed. All lower levels will be rolled up for the report.
Column 1-7	Select the data you want the report to display in each column.

Revenue Forecast Report

Use the Revenue Forecast report to review projected revenue for one or more organizations for the next six fiscal periods based on data for both existing projects and new business projects.

You can control how firm the forecasted revenue amounts are by specifying a minimum win probability for new business projects.

For each project, the report displays the following:

- Win probability (100 percent for all existing projects)
- Contract value
- Forecast revenue amounts for the next six fiscal periods following the current period in Costpoint Planning

For each organization, the report displays backlog revenue, non-backlog revenue, and total forecast revenue subtotals for each of these columns, along with totals for the report as a whole.

Options

You can select options on how you want the report to be displayed.

When you generate this report, you can do the following:

- Group projects based on owning organization or performing organization.
- Specify the organization level to which you want to roll up the data.
- Select the project level to which you want to roll up the data.
- Specify a minimum win probability. Only projects with a higher win probability than this percentage are included.
- Exclude or include new business projects.
- Select the organizations, at the specified organization level, that you want to include on the report.

Contract Value

There are different contract values for backlog projects and new business projects.

For backlog projects, the contract value is calculated as Project Value Fee + Project Value Costs.
For new business projects, the contract value is the total revenue budget.

Project Rollup Notes

The report rolls up revenue for backlog projects to the project level that you specify on the prompts screen.

Note the following about the project rollup option:

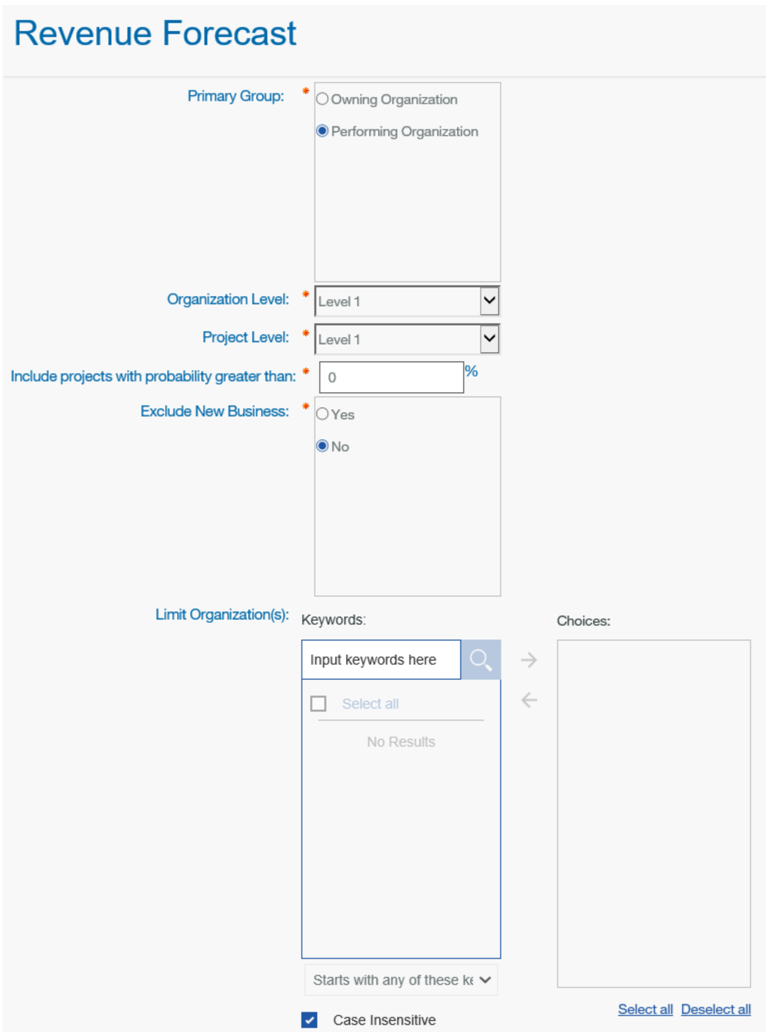
- The report does not roll up revenue for new business projects. Those amounts are always displayed at the level they are entered in Costpoint Planning.
- If you do not filter the report for specific projects, and if revenue for any projects has been budgeted at a higher project level than the project rollup level you specify on the prompts page, the report displays the total of that additional revenue in a separate detail row without a project ID. It also includes that revenue in the organization subtotals so those subtotals reflect the total projected revenue for the organization.

Reconcile Report Data

Refer to Reconcile Revenue Forecast in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompts

Use the prompts to configure the Revenue Forecast report.



Prompt Message	Description
Primary Group	Indicate if you want the report to group data by owning organization or by performing organization.
Organization Level	Select the level of the organization structure at which you want to review project costs. The report rolls up all data to that level.
Project Level	Select the project level at which you want to review project costs. The report rolls up all data to that level.

Prompt Message	Description
Include projects with probability greater than	Enter a win probability cutoff percentage. Only projects with a win probability greater than your entry are included on the report.
Exclude New Business	Select **No** to include new business projects on the report. The report includes new business projects that satisfy the probability requirement you specify in **Include projects with probability greater than**. Select **Yes** to exclude all new business projects from the report.
Limit Organization(s)	Use this option to limit the report to selected organizations. (If you make no selections, the report includes all organizations.) In **Keywords**, enter one or more characters for which you want to search to retrieve organizations. The list displays values as a combination of ID and name, so you can search by ID or by name. To enter more than one search string, separate them with spaces. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**. Select the organizations in Results that you want to include and click **Insert** to move them to Choices. To select multiple organizations that are together in the list, click the first organization in the group and then press SHIFT as you click the last one in the group. To select multiple organizations that are not listed together, press CTRL as you click each one. When you generate the report, it includes only records for the organizations in Choices.

Sample Report

This is a sample of the Revenue Forecast report.

Revenue Forecast

Subtotal for Organization 01			13,750,000	3,368.75	3,368.75	3,368.75	3,368.75	643.75	643.75
Total			13,750,000	3,368.75	3,368.75	3,368.75	3,368.75	643.75	643.75

T&M Profitability Report

Use the T&M Profitability report to review actual employee contributions to revenue and profit for existing Time and Materials (T&M) projects through the current fiscal period in Costpoint Planning, along with projected contributions for the next six fiscal periods.

Employees are grouped by project and by project labor category (PLC).

For each employee, the report displays the following revenue, burdened cost, and profit amounts:

- Inception-to-date (ITD) amounts through the period preceding the current period in Costpoint Planning
- Projected amounts for the current period in Costpoint Planning (<current period end date> **Budget** column)
- Projected amounts for the next five fiscal periods
- Projected amount beyond the next six fiscal periods (ETC amount – Sum of the projected period amounts)
- Estimate-to-complete (ETC) amount
- Estimate-at-completion (EAC) amount
- Forecast amount (ITD amount + ETC amount)

Revenue Amounts

The report calculates employee revenue amounts for a PLC using the PLC billing rate.

The report uses the following calculation for the employee revenue amounts: Employee's actual or budgeted hours for the PLC × PLC billing rate.

Forecast Amounts

In most cases, amounts in the **Forecast** column match those in the **EAC** column.

If the EAC for a project in Costpoint Planning is not up to date, for example, those amounts may be different. In that case, the amounts in **Forecast**, which the report calculates from ITD actual amounts and from budget amounts, may provide more accurate approximations of the expected completion amounts.

Reconcile Report Data

View Reconcile T&M Profitability in the Appendix for guidelines on how to reconcile data on this report with data in Costpoint Planning.

Prompt

Use the prompt to select a project for the T&M Profitability report.

Prompt Message	Description
Project	Enter all or part of a project ID. The report includes all projects with IDs that begin with your entry in this prompt.

Sample Report

This is a sample of the T&M Profitability report.

Projects

The Projects folder includes dashboards, packages, and report templates that cater to Deltek Costpoint Project users.

The report templates and dashboards in Projects are interactive where you can customize and make your own to be more useful to your business needs.

Model Information - Projects

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Projects framework model in spreadsheet format.

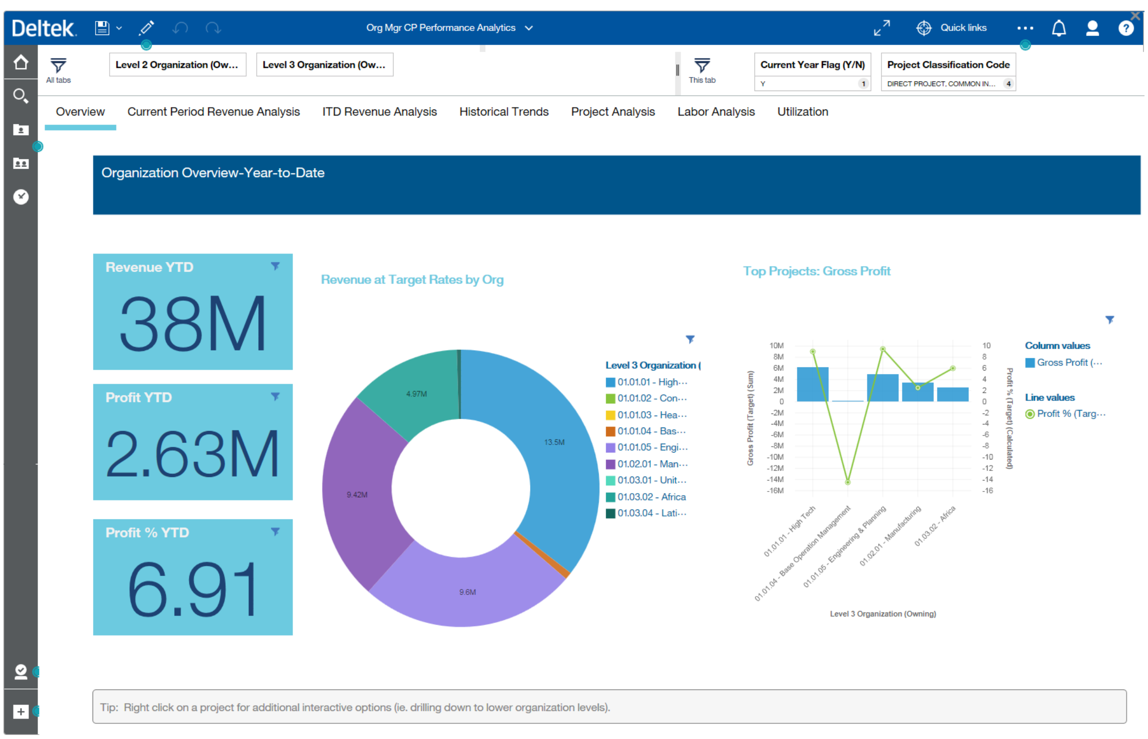
The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_ProjectsModel.xlsx.

Projects - Dashboards

The template dashboards for Projects allow you to create and share interactive analytical dashboards that uses the Costpoint Projects Data.

Org Mgr CP Performance Analytics

Use the Org Mgr CP Performance Analytics dashboard to see project performance, utilization, and other metrics of the owning organization.

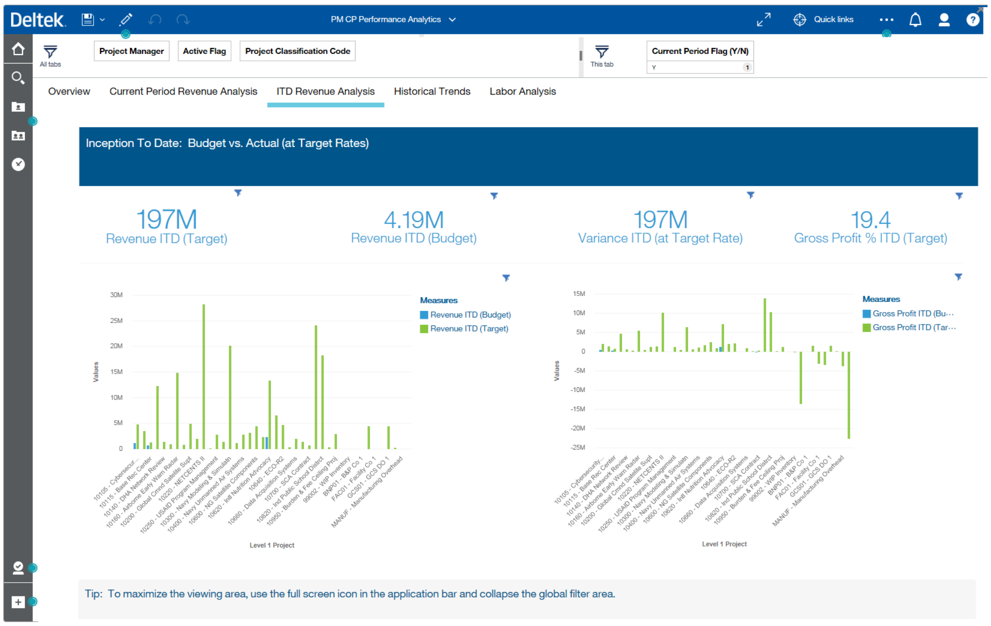


The filters for Owning Organization levels 2 and 3 are preset in the dashboard but can be easily changed to other levels. Additionally the Organization folder has levels that will show the data by performing organization if that is desired. This dashboard has 7 tabs that cover the different views of the organization data.

- **Overview** - This tab shows year-to-date information leveraging the current year flag, so it will always show the YTD information through the current month which is controlled by your CBI Administrator. Measures include Revenue, Profit, and Profit % as well as charts that compare actual revenue (at target rates) versus budgets.
- **Current Period Revenue Analysis** - This tab focuses on the current period performance showing revenue versus budget and gross profit (that is, revenue less direct expenses). The dashboard is filtered for Direct Projects only.
- **ITD Revenue Analysis** - This tab will show ITD revenue for all projects to get an idea of historical performance showing revenue vs. budget and gross profit. The dasbhoard is filtered for Direct Projects only. Note that all projects are shown whether Active or Inactive.
- **Historical Trends** - This tab shows comparison trends of actual versus budget for each Org at Level 3 leveraging the Repeat (row) capability in Dashboards to automatically create a separate chart for each Org at level 3.
- **Project Analysis** - This tab goes deeper than the org level to show project performance by Project Manager and % complete for largest 10 projects. The % complete chart shows the top 10 projects labor cost to date and determines % of the total EAC budget for labor.
- **Labor Analysis** - This tab leverages the "tree map" visualization where each block is a level 1 project, the size of the block represents the number of hours spent in the current period. Note that since budgeted hours are not available in Costpoint projects module, leveraging Deltek Project Planning can be used to track hour variances.
- **Utilization** - This tab breaks out the utilization by project classification. In aggregate, direct, indirect, total hours and average hourly rate are shown. In the bar chart, Org level 3 is broken out by project classification to show the utilization by % of hours spent in each category.

PM CP Performance Analytics

Use the PM CP Performance Analytics to review project performance.



If Organization security is used in Costpoint, users will only see the projects that belong to the organizations they have access to. However, if Project Manager Security is enable they will see only projects they are assigned to as PM. The dashboard has 5 tabs covering a different view of the project data. Note that all project results use Target Rates for actual results.

There are 5 tabs with different views of the project performance data:

- **Overview** - This tab shows inception-to-date information leveraging the current period flag, so it will always show the Inception To Date information through the current month which is controlled by your CBI Administrator. Measures include Revenue, Profit, and Profit % as well as charts that show the top 5 and bottom 5 performing projects.
- **Current Period Review Analysis** - This tab focuses on the current period performance showing revenue versus budget and gross profit (that is, revenue less direct expenses).
- **ITD Revenue Analysis** - This tab will show Inception To Date revenue for all projects to get an idea of historical performance showing revenue versus budget and gross profit.
- **Historical Trends** - This tab shows comparison trends of actual versus budget for each project leveraging the Repeat (row) capability in Dashboards to automatically create a separate chart for each project at level 1.
- **Labor Analysis** - This tab leverages the "tree map" visualization where each block is an employee, the size of the block represents the number of hours spent on the project. Note that since budgeted hours are not available in Costpoint projects module, leveraging Deltek Project Planning can be used to track hour variances.

Projects - Packages

The report packages in Projects are Project Analysis and Project Reporting.

Projects - Reports

There are four reports in the Projects area and they are the Project Status Report, PSR Template, PSR Trending Analysis, and Revenue Summary Report Template.

The Project Status Report (PSR) is based on the legacy version in the Costpoint Business Intelligence area. This version of the PSR uses the secured Project Reporting model.

The PSR Template is a basic project status report with prompts that you can customize.

Use the PSR Trending Analysis report template to show trending PSR data in a report based on a pre-determined time analysis dimension.

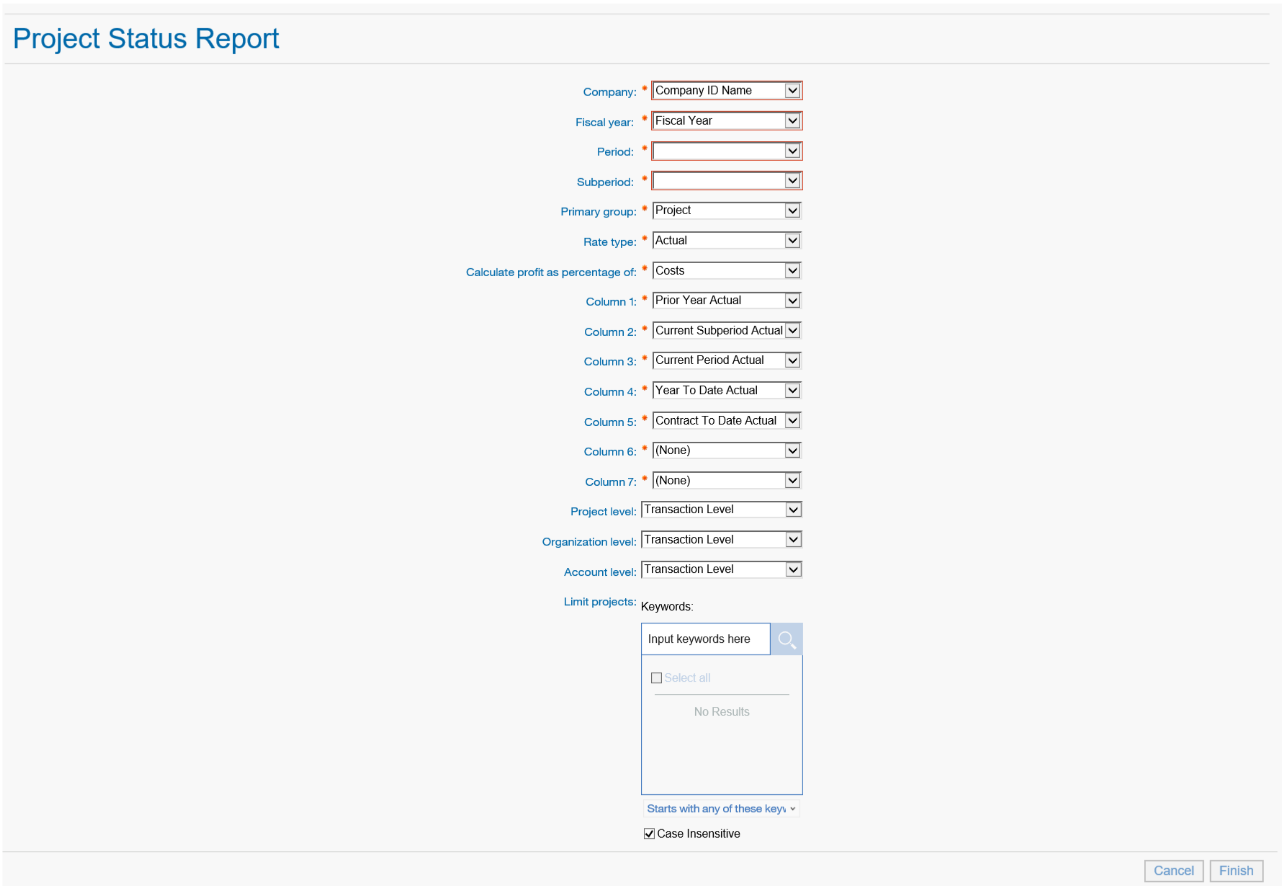
The Revenue Summary Report template is a basic revenue summary report with prompts.

Project Status Report

The Project Status Report displays revenue, direct costs (labor and non-labor), indirect costs, and profitability by project.

Prompts - Project Status Report

The Project Status Report (PSR) prompts include selections such as company, fiscal year, period, and subperiod.



Prompt Message	Description
Company:	Select the Company that you want to display in the report.
Fiscal year:	Select the fiscal year that you want to include in the report.
Period:	Select the period.
Subperiod:	Select the subperiod.
Primary group:	Select the primary group for the report: ▪ Alternate project ▪ Customer ▪ Owning organization ▪ Performing organization

Prompt Message	Description
	▪ Project ▪ Project Manager ▪ Reorganization
Rate type:	Select the rate type to include in the report: ▪ **Actual**: Print the report using actual burden rates from the tables. ▪ **Target**: Print the report using target burden rates from the tables.
Calculate profit as percentage of:	Select whether to calculate profit as percent of: ▪ Costs ▪ Revenue
Columns 1 to 7:	Select the data you want the report to display in each column.
Project level:	Select the project level at which you want the report printed. All lower levels will be rolled up for the report.
Organization level:	Select the organization level at which you want the report printed. All lower levels will be rolled up for the report.
Account level:	Select the account level at which you want the report printed. All lower levels will be rolled up for the report.
Limit projects:	In the **Keywords** field, enter a portion of one or more IDs or names to narrow the search for values you selected in the previous field. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Sample Report - Project Status Report

Sample Project Status Report that uses the Project Reporting model.

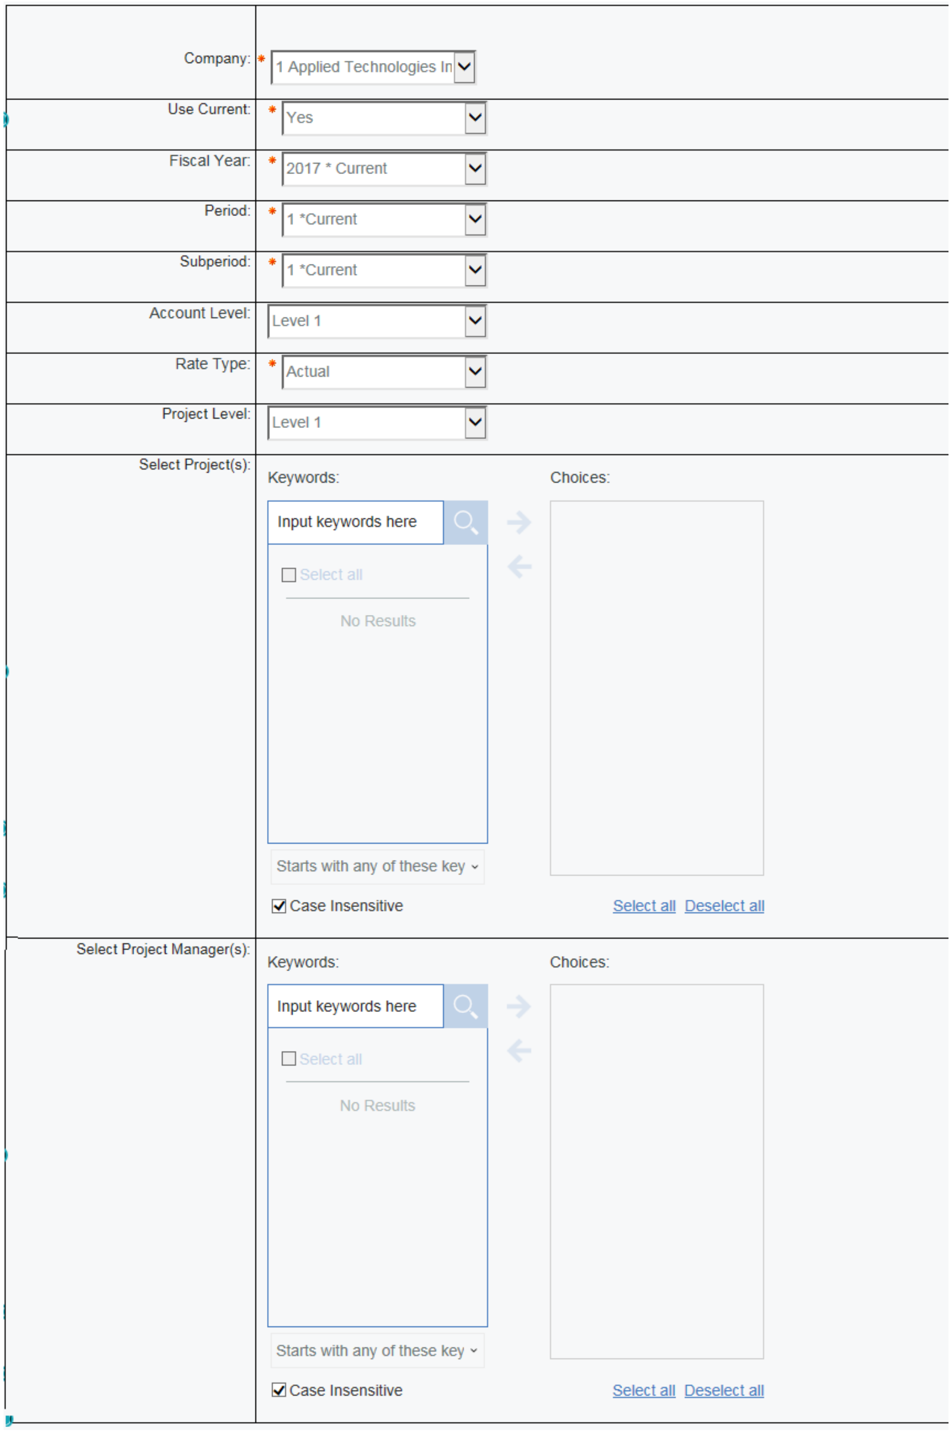
PSR Template

Use the PSR Template when you want to use a starting point when creating a report from PSR data.

Prompts

The PSR Template prompt includes selections such as Company, Project Level, Rate Type and others.



Prompt Message	Description
Company	Select the Company that you want to display in the report.
Use Current	Select **Yes** if you want to use the current period in the settings which automatically fills in the year, period, and subperiod.
Fiscal Year	Select the Fiscal Year to display in the report.
Period	Select the Period to display in the report.
Subperiod	Select the Subperiod to include in the report
Account Level	Select the account level at which you want the report printed.
Rate Type	Select either **Actual** or **Target** to indicate if you want to use actual rates or target rates in the report.
Project Level	Select the project level at which you want the report printed.
Select Project(s)	Select the projects that you want to include in the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select Project Manager(s)	Select the project manager(s) that you want to include in the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

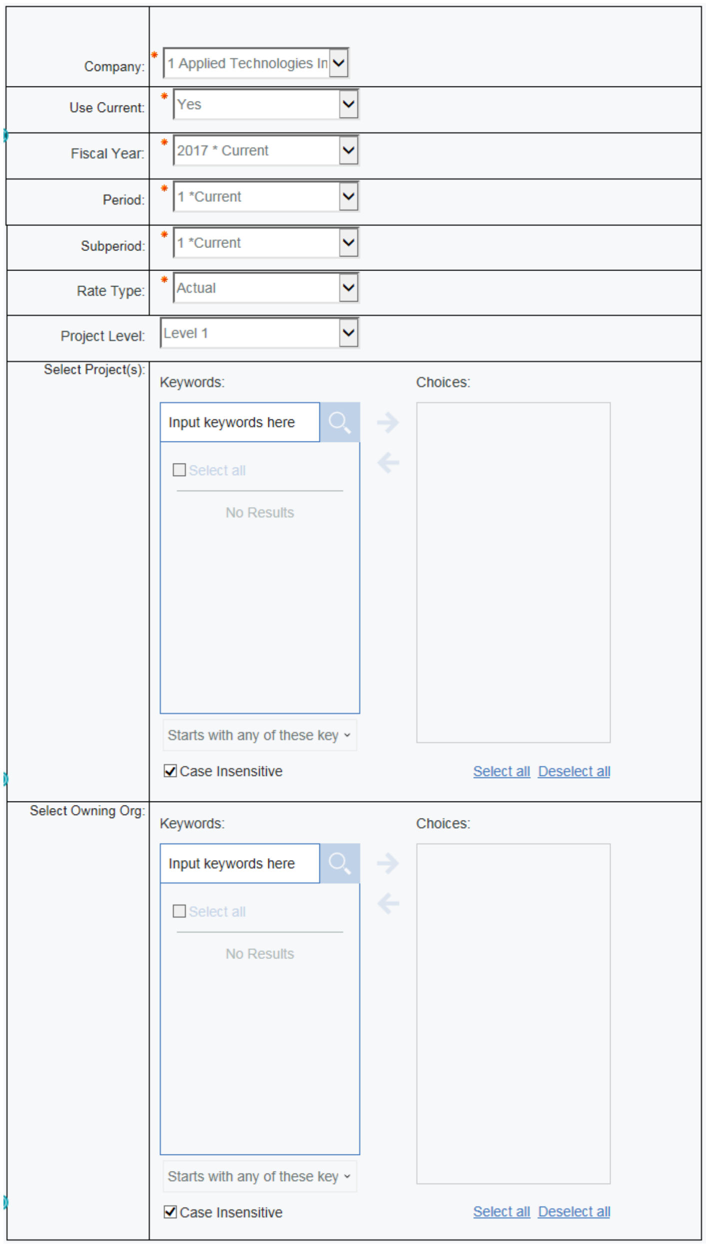
Revenue Summary Report Template

Use the Revenue Summary Report template as a starting point when you want to create a report based on the revenue summary report tables in Costpoint.

Prompts

The Revenue Summary Report Template prompt page includes selections such as Company, Project Level, and Projects.



Prompt Message	Description
Company	Select the Company that you want to display in the report.
Use Current	Select **Yes** if you want to use the current period in the settings which automatically fills in the year, period, and subperiod.
Fiscal Year	Select the Fiscal Year to display in the report.
Period	Select the Period to display in the report.
Subperiod	Select the Subperiod to include in the report
Rate Type	Select either **Actual** or **Target** to indicate if you want to use actual rates or target rates in the report.
Project Level	Select the project level at which you want the report printed.
Select Project(s)	Select the projects that you want to include in the report. To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.
Select Owning Org	Select the owning organization to include in the report. To search with **Keywords**, enter one or more characters that will help retrieve the item(s) you want to select for the report. To narrow the search, select an option in the **Starts with any of these keywords** dropdown list. If you search by name, use one of the **Contains...** options, rather than the **Starts with...** options. If applicable, click the right-arrow to move your selected results to **Choices**.

Samples - Costpoint BI

This folder contains data sets and a dashboard for resource management.

Dashboards with Data Sets

This folder includes sample dashboards and data sets that you can use with the dashboards.

This folder includes the following data sets:

- Accounts Receivable
- AR
- AR Project Dimension
- ECN (Engineering Change Notice)
- GL (General Ledger)
- Labor History
- MO (Manufacturing Order)
- Planning
- PSR (Project Status Report)

This folder also includes data modules and dashboards for the following areas:

- Executive
- Manufacturing
- Planning
- Projects

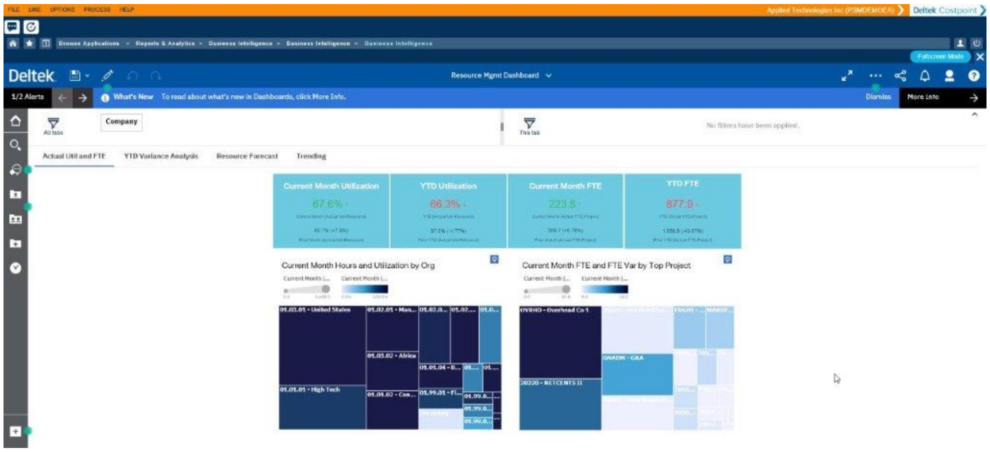
Smart AI

The Smart AI folder contains sample Resource Management data sets and the Resource Management dashboard.

Resource Management Dashboard

The Resource Management dashboard provides a visualization of resource utilization based on a sample of Smart AI (Artificial Intelligence) recommendations and Exploration.

More information about Smart AI is available in the Deltek Costpoint Business Intelligence Smart AI Guide.



The Resource Management dashboard includes four tabs:

- **Actual Util and FTE**: This tab displays data for the actual utilization by resource which is time spent on direct work, and the full time equivalent (FTE) data by project which is time spent on a project. This information helps you to analyze the staffing on a project to see how many FTEs were used or are needed.
- **YTD Variance Analysis**: This tab displays the actual vs. forecast utilization variance, FTE variance, and hours variance for the year.
- **Resource Forecast**: This tab displays the forecasted hours by resource type, forecasted FTE by organization, and analyzes the actual and forecasted utilization by organization based on a six month period.
- **Trending**: This tab displays actual vs. forecasted trends by month and quarter for the organization.

SOX Controls Reporting

This chapter includes a section on scheduling Sarbanes-Oxley Controls Reports.

The section also lists the report categories and links to their sample reports.

Scheduling SOX Controls Reporting

Deltek has provided predefined jobs so that you can schedule your Sarbanes-Oxley (SOX) control reports to run in batch mode.

These jobs, defined in the **SOX Controls Reporting.zip** file, will run the reports and save the output in the PDF file format. Also available is a batch program, which renames these PDF files so that the run date/time of each report is appended to its file name.

This document will help you to configure the output location, batch file, and Cognos server, to execute these jobs, and to run the renaming script.

The following are the steps in configuring your SOX reports:

Step 1: Import the deployment zip file.
Step 2: Customize the rename program and set the output location.
Step 3: Configure the Cognos Analytics server to save the report output and call the batch file.
Step 4: Execute the predefined jobs to run the reports in batch mode.

Step 1: Import the Deployment Zip File

You must complete this step during the installation process to make the predefined scheduling jobs available.

For instructions on importing this file, see the *Deltek Costpoint Business Intelligence 8.0 Upgrade Installation Guide*, available at the Knowledge Center tab of the Deltek Support Center site, https://support.deltek.com.

After you have completed the import, browse to the **Team content** » **SOX Controls Reporting** directory, where you will find the Report Generation Schedules folder. This folder contains all the predefined scheduling jobs.

The SOX Controls Reporting job runs all the SOX reports for Costpoint and Time Collection. There are also predefined jobs for specific modules. For example, Costpoint Accounting and for sub-modules, such as **Costpoint Accounting** » **Accounts Payable**.

Step 2: Customize the Batch Renaming Script

The reports generated by Cognos scheduler are given cryptic names.

For example, **Approver Settings** could potentially be generated as a file named 397_1163638261400.pdf. For each PDF file, the Cognos server also generates a descriptor file in .xml format. This file contains the mapping of the generated PDF file name to the report's original name on the Cognos Server.

> **Note:** When the Cognos scheduler generates a report, it saves this PDF file to a "Work" subfolder at the output location you specify in Step 3. Make sure to create these folders before running your job.

Deltek provides a script which, when run, takes the mapping information from the xml file to rename the PDF files to their original report names. This script then also appends the date and time of the report generation to the end of the file name. There is then an option to delete these descriptor files upon completion of the renaming process.

To customize the batch renaming script for your firm, you must edit the renameFiles.bat file (located at C:\Program Files (x86)\Deltek\CostpointEnterpriseReporting\CER723\SOX\Scripts), as necessary. The areas to edit are in italics in the following sample.

When you are through, save the renameFiles.bat file. Ensure that the renameFiles.bat, renameFiles.java, and renameFiles.class files are saved to the desired output location.

> **Note:** The renaming script will not run if special characters exist in the name. Therefore, exclude special characters from path and report names. Examples of special characters are: > < " ' & + / ? % # + , . : ; = [ ]

```
@echo off
REM
REM Please update the following information before executing the
program:

REM COGNOS_HOME:        Your cognos install directory

Set COGNOS_HOME=C:\Program Files\ibm\cognos\analytics

REM JAVA_HOME:        Combining Cognos_Home with this location
REM                   should result in a folder location where
REM                   "bin" folder can be found. Make sure there
REM                   is a java.exe inside the "bin" folder.

set JAVA_HOME=%COGNOS_HOME%\jre

set PATH=%JAVA_HOME%\bin;%PATH%

REM CMOUTPUT_LOCATION:        Location where your CRN Server will
REM                   save files. This is the directory
REM                   where the files "renameFiles.bat",
REM                   "renameFile.class" and
REM                   "renameFiles.java" should exist.

Set CMOUTPUT_LOCATION=C:\Output

REM WORK_LOCATION:    Location where all files will be moved
REM                   before renaming them. By default this
REM                   is the 'Work' subfolder of the
REM                   CM_OUTPUT_LOCATION. You can use the
REM                   alternate code below for specifying another
REM                   location altogether. Just remember to "REM"
REM                   the line of code not in use.
```

```
Set WORK_LOCATION=%CMOUTPUT_LOCATION%\work
REM set WORK_LOCATION=C:\test

REM Call the java program to rename the output file
REM -cp option specifies the classpath information i.e. location of
renameFiles.class
REM The files (%1 and %2) that the server will pass to the batch
file will be renamed

REM Set the last parameter of the code below to "Y" or "y" for the
program to put files
REM under a subfolder; "N" or "n" otherwise
Call "%JAVA_HOME%\bin\java" -cp "%CMOUTPUT_LOCATION%" renameFiles
"%WORK_LOCATION%" "%1" "%2" n

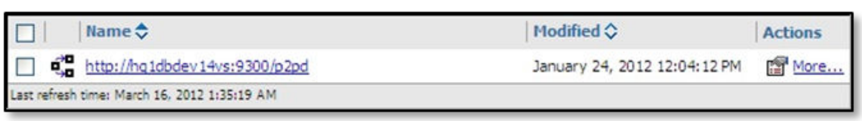
REM Delete the XML descriptor files
REM Remove "REM" from the line below if you want descriptor files
deleted
REM Deltek %WORK_LOCATION%\*.xml
```

Step 3: Configure the IBM Cognos Analytics Server

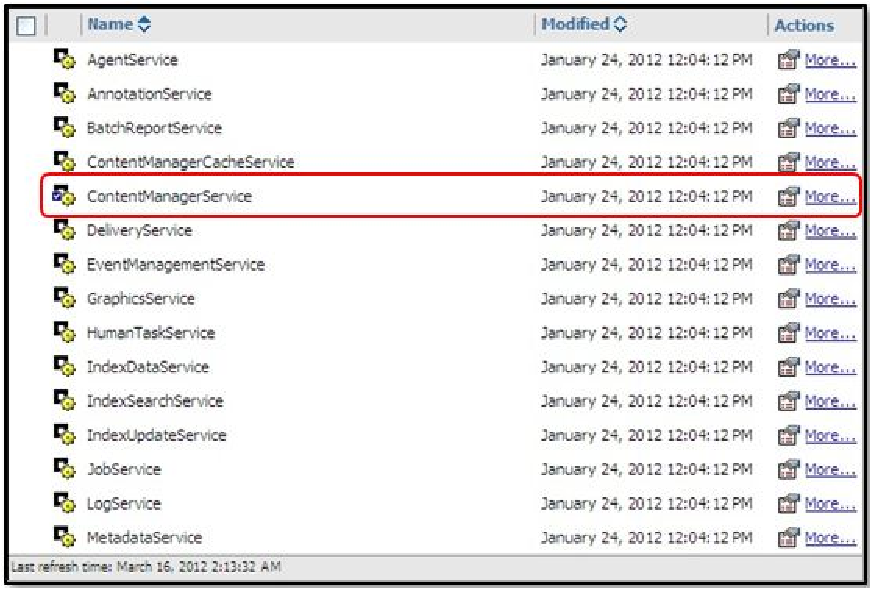
You must log on to Cognos Analytics and set the server parameters in order to save the output of reports in the proper folder structure on the file system.

To set the server parameters:

1. From the Navigation bar, click **Manage** » **Administration Console**.
2. On the IBM Cognos Administration page, click the Configuration tab, select the **COSTPOINT** check box, and click **Dispatchers and Services**.
3. Click the link for the dispatcher you want to configure.



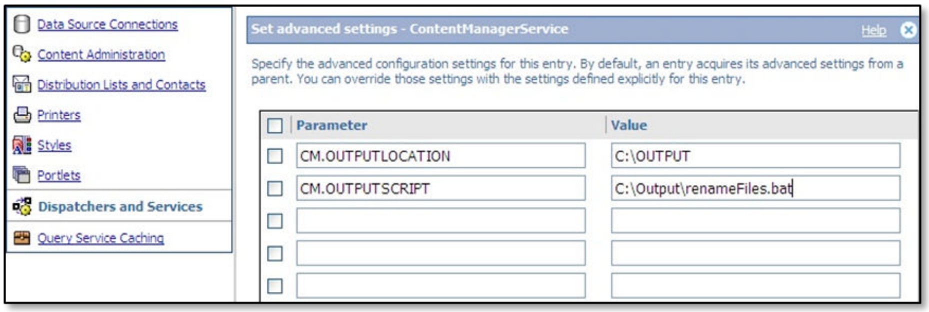
4. Select **ContentManagerService** from the list of objects to configure.



5. Under the **Actions** column, click the **Set properties** button.
6. Click the Settings tab.
7. Under the **Value** column, click **Edit** of **Environment** » **Advanced Settings**.
8. Select the **Override the settings acquired from the parent entry** check box.
   A table displays, in which you can add parameters.
9. Under **Parameter**, enter **CM.OUTPUTLOCATION**.
10. Under **Value**, enter the file system location where you want to store report outputs (for example, **C:\Output**).

    > **Note:** This will not work if you specify a UNC name. If you must specify a network location, use a mapped drive from the local machine.

11. Complete the following steps to add the batch renaming script file, which runs after a report output is saved to the target directory:
    a) Under **Parameter**, click an empty cell and enter **CM.OUTPUTSCRIPT**.
    b) In the corresponding **Value** cell, enter the location and the name of the script (for example, **C:\Output\renameFiles.bat**).
    c) Click **OK**.



12. Complete the configuration of Cognos Analytics Server:
    a) On the computer where you installed Content Manager, start IBM Cognos Configuration. You can find the IBM Cognos Configuration file (cogconfigw.exe) at C:\Program Files\ibm\cognos\analytics\bin64.
    b) In the Explorer window, under **Data Access**, click **Content Manager**.
    c) In the **Save report outputs to a file system** field, select **True**.
    d) On the menu, click **File** » **Save**.
    e) Restart the IBM Cognos service.

Step 4: Execute Job on Recurring Schedule

Browse to the job you want to run.

To execute the job:

1. Find a predefined SOX job in **Team content** » **SOX Controls Reporting** » **Report Generation Schedules**.
2. Click the **More** icon (dotted vertical line) to the right of the report, and select **Properties**.
3. Click **Job** » **Advanced**.
4. Under **Advanced**, do the following:
    a) Click **Set** to the right of **Properties** to edit the job and set parameters, and click **OK**.
    b) Click **Set** to the right of **Schedule Job** to set the desired schedule, and click **OK**.

After the job has completed running, browse to the specified output location to see the report output.

SOX Controls Reporting Report Categories

SOX Controls Reporting includes several report categories.

These report categories include the following:

- Costpoint Accounting
- Costpoint Materials
- Costpoint People

- Costpoint Projects
- Costpoint Other
- Deltek Time Collection
- Report Generation Schedules

Model Information

Included in the documentation downloaded is information about the structure, table inclusion, and relationships (joins) for the Costpoint Business Intelligence Framework Manager model, in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_CP711_CPSOXModel.xls.

SOX Controls Reports

The SOX Controls Reporting includes several report categories and their reports.

These report categories include the following:

Costpoint Accounting	
Accounts Payable	▪ Accounts Payable Accounts ▪ Accounts Payable Settings ▪ Accounts Payable Voucher Settings ▪ Approver Settings ▪ Cash Accounts ▪ Purchase Order Voucher Settings ▪ Vendor Settings ▪ Vendor Terms
Accounts Receivable	▪ Accounts Receivable Settings ▪ System-Assigned Cash Receipt Number ▪ Transfer Accounts

Time

This chapter describes the reports in the Time folder.

Model Information

The documentation included in this release has detailed information about the structure, table inclusion, and relationships (joins) for the Time framework model in spreadsheet format.

The name of the spreadsheet file is DeltekCostpointBusinessIntelligence80_TimeModel.xlsx.

Model Security

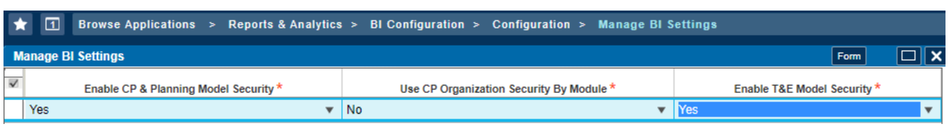
The Time data model includes Time security setup using functional roles.

Functional Role Security

Time security ensures that users can only see records based on their functional roles over employees and/or projects.

- Users (or resource managers) should see records based on Functional Role(s) over Employee(s).
- Users (or project managers) should see records based on Functional Role(s) over Projects(s).
- If a user is both a Resource Manager and Project Manager they will see the combination of records based on these roles.

You can turn on Time security in Costpoint for use in the Times model. To do so, select **Yes** in the **Enable T&E Model Security** field in **Manage BI Settings (BIMCERSETTINGS)**.



To limit the projects that users can view in reports, turn on **Apply Charge Level Security** in **Manage Security Roles (ADMSECURITYROLE)** in Costpoint. If this setting is off, the user can view all projects.

The functional role assigned to a user must also have **View** timesheet rights set for that functional role in **Manage Functional Roles (ADMFUNCTIONALROLE)**.

Time - Reports

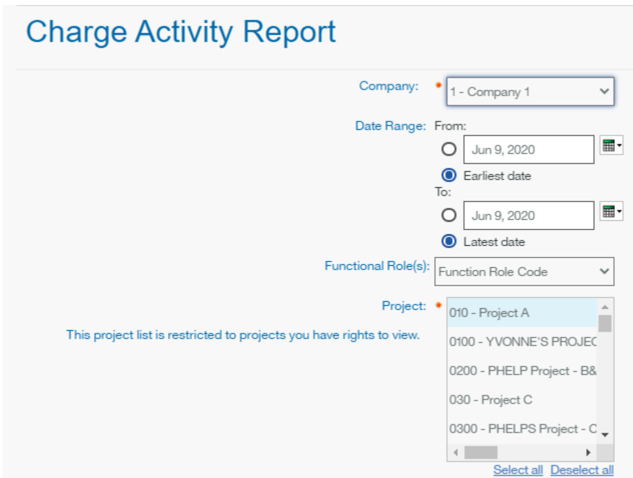
The Charge Activity Report and the Resource Activity Report use the Time framework model.

Charge Activity Report

Project managers can use the Charge Activity report to review the activity on their projects.

Prompts

Use the Charge Activity report prompts to configure the report.



Prompt Message	Description
Company	Select a company from the list.
Date Range	Enter or select the starting date for the report in **From** and the ending date in **To**. The report will include projects that satisfy the date range you specify. You can opt to select the **Earliest date** or the **Latest date** possible for the sales order dates.
Functional Role(s)	Select the functional role code(s) to only include the employees related to the role(s) in the report.
Project Prompt Type	Choose a method that will help you find the projects you want to select for the report. Select **Listview Prompt** to select projects from a list or select **Search and Select Prompt** to search and select individual projects using keywords.
Project	Based on the project prompt type specified, select the project(s) to include in the report from the project list or using keywords.

Sample Report

This is a sample Charge Activity report.

Charge Activity Report

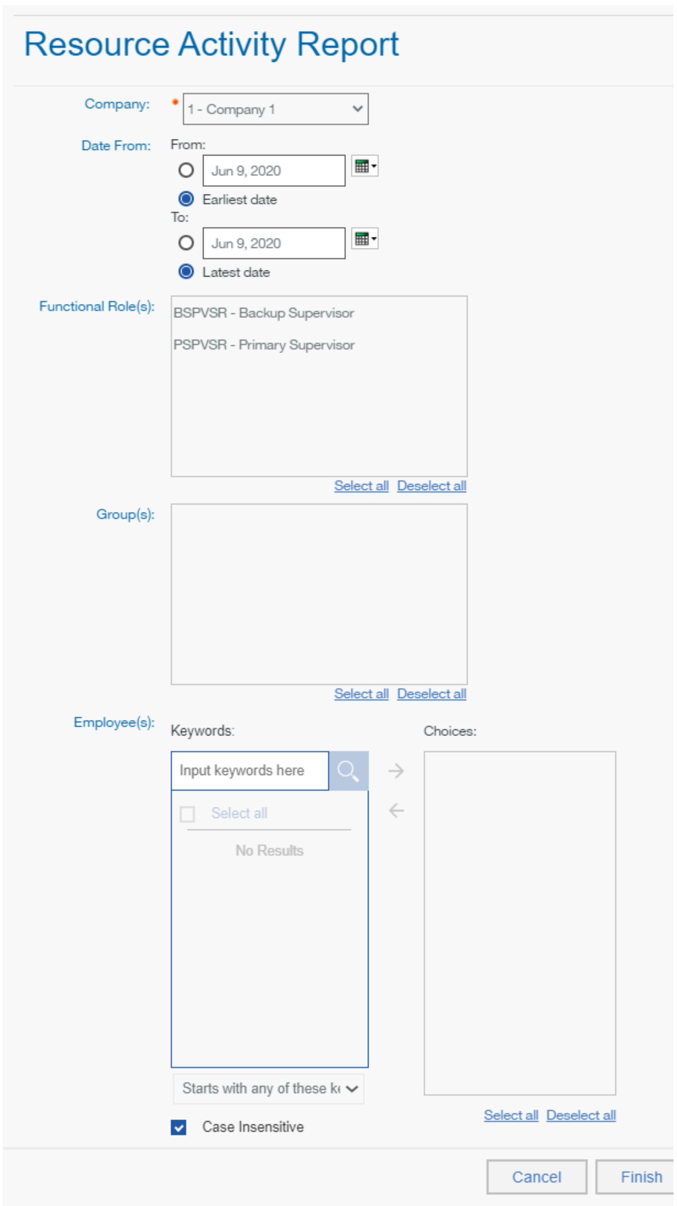
Resource Activity Report

Managers can use the Resource Activity report to see how the employees they have a role over have charged their time.

You can only view the activity of the resources you have a role over.

Prompts

Use the Resource Activity Report prompts to select a company and run the report.



Prompt Message	Description
Company	Select a company from the list.
Date From	Enter or select the starting date for the report in **From** and the ending date in **To**. The report will include the records that satisfy the date range you specify.

Prompt Message	Description
	You can opt to select the **Earliest date** or the **Latest date** possible for the sales order dates.
Functional Role(s)	Select the functional role code(s) to only include the employees related to the role(s) in the report.
Group(s)	Select the employee group(s) to include in the report.
Employee(s)	Select the employee(s) you want to display in the report. In **Keywords**, enter one or more characters to search with to retrieve this information. To narrow the search, select one of the following in the dropdown list: ▪ Starts with any of these keywords ▪ Starts with the first keyword and contains all of the remaining keywords ▪ Contains any of these keywords ▪ Contains all of these keywords If you search by name, use one of the Contains... options, rather than the Starts with... options. Click the arrow to list the matching contracts in **Choices**.

Sample Report

This is a sample Resource Activity report.

Appendix A: Dashboard Drill Thru Reports

Some dashparts provide more details for their data in a drill thru report. To access a drill report, right-click on the dashpart and then click the Drill Through icon.

Table 1: Dashboard Drill Thrus

Dashboard	Tab	Dashpart	Drill Thru Report
Executive Dashboard	Backlog Tab	▪ Funding Backlog (Target) by Contract Type ▪ Contract Backlog (Target) by Contract Type	Contract details
Procurement Dashboard(Header and Line Level)	Requisitions Tab	Requisitions Awaiting Approval by Approver	Days In Approval
	Requisition to PO Conversion Tab	Approved Requisitions Awaiting PO Conversion by Buyer	Approved Requisitions
Manufacturing Dashboard	Manufacturing Tab	Release On-Time %/On-Time/Late	Release Date vs Planned Date
		In-Shop On-Time%/On-Time/Late	In-Shop Date vs Planned In-Shop Date
		Mo Production Status	MO Production Status Details
		# of ECNs by Status	ECN Impact to MOs

Appendix B: Reconcile Data with Costpoint Planning

Use the following procedures to reconcile data in Costpoint Business Intelligence with Costpoint Planning.

Reconcile Labor Utilization with Drill Through

Use the Costpoint Planning reports to reconcile data on the Labor Utilization with Drill Through report.

These reports include the following:

- Labor Hours Analysis
- Hours Breakdown
- Labor Cost Analysis
- Raw Cost Breakdown

To reconcile the Costpoint Business Intelligence Labor Utilization Report with Drill Through with Costpoint Planning:

1. Run the Labor Utilization report in Costpoint Business Intelligence.
2. Obtain the data for each component of the utilization calculation by running the following Costpoint Planning reports, and then compile data to compare to the Utilization %.

   This allows you to independently calculate and confirm the Utilization %.

   a) Run the Labor Hours Analysis report in Costpoint Planning (**Planning** » **Project Budgeting** » **Top Level (All Projects) Reports** » **Labor Hours Analysis**) to list the labor hours for each project.

   b) Select **Latest EAC**.

   c) Run the Hours Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Hours Breakdown**) to verify the labor utilization by hours.

      Calculate the standard hours and run a SQL script to identify the standard hours by period. These are computed by multiplying the number of work days by 8 hours. Work days are defined in the Subperiod table (eSub_PD.Work_Days).

      Select **Latest EAC**. The labor utilization calculation for hours is:

      EAC hours/Standard hours

      The report shows monthly EAC hours by employee, but you can expand the employee to view the breakdown by project for the drill-through.

   d) Run the Labor Cost Analysis report in Costpoint Planning (**Planning** » **Organization Budgeting** » **Labor Analysis Reports** » **Labor Cost Analysis**) to list the projects that each employee charged.

Calculate the standard hours and run a SQL script to identify the standard hours by period. These are computed by multiplying the number of work days by 8 hours. Work days are defined in the Subperiod table (eSub_PD.Work_Days).

Select **Latest EAC**. The labor utilization calculation for cost by employee is:

EAC amount/(Standard hours * hourly amount)

The labor utilization calculation for cost by generic staff is:

EAC amount/(Standard hours * avg hourly amount)

3. The report displays monthly EAC cost by employee, but you can expand the employee to view the breakdown by project for the drill-through.

   a) Determine the current hourly amount for each employee.

   This information is available to those users with access rights to the Costpoint EMPL_LAB_INFO.HRLY_AMT table. You can use a SQL script to determine this information.

   b) Find the average hourly rate for generic staff.

   > **Attention:** To do this, you must refer to the Maintain Generic Staff report at (**Planning** » **Organization Budgeting** » **Controls and Utilities** » **Maintain Generic Staff**).

   c) Run the Raw Cost Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Raw Cost Breakdown**) for each project that was listed in the Labor Cost Analysis report to display the unburdened labor costs.

   If an employee has charged multiple projects, you must run this report for each charge and then manually compile the total EAC labor costs.

4. Export the data into an Excel spreadsheet to view all calculations and comparisons.

Reconcile Labor Variance by PLC

Use the Costpoint Planning reports to reconcile data on the Labor Variance by PLC report.

These reports include the following:

- Project Status Report
- Hours Breakdown Report

To reconcile the Costpoint Business Intelligence Labor Variance by PLC report with Costpoint Planning:

1. Run the Labor Variance by PLC report in Costpoint Business Intelligence.
2. Run the Project Status report in Costpoint Planning (**Planning** » **Project Budgeting** » **Supplemental Reports**).
3. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Current Period Actual Hours	Current Period Labor Hours
YTD Actual Hours	Fiscal Yr to Date Labor Hours

4. Run the Hours Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports**).
5. Select **Latest EAC**.
6. Click **All Periods**.
7. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Total for Current Period Budget Hours column	Total labor (employee labor) from the current period column. (Do not include subcontractor or consultant hours.)
Total for YTD Budget Hours column	Total labor (employee labor) from adding the monthly columns that should be included in YTD. (Do not include subcontractor or consultant hours.)

> **Note: Current Period**, **YTD Variance**, and **Variance %** columns in the Labor Variance by PLC report are calculations that can be independently verified.

Reconcile Project Labor Hours Status

Use the Costpoint Planning reports to reconcile data on the Project Labor Hours Status report.

These reports include the following:

- Project Status Report
- Hours Breakdown Report

To reconcile the Costpoint Business Intelligence Project Labor Hours Status report with Costpoint Planning:

1. Run the Project Labor Hours Status report in Costpoint Business Intelligence.
2. Run the Project Status report in Costpoint Planning (**Planning** » **Project Budgeting** » **Supplemental Reports**).
3. Select **Latest EAC**.
4. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
ITD Actual Hours + Current Period Actuals	Labor Hours for Contract to Date – you can expand these fields to verify hours by employee
Unposted Hours	Labor Hours for Unposted Time – you can expand these fields to verify hours by employee
Current Period Actuals	Labor Hours for Current Period – you can expand these fields to verify hours by employee

5. Run the Hours Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports**).
6. Select **Latest EAC**.
7. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Total EAC Hours	Tot Hrs Bgt
Current Period Forecast	Total for monthly column (current period)

Reconcile Project Report with Labor Detail

Use the Costpoint Planning reports to reconcile data on the Project Report with Labor Detail.

These reports include the following:

- Project Status
- Current Forecast
- Hours Breakdown
- Burdened Cost Breakdown

To reconcile the Costpoint Business Intelligence Project Report with Labor Detail report with Costpoint Planning:

1. Run the Project Report with Labor Detail in Costpoint Business Intelligence.

14. Compare the following for the six months of forecasts between the two reports:

Costpoint Business Intelligence: ETC Periods	Costpoint Planning Report: ETC Period
Total Labor Cost with Burden	Labor
Other Direct Cost with Burden	Calculated by Total - Labor
Total Costs	Total

Costpoint Business Intelligence: EAC column	Costpoint Planning Report: Tot Burd Budget column
Total Labor Cost with Burden	Labor
Other Direct Cost with Burden	Calculated by Total – Labor
Total Costs	Total

Costpoint Business Intelligence: Total Forecast Budget column	Costpoint Planning Report: Forecast Total column
Total Labor Cost with Burden	Labor
Other Direct Cost with Burden	Calculated by Total - Labor
Total Costs	Total

Reconcile Project Status Cost Summary

Use the Costpoint Planning reports to reconcile data on the Project Status Cost Summary report.

These reports include the following:

- Project Status Cost Summary
- Current Forecast

To reconcile the Costpoint Business Intelligence Project Status Cost Summary report with Costpoint Planning:

1. Run the Project Status Cost Summary report in Costpoint Business Intelligence.
2. Run the Project Status report in Costpoint Planning (**Planning** » **Project Budgeting** » **Supplemental Reports**).
3. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
ITD Actual Amount	Contract to Date Total Expense

4. Run the Current Forecast report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports**).

   Note: This report must be run for the next period.

5. Select **Budget**.
6. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Baseline Budget Amount	The sum of Labor Cost, Non-Labor Cost, and Indirect Cost from the Bgt/EAC Total column

7. Select **Latest EAC**.
8. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Forecast Amount	The sum of Labor Cost, Non-Labor Cost, and Indirect Cost from the Forecast Total column

9. Verify that the **ETC Amount** total in the Project Status Cost Summary report in Costpoint Business Intelligence is equal to the **Forecast Amount** column less the **ITD Actual Amount** column in the same report.

   Note: Variance Amount and **Variance Percentage** are report calculations that can be verified independently once the other figures are confirmed against Costpoint Planning.

Reconcile Project Subcontractor Status

Use the Costpoint Planning reports to reconcile data on the Project Subcontractor Status report.

These reports include the following:

- Burdened Cost Breakdown (Cost Analysis)
- Burdened Cost Breakdown (Budget Development)

To reconcile the Costpoint Business Intelligence Project Subcontractor Status report with Costpoint Planning:

1. Run the Project Subcontractor Status report in Costpoint Business Intelligence.
2. Run the Burdened Cost Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Burdened Cost Breakdown**).
3. Click **Mtls&Subs**.
4. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
ITD Actual Costs	Total of the ‘Subs’ line from ITD Total column
Commitments	Total of the ‘Subs’ line from Commit column
Current Period Actuals	Total of the ‘Subs’ line from Current Period column

5. Run the Burdened Cost Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Burdened Cost Breakdown**).
6. Click **Subcontracts**.
7. Select **Latest EAC**.
8. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report Total Burden Budget Column
EAC	Subcontracts and Other Mtls & Subs

Reconcile Revenue Forecast

These are the Costpoint Planning reports you can use to reconcile data on the Revenue Forecast report.

These reports include the following:

- Project Status
- Current Forecast
- Audit/Modify Non-Backlog Project Budget

To reconcile the Costpoint Business Intelligence Revenue Forecast report with Costpoint Planning:

1. Run the Revenue Forecast report in Costpoint Business Intelligence.

> **Note:** Projects that do not have monthly forecasts within the next 6 months are excluded from the report. Use the Current Forecast report to confirm if there are monthly forecasts for each of the detail projects. See Step 4 for details.

2. Run the Project Status report in Costpoint Planning (**Planning** » **Project Budgeting** » **Supplemental Reports**) to validate **Contract Value** for existing projects.
3. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report Contract Value Total Column
Contract Value for the line item with the same Project ID	Total Expense

4. Run the Current Forecast in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports**) to validate the monthly forecasts for each of the detail projects.

   > **Note:** This report must be run for the next period.

5. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Backlog projects	Total Revenue for each monthly forecast

6. Run the Audit/Modify Non-Backlog Project Budget report in Costpoint Planning (**Planning** » **New Business Budgeting** » **Actions/Processing** » **New Business Budgets**) to validate the contract value and monthly forecasts of non-backlog/new business projects.
7. Click **View** next to the desired project and latest budget version number, and select **REVBD** from the drop-down list.
8. Export the report to Microsoft Excel to generate the totals.
9. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Total Contract	Totals
Monthly forecast	Monthly columns

   > **Note:** If there are no forecasts in the specified period for a particular line item, the line is excluded from the Costpoint Business Intelligence report.

Reconcile T&M Profitability

Use the Costpoint Planning reports to reconcile your T&M Profitability reports.

These Costpoint Planning reports include the following:

- T&M Billable Revenue Breakdown
- Burdened Cost Breakdown
- Revenue Breakdown
- Burdened Cost Breakdown

To reconcile the Costpoint Business Intelligence T&M Profitability report with Costpoint Planning:

1. Run the T&M Profitability report in Costpoint Business Intelligence.
2. Run the T&M Billable Revenue Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **T&M Billable Revenue Breakdown**).

3. Compare the following:

Costpoint Business Intelligence ITD Amount Column	Costpoint Planning Report ITD Amt Column
Revenue	ITD Amt

4. Run the Burdened Cost Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Burdened Cost Breakdown**).
5. Compare the following:

Costpoint Business Intelligence ITD Amount Column	Costpoint Planning Report ITD Total Column
Revenue	Labor

6. Run the T&M Billable Revenue Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **T&M Billable Revenue Breakdown**).
7. Select **Latest EAC**.
8. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Billing Rate	Bill Rate
Revenue from EAC Column	Total Revenue Labor Amount from ITD Amt Column
Revenue from Monthly Forecast Columns	Total Revenue Labor from Monthly Forecast Columns

9. Run the Burdened Cost Breakdown report in Costpoint Planning (**Planning** » **Project Budgeting** » **Active Level Reports** » **Burdened Cost Breakdown**).
10. Select the **Latest EAC**.
11. Compare the following:

Costpoint Business Intelligence	Costpoint Planning Report
Burdened Labor from EAC Column	Labor from Tot Burd Bgt Column
Burdened Labor from Monthly Forecast Columns	Labor from Monthly Forecast Columns
