

## Authorization Server Pro 3.6.101.1 Release Notes

Release Date: March 25, 2026

Welcome to the **Authorization Server Pro 3.6.101.1 Release Notes**, which describe the new features, enhancements, and fixes introduced in this release.

### New

- The Authorization Server now enables role assignment by product, allowing for centralized management of user roles while maintaining product-level role creation and management. This feature ensures synchronization between individual product roles and the Authorization Server, streamlining role tracking and maintaining consistency across systems. Admins can now assign and manage user roles across multiple products, with role updates made within a product being reflected in Authorization Server in real-time or near real-time.

### Enhancements

- Authorization Server has been updated to support new perpetual web licenses for web products. This improvement ensures compatibility with version 3.6.101.0 and forward, enhancing the licensing capabilities of the system. The update allows for better management and implementation of perpetual licensing for web-based products within the Authorization Server framework.
- Authorization Server Pro 3.6.101.1 is compatible with BOE Pro 3.6.101.0 and Cost Volume Pro 3.6.101.0
