<b>Main Order No.</b>	If the packing slip has been created from a sales order which is linked to a main order, the number of the main order is displayed in this field. If the packing slip is created from the main order itself, the number of the current main order is displayed.

### Delivery Note Lines Sub-Tab

This section includes the fields and descriptions for the Delivery Note Lines sub-tab.

Field	Description
<b>Item No.</b>	This is the number of the item in the item line. The number is retrieved from the corresponding field on the sales order.
<b>Ordered</b>	This is the quantity of item units ordered on the sales order.
<b>Delivered</b>	This is the quantity of item units delivered.
<b>Back Orders</b>	This is the volume of back orders generated by the sales order and the delivery.
<b>Unit</b>	This is the item unit registered in the warehouse. The unit value is retrieved from the sales order.
<b>Description</b>	This is the item text from the "Description Lang. 1" field in the Item Information Card in the Inventory module.
<b>Extra Text 1-10</b>	These fields show the extra texts entered in the corresponding fields on the order line which forms the basis of the current packing slip line.
<b>Popup 1-5</b>	These fields show the pop-up values entered in the corresponding fields on the order line which forms the basis of the current packing slip line.

## Show Invoice Workspace

Use this workspace to see information about an invoice.

You can invoice item lines of a sales order on several different invoices.

In the Sales Orders workspace, you can see how many units in every item line are invoiced, but you cannot see the invoices on which the items are invoiced.

By using the search functions in the Find menu, you can retrieve a specific invoice in this workspace, giving you quick access to all of the relevant information about the invoice. It is often easier to retrieve the information in Maconomy than to look for a printout in your files. This workspace displays charges and taxes that Maconomy calculated for the sales order in the Sales Orders workspace or for the invoice in the Invoices workspace.

You can reprint invoices in batches. This is useful if you need to discard old copies because of a faulty printer, or if they are lost. To reprint an invoice, you deselect the **Printed** field in the Invoice island. You cannot change any other information in the workspace. It is purely for reference. Alternatively, you can reprint invoices.

You can also create and print invoices for sales orders that have been released for invoicing and are being invoiced in batches.

Note that if you have Maconomy Bill of Materials, and if an invoice has bills of materials, this workspace does not show the individual item parts.

Note also that the Show Invoice workspace does not display job invoices that you created in the Job Cost module. You can view these invoices in the Show Job Invoice workspace in the Job Cost module.

### Show Invoice Tab

This section includes the fields and descriptions for the Show Invoice tab.

#### Billing Address Island

Field	Description
<b>Bill to Customer</b>	This is the number of the customer to whom the invoice was sent. The other lines in this field show the bill-to customer's name and address. The text is retrieved from the invoice in the window Invoices or from the sales order in the window Sales Orders.
<b>Attn.</b>	This is the bill-to customer's attention person the person to whom payment information is directed. The name is retrieved from the invoice in the window Invoices or from the sales order in the window Sales Orders.
<b>Ctry</b>	This is the customer's country code. It is retrieved from the relevant invoice in the window Invoices or sales order in the window Sales Orders.

### Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the number of the settling company that applies to the currently displayed invoice.</p> <p>For further information about the influence of a settling company and how such a company is determined, please see the section Multiple Companies in the chapter "Introduction to the G/L Module."</p> <p>This field also displays the name of the specified settling company.</p>

### Price Island

Field	Description
<b>Currency</b>	This is the currency of the invoice. The currency is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Exchange Rate Date</b>	This field shows the exchange rate date for the calculation of prices on the invoice. If no exchange rate date was specified on the sales order on which the invoice is based, or if the invoice was created in the window Invoices, this field is blank.
<b>Sales</b>	This is the sum of the prices in the item lines of the invoice. All line and quantity discounts have been deducted.
<b>Invoice Discount %</b>	This is the percentage rate used to calculate the invoice discount on the invoice. The percentage rate is retrieved from the invoice in the window Invoices or on the sales order in the window Sales Orders.
<b>Invoice Discount</b>	This is the calculated invoice discount amount deducted from the invoice. The discount is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Tax on Sales</b>	<p>This is the tax calculated by Maconomy. The amount is automatically added to the invoice.</p> <p>If multiple tax codes are enabled, the "Tax on Sales" field will be replaced by the following fields: "Total Tax on Sales," "Tax on Sales 1," "Tax on Sales 2" and, if enabled, "Tax on Sales 3." The "Total Tax on Sales" field calculates the sum of the other individual tax amount fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Tax on Charges</b>	<p>This is the tax calculated by Maconomy from the charges in the above field. The amount is automatically added to the invoice.</p> <p>If multiple tax codes are enabled, the "Tax on Charges" field will be replaced by the following fields: "Total Tax on Charges," "Tax on Charges 1," "Tax on Charges 2" and, if enabled, "Tax on Charges 3." The "Total Tax on Charges" field calculates the sum of the other individual tax amount fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Items on Account</b>	This field shows how much of the item sum of the sales order was invoiced on account before this invoice was created. It is deducted from the item sum on

Field	Description
	the invoice. If the invoice is an on account invoice, the value is "0.00." The field is only used by Maconomy Trade.
<b>Tax on Account</b>	<p>This field shows the tax amount added to any on account invoices before this invoice was created. The amount is deducted from the total tax amount on the invoice. If the invoice is an on account invoice, the value is "0.00." The field is only used by Maconomy Trade.</p> <p>If multiple tax codes are enabled, the "Tax on Account" field will be replaced by the following fields: "Total Tax on Account," "Tax on Account 1," "Tax on Account 2," and, if enabled, "Tax on Account 3. The "Total Tax on Account" field calculates the sum of the other individual tax amount fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Balance Due</b>	This is the total amount due from the bill-to customer. The amount is calculated from the sales amount, less any invoice discount, plus charges and tax.
<b>Std. Currency</b>	This is the bill-to customer's standard currency. The currency is retrieved from the Customer Information Card.
<b>Total in Standard</b>	This field the "Total Amount Due" converted into the standard currency of the bill-to customer.

### Remarks Island

Here you can enter comments about the invoice. Your comments can only be edited and seen in this window.

### Extra Fields Island

Field	Description
<b>Popup 1-5</b>	These fields show the pop-up values selected in the corresponding fields in the invoice or sales order which is the basis of the current invoice.

### Ship to Address Island

Field	Description
<b>Customer</b>	<p>This is the number of the customer to whom the items were delivered. It is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.</p> <p>The other lines in this field show the ship-to customer's name and address. The text is retrieved from the invoice in the window Invoices or from the sales order in the window Sales Orders.</p>
<b>Attn.</b>	This is the ship-to customer's attention person the person to whom shipping information is directed. The name is retrieved from the invoice in the window Invoices or from the sales order in the window Sales Orders.

Field	Description
<b>Country</b>	This is the customer's country code. It is retrieved from the relevant invoice in the window Invoices or sales order in the window Sales Orders.

### Company Island

Field	Description
<b>Company</b>	<p>This field shows the number of the company responsible for the current invoice. The number is transferred from the island Company on the invoice or the sales order on which the invoice is based.</p> <p>This field also shows the name of the specified company.</p>

### Invoice Island

Field	Description
<b>Invoice No.</b>	This is the number of the invoice. If you cannot remember the number of an invoice, you can use the search functions in the Find menu. You determine how invoice numbers are allocated in the window Numbers in the Set-Up module.
<b>Printed</b>	<p>This field shows whether the invoice has been printed or not. If you wish to reprint it, select "Print..." in the File menu. If you remove the mark here first, the invoice will be treated as if it has not been printed. Alternatively, you can mark that you wish to reprint invoices, which means that the invoice in the window will be included although the mark is not removed.</p> <p>When you reprint the invoice, Maconomy does not invoice the amount again. The printout is merely registered as a copy of the original invoice.</p>
<b>Order No.</b>	This is the number of the sales order in the window Sales Orders which generated the invoice. If it is a blanket invoice, the field will show the lowest sales order number in the invoice. If the invoice was created in the window Invoices, the value is "0."
<b>Packing Slip No.</b>	This is the number of the packing slip for the invoice. If you have made more than one packing slip, the field shows the last one.
<b>Version</b>	This is the version number of the sales order which generated the invoice. The value cannot be changed here.
<b>Invoice Date</b>	This is the invoice date.
<b>Due Date</b>	This is the due date which is assigned to the invoice shown. The due date is automatically calculated from the invoice date and the customer's payment terms. If the field "Due Date from Printing Date" in the window System Information has been marked, the due date will be calculated from the printing date.
<b>Printed by</b>	Here, the name of the employee, who printed the invoice, is shown. The value does not change at reprinting.

Field	Description
<b>Printing Date</b>	Here, the date of invoice printing is shown. The value does not change at reprinting.

**Dimensions Island**

Field	Description
<b>Location</b>	This is the location specified in the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.

**Customer Information Island**

Field	Description
<b>Department</b>	This is the department assigned to the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Warehouse</b>	This is the warehouse from which the invoiced items were delivered. The information is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Reference</b>	This field shows the note entered in the field "Reference" in the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Tax No.</b>	This is the customer's tax number. It is retrieved from the relevant invoice in the window Invoices or sales order in the window Sales Orders.

**Sales Orders Island**

Field	Description
<b>Main Order No.</b>	If the invoice has been created from a sales order which is linked to a main order, the number of the main order is displayed in this field. If the invoice is created from the main order itself, the number of the current main order is displayed.

**Credit Card Island**

Field	Description
<b>Credit Card No.</b>	If the displayed invoice was created on the basis of a sales order to be paid by credit card, this field shows the number of the credit card which will be used for payment of the current invoice. The value is retrieved from the field "Credit Card No." on the current sales order.
<b>Expiry Date</b>	If the displayed invoice was created on the basis of a sales order to be paid by credit card, this field shows the expiry date entered for the credit card specified in the field "Credit Card No." above. The value in this field is retrieved from the field "Expiry Date" on the current sales order.
<b>Amount Authorized</b>	If the displayed invoice was created on the basis of a sales order to be paid by credit card, this field shows the amount which the credit card issuer has accepted to pay for the current sales order. The value in this field is retrieved from the field "Amount Authorized" on the current sales order.
<b>Authorization Code</b>	If the displayed invoice was created on the basis of a sales order to be paid by credit card, this field shows the authorization code which the credit card issuer has specified in connection with the payment of the amount in the field "Amount Authorized" above. The value in this field is retrieved from the field "Authorization Code" on the current sales order.
<b>Authorization Date</b>	If the displayed invoice was created on the basis of a sales order to be paid by credit card, this field shows the date on which the credit card issuer authorized payment of the amount in the field "Amount Authorized" above. The value in this field is retrieved from the field "Authorization Date" on the current sales order.

**Invoice Lines Sub-Tab**

This section includes the fields and descriptions for the Invoice Lines sub-tab.

Field	Description
<b>Item No.</b>	This is the number of the item invoiced on the item line. The value is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Quantity</b>	This is the quantity of items invoiced.
<b>Unit</b>	This is the unit in which the item is registered in the warehouse. The value is retrieved from the item's information card in the Inventory module.
<b>Description</b>	This is the item text specified in the field "Description" on the invoice or in the "External Description" field on the sales order.
<b>Unit Price</b>	This is the unit price of the item. The unit price is calculated when the invoice or sales order is created. Any quantity discount has been deducted.
<b>Discount %</b>	This is the discount percentage rate from the item line in the invoice in the window Invoices or the sales order in the window Sales Orders.

Field	Description
<b>Discount</b>	This is the discount amount from the item line in the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Extended Price</b>	This is the extended price calculated by multiplying the invoiced quantity by the unit price and dividing this sum by the pricing unit. Any line discount is then deducted. The extended price is added to the field "Sales" in the Price island in the card part of the window.
<b>Pricing Unit</b>	This is quantity of units included in the item's unit price. The value is retrieved from the item's information card in the Inventory module.
<b>Discount Desc.</b>	This is the discount description on the item line in the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Ordered</b>	This is the quantity of items ordered in the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Back Orders</b>	This is the volume of back orders at the time the invoice was created.
<b>Price at Step 1</b>	This is the price of one pricing unit. It is retrieved from the invoice in the window Invoices or the sales order in the window Sales Orders.
<b>Quantity Disc.</b>	This is the quantity discount justified by the quantity of items on the invoice line.
<b>Order No.</b>	This is the number of the sales order in which the invoice line originates. If the invoice is created in the window Invoices, it is given an internal order number from the Sales Orders system numbers in the Set-Up module. This number is shown here.
<b>Line No.</b>	This is the number of the invoice line or order line, in which the invoice line originates.
<b>Location</b>	This is the location specified on the invoice or sales order line from which the invoice line originates. The information is used when the invoice is posted.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Extra Text 1-10</b>	These fields show the extra texts entered in the corresponding fields on the invoice or order line which forms the basis of the current invoice line.

Field	Description
<b>Popup 1-5</b>	These fields show the pop-up values entered in the corresponding fields on the invoice or order line which forms the basis of the current invoice line.

## Show Credit Memo Workspace

Use this workspace to view information about a credit memo.

This workspace displays charges and taxes that Maconomy calculated for the credit memo or the credit order in the Credit Orders workspace, which generated the credit memo.

By using the search functions in the Find menu, you can retrieve a specific credit memo in this workspace, giving you quick access to all of the relevant information about the credit memo. It is often easier to retrieve the information in Maconomy than to look for a printout in your files.

You can reprint credit memos in batches. This is useful if you need to discard old copies because of a faulty printer, or if they are lost. To reprint a credit memo, you deselect the **Printed** field in the Credit Memo island. You cannot change any other information in this workspace; it is purely for reference. Alternatively, you can reprint invoices.

Note that if you have Maconomy Bill of Materials, and if a credit memo has bills of materials, this workspace does not show the individual item parts.

Note also that the Show Credit Memo workspace does not display job credit memos that you created in the Job Cost module. You can view these credit memos in the Show Job Credit Memo workspace in the Job Cost module.

### Show Credit Memo Tab

This section includes the fields and descriptions for the Show Credit Memo tab.

#### Billing Address Island

Field	Description
<b>Bill to Customer</b>	This is the number of the customer to whom the credit memo was sent. The other lines in this field show the bill-to customer's name and address. The text is retrieved from the credit memo in the window Credit Memos or from the credit order in the window Credit Orders.
<b>Attn.</b>	This is the bill-to customer's attention person the person to whom payment information is directed. The name is retrieved from the credit memo in the window Credit Memos or from the credit order in the window Credit Orders.
<b>Ctry</b>	This is the customer's country code. It is retrieved from the relevant credit memo in the window Credit Memos or credit order in the window Credit Orders.

### Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the number of the settling company that applies to the currently displayed credit memo.</p> <p>For further information about the influence of a settling company and how such a company is determined, please see the section Multiple Companies in the chapter "Introduction to the G/L Module."</p> <p>This field also shows the name of the specified company</p>

### Price Island

Field	Description
<b>Currency</b>	This is the currency of the credit memo. The currency is retrieved from the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Exchange Rate Date</b>	This field shows the exchange rate date for the calculation of prices on the credit memo. If no exchange rate date was specified on the credit order on which the credit memo is based, or if the credit memo was created in the window Credit Memos, this field is blank.
<b>Sales</b>	This is the sum of the prices in the item lines of the credit memo. All line and quantity discounts have been deducted.
<b>Invoice Discount %</b>	This is the percentage rate used to calculate the invoice discount on the credit memo. The percentage rate is retrieved from the credit memo in the window Credit Memos or on the credit order in the window Credit Orders.
<b>Invoice Discount</b>	This is the calculated invoice discount amount deducted from the credit memo. The discount is retrieved from the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Tax on Sales</b>	<p>This is the tax calculated by Maconomy. The amount is automatically added to the credit memo.</p> <p>If multiple tax codes are enabled, the "Tax on Sales" field will be replaced by the following fields: "Total Tax on Sales," "Tax on Sales 1," "Tax on Sales 2" and, if enabled, "Tax on Sales 3." The "Total Tax on Sales" field calculates the sum of the other individual tax amount fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Tax on Charges</b>	<p>This is the tax calculated by Maconomy from the charges in the above field. The amount is automatically added to the credit memo.</p> <p>If multiple tax codes are enabled, the "Tax on Charges" field will be replaced by the following fields: "Total Tax on Charges," "Tax on Charges 1," "Tax on Charges 2" and, if enabled, "Tax on Charges 3." The "Total Tax on Charges" field calculates the sum of the other individual tax amount fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Balance Due</b>	This is the total amount due to the bill-to customer. The amount is calculated as the sales amount less any invoice discount, plus charges and tax.

Field	Description
<b>Std. Currency</b>	This is the bill-to customer's standard currency. The currency is retrieved from the Customer Information Card.
<b>Total in Standard</b>	This is the "Total Amount Due" converted into the standard currency of the bill-to customer.

**Extra Fields Island**

Field	Description
<b>Popup 1-5</b>	These fields show the pop-up values selected in the corresponding fields in the credit memo or credit order which is the basis of the current credit memo.

**Remarks Island**

Here you can enter comments about the credit memo. Your comments can only be edited and seen in this window.

**Ship to Address Island**

Field	Description
<b>Customer</b>	This is the number of the customer who returned the items in credit memo in the window Credit Memos or the credit order in the window Credit Orders. The other lines in this field will show the ship-to customer's name and address. The text is retrieved from the credit memo in the window Credit Memos or from the credit order in the window Credit Orders, which generated the credit memo shown.
<b>Attn.</b>	This is the ship-to customer's attention person the person to whom shipping information is directed. The name is retrieved from the credit memo in the window Credit Memos or from the credit order in the window Credit Orders.
<b>Ctry</b>	This is the customer's country code. It is retrieved from the relevant credit memo in the window Credit Memos or credit order in the window Credit Orders.

**Company Island**

Field	Description
<b>Company</b>	This field shows the number of the company responsible for the current invoice. The number is transferred from the island Company on the invoice or the sales order on which the invoice is based. This field also shows the name of the specified company.

**Credit Memo Island**

Field	Description
<b>Credit Memo No.</b>	This is the number of the credit memo. If you cannot remember the number of a credit memo, you can use the search functions in the Find menu. You determine how credit memo numbers are allocated in the Numbers window in the Set-Up module.
<b>Printed</b>	This field shows whether the credit memo has been printed or not. If you wish to reprint it, select "Print..." in the File menu. If you remove the mark here first, the credit memo will be treated as if it has not been printed. Alternatively, you can mark that you wish to reprint credit memos, which means that the credit memo in the window will be included although the mark is not removed.  When you reprint the invoice, Maconomy does not invoice the amount again. The printout is merely registered as a copy of the original invoice.
<b>Re. Invoice No.</b>	This is the invoice number the credit order was created from and on which the credit memo is based. If the field shows "0," the credit order was created from scratch in the window Credit Orders.
<b>Order No.</b>	This is the number of the credit order in the window Credit Orders, which generated the credit memo.
<b>Invoice Date</b>	This is the date of the credit memo.
<b>Due Date</b>	This is the due date assigned to the credit memo. The due date is calculated from the credit memo date and the customer's payment terms.
<b>Printed by</b>	Here, the name of the employee, who printed the credit memo, is shown. The value does not change at reprinting.
<b>Printing Date</b>	Here, the date of credit memo printing is shown. The value does not change at reprinting.

**Dimensions Island**

Field	Description
<b>Company No.</b>	This field shows the number of the company responsible for the current credit memo. The number is transferred from the island Company on the credit memo or the credit order on which the credit memo is based.
<b>Location</b>	This is the location specified in the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.

Field	Description
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.

### Customer Information Island

Field	Description
<b>Department</b>	This is the department assigned to the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Warehouse</b>	This is the warehouse to which the credited items were returned. The information is retrieved from the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Reference</b>	This field shows the note entered in the "Reference" field in the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Tax No.</b>	This is the customer's tax number. It is retrieved from the relevant credit memo in the window Credit Memos or credit order in the window Credit Orders.

### Credit Memo Lines Sub-Tab

This section includes the fields and descriptions for the Credit Memo Lines sub-tab.

Field	Description
<b>Item No.</b>	This is the number of the item credited on the item line. The value is retrieved from the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Credited</b>	This is the quantity items credited.
<b>Returned</b>	This is the quantity of items returned.
<b>Unit</b>	This is the unit in which the item is registered in the warehouse. The value is retrieved from the item's information card in the Inventory module.
<b>Description</b>	This is the item text specified in the "Description Language 1" field in the item's information card.
<b>Unit Price</b>	This is the unit price of the item. The unit price is calculated when the credit order is created. Any quantity discount has been deducted.
<b>Discount %</b>	This is the discount percentage rate from the item line in the credit memo in the window Credit Memos or the credit order in the window Credit Orders.
<b>Discount</b>	This is the discount amount from the item line in the credit memo in the window Credit Memos or the credit order in the window Credit Orders.

Field	Description
<b>Extended Price</b>	This is the extended price calculated by multiplying the credited quantity by the unit price and dividing this sum by the pricing unit. Any line discount is then deducted. The extended price is added to the "Sales" field in the Price island in the card part of the window.
<b>Pricing Unit</b>	This is the quantity of units included in the unit price of the item. The value is retrieved from the item's information card in the Inventory module.
<b>Location</b>	This is the location specified on the credit memo or credit order line from which the credit memo line originates. The information is used when the credit memo is posted.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Extra Text 1-10</b>	These fields show the extra texts entered in the corresponding fields on the credit memo or credit order line which forms the basis of the current credit memo line.
<b>Popup 1-5</b>	These fields show the pop-up values entered in the corresponding fields on the credit memo or credit order line which forms the basis of the current credit memo line.

## Reporting Section

This section includes the fields and descriptions for the Reporting section workspaces.

### Print Order Volume Workspace

Use this workspace to print a list of your current volume of sales orders.

You can limit the list using the target group fields.

For every sales order line that meets the target group specification, Maconomy displays how much has been ordered but not yet invoiced or transferred to invoicing in the Job Cost module. By default, amounts are displayed in enterprise currency.

The order book is a list of items that customers ordered that have not been invoiced. If all of the items in an order line have been invoiced, the order line is thus not included in the list. Order lines from the backorder register are not included, either.

If you have Maconomy Bill of Materials, note that the list only displays the BOM header, regardless of which level has inventory and price control.

## Print Order Volume Tab

This section includes the fields and descriptions for the Print Order Volume tab.

### Selection Criteria Island

Field	Description
<b>Cust. No.</b>	Here you can enter a range of customer numbers. The order volume will only include sales order lines to ship-to customers within this range.
<b>Deliv. Date</b>	Here you enter a range of dates. The order volume will only include order lines for items to be delivered within this range and which have not been invoiced.
<b>Item No.</b>	Here you can enter a range of item numbers. The order volume will only include sales order lines to with items within this range, which have been ordered but not invoiced.  If you have Maconomy Bill of Materials, note that the list only shows the BOM header regardless of which level has inventory and price control.
<b>Company No.</b>	In this field, you can enter a range of company numbers. A sales order line is only included on the list if it is assigned to a sales order for which a company within the specified range is responsible.

### Print Control Island

Field	Description
<b>Sort by</b>	Here you select how to sort the order volume. The pop-up field has three options: "Customer" (customer number), "Item" (item number) and "Sales Rep."

## Actions

This section shows the Actions available in the Print Order Volume workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print a list of your current volume of sales orders.

## Print Order Listing Workspace

Use this workspace to print a list of your current volume of quotes, sales orders, and credit orders.

You can limit the list in the target group fields.

In contrast to the order book, which is a list of non-invoiced sales order lines, the orders list includes all of the current item lines in quotes, sales orders, and credit orders in Maconomy. Orders that you transferred to the backorder register are not included.

For every item line in the target group, Maconomy displays the order number, customer number, item number, delivery date, units, and more. By default, amounts are displayed in enterprise currency. Maconomy uses the letters **Q**, **S**, and **C** to indicate whether an item line is from a quote, sales order, or credit order.

If you have Maconomy Bill of Materials, note that the list only displays the BOM header, regardless of which level has inventory and price control.

### Print Order Listing Tab

This section includes the fields and descriptions for the Print Order Listing tab.

#### Selection Criteria Island

Field	Description
<b>Customer No.</b>	Here you can enter a range of customer numbers. Maconomy only prints order lines for ship-to customers within this range.
<b>Company No.</b>	In this field, you can enter a range of company numbers. An item line is only included on the list if it is assigned to a quote, a sales order or a credit order for which a company within the specified range is responsible.
<b>Statistics 1-4</b>	In these fields, you can enter statistics codes referring to the corresponding values in the island Print Control on the customer information card. Only item lines with statistics codes within the specified range will be included in the order listing.
<b>Deliv. Date</b>	Here you specify a range of dates. Maconomy only prints order lines with items to be delivered within this interval.
<b>Order Date</b>	In this field, you can specify a range of order dates. Only item lines where the order date is within the specified range are included in the order listing.
<b>Item No.</b>	Here you can enter a range of item numbers. Maconomy only prints order lines with items within this range.  If you have Maconomy Bill of Materials, note that the list only shows the BOM header regardless of which level has inventory and price control.

#### Print Control Island

Field	Description
<b>Incl. Sales Orders</b>	If you mark this field, the order listing will include items from sales orders. Maconomy automatically marks the field, but you can remove it.
<b>Incl. Credit Orders</b>	If you mark this field, the order listing will include items from credit orders. Maconomy does not mark the field automatically.

Field	Description
<b>Incl. Quotes</b>	If you mark this field, the order listing will include items from quotes. Maconomy does not mark the field automatically.
<b>Sort by</b>	Here you select how to sort the order listing. The pop-up field has three options: "Customer" (customer number), "Item" (item number) and "Sales Rep."

## Actions

This section shows the Actions available in the Print Order Listing workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print a list of your current volume of quotes, sales orders, and credit orders.

## Print Back Order Listing Workspace

Use this workspace to print a list of your current volume of backorders.

You can limit the list in the target group fields.

For every sales order line in the target group, Maconomy displays which items are on backorder. By default, amounts are displayed in enterprise currency. If all of the items in an order line are available in the warehouse, Maconomy does not include the order line in the list.

If you have Maconomy Bill of Materials, the backorder listing displays individual BOM parts on backorder. However, the list only shows BOM headers for which there is inventory control.

Maconomy does not include order lines from the backorder register in the list.

### Print Back Order Listing Tab

This section includes the fields and descriptions for the Print Back Order Listing tab.

#### Selection Criteria Island

Field	Description
<b>Customer No.</b>	Here you can enter a range of customer numbers. Maconomy only prints back orders for items to ship-to customers within this range.
<b>Company No.</b>	In this field, you can enter a range of company numbers. A sales order line is only included on the list if it is assigned to a sales order for which a company within the specified range is responsible.
<b>Statistics 1-4</b>	In these fields, you can enter statistics codes referring to the corresponding values in the island Print Control on the customer information card. Only item lines with statistics codes within the specified range will be included in the order listing.

Field	Description
<b>Deliv. Date</b>	Here you enter an interval of dates. Maconomy only prints back orders for items to be delivered within this interval.
<b>Item No.</b>	Here you can enter a range of item numbers. Maconomy only prints order lines with back order items within this range. If you have Maconomy Bill of Materials, the list will include BOM parts in the range.
<b>Trans No.</b>	Here you can enter a range of transaction numbers. The back order listing will only include lines with transactions with numbers within this range.
<b>Warehouse</b>	Here you can select a warehouse. The back order listing will only include sales order lines with items from this warehouse. The pop-up field shows existing warehouses created in the Warehouse Information Card window.

### Print Control Island

Field	Description
<b>Sort by</b>	Here you select how to sort the back order listing. The pop-up field has three options: "Customer" (customer number), "Item" (item number) and "Sales Rep." If you have Maconomy Bill of Materials, and the list is sorted by customers or items, Maconomy shows any BOM parts at the bottom of the list. Lists sorted by sales representative shows both standard items and BOM parts per sales representative. BOMs with inventory control at highest level are included in the same way as standard items.

### Actions

This section shows the Actions available in the Print Back Order Listing workspace.

#### Top Tab

Field	Description
<b>Print</b>	Use this action to print list of your current volume of back orders.

## Print Invoice Statistics Workspace

Use this workspace to print invoice statistics that display sales per item group per sales representative.

The statistics are based on the ship-to customer number. If you want statistics for bill-to customers, use the Print Customer Statistics or Print Customer Group Statistics workspaces.

The statistics can show up to seven columns of sales figures. You design the printout by selecting the content of each column from the following options, including "blank":

- Net Sales

- Gross Sales
- Gross Margin
- Discount
- Quantity
- Variance
- Ratio

You can apply each set of sales figures several times in the same set of statistics. For example, you can design your printout to show sales for January, February, and March in the first three columns, and gross margin in the last three.

You can create detailed statistics that show individual item sales.

### Print Invoice Statistics Tab

This section includes the fields and descriptions for the Print Invoice Statistics tab.

#### Selection Criteria Island

Field	Description
<b>Cust. No.</b>	Here you specify a range of customer numbers. The statistics will only include invoices to customers within this range.
<b>Item No.</b>	Here you specify a range of item numbers. The statistics will only include invoice lines for items within this range.
<b>Customer Group</b>	Here you select a customer group. The statistics will only include invoices to customers in this group.
<b>Sales Rep.</b>	Here you can specify a range of sales representatives. The field is alphanumeric AB comes before CB, and BB is in between, and so on. The statistics will only include sales representatives within the range.
<b>Warehouse</b>	Here you select a warehouse. The statistics will only include invoices from this warehouse.
<b>Company No.</b>	In this field, you can specify a range of company numbers. Only invoices for which companies within the specified range are responsible are included in the statistics.
<b>Cust. Group</b>	Here you select a customer group. The statistics will only include invoices to customers in this group.
<b>Item Group</b>	Here you select an item group. The statistics will only include invoice lines for items in this group.
<b>Item Type</b>	Here you select an item type. The statistics will only include invoice lines for items of this type.
<b>Department</b>	Here you select a department. The statistics will only include invoices from this department.

**Columns Island**

Field	Description
<b>Column</b>	<p>This field shows a column number, corresponding to the columns in the statistics printout.</p> <p>You also use the numbers to specify which sets of figures to compare, by selecting "Variance" or "Ratio." You type the number in the "Calculation" field.</p>
<b>Contents</b>	<p>Here you select the content of the column in the statistics printout. You can select from the following values:</p> <ul style="list-style-type: none"> <li>■ Net Sales — The column shows sales less any line and invoice discount for the period given in the "Period" fields.</li> <li>■ Gross Sales — The column shows sales including any line and invoice discount for the period given in the "Period" fields.</li> <li>■ Gross Margin — The column shows the gross margin (net sales less cost of sales) for the period given in the "Period" fields.</li> <li>■ Discount — The column shows the sum of line and invoice discount for the period given in the "Period" fields.</li> <li>■ Quantity — The column shows the quantity sold in the period given in the "Period" fields.</li> <li>■ Variance — The column shows the variance in the two columns given in the "Calculation" fields.</li> <li>■ Ratio — The column shows the ratio between the two columns given in the "Calculation" fields.</li> </ul> <p>If you select Sales, Gross Margin or Quantity, you must specify a period in the "Period" field next to the column. If you select Variance or Ratio, you must enter two column numbers in the Calculation field.</p>
<b>Period</b>	<p>Here you specify an interval of dates. They define the statistics period (Sales, Gross Margin or Quantity). You can select any period. You can, for example compare January 1998 with January 1999. You then enter 01.01.98 01.31.98 next to column 1 and 01.01.99 01.31.99 next to column 2.</p>
<b>Calculation</b>	<p>Here you enter two column numbers, if you select either Variance or Ratio in the "Contents" field. Maconomy will then compare the statistics from the two columns.</p> <p>If, for example, column 1 and 2 have the values from the above example in the "Period" field, and you wish to see the ratio between these columns in column 3, you select "Ratio" in column three and write "2" "1" in this field.</p>
<b>Percent</b>	<p>Here you select whether to show the statistics as an amount/quantity or as a percentage.</p>

**Print Control Island**

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, the only options are "Sales Rep. Item Group" and "Customer." The first shows invoice lines per sales representative, item group and item, and the second shows invoice lines per customer group, customer and item.
<b>Show Items</b>	Here you select whether to show only one sum per item group per sales representative, or whether to also specify the statistics per item. If you mark the field, the printout will specify the statistics per item, showing one line per item in every item group.
<b>Show Invoice Lines</b>	Here you specify whether to show only one sum per item group per sales representative, or whether to show individual invoice lines as well. If you mark the field, the statistics will be detailed, showing one line per invoice line per item in every item group.

**Actions**

This section shows the Actions available in the Print Invoice Statistics workspace.

**Top Tab**

Field	Description
<b>Print</b>	Use this action to print invoice statistics that show sales per item group per sales representative.

**Print COGS Suspense Overview Workspace**

Use this workspace to print out a COGS suspense overview for a range of customers.

The COGS suspense overview displays a list of unallocated customer entries posted to the COGS suspense account, that is, non-invoiced entries that result from item shipments.

The entries are grouped by company-specific customer.

**Print COGS Suspense Overview Tab**

This section includes the fields and descriptions for the Print COGS Suspense Overview tab.

**Selection Criteria Island**

Field	Description
<b>Customer No.</b>	In these fields, you can specify a range of customer numbers. The report will only include customers with numbers within the specified range.

Field	Description
<b>Company No.</b>	In these fields, you can specify a range of company numbers. The report will only be based on customer entries with settling companies within the specified range.
<b>Statement Date</b>	In this field, you enter the date whose balance you wish to see. Maconomy calculates the balance of the COGS suspense account on this date. If you do not specify a date, the report will include entries for all dates including future dates.

### Currency Island

Field	Description
<b>Reporting Currency</b>	In this field, you can specify in which currency the report should be displayed. Amounts in the vendor report will be converted into and displayed in this currency. If the current user has been assigned to a company in the window Users, Maconomy suggests the company base currency of the company in question. When converting amounts into the selected currency, Maconomy uses the exchange rates for purchases valid on the date entered in the field "Exchange Rate Date" below, and the exchange rate table used is the exchange rate table for sales selected in the window System Information in the Set-Up module. Please note that Maconomy performs currency conversion even though the original amount has been registered in the same currency as the one specified — In this field, which may give rise to discrepancies between the registered amounts and the amounts shown in this window.
<b>Exchange Rate Date</b>	In this field, you can specify an exchange rate date. When converting amounts into the reporting currency, Maconomy uses the exchange rates valid on this date according to the exchange rate table for sales selected in the window System Information in the Set-Up module for conversion of currency amounts. See also the field "Reporting Currency."

### Print Control Island

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, Overview is the only option.

## Actions

This section shows the Actions available in the Print COGS Suspense Overview workspace.

### Top Tab

Field	Description
Print	Use this action to print a COGS suspense overview for a range of customers.

## Commission Section

This section includes the fields and descriptions for the Commission section workspaces.

### Commission Agreements Workspace

Use this workspace to manage commission agreements.

These agreements are used for calculating commissions that are payable to your company's employees.

The **Sales Representative** field in the Employees workspace identifies an employee as a sales representative. You can then use the employee in the **Sales Rep. No.** field in various places in Maconomy, and you can create commission agreements for the employee.

You can assign a commission agreement to more than one employee. When you create a commission agreement for an employee, you define its period of validity. Use the Employee Commission Agreements workspace to identify which commission agreements apply to which employees.

Maconomy calculates commission from either sales or gross profit margin. Maconomy calculates "Sales" from invoiced line (or extended) prices in invoices and credit memos. Maconomy finds the line price by multiplying unit price by quantity, dividing by price unit, and deducting line discount. Maconomy also deducts invoice discount, distributing it proportionately to the invoice and credit memo lines. Maconomy finds the profit margin by subtracting the cost of sales from sales. The cost of sales is the cost multiplied by quantity, divided by price unit.

You can enter various commission rates to apply to your target combinations of customer group, item group, and activity number, and also on various amount limits. If you include an item group in a target for a commission rate, Maconomy never uses this commission rate for sales and profit margins from invoices and credit memos in the Job Cost module because these do not include items, and hence not item groups. If you include an activity in a target for a commission rate, Maconomy never uses the commission rate for sales and profit margins from invoices and credit memos from the Sales Orders module because these do not reflect activities.

When Maconomy calculates a commission for an employee, the commission basis is converted into enterprise currency, making it possible to measure the basis against the amount limits that you enter in this workspace. After this, Maconomy runs through the lines in the commission agreement, starting at the top. This means that Maconomy uses the first commission rate that applies to the target. If there is more than one line that fits the target, Maconomy calculates the commission separately for every amount limit.

Maconomy always calculates commission on a monthly basis; that is, the amount limit refers to the sales or profit margin in a calendar month.

For auditing purposes, it is recommended that you print and file the Commission Agreements workspace every time that you change it. Use the **Print This** function in the File menu.

### Commission Agreements Tab

This section includes the fields and descriptions for the Commission Agreements tab.

#### Commission Agreement Island

Field	Description
<b>Name</b>	Enter the name of the commission agreement. You cannot use the same name for two different agreements. The name is used in the "Commission Agreement" in the window Commission Agreement to assign it to a sales representative for a given period.
<b>Description</b>	Enter a detailed description of the commission agreement. This field is for reference only.
<b>Calculation mode</b>	Here you can select the basis of the commission agreement. You can choose between "Sales" and "Profit Margin." "Sales" is calculated from invoiced line prices in invoices and credit memos. Line price is found from multiplying unit price by quantity, dividing by price unit and deducting line discount. Maconomy also deducts invoice discount, distributing it proportionately to the invoice and credit memo lines. Profit margin is found subtracting cost of sales from sales. Cost of sales is the cost multiplied by quantity divided by price unit. Cost price is retrieved from current warehouse's line in the table part of the item information card when the item is shipped from the warehouse.

#### User Island

See the chapter "Getting Started" for a description of the fields in the island User.

### Commission Agreement Lines Sub-Tab

This section includes the fields and descriptions for the Commission Agreement Lines sub-tab.

Field	Description
<b>Customer Group</b>	Here you can select a customer group. This will, together with the "Item Group" and "Activity No." fields, define the target group that, with the amount limit, will point to a commission rate. The commission rate will only be used for sales or profit margin involving customers within this customer group.
<b>Item Group</b>	Here you can select an item group. This will, together with the "Customer Group" and "Activity No." fields, define the target group that, with the amount limit, will point to a commission rate. The commission rate will only be used for sales or profit margin involving items within this item group.
<b>Activity No.</b>	Here you can enter an activity number. This will, together with the "Customer Group" and "Item Group" fields, define the target group that, with the amount

Field	Description
	limit, will point to a commission rate. The commission rate will only be used for sales or profit margin from invoice and credit memo lines from the Job Cost module with this activity number.
<b>Limit</b>	Here you can enter an amount limit in enterprise currency. The commission rate will only be used for amounts, converted into enterprise currency, exceeding this limit. It is applied to sales or profit margin, according to which method you have chosen in the Calculation Mode field in the card part of the window.
<b>Commission Rate</b>	Enter the percentage rate to be used in the commission calculation. Commission is calculated from either sales or profit margin and only for the target group defined and from amounts greater than the limit. If the "Calculation Mode" shows:

## Commission Calculation Workspace

Use this workspace to calculate commission that is based on the commission agreements that you create in the Commission Agreements workspace.

You can calculate commission for employees who are assigned to commission agreements in the given month.

The invoices and credit memos that are dated within the commission period are the basis of the commission agreements. Maconomy calculates commission for employees who are assigned to the agreements. Maconomy divides the sales or profit margin into the target groups and amount limits that you enter for the commission agreements assigned to the employee in the calculation period. Maconomy recalculates the commission basis and then calculates the total commission by calculating the commission from every group based on the commission rate for the target group and the amount limit.

After calculating commission, Maconomy prints a commission listing that displays amounts in enterprise currency, showing the commission and the sales or profit margin from which it was calculated. Maconomy also creates a commission journal with an entry for every commission amount to an employee. The commission is entered to the accounts and any other dimension values to which the dimension combinations in the **Commission** and **Commission Offset** fields in the Employee Commission Agreements workspace refer. If you select one or more of the **Transfer Location**, **Transfer Entity**, and similar fields in the Commission Calculation island in the Employee Commission Agreements workspace, Maconomy divides the entries by the specified dimensions.

See the Commission Agreements workspace for more information about how Maconomy calculates commissions.

## Commission Calculation Tab

This section includes the fields and descriptions for the Commission Calculation tab.

### Run Mode Island

Field	Description
<b>Calculate Commission</b>	You mark this field if you wish to calculate commission. If you remove the mark, Maconomy will reprint the commission calculated and given the journal number you enter in the field "Journal No."

### Selection Criteria Island

Field	Description
<b>Sales Rep No.</b>	Enter a range of sales representative numbers. Commission will only be calculated for sales reps. within this range. If you leave the fields blank, you will include all sales reps. in the commission calculation.
<b>Company No.</b>	In this field, you can specify a range of company numbers. The commission calculation will only include invoices and credit memos for which companies within this range are responsible.
<b>Month/Yr.</b>	Enter the calendar month and the year for which you wish to calculate commission. Enter the month as a number from 1 to 12, where 1 is January and 12 is December.

### Reprint Island

Field	Description
<b>Journal No.</b>	Enter a journal number if you have not marked the field "Calculate Commission." Maconomy will reprint the calculation that was given this journal number. You cannot enter a journal number if you are calculating commission. Maconomy retrieves the next available journal number from the window Numbers.

### Posting Island

Field	Description
<b>Entry Date</b>	Enter the entry date for entries to the commission journal that will be created as result of the commission calculation. The entry date must be within the G/L open posting period of the companies involved in the commission calculation. These periods can be found in the "Posting Period Setup" window. The transaction type to look for is either in the field "Trans. Type" (if set) or it is the default transaction type of the Commission journal.
<b>Trans. Type</b>	In this field you can enter the transaction type to be used for the entries to the general journal made from the commission calculation. If you enter nothing, a transaction type will be derived.

Field	Description
<b>Number Series</b>	Here you can select a transaction number series, created in the window Popup Fields. If you select a number series, it will automatically be retrieved and used for entries to the journal that is created as a result of the commission calculation.
<b>Trans. No.</b>	Enter the transaction number to be used for the entries to the journal made from the commission calculation. If you do not enter a Trans. No. and a Number Series, the system will try to derive a Number Series.
<b>Entry Description</b>	Enter the text for the entries to the journal made from the commission calculation.

### Print Control Island

Field	Description
<b>Layout</b>	Here you can choose the layout of the printout. The "Standard" layout shows one line per employee, showing commission amount in enterprise currency and what it was calculated from. The "Detailed" layout also shows the invoices and credit memos on which commission was based.
<b>Show Commission by Invoice Line</b>	If you mark this field, the commission is specified at line level. The commission list will show the invoice and credit memo lines on which the commission was based. You can only use this field if you have selected "Detailed" in the field "Layout."

### Actions

This section shows the Actions available in the Commission Calculation workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print a commission listing with amounts displayed in enterprise currency showing the commission and the sales or profit margin from which it was calculated.

## Print Commission Statistics Workspace

Use this workspace to print commission statistics that specify the amount of commission paid to your company's sales representatives.

A sales representative is an employee for whom you select the **Sales Rep.** field in the Employee Information card in the Set-Up module.

These statistics can be detailed or summarized. You can view monthly figures for each sales representative and itemization of the commission agreements that Maconomy used to calculate the commission

## Print Commission Statistics Tab

This section includes the fields and descriptions for the Print Commission Statistics tab.

### Selection Criteria Island

Field	Description
<b>Sales Rep. No.</b>	Here you can enter a range of sales representative numbers. The statistics will only include sales reps. within this interval.
<b>Company No.</b>	In this field, you can specify a range of company numbers. Only sales reps. assigned to companies within the specified range are included in the statistics. Sales reps. are assigned to companies in the window Employees.
<b>Year</b>	Here you enter the year of the commission figures.

### Print Control Island

Field	Description
<b>Layout</b>	Here you choose whether to make a detailed or standard statistics printout. <ul style="list-style-type: none"> <li>The detailed printout shows how the commission is calculated for each commission agreement per sales rep.</li> <li>The standard printout shows the total amount from which commission was calculated and the total commission per sales rep.</li> </ul>
<b>Include Blocked Sales Reps.</b>	If you mark this field, the statistics will include commission to sales reps. which have been blocked. A sales rep. is blocked when the "Blocked" field in the Employees window in the Set-Up module is marked.

## Actions

This section shows the Actions available in the Print Commission Statistics workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print commission statistics that specify the amount of commission paid to your company's sales representatives.

## Set-Up Section

This section includes the fields and descriptions for the Set-Up section workspaces.

### Charges Workspace

Use this workspace to maintain charge codes for sales orders.

Charges can include handling charges, postage, and so forth.

A charge can be a fixed amount or Maconomy can calculate it from a charge table in the Charge Tables workspace. When Maconomy calculates from a charge table, the charge amount depends on the information in the sales order, for example, how much does the total sales order weigh, which destination is the order assigned to, and so on. You specify the calculation basis of the charge amount on the individual line in the charge table. See the Charge Tables workspace for a description of charge tables and charge calculation.

If Maconomy is to calculate the current charge from a charge table, you can use the Charge Table island to indicate whether Maconomy should always calculate the charge from the same charge table or whether Maconomy should use the charge table specified on the individual order. A fixed charge table can, for example, be used for general freight charges, and charges calculated from the charge table on the individual sales order can be used in cases where you want the freight charges to depend on the customer.

This workspace displays all of the amounts in enterprise currency. When you transfer a charge to a quote or an order, Maconomy converts the amount into the currency that you assigned to the current quote or order.

For auditing purposes, it is recommended that you print and file the Charges workspace every time that you change it. Use the **Print this** function in the File menu.

### Charges Tab

This section includes the fields and descriptions for the Charges tab.

#### Charge Island

Field	Description
<b>Name</b>	Enter a unique name for the charge. You can change the name of an existing charge. This field must be completed.
<b>Charge Description</b>	<p>Enter the charge description. This is printed on order documents next to the charge amount.</p> <p>The text you enter is furthermore created as an entry in the window Language Texts in the Set-Up module. It is then possible to assign translations of the charge description in the languages used in Maconomy. This makes it possible, for example, to send an invoice to a German company with the charge descriptions in German. In those cases where no translation of the charge description has been made in the language used in a given context for instance on the printout of an order confirmation, Maconomy uses the description in this field instead. For more information about charge descriptions</p>

Field	Description
	in other languages, please see the description of the window Language Texts in the Set-Up module.

**Charge Table Island**

Field	Description
<b>From Charge Table</b>	<p>If this field is selected, the current charge amount will be calculated from a charge table in Maconomy when the charge is selected on a sales order. The charge amount will be calculated from the charge table specified on the current sales order plus any charge discount percentage specified on the order. If no charge table has been specified on the order, the charge amount is 0. The charge can also be entered as a fixed price, a percentage of the invoice amount, or on the basis of a fixed charge table. However, you can only enter one of these methods for each charge code.</p> <p>Charge tables are created and maintained in the window Charge Tables.</p>
<b>Charge Table</b>	<p>In this field, you can enter the name of a charge table. If you specify a charge table in this field, the charge amount will always be calculated from this charge table when the charge is specified on an order. This means that the charge table in this field is used regardless of any other charge table selected on the sales order in question.</p> <p>The charge can also be entered as a fixed price, a percentage of the invoice amount, or on the basis of a customer specific charge table. However, you can only enter one of these methods for each charge code.</p>
<b>Charge Discount %</b>	<p>In this field, you can enter a discount percentage, if you have entered a charge table in the field "Charge Table" above. The discount will be subtracted from the charge amount calculated from the charge table.</p>

**User Island**

See the chapter "Getting Started" for a description of the fields in the island User.

**Sales Order Island**

Field	Description
<b>Fixed Amount</b>	<p>In this field, you can enter a fixed amount in enterprise currency. You can also enter the charge as a percentage of the invoice amount or it can be calculated on the basis of a fixed or a customer dependent charge table. However, you can only enter one of these methods for each charge code.</p>
<b>Percentage</b>	<p>In this field, you can enter a percentage. The percentage is taken from the item total of the invoice after invoice discount has been deducted. The charge can also be entered as a fixed amount, or it can be calculated the calculated on the basis of a fixed or a customer dependent charge table. However, you can only enter one of these methods for each charge code.</p>

Field	Description
<b>Limit</b>	In this field, you can specify an upper order limit amount in enterprise currency. This means that the charge only applies if the invoice amount (or the total for the items delivered on the packing slip in question if the field "Calculate per Delivery" has been marked for the charge), converted to enterprise currency, is smaller than the amount in this field. If the limit is "0," the charge will always be added.
<b>One-time Charge</b>	If a charge is marked as a once-time charge, it will be removed from a sales order after the order is invoiced the first time. In this way, an order that is partially delivered and invoiced more than once can be assigned charges that are not repeated with additional deliveries. For sales orders that are blanket orders, the charge is only applied once.
<b>Calculate per Delivery</b>	<p>In this field, you can specify if the charge should be calculated separately for the individual packing slip or from a summation of the information on the packing slips, if an invoice is based on multiple packing slips. If you mark this field, Maconomy will calculate separate charges for each packing slip created. This means that if a sales order is split into three deliveries, the charge will be calculated separately for the three packing slips. The three calculated charges will be summed at the time of invoicing. Consider, for instance, the following scenario: three packing slips are created for a sales order. The packing slips have an item total of USD 100, USD 120, and USD 150, respectively, and a charge to be calculated from the item total has been assigned to the order. If this field is selected, three charge amounts will be calculated, and the charges will be summed when invoicing the sales order. You can, for example, use this functionality when calculating freight charges which are to be calculated per delivery.</p> <p>If you do not select this field, Maconomy will calculate the charge at the time of invoicing, and the calculation will be performed by summing up the information of the packing slips identified by the invoice. Consider, for instance, the following scenario: three packing slips are created for a sales order. The packing slips have an item total of USD 100, USD 120, and USD 150, respectively, and a charge to be calculated from the item total is assigned to the order. If this field is not selected, a single charge amount will be calculated when invoicing the order, based on the sum total, USD 370.</p>
<b>Tax Code</b>	<p>In this field, you can specify a tax code (that is, a tax percentage). You can add up to three different tax codes if necessary. To enable multiple tax codes, the system parameters "Show Three Tax Levels" and/or "Show Two Tax Levels" must be marked in the System Parameters window. When multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2" and, if enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p> <p>Please note that tax is only added to the relevant amount if the customer is subject to paying tax.</p>
<b>Min. Charge</b>	In this field, you can enter the minimum amount to be collected if the charge is normally calculated as a percentage. The amount is specified in enterprise currency. This minimum charge will be used as the charge amount in cases

Field	Description
	where the amount calculated on the basis of a percentage, converted into the enterprise currency, is less than the minimum charge. The minimum charge is not collected, however, if the amount used as a basis for the current charge calculation exceeds the amount in the field "Limit."
<b>Max. Charge</b>	In this field, you can enter the maximum amount to be collected if the charge is normally calculated as a percentage. The amount is specified in enterprise currency. This maximum charge will be used as the charge amount in cases where the amount calculated on the basis of a percentage, converted into the enterprise currency, exceeds the maximum charge. The maximum charge is not collected, however, if the amount used as a basis for the current charge calculation exceeds the amount in the field "Limit."

### Posting Island

Field	Description
<b>Posting Group</b>	You must enter a reference here so that the charge will be assigned to a G/L account. The reference is written as 1, 2, 3 or 4 and refers to one of the four order charge posting references in the window Posting References (see below). By entering "1," the charge will be posted to the account and any other dimensions referred to by means of a dimension combination in the posting reference type "Order Charge 1," and so on.
<b>Item Tax Code</b>	<p>In this field, you can enter an item tax code, which is created in the window Popup Fields. Maconomy uses the field to determine which tax code to use for calculating tax for the current charge, as the reporting code is part of the criteria to select a tax code in the window Tax Tables in the G/L module. At this selection, Maconomy uses the tax table specified for the responsible company assigned to the current order, invoice, and so on. However, the tax code is only selected from a tax table, if you have specified in the window System Information that tax tables are to be used, and only if the company responsible for the current transaction is assigned to a tax table. If no tax table has been specified for the responsible company or if you are using differentiated tax, and you are not using tax tables, Maconomy will use the tax code specified for the individual charge in the window Charges. If neither tax tables nor differentiated tax has been selected, Maconomy uses the standard tax code specified in the window System Information in the Set-Up module.</p> <p>When posting invoices and credit memos on which the current charge is specified, the reporting code is used for determining which tax report entries are to be created for the charge. On the basis of the tax report entries, it is possible to create tax reports which show tax and tax basis entries assigned to a given tax report field. This kind of reporting is only possible if extended tax reporting has been selected in the window System Information.</p>

## Charge Tables Workspace

Use this workspace to create and maintain charge tables.

Maconomy uses charge tables to calculate charges based on the information on the sales order, such as weight, volume, or delivery address, instead of just entering a fixed charge on the order.

A charge table consists of a number of lines, each of which contains selection criteria, a calculation basis, and a rate for calculating the charge amount. In the selection criteria on a line, you can enter ranges of zip codes, weight, or volume, and so forth, and combinations of delivery mode, carrier, and country, and so on. Maconomy only takes a line into account when calculating a charge if the information on the current sales order matches all of the selection criteria on the line. The calculation basis and the rate on a line indicate how to calculate the charge amount if the current line is used. The calculation basis specifies the factor by which Maconomy should calculate the charge, for example, if the charge should be a percentage of the total price of the sales order or an amount that depends on the total weight of the items. The rate can be either a fixed rate or a percentage used when converting the calculation basis to an amount. For instance, the rate could be 50 cents per unit. If multiple lines in the charge table match the information on the current sales order, Maconomy uses the line that yields the lowest price.

You assign charge tables to charge codes in the Charges workspace, in which you can specify to use a fixed charge table for calculating the charge, or to use the charge table specified in the card part of the sales order. In this way, the charge codes that are specified on the individual order determine the charge tables to be used.

You must enter all of the amounts in this workspace in enterprise currency. When you transfer a charge to a quote or an order, Maconomy converts the amount into the currency assigned to the current quote or order.

### Charge Tables Tab

This section includes the fields and descriptions for the Charge Tables tab.

#### Charge Table Island

Field	Description
<b>Name</b>	In this field, you can enter the name of the charge table. The field must be completed when creating a charge table. It cannot be changed upon creation.
<b>Description</b>	In this field, you can enter a description of the charge table. Using Maconomy's layout editing tools, you can add the description to the packing slip.
<b>Charge Agreement</b>	In this field, you can enter an agreement number for the charge table. Using Maconomy's layout editing tools, you can add the agreement number to the packing slip.
<b>Issue</b>	This field shows the issue of the current charge table. The first table created is assigned the number 1, while subsequent issues are assigned consecutive issue numbers.

Field	Description
<b>Period</b>	This field shows the period in which the current charge table is valid. No two issues can have overlapping periods, and thus, a date can only have one issue assigned to it.

### Selection Criteria Island

Field	Description
<b>Destination No.</b>	In this field, you can enter a destination number if you want to limit the number of lines displayed in the table part of this window. The table part will show the lines where the destination number entered here is included in the range of destination numbers specified on the line. If you do not specify a destination number, destination numbers have no influence on the selection of lines shown in the table part.
<b>Delivery Mode</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Delivery Terms</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Carrier</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Consignment Type</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Payment Terms</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Country</b>	The functionality of this field is similar to that of the field "Destination No." above.
<b>Show Lines</b>	If you mark this field, the table part of the window will show the lines that match the selection criteria above.

### Conversion Island

Field	Description
<b>Volume to Weight</b>	<p>In this field, you can specify the conversion factor for items. You can only enter conversion factors in one or two fields, and conversion must be made into the same unit type. For example, you can complete the fields "Volume to Weight" and "Area Unit to Weight" whereas completing the fields "Volume to Weight" and "Volume to Area Unit" is not allowed.</p> <p>The conversion factors are usually defined by the carrier(s), and they usually depend on the type of item being shipped. Thus, this field is used if the carrier states all of his prices in, for example, weight but charges extra for very big but light shipments. In this example, Maconomy therefore uses the highest amount of weight, the volume of the order converted to weight, and the area unit of the order converted to weight to determine the cost of charge.</p>

Field	Description
<b>Area to Weight</b>	In this field, you can specify the conversion factor for area units into weight.
<b>Weight to Volume</b>	In this field, you can specify the conversion factor for weight into volume.
<b>Area to Volume</b>	In this field, you can specify the conversion factor for area units into volume.
<b>Weight to Area</b>	In this field, you can specify the conversion factor for weight into area units.
<b>Volume to Area</b>	In this field, you can specify the conversion factor for volume into area units.

### New Issue Island

Field	Description
<b>Start Date</b>	<p>In this field, you can enter the starting date of a new issue of the charge table.</p> <p>The periods specified by the dates in this field could, for example, look as follows: Issue 1 [ 31/6-98] Issue 2 [1/7-98 10/9-98] Issue 3 [11/9-98 -]</p> <p>As shown in the example, the last issue runs indefinitely. When a new issue of the charge table is added, the starting date is entered in this field, and the new Issue 4 will start on the specified date, thus automatically closing the period of Issue 3.</p> <p>For example:</p> <p>If the starting date of the new issue, Issue 4, is specified as 25/9-98, the period of Issue 3 is reduced to [11/9-98 24/9-98], while the period of Issue 4 will be [25/9-98].</p> <p>You can also enter a starting date which precedes the starting date of an earlier issue. For example, the starting date of Issue 4 could be 7/7-98, that is, within the period of Issue 2. In this example, the ending period of Issue 2 will automatically be changed to 6/7/98, while the ending date of Issue 4 will automatically be set at 10/9/98. This functionality is used when one of the carriers in a charge table changes his prices in a given period.</p> <p>The example above would result in the following order of issues: Issue 1, Issue 2, Issue 4, Issue 3, and so on. Note, however, that the delivery date on the packing slip is the factor which determines which issue is used. The issue number itself is irrelevant.</p> <p>The issue is created by using the action "New Issue."</p>

### User Island

See the chapter "Getting Started" for a description of the fields in the island User.

## Charge Table Lines Sub-Tab

This section includes the fields and descriptions for the Charge Table Lines sub-tab.

Field	Description
<b>From Destination No.</b>	In this field, you can enter a destination number. The destination numbers specified in this field and the field "To Destination No." identify a range of destination numbers. The current charge table line will only be used on orders on which the destination number specified for the order is within the specified range.
<b>To Destination No.</b>	In this field, you can enter a destination number. The destination numbers specified in this field and the field "From Destination No." identify a range of destination numbers. The current charge table line will only be used on orders on which the destination number specified for the order is within the specified range.
<b>Country</b>	In this field, you can select a country. The current charge table line will only be used on orders on which this country has been selected. Countries are created in the window Popup Fields.
<b>Delivery Mode</b>	In this field, you can select a delivery mode. The current charge table line will only be used on orders on which this delivery mode has been selected. Delivery modes are created in the window Popup Fields.
<b>Delivery Terms</b>	In this field, you can select a code for delivery terms. The current charge table line will only be used on orders on which these delivery terms have been selected. Delivery terms are created in the window Popup Fields.
<b>Carrier</b>	In this field, you can select a carrier. The current charge table line will only be used on orders on which this carrier has been selected. Carriers are created in the window Popup Fields.
<b>Consignment Type</b>	In this field, you can select a consignment type. The current charge table line will only be used on orders on which this consignment type has been selected.
<b>Payment Terms</b>	In this field, you can select a code for payment terms. The current charge table line will only be used on orders on which these payment terms have been selected. Payment terms are created in the window Popup Fields.
<b>Enterprise</b>	In this field, you can select an enterprise. The current charge table line will only be used on orders on which this enterprise has been selected. Enterprises are created in the window Popup Fields.
<b>Segment</b>	In this field, you can select a segment. The current charge table line will only be used on orders on which this segment has been selected. Segments are created in the window Popup Fields.
<b>Area</b>	In this field, you can select an area. The current charge table line will only be used on orders on which this area has been selected. Areas are created in the window Popup Fields.

Field	Description
<b>From Zip Code</b>	In this field, you can enter a zip code. The zip codes specified in this field and the field "To Zip Code" identify a range of zip codes. The current charge table line will only be used on orders on which the zip code specified for the ship-to customer is within the specified range.
<b>To Zip Code</b>	In this field, you can enter a zip code. The zip codes specified in this field and the field "From Zip Code" identify a range of zip codes. The current charge table line will only be used on orders on which the zip code specified for the ship-to customer is within the specified range.
<b>From Weight</b>	In this field, you can specify the lower weight limit. The weight specifications in this field and the field "To Weight" identify a range of weight specifications. The current charge table line will only be used if the total weight of the items on the sales order, including any weight increase for the consignment to which the order is assigned, is within the specified range.
<b>To Weight</b>	In this field, you can specify the upper weight limit. The weight specifications in this field and the field "From Weight" identify a range of weight specifications. The current charge table line will only be used if the total weight of the items on the sales order, including any weight increase for the consignment to which the order is assigned, is within the specified range.
<b>From Volume</b>	In this field, you can specify the lower volume limit. The volume specifications in this field and the field "To Volume" identify a range of volume specifications. The current charge table line will only be used if the total volume of the items on the sales order, including any volume increase for the consignment to which the order is assigned, is within the specified range.
<b>To Volume</b>	In this field, you can specify the upper volume limit. The volume specifications in this field and the field "From Volume" identify a range of volume specifications. The current charge table line will only be used if the total volume of the items on the sales order, including any volume increase for the consignment to which the order is assigned, is within the specified range.
<b>From Area</b>	In this field, you can specify the lower area limit. The area specifications in this field and the field "To Area" identify a range of area specifications. The current charge table line will only be used if the total area of the items on the sales order is within the specified range.
<b>To Area</b>	In this field, you can specify the upper area limit. The area specifications in this field and the field "From Area" identify a range of area specifications. The current charge table line will only be used if the total area of the items on the sales order is within the specified range.
<b>From No. of Packages</b>	In this field, you can specify the lower limit for number of packages. The number in this field and the field "To No. of Packages" identify a range of package numbers. The current charge table line will only be used if the total number of packages on the sales order is within the specified range.
<b>To No. of Packages</b>	In this field, you can specify the upper limit for number of packages. The number in this field and the field "From No. of Packages" identify a range of

Field	Description
	package numbers. The current charge table line will only be used if the total number of packages on the sales order is within the specified range.
<b>Base Rate</b>	In this field, you can enter a base rate to be added to the charge calculation, regardless of weight, volume, area units and the number of packages.
<b>Unit Rate</b>	<p>In this field, you enter the rate per unit. The unit rate is used in the calculation of the charge amount if the calculation basis is either "Volume Unit," "Area Unit," or "Packages." The charge will be calculated as follows:</p> <p>No. of units of the selected unit type x Unit Rate.</p> <p>The calculation basis is selected in the field "Calculation Basis." Please note that the charge amount is calculated on the basis of the number of units reported in the window Packing Lists.</p>
<b>Calculation Basis</b>	<p>In this field, select the calculation basis for the charge amount. If you select "Volume Unit," "Area Unit," or "Packages," the charge will be calculated as the number of the selected unit type multiplied by the unit rate plus any base rate.</p> <p>If you select "Item Total," the charge will be calculated on the basis of the percentage in the field "Percentage" and the item total of the current order. The item total is shown in the field "Price" in the Order Total island on the sales order.</p> <p>If you select "Order Total," the charge will be calculated on the basis of the percentage in the field "Percentage" and the order total of the current order, that is, the total sales price of the items plus any charges.</p>
<b>Percentage</b>	<p>In this field, you can enter a percentage. The percentage is used when calculating the charge amount, provided that the calculation basis is either "Item Total" or "Order Total." In this case, the charge amount will be calculated as follows:</p> $\frac{\text{Item Total or Order Total} \times \text{Percentage}}{100}$ <p>The calculation basis is selected in the field "Calculation Basis" above.</p>
<b>From Amount</b>	In this field, you can specify the lower amount limit. The amount is entered in enterprise currency. The amounts in this field and the field "To Amount" identify a range of amounts. The current charge table line will only be used if the calculation basis (Item or Order Total) of the current line converted into enterprise currency constitutes an amount within the specified range.
<b>To Amount</b>	In this field, you can specify the upper amount limit. The amounts in this field and the field "From Amount" identify a range of amounts. The amount is entered in enterprise currency. The current charge table line will only be used if the calculation basis (Item or Order Total) of the current line converted into enterprise currency constitutes an amount within the specified range.
<b>Min. Charge</b>	In this field, you can enter the minimum amount to be collected. The amount is entered in enterprise currency. This minimum charge will be used as the charge amount in cases where the amount calculated is less than the

Field	Description
	minimum charge. The minimum charge is not collected, however, if the amount used as a basis for the current charge calculation exceeds the charge limit for the current charge. The charge limit is specified in the window Charges.
<b>Max. Charge</b>	In this field, you can enter the maximum amount to be collected. The amount is entered in enterprise currency. This maximum charge will be used as the charge amount in cases where the amount calculated is less than the maximum charge. The maximum charge is not collected, however, if the amount used as a basis for the current charge calculation exceeds the charge limit for the current charge. The charge limit is specified in the window Charges.

## Destination Information Card Workspace

Use this workspace to maintain information about the destinations to which your company ships consignments, for example, an airport or a city.

In the Destination Information Card tab you enter information about the name and address of the destination. In the Consignment Modes sub-tab you create a number of consignment modes, each of which represents a means of shipping goods to the current destination.

Each consignment mode is a combination of a delivery mode, a consignment type, a carrier, and delivery terms. In this way, a consignment mode can be a shipment of furniture by truck from Freight & Sons, CPT. You can only create consignments to a given destination with the consignment modes specified in this workspace for the destination in question. Consequently you must create a line for every combination of delivery mode, carrier, delivery terms, and consignment type that can occur for shipments to the destination in question.

For each consignment mode, you can enter a number of charges and maximum volume and weight capacities. You can also specify how long it usually takes to pack items for the current consignment mode, and how long the items will be in transit. Maconomy suggests this information in the Consignments workspace when you create consignments based on the consignment mode in question.

For each consignment mode, you can indicate that Maconomy should automatically create consignments on the dates when they are needed. In this way, you can, for example, specify that a given consignment mode can be used once a month, but you only want consignments for that consignment mode to be created if it results in a consignment with an earlier packing date than the ones on the existing consignments. The automatic creation of consignments then occurs when Maconomy is to assign a quote or an order to a consignment automatically, and Maconomy cannot find an existing consignment that matches the quote's or sales order's requirements for consignment mode, delivery date, weight, and volume.

## Destination Information Card Tab

This section includes the fields and descriptions for the Destination Information Card tab.

### Destination Island

Field	Description
<b>Destination No.</b>	In this field, you can enter a number for the destination. Furthermore, you can enter the name and address of the destination. The information is used when looking up the destination and for printouts, such as consignment papers. The fourth line contains two fields – the zip code and city of the destination.
<b>Country</b>	In this field, you can specify the country of the current destination.

### Remarks Island

Here, you can enter a number of notes to further specify the current destination.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

## Consignment Modes Sub-Tab

This section includes the fields and descriptions for the Consignment Modes sub-tab.

Field	Description
<b>Delivery Mode</b>	In this field, you must enter a delivery mode. The combination of the values in this field and the fields “Delivery Terms,” “Carrier,” and “Consignment Type” constitute a consignment mode for which you can create consignments. When you create consignments for the current consignment mode, Maconomy suggests the values in the remaining fields of the current line on the new consignment.
<b>Carrier</b>	In this field, you must enter a carrier. Apart from this, the functionality of this field is similar to that of the field “Delivery Mode” above.
<b>Deliv. Terms</b>	In this field, you must enter a code for delivery terms. Apart from this, the functionality of this field is similar to that of the field “Delivery Mode” above.
<b>Consignment Type</b>	In this field, you must enter a consignment type. Apart from this, the functionality of this field is similar to that of the field “Delivery Mode” above.
<b>Charge 1-4</b>	In these fields, you can specify a number of charge codes to be suggested on new consignments created for the current consignment mode in the window Consignments.
<b>Weight Capac.</b>	In this field, you can specify the normal capacity of consignments using the current consignment mode in terms of weight. The weight capacity is

Field	Description
	suggested on new consignments created for the current consignment mode in the window Consignments. The weight capacity on the individual consignment is used when Maconomy evaluates which consignment to choose in the automatic assignment of a quote or a sales order to a consignment.
<b>Volume Capac.</b>	In this field, you can specify the normal capacity of consignments using the current consignment mode in terms of volume. The volume capacity is suggested on new consignments created for the current consignment mode in the window Consignments. The volume capacity on the individual consignment is used when Maconomy evaluates which consignment to choose in the automatic assignment of a quote or a sales order to a consignment.
<b>Increase in Weight</b>	<p>In this field, you can enter a percentage increase in weight. The weight increase is suggested on new consignments created for the current consignment mode in the window Consignments. The weight increase is used if the current consignment mode requires that the items are packaged in special packaging, for example, wooden crates. The weight increase on the individual consignment is used when Maconomy evaluates which consignment to choose in the automatic assignment of a quote or a sales order to a consignment. Charges which are calculated on the basis of weight take the weight increase into account when you calculate the expected charge amounts using the action "Calculate Charges" in the windows Quote and Sales Orders when printing quotes and order confirmations.</p> <p>The weight increase is also used on packing lists where the increase is added to the weight calculated from the regular weight of the individual items and the quantities for packing.</p>
<b>Increase in Volume</b>	<p>In this field, you can enter a percentage increase in volume. The volume increase is suggested on new consignments created for the current consignment mode in the window Consignments. The volume increase is used if the current consignment mode requires that the items are packaged in special packaging, for example, wooden crates. The volume increase on the individual consignment is used when Maconomy evaluates which consignment to choose in the automatic assignment of a quote or a sales order to a consignment. Charges which are calculated on the basis of volume take the volume increase into account when you calculate the expected charge amounts using the action "Calculate Charges" in the windows Quote and Sales Orders when printing quotes and order confirmations.</p> <p>The volume increase is also used on packing lists where the increase is added to the volume calculated from the regular volumes of the individual items and the quantities for packing.</p>
<b>Packing Days</b>	In this field, you can specify how many days it usually takes to pack items for consignments using the current consignment mode for this destination. When creating consignments using the current consignment mode, this

Field	Description
	number of days is used for calculating the date for commencing the packing of items in the consignment. The date is calculated as the consignment date less the number of packing days, but the date can be changed on the individual consignment.
<b>Transportation Days</b>	In this field, you can specify how many days it usually takes to ship consignment using the current consignment mode for this destination. When creating consignments using the current consignment mode, this number of days is used for calculating the expected date of arrival of the consignment. The date is calculated as the consignment date plus the number of transportation days, but the date can be changed on the individual consignment.
<b>Background Inv.</b>	In this field, you can specify that orders assigned to consignments using the current consignment mode should be batch invoiced. The field is transferred to all consignment using the current consignment mode and cannot be changed on the individual consignment. When an order where the corresponding field is selected is assigned to a consignment where this field is not selected, the selection will be removed from the order. If the field is selected on the consignment, the value in the field "Batch Invoice" on the individual sales order will remain unchanged, whether it is selected or not. You can, for example, use this functionality if you usually batch invoice your sales orders, but you want to manually evaluate the charges on orders assigned to a certain consignment mode for a given destination before invoicing.
<b>Start Date</b>	<p>In this field, you can specify if Maconomy is to automatically create consignments with the current consignment mode on the dates when they are required. If you do not enter a date in this field, Maconomy will not automatically create consignments to the current destination with the current consignment mode.</p> <p>If you specify a date in this field, the current consignment mode is considered available for automatic creation of consignments. Automatic creation can, for example, be used for consignment modes which can be used at intervals of a given number of days, for instance a flight taking place once per week. Automatic creation is used when Maconomy assigns quotes and orders to consignments with the current consignment mode, as Maconomy will attempt to automatically create a consignment with the earliest possible packing date. For further information about how Maconomy assigns quotes and orders to consignments, please see Appendix B: Assign Order to Consignment.</p> <p>This field also determines the days on which automatic creation of consignments with this consignment mode can take place. The date in this field represents the earliest consignment date with which a consignment can be created automatically. After this date, Maconomy can only create consignments at the interval specified in the pop-up field "Time Unit" on the current line. If, for instance, the date in this field is 01/06/99 and the time unit on the line is "Weekly," Maconomy will only be able to create consignments with the current consignment mode with the dates 01/06/99,</p>

Field	Description
	<p>08/06/99, 15/06/99, and so on, as the consignment date. Any week calendar specified on the line also influences the dates allowed, as Maconomy skips the dates where the number of hours in the calendar is zero. The next day available for automatic creation is thus one interval later.</p> <p>The calculation of each date for automatic creation is made from the start date and the time unit. This calculation method causes the calculation to take more and more time as you move away from the start date. You should therefore regularly change the date to a more recent date that is in line with the original start date and the time unit.</p> <p>Please note that the start date, the time unit, and the week calendar do not determine whether a consignment can be created manually on any given date, as you can manually create a consignment with any consignment date.</p>
<b>Time Unit</b>	<p>In this field, you can specify a time unit created in the window Popup Fields in the Set-Up module. The time unit determines how often Maconomy should be able to automatically create consignments with the current consignment mode, and the field can only be completed if you have specified a start date on the current line. The functionality of the field is described in the field "Start Date" above.</p>
<b>Week Calendar No.</b>	<p>In this field, you can specify the number of a week calendar created in the window Week Calendars in the Set-Up module. The week calendar determines the dates which cannot be used as the consignment date on automatically created consignments, as Maconomy will not create consignments on holidays (or weekends), that is, days in the calendar where the number of hours is zero. The next day available for automatic creation after a holiday is thus one interval later. If you have specified a starting date on the line, but you do not specify a week calendar, Maconomy can create consignments on all dates in line with the start date and time unit as described in the field "Start Date."</p>
<b>Remarks 1-10</b>	<p>In these fields, you enter a number of remarks about the current consignment mode. When a consignment is created with the current consignment mode, the remarks are transferred to the new consignment.</p>

## Destination Properties Workspace

Use this workspace to set up a number of criteria for the properties of the items to be delivered to each destination

A property can, for instance, be specifications about the frequency or voltage of an item.

You assign properties to items in the Item Properties workspace; in the Destination Properties workspace you can specify that items delivered to the current destination should or should not have particular properties. Maconomy issues a warning if you create quote or order lines that include items that do not comply with the property criteria of the destination to which the quote or order in question is to be delivered. Using destination properties, you can thus specify that electrical items delivered to a given destination should use 220 volts, or that chilled goods should

not be sent to a given destination because the proper storage facilities are not available there. Note that Maconomy only uses the destination properties as a warning in those cases where you create quote or order lines that do not comply with the property criteria of a destination. You can still assign an order to a consignment to a given destination, even if the items on the order do not have the correct properties.

## Destination Properties Tab

This section includes the fields and descriptions for the Destination Properties tab.

### Destination Island

Field	Description
<b>Destination No.</b>	This field shows the number of the current destination. Furthermore, Maconomy shows various information about the name, address, and country of the destination.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

## Destination Properties Sub-Tab

This section includes the fields and descriptions for the Destination Properties sub-tab.

Field	Description
<b>Property Name</b>	In this field, you can specify the name of the property which you want to create as a destination property.
<b>Property Type</b>	This field shows the property type to which the property is assigned.
<b>Requirement</b>	<p>In this field, you can specify whether items to be sent to the current destination should or should not have the property specified on the current line. If you mark the field, Maconomy will issue a warning if you create an order line on an order assigned to the current destination, and the item on the order line has one or more properties of the current property type, but does not possess the current property. If you mark this field on several lines for the same destination, using properties of the same property type and the item has one or more properties of the current property type, an item only has to possess one of the properties in question to be in compliance with the requirements. Maconomy does not issue a warning if you enter an item not having any properties of the current type.</p> <p>If you do not mark this field, Maconomy will issue a warning if you create an order line on an order assigned to the current destination, and the item on the order line does possess the current property. Please note that although several destination property lines exist with properties of the same type and this field unmarked, Maconomy will issue a warning if you create an order line</p>

Field	Description
	on an order assigned to the current destination, and the item on the order line possesses but one of the properties in question. Items are assigned properties in the window Item Properties in the Inventory module.
<b>Remarks 1-5</b>	In these fields, you enter a number of remarks about the current destination property. Maconomy suggests the remarks from the property information card, but you can change the remarks here.

## Footer Templates Workspace

Use this workspace to create and maintain footer templates.

You use footer templates to define general footers that you want to display in a certain selection of order-related documents, such as quotes, order confirmations, packing lists, packing slips, and credit memos. This enables you to enter footers for automatic printing on all quotes and order confirmations in a certain period of time or for customers within a specific segment, for example.

In the Footer Templates tab, you define selection criteria. In the Footer Template Lines sub-tab, you enter the footers that are to be transferred to the quotes, order confirmations, and so on, that match the tab's selection criteria. If you do not enter a value for specific selection criteria fields, Maconomy disregards those fields.

When you create a quote or sales order, Maconomy checks whether the quote or sales order matches the selection criteria of a footer template. If it does, Maconomy transfers the footers from the footer template in question to the quote or sales order. You can, however, review and edit the footer of the individual order in the Footers workspace. If a quote or a sales order does not match the selection criteria in any template, the footer is blank for that quote or sales order, but you can specify a footer in the Footers workspace.

You can create several lines in a footer template. For each line you can indicate on which kind of printouts Maconomy should include that footer line. For instance, if for a certain group you want to transfer a certain footer to quotes and order confirmations and another footer to invoices and packing slips, you can create a footer template that has a line for each of these document types.

If a quote or an order matches the selection criteria of several footer templates, Maconomy transfers the footer lines from all of those templates. Maconomy determines the sequence of footer lines on the quote or sales order by the number of the footer template; that is, the footer that has the lowest template number is at the top, and so on.

### Footer Templates Tab

This section includes the fields and descriptions for the Footer Templates tab.

#### Template Island

Field	Description
<b>Template No.</b>	In this field, you can enter the number of the current template. The template number determines the sequence in which footer lines are transferred when a quote or an order matches multiple footer templates. If that is the case, the lines

Field	Description
	from all the matching footer templates will be transferred, and the footer template with the lowest number will be placed at the top, and so on.
<b>Name</b>	In this field, you can enter the name of the current footer template.

### Selection Criteria Island

Field	Description
<b>Ship to Customer</b>	In these fields, you can enter a range of customer numbers. If the ship-to customer number of an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order. If you do not enter a range, this field is disregarded.
<b>Bill to Customer</b>	In these fields, you enter a range of customer numbers. If the bill-to customer number of an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order. If you do not enter a range, this field is disregarded.
<b>Customer Group</b>	In this field, you can select a customer group. If the bill-to customer number of an order or a quote belongs to this group, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Order Mode</b>	In this field, you can select an order mode. If this order mode is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Sales Rep.</b>	In these fields, you enter a range of sales representatives. If the sales rep. specified on an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order. If you do not enter a range, this field is disregarded.
<b>Language</b>	In this field, you can select a language code. If this language code is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Enterprise</b>	In this field, you can select an enterprise. If this enterprise is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Segment</b>	In this field, you can select a segment. If this segment is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.

Field	Description
<b>Area</b>	In this field, you can select an area. If this area is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Destination No.</b>	In these fields, you enter a range of destination numbers. If the destination number specified on an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order. If you do not enter a range, this field is disregarded.
<b>Delivery Mode</b>	In this field, you can select a delivery mode. If this delivery mode is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Delivery Terms</b>	In this field, you can select delivery terms. If these delivery terms are specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Carrier</b>	In this field, you can select a carrier. If this carrier is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Consignment Type</b>	In this field, you can select a consignment mode. If this consignment mode is specified when the quote or order is created, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Company No.</b>	In these fields, you enter a range of company numbers. If the number of the responsible company specified on an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.
<b>Created on</b>	In these fields, you enter a range of dates. If the creation date of an order or a quote matches this range, and the quote or order matches the other criteria in this island, the footer lines from the table part of this window will be transferred to the quote or order.

### Remarks Island

In these fields, you can enter comments regarding the current footer template.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

## Footer Template Lines Sub-Tab

This section includes the fields and descriptions for the Footer Template Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you can enter the footer text.
<b>Quote</b>	In this field, you can specify whether the current footer should be printed on quotes.
<b>Order Confirmation</b>	In this field, you can specify whether the current footer should be printed on order confirmations. For orders specified as main orders, the footer will also be included on printouts from the window Print Main Order. However, the footer is not included on printouts of the suborders assigned to the main order.
<b>Packing List</b>	In this field, you can specify whether the current footer should be printed on packing lists.
<b>Packing Slip</b>	In this field, you can specify whether the current footer should be printed on packing slips.
<b>Returns List</b>	In this field, you can specify whether the current footer should be printed on returns lists.
<b>Invoice</b>	In this field, you can specify whether the current footer should be printed on invoices.
<b>Credit Memo</b>	In this field, you can specify whether the current footer should be printed on credit memos.
<b>Label</b>	In this field, you can specify whether the current footer should be printed on labels.
<b>Bill of Lading</b>	In this field, you can specify whether the current footer should be printed on bills of lading.
<b>Consignment</b>	In this field, you can specify whether the current footer should be printed on consignment printouts. Consignment Slip In this field, you can specify whether the current footer should be printed on consignment slips.

## Item Purchase Overview

The Item Purchase module in Maconomy allows you to create and maintain item purchase orders to your vendors.

### Item Purchase Orders Tab

This section includes the fields and descriptions for the Item Purchase Orders tab.

#### Item Purchase Order Island

Field	Description
<b>Order No.</b>	This is the number of the item purchase order and is unique. Maconomy automatically allocates the next available order number. The number cannot be changed manually, but you determine how item purchase order numbers are allocated in the System Numbers window.
<b>Our Ref.</b>	Here you enter the name of the person who created the item purchase order. The name is printed on the item purchase order for future reference for the vendor. Maconomy suggests the name from the Vendor Information Card. If the field there is blank, Maconomy suggests the name of the user. You can change it, but you must enter a name.
<b>Buyer</b>	Here you enter the person normally responsible for purchases from the vendor. Maconomy suggests the name from the Vendor Information Card, but you can change it.

#### Dispatching Address Island

Field	Description
<b>Vendor</b>	<p>Here you enter the vendor number. Maconomy verifies that the vendor exists in the Accounts Payable module.</p> <p>Maconomy retrieves various information from the Vendor Information Card in the Accounts Payable module. The information is suggested in corresponding fields here, but you can change most of it.</p> <p>You cannot change the vendor number on an existing item purchase order, and you cannot enter the number of a blocked vendor.</p> <p>The other lines in this field show the vendor's name and address. Maconomy retrieves the information from the Vendor Information Card in the Accounts Payable module, but you can change it.</p>
<b>Attn.</b>	This is the vendor's attention person the person to whom shipping information is directed. The name is retrieved from the Vendor Information Card. You can change it.
<b>Country</b>	This is the vendor's country code. The value is retrieved from the Vendor Information Card. You can change it here.
<b>Phone</b>	This is the vendor's phone number, retrieved from the Vendor Information Card. It can be changed.

Field	Description
<b>Fax</b>	This is the vendor's fax number, retrieved from the Vendor Information Card. It can be changed.
<b>Telex</b>	This is the vendor's telex number, retrieved from the Vendor Information Card. It can be changed.
<b>E-mail</b>	This is the vendor's e-mail address.

### Price Island

Field	Description
<b>Currency</b>	Here you select the currency of the item purchase order. Maconomy suggests the value from the Vendor Information Card, but you can change it. You maintain currencies in the Popup Fields window in the Set- Up module.
<b>Price List</b>	Here you select the price list from which to suggest prices for the items in the table part of the item purchase order. Maconomy retrieves the price list from the Vendor Information Card in the Accounts Payable module, but you can select another. The pop-up field only shows existing price lists, that is, those created in the Price Lists window in the Inventory module. If you leave the field blank, Maconomy suggests the current warehouse's latest cost of each item in the table part.
<b>Keep Price</b>	In this field, you can specify the value which Maconomy should suggest in the corresponding field on each line created in the table part. On the lines, the field determines whether a change in quantity should cause the current unit price or discount percentage to be recalculated. For further information, see the description of the field "Keep Price." When you create an order Maconomy suggests the value from the corresponding field in the customer information card, but you can change it for the current order.
<b>Goods</b>	This is the sum of the prices from the item lines (in the "Extended Price" field). The value cannot be changed manually.
<b>Invoice Discount %</b>	Here you specify an invoice discount percentage. Maconomy suggests the value from the Vendor Information Card in the Accounts Payable module. You can change it. The invoice discount is deducted from the item sum. This is shown on the printed item purchase order, making it clear to the vendor, how much you expect to be invoiced for. The invoice discount percentage is deducted from the prices of the items, before these are shipped to the warehouse. This ensures costs are correct. If your company does not use purchase price lists, that is, if there are no purchase price lists in the system, Maconomy suggests the latest cost in the current warehouse as unit price on every item line. This price includes any invoice discount received when you last bought the item. This means, that if you enter a figure in this field, Maconomy will calculate the invoice discount twice.

Field	Description
<b>Invoice Discount</b>	Here you can enter an invoice discount amount, if applicable. You cannot enter a value both in this field and in the "Invoice Discount %" field.
<b>Expense %</b>	<p>Here you can specify an expense percentage, for example, for a handling charge. You can enter an estimated expense percentage, based on previous charges.</p> <p>Maconomy suggests the value from the Vendor Information Card, but you can change it.</p> <p>Expenses are added to the item sum and apportioned to individual items, when these are placed in the warehouse. This ensures costs are correct.</p> <p>If your company does not use purchase price lists, that is, if there are no purchase price lists in the system, Maconomy suggests the current warehouse's last cost of the relevant item as unit price on every item line, and this price includes any expense incurred when you last bought the item. This means, that if you enter a figure in this field, Maconomy will calculate both expenses.</p>
<b>Expenses</b>	<p>Here you can specify an expense amount. You cannot enter a value both in this field and in the "Expense %" field.</p> <p>The costs are apportioned to the individual items when item deliveries are registered. If you receive several deliveries for the same item purchase order, the costs will be apportioned each time.</p>

**Status Island**

Field	Description
<b>Approved</b>	This field is marked once the item purchase order has been approved. To approve an item purchase order, you must select "Approve Item Purchase Order" in the Action menu. After approving the order, you can print it and enter item receipts.
<b>Date Printed</b>	This is the date the item purchase order was last printed. The date cannot be changed manually.
<b>Quantity</b>	This field shows how many times the item purchase order has been printed. This does not include copies from your computer's standard print dialogue. The value cannot be changed manually.
<b>Currently Received</b>	<p>This field shows how many items have been delivered to you. The field shows "No," "Partly," or "Yes" depending on whether none, some or all of the items in the item purchase order have been received.</p> <p>Item receipt is entered in the Item Receipt window. The value in this field is retrieved from the Item Receipt window.</p>
<b>Last Received On</b>	This is the date you last received items in the item purchase order. The date cannot be changed manually.

Field	Description
<b>Quantity</b>	This field shows how many deliveries the vendor has made for the item purchase order. The value cannot be changed manually.
<b>Closed</b>	<p>This field shows whether the item purchase order has been closed. When you have received all the items in an item purchase order, you should close the order by selecting the action "Close Item Purchase Order."</p> <p>After closing the item purchase order, you cannot any longer add new item lines or enter backorder arrivals. Maconomy does not automatically close an item purchase order when all items have been received.</p> <p>You can only mark this field by selecting "Close Item Purchase Order." Only closed orders can be deleted in the window Delete Item Purchase Orders.</p>
<b>Date Closed</b>	This field shows the date the item purchase order was closed. The date cannot be changed.

**Payment Island**

Field	Description
<b>Pmt. Terms</b>	Here you select the payment terms of the item purchase order. Maconomy suggests the value from the Vendor Information Card, but you can select another. Payment terms are defined in the Popup Fields window in the Set Up module.

**Document Archive Island**

Field	Description
<b>Document Archive</b>	In these fields, you can assign a document archive to the item purchase order. By assigning a document archive to an item purchase order, you can keep track of the various documents related to the order. Document archives are created in the window Document Archives in the Set-Up module. See the description of that window for further information on the use of document archives.
<b>Document Count</b>	This field displays the number of documents in the Document Archive.

**Extra Fields Island**

Field	Description
<b>Popup 1-5</b>	In these fields, you can enter various information about the item purchase order and the current vendor. Maconomy suggests the values selected in the corresponding fields on the Vendor Information Card, but you can change the values for the current item purchase order in this window. The options are created in the window Popup Fields in the Set-Up module.

### Remarks Island

Field	Description
<b>Remarks 1-10</b>	Here you can enter remarks about the item purchase order.

### Vendor's Order Island

Field	Description
<b>Order No.</b>	<p>Here you can enter the number of the vendor's sales order, which corresponds to your item purchase order. If you contact the vendor before making the order to ask about expected delivery time, and so on, you are occasionally given a sales order number to which to refer to in your item purchase order.</p> <p>The number is printed on the item purchase order.</p>
<b>Your Reference</b>	<p>Here you can enter the name of the vendor contact you spoke to about the order. The name is printed on the item purchase order.</p> <p>Maconomy automatically suggests the name from the Vendor Information Card in the Accounts Payable module, but you can change it.</p>
<b>Our Cust. No.</b>	<p>Here you enter your company's customer number with the vendor. Maconomy automatically suggests the value from the Vendor Information Card in the Accounts Payable module, but you can change it. It is printed on the item purchase order.</p>

### Billing Address Island

Field	Description
<b>Payment Vendor</b>	<p>These fields display the name and number of the vendor you are paying for the delivery.</p> <p>Maconomy retrieves the number from the Vendor Information Card, but you can change it. If you do, Maconomy verifies that the number exists in the Accounts Payable module.</p> <p>The two vendor numbers are not the same, if one vendor delivers the items, while another receives payment for them.</p> <p>The other lines show the bill-to vendor's name and address. Maconomy retrieves the information from the Vendor Information Card in the Accounts Payable module. It cannot be changed here.</p>
<b>Attn.</b>	<p>This is the vendor's attention person the person to whom payment information is directed. Maconomy retrieves the name from the Vendor Information Card. It cannot be changed here.</p>
<b>Country</b>	<p>This is the country of the vendor who is receiving payment for the purchase. It is retrieved from the Vendor Information card and cannot be changed here.</p>

**Settling Company Island**

Field	Description
<b>Settling Company</b>	<p>these fields show the name and number of the settling company that applies to the current item purchase order.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section “Multiple Companies” in the chapter “Introduction to the G/L module.”</p>

**Company Island**

Field	Description
<b>Company</b>	<p>In these fields, you can specify the name and number of the company responsible for the item purchase order. If you do not enter values manually, Maconomy will attempt to derive the values, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard values are transferred from the window System Information in the set-up module.</p> <p>If the company in these fields is different from the one shown in the island Settling Company, Maconomy will automatically create intercompany balances at the posting of the item journal created as a result of the item receipt. In the intercompany balance, the company in these fields will be the responsible company. However, if the system parameter “Create intercompany entries for companies with same parent company” is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>See the section “Multiple Companies” in the chapter “Introduction to the G/L Module” and the window Intercompany Accounts in the G/L module for a further description of the concept of responsible companies and intercompany balances.</p>

**Delivery Island**

Field	Description
<b>Pref. Deliv. Date</b>	<p>Here you can enter the date you wish to receive the delivery, or a date agreed on with the vendor. When you create an item purchase order, Maconomy suggests a blank value. If you specify a date and create a line, Maconomy will suggest this date in the field “Deliv. Date” on the new line.</p> <p>If you do not specify a value in this field, Maconomy will calculate a delivery date for the line, unless manually specify a delivery date on the line. For a description of the calculation of the delivery dates on individual item purchase order lines, see the field “Deliv. Date” in the table part.</p> <p>The delivery dates on the lines of the item purchase order are not updated if you change the value in this field. However, if you select the action “Copy Delivery Date,” the delivery date on all lines in the table part will be changed to the date in this field. Please note that this can result in an update of the expected availability date, as described in the field “Deliv. Date” in the table part.</p>

Field	Description
<b>Warehouse</b>	<p>Here you select the warehouse to which the items are to be shipped. Maconomy suggests the warehouse from the vendor information card, but you can change it.</p> <p>You can only order items for one warehouse in one item purchase order. If you wish to order items for several warehouses from this vendor, you can direct them to the main warehouse and transfer them to your other warehouses after delivery using the window Inventory Change. Alternately, you can create one item purchase order per warehouse.</p> <p>If you select a warehouse which is assigned to another company than the one specified in the island "Company," Maconomy will create intercompany balances when you post the item journal created as a result of the item receipt. In the intercompany balance, the company to which the warehouse is assigned will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" and the window Intercompany Accounts in the G/L module for a further description of the concept of responsible companies and intercompany balances.</p>
<b>Stock Location No.</b>	<p>In this field, you can specify the location in the selected warehouse at which you expect to receive the items. This location will apply to those lines in the table part where the warehouse location field is left blank. If a warehouse location is specified on a given line, it overrules any location specified in this field. Maconomy suggests the standard receiving location specified for the current warehouse in the window Warehouse Information Card, but you can specify another location.</p> <p>It is not mandatory to enter location numbers in this window. However, the location information is also used in the window Item Receipt where the receipt of the items cannot be approved until you have either entered a location in the card part or on the individual item lines.</p>
<b>Delivery Mode</b>	<p>Here you select a delivery mode. Maconomy suggests the value from the Vendor Information Card, but you can change it.</p> <p>You maintain delivery modes in the Popup Fields window in the Set-Up module.</p>
<b>Delivery Terms</b>	<p>Here you select the delivery terms of the item purchase order. Maconomy suggests the value from the Vendor Information Card, but you can change it.</p> <p>You maintain delivery terms in the Popup Fields window in the Set Up module.</p>
<b>Bill of Lading</b>	<p>Here you can enter a text or number (for example, the way bill number) to later identify the delivery. Delivery information is normally given in the Item Receipt window. If this text or number is changed in the Item Receipt window, it is copied to this window next time the window is opened, but it can be changed.</p>

**Vendor Information Island**

Field	Description
<b>Department</b>	<p>Here you can select the department the purchase involves. Maconomy suggests the department from the Vendor Information Card in the Inventory module, but you can change it.</p> <p>You maintain your company's departments in the window Posting References in the G/L module.</p>
<b>Vendor Group</b>	<p>This is the vendor group to which the vendor is assigned. It is retrieved from the Vendor Information Card. You cannot change it here.</p>
<b>Language</b>	<p>Here you select the language code of the item purchase order. Maconomy suggests the language code from the Vendor Information Card, but you can change it.</p> <p>You can use the language code to print item purchase orders in different languages. Using Maconomy's layout editing tools, you can create item purchase order layouts in different languages.</p> <p>Language codes are defined in the Popup Fields window in the Set-Up module.</p> <p>The extra item texts on the item information card are sales-related and have no effect in this window. Instead, you can enter the vendor's item text in the field "Vendor Item Desc." in the table part of the window.</p>
<b>Tax</b>	<p>You can mark this field if the item purchase order is subject to tax. Maconomy suggests the value from the vendor information card, but it is possible to change it.</p>
<b>Tax No.</b>	<p>Here you can enter the vendor's tax number. Maconomy suggests the value from the vendor information card, but it is possible to change it. The number is printed out on the item purchase order.</p>

**Sales Order Island**

Field	Description
<b>Sales Order No.</b>	<p>If the item purchase order is created from a sales order in the Sales Order to Item Purchase Orders window, and if all the item purchase order lines are attached to the same sales order, the sales order number is shown here. This will always be the case if you have entered a common item purchase order number in the Sales Order to Item Purchase Orders window. The number cannot be changed here.</p>
<b>Drop Shipment</b>	<p>If the item purchase order is attached to a single sales order – that is, there is a number in the "Sales Order No." field – you can mark this field to show that the items in the item purchase order should be delivered directly to the customer the sales order is for. If the field is marked, Maconomy uses the delivery address of the sales order instead of the address of your inventory. You can change the value in the field, but you can only mark the field if the item purchase order is linked to a sales order.</p> <p>The "For Packing" quantity will be zero on the related sales order lines as long as this field is marked. Items for drop shipment will thus not be included on a</p>

Field	Description
	packing list or packing slip. If the mark is removed, the whole undelivered quantity will be set for packing.
<b>Customer</b>	This is the customer in the above sales order, if applicable. The next two lines show the name and address of the customer.

### Statistics to Tax Authorities Island

Field	Description
<b>Intrastat Reg.</b>	This field should be marked if the items delivered from the item purchase order are to be included in the monthly report to Intrastat. If the "Intrastat Export Report" field in the System Information window is marked, Maconomy marks this field automatically if the vendor comes from another EU country and does not have a mark in the "Tax" field in the Payment Control window.
<b>Nature</b>	Here you select which transaction to report to Intrastat. They are created in the Popup Fields window in the Set-Up module.
<b>EU Trade Type</b>	Here you select the trade type, which can be either "Normal" or "Triangulation." Triangulation implies that you are agent for a vendor in another EU country and an end customer in a third EU country. In this type of trade the invoice amount is not included in the EU purchases in your tax specification.

### User Island

See the "Getting Started" topic for a description of the fields in the island User.

## Registration Section

This section includes the fields and descriptions for the Registration Section workspaces.

### Item Purchase Orders Workspace

Use this workspace to create and maintain item purchase orders for your vendors. In the Item Purchase Orders tab you enter general and account information about the order. When this is complete, press Return. Maconomy then verifies the information and opens for item entry in the Item Purchase Lines sub-tab.

To create an order, you first enter the number of the vendor. Maconomy verifies that the vendor exists, then retrieves information from the Vendor Information Card in the Accounts Payable module. Maconomy suggests this information in the corresponding fields in the item purchase order. You can change most of it.

In the Item Purchase Selection workspace, Maconomy can make an item purchase selection based on current stock, reorder level, and maximum stock for individual items. Maconomy automatically prepares an item purchase order that you can adjust and approve in this workspace.

You can use the Sales Order to Item Purchase Orders workspace to automatically create an item purchase order from a sales order. In that process, Maconomy converts sales units to purchase units. When you receive serial numbers for articles that have serial number control, Maconomy

automatically transfers them to the Serial Number Entry workspace in the Sales Orders module. Any items that are on backorder are reserved for packing so that you are ready to print a packing slip for the sales order.

### Item Purchase Lines Sub-Tab

This section includes the fields and descriptions for the Item Purchase Lines sub-tab.

Field	Description
<b>Item No.</b>	In this field, you can enter the item number of the item you wish to purchase. Maconomy verifies that the item number exists in the Item Information Card window. For items with inventory control, Maconomy will alert you if the vendor on the item purchase order has not been registered as a vendor of the current item in the window Suppliers.
<b>Ordered</b>	In this field, you can specify how many item units to order. The quantity must be either zero or divisible by the item's minimum purchase unit.
<b>Description</b>	This is the item text. Maconomy retrieves the text from the Item Information Card in the Inventory module, but you can change it here.
<b>Unit Price</b>	<p>This is the item's unit price suggested for the item purchase order line. If the item purchase order is assigned to a price list, and the item is included in the price list, Maconomy suggests the price from the price list.</p> <p>When setting the price of an item, the estimated delivery date is used as a reference to the price list issue which is valid at the time of delivery.</p> <p>Maconomy includes any quantity discount justified by the quantity ordered. You can change the suggested price.</p> <p>If the item is not included in the price list, or the item purchase order is not assigned to a price list, Maconomy suggests the latest cost at the current warehouse from the item information card, converted to purchase units from sales units. This cost includes any invoice discount/charges incurred when you last bought the item you could distort the price by entering new discounts or charges in the "Invoice Discount %" or "Expense %" fields.</p>
<b>Pricing Unit</b>	This is the quantity of item units included in the unit price. The value is retrieved from the field "Unit, Purchase" on the Item Information Card and cannot be changed here.
<b>Discount %</b>	<p>This field shows a discount percentage, if the conditions for getting a discount via an item discount agreement have been fulfilled on the current item line. You can change the suggested discount percentage in this field, but you cannot enter a percentage in this field as well as a discount amount in the field "Discount," as these two fields follow each other in such a way that the discount percentage is calculated on the basis of the discount amount.</p> <p>If the current line is a text line, no value can be entered in this field.</p>
<b>Discount</b>	This field shows a discount amount, if the conditions for getting a discount via an item discount agreement have been fulfilled on the current item line. You can change the suggested discount percentage in this field, but you cannot

Field	Description
	<p>enter an amount in this field as well as a discount percentage in the field "Discount %," as these two fields follow each other in such a way that the discount percentage is calculated on the basis of the discount amount.</p> <p>If the current line is a text line, no value can be entered in this field.</p>
<b>Extended Price</b>	<p>This is the extended price calculated by multiplying the quantity ordered by the unit price and dividing this sum by the pricing unit. The extended price is included in the "Goods" field in the Price island in the card part of the window. The value cannot be changed manually.</p>
<b>Deliv. Date</b>	<p>Here you enter the date on which you would like the supplier to deliver the items. If a preferred delivery date has been specified in the card part, Maconomy suggests this preferred delivery date from the card part, but you can specify another delivery date.</p> <p>If no date is specified in the card part, and you have not manually entered a delivery date, Maconomy calculates a delivery date by checking the supplier's delivery time for the item to the current warehouse in the window Suppliers and adds it to today's date. If a week calendar has been specified in the vendor information card of the supplier, Maconomy also adds the number of days within the delivery time on which the vendor's business is closed, thus compensating for, for example, weekends and holidays.</p> <p>Please note that the date in this field indicates the requested delivery date not the date you expect the items to arrive. However, you can specify an expected arrival date in the field "Expected Delivery Date," a confirmed delivery date in the field "Confirmed Delivery Date" or an expected availability date in the field "Expected Availability Date."</p>
<b>Expected Delivery Date</b>	<p>In this field, you can specify the date on which you expect the supplier to deliver the items on the line.</p> <p>Maconomy suggests the delivery date on the line plus any number of delivery days (either specified for the vendor if the vendor is created as a supplier of the item in question in the window Suppliers, or in the window Item Information Card if the vendor is not a supplier of the item). However, if you specify a delivery date which corresponds to today's date plus the number of delivery days, or more, the expected delivery date is set to the same date as the delivery date.</p> <p>The expected delivery date can be changed to another date manually. However, it cannot be set to a date earlier than the preferred delivery date on the item purchase order.</p>
<b>Confirmed Deliv. Date</b>	<p>In this field, you can enter the date which the supplier has confirmed as the day the items will be delivered. When you do so, the specified date plus any number of preparation days specified for the vendor if the vendor is created as a supplier of the item in question in the window Suppliers is copied to the field "Expected Availability Date." If you change the confirmed delivery date later, the new confirmed delivery date will cause the expected availability date to be changed accordingly.</p>

Field	Description
	<p>However, if you have changed the expected delivery date first, and the new confirmed delivery date plus any number of preparation days is earlier than or equal to the expected delivery date, the expected delivery date is not changed.</p> <p>If you manually specified an expected availability date at the same time as entering a new confirmed delivery date, the manually entered expected delivery date is not overwritten.</p>
<b>Expected Availability Date</b>	<p>In this field, you can enter the date on which you expect the items on the current line to be available for sale. If the item uses inventory profile, this date is used as the date on which the purchase volume represented by the current line will be added to the stock.</p> <p>Maconomy suggests the expected delivery date plus any number of preparation days specified for the vendor if the vendor is created as a supplier of the item in question in the window Suppliers. However, if a confirmed delivery date is specified, the expected availability date is changed to the confirmed delivery date plus any number of preparation days. Changing the confirmed delivery date (or the expected delivery date if no confirmed delivery date has been specified) causes the expected availability date to be updated accordingly, as long as the confirmed/expected delivery date (before the change) plus any number of preparation days corresponds to the expected availability date. This means that if you change the expected availability date manually, it is no longer updated when the expected/confirmed delivery date is changed. However, you can re-establish the synchronization by first deleting the confirmed delivery date and then entering a new one, or by changing the expected/confirmed delivery date to the date corresponding to the expected availability date less any number of preparation days.</p> <p>If you manually specified an expected availability date at the same time as entering a new confirmed or expected delivery date, the manually entered expected availability date is not overwritten.</p>
<b>Stock Location No.</b>	<p>In this field, you can specify the location in the selected warehouse at which you expect to receive the items on the current line. If you leave this field blank, the location number specified in the card part of the window will apply to the line.</p> <p>It is not mandatory to enter location numbers in this window. However, the location information is also used in the window Item Receipt where the receipt of the items cannot be approved until you have either entered a location in the card part or on the individual item lines.</p>
<b>Remarks</b>	Here you can make a note about the order line.
<b>Internal Desc.</b>	This is the internal description from the Item Information Card. You can change it here.
<b>Discount Desc.</b>	This field shows the discount description from a discount agreement, if an item discount agreement justifying a discount on the current item line on the order has been created. You can change the suggested text in this field.

Field	Description
	<p>If you have manually entered a discount on the item line, you can enter a description of the discount in this field. The description is included on the printout of the item purchase order.</p> <p>If the current line is a text line, no value can be entered in this field.</p>
<b>Note No.</b>	In this field, you can specify the number of a note to be assigned to the current line for further specification. Notes are created and edited in the window Notes in the Set-Up module.
<b>Note Description</b>	This field shows a description of the note specified in the field "Note No." above.
<b>Item Note No.</b>	<p>If the item specified on the line is a template item, that is, an item for which a template note has been specified in the window Item Information Card, this field is automatically completed.</p> <p>A template item is an item where the generic item information is not specific enough, as certain details may change from order to order. An example of a template item is a business card where the basic information about the card such as the paper type and background color is static, but each time a batch of cards is ordered, the title, name and address to be printed on the card are different. It is therefore important that a number of additional fields are made available so that a user ordering a business card is allowed to enter this information. Once the order line has been created and this field has automatically been completed, you can enter the additional information required for the template item by opening the window Notes in the Set-Up module, selecting the template note in this field, and specifying the relevant data in the table part.</p> <p>The procedure for the automatic completion of the field depends on whether the purchase order line is created on the basis of a sales order line or not. If the line is not based on a sales order line, Maconomy creates a copy of the template note from the item information card, assigns the copy to the current purchase order line by means of this field. If the line is based on a sales order line, Maconomy creates a copy of the template note from the order line in question, and assigns the copy to the current purchase order line.</p> <p>For further information on the use and set-up of template items, see the description of the field "Template Note No." in the window Item Information Card.</p> <p>The information entered in the note is also printed on external order documents.</p>
<b>Item Note Description</b>	This field shows a description of the note specified in the field "Item Note No." above.
<b>Extra Text 1-10</b>	In these fields, you can enter supplementary text for a further description of the current item. In the first three fields, Maconomy suggests the value from the corresponding fields in the item information card. You can change the suggested texts and enter additional information in the remaining seven fields.

Field	Description
<b>Popup 1-5</b>	In these fields, you can enter various information about the current item. Maconomy suggests the values selected in the corresponding fields on the current item's information card, but you can change the values for the current item purchase order line in these fields. The options are created in the window Popup Fields the Set-Up module.
<b>Date 1-5</b>	In these fields, you can enter various dates related to the current item purchase order line.
<b>Orig. Quantity</b>	In this field, you can enter the number of units of the current item that were ordered originally. When item purchase order lines are created, the value entered in the field "Ordered" is automatically copied to this field. The value can, however, be changed if this is required.
<b>Currently Received</b>	This field shows how many items in the item line have already been received. The value cannot be changed here. The field is updated when you enter item receipt in the Item Receipt window.
<b>Vendor Item No.</b>	This is the vendor's item number. For items with inventory control, the value is automatically retrieved from the current combination of warehouse and vendor in the window Suppliers, but the number can be changed in this field.  If you specify a value here, it is printed on the item purchase order instead of your own item number. This makes it easier for the vendor to identify the item.
<b>Vendor Item Desc.</b>	This is the vendor's item text. For items with inventory control, text is retrieved from the current combination of warehouse and vendor in the window Suppliers, but the text can be changed in this field. If you specify a text here, it is printed on the item purchase order instead of your own item text.
<b>Price at Step 1</b>	This is the price of one unit of the item, if the order is assigned to a price list and the item is included in the price list. The value cannot be changed manually.
<b>Keep Price</b>	This field shows whether the unit price and discount percentage on the current line should be recalculated when changing the quantity. If this field is marked, a change in quantity will not cause the current unit price or discount percentage to be recalculated, even if the new quantity results in, for example, a different price step.
<b>Quantity Disc.</b>	This is the quantity discount, if the price list quotes a quantity discount and if the quantity ordered justifies the discount.
<b>Sales Order No.</b>	If the item purchase order line is created from a sales order line, in either the Sales Order to Item Purchase Orders or the Item Purchase Selection window, this field shows the number of the sales order. It cannot be changed manually.
<b>Duty Code</b>	This field shows a code for the duty to be calculated if the vendor is from a foreign country. The duty code is transferred from the item information card in connection with the creation of an item purchase order. The duty code in this field cannot be changed.

## Actions

This section shows the Actions available in the Item Purchase Orders workspace.

### Top Tab

Field	Description
<b>Approve item purchase order</b>	<p>Select this action to approve the item purchase order in the window. After having completed an order in the Item Purchase Orders window, you must approve it to be able to print it and process it through the system.</p> <p>When the order is approved, the items are registered as ordered, that is, Maconomy updates the "Item Purchase Orders" field in the Item Information Card and Item Information windows in the Inventory module. If you have selected an inventory profile, the purchase line will also be shown in the Inventory Profiles window.</p>
<b>Print Item Purchase Order</b>	<p>Select this action to print the item purchase order in the window. An item purchase order must be approved before it can be printed.</p> <p>If you wish to print several item purchase orders at the same time, you can use the "Print Item Purchase Orders" window. In the "Print Item Purchase Orders" window, you can define selection criteria by specifying a range of item purchase order numbers and/or an interval of delivery dates.</p>
<b>Close Item Purchase Order</b>	<p>Select this action to close the item purchase order in the window. Closing an item purchase order means you cannot any longer add item lines or enter backorder receipts. If the Item Receipt window is open, and shows the item purchase order from this window, you must close the Item Receipt window before being able to close the item purchase order here.</p> <p>You may find that the vendor is unable to deliver an item on backorder, because it is discontinued. If so, and the item purchase order is closed, Maconomy cancels the order by resetting the value in the "Item Purchase Orders" field in the Item Information Card and Item Information windows in the Inventory module.</p>
<b>Sort by Item No.</b>	<p>When you select this action, item purchase order lines will be sorted by item number. Lines with identical item numbers and description will keep their original sorting order.</p>
<b>Copy Delivery Date</b>	<p>When you select this action, the date from the field "Pref. Deliv. Date" in the card part of this window is copied to the field "Deliv. Date" on all lines in the table part of the item purchase order.</p>
<b>Update Item Reservations</b>	<p>Using this action, you can update the delivery dates on sales order lines regarding the items specified on the current item purchase order, so that they reflect the latest information on expected delivery (for instance changes in the expected availability date of purchased items). The action only includes lines where the item has inventory profile, and the action ignores sales order lines belonging to sales orders where the field "Urgent" is marked.</p>

Field	Description
	<p>For each line on the item purchase order, Maconomy checks which order lines in the Sales Orders module pertain to the same item. Only lines for which no picking or packing list exists are considered in this process. For each of these sales order lines, starting with the one with the earliest delivery date, Maconomy re-reserves the items, and calculates the earliest possible deliver date based on delivery time, the current purchase volume, production volume, order volume, and quantity in stock. This process also includes information on other item purchase orders. If a later date is calculated for a sales order line and the field "Split Order Lines" is marked on the order in question, Maconomy runs the action "Split Line" on the line to see if any of the units can be delivered at an earlier time.</p> <p>If the delivery date on one of the affected sales order lines is changed to a later one which conflicts with the remaining delivery information on the sales order, Maconomy blocks the line after updating the delivery date. The following situations cause Maconomy to block the line:</p> <ul style="list-style-type: none"> <li>▪ The sales order has not been approved, a consignment is specified on the line, and the updated delivery date is not the same as the packing date of the consignment</li> <li>▪ The sales order has been approved and does not have partial delivery, and the updated delivery date on the line is later than the one in the card part</li> </ul> <p>You can also use the window Update Item Reservations to update delivery dates on a range of order lines.</p>
<b>Attach Document</b>	This action allows you to attach a document to the item purchase order.

## Item Purchase Order Lines Workspace

Use this workspace to look up information about item purchase order lines.

Using the Find functionality in this workspace, you can find, for example, the number of the item purchase order on which certain items were ordered.

### Item Purchase Order Lines Tab

This section includes the fields and descriptions for the Item Purchase Order Lines tab.

#### Item Purchase Order Line Island

Field	Description
<b>Order No.</b>	This field shows the number of the item purchase order to which the line has been assigned.

Field	Description
<b>Line No.</b>	This field shows the number of the item purchase order line on the item purchase order.
<b>Vendor No.</b>	This field shows the number of the vendor to whom the item purchase order has been assigned.

**Item Island**

Field	Description
<b>Item No.</b>	This field shows the number of the item to be purchased.
<b>Description</b>	This field shows the description of the current item.
<b>Internal Desc.</b>	This field shows the internal description of the current item.
<b>Extra Text 1-10</b>	These fields show the supplementary text entered for the current item purchase order line in the window Item Purchase Orders.
<b>Deliv. Item No.</b>	This field shows the vendor's item number of the current item. The item number is printed on item purchase orders in the Item Purchase module instead of the company's own item number. This facilitates the identification of items to be ordered.
<b>Deliv. Item Text</b>	This field shows the item text used by the vendor for the current item. This item text is printed on item purchase orders in the Item Purchase module instead of the company's own reference to the same item.
<b>Item Group</b>	This field shows the item group to which the current item has been assigned.
<b>Item Type</b>	This field shows the item type to which the item has been assigned.
<b>Unit</b>	This field shows the unit in which the current item is purchased (for instance pieces, pounds, and so on).
<b>Serial No. Control</b>	This field indicates whether the current item is under serial control, which means that you have entered a serial number in connection with purchases and sales. In this way, an individual item can be trailed from vendor via warehouse to customer. This is referred to as the item's life cycle. The item can only be under inventory control if it is under serial number control also.

**Quantity Island**

Field	Description
<b>Ordered</b>	This field shows the number of purchase units, which have been ordered of the current item.

Field	Description
<b>Currently Received</b>	This field shows the number of items already registered as being received.
<b>Sales/Purchase Unit</b>	This field shows the number of sales units being equivalent to a purchase unit. If for instance you have purchased a case of 12 units from the vendor and you wish to stock and sell these units by the piece, the number 12 will be displayed in this field.
<b>Min. Purchase Unit</b>	This field shows the smallest purchase unit of the item.

### Price Island

Field	Description
<b>Pricing Unit</b>	This field shows a number of the current item included in the unit price of the item.
<b>Unit Price</b>	This field shows the unit price used on the item line in question.
<b>Extended Price</b>	This field shows the current line price as the number of ordered units multiplied by the unit price on the line, divided by the pricing unit and finally deducted a discount amount entered in the field "Discount."
<b>Currency</b>	This field displays the currency used on the order line.

### General Island

Field	Description
<b>Tax Code</b>	This field shows the tax code for the item purchase order line. If multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Duty Code</b>	This field shows the duty code for the item purchase order line if the vendor's country is different from the company's country.
<b>Sales Order No.</b>	If the item purchase order line has been created from a sales order line in one of the windows Sales Orders, Item Purchase Orders or Item Purchase Selection, the number of the assigned sales order will be shown here.

### Item Note Island

Field	Description
<b>Note</b>	If a template note has been assigned to the current line, this field shows the note number and description of the note in question. The note text can be viewed and edited in the window Notes in the Set-Up module.

### Warehouse Island

Field	Description
<b>Warehouse</b>	This field shows the warehouse to which the current item has been assigned.
<b>Stock Location No.</b>	This field shows the stock location specified on the order line.
<b>Inventory Control</b>	This field indicates whether the current item is under inventory control.
<b>Delivery Date</b>	This field shows the requested delivery date of the item.
<b>Expected Delivery Date</b>	This field shows the expected delivery date of the item.
<b>Confirmed Deliv. Date</b>	This field shows the date on which the supplier has confirmed that delivery will take place.
<b>Expected Availability Date</b>	This field shows the date on which the items are expected to be available for sale. For a description of the difference between this field and the field "Confirmed Deliv. Date," see the description of the relevant fields in the table part of the window Item Purchase Orders.
<b>Deliv. Remarks</b>	This field shows the remarks assigned to the delivery date for the item purchase order line.

### Discount Island

Field	Description
<b>Discount %</b>	This field shows any discount percentage entered on the item purchase order line.
<b>Discount</b>	This field shows any discount amount entered on the item purchase order line.
<b>Discount Desc.</b>	This field shows any discount description entered on the item purchase order line.
<b>Quantity Disc.</b>	This field shows the quantity discount amount if a quantity discount has been selected for the item and if the number of ordered units on the item line justifies a quantity discount.

### Note Island

Field	Description
<b>Note</b>	If a note has been assigned to the current line, this field shows the note number and description of the note in question. The note text can be viewed and edited in the window Notes in the Set-Up module.

**Extra Fields Island**

Field	Description
<b>Popup 1-5</b>	These fields show the selected pop-up values for the item purchase order line.
<b>Date 1-5</b>	In these fields, you can enter various dates related to the current item purchase order line.

## Item Purchase Selection Workspace

Use this workspace to create an item purchase selection based on stocking information from the Item Information Card or on non-delivered sales orders.

Use the fields in the Selection Criteria island to select which items, vendors, sales orders, and customers to include in the purchase selection. When you click "OK," Maconomy runs through the selected criteria and creates item purchase orders and item purchase order lines using the information in the Item Purchase Control island. Maconomy creates one item purchase order for every vendor that is included in the item purchase selection. Using the **One Order per Buyer** field, you can split the selection up into one order per combination of vendor and buyer specified on the item information cards (or item groups; see the **Buyer** field) of the included items.

Maconomy automatically specifies the company to which the selected warehouse is assigned as being responsible for the item purchase orders that are created. See "Multiple Companies" in "Introduction to the G/L Module" for more information about the concept of responsible companies and the company specification on warehouses.

When setting the price of the items, Maconomy uses the delivery date on the order line as a reference to the issue of the price list that is valid at the time of delivery.

An item purchase order that you create as part of the item purchase selection can contain a maximum of 100 lines. If more lines are required, Maconomy creates an additional number of item purchase orders with the same vendor.

**Purchase Based on Stock**

When you create an item purchase selection from inventory balances, Maconomy calculates the quantity, using the reorder level and the maximum inventory specified on the Item Information Card and the regulations in percentages from a possible seasonal model in the Seasonal Models workspace to which the current item is assigned. First Maconomy calculates the expected available inventory at the delivery horizon, that is, the current date plus the delivery time. If you use the Inventory Profile for the current item and inventory, Maconomy calculates the available stock from the current inventory plus the entered receipts, less the entered shipments in the period up to the horizon date. Otherwise, Maconomy calculates the available stock as the current stock plus existing item purchase order volume, less sales order and backorder volumes. By using an Inventory Profile, you avoid purchasing items for sales orders that are to be delivered later than the item's delivery horizon.

If the calculated future stock is less than or equal to the reorder level of the item, Maconomy suggests a purchase that brings the stock level up to the maximum level of the item. For items that you assigned to a seasonal model for the warehouse to which items are bought, Maconomy regulates the reorder level and the maximum inventory with the percentages that you specified on the line in the seasonal model that is valid on the day on which the item is to be delivered at the

earliest, that is, today's date plus the item's delivery time. If the reorder level for an item is 8 pieces, and the item stock on hand is 10 pieces, Maconomy does not create an item purchase order line for the item in the current warehouse. However, if the item in the current warehouse is assigned to a seasonal model in which it is specified that the reorder level is to be regulated with 50% in the current period, Maconomy regulates the reorder level to 12 pieces so that the item stock is smaller than the reorder level. This regulation then results in the creation of an item purchase order line for the item.

If you specify the recommended purchase quantity in the Item Information Card workspace as being larger than 0 in the **Recommended Purchase Quantity** field, one of the following situations occurs when you create an item purchase selection:

- If you need a larger quantity of items than the one specified as the recommended purchase quantity, Maconomy suggests a whole number multiplied by the recommended purchase quantity. Maconomy never suggests a purchase quantity that exceeds the one allowed by the maximum stock level.

Example:

- Maximum stock level = 34
- Available quantity = 10
- Difference between maximum and avail. = 24
- Recommended purchase quantity = 5

Because Maconomy suggests a whole number multiplied by the recommended purchase quantity, you can order 4 times 5, that is, 20 items, and still be within the maximum stock level of the item. If you ordered 5 times 5 items, the maximum level would be exceeded.

- If the difference between the maximum stock and the available quantity is smaller than the recommended purchase quantity, Maconomy still suggests the same purchase quantity, even though the maximum stock level is exceeded. If you want to change that, you must manually specify another recommended quantity in the Item Purchase Orders workspace for each item involved.

If one of the vendors that is affected by the item purchase selection is blocked, or if you do not have access to the vendor, Maconomy does not create any item purchase orders. You can remove the blocking of a vendor by deselecting the **Blocked** field on the information card of the vendor in question.

### Purchase Based on Sales Orders

When you create an item purchase selection from sales orders, you can either enter the purchase quantity manually in the Sales Order to Item Purchase Orders workspace, or Maconomy can add it automatically to the backorder quantity or the as-yet-undelivered quantity. In the Sales Order to Item Purchase Orders workspace you can also specify precisely which order lines are to be selected for purchasing, as well as which vendors you are buying the items from. You can also create item purchase orders directly from this workspace, but then you can only create an item purchase order for one sales order at a time, which means that you cannot create joint item purchase orders for items in different sales orders.

Maconomy converts the suggested purchases from sales units, which are used to calculate inventories, to purchase units. Maconomy does this using the **Sales/Purchase Unit** conversion factor in the Item Information Card. If this results in a quantity that is lower than the minimum

purchase unit of the item in question, Maconomy sets the quantity to zero on the resulting purchase order line.

In practice, an item purchase selection consists of a number of item purchase orders. Maconomy creates one item purchase order for every vendor in the selection. You can edit the item purchase orders in the Item Purchase Orders workspace, where you can add and delete item lines.

If one of the vendors affected by the item purchase selection is blocked, if you do not have access to the vendor, or if you do not have access to every sales order for which item purchase orders are being created, Maconomy does not create any item purchase orders. You can remove the blocking of a vendor by deselecting the **Blocked** field on the information card of the vendor in question.

## Item Purchase Selection Tab

This section includes the fields and descriptions for the Item Purchase Selection tab.

### Selection Criteria Island

Field	Description
<b>Warehouse</b>	Here, you can select a warehouse for which you are purchasing items. If you select a warehouse, Maconomy only verifies items assigned to this warehouse in the window Item Information Card in the Inventory module. The company to which the warehouse is assigned will automatically be responsible for the item purchase orders created as a result of the item purchase selection. See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" for a detailed description of the concept of the company specification on warehouses.
<b>Vendor</b>	Here you enter a range of vendor numbers. Maconomy only verifies items from vendors within this range.
<b>Buyer</b>	<p>This field is only used when creating an item purchase selection from stock. Here you can enter a range of buyers. The item purchase selection will only include items assigned to buyers within the specified range.</p> <p>Buyers can be assigned to items in three places:</p> <ul style="list-style-type: none"> <li>■ In the table part of the window Item Information Card, thus indicating a warehouse specific buyer of the item in question.</li> <li>■ In the card part of the window Item Information Card, indicating an item specific buyer.</li> <li>■ In the window Item Group Information Card, indicating a group specific buyer.</li> </ul> <p>It is possible to assign buyers in both the card and table parts of the same item, as well as on the item group to which the item is assigned.</p> <p>When determining whether to include a given item in the item purchase selection, Maconomy uses the following procedure, thus prioritizing the individual places in which a buyer can be specified:</p>

Field	Description
	<ol style="list-style-type: none"> <li>1. If the item information card of the item contains a line for the warehouse selected in the field "Warehouse" above, and a buyer has been specified on that line, the item is included if the buyer is within the specified range, and Maconomy skips the remaining steps in the procedure. If a buyer has been specified for the warehouse in question but the buyer is not within the specified range, the item is not included, and Maconomy skips the remaining steps in the procedure. If the item information card does not contain a line for the warehouse or if the field "Buyer" is blank for the warehouse line in question, Maconomy proceeds to step 2.</li> <li>2. If a buyer has been specified in the card part of the item information card of the item, the item is included if the buyer is within the specified range, and Maconomy skips the remaining steps in this procedure. If a buyer has been specified but the buyer is not within the specified range, the item is not included, and Maconomy skips the remaining steps in the procedure. If no buyer has been specified in the card part of the item information card, Maconomy proceeds to step 3.</li> <li>3. If a buyer has been specified for the item group to which the item is assigned, the item is included if the buyer is within the specified range, and Maconomy skips the remaining steps in the procedure. If a buyer has been specified but the buyer is not within the specified range, the item is not included. If no buyer has been specified in the item group, Maconomy proceeds to step 4.</li> <li>4. If no buyer has been found in any of the previous steps, the item is not included in the item purchase selection.</li> </ol> <p>Please note that if you do not specify a range of buyers, Maconomy disregards buyer information when determining whether to include an item in the item purchase selection. This means that a blank range of buyers does not mean that Maconomy will only include items to which no buyer is assigned. Instead, the selection will include all items matching the remaining selection criteria entered in the window.</p>
<b>One Order per Buyer</b>	By default, the purchase selection will be split up into one order per vendor to supply the items included in the selection. However, by marking this field, you can specify that the purchase selection should be split up into one order per combination of supplier and buyer assigned to the items included in the selection criteria. For further information about Maconomy's method for finding the buyer assigned to a given item, see the description of the field "Buyer" above.
<b>Item Group</b>	Here you can select an item group. Maconomy only verifies items assigned to this group in the Item Information Card window.
<b>Item Type</b>	Here you can select an item type. Maconomy only verifies item numbers assigned to this type in the Item Information Card window.

Field	Description
<b>Item No.</b>	<p>Here you can specify a range of item numbers. Maconomy only verifies items within this range.</p> <p>If you do not enter a range, the other selection criteria fields will determine which item numbers will be included in the item purchase selection.</p>
<b>Item Statistics 1-4</b>	In these fields, you can specify ranges for the statistics fields on the item information card. The item purchase selection will only include items whose values in the four statistics fields are within the specified range.
<b>Order No.</b>	<p>Here you can enter a range of order numbers. It is only possible if you have chosen "From Sales Orders" in the "Create Item Purchase Selection" field. If you enter a range, Maconomy will only create item purchase orders from the sales orders in the range.</p>
<b>Created on</b>	<p>Here you can enter an interval of dates. Maconomy automatically enters the current date, but you can change it. If you enter an interval, and if you have chosen "From Sales Orders" in the "Create Item Purchase Selection" field, Maconomy will only create item purchase orders for the sales orders which are created in the given period. The field cannot be used if you have chosen "From Stock."</p>
<b>Packing Date</b>	<p>In this field, you can specify a range of packing dates. The field can only be used if you select "From Sales Orders" in the "Create Item Purchase Selection" field. If you enter a range, Maconomy will create item purchase orders for the sales orders assigned to consignments whose packing dates are within the specified range. Furthermore, purchase orders will be created from orders that are not assigned to a consignment.</p>
<b>Consignment Date</b>	<p>Here you can enter a range of consignment dates. Maconomy will only create item purchase orders assigned to consignments with a consignment date within the specified range.</p>
<b>Customer No.</b>	<p>Here you can enter a range of customer numbers. It can only be used if you have chosen "From Sales Orders" in the "Create Item Purchase Selection" field. If you enter a range, Maconomy will only create item purchase orders for sales orders whose ship-to customers are in the range.</p>
<b>Department</b>	<p>Here you can select a department. The field can only be used if you select "From Sales Orders" in the "Create Item Purchase Selection" field. If you select a department, Maconomy will only create item purchase orders for sales orders assigned to that department.</p>

#### Item Purchase Control Island

Field	Description
<b>Create Item Purchase Selection</b>	<p>Here you choose whether to base the item purchase selection on inventory balances or non-delivered sales order lines.</p> <p>If you select "From Stock," Maconomy verifies the items which meet the selection criteria specifications, and creates purchase lines for items whose</p>

Field	Description
	<p>expected inventories will be on or under the reorder level at the delivery horizon.</p> <p>If you select "From Sales Orders," Maconomy verifies the sales orders in the selection criteria and creates purchase lines for the order lines for which there is a quantity in the "Purchase" field. The quantity can also be set automatically by marking the "Purchase All" or "Purchase Remainder" fields.</p>
<b>Auto. Approval</b>	<p>Here you choose whether to automatically approve the item purchase orders. If you mark the field, the item purchase orders will be approved in the same way as if you for each item purchase order selected "Approve Item Purchase Order" in the Item Purchase Orders window. When item purchase orders are approved, the items are registered as having been ordered, that is, the value in the "Item Purchase Orders" field is updated in the Item Information Card and Item Information windows.</p>
<b>Item Purchase, Total</b>	<p>If you mark this field, Maconomy will automatically suggest you purchase items that have not yet been delivered in the sales orders that meet the selection criteria. The quantity will only be set for order lines for which there is a vendor in the "Vendor No." field in the window Sales Order to Item Purchase Orders. The field can only be used if you have chosen "From Sales Orders" in the "Create Item Purchase Selection" field.</p>
<b>Item Purchase, Remainder</b>	<p>If you mark this field, Maconomy will automatically suggest you purchase items which are in backorder on the sales orders which meet the selection criteria specifications. The quantity will only be set for order lines for which there is a vendor in the "Vendor No." field in the window Sales Order to Item Purchase Orders. The field can only be used if you have chosen "From Sales Orders" in the "Create Item Purchase Selection" field.</p>
<b>Include Expected Raw Material Requirement</b>	<p>In this field, you can specify whether the item purchase selection is to consider raw material requirements in planned productions. When determining the quantity of items to purchase, Maconomy assumes that items with production control are produced by the company itself. Thus, if the stock of raw materials is insufficient compared to the size of planned productions, Maconomy will create item purchase orders for the raw materials. The expected raw material requirements are calculated from the number of orders registered, productions, current stock, and existing item purchase orders. If the finished item has inventory profile, the raw material requirement analysis is limited to the delivery time of the raw material in question. Thus, sales orders, item purchase orders, and productions beyond the time limit are ignored.</p> <p>For example, a company using a certain type of screw in the production of office furniture may need to analyze the need for screws in all sales orders for BOM items, that is, tables, chairs, and so on, to get a full perspective of the raw material requirements. In other words, the raw material requirement for screws is determined by the need for screws on the lowest production level of the finished item.</p>

Field	Description
	<p>Considering the number of registered sales orders, production transactions, and item purchase orders for a given raw material, the requirement analysis can thus show whether the available stock is smaller than required for a given production, and you will be warned of the need for producing more units of the raw material in question.</p> <p>An item is only included in the raw material requirement analysis if it has purchase control and is registered on the BOM of an item with inventory control.</p>
<b>Drop Shipment</b>	<p>If you mark this field, the item purchase orders will be delivered directly from the vendor to the bill-to customer in the sales order. Marking this field has the same effect as marking the "Direct Deliv." field on all of the item lines in the window Sales Order to Item Purchase Orders. It can only be used if you have selected "From Sales Orders" in the "Create Item Purchase Selection" field.</p> <p>Even if you do not mark the field, it is still possible to make item purchase orders to be drop shipped. This is done by manually marking the "Direct Deliv." field on the item lines in the window Sales Order to Item Purchase Orders.</p>
<b>Include Orders with Consignments</b>	<p>This field is only relevant if you have marked the field "Drop Shipment." If you mark the field "Drop Shipment," orders with consignments are only taken into consideration in the item purchase selection if you mark this field. On the sales orders in question, the fields "Consignment No." and "Blanket Order" are automatically blanked, and the orders are marked for partial delivery.</p>
<b>Incl. non-inventoried</b>	<p>If you mark this field, Maconomy will make purchase lines for items both with and without inventory control. If you do not mark the field, Maconomy will only create purchase lines for items with inventory control. The field can only be used if you have selected "From Sales Orders" in the "Create Item Purchase Selection" field.</p>
<b>Reorder Factor</b>	<p>In this field, you can enter a factor to be used for regulation of the reorder level for the items on the item purchase selection. When Maconomy determines whether or not to purchase an item, it uses the reorder level from the Item Information Card. If you wish to adjust your stock of an item temporarily, you can enter a reorder factor here, which Maconomy then multiplies with the reorder level when making the item purchase selection. Note that if a regulation of the reorder level for an item is made on the basis of a seasonal model, the reorder factor is multiplied with the regulated reorder level and not on the basis of the reorder level stated on the item's information card. The field can only be used if you select "From Stock" in the "Create Item Purchase Selection" field.</p>
<b>Pref. Delivery Date</b>	<p>Here you must specify an interval of preferred delivery dates. Maconomy prints item purchase orders with preferred delivery dates (from the card part of the Item purchase orders window) within this interval.</p>

## Actions

This section shows the Actions available in the Item Purchase Selection workspace.

### Top Tab

Field	Description
OK	When you click "OK," Maconomy runs through the selected criteria and creates item purchase orders and item purchase order lines using the information in the "Item Purchase Control" island. Maconomy creates one item purchase order for every vendor included in the item purchase selection. Using the field "One Order per Buyer," you can split the selection up into one order per combination of vendor and buyer specified on the item information cards (or item groups; see the field "Buyer") of the items included.

## Sales Order to Item Purchase Orders Workspace

Use this workspace to automatically create one or more item purchase orders from a sales order. You assign each item line in the item purchase orders to only one of the sales order's item lines. This workspace enables you to browse through all of the sales orders, but you can only create item purchase orders from a sales order if it is approved and not yet fully delivered.

You can enter a vendor number on each item line, after which you can create an item purchase order for each separate vendor.

From the Item Purchase Selection workspace you can also create item purchase orders from several sales orders in one operation. This feature also enables you to create one item purchase order for each vendor from the chosen sales order item lines. This means that you can take lines from different sales orders and put them in the same item purchase order. However, Maconomy always creates a separate item purchase order line for each sales order line.

When you receive the items from an item purchase order that you create in this workspace, Maconomy automatically transfers serial numbers that have serial number control to the Serial Number Entry workspace in the Sales Orders module, shown for the relevant sales order. Maconomy selects any backorder items for packing so that you can print a packing slip for the sales orders.

You can specify on each line whether the items are to be drop shipped, so that the vendor sends the items directly to your customer. The delivery address on the item purchase order is therefore that of the customer, instead of your inventory. Maconomy creates a separate item purchase order for lines to the same vendor to the same customer.

You can edit and approve the item purchase order for further processing in the Item Purchase Orders workspace.

Orders that you create in the subscription module cannot be displayed in this workspace.

## Sales Order to Item Purchase Orders Tab

This section includes the fields and descriptions for the Sales Order to Item Purchase Orders tab.

## Sales Orders Island

Field	Description
<b>Order No.</b>	This is the number of the sales order on which the item purchase orders will be based. You can use the search functions in the Find menu to find the right sales order.
<b>Warehouse</b>	This is the warehouse the items in the sales order are to be delivered from.
<b>Department</b>	This is the department the sales order is assigned to. In the Item Purchase Selection window you can choose to include sales orders from a specific department and/or warehouse.
<b>Approved</b>	This field shows whether or not the sales order is approved. A sales order must be approved using the action "Approve Order" in the Sales Orders window before you can create item purchase orders from its item lines.
<b>Delivered</b>	This field shows whether all or any items from the sales order have already been delivered. It shows "No," "Partly," or "Yes." You can only create item purchase orders if it is not yet fully delivered.

## Customer Island

Field	Description
<b>Customer</b>	These fields display the name and number of the ship-to customer in the sales order. They will appear on any item purchase orders to be drop shipped. The other lines in These fields show the address of the customer in the sales order. It is printed on delivery notes and invoices for the sales order, as well as on any item purchase orders to be drop shipped. The text can be changed here, but the changes only have effect in the sales order and the item purchase orders shown and created here.
<b>Attn.</b>	This field displays the customer's attention person.
<b>Phone</b>	This field displays the customer's telephone number.

## Item Purchase Island

Field	Description
<b>Auto. Approval</b>	In this field, you can specify whether the item purchase orders should be approved automatically. If you mark this field, the item purchase orders will be approved in the same way as if you for each item purchase order chose the action "Approve Item Purchase Order" in the Item purchase orders

Field	Description
	window. When item purchase orders are approved, the items are registered as being ordered, that is, the value in the “Item Purchase Orders” field is updated in the windows Item Information Card and Item Information in the Inventory module.
<b>Incl. non-inventoried</b>	If you mark this field, you will include items without inventory control in the item purchase order.
<b>Item Purchase Order Sum</b>	This field displays the order sum of the assigned item purchase order lines. The amount is displayed in the base currency of the company responsible for the sales order.
<b>Base Currency</b>	This field shows the base currency of the company responsible for the current sales order. For further information about the concepts of enterprise currency and base currencies, see the description of the field “Base Currency” in the window Company Information in the G/L module.
<b>Last Receipt</b>	This field displays the date of the last item receipt for the item purchase orders in the window. The date is updated when you choose “Approve Receipt” in the Item Receipt window.
<b>Last Delivery</b>	This field displays the date of the last delivery for the order.

#### Joint Item Purchase Order Island

Field	Description
<b>Vendor</b>	In this field, you can enter the number of a vendor to be used for all the item lines in the sales order. It is used if you want to match sales orders and item purchase orders one-to-one. If you enter a value, the action “Create Item Purchase Orders” will create one item purchase order with the same item lines as in the sales order. You can only use it if you have not already created item purchase orders for any of the item lines in the sales order. When you press Return, the vendor number is copied to all the item lines.
<b>Drop Shipment</b>	You can mark this field if you wish your vendor to deliver the items directly to your ship-to customer. You can only change the field if you have not already created item purchase orders for any of the item lines in the sales order.
<b>Incl. Text Lines</b>	You can mark this field if you wish to include any text lines from the sales order.
<b>Item Purchase Order No.</b>	This field displays the number given to the item purchase order by Maconomy after you select “Create Item Purchase Order” in the Action menu. It cannot be changed.

#### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

## Company Island

Field	Description
<b>Company</b>	This field displays the name and number of the company responsible for the current sales order. The company in this field will also be responsible for the item purchase orders created from the sales order. See the section "Several Companies" in the chapter "Introduction to the G/L Module" for a further description of the concept of responsible companies.

## Order Lines Sub-Tab

This section includes the fields and descriptions for the Order Lines sub-tab.

Field	Description
<b>Item No.</b>	This is the line's item number. All the sales orders item lines are shown, but Maconomy does not create item purchase orders for BOMs which are being shown in full on the sales orders.
<b>Quantity</b>	This is the quantity of units entered in the Sales Orders window. It cannot be changed here.
<b>Unit</b>	This is the unit the item is sold in.
<b>Balance</b>	<p>This is the backorder quantity of the item line. It cannot be changed here. When you choose the action "Purchase Back Orders," Maconomy copies this quantity to the "Item Purchase Orders" field, where it is rounded down to a whole number of the item's minimum purchase units.</p> <p>If your company uses the "By Reservation" backorder principle, the quantity shown here will be the same as the quantity which was not available when the sales order was registered.</p>
<b>Delivered</b>	This is the quantity already delivered to the customer from the item line. It cannot be changed here. When you choose "Purchase All" in the Action menu, Maconomy copies the undelivered quantity – that is, the difference between the "Quantity" and "Delivered" fields – to the "Item Purchase Orders" field, where it is rounded down to the nearest whole quantity of the item's minimum purchase unit.
<b>Description</b>	<p>This is the item description.</p> <p>The "Quantity," "Unit," and "Description" fields can always be changed in the Sales Orders window.</p>
<b>Item Purchase</b>	<p>Here you enter how many units to purchase. The actions "Purchase All" and "Purchase Back Orders" determine the value here, but you can change it manually.</p> <p>When you choose "Create Item Purchase Orders," Maconomy creates item purchase order lines for the item lines with a positive quantity in this field. The quantity is given in sales units, but the system verifies that it can be divided by</p>

Field	Description
	<p>the minimum purchase unit. Maconomy gives a warning if the quantity exceeds the as yet undelivered quantity.</p> <p>You can only enter a quantity if the “Vendor” field is completed. After having created a purchase line for the sales order line, you cannot change the quantity.</p>
<b>Currently Received</b>	<p>This is the quantity already received on the purchase line. It is updated when you choose “Approve Receipt” in the Item Receipt window. This also updates the “Last Receipt” field in the card part of the window.</p> <p>In the “Order Lines” window in the Sales Orders module you can search for the lines for which you have received items.</p>
<b>Drop Ship</b>	<p>You can mark this field to show that the items in the item purchase order must be delivered directly from the vendor to the customer. If this field is marked, Maconomy uses the delivery address for the sales order when printing the item purchase order. After having created a purchase line, you cannot change the field.</p> <p>For order lines to be drop shipped, the “For Packing” field is reset, so that they will not be included in any packing lists and packing slips.</p>
<b>Vendor</b>	<p>Here, you can enter the number of the vendor who is delivering the items. For items with inventory control, Maconomy completes the field automatically when the line is created. The item is suggested purchased from the vendor who is registered on the information card of the item. The action “Create Item Purchase Orders” only includes lines with a vendor that has not been blocked. After creating a purchase line, you cannot change the field.</p>
<b>Vendor Name</b>	<p>This is the name of the vendor shown in the “Vendor No.” field.</p>
<b>Remarks</b>	<p>In this field, you can make notes related to the delivery.</p>
<b>Item Purchase Order No.</b>	<p>This is the number of the item purchase order. It can only be manually changed to zero, whereby the association between the sales order line and the item purchase order line is broken. This means, for example, that items received from the item purchase order will not affect the sales order.</p>
<b>Transfer Cost</b>	<p>In this field, you can specify that you wish to transfer the cost and the description from the sales order line on which the item purchase order line is based. The description from the sales order line will be shown in the field “Description.”</p>
<b>Cost</b>	<p>If you have marked the field “Transfer Cost,” the cost from the sales order will be copied to this field and replace the regular calculation of the purchase price, which is based on the item’s price and possibly a purchase price list.</p>

## Print Item Purchase Order Workspace

Use this workspace to print open item purchase orders in batches.

If you create many item purchase orders in a day or in a certain period, you can save time by printing them from this workspace in one operation. You define selection criteria by specifying a range of item purchase order numbers and/or an interval of delivery dates. You can only print an item purchase order if it is approved and not yet closed. In the Item Purchase Orders workspace, you can print item purchase orders individually after you create them.

### Print Item Purchase Order Tab

This section includes the fields and descriptions for the Print Item Purchase Order tab.

#### Selection Criteria Island

Field	Description
<b>Item Purchase Order No.</b>	Here you can specify a range of item purchase order numbers. Maconomy prints item purchase orders numbered within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Company No.</b>	In this field, you can specify a range of company numbers. The printout will only include item purchase orders on which the responsible company is within the specified range.
<b>Pref. Delivery Date</b>	Here you must specify an interval of preferred delivery dates. Maconomy prints item purchase orders with preferred delivery dates (from the card part of the Item purchase orders window) within this interval.
<b>Vendor</b>	Here you enter a range of vendor numbers. Maconomy will only print item purchase orders to vendors within the range. You can leave the field blank, in which case vendor number will not have influence on the selection criteria.
<b>Department</b>	Here you can select a department. Maconomy will only print item purchase orders from this department. If you leave the pop-up field blank, department will not influence the selection criteria. The pop-up field shows the departments created in the window Posting References in the G/L module.
<b>Language</b>	Here you can select a language code. The printout will only include item purchase orders with this language code. If you leave the pop-up field blank, language will not influence the selection criteria. The pop-up field shows the languages created in the Popup Fields window in the Set-Up module. If you have created different language layouts, you can select language code here and the particular layout in the Print Control island.
<b>Include Non-Approved</b>	In this field, you can specify if non-approved item purchase orders are to be included on the printout. If you do not mark this field, only approved item purchase orders are included on the printout.

Field	Description
<b>Include Orders with No Preferred Del. Date</b>	If you mark this field, the printout will include orders on which no preferred delivery date has been specified. If you do not mark the field, only orders for which a preferred delivery date has been specified are included.

**Print Control Island**

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, "Standard" is the only option.

**Receipt Section**

This section includes the fields and descriptions for the Receipt Section workspaces.

**Item Receipt Workspace**

Use this workspace to enter item receipts from item purchase orders that you create in the Item Purchase Orders workspace.

The Item Receipt tab displays general and account information about the item purchase order. The Item Purchase Lines sub-tab displays the items that have been ordered. You must approve an item purchase order in the Item Purchase Orders workspace before you can enter the item receipt here.

To record an item receipt, you first retrieve the relevant item purchase order in the Item Purchase Order tab in this workspace. If you cannot remember the number of an item purchase order, you can use the search functions in the Find menu to locate it. Next, specify how many items you have received for each item line. You cannot change any prices here; you set prices in the Item Purchase Orders workspace.

If the item purchase order has items that have serial number control, you must enter these serial numbers in the Serial Number Entry workspace before you can approve the item receipt. If you select the **Extended Serial Number Control** system parameter, Maconomy automatically creates serial number receipt lines for items with a standard serial number for purchase to the current warehouse.

When you create an item purchase order, the automatically created serial number receipt lines already exist; Maconomy automatically updates them with the ordered and received numbers if you do not manually create additional serial number receipt lines for the current item purchase order line, and if the numbers on the automatically created serial number line correspond to the numbers that have been ordered and received in the Item Purchase Orders and Item Receipt workspaces.

Thus, you do not need to manually enter the receipt of serial numbers for items that have a standard serial number for purchase. You specify the standard serial number for purchase of an item in the Item Information Card workspace.

If the item purchase order is linked to a sales order, Maconomy automatically copies the serial numbers to the sales order when you approve the item receipt. Any items that are on backorder are reserved for packing so that you are ready to print a packing slip.

If you select the **Warning of Receipt without Price** system parameter, Maconomy warns you if the price is missing on either of the item purchase order lines on which the current item receipt is based. Thus you can avoid the problem of stocking items with a cost of 0. If a cost of 0 has been specified, you can go back to the item purchase order and correct the cost in accordance with the packing slip or vendor invoice received along with the items.

When you approve a receipt, automatic backorder allocation only happens if you selected the **Automatic Back Order Receipt** field in the System Information workspace, and you use the backorder method **By Reservation**. Backorder allocation happens upon item receipt. Maconomy sets the quantity for packing on order and BOM lines at the number of items on backorder, and the new items thus do not count as available stock.

If you change the price, item description, unit, or quantity on a purchase line that is created from a sales order in the Sales Order to Item Purchase Orders workspace, these changes also affect the sales order in question when you approve the item receipt. However, the sales order is only affected if the item has sales price costing and you selected the **Transfer Cost** field in the Sales Order to Item Purchase Orders workspace. You define sales price costing for an item group in the Item Group Information Card workspace in the Inventory module.

You can enter item receipts that are not related to any item purchase order in the Inventory Change workspace in the Inventory module.

## Item Receipt Tab

This section includes the fields and descriptions for the Item Receipt tab.

### Item Purchase Order Island

Field	Description
<b>Order No.</b>	This is the number of the item purchase order. If you cannot remember the number of an item purchase order, you can use the search functions in the Find menu. The value cannot be changed here.
<b>Our Ref.</b>	This is the text from the item purchase order. It could be the name of the person who created the item purchase order. You can change it here.
<b>Buyer</b>	This is the buyer specified in the item purchase order. The name cannot be changed here.
<b>Handled by</b>	This is the name of the person who received the items or entered the item receipt. Maconomy suggests the name of the user. You must enter a name.

### Dispatching Address Island

Field	Description
<b>Vendor</b>	These fields display the name and number of the vendor delivering the items in the item purchase order. The value cannot be changed.

Field	Description
	The other lines in this field show the vendor's name and address. The text cannot be changed here.
<b>Attn.</b>	This is the vendor's attention person the person to whom shipping information is directed. The name cannot be changed here.
<b>Country</b>	This is the country the vendor is from. It cannot be changed here.

### Company Island

Field	Description
<b>Company</b>	These fields show the name and number of the company responsible for the item purchase order. If the warehouse on the item purchase order is assigned to another company than the one shown in these fields, Maconomy will automatically create intercompany balances at the posting of the item journal created as a result of the item receipt. In the intercompany balancing, the company in these fields will be the responsible company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company. See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" and the window Intercompany Accounts in the G/L module for a further description of the concept of responsible companies and intercompany balances.

### Receipt Island

Field	Description
<b>Date Received</b>	In this field, you can enter a date provided that you want the received items to be registered under a different date than today's date. At the creation of the item receipt, Maconomy suggests today's date and the field can then be adjusted to an earlier but not a future date. The field can only be adjusted if you have selected "Allow Back Dating" in the window System Information. For rules regarding back dating, see the description of the mentioned check box. The date is validated against the G/L open posting period of the company mentioned in the Company island and the Item journal's default transaction type.

### Extra Fields Island

Field	Description
<b>Popup 1-5</b>	In these fields, you can enter various information about the item purchase order and the current vendor. Maconomy suggests the values selected in the corresponding fields on the Vendor Information Card, but you can change the values for the current item purchase order in this window. The options are created in the window Popup Fields the Set-Up module.

**Vendor's Order Island**

Field	Description
<b>Order No.</b>	This is the number of the vendor's sales order. It is retrieved from the Item purchase orders window. You can change it.
<b>Packing Slip No.</b>	Here you enter the number of the delivery note which accompanied the item delivery. You must enter a value for reference. The delivery note number is printed on the item transaction created when you select the action "Approve Receipt."
<b>Your Reference</b>	This is the reference entered in the Item purchase orders window, when the order was created, for example, the name of the person the purchaser spoke to about the order. You can change it.
<b>Our Cust. No.</b>	This is your customer number with the vendor. It is retrieved from the item purchase order. You can change it.

**Delivery Island**

Field	Description
<b>Warehouse</b>	<p>This is the warehouse to which the items are shipped. The warehouse is specified in the item purchase order.</p> <p>You can only order items for one warehouse in one item purchase order. If you wish to buy items for several warehouses from this vendor, you can direct them to the main warehouse and transfer them to your other warehouses after delivery. You do this in the Inventory Change window.</p> <p>If you select a warehouse assigned to another company than the one shown in the field "Company No." in the island Company, Maconomy will automatically create intercompany balances when you post the item journal created as a result of the item receipt. In the intercompany balances, the company to which the warehouse is assigned will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company. See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" and the window Intercompany Accounts in the G/L module for a further description of the company specification on warehouses and intercompany balances.</p>
<b>Stock Location No.</b>	<p>In this field, you can specify the location in the current warehouse at which the items are received. This location will apply to those lines in the table part where the warehouse location field is left blank. If a warehouse location is specified on a given line, it overrules any location specified in this field. Maconomy suggests the receiving location specified on the item purchase order, but you can specify another location.</p> <p>The receipt of the items cannot be approved until you have either entered a location in the card part or on the individual item lines.</p>

Field	Description
<b>Delivery Mode</b>	This is the delivery mode specified in the item purchase order. You can change it.
<b>Delivery Terms</b>	These are the delivery terms specified in the item purchase order. You can change the value.
<b>Bill of Lading</b>	Here you can enter a text or number, for example, the bill of lading number, to later identify the delivery. Delivery information is normally given in the Item Receipt window. If this text or number is changed in the Item Receipt window, it is copied to this window next time the window is opened, but it can be changed.

**Price Island**

Field	Description
<b>Currency</b>	This is the currency of the item purchase order.
<b>Goods</b>	This is the price total of the item lines in the item purchase order. The value cannot be changed manually.
<b>Invoice Discount %</b>	This is the invoice discount percentage specified in the item purchase order. The value cannot be changed here. Any invoice discount is deducted from the prices for the individual item lines, before the items are placed in the warehouse. This ensures that costs are correct.
<b>Invoice Discount</b>	This is the invoice discount amount specified in the item purchase order. The value cannot be changed here. Any invoice discount is deducted from prices for the individual item lines, before the items are placed in the warehouse. This ensures that costs are correct.
<b>Expense %</b>	This is the expense percentage specified in the item purchase order. The value cannot be changed here. Any expenses are apportioned to individual item lines before the items are placed in the warehouse. This ensures costs are correct.
<b>Expenses</b>	This is the expense amount specified in the item purchase order. The value cannot be changed here. Any costs are apportioned to the individual items when item deliveries are registered, before the items are placed in the warehouse. If you receive several deliveries for the same item purchase order, the costs will be apportioned each time.

**Document Archive Island**

Field	Description
<b>Document Archive</b>	In these fields, you can assign a document archive to the item purchase order. By assigning a document archive to an item purchase order, you can keep track of the various documents related to the order. Document archives are created in the window Document Archives in the Set-Up module. See the description of that window for further information on the use of document archives.
<b>Document Count</b>	This field displays the number of documents in the Document Archive.

## Item Purchase Lines Sub-Tab

This section includes the fields and descriptions for the Item Purchase Lines sub-tab.

Field	Description
<b>Item No.</b>	This is the number of the item ordered in the item purchase order. The value cannot be changed here.
<b>Vendor Item No.</b>	This is the vendor's item number from the item purchase order. The number probably also appears on the vendor's delivery note and invoice for which you are entering the item receipt. Maconomy suggests the value from the corresponding field on the item purchase order, but the value can be changed here.
<b>Ordered</b>	This is the quantity ordered in the item purchase order. The value cannot be changed here.
<b>Balance</b>	<p>This field shows how many of the items ordered have not yet been delivered. Maconomy updates the balance when you select the action "Approve Receipt" after entering item receipt.</p> <p>When you close the item purchase order (with the action "Close Item Purchase Order" in the Item purchase orders window), Maconomy clears any balance occurring here, and resets the value in the "Purchase" field in the Item Information Card and Item Information windows in the Inventory module. This only applies to orders which have been approved.</p>
<b>Currently Received</b>	<p>Here you can specify how many item units in the item line you have received from the vendor.</p> <p>If you receive all, or almost all, of the items in an item purchase order, you can use the action "Receive All." Maconomy then inserts the value from the "Balance" field in this field in all the item lines. You can then adjust the values, if not all the items were delivered. If the item has serial number control, you must enter the serial numbers in the window Serial Number Entry before approving the receipt.</p>

Field	Description
<b>Unit</b>	In this field, you can enter the unit in which the current item is purchased. Maconomy suggests the value from the corresponding field on the item purchase order, but you can change the value here.
<b>Stock Location No.</b>	In this field, you can specify the location in the selected warehouse at which the items on the current line are received. If you leave this field blank, the location number specified in the card part of the window will apply to the line. The receipt of the items cannot be approved until you have either entered a location in the card part or on the individual item lines.
<b>Description</b>	In this field, you can enter an item description for the item on the current item line. Maconomy suggests the value from the corresponding field on the item purchase order, but you can change the value here.
<b>Vendor Item Desc.</b>	In this field, you can enter the vendor's item text from the item purchase order. The text probably also appears on the delivery note and invoice for which you are entering the item receipt. Maconomy suggests the value from the corresponding field on the item purchase order, but you can change the value here.
<b>Remarks</b>	In this field, you can enter a note related to the current line. Maconomy suggests the value from the corresponding field on the associated item purchase order, but you can change the note here.
<b>Internal Desc.</b>	In this field, you can enter an internal description related to the item entered on the Item Information Card in the Inventory module. Maconomy suggests the value from the corresponding field on the item purchase order, but you can change the value here.
<b>Note No.</b>	In this field, you can specify the number of a note to be assigned to the current line for further specification. Notes are created and edited in the window Notes in the Set-Up module.
<b>Note Description</b>	This field shows a description of the note specified in the field "Note No." above.
<b>Popup 1-5</b>	In these fields, you can enter various information about the item. Maconomy suggests the values entered in the corresponding fields on the assigned item purchase order, but you can change the values here.
<b>Deliv. Date</b>	This is the preferred delivery date specified on the item line on the item purchase order. The date cannot be changed here. Maconomy automatically inserts the date from the field "Date Received."
<b>Pricing Unit</b>	This field shows how many units of the item are included in the unit price. The value is determined in the Item Information Card and cannot be changed here.
<b>Unit Price</b>	This is the unit price specified in the item purchase order. The price cannot be changed while entering item receipt.

Field	Description
<b>Extended Price</b>	This is the extended price calculated by multiplying the quantity ordered by the unit price and dividing this sum by the pricing unit. The extended price is included in the "Goods" field in the Price island in the card part of the window. The value cannot be changed manually.
<b>Duty Code</b>	In this field, you can enter a code for the duty to be calculated if the vendor's country is different from the company's country. The duty code is transferred from the Item Information Card in connection with the creation of an item purchase order and can be changed in this field.

## Serial Number Receipt Workspace

Use this workspace with the Item Receipt workspace to enter articles that have serial numbers.

The Serial Number Receipt tab displays information about the item receipt, and the Serial Numbers sub-tab contains the serial numbers.

You can enter the serial numbers directly in this workspace, or you can import them in the Import Serial Numbers workspace in the Inventory module. When you import serial numbers, Maconomy automatically updates the **Received** field for item lines for which you are importing serial numbers. Serial number entry in this workspace is mandatory for items that have the serial number control type **Full Serial No. Registration** or **Serial No. Reg. at Receipt** set up in the Item Information Card workspace. You cannot approve the receipt of an item purchase order that contains an item line that contains one of these serial number control types until you have entered a serial number for every single unit of the item in this workspace.

For items that use standard serial numbers Maconomy automatically creates serial number lines with the ordered quantity. However, this only happens if you select the **Extended Serial Number Control** system parameter. When you create an item purchase order line in the Item Purchase Orders workspace, Maconomy checks whether a standard serial number for purchase has been specified for the current warehouse in the sub-tab of the item's information card. If this is the case, Maconomy automatically creates a serial number line with the standard serial number and the ordered quantity in this workspace. When you enter the receipt of the items in the Item Receipt workspace, Maconomy checks whether there is exactly one serial number line for the current receipt line and whether the numbers in the **Ordered** and **Received** fields on this serial number line correspond to the numbers in the corresponding fields on the current receipt line. If this is the case, Maconomy automatically updates the serial number line with the number entered as received in the Item Receipt workspace. Therefore, you do not need to manually enter serial number receipt for items that use a standard serial number. If there is more than one serial number line for the receipt line, or if the numbers on the receipt line and the serial number line, respectively, are not the same, Maconomy does not update the number, so you must enter it manually in this workspace.

When you approve the item receipt, Maconomy automatically enters the serial numbers in the Serial Number Information workspace in the Inventory module. They are entered at the individual item purchase order lines' receipt locations in the warehouse of the item purchase order. The serial number is given a reference to the item purchase order. If the item purchase order is linked to a sales order, Maconomy automatically transfers the serial numbers to the sales order when you approve the item receipt.

## Serial Number Receipt Tab

This section includes the fields and descriptions for the Serial Number Receipt tab.

## Item Purchase Line Island

Field	Description
<b>Item Purchase Order No.</b>	This is the number of the item purchase order for which you are entering serial numbers. You cannot change it.
<b>Line No.</b>	This is the line number to which you are entering serial numbers. It cannot be changed.

## Item Island

Field	Description
<b>Item No.</b>	This is the item number on the purchase line to which you are entering serial numbers. It cannot be changed.
<b>Description</b>	This is the item text to the purchase line to which you are entering serial numbers. It can only be changed in the Item purchase orders window.
<b>Vendor Item No.</b>	This is the vendor's item number for the purchase line to which you are entering serial numbers. It can only be changed in the Item purchase orders window.
<b>Vendor Item Desc.</b>	This is the vendor's item text for the purchase line to which you are entering serial numbers. It can only be changed in the Item purchase orders window.
<b>Internal Desc.</b>	This is the internal item text for the purchase line to which you are entering serial numbers. It can only be changed in the Item purchase orders window.

## Quantity Island

Field	Description
<b>Ordered</b>	This field shows how many units have been ordered on the purchase line to which you are entering serial numbers. It can only be changed in the Item purchase orders window.
<b>Balance</b>	This shows how many units which have yet to be registered to the purchase line to which you are entering serial numbers. The value is automatically updated by Maconomy when you register items using the action "Approve Receipt" in the Item Receipt window.
<b>Currently Received</b>	This shows how many units are entered for receipt on the item purchase order line to which you are entering serial numbers. It can only be changed in the Item Receipt window.

Field	Description
<b>No. of Serial Nos. Received</b>	This field shows how many serial number units are entered in the table part of the window. Serial number entry in this window is mandatory for items which have the serial number control type "Full Serial No. Registration" or "Serial No. Reg. at Receipt" set up in the window Item Information Card. Therefore, if an item purchase order line contains an item with one of these serial number control types, receipt of the current item purchase order cannot be approved before you have entered as many serial numbers as shown in the field "Received."

### Warehouse Island

Field	Description
<b>Serial No. Control</b>	This field shows whether the item has serial number control. You can only enter items with serial number control. The value is retrieved from the item information card in the Inventory module and it cannot be changed here.
<b>Warehouse</b>	This is the warehouse the purchased items will be placed in. The warehouse is selected when the item purchase order is created.
<b>Stock Location No.</b>	This shows the location at which the items on the item purchase order line are to be received. The value is automatically transferred to each line in the table part.
<b>Delivery Date</b>	This is the preferred delivery date. It can only be changed in the Item purchase orders window.

### Price Island

Field	Description
<b>Unit Price</b>	This is the unit price of the purchase line. It can only be changed in the Item purchase orders window.
<b>Pricing Unit</b>	This shows how many units are included in the unit price. It is retrieved from the item information card and cannot be changed here.
<b>Extended Price</b>	This is the current extended price, which is the quantity of units ordered multiplied by the unit price and divided by the pricing unit. It cannot be changed manually.
<b>Price at Step 1</b>	This is the price of one pricing unit of the item, if the item purchase order is attached to a price list and if there is a price for the item in the price list. It cannot be changed manually.
<b>Quantity Disc.</b>	This is the quantity discount, if there is a quantity discount on the item in the price list applied to the purchase, and if the quantity ordered justifies a discount.

**Information Island**

Field	Description
<b>Item Group</b>	This field shows the item group for the purchase line to which you are entering serial numbers.
<b>Item Type</b>	This field shows the item type for the purchase line to which you are entering serial numbers.
<b>Unit</b>	This field shows the unit for the purchase line to which you are entering serial numbers.
<b>Tax Code</b>	<p>This field shows the tax code for the purchase line to which you are entering serial numbers.</p> <p>If multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if three tax levels are enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p>

## Serial Numbers Sub-Tab

This section includes the fields and descriptions for the Serial Numbers sub-tab.

Field	Description
<b>Serial No.</b>	In this field, you enter the serial number of the item you have received. Maconomy verifies that the serial number does not already exist, that is, that it is not already registered as being on stock in the Serial Number Information window in the Inventory module. Maconomy also verifies that the serial number has not been entered in another unapproved item receipt. However, if you have marked the system parameter "Extended Serial Number Control," this verification is not made as the user is then allowed to register the receipt of the same serial number over several different item receipts.
<b>Stock Location</b>	This field shows the location at which the current serial number is received. The value is transferred from the card part, but you can specify another location for the current line.
<b>Ordered</b>	In this field, you can specify the number of ordered units of the current serial number. If you have marked the system parameter "Extended Serial Number Control," Maconomy automatically updates the field when the ordered number of units is changed in the window Item Receipt as long as there is only one serial number receipt line for the current receipt line and as long as the numbers in the fields "Ordered" and "Received" match the corresponding fields in the windows Item Purchase Orders and Item Receipt.
<b>Balance</b>	This field shows how many of the serial number ordered have not yet been delivered. Maconomy updates the balance when you select the action "Approve Receipt" in the window Item Receipt.

Field	Description
<b>Currently Received</b>	In this field, you can specify the number of received units of the current serial number. If you have marked the system parameter "Extended Serial Number Control," Maconomy automatically updates the field when the ordered number of units is changed in the window Item Purchase Orders as long as there is only one serial number receipt line for the current receipt line and as long as the numbers in the fields "Ordered" and "Received" match the corresponding fields in the windows Item Purchase Orders and Item Receipt.
<b>Production Date</b>	In this field, you can enter a production date for the current serial number. The date is for information only.
<b>Sell-by Date</b>	In this field, you can enter an expiry date for the current serial number. The date is for information only.
<b>Expiry Date</b>	In this field, you can enter a sell-by date for the current serial number. The date is for information only.
<b>Serial No. Text 1-5</b>	In these fields, you can enter various information related to the current serial number. The text is for information only.

## Reporting Section

This section includes the fields and descriptions for the Reporting Section workspaces.

### Print Item Receipt Workspace

Use this workspace to print one or more item receipts.

This receipt is an internal message to the warehouse that an item delivery is expected shortly. The receipt shows how many units of which items will be delivered from which vendors. You also specify when the delivery is expected. You can limit the printout to a range of item purchase orders using the selection criteria fields.

#### Print Item Receipt Tab

This section includes the fields and descriptions for the Print Item Receipt tab.

#### Selection Criteria Island

Field	Description
<b>Item Purchase Order No.</b>	Here you can specify a range of item purchase order numbers. The item receipt will only include item purchase orders within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Company No.</b>	In this field, you can specify a range of company numbers. The printout will only include item purchase orders on which the responsible company is within the specified range.

Field	Description
<b>Vendor</b>	Here you can specify a range of vendor numbers. The item receipt will only include item purchase orders to vendors within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Item No.</b>	Here you can specify a range of item numbers. The item receipt will only include item purchase order lines with items within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Date Available</b>	Here you must specify an interval of availability dates. The item receipt will only include item purchase order lines for which the expected availability date is within this interval.
<b>Warehouse</b>	Here you can select a warehouse. The item receipt will only include item purchase orders to this warehouse. If you select "blank," the item receipt will include item purchase orders to all existing warehouses. Warehouses are created in the Warehouse Information Card in the Inventory module.

### Currency Island

Field	Description
<b>Reporting Currency</b>	In this field, you can specify the currency in which the item purchase order amounts should be displayed. If the current user has been assigned to a company in the window Users, Maconomy suggests the company base currency of the company in question.  For the purpose of converting the chosen currency into another currency, Maconomy uses the valid exchange rates specified in the exchange rate table for purchases on the date entered in the field "Exchange Rate Date" below. The exchange rate table to be used for purchases is specified in the window System Information in the Set-Up module. Please note that Maconomy performs currency conversion even though the original amount has been registered in the same currency as the one specified in this field, which may cause discrepancies between the registered amounts and the amounts shown in this window.
<b>Exchange Rate Date</b>	In this field, you can specify the date which should be used when converting amounts into the chosen reporting currency. Maconomy uses the valid exchange rates specified in the exchange rate table for purchases selected in the window System Information in the Set-Up module for conversion of currency amounts. See also the field "Reporting Currency."

### Layout Island

Field	Description
<b>Sort by</b>	Here you select how to sort the item receipt. You can choose between having the information sorted by date, item number, vendor number or item purchase order number.

## Print Receipt Listing Workspace

Use this workspace to print a receipt listing that can function as a reference when you place items in the warehouse.

Maconomy prints a list out for every receipt and gives it the same number as the item transaction. You can also print out a receipt list when you approve an item receipt in the Item Receipt workspace.

For each item receipt, Maconomy sorts the items by the location at which the items were received. The receipt lists the items that are received at the same location in the same order as in the item purchase order. The receipt also shows the quantity next to each item. You can define the printout in the Selection Criteria island.

### Print Receipt Listing Tab

This section includes the fields and descriptions for the Print Receipt Listing tab.

#### Selection Criteria Island

Field	Description
<b>Trans. No.</b>	Here you can enter a range of transaction numbers.

#### Print Control Island

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, "Standard" is the only option.

## Print Item Purchase Order Overview Workspace

Use this workspace to print a list of your item purchase orders. You can limit the list of orders in the Selection Criteria island. The list displays various information about the order lines.

### Print Item Purchase Order Overview Tab

This section includes the fields and descriptions for the Print Item Purchase Order Overview tab.

#### Selection Criteria Island

Field	Description
<b>Item Purchase Order No.</b>	Here you can specify a range of item purchase order numbers. The item purchase order list will only include item purchase orders within this range. If you leave the fields blank, they have no influence on the selection criteria.

Field	Description
<b>Company No.</b>	In this field, you can specify a range of company numbers. The printout will only include item purchase orders on which the responsible company is within the specified range.
<b>Vendor</b>	Here you can specify a range of vendor numbers. The item purchase order list will only include item purchase orders to vendors within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Item No.</b>	Here you can specify a range of item numbers. The printout will only include item purchase order lines for items within this range. If you leave the fields blank, they have no influence on the selection criteria.
<b>Date Available</b>	Here you must specify a range of availability dates. The printout will only include item purchase order lines for which the expected availability date is within this range.
<b>Buyer</b>	In this field, you can enter a range of buyers. The printout will only include item purchase order lines placed within this range.
<b>Warehouse</b>	Here you can select a warehouse. The item purchase order list will include item purchase orders to this warehouse. If you select "blank," the list will include item purchase orders to all existing warehouses. Warehouses are created in the Warehouse Information Card in the Inventory module.
<b>Show Fully Delivered Lines</b>	Here you specify whether to include fully delivered item lines. By default, these lines are not included, because the list might otherwise be very extensive. To include fully delivered lines, mark the field.

### Currency Island

Field	Description
<b>Reporting Currency</b>	In this field, you can specify the currency in which the item purchase order amounts should be displayed. If the current user has been assigned to a company in the window Users, Maconomy suggests the company base currency of the company in question.  For the purpose of converting the chosen currency into another currency, Maconomy uses the valid exchange rates specified in the exchange rate table for purchases on the date entered in the field "Exchange Rate Date" below. The exchange rate table to be used for purchases is specified in the window System Information in the Set-Up module. Please note that Maconomy performs currency conversion even though the original amount has been registered in the same currency as the one specified in this field, which may cause discrepancies between the registered amounts and the amounts shown in this window.
<b>Exchange Rate Date</b>	In this field, you can specify the date which should be used when converting amounts into the chosen reporting currency. Maconomy uses the valid exchange rates specified in the exchange rate table for purchases selected in the window

Field	Description
	System Information in the Set-Up module for conversion of currency amounts. See also the field "Reporting Currency."

### Layouts Island

Field	Description
<b>Sort by</b>	Here you select how to sort the item receipt. You can choose between having the information sorted by vendor number, item number or warehouse.

## Set-Up Section

This section includes the fields and descriptions for the Set-Up Section workspaces.

### Suppliers Workspace

Use this workspace to create vendors as suppliers.

A supplier is a vendor that delivers a specific item to one or more warehouses. The Supplies tab displays an item. In the Suppliers sub-tab, you can enter the vendors that deliver the current item to the current warehouse.

You can assign several vendors to a specific item in a specific warehouse. You can also indicate that a vendor delivers a specific item to all warehouses. For each supplier you can enter the item number and the text used by the supplier for the current item. Maconomy transfers this information to item purchase order lines with the current item when purchasing from the current vendor to the current warehouse. This information is also included on printouts of item purchase orders.

For each supplier of a given item, you can also enter a delivery time for delivering items to the warehouse in question. This can, for example, be a time limit within which the supplier is contractually obliged to deliver the items, or just an agreed-on or estimated time.

You do not need to create a vendor in this workspace to use the vendor on item purchase order lines, but Maconomy issues a warning if you create an item purchase order line with an item for which the selected combination of warehouse and vendor was not created in this workspace.

In the sub-tab of the Item Information Card workspace, you can specify the primary vendor of the item to the current warehouse. Maconomy uses the primary vendor when you create item purchase selections where the current item is to be purchased to the current warehouse.

### Suppliers Tab

This section includes the fields and descriptions for the Suppliers tab.

### Item Island

Field	Description
<b>Item No.</b>	This field displays the item number of the current item.

Field	Description
<b>Description</b>	This field displays the description of the current item.
<b>Item Group</b>	This field displays the name of the item group of which the current item is part.
<b>Unit, Purchase</b>	This field displays the unit used when the current item is purchased.

### Suppliers Sub-Tab

This section includes the fields and descriptions for the Suppliers sub-tab.

Field	Description
<b>Vendor</b>	In this field, you can enter a vendor number thus creating the current vendor as supplier of the current item to the current warehouse.
<b>Name</b>	This field displays the name of the vendor specified in the field "Vendor No." above.
<b>Warehouse</b>	In this field, you can enter a warehouse thus creating the vendor specified in the field "Vendor No." as vendor of the current item to the current warehouse. If you do not specify a warehouse in this field, the vendor will be considered a supplier of the item to all warehouses.
<b>Delivery Time</b>	In this field, you can specify the number of days' delivery time to be expected when purchasing from the current supplier to the warehouse in question. This can, for example, be a time limit within which the supplier is contractually obliged to deliver the items, or just an agreed or estimated time. This information is used for calculating a delivery date on item purchase order lines regarding the current item and supplier.
<b>Preparation Time</b>	In this field you can enter the number of days needed after the items has been delivered by the supplier until they are ready to be shipped to a customer. Maconomy will use the value to calculate the field "Expected Availability Date" from "Delivery Date"/"Confirmed Delivery Date" on an item purchase order line.
<b>Vendor Item No.</b>	In this field, you can enter the vendor's item number for the current item. This item number is transferred to item purchase orders where purchase of the current item is made to the current warehouse. The item number is used on printouts of item purchase orders instead of your own item number. This feature makes it easier for the vendor to identify the items ordered.
<b>Vendor Item Desc.</b>	In this field, you can enter the vendor's item description for the current item. This description is transferred to item purchase orders where purchase of the current item to the current warehouse is made from the current vendor. The item description is used on printouts of item purchase orders instead of your own item number. This feature makes it easier for the vendor to identify the items ordered.

Field	Description
Remarks 1-5	In these fields, you can specify a number of remarks for additional information on the current supplier. The fields are for information only.

## Seasonal Models Workspace

Use this workspace to create and maintain seasonal models for the regulation of purchase requirements in specific periods. You use seasonal models for percentage regulation of the reorder level and the maximum stock of items assigned to a seasonal model when creating item purchase selections.

You use seasonal models for percentage regulation of the reorder level and the maximum stock of items assigned to a seasonal model when creating item purchase selections.

For each seasonal model, you create a line for each period in which the reorder level and the maximum stock are to vary from the norm. For example, if you sell a large number of items in the period of June to August, you can create a seasonal model that has a line in which you specify that the reorder level for items that are assigned to this seasonal model must be 40% larger in this period, and that you must order 60% more of these units when purchasing items in this period.

You can assign each item to a seasonal model in the sub-tab of the Item Information Card workspace, where you can specify a seasonal model for each warehouse. When you create item purchase selections, Maconomy controls for which items there is a regular need to make purchases—that is, which items' volumes might be below the reorder level in the warehouse to which the purchase is made. During this process, Maconomy controls whether the items are assigned to a seasonal model. If they are, Maconomy regulates the reorder level for the current item with the percentage that you specify on the line in the seasonal model that is valid on the day on which the item is to be delivered at the earliest—that is, today's date plus the item's delivery time. If the reorder level for an item is 8 pieces, and the item quantity is 10 pieces, Maconomy does not create an item purchase order line for the item in the current warehouse. However, if the item in the current warehouse is assigned to a seasonal model in which you specified that the reorder level is to be regulated with 50% in the current period, the reorder level is regulated to 12 pieces so that the item quantity is smaller than the reorder level. This regulation results in the creation of an item purchase order line for the item. If units of the item are to be purchased, Maconomy also regulates the maximum stock in accordance with the seasonal model.

If there is no line where the period covers the current date, Maconomy uses the order level and the maximum stock provided on the item's information card. In this way, you only need to create lines for periods where the order level and the maximum stock are to vary from the norm in the Item Information Card workspace.

## Seasonal Models Tab

This section includes the fields and descriptions for the Seasonal Models tab.

### Seasonal Model Island

Field	Description
<b>Seasonal Model No.</b>	In this field, you can enter the number of the current seasonal model.
<b>Name</b>	In this field, you can enter the name of the current seasonal model.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

### Remarks Island

Field	Description
<b>Remarks</b>	In these fields, you can enter various remarks to the current seasonal model.

## Seasonal Model Lines Sub-Tab

This section includes the fields and descriptions for the Seasonal Model Lines sub-tab.

Field	Description
<b>From Date</b>	With the field “To Date” this field constitutes a range of dates. When creating item purchase selections for items assigned to the current seasonal model, the regulation percentages on the current line will be used if the item purchase selection’s creation date plus the item’s delivery time are both placed at a date within this range. If you leave this field blank, the start date of the range is considered as being open. If you leave this field as well as the field “To Date” blank, the current line will always be used when items assigned to the current seasonal model are purchased.
<b>To Date</b>	With the field “From Date” this field constitutes a range of dates. When creating item purchase selections for items assigned to the current seasonal model, the regulation percentages on the current line will be used if the item purchase selection’s creation date plus the item’s delivery time are both placed at a date within this range. If you leave this field blank, the end date of the range is considered as being open, meaning that the period comprises all dates on or after the start date. If you leave this field as well as the field “From Date” blank, the current line will always be used when items assigned to the current seasonal model are purchased.

Field	Description
<b>% Change in Reorder Lvl.</b>	In this field, you can enter a regulation percentage for the reorder level. When creating item purchase selections this percentage will be used to regulate the reorder level for items assigned to the current seasonal model. If, for example, the reorder level for an item is 8 pieces while the item quantity is 10 pieces, then no item purchase order line for the item in the current warehouse will usually be created. But if the item in the current warehouse is assigned to a seasonal model in which it is specified that the reorder level is to be regulated with 50% in the current period, the reorder level will be regulated to 12 pieces in such a way that the item quantity is smaller than the reorder level. This regulation will then result in a creation of an item purchase order line for the item.
<b>% Change in Max. Stock</b>	In this field, you can enter a regulation percentage for the maximum stock. When purchase lines for items assigned to the current seasonal model are created via an item purchase selection, this percentage will be used to regulate the maximum stock for the item which can result in a change of the purchased number of items.

## Delete Section

This section includes the fields and descriptions for the Delete Section workspace.

### Delete Item Purchase Orders Workspace

Use this workspace to delete closed item purchase orders up to a given date. It is critical that you enter the correct date to prevent deleting too many orders. Deleting item purchase orders only affects the Item Purchase Orders module.

It is recommended that you make a backup copy before you delete any orders. Maconomy prints out a list of the deleted orders.

When you delete an item purchase order, all of the information disappears. You can no longer view or print the deleted order. Before you approve the deletion, Maconomy warns you that you must print all of the item purchase orders for auditing purposes.

You cannot delete an item purchase order while it is being used in any workspace in the Item Purchase Orders module.

### Delete Item Purchase Orders Tab

This section includes the fields and descriptions for the Delete Item Purchase Orders tab.

#### Selection Criteria Island

Field	Description
<b>Company No.</b>	In this field, you can enter a range of company numbers. Only item purchase orders assigned to a company within the specified range are deleted.
<b>Closed Before</b>	Here you enter a date. Maconomy will only delete item purchase orders closed before this date. You must enter a date.

## Job Cost Overview

Maconomy's Job Cost module enables you to manage and account for jobs and project-oriented work.

Use this module to create budgets; record usage of time, and other job costs; and invoice customers based on these records. You also use the Job Cost module to generate reports on jobs, employees, and profitability.

### Creation Section

This section includes the fields and descriptions for the Creation section workspaces.

#### Jobs Single Dialogs Workspace

Use this workspace to create jobs and maintain master data about jobs.

A job is a unit of business with your customers. You can budget and enter the usage of time, external purchases, and other costs on individual jobs. You use job entries for invoicing and reporting through time and expense or vendor invoice allocations.

The data in this workspace is core information that you must enter to create a job. Maconomy maintains master data about jobs in a number of additional workspaces, including:

- Job Information workspace — Use to maintain customer-related information, such as payment and delivery addresses.
- Job Price Information workspace — Use to maintain pricing information, such as selecting general price lists and/or overwriting with job-specific prices.
- A number of other workspaces contain job-specific information, such as Job Descriptions, Employee Control, and Job Phases.

#### Job Tab

This section includes the fields and descriptions for the Job tab.

#### Approval Status Island

Field	Description
<b>Approval Status</b>	This field shows the current approval status of the selected job, for example, who and when it was submitted and approved. Note that this field only has relevance when jobs are set up to be approved through approval hierarchies.

#### Current Job State Island

Field	Description
<b>Current Job State</b>	This field shows the current state of the job. This field is relevant only if approval hierarchies are set up to use multiple stage approvals.

Field	Description
	<b>Note:</b> This field only appears if the Job State functionality is used.

### Customer Island

Field	Description
<b>Customer</b>	This is the number of the customer associated with the job. The customer number is entered in the window Jobs when the job is created. You cannot change it in this window. This field also shows the customer's name as entered in the Customer Information Card in the A/R module. The name cannot be changed here, but you can change it in the Job Information window.

### Company Island

Field	Description
<b>Company</b>	This field shows the number of the company responsible for the current job. You cannot change the value here. This field also shows the name of the company responsible for the current job.
<b>Base Currency</b>	This field shows the base currency of the company responsible for the current job.

### Job Island

Field	Description
<b>Job</b>	<p>This field shows the job number, which is the unique identification of the job. You can either enter the number yourself or let Maconomy allocate the next available number from the job number series in the window System Numbers in the Set-Up module. If you enter a number manually, the system number series is not affected. The number can consist of both numbers and letters. It is not possible to enter a job number of an existing job.</p> <p>You can change the job number as long as no registrations have been made on the job. The job number is closed when registrations have been made on the job, for example, in the windows Time Sheets, Expense Sheets, Job Journal, Job Reallocation, Vendor Invoices, Requisitions, General Journal, Sales Orders, and Advertising Orders. When registrations have been made on the job, you cannot change its number. However, you can make references to the job in budgeting windows such as Job Budgets and Detailed Planning. If the job number is subsequently changed, the job number is changed in those windows also.</p> <p>If you need to be able to change the job number after creating the job, for example, if the job number must be approved by someone else, you should mark the fields "Blocked for Reg." and "Blocked for Inv." in this island when creating the job, and remove the marks when the job number has been verified. There are two ways to automate this process: you can use a template</p>

Field	Description
	<p>job where these fields are preselected for job creation, or you can mark the system parameter “Block new entries for reg. and inv.” to specify that all new jobs are blocked for registration and invoicing when created. The user who changes a job number must have been given access to doing so in the window Actions in the Set-Up module, where the field “Change Job No. on Job” must be marked.</p> <p>This field also shows the job name, which is entered in the Jobs window. You cannot change the name here, but you can change it in the Jobs window.</p>
<b>Job Group</b>	<p>In this field, you assign the job to a job group. All jobs must be assigned to a job group. The pop-up shows the job groups created in the window Job Groups and you can only assign jobs to existing groups. For all jobs in a job group, it applies that expenses are either capitalized or posted to Profit &amp; Loss. You can change the job group as long as you have not made any entries to the job. After having registered entries on a job, it is only possible to change the job group from a job group without capitalization to another group without capitalization.</p> <p>If the system parameter “Manual completion of job groups” has been selected, it is mandatory to select a job group manually when creating a job.</p> <p>If a standard budget is assigned to the selected job group, this budget is transferred to the job and is recalculated when the job is created. Similarly, the job phase list is transferred to the job from which the standard budget is copied to the new job. For more information, please see the description of the window Job Groups.</p>
<b>Time Unit</b>	<p>Use this field to specify the time unit for the job. This is the unit for quantities for time-related activities in the form of budgeted quantities, registered quantities, open quantities, invoiced quantities, write up/down on the quantity, and estimate-to-complete. The unit prices for time also follow this unit, as prices per hour or per day depending on the time unit.</p>
<b>Department</b>	<p>In this field, you choose the department to which the job belongs. Maconomy suggests the value from the customer’s information card in the A/R module, but you can change it.</p> <p>Departments are defined in the window Posting References in the G/L module.</p>
<b>Project Manager</b>	<p>In this field, you can enter the number of an employee created in the window Employees in the Set-Up module. Maconomy suggests the number of the user creating the job if this user has an employee number assigned to him.</p> <p>The project manager in this field is the one who can approve time and expense sheet lines if the fields in the island Approval indicate that the project leader can or must approve time and expense sheets. If so, this field must be completed. Furthermore, the project manager of a job can initiate the first job phase and end phases if job phases are used on the job.</p> <p>This field also shows the name of the specified project manager.</p>
<b>Sales Person</b>	<p>In this field, you enter the number of the employee who is registered as sales person in the window Employees in the Set-Up module. If you do not specify a</p>

Field	Description
	<p>sales person number at creation of the job, Maconomy will copy this information from the customer assigned to the current job.</p> <p>Sales in connection with this job will be included in any commission calculation for the sales person.</p> <p>This field also displays the name of the specified sales person.</p>
<b>Account Manager</b>	This is the name and number of the account manager of the job.
<b>Responsible</b>	This is the name of the person responsible for the job. Maconomy suggests the name of the user. The name appears in various other windows and on printouts from the Job Cost module.
<b>Template Job</b>	<p>If you mark this field, the job currently displayed in the window will get the status of being a template job. You cannot mark this field on jobs on which registrations have already been made. When a job is marked as being a template job, it is neither possible to register entries nor to perform invoicing from it. However, you can assign job parameters, job budgets, job descriptions, task lists, and so on, to a template job. Note that on a template job you can blank some of the fields, which are mandatory on normal jobs. This allows you to enter only those values on a template job that you want to be transferred to new jobs created on the basis of the template job in question. See the description of the island Creation for further information about the use of template jobs.</p>
<b>Reference Job No.</b>	In this field, you can enter a reference job number. If the current job has been copied from another job by means of the action "Copy Job," this field shows the number of the job from which the new job was copied. If the job has been created on the basis of a template job, this field shows the job number of the relevant template job. However, you can change the value in this field at any time.
<b>Include in Forecast</b>	In this field, you can specify whether the current forecast should be included in forecast reports created using the Periodic Forecasting component in the Portal.
<b>Task Group Status</b>	<p>This field indicates whether the job entries associated with the present job are assigned to the correct task groups. This functionality is relevant if the invoice layout rule of the job specifies that invoice selections or invoices should be grouped by task groups.</p> <p>For more information on task group status, see the description of the "Task Group Status" field in the Invoice Selection window.</p> <p>For further information on work breakdown structure and task groups, see the descriptions under "Job Tasks" and under "Job Budgets."</p>
<b>Transfer to People Planner</b>	If this field is marked, the job will be included in the scheduled import to People Planner. If this field is set on a template job, jobs created from this template will also be included. Setting the Transfer To People Planner field will

Field	Description
	only have an effect if the field is included in the relevant queries in the .I files on the web server.

### Invoicing Island

Field	Description
<b>Invoice Layout</b>	In this field, you can select the invoice layout rule to be used when creating quotes, invoice selections, job invoices, invoicing methods, and a number of set-up parameters to apply to a job. The field must be completed. If you change invoice layout rules at a later point in time, any invoice selections are recalculated. If the invoice selection was approved, it must be reapproved. However, you can only change the rule in this field if the selected rule has the same selections regarding invoicing subjobs as part of main jobs. That is, the field "Main Job Invoicing" must have the same value as the initially used invoice layout rule. For more information, please see the description of the window Invoice Layout Rules.
<b>Detailed Invoice Specification</b>	Use this field to select a detailed invoice specification.
<b>Invoiceable</b>	<p>In this field, you define the job as invoiceable or non-invoiceable. If you mark the field, the job is non-invoiceable. If job entries are posted to the job, these will be closed, regardless of whether they originate from invoiceable or non-invoiceable activities.</p> <p>Non-invoiceable jobs are used partly to register customer-related but not job-related hours (you create one non-invoiceable job per customer), and partly to register internal time (you create one or more non-invoiceable jobs for a particular 'internal' customer).</p> <p>An invoiceable job cannot be changed to non-invoiceable if there are open entries on the job in question. If a quote price exists for the job, this quote price can only be changed to 0 if the job is made non-invoiceable. A non-invoiceable job can be changed to invoiceable, if it is not an internal job. Any existing entries will continue to be treated as non-invoiceable, that is, they will continue to be closed after this field is changed.</p>
<b>Allow PM Invoice Proposals</b>	This field enables the user to select whether project managers are allowed to propose changes to invoiceable hours and amounts from employees' time sheet and expense sheet registrations. If the field is marked, the project manager can propose a number of invoiceable hours as well as invoiceable amounts in the window Approve Time Sheet Lines and propose invoiceable amounts in the window Approve Expense Sheet Lines. Project managers can thus provide input on invoiceable hours and amounts to the invoicing department at an early stage. The field can only be marked if the job parameter Allow Write-Up/Down at Transfer of Billing Price Only Method is set to No and the job parameter Invoicing Method is set to Time and Material for the current job.

Field	Description
<b>Allow Employee Invoice Proposals</b>	This field enables the user to select whether employees are allowed to propose changes to invoiceable hours on their time sheet registrations. If the field is marked, employees can propose a number of invoiceable hours when filling in time sheet lines in the windows Time Sheets, Daily Time Sheet and Speed-Sheet. This allows employees to provide input on invoiceable hours to the project manager and the invoicing department while entering their time sheets. The field can only be marked if the job parameter Allow Write-Up/Down at Transfer of Billing Price Only Method is set to No and the job parameter Invoicing Method is set to Time and Material for the current job.
<b>Close at End Inv.</b>	In this field, you can specify whether the job is to be closed at end invoicing. If you mark this field, and the field "End Invoice" has been marked in the window Invoice Selection, the job is automatically closed when the invoice is printed. However, the job is only closed if the job has no open entries, no open purchase orders, no open requisitions, no open invoices on account, and no unapproved time sheets.  The default value of this field is set up in the system parameter "Close at End Invoicing."
<b>End Invoiced</b>	You can mark this field if the job has been end invoiced.
<b>Standard Invoice Text List</b>	Enter the name of a standard invoicing text list to make these standard texts available in Invoice Editing. The name of the list can be derived from the template job.

### Status Island

Field	Description
<b>Status</b>	This is the current job status. When the job is created, it has "Quote" status, unless you have marked the "Created as Order" field in the window System Information. It is then only possible to make quotes from it, not invoices. This is done in the window Quote Editing.  The job status can be changed to "Order" by selecting "Convert to Order" in the Action menu. The field can only have one of the two values mentioned.  If the field "Created as Order" in the window System Information is marked, new jobs are created with "Order" status but only if the current user has been given access to convert jobs to orders in the window Actions in the Set-Up module.
<b>Converted by</b>	This field shows the name of the employee who converted the job from "Quote" to "Order." If you have marked "Created as Order" in the window System Information, the name of the employee who created the order will be shown in this field.
<b>Date of Conversion</b>	This field shows the date the job was converted from "Quote" to "Order." If you have marked "Created as Order" in the window System Information, the creation date will be shown in this field.

Field	Description
<b>Blocked for</b>	<p>These fields show whether the job is blocked.</p> <ul style="list-style-type: none"> <li>Time Registrations — This field shows whether the job is blocked for registration. If you mark the field, it is no longer possible to register information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create invoices for the job.</li> <li>Amount Registrations — This field shows whether the job is blocked for amount registration. If this field is marked, it is not possible to register amount information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.</li> <li>Invoicing — This field shows whether the job is blocked for invoicing. If you mark the field, it is no longer possible to create invoices and credit memos regarding the current job in, for example, the windows Invoice Selection and Job Invoicing, and these windows will not show jobs which are blocked for invoicing. However, you can still register time and expenses as well as other information on the job.</li> <li>Budgeting — This field shows whether the job is blocked for budgeting. If this field has been marked, you cannot register information on the budgets of the job in, for example, the windows Job Budgets and Periodic Job Budgets. However, you can still make various kinds of other registrations on the job.</li> </ul>
<b>Work Completed On</b>	<p>In this field you can enter a date after which it will not be possible to enter time and expense entries on a given job unless you are assigned project manager of the job in question. Specifying a date in this field is useful in situations where all work on a job has been completed, but where all vendor invoices for the job have not yet been registered in the system. By specifying a date in this field, users with access to the job in question can thus not enter time and expense entries after the date specified whereas the project manager can make final registrations before actually closing the job.</p> <p>If you enter a date in the field, Maconomy will issue an error message if users attempt to register time and expense entries after the date specified on the job in question in the windows Time Sheets, Daily Time Sheets and Expense Sheets. Any other registrations are still possible until the job is closed.</p>
<b>Closed</b>	<p>If this field is marked, the job has been closed. The fields "Changed By" and "Date" in the island User shows the name of the person who closed the job and the date on which the job was closed. To close a job, select the action "Close Job." As long as a job is closed, you cannot post entries to it, and you cannot enter or change information on its budget in the window Job Budgets. However, you can always reopen a closed job by selecting the action "Reopen Job."</p>
<b>Date</b>	<p>This is the date the job was closed, using the action "Close Job." If the job is later reopened, using the action "Reopen Job," the closing date is removed and deleted from the system.</p>

## User Island

See the chapter “Getting Started” for a description of the fields in the island User. Note, however, that until a quote, an order confirmation, an invoice, or a credit note has been printed for the current job, the field “Version No.” will always show the value 1.

## Dimension Combination Island

Field	Description
<b>Dimension Combination</b>	<p>In this field, you can enter the number of a dimension combination of the type “Dimension Derivation,” created in the window Dimension Combinations. If a description has been assigned to the dimension combination, the text is displayed in the field “Description.”</p> <p>If you specify a dimension combination, Maconomy will use the values in this dimension combination when deriving dimensions from the current job.</p> <p>However, any dimension derivation values specified in this island will be used instead of those specified for the same dimensions in the dimension combination. This means that the dimension combination only applies to the dimensions for which no value has been entered on the job.</p> <p>The functionality on period specific sets of derived dimension values in the window Derived Dimensions, which is described in the field “Location” below, also applies to this field.</p> <p>See the section on dimension derivation in the chapter “Introduction to the G/L module” as well as the description of the windows Dimension Derivation and Dimension Combinations in the G/L module for further information about dimension derivation.</p>

## Derived Company Island

Field	Description
<b>Company</b>	<p>This field shows the number of the responsible company as specified in the island Company. The name of the company is displayed in the field “Description.” The company number cannot be changed, but the field “Overwrite” can be changed.</p> <p>The information in the field will only be used in the cases when a company number in the table part of a window can be derived from the job specified. In these cases, the current company will only overwrite any manually specified value for the dimension if you have marked the field “Overwrite” on the current job. If you do not select to overwrite, the dimension value will only be transferred to a table line at creation if the dimension field “Company No.” is not manually completed.</p> <p>Even if you have specified a dimension combination in the field “Dimension Combination” above, a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question.</p> <p>As date-dependent dimension derivation is not possible for company numbers, the functionality on period specific sets of derived dimension values in the window Derived Dimensions, which is described in the field “Location” below, does not apply to this field.</p>

Field	Description
	See the section on dimension derivation in “Introduction to the G/L Module” as well as the description of the windows Dimension Derivation and Dimension Combinations in the G/L module for further information about dimension derivation.

### Derived Dimensions Island

Field	Description
<b>Location</b>	<p>In this field, you can enter a value for the dimension Location if you want a value to be derived from the current job. If a description has been assigned to the location, the text is displayed in the field “Description.” For further information, please refer to the field “Location” in the window Activities. The information is suggested when posting all job entries concerning the job in question, if the relevant G/L accounts allow splitting up in dimensions. In this way, the specified location is assigned to these job entries.</p> <p>Even if you have specified a dimension combination in the field “Dim. Comb. No.” above, a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question. This means that the dimension combination only applies to this dimension if you have not entered a value in this field.</p> <p>Please note that if a dimension combination has been specified in the field “Dim. Comb. No.,” a mark in the field “Overwrite” will only have effect if you have also entered a dimension value. If you mark the field “Overwrite” but you do not enter a dimension value in this field, the “Overwrite” field is ignored, as dimension values and overwriting specification are always retrieved together from the same dimension derivation island, dimension combination or dimension combination line.</p> <p>In the window Derived Dimensions, you can create period specific sets of derived dimensions if the dimension values to be derived from the current job should vary, depending on the entry date of the registrations to which dimension values are derived from the current job. In this context, the value in this field is always reflected in the corresponding field on the dimension derivation line that has a blank ending date, and changing the dimension values in this field will cause the corresponding information on that dimension derivation line to be updated accordingly, and vice versa.</p> <p>When you create a job, Maconomy automatically creates a line in the window Derived Dimensions with the information specified in this island, and a blank starting and ending date, indicating that this line applies on all registrations regardless of entry date. In effect, as long as you do not need the dimension values derived from the job to change on a given date, you only need to enter dimension derivation information in this island and not in the window Derived Dimensions.</p> <p>Please note, however, that if you have added period specific set of derived dimensions in the window Derived Dimensions, the dimension derivation line that has a blank ending date is not necessarily the dimension derivation line valid on today's date. You should therefore be aware that if period specific sets</p>

Field	Description
	of derived dimensions have been created for the job, the dimension values derived from the current job are not necessarily those appearing in this island. See the section on dimension derivation in the chapter "Introduction to the G/L module" as well as the description of the windows Dimension Derivation and Dimension Combinations in the G/L module for further information about dimension derivation. For information on period specific sets of derived dimensions, see the window Derived Dimensions in the G/L module.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.

### Employees Island

Field	Description
<b>Employee 1-10</b>	In these fields, you can assign up to ten employees to the current cob. When you enter an employee number in the "Employee No." field, the name of the employee is displayed. These fields are for information only, but may be used in the automatic creation of teams using the action "Create Teams" in the Timing Plans window. Using Maconomy's layout editing tools, the fields can be placed on various printouts.

### Extra Fields Island

Field	Description
<b>Text 1-25</b>	<p>In these fields, you can enter various information about the job.</p> <p>If you want to put restrictions to some or all the texts entered in these fields, the contents can be delimited by applying an option list to each of the 20 text fields. Option lists are created in the window Option Lists in the Set-Up module and are subsequently specified in the relevant attributes in the job parameter type "Job Text Option Lists" for the job in question. If you have, for example, specified an option list in the attribute "Text 1 Option List," only values belonging to that option list can be entered in the first text field in this island.</p> <p>If no values have been defined in the attributes of the job parameter type "Job Text Option Lists," you can enter any text you like in the fields in this island.</p>

Field	Description
	Using Maconomy's layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.
<b>Boolean 1-5</b>	In these Boolean fields you can assign attributes to your job.
<b>Date 1-10</b>	In these fields, you can enter dates connected to the job. These are date fields. Using Maconomy's layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.
<b>Amount 1-5</b>	In these fields, you can enter amounts connected to the job. These are amount fields.
<b>Popup 1-10</b>	In these fields, you can select various information about the job. These are pop-up fields, which means you can choose from the options created for each field. They are created in the window Popup Fields.  Using Maconomy's layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.
<b>Customer Popup 1-5</b>	In these five fields, you can select various information about the customer. These are pop-up fields, which means that you can choose from the options created for each field. They are created as Customer Popup 1 Customer Popup 5 in the window Popup Fields. When the job is created, or when a different customer is selected on the job, the values from the customer's information card are copied to these fields, but you can change the selections later.

### Description Island

Field	Description
<b>Internal</b>	In these fields, you can enter a description of the job for internal use. The fields are purely for reference and are used in other windows and on various printouts in the Job Cost module.
<b>Customer</b>	In this field, you can enter a comment about the customer for internal use. Maconomy automatically suggests the order comment from the Customer Information Card, but you can change it. The field is purely for reference.
<b>Ref.</b>	In this field, you can enter the name of the customer representative dealing with the order. The field is purely for reference, and the name appears on various printouts and in other windows in the Job Cost module. The test in the field is printed on all external documents about the job.

Field	Description
<b>End User No.</b>	This field shows a unique end customer number, which you can set up in the End Users workspace. The end customer is a customer who buys from one or more of your direct customers.
<b>Blanket invoice Ref.</b>	In this field, you can enter a text as a reference for the job. The text will be displayed on the invoice if you use blanket invoicing (that is, invoice lines from multiple jobs are combined on one invoice, if the bill-to customer, company, department, company tax code, and currency code are identical), and if the invoice layout rule applied to the job indicates that the text should be shown. Blanket invoicing is selected in the Job Information window. For more information, please see the description of the Invoice Layout Rules window.
<b>Year</b>	This field defaults to the current year when creating a job, but you can change the year.
<b>Start Date</b>	In this field, you can enter the date on which the job is scheduled to start. It is purely for reference.
<b>Estimated Ending Date</b>	In this field, you can enter the date on which the job is expected to be finished. The date is for information only.
<b>Recurring Annually</b>	Select this field to indicate that the job should recur annually. If the field is marked, the job can be rolled forward in the window.
<b>Rolled Forward to Job</b>	If the job has been rolled forward, this field displays the number of the new job.

### Price Island

Field	Description
<b>Max. Billing Price</b>	In this field, you can enter the maximum amount, in the job's currency, at which the job is to be billed. This amount is shown in the window Job Budgets, where Maconomy alerts you if the total budgeted billing price exceeds the amount stated here. Maconomy also shows the job's currency code in this field.
<b>Effective Quote Price</b>	For jobs billed using the invoicing principle "Time and Material," you can enter a price that you have calculated or agreed upon with the customer in this field. The price should be entered in the currency of the job. However, you cannot enter an effective quote price once the quote has been approved in the window Quote Editing. Once a quote has been approved, it can only be edited in the window Quote Editing. For fixed-price jobs, the effective quote price can only be entered or changed in the window Quote Editing. For further information, please see the description of the window Quote Editing. Maconomy also shows the currency of the job in this field.

Field	Description
	<p>The amount can be printed on a quote or order confirmation to the customer from the window Quote Editing. The amount can also be changed in the windows Job Budgets and Job Price Information if the job is invoiced based on time and materials. If you create a quote from a budget, or if a quote is changed in the window Quote Editing, the amount in this field will automatically be corrected to the sum of the quote lines. It will then no longer possible to change the amount here.</p> <p>When you create an invoice selection in the window Invoice Selection, you can retrieve the effective quote price from this field and apply it as the total invoice amount.</p>
<b>Fixed Price</b>	<p>This field shows the fixed price of the job. The value displayed in this field is determined by the set-up of the job parameter attribute "Fixed Price Basis" in the job parameter type "Pricing Method" which can have one of the values "Quote" and "Budget."</p> <p>If the job in question is a fixed price job and is assigned the job parameter attribute "Fixed Price Basis" with the value "Quote," the value displayed in this field is identical to the value displayed in the field "Effective Quote Price" in this island. The value in this field is calculated on the basis of the quote price approved for the job in the one of the windows Quote Editing and Approve Quote. If you need to change the fixed price, that is, the approved quote price of such a job, this can be done in one of the windows Quote Editing or Approve Quote.</p> <p>If the fixed price job in question is assigned the job parameter attribute "Fixed Price Basis" with the value "Budget," the value displayed in this field will be identical to the value of the latest approved budget of the job. Note that the value displayed in this field is the sum of the sales prices displayed in the table part of the window Job Budgets for those lines on which the field "Not incl. in fixed price" has not been marked, that is, the fixed price is the sum of the lines included in the fixed price of the job. See also the introduction of the window Invoice Selection for a description of how Maconomy determines whether or not entries are to be included in the fixed price of a job.</p> <p>You can inspect the pricing method selected for the job in question in the window Job Parameter Selection.</p>
<b>Contracted Billing Price for Time</b>	<p>This field shows the price that was agreed on with the customer for time, usually reflected in a job price list.</p>

### Creation Island

Field	Description
<b>Create from Template</b>	<p>This field shows whether the job under creation should be based on a template job. If the system parameter "Create jobs from templates" is marked, this field is automatically marked when you create a job. However, the mark in this field can be removed if you do not want the new job to be based on a template job.</p>

Field	Description
	<p>If you want to create a job on the basis of a template job, you can use one of the following methods: At creation of a job, you can enter values in a number of the fields in this window. If you have marked this field and if the values entered on the new job uniquely identify a certain template job, that is, if the combination of certain fields uniquely identifies one template job, all remaining values in this window and other values, such as job budget lines, job parameters, job price information, and so on, will be copied from this template to the new job when you press Return. If no unique template can be found, Maconomy issues a message informing you that no template could be found. The other method for using a template job for the creation of a job is to enter the job number of a template job in the field "Template Job No." in this island and have the job created on the basis of this template when pressing Return.</p> <p>Note that if the system parameter "Create job from template" is marked and you remove the mark in this field in order not to base your new job on a template job, this field will be marked by Maconomy when you have created the job, even though the new job was not based on a template job. In such situations the field "Template Job No." will be blank, thus indicating that no template formed the basis of the new job.</p> <p>When creating a job from a template, you can choose whether you want to re-derive all customer information based on the customer number. If the system parameter "Overwrite customer fields when creating job from template" is unmarked, Maconomy will re-derive information about the job's customer when the job is created. Information such as the customer name, address, payment terms, and tax code is updated to reflect that which is currently specified on the customer's information card. If the parameter is marked, any information already specified in the template used for creating the job will not be rederived but be transferred unchanged to the job. For instance, if the customer's information card specifies that the customer belongs to the "Advertising" market segment (in the pop-up field "Segment"), you can overwrite this for the current job by specifying another segment in the job template, provided the system parameter "Overwrite customer fields when creating job from template" is marked.</p>
<b>Job</b>	<p>In this field, you can enter a number of a template job if you want to create a new job on the basis of a template job. When the job has been created, you can no longer change the value in this field. This field always shows the number or name of the template job, if any, on the basis of which the current job was created. See the description of the above field "Create from Template" for further information about the use of template jobs.</p>
<b>Opportunity No.</b>	<p>In this field, you can specify the number of an opportunity to which the event should be assigned. Once an event has been assigned to an opportunity, the opportunity number can no longer be changed. If you create a job from an opportunity, the job is created with the same time unit as the opportunity budget.</p>

### Copying Island

In this island, you can specify settings for copying the current job to a new job. When you have specified the correct settings, select the “Copy Job” action to copy the job.

Field	Description
<b>New Job No.</b>	If you do not want the new job number to be taken from the number series, you can manually enter the desired number here. When you select the “Copy Job” action, the new job is created as a copy of the current job. See the description of the “Copy Job” action for further information.
<b>Include Budget Texts</b>	Mark this field if you want to include the budget texts associated with the current job in the job that will be created when you select the “Copy Job” action.
<b>Include Item Lines</b>	If you mark this field, item lines attached to the budget lines of the current job will be included when the job is copied.

### Approval Island

In the fields in this island, you can specify the approval procedures applying to time and expense sheet lines pertaining to the current job. For each job, you can specify whether the supervisor of an employee, the project manager of the job, both, or none of them are to approve time registrations, expense registrations, or both. The default values in these fields are transferred from the corresponding fields in the window System Information in the Set-Up module.

Note that if you want separate approval routines for time vs. expense registrations, the system parameter “Allow separate approval requirements for time and expenses” must be marked in the window System Parameters in the Set-Up module. If the parameter is not marked, the fields are mutually dependent—that is, changing the value for the Supervisor or Project Manager for time registrations changes the corresponding value for expenses, and vice versa. It is possible to change the approval principle of a job, even though time sheets or expense sheets with entries on the job have already been created. However, if any such time and expense sheets have been submitted, they must be transferred before the approval principle can be changed.

The supervisor of each employee is specified in the window Employees. A supervisor approves time and expense sheets in the windows Time Sheets and Expense Sheets, respectively.

If approval of expense sheets is performed through an approval hierarchy, this approval overrules the supervisor’s approval. This means that if it has been specified on a job that the supervisor must approve expense sheets, an expense sheet can only be posted (and thereby settled) when it has been fully approved through an approval hierarchy. If the project manager’s approval of a job is also required, the individual expense sheet lines must also be approved by the project manager before the sheet can be posted. The project manager’s approval is carried out without using approval hierarchies.

Field	Description
<b>Supervisor, Time</b>	<p>The following options are available for the supervisors of the employees registering time entries on the current job:</p> <ul style="list-style-type: none"> <li>None — The supervisor cannot approve time sheet lines concerning the current job.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Optional — The supervisor can approve time sheet lines concerning the job, but he does not have to. This means that the registrations of the employees can be transferred for posting without being approved by the supervisor. However, you should note that time sheets will only have the status of being fully approved once they have been approved by all relevant parties.</li> <li>Mandatory — The supervisor must approve time sheet lines concerning the current job before they can be transferred for posting.</li> </ul>
<b>Project Manager, Time</b>	<p>The project manager of each job is specified in the field “Project Manager No.” in this window. If the project manager is to approve time sheet lines, it is done in the windows Approve Time Sheet Lines and Approve Job Registrations. The following options are available:</p> <ul style="list-style-type: none"> <li>None — The project manager cannot approve time sheet lines concerning the current job.</li> <li>Optional — The project manager can approve time sheet lines concerning the job, but he does not have to. This means that the registrations of the employees can be transferred for posting without being approved by the project manager. However, you should note that time sheets will only have the status of being fully approved once they have been approved by all relevant parties.</li> <li>Mandatory — The project manager must approve time sheet lines concerning the current job before they can be transferred for posting.</li> </ul>
<b>Supervisor, Exp.</b>	<p>The functionality of this field is similar to that of the field “Supervisor, Time” above, but concerns the approval of expense sheets in the window Expense Sheets.</p>
<b>Project Manager, Exp.</b>	<p>The functionality of this field is similar to that of the field “Project Manager, Time” above, but concerns the approval of expense sheet lines in the windows Approve Expense Sheet Lines and Approve Job Registrations.</p> <p>Please note that the option of approving time sheets is not only available to the supervisor and the project manager of the job. Users who in the window Actions have been granted access to seeing and changing all time sheets can also see registrations and approve them in the windows Time Sheets, Expense Sheets, Approve Time Sheet Lines, Approve Expense Sheet Lines, and Approve Job Registrations. In the same way, the secretary of the time sheet user can approve time sheets if the system parameter “Secretary can Approve Time Sheets” has been marked. However, if you use approval hierarchies, the hierarchy in question determines who can carry out approvals corresponding to the supervisor.</p> <p>The following table illustrates the approval steps necessary in order for time and expense sheet lines to be transferred for posting. Only time sheets are mentioned in the table, but the principles are identical for both time and expense sheets. However, if approval hierarchies are used for expense sheets, approval through these hierarchies will overrule the supervisor’s approval, and</p>

Field	Description																				
	therefore the approval must be carried out in the window Approvals in the Set-Up module.																				
	<table><tr><th colspan="3">Approval Principle — Time</th></tr><tr><th>Supervisor</th><th>Project Manager</th><th>Approval Required for Transfer</th></tr><tr><td>None/Optional</td><td>None/Optional</td><td>None — The user only has to submit or temporarily submit the time sheet.</td></tr><tr><td>Mandatory</td><td>None/Optional</td><td>The supervisor has to release or approve the time sheet in the window Time Sheets, thus transferring all of the lines on the time sheet. The time sheet is only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information.	None/Optional	Mandatory	The project manager has to release or approve a time sheet line in the window Time Sheets, thus transferring the line in question. The time sheet line is only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information. A time sheet is not marked as transferred until all of its lines have been transferred.	Mandatory	Mandatory	A time sheet line is transferred when it has either been released or approved by both the supervisor and the project manager. The approval or release by the project manager is done line-by-line, while the approval by the supervisor is done for a whole time sheet at a time. The time sheet lines are only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information.
Approval Principle — Time																					
Supervisor	Project Manager	Approval Required for Transfer																			
None/Optional	None/Optional	None — The user only has to submit or temporarily submit the time sheet.																			
Mandatory	None/Optional	The supervisor has to release or approve the time sheet in the window Time Sheets, thus transferring all of the lines on the time sheet. The time sheet is only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information.																			
None/Optional	Mandatory	The project manager has to release or approve a time sheet line in the window Time Sheets, thus transferring the line in question. The time sheet line is only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information. A time sheet is not marked as transferred until all of its lines have been transferred.																			
Mandatory	Mandatory	A time sheet line is transferred when it has either been released or approved by both the supervisor and the project manager. The approval or release by the project manager is done line-by-line, while the approval by the supervisor is done for a whole time sheet at a time. The time sheet lines are only released if the field “Transf. Non-Appr. Time Sheets” has been marked in the window System Information.																			
	A time sheet line is not fully approved until it has been approved by the people indicated by the approval principles of the job. If it has been approved by one but only released by the other, it is still only partially approved.																				

### Link Jobs Island

Field	Description
<b>No. of Subjobs</b>	This field shows the number of underlying jobs assigned to the job. The value cannot be changed here.
<b>Main Job</b>	<p>In this field, you enter the number on an existing job in the Job Cost module. Maconomy only allows one level of subjobs which means that the current subjob must not have its own subjobs and that the specified primary job must not be a subjob.</p> <p>If you wish to change the current job into a subjob for another job, you enter in this field the number on the job you wish to assign as the primary job. In the window Distribute to Subjobs you can specify an allocation percentage for each subjob.</p> <p>Printouts of information about primary jobs and subjobs can also be retrieved by using the layouts "Summary" and "Customer Summary" in the window Print Jobs or by printing out job reports in the window Print Job Report. When you print out a job report on a primary job, you can choose to</p>

### Access Level Island

Field	Description
<b>Access Level</b>	<p>In this field, you enter the access level to be assigned to the job. If you do not enter an access level, all users with access to the window Jobs will have access to the job.</p> <p>Please note that this access control model only applies if the standard access control configuration has not been changed in your Maconomy system. If it has, the access to jobs may depend on other factors. For further information about the standard access control configuration, please see the section "Introduction to the Access Control System" in the Set-Up module.</p> <p>It is only possible to enter an access level if you have access to the level in question. You can assign access levels to a user in the window User Access Levels in the Set-Up module.</p> <p>This field also shows a description of the specified access level.</p>

### Registration Island

Field	Description
<b>Job Allocation</b>	In this field, you can specify which allocation rule you wish to use in connection with job reporting. Allocation rules can be created in the window Job Allocation Combinations.
<b>Employee Control</b>	In this field, you can specify the way in which you want to check which employees can be used in entries on the job. This is useful to avoid accidental, incorrect entries.

Field	Description
	<p>The check is performed in all windows in which you can enter, reallocate, or import job entries or purchase orders. Maconomy will default to the control type specified for the current job group, but you can change the control type for each job in this field.</p> <p>There are the following options:</p> <ul style="list-style-type: none"> <li>None — Job entries can be registered for all employees.</li> <li>Budget — If the system parameter “Use Fixed Budget Type for Employee Control” has not been marked, job entries can be registered for all employees found in the latest revision of the job’s planning budget. If the system parameter has been marked, job entries can be registered for all employees found in the latest revision of the job’s budget of the type specified in the system parameter “Budget Type No. for Employee Control.”</li> </ul> <p>If, for instance, the system parameter “Use Fixed Budget Type for Employee Control” has been marked and the system parameter “Budget Type No. for Employee Control” indicates the budget type “Standard,” a job registration for a given employee is only allowed if the employee in question appears in the latest revision of the job’s budget of the type “Standard.”</p> <p>For enabling entries to be made on a job for an employee, the employee just has to appear in the budget in question. Maconomy does not check which activities the employee is assigned to in the budget. For more information about budgets and budget types, please see the description of the windows Job Budgets and Job Planning.</p> <ul style="list-style-type: none"> <li>Approved Budget — The budget type against which employee control should be carried out when you select this option is determined in the same way as described for the option “Budget” above. However, when you select this option, employee control is carried out on the latest approved revision of the budget of the type in question, rather than just the latest revision of the budget.</li> <li>Employee List — Employee control is enabled. Only employees assigned to the job’s employee list in the window Employee Control can register job entries.</li> </ul> <p>Of these methods for employee control, the “Employee List” method is recommended over the “Budget” method, as the planning budget is likely to be needed for other purposes, such as for resource planning where specific employee assignments are discouraged. For more information, please see the description of the window Employee Control.</p>
<b>Task List</b>	In this field, you enter the task list assigned to the job.

**Budgeting Island**

Field	Description
<b>Hours Per Man Day</b>	<p>In this field, you can specify how many hours are in a man day. In the table part, quantities for time activities can be specified either as a number of hours or a number of days. There are separate fields for specifying hours and days. When you specify a number of days, the corresponding number of hours is automatically calculated by multiplying the number of days by the value in this field. Similarly, when you specify a number of hours, the corresponding number of days is calculated by dividing the number of hours by the value in this field.</p> <p>This field is also used for calculating prices per day from hour-based prices.</p> <p>This field is also used when converting quantities of time from hours to days or vice-versa. When transferring time from a time sheet in days, the quantity is multiplied with this field to get the number of hours (if time on the job is measured in hours).</p>
<b>Time Budget In Days</b>	<p>Select this check box to show quantities in the Time Budget workspace in days. The default value is not selected, which shows quantities in hours. Maconomy updates this field when you change the value of the <b>Time Unit</b> field; the <b>Time Budget In Days</b> field is selected if you choose Day for the time unit, and deselected if you choose Hour for the time unit.</p>

**Customer Job Option Lists Island**

Copy to come.

**Budget Status Island**

Field	Description
<b>Current Budget</b>	For information about budgets, refer to the Job Budgets single dialogs workspace.
<b>Exists</b>	This field specifies whether the current budget already exists for the current job.
<b>Planning Budget</b>	For information about budgets, refer to the Job Budgets single dialogs workspace.
<b>Exists</b>	This field specifies whether the planning budget already exists for the current job.
<b>Forecast Budget</b>	For information about budgets, refer to the Job Budgets single dialogs workspace.
<b>Exists</b>	This field specifies whether the forecast budget already exists for the current job.
<b>Baseline Budget</b>	This field shows the budget type of the baseline budget on the job. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialogs workspace.

Field	Description
<b>Exists</b>	This field specifies whether the baseline budget already exists for the current job.
<b>Fixed Price Budget</b>	This field shows the budget type of the fixed price budget on the job. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialogs workspace.
<b>Exists</b>	This field specifies whether the fixed price budget already exists for the current job.
<b>Completion Percentage Budget</b>	This field shows the budget type to use when calculating the completion percentage of the job. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialogs workspace.
<b>Exists</b>	This field specifies whether the completion percentage budget already exists for the current job.
<b>Baseline Comparison Enabled</b>	This field shows whether baseline comparison is enabled on the job for assessing job progress. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialogs workspace.
<b>Fixed-Price Basis</b>	This field determines whether the fixed price of a job is transferred from the latest approved job budget type or from the job's quote. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialogs workspace.
<b>Rec. Rev. By Compl. Percentage</b>	This field shows whether revenue on a job should be recognized according to completion percentage. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialog workspace.
<b>Handling of Overruns</b>	This field shows whether the specified job should handle overruns. For more information about how this job parameter is utilized with jobs, refer to the Job Parameters single dialog workspace.

## Actions

This section shows the Actions available in the Jobs workspace

### Top Tab

Field	Description
<b>Submit</b>	Use this action to submit the job for approval.
<b>Approve</b>	Use this action to approve a submitted job.
<b>Reject</b>	Use this action to reject a submitted job.

Field	Description
<b>Undo Approval/Reject</b>	Use this action to undo the approval or rejection of a submitted job.
<b>Convert to Order</b>	<p>When you select this action, Maconomy changes the job status to "Order" from "Quote." You can only select this action, if the job in the window has "Quote" status, and only if the current user has been given access to this action by selecting the field "Convert Job to Order" in the Set-Up module.</p> <p>The change is shown in the fields "Status," "Converted by," and "Date of Conversion" in the island Job. Upon conversion, Maconomy enters the value 100 in the field "Probability %" in each budget created for the job in the window Job Budgets.</p>
<b>Convert to Quote</b>	<p>When you select this action, Maconomy changes the job status to "Quote" from "Order." You can only select this action, if the job in the window has "Order" status, and only if the current user has been given access to this action by selecting the field "Convert Job to Order" in the Set-Up module.</p> <p>You can only convert a job from "Order" to "Quote" if no invoicing has been made on the job, if no approved invoice selection exists for the job, and if no order lines are assigned to the job. If the job is a main job, it can be converted to "Quote" even if any subjobs have been invoiced.</p> <p>The change is shown in the fields "Status," "Converted by," and "Date of Conversion" in the island Job. The conversion does not affect the value in the field "Probability %" for the budgets created for the job in the window Job Budgets.</p>
<b>Close Job</b>	<p>When you select this action, you close the job in the window. Maconomy marks the field "Closed" and inserts today's date in the field "Date" in the Job island.</p> <p>You can only select this action if the job has no open entries and is not already closed. You cannot close a job that has open purchase orders, open requisitions, open invoices on account, accruals, open job events or event flows, unapproved time or expense sheets, sales orders which have not been fully delivered or invoiced, unposted reallocation journals or unposted job revenue journals.</p> <p>Maconomy will issue a warning if an entry is marked for reallocation to or from the job in question or referenced on an unposted vendor invoice journal. As long as a job is marked as closed, you cannot register entries to it. A closed job can always be reopened with the action "Reopen Job." However, you can close a job to which non-invoiced sales orders are assigned if the orders in question are so-called 0 orders, that is, orders without order lines or orders where all order lines contain a quantity and delivered quantity of zero.</p> <p>If a job has quote status, you can always close the job. However, if the job is a fixed-price job with order status, Maconomy checks that the job's fixed price less any invoiced amounts equals the sum of previously printed invoices on account. If this is not the case, the job cannot be closed. If a job is assigned a job allocation combination rule that allows non-fixed-price entries, such non-fixed price entries are not registered as part of the 'fixed price' of either a fixed price job or a time and material job. This means that the amount invoiced for such non-</p>

Field	Description
	<p>fixed price entries is not included in the total invoiced amount on the basis of which the above-mentioned comparison is made.</p> <p>If the job parameter "Create Invoice Upon Job Closing" in the job parameter type "Fixed Price Set-Up" is assigned the value "Yes," closing a fixed price job assigned to this parameter will automatically create an invoice for the quote price less amounts invoiced on account, that is, a zero invoice. Any difference between the fixed price and the sales price of registered job entries will be posted on the activity entered in the job parameter attribute "Activity for Job Closing" assigned to the job in question. The sales price of registered job entries does thus not include non-fixed price entries when using the functionality regarding invoicing non-fixed price entries separately on a fixed price job. See the description of the window Job Allocation Combinations for further information on non-fixed price entries on fixed price jobs and time and material jobs.</p> <p>The job cannot be closed if the amount credited on account is greater than the amount invoiced on account. If the system parameter "Extended use of 0-invoice system numbers" is selected, the invoice number of the zero invoice printed is taken from the system number series "0-Invoice" defined in the window System Numbers in the Set-Up module. Note that if the last invoice created on such a job gives rise to the creation of a credit memo, the system number assigned to the credit memo will be derived from the system number series "Credit Memo."</p> <p>If the job is a fixed price job with overrun handling, and the job parameter attribute "Create Invoice Upon Job Closing" is assigned the value "Yes," Maconomy will close all job entries created as a result of any overrun. If the activity for overrun registration and the activity for job closing are not the same, the amount from the overrun activity will be moved to the activity for job closing. These activities are specified in the window Job Parameters in the job parameter type "Fixed Price Job Set-Up." Entries not included in the fixed price of the job (outlays, if the job parameter attribute "Include Outlays in Fixed Price" is assigned the value "No," and other entries not included in the fixed price using job allocation combinations) must be invoiced to the customer and closed before the job can be closed.</p> <p>Any job profit entries and overrun entries created when closing a fixed price job on which an invoice is automatically created upon job closing are also provided with the journal number of the invoice journal. Moreover, if a job uses detailed revenue recognition, any profit entries created at closing of the job will be split into the detail levels that apply to the relevant job; that is, a profit entry is automatically created for each detail level of the job.</p> <p>When closing a time and material job using revenue recognition by completion percentage and/or overrun handling or a job using WIP evaluation, Maconomy creates a revenue recognition journal which when posted ensures that the revenue recognized on the T&amp;M job is equal to the amount invoiced on the job. Thereby any revenue adjustment entries made during the life of the job are reversed. If the job uses detailed revenue recognition, Maconomy automatically creates a journal for each of the relevant detail levels applying to the job. See the description of the job parameter type "Revenue Recognition" for further</p>

Field	Description
	<p>information about the possibility of setting up jobs with overrun handling, revenue recognition by completion percentage, and WIP evaluation</p> <p>For each team assigned to the job, Maconomy checks if the field "Block Team when Unused" is marked for the team in question. If it is, and if all other jobs to which the team in question is assigned have also been closed, the team is blocked. However, the team is automatically reopened if the job is reopened.</p> <p>Maconomy will set all estimates to completion to 0 and evaluate the progress of the job to bring the planning budget up to date with actuals. You may turn off this feature of job closing by unmarking the system parameter "Calculate Progress at Job Closure."</p> <p>Once a job has been closed, it is no longer possible to create entries for the job. However, a closed job can be reopened at any time using the action "Reopen Job."</p>
<b>Reopen Job</b>	<p>When you select this action, you reopen the closed job in the window. Maconomy removes the mark in the "Closed" field and the date in the "Date Closed" field. You can only select this action if the job in the window is closed, that is, if there is a mark in the "Closed" field.</p> <p>Maconomy checks that the user has permission to reopen jobs, that is, that the field "Can Reopen Jobs" in the window Actions in the Set-Up module is marked for the user.</p> <p>Any blocked teams assigned to the current job are automatically reopened when reopening the job.</p>
<b>Roll Forward</b>	<p>This action will roll the job forward by copying the job and updating the name and year on the new job. A job can only be rolled forward once and only if it is not closed.</p>
<b>Copy Job</b>	<p>When you select this action, you copy the job shown in the window, including its budget and the job parameters assigned to it. If you have entered a number in the Copying island, this number will be assigned to the new job. Otherwise Maconomy will allocate a number automatically.</p> <p>The status of the new job will be "Order" if this has been specified in the "System Information" window. Otherwise it will be "Quote." It will not be assigned to any other job as a subjob, and it will have no subjobs assigned to it. If a quote price has been specified on the job that is copied, this amount is reset to zero on the new job. If you want to assign the job to another customer, change the customer number.</p> <p>If a standard budget is assigned to the selected job group, this budget is transferred to the new job and recalculated when the job is created by copying the current job. If the "Include Budget Texts" and "Include Item Lines" fields are marked, budget texts or item lines will be transferred from the standard budget. However, job budget lines containing blocked activities, tasks, dimensions, and so on, are not copied to the new job budget. Maconomy will issue a message stating which lines, if any, could not be copied to the new job.</p> <p>When copying a job, Maconomy attempts to include the job parameters from the existing job in the new job. However, if some of the job parameters on the</p>

Field	Description
	<p>existing job do not match the new job, Maconomy makes a derivation of job parameters from other job parameter selection rules created in the system. The job parameters that are derived to any job can be viewed and changed in the Job Parameter Selection window.</p> <p>Note that some very job-specific fields are blanked when copying. This includes the field "Estimated Ending Date."</p> <p>If a job phase list has been assigned to the existing job, it is copied to the new job. In this process, the planned duration of each phase is maintained, but the phases are moved so that the starting date of the first phase is set to today's date. The employee responsible for each phase is not copied, which means these employees must be specified for the new job in the Job Phases window.</p> <p>Note that new jobs can also be created from a template job. See the description of the island Creation in this window for further information about the use of template jobs.</p>
<b>Send Job to People Planner</b>	<p>This action will send the job, including budget, to People Planner. System parameters affecting this functionality are:</p> <ul style="list-style-type: none"> <li>Always Allow Send Action — If this is False, and Integration Status Notes are used, you can only push the job from Maconomy to People Planner once. After that, it will only be possible to import it from People Planner.</li> <li>Include Subjobs When Sending Job to People Planner — Allows including subjobs when sending jobs to People Planner.</li> <li>Default Job Budget Type — If a value is entered, this will be the budget type sent. If a value is not entered, the budget type currently shown in Job Budgets will be sent. There is an exception if the job has been sent to People Planner previously using another budget type. In that case, this budget type will be used again.</li> </ul> <p>The action is only available if add-ons for People Planner and Custom Actions are installed and the Enable Custom People Planner Actions system parameter is set to True.</p>

## Job Information Single Dialogs Workspace

Use this workspace to maintain information about the jobs that you manage in the Job Cost module.

The Job Information tab contains general and account information, and the Order Assignments sub-tab displays a list of the job quotes and sales orders from Maconomy's Sales Orders module. This workspace supplements the Jobs workspace, which also contains job information. While you use the Jobs workspace to create jobs, you use the Job Information workspace for more customer-related information such as payment and delivery address, invoice discounts, and payment terms.

When you create a job in the Jobs workspace, Maconomy retrieves information from other parts of the system, such as customer information from Accounts Receivable and system information from the Set-Up module. The Job Information workspace also displays status information about

printouts of quotes, order confirmations, invoices, and credit memos connected to the particular jobs.

**Note:** On typical jobs, a number of the fields are mandatory. However, if the job is a template job, those fields are not mandatory, so that you can leave fields empty as needed. See the Jobs workspace for information about template jobs.

You do not need to use this workspace to manage jobs if you use the terms of contract, delivery and payment address, and so on, which are described in the Accounts Receivable module.

## Job Information Tab

This section includes the fields and descriptions for the Job Information tab.

### Job Island

Field	Description
<b>Job</b>	<p>This is the job's number. It is the sole and absolute identification of the job. You cannot change it here.</p> <p>This field also shows the job name, which is entered in the Jobs window. You cannot change the name here, but you can change it in the Jobs window.</p>
<b>Job Group</b>	<p>This is the job group to which the job is assigned. You cannot change it here. Job group can only be changed in the window Jobs, and only as long as the job has "Quote" status.</p>
<b>Status</b>	<p>This is the job's current status. A job is either "Quote" or "Order." You cannot change its status here.</p> <p>When a job is created, it is automatically in "Quote," unless you have marked the field "Created as Order" in the window System Information. In the window Jobs, you can convert jobs in quote to "Order" and vice versa.</p> <p>As long as a job is on quote, you can only assign it to quotes (not sales orders) in the Sales Orders module. If there are quotes or sales orders for the job, these will be shown in the table part of the window.</p>
<b>Template</b>	<p>This field shows whether the job is a template job or a 'normal' job. See the description of the island Creation in the window Jobs for information about the use of template jobs.</p>
<b>Blocked for Budg.</b>	<p>This field shows whether the job is blocked for budgeting. If this field is marked, it is not possible to register budget lines on the job in the windows Job Budgets and Periodic Job Budgets.</p>
<b>Blocked for Time Reg.</b>	<p>This field shows whether the job is blocked for registration. If this field is marked, it is not possible to register information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.</p>
<b>Blocked for Amount Reg.</b>	<p>This field shows whether the job is blocked for amount registration. If this field is marked, it is not possible to register amount information on the job in, for</p>

Field	Description
	example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.
<b>Blocked for Inv.</b>	This field shows whether the job is blocked for invoicing. If this field is marked, it is not possible to create invoices and credit memos regarding the current job in, for example, the windows Invoice Selection and Job Invoicing, and these windows will not show jobs which are blocked for invoicing. However, you can still register time and expenses as well as other information on the job.
<b>Closed</b>	<p>This field is marked if the job is closed. You cannot change the field's value here.</p> <p>Jobs are closed using the action "Close Job" in the window Jobs, and they are reopened by choosing "Reopen Job" in the same menu.</p> <p>As long as a job is marked as closed, you cannot register entries to it. And you cannot make or revise budgets for it in the window Job Budgets. But you can always reopen a closed job.</p>

### Ship to Address Island

Field	Description
<b>Customer</b>	<p>This is the number of the customer associated with the job. The customer number is entered in the window Jobs when the job is created. You cannot change it in this window.</p> <p>The rest of the lines will show name and address of the customer. The information is retrieved from the window Customer Information Card in the Accounts Receivable module, when the job is created in the window Jobs. The information can be changed freely, regardless of whether the system parameter "Allow Job Specific Billing Addresses" is marked.</p>
<b>Attn.</b>	This is the customer's attention person. The name is retrieved from the window Customer Information Card in the Accounts Receivable module, when the job is created in the window Jobs. The name can be changed freely, regardless of whether the system parameter "Allow Job Specific Bill To Customer Attention Persons" is marked.
<b>Country</b>	This is the customer's country code. It is retrieved from the Customer Information Card, when the job is created in the window Jobs. You can choose another country in the pop-up field. The codes shown here are created in the Country pop-up field in the Set-Up module.
<b>Phone</b>	The functionality of this field is similar to that of the field "Country" above.
<b>Fax</b>	The functionality of this field is similar to that of the field "Country" above.
<b>Telex</b>	The functionality of this field is similar to that of the field "Country" above.

Field	Description
<b>E-mail</b>	The functionality of this field is similar to that of the field “Country” above.

### Customer Hierarchy Island

Field	Description
<b>Level 1-5</b>	These fields show the numbers and names of customers in the hierarchy levels above the customer in question. These fields are only available if Customer Levels are set up using the designated System Parameters.

### Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the number of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter “Create intercompany entries for companies with same parent company” is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section “Multiple Companies” in the chapter “Introduction to the G/L module.” Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p> <p>This field also shows the name of the specified settling company.</p>

### Payment Island

Field	Description
<b>Pmt. Terms</b>	<p>In this field, you can choose which payment terms to apply to the invoices for the job. Maconomy automatically suggests the payment terms normally applied to the customer, retrieving the information from the window Payment Information in the Accounts Receivable module. You can change the payment terms here.</p> <p>Please note that if the current job is set up for split billing (that is, there is more than one bill-to customer on the job), the payment terms can only be changed for the bill-to customer shown in this window. You can change the payment terms for all customers on the job in the window Bill to Customer Distribution. For more information, please see the description of the window Bill to Customer Distribution.</p> <p>Payment terms are defined in the window Popup Fields in the Set-Up module.</p>
<b>Blanket Invoice</b>	In this field, you can specify whether the job is to be included in a blanket invoice or blanket credit note to the customer. Maconomy supports blanket invoicing and crediting for both regular invoices and credit memos and for invoices and credit

Field	Description
	<p>memos on account. Maconomy suggests the value from the field "Blanket Invoice" in the customer's information card in the A/R module, but you can change it here.</p> <p>Blanket invoicing means that all non-invoiced but approved invoice selections to the customer are invoiced together in one invoice, provided that the jobs have the same bill-to customer and are assigned to the same company, the same department, the same company tax code, and the same currency code. Similar principles apply to blanket crediting; all crediting to the same customer can be joined in one credit memo. However, a credit memo selection will not be included in a blanket crediting if it was created from an invoice.</p> <p>If the system parameter "Blanket invoicing per main job" is marked, only main jobs and their subjobs are joined in the blanket invoice or credit memo. For more information about main job invoicing and crediting, please see the description of the window Invoice Layout Rules.</p>

### Customer Information Island

Field	Description
<b>Department</b>	<p>In this field, you select the department associated with the job. Maconomy suggests the value from the customer's information card in the Accounts Receivable module, but you can change it here.</p> <p>Departments are defined in the window Posting References in the G/L module.</p>
<b>Customer Group</b>	<p>This is the customer group to which the customer is assigned. Maconomy automatically suggests the value from the customer's information card. It is possible to change the value in this field until the first invoice has been printed on the job.</p>
<b>Language</b>	<p>In this field, you select the language code for the job. Maconomy suggests the value from the customer's information card in the Accounts Receivable module, but you can change it here.</p> <p>Language codes are created in the window Popup Fields in the Set-Up module.</p>
<b>Tax</b>	<p>Mark this field if invoices for the job are subject to tax. Maconomy suggests the value from the customer's information card in the Accounts Receivable module, but you can change it here.</p> <p>Please note that if the current job is set up for split billing (that is, there are more than one bill-to customer on the job), and the mark in this field is removed, the mark is removed for all bill-to customers on the job. You can change the tax setting for individual customers on the job in the window Bill to Customer Distribution. For more information, please see the description of the window Bill to Customer Distribution.</p>
<b>Tax No.</b>	<p>In this field, you can write the customer's tax number. Maconomy suggests the value from the bill-to customer's information card in the Accounts Receivable module, but you can change it here. If a validation rule is assigned to the tax number field in the window Rules of Validation in the Set-Up module,</p>

Field	Description
	<p>Maconomy will validate the tax number upon entry or change. If you change the bill-to customer, Maconomy retrieves the new tax number.</p>
<b>Company Tax Code</b>	<p>In this field, you can select a company tax code created in the window Popup Fields. Maconomy uses the field to determine which tax code to use for calculation of tax on the current job, as the reporting code is one of the tax code selection criteria in the window Tax Tables in the G/L module. Maconomy uses the tax table specified in the window Company Information for the job's responsible company. The tax code, however, is only transferred from a tax table, if the use of tax tables has been selected in the window System Information, and only if a tax table has been assigned to the current job's responsible company. If no tax table has been specified for the responsible company, or if differentiated tax has been selected but not the use of tax tables, Maconomy transfers the tax code specified for each activity in the window Activities. If neither the use of tax tables nor differentiated tax has been selected, Maconomy uses the standard tax code specified in the window System Information in the Set-Up module.</p> <p>If you use tax tables, and the system parameter "Get on account tax code from tax table" is marked, the tax code to be transferred to on account invoices is found in a tax table. But instead of using the item tax code specified on an activity, item or account, Maconomy uses the on account tax code in the field "On Account Tax Code" in the window System Information in the Set-Up module (along with various other information) to point out the relevant tax table line. If the system parameter "Get on account tax code from tax table" is not marked, the standard tax code specified in the window System Information is always used as the tax code on invoices on account. For further information about the information used to point out the correct tax code, please see the description of the window Tax Tables in the G/L module.</p> <p>The reporting code is used in connection with posting of job entries to determine which tax report entries to create when posting on the current job. Based on the tax report entries, it is possible to create tax reports showing tax and tax basis postings associated with a given tax report field. However, this type of reporting can only be done, if extended tax reporting has been selected in the window System Information.</p> <p>The value is transferred from the customer's information card at the creation of a job. It is possible to change the value here.</p> <p>It is only possible to blanket invoice jobs with the same reporting code.</p>
<b>Cust. Payment Mode</b>	<p>In this field, you can select the customer payment mode to be used on the current job. Maconomy suggests the value from the customer's information card, but you can select another customer payment mode for the current job.</p> <p>Please note that if the current job is set up for split billing (that is, there is more than one bill-to customer on the job), the customer payment mode can only be changed for the bill-to customer shown in this window. You can change the customer payment mode for all customers on the job in the window Bill to Customer Distribution. For more information, please see the description of the window Bill to Customer Distribution.</p>

Field	Description
<b>Global Location No.</b>	If the customer has requested that you use a specific global location number on invoices pertaining to the current job, you can specify the location number in question here. The number specified here will be transferred to invoices for the current job. Maconomy suggests the global location number specified in the window Company Specific Payment Information for the customer in question, but you can change it here if the location number to be used on the current job is not the same as the standard location number of the customer. For further information about the concept of global location numbers, see the introduction to the window Company Locations in the G/L module.
<b>Enterprise</b>	This field is used to assign the job to an enterprise. Maconomy automatically suggests the value from the customer's information card. It is possible to change the value.
<b>Segment</b>	This field is used to assign the job to a segment. Maconomy automatically suggests the value from the customer's information card. It is possible to change the value.
<b>Area</b>	This field is used to assign the job to an area. Maconomy automatically suggests the value from the customer's information card. It is possible to change the value.
<b>Post Vendor Exch. Rate Variances on Job</b>	<p>Use this field to specify how to post exchange rate variances that occur when you register vendor payments.</p> <p>If you select this check box, the exchange rate variances are posted to the jobs to which the paid vendor invoices were allocated.</p> <p>If you do not select this check box, the exchange rate variances are posted to the Vendor Exchange Rate Gain or Vendor Exchange Rate Loss account.</p> <p>The default value is that the check box is not selected.</p> <p>When you create a job, this field is initialized to the value of the Post Vendor Exch. Rate Variances on Job field on the company-specific customer for the job. You can change the field in this window.</p> <p>You can change the value of the field as many times as needed, such as when approving invoice selection, when printing an invoice, and so on. What is important is its value when you post.</p>

### Credit Memo Island

Field	Description
<b>Last Credit Memo Date</b>	This is the date of the last job credit memo. It cannot be changed here.
<b>No. Credit Memos</b>	This field shows how many credit memos have been made for the job. The value cannot be changed here.

Field	Description
<b>No. of Copies</b>	This field shows how many times credit memos have been printed for the job, including reprints. It does not include the number of copies chosen in your computer's standard print dialog. The value cannot be changed.

### Dimension Combination Island

Field	Description
<b>Dimension Combination</b>	<p>In this field, you can enter the number of a dimension combination of the type "Dimension Derivation" created in the window Dimension Combinations. If a description has been assigned to the dimension combination, the text is displayed in the field "Description."</p> <p>If you specify a dimension combination, Maconomy will use the values in this dimension combination when deriving dimensions from the current job. However, any dimension derivation values specified in this island will be used instead of those specified for the same dimensions in the dimension combination. This means that the dimension combination only applies to the dimensions for which no value has been entered on the job.</p> <p>The functionality on period specific sets of derived dimension values in the window Derived Dimensions, which is described in the field "Location" below, also applies to this field.</p> <p>This field also shows the number of the responsible company as specified in the island Company. The name of the company is displayed in the field "Description." The company number cannot be changed, but the field "Overwrite" can be changed.</p> <p>The information in the field will only be used in the cases when a company number in the table part of a window can be derived from the job specified. In these cases, the current company will only overwrite any manually specified value for the dimension if you have marked the field "Overwrite" on the current job. If you do not select to overwrite, the dimension value will only be transferred to a table line at creation if the dimension field "Company No." is not manually completed.</p> <p>Even if you have specified a dimension combination in the field "Dimension Combination," a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question.</p> <p>The functionality on period specific sets of derived dimension values in the window Derived Dimensions, which is described in the field "Location" below, also applies to this field.</p> <p>For a further description of derived dimensions, refer to "Introduction to the G/L Module" and the description of the fields and functions for the windows Dimension Derivations and Dimension Combinations in the G/L module.</p>

**Derived Company Island**

Field	Description
<b>Company</b>	<p>This field shows the number of the responsible company as specified in the island Company. The name of the company is displayed in the field "Description." The company number cannot be changed, but the field "Overwrite" can be changed.</p> <p>The information in the field will only be used in the cases when a company number in the table part of a window can be derived from the job specified. In these cases, the current company will only overwrite any manually specified value for the dimension if you have marked the field "Overwrite" on the current job. If you do not select to overwrite, the dimension value will only be transferred to a table line at creation if the dimension field "Company No." is not manually completed.</p> <p>Even if you have specified a dimension combination in the field "Dim. Comb. No." above, a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question.</p> <p>The functionality on period specific sets of derived dimension values in the window Derived Dimensions, which is described in the field "Location" below, also applies to this field.</p> <p>For a further description of derived dimensions, refer to "Introduction to the G/L Module" and the description of the fields and functions for the windows Dimension Derivations and Dimension Combinations in the G/L module.</p>

**Derived Dimensions Island**

Field	Description
<b>Location</b>	<p>In this field, you can enter a value for the dimension Location. If a description has been assigned to the location, the text is displayed in the field "Description." If you do not enter a value manually, Maconomy will try to derive a value on the basis of the order of priority specified in the window Dimension Derivations in the G/L module. If a value cannot be derived, Maconomy will transfer the standard value from the window System Parameters in the Set-Up module.</p> <p>Even if you have specified a dimension combination in the field "Dim. Comb. No." above, a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question. This means that the dimension combination only applies to this dimension if you have not entered a value in this field.</p> <p>Please note that if a dimension combination has been specified in the field "Dim. Comb. No.," a mark in the field "Overwrite" will only have effect if you have also entered a dimension value. If you mark the field "Overwrite" but you do not enter a dimension value in this field, the "Overwrite" field is ignored, as dimension values and overwriting specification are always retrieved together from the same dimension derivation island, dimension combination or dimension combination line.</p> <p>In the window Derived Dimensions, you can create period specific sets of derived dimensions if the dimension values to be derived from the current job should vary, depending on the entry date of the registrations to which</p>

Field	Description
	<p>dimension values are derived from the current job. In this context, the value in this field is always reflected in the corresponding field on the dimension derivation line that has a blank ending date, and changing the dimension values in this field will cause the corresponding information on that dimension derivation line to be updated accordingly, and vice versa.</p> <p>When you create a job, Maconomy automatically creates a line in the window Derived Dimensions with the information specified in this island, and a blank starting and ending date, indicating that this line applies on all registrations regardless of entry date. In effect, as long as you do not need the dimension values derived from the job to change on a given date, you only need to enter dimension derivation information in this island, and not in the window Derived Dimensions.</p> <p>Please note, however, that if you have added a period-specific set of derived dimensions in the window Derived Dimensions, the dimension derivation line that has a blank ending date is not necessarily the dimension derivation line valid on today's date. You should therefore be aware that if period specific sets of derived dimensions have been created for the job, the dimension values derived from the current job are not necessarily those appearing in this island.</p> <p>See the section on dimension derivation in the chapter "Introduction to the G/L Module" as well as the description of the windows Dimension Derivation and Dimension Combinations in the G/L module for further information about dimension derivation. For information on period specific sets of derived dimensions, see the window Derived Dimensions in the G/L module.</p>
<b>Entity</b>	This field shows the name of the company shown in the field "Location" above.
<b>Project</b>	This field shows the name of the company shown in the field "Location" above.
<b>Purpose</b>	This field shows the name of the company shown in the field "Location" above.
<b>Spec. 1-3</b>	This field shows the name of the company shown in the field "Location" above.
<b>Local Spec. 1-3</b>	This field shows the name of the company shown in the field "Location" above.

### Billing Address Island

Field	Description
<b>Bill to Customer</b>	In this field, you enter the number of the customer receiving the invoice. Maconomy retrieves the value from the ship-to customer's customer information card in the module Accounts Receivable, but you can change it here. Maconomy verifies that the customer exists in the module Accounts Receivable.

Field	Description
	<p>The two customer numbers can, for example, be different if one customer has commissioned the job and another is paying for it.</p> <p>The other lines in this field show the name and address of the bill-to customer. The information is retrieved from the window Customer Information Card in the module Accounts Receivable.</p> <p>If the system parameter “Allow Job Specific Billing Addresses” is marked, and you mark the field “Job Specific Address” in this island, you can specify a different address for the bill-to customer from the one that is specified in the Customer Information Card. The changed address is reflected on the current job throughout the Job Cost system (for example, on printouts such as invoices and credit memos), including the window Bill to Customer Distribution.</p> <p>If you use main job invoicing and change the bill-to customer on a main job, the bill-to customer is changed on all subjobs in the main job/subjob hierarchy. You cannot change the bill-to customer on individual subjobs if you use main job invoicing.</p> <p>If the current job is set up for split billing (that is, there are more than one bill-to customer on the job), changing the bill-to customer in this window adds the new customer to a line in the table part of the window Bill to Customer Distribution with a setup percentage of zero. Merely changing the address does not add a new line to the table part. For more information, please see the description of the window Bill to Customer Distribution.</p>
<b>Appropriation</b>	In this field you must specify the bill-to customer appropriation. If the bill-to customer with the given appropriation does not exist, you will receive an error message.
<b>Invoice Currency</b>	This field shows the invoice currency for the line. If a bill-to customer is specified on the line, then the invoice currency of this bill-to customer is shown. If no bill-to customer is specified, then the field shows the invoice currency of the job.
<b>Attn.</b>	This field shows the bill-to customer’s attention person. The name is retrieved from the window Customer Information Card in the Accounts Receivable module, when the job is created in the window Jobs. If either the system parameter “Allow Job Specific Billing Addresses” or “Allow Job Specific Bill To Customer Attention Persons” is marked, you are able to change the attention person independently of the information in the customer information card. See also the description of the field “Bill to Customer” above and the field “Job Specific Address” below.
<b>Country</b>	This field shows the bill-to customer’s country code. It is retrieved from the Customer Information Card in the Accounts Receivable module, when the job is created in the window Jobs.
<b>Phone</b>	The functionality of this field is similar to that of the field “Country” above.
<b>Fax</b>	The functionality of this field is similar to that of the field “Country” above.

Field	Description
<b>Telex</b>	The functionality of this field is similar to that of the field "Country" above.
<b>E-mail</b>	The functionality of this field is similar to that of the field "Country" above.
<b>Job Specific Address</b>	<p>If the system parameter "Allow Job Specific Billing Addresses" is marked, you can mark this field to allow the bill-to customer's address to be changed in this window and in the table part of the window Bill to Customer Distribution. Otherwise, the address from the customer card of the bill-to customer will be used on invoices, and so on.</p> <p>Similar functionality exists in the window Bill to Customer Distribution. In that window, you can change the bill-to address for each combination of customer and appropriation. If you do this, you cannot change the bill-to customer address in this window, but you must continue to maintain addresses in the window Bill to Customer Distribution. For more information, please see the description of the window Bill to Customer Distribution.</p> <p>You cannot change the bill-to customer's address on a template job.</p>

### Company Island

Field	Description
<b>Company</b>	<p>This field shows the number of the company responsible for the current job. You cannot change the value here.</p> <p>This field also shows the name of the specified company.</p>

### Quote Island

Field	Description
<b>Date Printed</b>	This is the date a quote was last printed for the job. The date cannot be changed here.
<b>No. of Copies</b>	This shows how many times you have printed a quote for the job. It does not include the number of copies chosen in your computer's standard print dialog. The value cannot be changed.

### Order Confirmation Island

Field	Description
<b>Date Printed</b>	This is the date an order confirmation was last printed for the job. The date cannot be changed here.
<b>No. of Copies</b>	This shows how many times you have printed an order confirmation for the job. It does not include the number of copies chosen in your computer's standard print dialog. The value cannot be changed.

**Invoice Island**

Field	Description
<b>Date of Last Invoice</b>	This is the date of the last invoice made for the job. It cannot be changed here.
<b>No. Invoices</b>	This field shows how many times an invoice has been made for the job. It cannot be changed here.
<b>No. of Copies</b>	This field shows how many times an invoice for the job has been printed, including reprints. It does not include the number of copies chosen in your computer's standard print dialog. The value cannot be changed.

**User Island**

See the chapter "Getting Started" for a description of the fields in the island User. Note, however, that until a quote, an order confirmation, an invoice or a credit note has been printed for the current job, the field "Version No." will always show the value 1. The information in the island applies to the current job, and therefore a change in this window will also be reflected in the island User in the windows Jobs, Job Descriptions and Job Budgets.

**Budget Texts Island**

Field	Description
<b>Text Lines for Purchase</b>	In this field, you can mark that texts entered in the window Job Budget Texts should be transferred to purchase orders created from the job budget lines. When you create a new job, Maconomy suggests the value entered in the window System Information.

## Order Assignments Sub-Tab

This section includes the fields and descriptions for the Order Assignments sub-tab.

Field	Description
<b>Order No.</b>	<p>This field shows the numbers of the quotes and/or sales orders that have been made for the job in the windows Quotes and Sales Orders in the Sales Orders module. The value cannot be changed here.</p> <p>If you sell any items from Maconomy's inventory system, the job is assigned to one or several sales orders. However, if the status of the job is "Quote," the job is assigned to quotes instead.</p> <p>The item sale is invoiced separately in the Orders module, but the sales figures are transferred to the job. This makes it possible to cost the job afterwards. The job is attached to a sale by specifying job number and activity number in the window Quotes or Sales Orders.</p>
<b>Activity No.</b>	This is the number of the activity to which the quote or sales order is registered in the Job Cost system. The value is transferred from the island

Field	Description
	Job Cost on the quote or sales order in question. The value cannot be changed here.
<b>Activity Name</b>	This field displays the activity name. The activity name is retrieved from the window Activities for the activity in question.
<b>Task</b>	These fields show the task, if any, to which the sales of the current quote or sales order is to be registered in the Job Cost module. The value of this field is transferred from the corresponding field on the quote or sales order in question, and as a result, it cannot be altered here.
<b>Task Description</b>	This field displays the task description. The task description is retrieved from the window Job Tasks for the task in question.
<b>Location</b>	This field shows the dimensions to which the sales of the current quote or sales order is to be registered in the Job Cost module. The value is transferred from the corresponding field on the quote or sales order and as a result, it cannot be altered here.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Description</b>	In this field, you enter an entry text which will be used for the quote or sales order, when it is entered in the Job Cost module. Maconomy suggests the text attached to the activity in the "Activity No." field for the quote or sales order on the line. However, you can change the text here.

## Job Descriptions Workspace

Use this workspace to assign descriptive texts to jobs to document a job flow.

The Job Descriptions tab displays information about the current job. The Note Lines sub-tab displays the contents of any note that you assigned to the current job, allowing you to describe the job in detail.

To enter or edit text in the sub-tab, you must assign a note to a job. You can do this manually or use the **Create Note** action. See the description of the **Note No.** field for details.

Text that you enter in the sub-tab automatically wraps when you click **Enter** or use the **Wrap lines** action.

You can assign a heading to each group of text lines. You select headings from the options in the note type that you select in the **Job Description** job parameter type for each job. Define the headings in the Note Types workspace in the Set-Up module.

You can use the heading as an internal code to indicate this portion of the job flow. For example, if the job is related to customer service around a returned product, the first heading might be *Received*. You could then include the customer's explanation of what is wrong with the product. The next heading might be *Transferred*, with the description naming the department to which the job was transferred. You can also specify the values and texts that you enter in this workspace on template jobs.

Use the Job Search workspace to search for all descriptions and headings. For example, you might search for jobs of a certain status.

## Job Descriptions Tab

This section includes the fields and descriptions for the Job Descriptions tab.

### Customer Island

Field	Description
<b>Customer</b>	This is the number of the customer associated with the job. The customer number is entered in the window Jobs when the job is created. You cannot change it in this window. This field also shows the customer's name as entered in the Customer Information Card in the A/R module. The name cannot be changed here, but you can change it in the Job Information window.

### Job Island

Field	Description
<b>Job No.</b>	This is the job's number. It is the sole and absolute identification of the job. You cannot change it here.  This field also shows the job name, which is entered in the Jobs window. You cannot change the name here, but you can change it in the Jobs window.
<b>Job Group</b>	This is the job group to which the job is assigned. You cannot change it here. Job group can only be changed in the window Jobs, and only as long as the job has "Quote" status.
<b>Department</b>	In this field, you choose the department to which the job belongs. Maconomy suggests the value from the customer's information card in the A/R module, but you can change it.  Departments are defined in the window Posting References in the G/L module.
<b>Status</b>	This is the job's current status. A job is either "Quote" or "Order." You cannot change its status here.  When a job is created, it is automatically in "Quote," unless you have marked the field "Created as Order" in the window System Information. In the window Jobs, you can convert jobs in quote to "Order" and vice versa.

Field	Description
	As long as a job is on quote, you can only assign it to quotes (not sales orders) in the Sales Orders module. If there are quotes or sales orders for the job, these will be shown in the table part of the window.
<b>Template</b>	This field shows whether the job is a template job or a 'normal' job. See the description of the island Creation in the window Jobs for information about the use of template jobs.
<b>Current Phase</b>	This field displays the name of the current job phase, if a job phase list has been assigned to the job in the window Job Phases, and a phase has been commenced.
<b>Job Proc. Status</b>	This field displays the current job processing status. This status is specified if events have been assigned to the job in the window Events or in the window Job Events in the Contact Management module, and will be transferred to this window when the event is closed. For further information see the description of the windows Events and Job Events in the Contact Management module.
<b>Project Manager</b>	In this field, you can enter the number of an employee created in the window Employees in the Set-Up module. Maconomy suggests the number of the user creating the job if this user has an employee number assigned to him.  The project manager in this field is the one who can approve time and expense sheet lines if the fields in the island Approval indicate that the project leader can or must approve time and expense sheets. If so, this field must be completed. Furthermore, the project manager of a job can initiate the first job phase and end phases if job phases are used on the job.  This field also shows the name of the specified project manager.
<b>Sales Person</b>	In this field, you enter the number of the employee who is registered as sales person in the window Employees in the Set-Up module. If you do not specify a sales person number at creation of the job, Maconomy will copy this information from the customer assigned to the current job.  Sales in connection with this job will be included in any commission calculation for the sales person.  This field also displays the name of the specified sales person.
<b>Account manager</b>	This field shows the name and number of the account manager of the company-specific customer (the bill-to customer).
<b>Responsible</b>	This is the name of the person responsible for the job. Maconomy suggests the name of the user. The name appears in various other windows and on printouts from the Job Cost module.
<b>Closed</b>	This field is marked if the job is closed. You cannot change the field's value here.  Jobs are closed using the action "Close Job" in the window Jobs, and they are reopened by choosing "Reopen Job" in the same menu.

Field	Description
	As long as a job is marked as closed, you cannot register entries to it. And you cannot make or revise budgets for it in the window Job Budgets. But you can always reopen a closed job.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User. Note, however, that until a quote, an order confirmation, an invoice, or a credit note has been printed for the current job, the field “Version No.” will always show the value 1. The information in the island applies to the current job, and therefore a change in this window will also be reflected in the island User in the windows Jobs, Job Information and Job Budgets.

### Employees Island

Field	Description
<b>Employee 1-10</b>	In these fields, you can assign up to ten employees to the current cob. When you enter an employee number in the “Employee No.” field, the name of the employee is displayed. These fields are for information only, but may be used in the automatic creation of teams using the action “Create Teams” in the Timing Plans window. Using Maconomy’s layout editing tools, the fields can be placed on various printouts.

### Extra Fields Island

Field	Description
<b>Text 1-25</b>	<p>In these fields, you can enter various information about the job.</p> <p>If you want to put restrictions to some or all the texts entered in these fields, the contents can be delimited by applying an option list to each of the 20 text fields. Option lists are created in the window Option Lists in the Set-Up module and are subsequently specified in the relevant attributes in the job parameter type “Job Text Option Lists” for the job in question. If you have, for example, specified an option list in the attribute “Text 1 Option List,” only values belonging to that option list can be entered in the first text field in this island.</p> <p>If no values have been defined in the attributes of the job parameter type “Job Text Option Lists,” you can enter any text you like in the fields in this island.</p> <p>Using Maconomy’s layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.</p>
<b>Boolean 1-5</b>	In these Boolean fields you can assign attributes to your job.
<b>Date 1-10</b>	In these fields, you can enter dates connected to the job. These are date fields. Using Maconomy’s layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The

Field	Description
	information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.
<b>Amount 1-5</b>	In these fields, you can enter amounts connected to the job. These are amount fields.
<b>Popup 1-10</b>	<p>In these fields, you can select various information about the job. These are pop-up fields, which means you can choose from the options created for each field. They are created in the window Popup Fields.</p> <p>Using Maconomy's layout editing tools, it is possible to change the position of the fields and to include them in various printouts connected to the job. The information is primarily used for internal use, for example, the work description. It can also be shown on printouts of job budget, job report, quote and order confirmation, but not on invoices.</p>
<b>Customer Popup 1-5</b>	In these five fields, you can select various information about the customer. These are pop-up fields, which means that you can choose from the options created for each field. They are created as Customer Popup 1 Customer Popup 5 in the window Popup Fields. When the job is created, or when a different customer is selected on the job, the values from the customer's information card are copied to these fields, but you can change the selections later.

### Description Island

Field	Description
<b>Job Name</b>	This shows the job name, which is entered in the window Jobs. You cannot change the name here, but you can change it in the window Jobs.
<b>Internal</b>	In these fields, you can enter a description of the job for internal use. The fields are purely for reference and are used in other windows and on various printouts in the Job Cost module.
<b>Customer</b>	In this field, you can enter a comment about the customer for internal use. Maconomy automatically suggests the order comment from the Customer Information Card, but you can change it. The field is purely for reference.
<b>Ref.</b>	In this field, you can enter the name of the customer representative dealing with the order. The field is purely for reference, and the name appears on various printouts and in other windows in the Job Cost module. The text in the field is printed on all external documents about the job.
<b>Blanket invoice Ref.</b>	In this field, you can enter a text as a reference for the job. The text will be displayed on the invoice if you use blanket invoicing (that is, invoice lines from multiple jobs are combined on one invoice, if the bill-to customer, company, department, company tax code, and currency code are identical), and if the invoice layout rule applied to the job indicates that the text should be shown. Blanket invoicing is selected in the Job Information window. For more information, please see the description of the Invoice Layout Rules window.

Field	Description
<b>Start Date</b>	In this field, you can enter the date on which the job is scheduled to start. It is purely for reference.
<b>Estimated Ending Date</b>	In this field, you can enter the date on which the job is expected to be finished. The date is for information only.

### Company Island

Field	Description
<b>Company</b>	This field shows the number of the company responsible for the current job. You cannot change the value here. This field also shows the name of the company responsible for the current job.

### Document Archive Island

Field	Description
<b>Document Archive</b>	<p>In this field, you can assign a document archive to the job description in question. By assigning a document archive to a job description, you can keep track of the various documents related to the job description. Document archives are created in the window Document Archives in the Set-Up module. See the description of that window for further information on the use of document archives.</p> <p>This field also shows a description of the specified document archive.</p>
<b>Document Count</b>	This field shows the total number of documents in the Document Archive.

### Note Island

Field	Description
<b>Note</b>	<p>In this field, you can specify the number of a note relating to the current job. The contents of this note are shown in the table part of the window, and you can change the text freely. It is only possible to enter information in the table part if a note has been specified in this field.</p> <p>You can specify the number of an existing note manually, but by using the action "Create Note" you can have Maconomy automatically create a new note and assign it to the current job in this field. Notes can also be created manually in the window Notes in the Set-Up module where you can also edit the text and description.</p> <p>This field also shows a description of the specified note.</p>

## Note Lines Sub-Tab

This section includes the fields and descriptions for the Note Lines sub-tab.

Field	Description
<b>Heading</b>	<p>In this field, you can enter a heading for the description of the job specified in the field "Value" on the line. A heading can only appear once in a job description and must be one of the heading options in the note type assigned to the current job's job parameter of the type Job Description. You can see the possible options by selecting the action "Find Note Type Specification" in the Find menu.</p> <p>Assigned to the heading is a section of text fields in the column "Description" from the row that contains the heading to the row that contains the next heading. The format of the heading determines what type of information may be entered in the field "Value" on the lines in this section. The format of each heading is specified in the window Note Types in the Set-Up module, and can, for example, indicate that the "Value" fields under the heading in question can only contain figures or amounts. For further information on the use of heading formats, see the description of the window Notes.</p>
<b>Value</b>	<p>In this field, you can write a description of the job at the level specified in the field "Heading" to the right of this field. You can write 255 characters in the field. When you press "Enter," Maconomy automatically wraps the text, moving the text exceeding the standard width of the field down to the necessary number of lines.</p> <p>If you create a text line right under another text line, and if these two lines belong to the same heading, the new line will be wrapped with the above line. That is, the lines are pulled together.</p> <p>The text can be split into sections by inserting one or more blank lines between the respective sections. Note that you cannot use the Enter key to split the text into sections as this key as usually in Maconomy is used for executing new changes.</p> <p>If a heading is specified on the current line or a line above it, the value in this field must comply with the format specified for the heading on the current line or, if no heading is specified on the current line, the nearest above line where a heading has been specified. Similarly, if an option list has been specified for the heading in question in the note type, you can only select an option within the option list in question. For further information on the use of heading formats, see the fields "Format" and "Option List" in the window Note Types.</p>
<b>Format</b>	This field shows the format of the value, as defined for the note type heading in the Note Types window's table part

## Actions

This section shows the Actions available in the Job Descriptions workspace.

### Top Tab

Field	Description
<b>Create Note</b>	When you select this action, Maconomy creates a note in the window Notes and assigns it to the current job. The note created is assigned the note type

Field	Description
	which is assigned to the current job's job parameter of the type Job Description. You cannot enter information in the table part until a note has been assigned to the job either manually or by using this action.
<b>Wrap lines</b>	When you select this action, Maconomy wraps the text entered in the table part as described in the field "Description." When you enter information in this window, Maconomy automatically wraps the text entered, but lines created using the import program Import Jobs are not wrapped unless you use this action.
<b>Attach Document</b>	This action allows you to attach a document to the job.

## Job Price Information Single Dialogs Workspace

Use this workspace to gather all of the information about how prices and currency information are determined for a job.

This workspace also enables you to create a job price list that is specific for the current job. You also use this workspace to select a date to freeze exchange rates for the job, as well as select an exchange rate table.

The Price island displays pricing information for the current job, including job price lists assigned to the job, if any. You can also specify a separate job price list that contains cost, intercompany price, and sales price. Use this if you want to derive a cost price based on a combination of employee and activity, but a sales price based on a different combination, such as the dimensions Location and Specification 1. Or, you can specify the same job price list for all three price types.

### Currencies

Different currencies might be used in a job process. For example, you use one currency, and your customer uses another. If so, you can use a fixed exchange rate by selecting a date to freeze the exchange rates.

At times, the customer's native currency and your job currency may evolve differently. This may make it more expensive than exchange rates at budgeting time suggested to purchase the external services to deliver to the customer, while the value of the customer's currency has deteriorated compared to your company's currency. When you settle and close the job, the profitability calculations might thus show a lower gross ratio than expected.

Since exchange rates are beyond the control of the budget holder, you can limit their influence over job profitability by choosing to use fixed exchange rates. After you fix the job's exchange rates, then invoices on account sent to the customer remain stable. Thus you take the exchange rate fluctuation risks as real exchange of the sums received that may deviate from the job budget.

### Setup

In the Set-Up module, System Parameters workspace, select the **Fixed exchange rates in budgets only** system parameter to limit the use of fixed exchange rates on the job budget.

If you select this parameter, Maconomy converts all of the currency transactions that you enter on the job, from budget to posting, according to the exchange rate that is in effect on that date. For

more information, see the description of the **Fixed exchange rates in budgets only** system parameter.

**Note:** The fixed exchange rate does not influence prices in the Job Cost module that are calculated by item price lists.

### Job-Specific Price List

In the Job Price List Lines sub-tab, you can create a job-specific price list. Instead of creating many job price lists with minor differences, such as price variations, you can use a few general job price lists and then add exceptions to these price lists in a job-specific price list. The job-specific price list has a higher priority than the general price lists.

**Note:** If you set the job up to control prices from the budget, maintain the lines in the Job Price List Lines sub-tab in this workspace from the Job Budgets workspace. You cannot edit them in this workspace.

### Job Price Information Tab

This section includes the fields and descriptions for the Job Price Information tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the number and name of the current job.
<b>Job Group</b>	This field shows the job group to which the current job is assigned.
<b>Time Unit</b>	Use this field to specify the default time unit for prices on time activities. You must fill in this field in both the tab and sub-tab. When you create a line in the sub-tab, the field is auto-populated with the default value from this field. Price calculation relies on the time unit specified on the line.
<b>Template</b>	This field shows whether the job is a template job or a normal job. If the job is a template job, a number of the fields which are mandatory on a normal job will not be mandatory on the template job. This means that you can fill in only those fields you wish to be transferred to new jobs created on the basis of the template job. However, you should note that if you want to enter prices in the table part of this window on a template job, you must first specify a currency in the "Currency" field in the Price island.

#### Price Island

Field	Description
<b>Currency</b>	In this field, you can choose the currency of the job. Maconomy automatically suggests the value normally applied to the customer, retrieving it from the Customer Information Card workspace. You cannot change the currency if you

Field	Description
	have made entries on the job. If you change the currency, any budget figures for the job are recalculated to match the selected currency. The same applies to prices in job specific price lists in this workspace.
<b>Job Price List, Cost</b>	In this field, you can select a job price list to be used for calculating cost prices. The suggested value in the field is transferred from the delivery customer's information card. If you want to use a job price list that is different from the one suggested, you can change the value here. For more information about job price lists, see the Job Price Lists workspace and "Appendix A: Price Calculation in the Job Cost Module." This field also shows the description of the specified job price list. The description derives from the Job Price Lists workspace.
<b>Job Price List, Intercomp.</b>	In this field, you can select a job price list to be used for calculating intercompany prices. The functionality of this field is similar to that of the "Job Price List, Cost" field. This field also shows the description of the specified job price list. The description derives from the Job Price Lists workspace.
<b>Job Price List, Sales</b>	In this field, you can choose a job price list to be used for calculating the prices of the activities used for the job. If you have selected the "Check Price List Currency" system parameter in the System Parameters workspace in the Set-Up module, Maconomy issues a warning if you choose a price list in a currency different from the base currency of the job. The current exchange rate table for sales is applied for the conversion of currencies. The functionality of this field is similar to that of the "Job Price List, Cost" field. This field also shows the description of the specified job price list. The description derives from the Job Price Lists workspace.
<b>Job Price List, Standard Sales</b>	In this field, you can choose a job price list to be used for calculating the standard billing prices of the activities used for the job. The functionality of this field is similar to that of the "Job Price List, Sales" field. This field also shows the description of the specified job price list. The description derives from the Job Price Lists workspace.
<b>Item Price List, Intercomp.</b>	<p>In this field, you can select an intercompany price list to be used in the pricing of work carried out on the job by employees assigned to other companies. This means that if the company specified in the "Executing Company" field in the Job Journal workspace is different from the one responsible for the job journal, the intercompany price list is used to determine the price of the work performed. The price lists from which you can choose are of the type "Sales Price List," and they are created and maintained in the Price Lists workspace in the Inventory module.</p> <p>If you have selected the "Check Price List Currency" system parameter in the System Parameters workspace in the Set-Up module, Maconomy issues a warning if you choose a price list in a currency different from the base currency of the job. In this case, Maconomy converts the prices on the price list to the base currency of the job according to the current exchange rate table for sales.</p>
<b>Price Step</b>	In this field, you can enter a price step from 1 to 6, which means that the prices suggested for the items used for the job are from a fixed-price step in the

Field	Description
	<p>selected price list, as defined in the Quantity Discounts workspace in the Inventory module. This field is only functional if you select a value in the "Item Price List, Intercomp" field.</p> <p>Note that if you specify a price step, Maconomy uses this price step, regardless of whether the quantity entered on a job budget line or job entry would normally justify a lower price because of a quantity discount.</p>
<b>Item Price List, Sales</b>	<p>In this field, you can select a price list to be used in the pricing of items used in connection with the current job. The item numbers for these items are entered into the "Item No." field in the Employees or Activities workspace, if the company uses central control of the hourly price per employee or per activity.</p> <p>Maconomy automatically transfers the value from the Order island on the customer's information card, but you may choose to select a different price list to be used for the current job. You can, however, only choose an existing sales price list, that is, price lists of the type sales price list that have been created in the Price Lists workspace in the Inventory module. You can also select the value "Blank" in this pop-up field, meaning that the suggested prices are calculated based on the current cost prices and markup percentages.</p> <p>If you have selected the "Check Price List Currency" system parameter in the System Parameters workspace in the Set-Up module, Maconomy issues a warning if you choose a price list in a currency different from the base currency of the job. In this case, Maconomy converts the prices on the price list to the base currency of the job according to the current exchange rate table for sales.</p>
<b>Price Step</b>	<p>The functionality of this field is similar to that of the "Price Step" field. However, in this field, Maconomy automatically transfers the value from the field "Price Step" on the Customer Information Card in the Accounts Receivable module.</p>
<b>Fixed Markup (Amts.)</b>	<p>You can mark this field if you want to calculate billing prices based on a fixed markup percentage for all sales prices when calculating the gross margin of the current job. A billing price is calculated when you register entries and make budgets. You can always change the billing price calculated by Maconomy during budgeting or before invoicing a job.</p> <p>If this field is selected, the billing price of all invoiceable amount activities is calculated from the current cost of the amount activity and the percentage rate in the "Markup %" field. If this field is not selected, the price and GM information are applied to the individual activities. However, Maconomy always checks whether a sales price or a gross margin percentage can be derived from an assigned sales price list, and if it can, this is used. The principles of price calculation are described in detail in "Appendix A: Price Calculation in the Job Cost Module."</p>
<b>Markup %</b>	<p>In this field, you can enter the markup percentage to be used when calculating the billing price of all amount activities related to the job. The billing price calculation is performed for all invoiceable amount activities using the current cost of the amount activity and the percentage rate in this field. You must also select the "Fixed Markup (Amts.)" field. However, Maconomy always checks whether a sales price or a gross margin percentage can be derived from an assigned sales price list, and if it can, this is used. The principles of price</p>

Field	Description
	<p>calculation are described in detail in “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>If a markup percentage has been entered in the delivery customer’s information card, the markup percentage is transferred to this field when a job is created in the Jobs workspace.</p> <p>The billing price is calculated when you make job entries and budgets. You can always change the billing price during budgeting or before the job is invoiced.</p>
<b>Invoice Discount %</b>	<p>In this field, you can enter an invoice discount percentage. Maconomy suggests the value normally given to the customer, retrieving the figure from the Customer Information Card. You can change the suggested value if you have agreed on another rate.</p> <p>The invoice discount is automatically deducted from the item total on any invoices you create for the job. Invoice discounts, however, are not deducted from invoices on account.</p> <p>Invoice discount cannot be granted on fixed-price jobs. If the “Invoicing Method” job parameter type for the current job specifies that the job is a fixed-price job, this field must be zero.</p> <p>If the current job is set up for split billing (that is, there are more than one bill-to customer on the job), you cannot change the invoice discount percentage in this workspace. However, you can do this in the Bill to Customer Distribution workspace. For more information, see the description of the Bill to Customer Distribution workspace.</p>
<b>Job Surcharge Rule</b>	<p>In this field, you can enter the name of a job surcharge rule to be used for the current job. Maconomy automatically suggests the value from the Customer Information Card workspace in the Accounts Receivable module, but you can select another one here or in the Job Budgets workspace. Job surcharge rules are created in the Job Surcharge Rules workspace.</p> <p>Note that the selected surcharge rule may contain references to tasks. This can cause the creation of surcharges for tasks that are not available in the tasks assigned to the current job. If this happens, the Job Budgets workspace displays an error message if you use the “Calculate Job Surcharge” action. The error message is also displayed when you attempt to post entries.</p>
<b>Quote Price, Currency</b>	<p>If a quote price has been agreed upon in cooperation with the customer and it has been specified for the current job in the Jobs workspace, the price is shown in this field. You can correct the quote price here. For a more detailed description of this field, see the description of the Jobs workspace.</p>

### Selection Criteria Island

Field	Description
<b>Act. No.</b>	<p>In these fields, you can limit the number of price list lines shown in the sub-tab by specifying a range of activity numbers. The sub-tab only shows the price list lines that have an activity within the selection criteria, or if the activity number is blank. If you do not enter a range of activity numbers, the</p>

Field	Description
	activity on the line has no influence on whether the line is shown in the sub-tab.
<b>Price Group, Act.</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Activity Type</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Employee No.</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Empl. Category</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Employee Type</b>	The functionality of these fields is similar to that of the “Activity No.” field. If a job budget line in the Job Budgets workspace is assigned to an employee category but not an employee, Maconomy compares the employee type specified as a membership criterion on the employee category with the value in this field. The line is only used if either the employee type of the category is blank, if this field is blank, or if the two fields have the same value.
<b>Price Group, Empl.</b>	The functionality of this field relates to employees in job price groups and is similar to that of the “Activity No.” field. If a job budget line in the Job Budgets workspace is assigned to an employee category but not an employee, Maconomy compares the job price group specified on the employee category with the value “Price Group, Empl.” in this workspace when calculating the price on the basis of a job-specific price list.
<b>Task</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Price Group, Task</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Overtime Spec.</b>	The functionality of these fields is similar to that of the “Activity No.” field.

### Company Island

Field	Description
<b>Company</b>	This field shows the number of the company responsible for the current job. The value cannot be changed here. For more information, see the description of the “Company No.” field in the Jobs workspace. This field also shows the name of the specified company.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the “Company No.” field. See the “Base Currency” field in the Company Information workspace in the G/L module for a detailed description of company base currency and enterprise currency.

**Selection Criteria, Dimensions Island**

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Entity</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Project</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Purpose</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Specification 1-3</b>	The functionality of these fields is similar to that of the “Activity No.” field.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the “Activity No.” field.

**Job Price List Lines Sub-Tab**

This section includes the fields and descriptions for the Job Price List Lines sub-tab.

Field	Description
<b>Activity No.</b>	In this field, you can specify the number of an activity for which you wish to calculate a price or a markup. If you leave the field blank, the activity number is not included in the combination of factors which cause the line to be used on a registration in, for example, a job journal. Please note that in order for a job price list line to be activated when you register job entries, all completed fields on the price list line must match the job entry.
<b>Activity Name</b>	This field displays the name of the activity entered in the field “Activity No.”
<b>Activity Type</b>	In this field, you can specify the type of an activity for which you wish to calculate a price or a markup. You can choose one of the predefined values “Time” and “Amount.” If you leave this field blank, and if you have specified an activity number in the field “Act. No.” on the line, Maconomy automatically derives the type of the activity specified.
<b>Price Group, Act.</b>	The functionality of this field concerns activities in job price groups, and is similar to that of the field “Activity No.”
<b>Employee No.</b>	The functionality of this field is similar to that of the field “Activity No.”
<b>Employee Name</b>	This field displays the name of the employee entered in the field “Employee Information.”

Field	Description
<b>Employee Category No.</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Employee Type</b>	This field displays the name of the employee entered in the field "Employee Information."
<b>Price Group, Empl.</b>	The functionality of this field concerns employees in job price groups, and is similar to that of the field "Activity No."
<b>Task</b>	The functionality of this field is similar to that of the field "Activity No."
<b>Task Description</b>	This field displays the description of the task entered in the field "Task."
<b>Price Group, Task</b>	The functionality of this field concerns tasks in job price groups, and is similar to that of the field "Activity No."
<b>Location</b>	The functionality of this field is similar to that of the field "Activity No."
<b>Entity</b>	The functionality of this field is similar to that of the field "Activity No."
<b>Project</b>	The functionality of this field is similar to that of the field "Activity No."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Activity No."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Activity No."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Activity No."
<b>Cost</b>	<p>In this field, you can enter a cost to be used for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as Job Budgets. If you do not enter a value here, Maconomy will find the cost using the order of priorities described in "Appendix A: Price Calculation in the Job Cost module," even if another line with a higher line number matches the job registration.</p> <p>The value specified in this field is the cost per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Cost, Per Day</b>	This field only applies to time activities. The field shows the cost per day for the current combination of activity, employee, job price group, and

Field	Description
	<p>dimension values on job registrations in windows such as Job Budgets. The value is based on the cost per hour specified in the field "Cost" above, and the number of hours per day specified in the field "Hours per Man Day" in the window Jobs.</p> <p>Note that if the time unit is "Day," this field displays the same price as the <b>Cost</b> field.</p>
<b>Base Salary Rate</b>	<p>A nonzero base salary rate in the price list will override a base salary rate on employees and employee categories. The base salary rate is only used for time activities. If no base salary rate and no overhead rate have been specified, then the cost price on the line will be interpreted as the base salary rate.</p> <p>The value specified in this field is the base salary rate per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Overhead Rate</b>	<p>A nonzero overhead rate in the price list will override an overhead cost rate on employees and employee categories. The overhead rate is only used for time activities.</p> <p>The value specified in this field is the overhead rate per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Intercompany Price</b>	<p>In this field, you can enter an intercompany price to be used for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as, for example, Job Journal. If you do not enter a value here, and you do not enter an intercompany price percentage on the line, Maconomy will find the intercompany price using the order of priorities described in "Appendix A: Price Calculation in the Job Cost module," even if another line with a higher line number matches the job registration.</p> <p>You cannot enter both an intercompany price percentage and an intercompany price on the same line. If you specify an intercompany price on a line on which an intercompany price percentage has already been specified, the intercompany price is set to 0 (and vice versa).</p> <p>The value specified in this field is the intercompany price per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>

Field	Description
<b>Intercompany Price, Per Day</b>	<p>This field only applies to time activities. The field shows the intercompany price per day for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as Job Budgets. The value is based on the intercompany price per hour specified in the field "Intercompany Price" above, and the number of hours per day specified in the field "Hours per Man Day" in the window Jobs.</p> <p>Note that if the time unit is "Day," this field displays the same price as the <b>Cost</b> field.</p>
<b>Intercompany Price %</b>	<p>In this field, you can enter an intercompany price percentage to be used for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as, for example, Job Journal.</p> <p>If you specify an intercompany price percentage, the intercompany price on each job registration will be calculated as the specified percentage of the billing price on the registration in question.</p> <p>If you do not enter a value here, and you do not enter an intercompany price on the line, Maconomy will find the intercompany price using the order of priorities described in "Appendix A: Price Calculation in the Job Cost module," even if another line with a higher line number matches the job registration.</p> <p>You cannot enter both an intercompany price percentage and an intercompany price on the same line. If you specify a percentage on a line on which an intercompany price has already been specified, the intercompany price is set to 0 (and vice versa).</p>
<b>Billing Price</b>	<p>In this field, you can enter a cost to be used for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as Job Budgets. If you do not enter a value here, Maconomy will find the cost using the order of priorities described in "Appendix A: Price Calculation in the Job Cost module," even if another line with a higher line number matches the job registration.</p> <p>The value specified in this field is the billing price per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Billing Price, Per Day</b>	<p>This field only applies to time activities. The field shows the billing price per day for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as Job Budgets. The value is based on the billing price per hour specified in the field "Billing Price" above, and the number of hours per day specified in the field "Hours per Man Day" in the window Jobs.</p> <p>Note that if the time unit is "Day," this field displays the same price as the <b>Cost</b> field.</p>

Field	Description
<b>Markup %</b>	<p>In this field, you can enter a markup percentage to be used for the current combination of activity, employee, job price group, and dimension values on job registrations in windows such as, for example, Job Budgets. If you do not enter a value here, Maconomy will find the markup percentage using the order of priorities described in “Appendix A: Price Calculation in the Job Cost Module,” even if another line with a higher line number matches the job registration.</p> <p>Note that there is no connection between the fields “Billing Price” and “Markup %” in this window. This means that the billing price on a line is not calculated from the cost when you enter a markup percentage on the same line.</p>
<b>Base Salary Markup %</b>	<p>If the system parameter 'Use markup % for time activities' is selected, then markup percentages in price lists are also applied to time registrations. In this field, you can specify a markup percentage relative to the base salary rate.</p>
<b>Adjustment %</b>	<p>In this field, you can specify an adjustment percentage to be used for the adjustment of the billing price for the current combination of activity, employee, and dimension values on job registrations in windows such as Job Budgets. The matching billing price will be adjusted according to the percentage in this field, unless the billing price or the markup percentage has been entered directly on the line. The percentage can either be positive or negative to ensure the necessary upward or downward adjustment of the billing price. This functionality is useful in connection with customers that have been promised a specific discount percentage or a surcharge on all activities of a certain type.</p> <p>Note that if the billing price is set on the basis of a markup percentage, the gross margin after adjustment will no longer correspond to the markup percentage originally stated.</p> <p>For a more detailed description of price calculation, please refer to “Appendix A: Price Calculation in the Job Cost Module.”</p>
<b>Overtime Spec.</b>	<p>In this pop-up field, you can select an overtime specification for the current line. Overtime specifications are defined in the window Popup Fields in the Set-Up module.</p> <p>When entering time, for example, in a time sheet, a user can specify that the work was performed using overtime, for instance during the weekend. The price for that registration is then found in the following way:</p> <p>The basic price is found for the current combination of activity, employee, task, and so on, on the time sheet line.</p> <p>If a matching overtime specification (for example, “Weekend”) is entered on the price list line on which Maconomy found the price, then the amounts or percentages entered in the “Overtime Charge” fields below are added to the price.</p> <p>If no matching overtime specification is found on the line, Maconomy will scan the price list for a line with the overtime specification in question,</p>

Field	Description
	<p>which does not contradict the allocation combination from the time sheet line. For instance, the job price list may contain a line which is blank apart from the overtime specification "Weekend" and some percentage specifications in the "Overtime Charge %" fields below.</p> <p>On the basis of this, the final price is calculated and used in subsequent billings.</p> <p>If no matching overtime specification is found in the price list, the price list specified for the job is searched in a similar way.</p> <p>You can choose to enter the addition to the price as an amount or as a percentage of the original price. Additions to cost, intercompany price, and billing price can be entered separately.</p>
<b>Overtime Charge %, Overhead</b>	<p>Enter a value to determine the percentage of the overhead rate before it is added to the cost of the job entry as calculated by the current price list. This applies only if you have specified an overtime specification in the <b>Overtime Spec.</b> field.</p> <p>You can enter a value that is greater than or equal to -100%.</p> <p>Note that if you enter zero as a value, this indicates that the field should be left as is, and no calculations will occur.</p>
<b>Overtime Charge %, Base Salary</b>	<p>Enter a value to determine the percentage of the base salary rate should be added to the cost of the job entry as calculated by the current price list. This applies only if you have specified an overtime specification in the <b>Overtime Spec.</b> field.</p> <p>You can enter a value that is greater than or equal to -100%.</p> <p>Note that if you enter zero as a value, this indicates that the field should be left as is, and no calculations will occur.</p>
<b>Overtime Charge, Cost</b>	<p>If an overtime specification has been selected in the <b>Overtime Spec.</b> pop-up field above, you can enter an amount which should be added to the cost of a job entry as calculated by the current price list in this field.</p> <p>The value specified in this field is the cost per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul> <p>For more information about overtime specifications, please see the description of the <b>Overtime Spec.</b> pop-up field above.</p>
<b>Overtime Charge %, Intercompany</b>	<p>The functionality of this field is similar to that of the <b>Overtime Charge %, Cost</b> field above, but specifies the addition to the intercompany price.</p>
<b>Overtime Charge, Intercompany</b>	<p>The functionality of this field is similar to that of the <b>Overtime Charge, Cost</b> field above, but specifies the addition to the intercompany price.</p>

Field	Description
	<p>The value specified in this field is the intercompany overtime charge per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Overtime Charge %, Billing</b>	The functionality of this field is similar to that of the <b>Overtime Charge %, Cost</b> field above, but specifies the addition to the billing price.
<b>Overtime Charge, Billing</b>	<p>The functionality of this field is similar to that of the <b>Overtime Charge, Cost</b> field above, but specifies the addition to the billing price.</p> <p>The value specified in this field is the billing overtime charge per hour or day, depending on the following:</p> <ul style="list-style-type: none"> <li>▪ The time unit specified in the line</li> <li>▪ The time unit specified in the Job Price Lists tab (if the time unit is not specified in the line)</li> </ul>
<b>Time Unit</b>	In this field, you can specify the time unit for prices on time activities. You must fill in this field in both the tab and sub-tab. When you create a line here, the field is auto-populated with the default value from the tab. Price calculation relies on the time unit specified on the line.
<b>Currency, Cost</b>	In this field, you can specify the currency of the cost price. If blank, the cost is in the currency specified in the card part.
<b>Currency, Intercomp.</b>	Similar to "Currency, Cost" but for intercompany price.
<b>Currency, Sales</b>	Similar to "Currency, Cost" but for the sales price.

## Actions

This section shows the Actions available in the Job Price Information workspace.

### Top Tab

Field	Description
<b>Print Price Overview</b>	<p>This action is available if the current job uses price control from budgets (see "Price control from budgets." When you select this action, Maconomy creates a printout providing an overview of employee category prices.</p> <p>Selecting this action is a shortcut to choosing "Print." and printing the baseline budget for the current job using the layout "Price Overview." Therefore, for further information about the contents of the printout, see the description of the</p>

Field	Description
	window Print Job Budget. Note that this action is available in the window Job Budgets as well.

## Fixed Exchange Rate Information Single Dialogs Workspace

Use this workspace to manage jobs for which you budget and enter purchases from vendors in foreign currencies.

The billing of the customer can happen in a currency that is different from the local currency. Maconomy converts the budgeted amounts into local currency using the exchange rates that are in effect at the time of budgeting. Maconomy converts the actual amounts at the rates that are valid on the transaction date of each entry or invoice. This means that any exchange rate variations that occur between the time of budgeting the job and the time of receiving invoices from vendors or billing customers have an impact on the profitability of the job as calculated by Maconomy.

While you manage the fixed exchange rate tables through the Set-Up module (typically maintained by the finance department in companies) this workspace enables project managers to manage job-specific exchange rates from the Job Cost module, without allowing them to change any of the standard exchange rates.

There are three ways of choosing which exchange rates to use on a job:

- Use fixed exchange rate tables specific for purchases and/or sales.
- If no exchange rate table is selected, use the default exchange rate table entered in System Information.
- Create job-specific fixed exchange rate tables. You create and manage them from the Job Cost module; they are not available from the Exchange Rate Tables workspace or from drop-down lists of global exchange rate tables.

Project managers can fix exchange rates of jobs in two ways:

- Assign a fixed exchange rate date to the job. This way the standard exchange rate functionality of Maconomy is used with the currency conversion date fixed to this date.
- Assign a fixed exchange rate for each currency used on the job. These exchange rates are then used for all transactions on the job.

You can change the fixed exchange rates of a job and then recalculate the current job budget using the new exchange rates. Maconomy uses the new exchange rates for all transactions that occur after the change. If you select the **Fixed exchange rates in budgets only** system parameter, Maconomy only uses the fixed rates for budgeting, not for entries on the job.

If you create a job-specific fixed exchange rate table, it has the same effect on budgets, entries, invoicing, and printing as if you created it as a fixed exchange rate table for both purchases and sales on the job.

**Note:** You must use either system rates or job-specific rates. If you choose to use job-specific rates by selecting the **Use Fixed Exchange Rate from Job** field, Maconomy disables all of the fields in the Fixed System Exchange Rates island.

## Create and Manage Job-Specific Fixed Exchange Rate Tables

The following sections describe how you create and manage job-specific fixed exchange rate tables.

### Assign Fixed Exchange Rates to Jobs

To create a job-specific table, do one of the following:

- Enter exchange rates manually, one currency at a time.
- Copy all currencies and initial values, either from another job, or from a selected standard exchange rate table for a given date. You can then add, remove, or change exchange rate lines manually.

The following conditions apply to managing fixed exchange rates on jobs:

- The reference currency for the exchange rate table is the enterprise currency that you specify in the System Information workspace.
- When you create job-specific exchange rates, they can be:
  - Copied from another job.
  - Copied from an existing standard exchange rate table from a specified date.
  - Entered manually, one at a time.
  - Imported using an import program.
- If you select a standard table from which to copy the exchange, Maconomy uses the exchange rate value from this table for calculations if you use a currency with no job-specific entry. If you do not enter a standard table, or if the table that you enter has no entry for this currency, it causes an error.
- Using the **Margin for job exchange rate variance, %** system parameter enables you to set a maximum deviation from the enterprise exchange rate of a currency at the time of creation. If you set the value of this parameter to 0.0, Maconomy accepts any deviation. This parameter is available at both the company level and the system level. Maconomy uses the system level if you do not enter a value for the company.
- The **Fixed exchange rates in budgets only** system parameter is also available at both the system and company level.
- All changes to fixed exchange rate information are effective as soon as you enter them. When you complete changes to fixed exchange rate information, you can update existing budgets using an action. If you need to edit exchange rates, you can block further entries, such as block time and expense entries on the job for a period of time.
- If you create a job from a template or copy it from another job, Maconomy copies the selected values of the fixed exchange rate tables, but does not copy the exchange rate date or exchange rate table entries. If the job uses job-specific fixed exchange rates, you must enter the exchange rate date and/or exchange rate entries in the sub-tab subsequently.
- There is no restriction on the combinations of fixed exchange rate settings for main jobs and subjobs.

### Assign Fixed Exchange Rates to Opportunity Budgets

You can manage fixed exchange rates for opportunity budgets as you do for jobs.

When you create an opportunity budget, Maconomy creates a job with the same name as the opportunity, but prefixed with an underscore ( \_ ). This job is available for editing fixed exchange rate information in the Job Cost module. The initial values are copied from the template job that was entered when you created the opportunity budget.

When an opportunity is won, you create a regular job based on the opportunity number. Maconomy then copies the initial exchange rate information for this job from the now closed job for the opportunity budget. Maconomy does not copy the individual rates. If you want to transfer these, use the **Copy Job Exchange Rates to Job** action with the job number \_OpportunityNumber that you entered for the opportunity budget.

### Fixed Exchange Rate Information Tab

This section includes the fields and descriptions for the Fixed Exchange Rate Information tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the number of the current job. This field also shows the name of the job.
<b>Job Group</b>	This field shows the job group to which the current job is assigned.
<b>Template</b>	This field shows whether the job is a template job or a normal job. If the job is a template job, a number of the fields which are mandatory on a normal job will not be mandatory on the template job. This means that you can fill in only the fields you want to be transferred to new jobs created on the basis of the template job.
<b>Currency</b>	This field shows the currency specified for the job.
<b>Invoice Currency</b>	This field shows the currency specified for the invoice.
<b>Blocked for Time Reg.</b>	This field shows whether the job is blocked for time registration. If this field is marked, it is not possible to register time information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.
<b>Blocked for Amount Reg.</b>	This field shows whether the job is blocked for amount registration. If this field is marked, it is not possible to register amount information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.

Field	Description
<b>Blocked for Invoicing</b>	This field shows whether the job is blocked for invoicing. If this field is marked, it is not possible to create invoices and credit memos regarding the current job in, for example, the windows Invoice Selection and Job Invoicing, and these windows will not show jobs which are blocked for invoicing. However, you can still register time and expenses as well as other information on the job.
<b>Blocked for Budgeting</b>	This field shows whether the job is blocked for budgeting. If this field is marked, it is not possible to register budget lines on the job in the windows Job Budgets and Periodic Job Budgets.

### Fixed System Exchange Rates Island

If you have marked the field "Use Fixed Exchange Rates from Job" in the island Job Specific Fixed Exchange Rates, all the fields in this island will be disabled, and you cannot enter any data here.

Field	Description
<b>Fixed Exchange Rate Date</b>	In this field, you can specify the date for selecting exchange rate table entries from the system tables. If you do not enter a date in this field, Maconomy will use today's date.
<b>Fixed Exch. Rate Tbl., Purch.</b>	In this field, you can specify which exchange rate table to use for purchase-related currency calculations. This exchange rate table is used in connection with purchase orders and vendor invoices relating to the job. If you do not specify an exchange rate table in this field, Maconomy will use the exchange rate table specified in the window System Information in the Set-Up module.  When you copy or create jobs to which job price lists have been assigned, Maconomy will recalculate the prices on the job price lists according to the fixed price information of the job. In connection with the conversion of intercompany prices, Maconomy will use the exchange rate table for purchases.
<b>Fixed Exch. Rate Tbl., Sales</b>	In this field, you can specify which exchange rate table to use for job-related currency calculations. This exchange rate table is used in connection with calculation of sales prices on the basis of budgeted or registered expenses on the job, for example, in the windows Job Budgets and Job Journal. If you do not specify an exchange rate table in this field, Maconomy will use the exchange rate table specified in the window System Information in the Set-Up module.

**Job Specific Fixed Exchange Rates Island**

Field	Description
<b>Use Fixed Exchange Rates from Job</b>	<p>This field must be marked to create job specific exchange rates. Use the Standard Exchange Rate Date for selecting exchange rate table entries to copy from or to use as default. If none is entered the current date will be used.</p> <p>If you place a check mark in this field, all the fields in this island Fixed System Exchange Rates will be disabled and you cannot enter any data there.</p>
<b>Job No</b>	This field shows the job number from which you copy exchange rates when you run the action "Copy Job Exchange Rates to Job."
<b>Standard Exchange Rate Date</b>	In this field, you enter the date when Maconomy should select exchange rate table entries from system tables. If you do not specify a date, the current date will be used.
<b>Standard Exchange Rate Table</b>	In this field, you specify from which exchange rate table you want to copy initial job-specific exchange rates. The reference currency of the selected table must be the same as the enterprise currency. If no exchange rate line for a currency is entered on the job, and "Use Fixed Exchange Rates from Job" is marked, the table you select here will be used to look up exchange rate values on the job.
<b>Job/Base Currency Fixed Exchange Rate is Hedged</b>	<p>Select this check box to indicate that the sales currency has been financially hedged against exchange rate risks in the bank.</p> <p>When this check box is selected, the Print Currency Report does not report unrealized exchange rate gain or loss for work in progress and invoices on account for this job.</p> <p>When this check box is not selected, the Print Currency Report reports unrealized exchange rate gain or loss for work in progress and invoices on account according to the standard Sales exchange rate table selected in the System Setup workspace.</p> <p>By default, this check box is not selected when a new job is created.</p>
<b>Reference Currency</b>	This field shows the reference currency of the job-specific exchange rate table.
<b>Created</b>	This is the name of the user who created the exchange rate table and the date when the exchange rate table was created.
<b>Changed</b>	This is the name of the user who last updated the exchange rate table and the date on which the exchange rate table was last updated.
<b>Version</b>	This is the version number of the job information shown in the window. The number increases incrementally every time an exchange rate on the job is updated. You can neither change the value here nor see previous versions.

**Company Island**

Field	Description
<b>Company</b>	This field shows the number of the company responsible for the current job. The value cannot be changed here. For more information, please see the description of the field "Company No." in the window Jobs. This field also shows the name of the specified company.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

**Status Island**

This field displays the current status. The status can be one of the following:

- Budgets not updated
- Budgets Updates: [date] by [employee name]

**Exchange Rates Sub-Tab**

This section includes the fields and descriptions for the Exchange Rates sub-tab.

Field	Description
<b>Date</b>	Here, you enter the starting date of the exchange rate to be used for the job. The exchange rate is valid from the specified date until the next date with an exchange rate for the current currency. The date in this field cannot be changed.
<b>Currency</b>	Here you select from existing currency codes (for example, GBP, SEK). Currency codes are maintained in the window Popup Fields.
<b>Exchange Rate</b>	Here you enter the exchange rate between the currency on the line and the reference currency of the exchange rate table. You can enter it as the price of the foreign currency in base or the other way round, depending on whether the field "Exchange Rate in Reference Currency" in the window System Information has been marked. You use the unit entered in the field "Standard Unit" in the window System Information.

## Actions

This section shows the Actions available in the Fixed Exchange Rate Information workspace.

### Top Tab

Field	Description
<b>Copy Standard Exchange Rates to Job</b>	Use this action to create exchange rate table entries on the job with the current date as the start date and values copied from the selected standard exchange rate table using the standard exchange rate date. If you do not enter a date, the current date is used.  Notice that this action is only enabled if the field "Use Fixed Exchange Rates from Job" is check marked. If exchange rates for the job already exist, a warning is issued before overwriting the existing rates.
<b>Copy Job Exchange Rates to Job</b>	Use this action to create exchange rate table entries on the job with the current date as the start date and values copied from the selected job entered.  Notice that this action is only enabled if the field "Use Fixed Exchange Rates from Job" is check marked. If exchange rates for the job already exist, a warning is issued before overwriting the existing rates.
<b>Update Exchange Rates in Job Budgets</b>	Use this action to recalculate job budgets with the new exchange rates. If a budget is submitted, it must be resubmitted after the update. If a budget is approved, it will not be updated until it is reopened.

## Job Parameter Selection Single Dialogs Workspace

Use this workspace to specify which job parameter attribute values to apply to a given job.

The Job Parameter Selection tab displays information about the job in question, and the Job Parameters sub-tab displays one line for each job parameter type that is available. Each of these lines specifies which job parameter—that is, which attributes and assigned values—Maconomy should apply to the job.

When you create a job, Maconomy derives job parameters for the job in question based on the setup in the Job Parameter Selection Rules workspace. This applies to the assigned selection criteria specifications and the specified priorities of the relevant job parameter selection rules. However, you can manually change the job parameters that Maconomy displays in the **New Parameter Name** field in the Job Parameters sub-tab of this workspace. If you change one or more parameter names, use the **Change Job Parameters** action in the Action menu to make the new parameters effective for that job.

When you change a job information field (such as the job name), Maconomy automatically rederives the job parameters according to the setup in the Job Parameter Selection Rules workspace. However, in the Job Parameter Derivation Fields workspace, you can specify that Maconomy should only rederive job parameters when certain fields are changed, such as the job name or a job pop-up. Or, for performance reasons, you can specify that Maconomy should never rederive job parameters. In this case, you would rederive the job parameters manually, if needed, using the **Rederive Job Parameters** action in this workspace.

## Job Parameter Selection Tab

This section includes the fields and descriptions for the Job Parameter Selection tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number and name of the job.
<b>Template</b>	This field shows whether the job is a template job or a normal job.
<b>Project Manager</b>	This field shows the employee number and name of a project manager assigned to the job, if any.

### Customer Island

Field	Description
<b>Customer</b>	This field shows the number and name of the customer assigned to the job in question.

### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

## Job Parameters Sub-Tab

This section includes the fields and descriptions for the Job Parameters sub-tab.

Field	Description
<b>Parameter Type</b>	This field shows the parameter type of the line.
<b>New Parameter Name</b>	<p>In this field, you enter the name of a new job parameter to apply to the job parameter type in question. When a job is created, Maconomy automatically derives the value in this field in accordance with the set-up of the job parameter selection rules specified in the window Job Parameter Selection Rules.</p> <p>If you want to change the value of this field, enter the name of the job parameter you wish to be the new effective job parameter for the job parameter type in question. The values available are found by using the action “Find Job Parameter” in the Find menu. You can only select among job parameters to which you have been granted access. Moreover, you can only enter a job parameter which is considered valid for the job in question. The validity of job parameters is specified in the window Job Parameter Selection Rules. In order for the new parameter to be effective, you must select the action “Change Job Parameters” in the Action menu. See the description of this action for further information.</p>

Field	Description
<b>Description, New Parameter</b>	This field shows the description of the currently selected job parameter. The description of each job parameter is entered in the card part of the window Job Parameters and cannot be changed here.
<b>Current Parameter Name</b>	This field shows the name of the job parameter currently selected for the job parameter type in question. If you change the value in the field "New Parameter Name" for a certain job parameter type, this field is only updated with the new value when you have selected the action "Change Job Parameters."
<b>Description, Current Parameter</b>	This field shows a description of the job parameter currently specified as effective on the line. The field is updated when you select the action "Change Job Parameters" in the Action menu.
<b>Derivation Rule No.</b>	This field shows the number of the derivation rule applied during derivation of the job parameter type.
<b>Derivation Rule Description</b>	This field shows the description of the derivation rule applied during derivation of the job parameter type.
<b>Remarks 1-5</b>	These fields show any remarks entered on the new job parameter. The remarks, if any, are specified in the card part of the job parameter in question and cannot be changed here.

## Actions

This section shows the Actions available in the Job Parameter Selection workspace.

### Top Tab

Field	Description
<b>Change Job Parameters</b>	When you select this action, the job parameters specified as new job parameters in the field "New Job Parameter" in the table part of the window are changed to be the effective job parameters of the job in question. Whether or not a new job parameter is accepted as valid for the job in question depends on the set-up of the relevant job parameter selection rules. See the description of the window Job Parameter Selection Rules for further information on job parameter validity.
<b>Rederive Job Parameters</b>	When you select this action, job parameters are rederived for the job. In the window Job Parameter Derivation Fields, you can specify that job parameters should not be rederived automatically whenever a change to the job information occurs, for example, if the job name or a job pop-up field changes. If you specify that job parameters should not be rederived automatically, but you find that you need to rederive the job parameters, you can do so by selecting this action. For more information, please see the description of the window Job Parameter Derivation Fields.

**Bottom Tab**

Field	Description
<b>Change Job Parameters</b>	When you select this action, the job parameters specified as new job parameters in the field “New Job Parameter” in the table part of the window are changed to be the effective job parameters of the job in question. Whether or not a new job parameter is accepted as valid for the job in question depends on the set-up of the relevant job parameter selection rules. See the description of the window Job Parameter Selection Rules for further information on job parameter validity.
<b>Rederive Job Parameters</b>	When you select this action, job parameters are rederived for the job. In the window Job Parameter Derivation Fields, you can specify that job parameters should not be rederived automatically whenever a change to the job information occurs, for example, if the job name or a job pop-up field changes. If you specify that job parameters should not be rederived automatically, but you find that you need to rederive the job parameters, you can do so by selecting this action. For more information, please see the description of the window Job Parameter Derivation Fields.

## Job Employees Single Dialog Workspace

Use this workspace to create and distribute favorites for a selection of employees.

A favorite is a link between a descriptive text (the favorite name) and an entry combination. You can use favorites for quick time entry in the time entry workspaces (SpeedSheet, Time Sheets, Daily Time Sheets, and so on).

In the Job Employees tab, you can browse the jobs to which you have access. In the Job Employee Specifications sub-tab, you can define the content of favorites and select the employees to whom the favorites should be available.

Access to this workspace requires add-on number 122.

**Enter Favorites**

You can enter favorites in this workspace to streamline workflow for your group. For example, if you are the project manager of a job, you might want to help your project team by distributing the entry combinations that apply to the current job. To do this, enter a number of favorite definitions with the activity and task in the Job Employee Specifications sub-tab, select the members of your team, and use the **Update** action. The next time that your team members open their SpeedSheet or Time Sheet, the favorites are available in the workspace, and they can easily enter time on the job without having to ask for details. Or, if you work in the finance department, you might want to distribute favorites to all employees for entering vacation, furlough, and illness.

**Employee Control**

You also use this workspace to specify which employees can enter time on the job. This functionality is the same as in the Employee Control workspace, and Maconomy enters the employees that you select here into the sub-tab of the Employee Control workspace. Use this workspace for simple employee control operations, and the other workspace for more detailed needs.

Use the **Distribute to Employees** action to apply the settings in the Job Employees tab and Job Employee Specifications sub-tab to the selection of employees.

The **Create from Tasks** action creates a list of favorites from the tasks selected in the Job Tasks workspace.

## Job Employees Tab

This section includes the fields and descriptions for the Job Employees tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job to which the favorites in the table part of the window apply. This field also shows the name of the job.
<b>Job Group</b>	This field shows the name of the job group of the current job.
<b>Project Manager No.</b>	This field shows the employee number of the project manager of the current job. The project manager is specified in the window Jobs.
<b>Name</b>	This field shows the name of the project manager of the job.
<b>Blocked for Time Reg.</b>	If you mark this field, nobody can register time or expenses on the current job. Any favorites already distributed for the job will be unavailable in the employees' time registration windows. If you remove the mark from the field, the favorites will be available again. This field can also be marked in the window Jobs.
<b>Blocked for Amount Reg.</b>	This field shows whether the job is blocked for amount registration. If this field is marked, it is not possible to register amount information on the job in, for example, the windows Time Sheets, Expense Sheets, Job Reallocation, and Job Journal. However, you can still create job budget lines and invoices for the job.

### Distribution of Favorites Island

Field	Description
<b>Distribute favorites to employees</b>	If this field is marked, when you select the action "Distribute to Employees," Maconomy will distribute the registration combinations in the table part as favorites to the employees selected in the table part. For more information, see the description of the action "Distribute to Employees."
<b>Only specified employees can register on the job</b>	If this field is marked when you select the action "Distribute to Employees," only the employees selected in the table part can register time and expenses on the job. This way, employee control is automatically enabled. For more information, see the description of the action "Distribute to Employees."

Field	Description
<b>Delete employees' own favorites on the job</b>	If this field is marked, when you select the action "Distribute to Employees," Maconomy will delete all favorites on which the current job is specified. Note that this applies to all employees. For more information, see the description of the action "Distribute to Employees."

### Employees Island

Field	Description
<b>Project Manager</b>	This field shows the employee number and name of the project manager of the current job. The project manager is specified in the window Jobs.
<b>Sales Person</b>	This field shows the employee number and name of the sales person of the current job.
<b>Account Manager</b>	This field shows the employee number and name of the account manager of the current job.
<b>Employee No. 1-10</b>	The functionality of these fields is similar to that of the field "Project Manager."

### Job Employee Specifications Sub-Tab

This section includes the fields and descriptions for the Job Employee Specifications sub-tab.

Field	Description
<b>Active</b>	This field controls which of the lines are included by the Distribute to Employees action.
<b>Favorite Name</b>	In this field, you can enter the name of a new favorite or edit an existing name. This is the name that the employees to whom the favorites are distributed will see in their time registration windows.
<b>Task</b>	In this field, you can enter the name of a task from the job's task list. If you enter a task, this task will be used as part of the favorite definition which is transferred to the selected employees.  If dimensions are specified on the current line, they will only be used if the field "Overwrite" is not marked for the dimension in question on the task in the window Job Tasks. The same applies to the activity.
<b>Task Description</b>	This field shows the task description as entered in the window Job Tasks or Task Lists.
<b>Activity No.</b>	In this field, you can enter an activity. If you enter an activity, this activity will be used as part of the favorite definition which is transferred to the selected employees. The activity entered here overwrites any activity derived from the task, unless the field "Overwrite" is marked for the activity on the task.
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you enter a location, this location will be used as part of the favorite definition which

Field	Description
	is transferred to the selected employees. If you do not enter a location, the standard rules of dimension derivation apply as described in the section "Deriving Dimensions" in the G/L module.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Valid From</b>	In this field, you can enter a date from which the current favorite should be valid. For instance, if a certain favorite only applies to a series of seminars taking place during a week in May, you can enter the starting date of that week in this field, and the ending date in the field "Valid To" below. The favorite will then only be available in time registration windows for the week to which the registrations apply.
<b>Valid To</b>	In this field, you can enter a date until which the current favorite should be valid. See the field "Valid From" above.
<b>Employee No.</b>	In this field, you can enter the employee number of an employee. Depending on the settings in the island Updating in the card part, the action "Update" applies the current favorite to this employee and/or permits this employee to register on the current job.  Note that to be included in the selection of employees on the current line, an employee must fulfill all criteria specified on the line.
<b>Employee Name</b>	This is the name of the employee whose number you entered in the Employee No. field.
<b>Company No. (empl.)</b>	In this field, you can enter a company number. To be included in the selection, an employee must belong to this company. The functionality of this field is similar to that of the field "Employee No.."
<b>Location (empl.)</b>	In this field, you can enter a location. For an employee to be included in the selection, this location must be specified for the employee.
<b>Entity (empl.)</b>	The functionality of this field is similar to that of the field "Location (empl.)."
<b>Project (empl.)</b>	The functionality of this field is similar to that of the field "Location (empl.)."
<b>Purpose (empl.)</b>	The functionality of this field is similar to that of the field "Location."

Field	Description
<b>Spec. 1-3 (empl.)</b>	The functionality of these fields is similar to that of the field “Location (empl.).”
<b>Local Spec. 1-3 (empl.)</b>	The functionality of these fields is similar to that of the field “Location (empl.).”
<b>Supervisor Employee No.</b>	In this field you can enter the employee number of an employee. Maconomy selects all employees who have the specified employee as supervisor.
<b>Department</b>	In this field you can select a department. Maconomy selects all employees who belong to the specified department.
<b>Primary Employee Category No.</b>	In this field you can enter the number of an employee category. Maconomy selects all employees where the specified employee category is the primary category.
<b>Team No.</b>	In this field you can enter the number of a team. Maconomy selects all employees who belong to the specified team (as defined in the window Teams in the Set-Up module).
<b>Employee Type</b>	In this field you can select an employee type. Maconomy selects all employees of the specified type.
<b>Position</b>	In this field you can enter a position. Maconomy selects all employees with the specified position (as specified in the window Position Information Card in the Human Resources module).
<b>Created by</b>	This field shows the name of the user who created the job favorite on the current line.
<b>Created on</b>	This field shows the date on which the current favorite was created.
<b>Changed by</b>	This field shows the name of the user who made the latest change to the current line.
<b>Changed on</b>	This field shows the date on which the latest change to the line in question was made.
<b>Version</b>	This field shows the version number of the favorite on the line in question. The number is incremented by one each time a change is made to the favorite.
<b>Distributed by</b>	This field shows the name of the user who distributed the favorite on the current line.
<b>Distributed on</b>	This field shows the date on which the favorite on the line was distributed.

## Actions

This section shows the Actions available in the Job Employees workspace.

By choosing the action “Distribute to Employees,” you apply the settings in the card and table parts to the selection of employees.

Another action, “Create from Tasks,” is a shortcut to creating a list of favorites from the tasks specified in the window Job Tasks.

Access to this window requires add-on number 122.

### Top Tab

Field	Description
<b>Create from Tasks</b>	When you select this action, Maconomy will copy any existing tasks associated with the current job to this window. Each task from the window Job Tasks is copied as a favorite in this window, unless a favorite using the task already exists. The new favorites are given a name according to the pattern “Job name, Task name,” for example “Absence, Vacation” or “XYZ Corp Campaign, Client Meeting.”
<b>Distribute to Employees</b>	<p>When you select this action, a number of scenarios are possible, depending on the setting of the following three fields in the island Distributing in the card part:</p> <ul style="list-style-type: none"> <li>“Only specified employees can register on the job” — If this field is marked in the card part, when you select this action, only the employees selected in the table part of the window are allowed to make registrations on the current job. This corresponds to enabling employee control in the window Employee Control and adding the selected employees in that window. If the field is not marked, all employees with access to the job may register on it.</li> <li>“Favorites should be available for specified employees” — If this field is marked in the card part, when you select this action, each favorite in the table will be “pushed” to those employees who are selected to receive it. This means that the employees will be able to select the favorites in time registration windows, and to view “their” favorites in the window Favorites.</li> <li>“Delete the employees’ own favorites on the job” — If this field is marked in the card part, when you select this action, Maconomy cleans out all favorites where the current job is specified, from all employees, before the new favorites are distributed to the specified employees. If no new favorites are specified, choosing this action simply removes all favorites for the current job.</li> </ul> <p>If the “Only Add to Employee Control from Job Employees” company-specific system parameter has been selected, this action will add employees to the Employee Control as needed, but not delete employees from this list. In this way, you can use both windows and maintain a larger list of employees in Employee Control.</p>

Field	Description
	This can be useful if you have the integration from People Planner, which pushes employees from the plan into Job Employees, but you also have some employees who should be allowed to enter time on jobs without being in the plan.

## Job Tasks Single Dialogs Workspace

Use this workspace to create and maintain a job-specific task list.

When you make entries on a job, for example in a time sheet, you usually make the entries on both tasks and activities. Thus, you must assign a list of available tasks for each job so that you can create entries for the job.

For more information about the general purpose of tasks, see the description of the Task Lists workspace.

In Maconomy, there are two ways of assigning task lists to jobs.

1. **Assign a standard task list to the job**

. Multiple jobs can share task lists. Use this approach for simple task lists that do not require editing on a job-to-job basis. Create and maintain standard task lists in the Task Lists workspace. When you create or edit a task there, Maconomy makes the change for all of the jobs that share that task list.

2. **Assign a separate task list to each job**

. If you select a standard task list and then make it private to the job, Maconomy automatically creates a copy of the standard task list, as well as any changes that you make to the copied job task list in this workspace. Use this approach for complex jobs and long task lists, or if you are using work breakdown structures in your job budgets.

You can mix these two approaches, but be careful not to accidentally change tasks.

**Note:** This workspace describes the job-specific task list approach only. For more information about shared tasks lists, see the Task Lists workspace.

When you create a job using a template, and if the template job has job-specific tasks, Maconomy creates a copy of those tasks and assigns them to the new job. The task list is now private to the job, meaning that it is not shared with any other job.

This workspace always displays the current task list for the job, regardless of whether the task list is job-specific or shared. However, if you change anything in the task list in this workspace (or elsewhere, for example by creating a task in the Job Budgets workspace), Maconomy checks whether the task list is shared with other jobs. If it is, Maconomy makes a copy of the task list and makes it private to the current job before it applies the change to the task list. Subsequent changes that you make to the original task list in the Task Lists workspace no longer apply to the job tasks. You can also view and edit the job-specific tasks in the Task Lists workspace.

On the lines in the Job Employee Specifications sub-tab, the **Task Group 1-6** fields display the work breakdown structure of a job. You can create and edit this structure in the Job Budgets workspace, but you cannot edit it in this workspace. Creating a work breakdown structure on a job by assigning the related tasks to task groups gives you a better overview of the job, particularly on jobs that have several stages and task levels.

Here is a sample work breakdown structure for a job.

<b>Analysis Stage</b>		
	<b>Initial Analysis</b>	
		Pre-project analysis
		Feasibility study
	<b>Project Analysis</b>	
		Business model review
		Project planning
<b>Design Stage</b>		
	Design development	
	Testing	

In this table, task groups are highlighted in bold, while the tasks that belong to the job appear in regular font. This particular table contains two task group levels: The first task group level consists of an Analysis Stage and a Design Stage, and the second task group level—which is subordinate to Analysis Stage—contains the entries Initial Analysis and Project Analysis. In Maconomy, the first task group level is identified as Task Group 1, the second task group level is Task Group 2, and so on.

Note that a task group path (for example, Analysis Stage » Initial Analysis » Feasibility study) must always end with a task against which job entries can be posted. The work breakdown structure functionality merely allows you to assign task groups to tasks, thus helping you to structure your tasks in a logical way on a particular job.

Thus, in the context of this example, the Tasks sub-tab of the Job Tasks workspace would show six lines, equaling the number of tasks in the preceding table. Six task lines would be listed in the Job Tasks tab: Pre-project analysis, Feasibility study, Business model review, Project planning, Design development, and Testing. The Task Group 1 field would show a value of Analysis Stage on the first four lines and Design Stage on the last two lines. In addition, in the Task Group 2 field, the first two lines would show a value of Initial Analysis, while the third and fourth lines would show Project Analysis. No value would be shown in the Task Group 2 field on the fifth and sixth lines because only one task group has been assigned to these tasks.

Note that the grouping information is taken from the planning budget. If a task is not present in the planning budget, similar information is taken from the baseline budget. Thus, in case of inconsistency between the baseline budget and the planning budget, the planning budget overrides the baseline budget.

For more information on work breakdown structures and task groups, see the description of Job Budgets.

### Actions in this Workspace

A number of actions in this workspace enable you to:

- Specify that users must enter tasks on all entries, or specify that they must not enter tasks.

- Copy the task list from another job and use it as a template for a new task list. Any existing tasks are preserved.
- Specify that daily task descriptions are required or optional for all tasks.

### Task Approval

All users can create and edit tasks. However, if you set up the task to derive an amount or time activity, you must be granted permission to change amount and time activities in the Actions workspace in the Set-Up module. Also, tasks may require approval. If you have access to approve tasks in the Actions workspace, tasks that you created or changed are automatically approved. Otherwise, approval by another user is required, either in this workspace or the Approve Tasks workspace.

### Job Tasks Tab

This section includes the fields and descriptions for the Job Tasks tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job to which the job task list in the table part of the window applies. If the table part is empty, no job task list has been assigned to or created for the job. This field also shows the name of the current job.

### Daily Descriptions Island

Field	Description
<b>Use Daily Descriptions</b>	<p>A daily description is a descriptive text that you can add to any combination of task, activity, and day in a time sheet.</p> <p>For example: Without using daily descriptions, you register time on a task called "Client Meetings" two times in a given week: Tuesday and Friday. In the "Description" field you enter a description of these two meetings. Using daily descriptions, you could enter a description of each meeting separately, thus adding clarity to your registrations.</p> <p>This text can be used as a help to the person approving time sheets, or it can be included in invoice texts for the customer to see. If the invoice layout for the job specifies "Registration" at either level of the invoice text, any daily descriptions entered in the time sheet will be printed on the invoice. The project manager can edit the daily descriptions in the window Approve Time Sheet Lines before approving the time sheet line in question.</p> <p>If you mark this field, daily descriptions are turned on by default for all tasks registered on the job. However, the setting can be turned off or on for individual tasks in the table part. A number of factors come into play when changing the setting of this field:</p> <p>If you change the setting of this field, and the task list assigned to the job is shared with other jobs (that is, not yet made job specific), then you will receive an error message. The task list must be made job specific, or the change</p>

Field	Description
	<p>should be made in the window Task Lists, in which case the change will affect all jobs sharing the task list in question.</p> <p>If the field is marked, and there are no tasks for the job, daily descriptions will be required on all time sheet registrations on the job. Similarly, if the field is not marked, and there are no tasks for the job, then daily descriptions will not be required.</p> <p>To enable daily descriptions on job entries, Maconomy must be set up such that a time sheet line will give rise to a job entry for each day with a registration. This is done by setting the popup field "Allocation Method" in the island Job Cost to "One Entry per Day" in the window System Information in the Set-Up module.</p>

### Tasks Island

This island is usually called User. In this window it is called Tasks to clarify that the version information applies to the task list in the table part of the window, and not the job in the card part. See the "Getting Started" topic for a description of the fields in this island.

### Customer Island

Field	Description
<b>Customer</b>	This field shows the number and name of the bill-to customer assigned to the current job.

### Standard Tasks Island

Field	Description
<b>Time Budgeting</b>	In this field, you can enter a task to be used by default when time-related budget lines on jobs.
<b>Amount Budgeting</b>	In this field, you can enter a task to be used by default when creating amount-related budget lines on jobs.
<b>Registration</b>	In this field, you can enter a task to be used by default when making registrations on jobs. When you make registrations and you do not enter a task on the job in question, the task from this field is automatically copied to the registration.
<b>Revenue Recognition</b>	<p>In this field, you can enter a task to be used by default at the creation of a revenue recognition adjustment. At overrun adjustment or revenue adjustment on the basis of completion percentage on jobs to which a task list is assigned, the task from this field is automatically copied to the adjustment entry.</p> <p>Maconomy will also use the task specified in this field on revenue recognition entries in connection with the closing of fixed-price jobs for which the system has been set up to automatically create an invoice upon job closing. The value of the job parameter attribute is specified in</p>

Field	Description
	<p>the job parameter type “Fixed-Price Job Set-Up” in the window Job Parameters.</p> <p>If you enter a derived activity on the task in question, you can register the revenue adjustment on another activity than the one specified in the job parameter attribute “Activity for Job Revenue Adjustment” in the job parameter type “Fixed-Price Set-Up.” However, you should not enter other derived dimensions on the task in question, as this could lead to wrong postings in the G/L module.</p>
<b>Mileage</b>	This field shows the total mileage (in km or miles) for the lines in the table part.
<b>Invoicing Plan</b>	This field shows the invoicing plan specified for the task.
<b>Invoicing On Account 1</b>	In this field you can indicate the standard task that will be used for invoicing on account in the Invoice Selection window if the user does not actively select another task in the On Account Invoice Selection window. See also job parameter type “Invoicing on Account” attribute “Activity required for Invoicing on Account.”
<b>Invoicing On Account 2</b>	In this field you can indicate the standard task that will be used for invoicing on account in the Invoice Selection window if the user does not actively select another task in the On Account Invoice Selection window. See also job parameter type “Invoicing on Account” attribute “Activity required for Invoicing on Account.”
<b>Write Up/Down, Invoice Selection</b>	In this field you can indicate the standard task used for write-up/down registrations upon write-up/down in Invoice Selection. See also the job parameter type “Write-Up/Down” attribute “Transfer Write-Up/Down to Fixed Allocation Combination.”
<b>Write Up/Down, Job Inv. Allocation</b>	In this field you can indicate the standard task used for write-up/down registrations upon write-up/down in Invoice Allocation. See also the job parameter type “Write-Up/Down” attribute “Transfer Write-Up/Down to Fixed Allocation Combination.”
<b>Special Tax</b>	<p>In this field, you can specify a tax rate which often represents public charges. The tax is charged to the invoicing party, not the customer being invoiced. Therefore it is not added to the invoice or credit memo amounts.</p> <p>The charge will only be used in connection with invoice and credit memo postings. If you specify a tax rate here, the calculated charge amount will be posted on the account specified in the dimension combination in the field “Tax” in this window with an offset entry posted on the account specified in the dimension combination in the field “Offset Account” in the island Posting References.</p>
<b>Employee Revenue Distribution</b>	Use this field to specify a standard task for the revenue adjustment entries created from Employee Revenue Distribution window.

Field	Description
<b>Subcontractor Variance</b>	In this field, you can define where Maconomy should post the margin/difference between the time registered and the total for subcontractor reconciliation.  This is an amount task.
<b>Surcharge</b>	Use this field to specify a task for the job surcharge.

### Tasks Sub-Tab

This section includes the fields and descriptions for the Tasks sub-tab.

Field	Description
<b>Task</b>	Enter the name of a new task in this field. Maconomy checks that the specified task does not already exist for the current job. Specifying tasks from task lists of other jobs is allowed. Once created, you cannot change the name of the task.
<b>Task Description</b>	In this field, you can enter a short description of the task. Depending on the setup of your invoice layouts, this text may appear on invoices.
<b>Blocked</b>	In this field, you can specify if the current task is blocked. If it is blocked, no entries can be registered on the task. Blocking or unblocking a task does not affect the approval status of the task.
<b>Derived Act. No.</b>	<p>In this field, you can enter an activity number for the current task. If you enter the number of an activity, this activity will be selected and applied when using the current task in connection with a registration, provided that no activity number is entered by the user.</p> <p>If no number is entered in this field, the activity number entered in the card part of the window Task Lists for the current task list, if any, will be used. For more information, please see the description of the window Task Lists.</p> <p>If a task is created from the budget line (see the description of the field "Task" in the window Job Budgets), and the system parameter "Mark 'Overwrite Activity' On Tasks" is marked, the activity from the job budget line is entered in this field when the task is created, and the field "Overwrite Activity" below is marked.</p> <p>Note that to enter, change or remove an amount or time activity in this field, you need permission in the window Actions in the Set-Up module to change amount or time activities.</p>
<b>Overwrite Activity</b>	In this field, you can specify if the activity shown in the field "Derived Act. No." should overwrite any manually entered activity. This field will be marked automatically if the current task is created from a job budget, and the system parameter "Mark 'Overwrite Activity' On Tasks" is marked.
<b>Activity Name</b>	This field shows the activity text entered for the activity in the window Activities.

Field	Description
<b>Activity Type</b>	This field displays the type of the current activity.
<b>Job Price Group No.</b>	In this field, you enter the number of a job price group. The current activity is assigned to the specified job price group. When a reference is made to a job price group on a line in a job price list, all activities assigned to the job price group in question will determine the price on the current job price list line. For a more detailed description of job price groups, please refer to the description of the window Job Price Groups.
<b>Included in Fixed Price</b>	A check mark in this field indicates that the entry is included in the fixed price of a fixed price job. When you create a new line, Maconomy automatically marks this field, if the current entry is not to be included in the fixed price of the relevant job. The check mark in this field cannot be removed manually.
<b>Allow Time Registration</b>	Select this field to make the task available for time-related windows such as Time Sheets and SpeedSheet.  If you created a task with the Overwrite Activity field selected, the Allow Time Registration field is derived from the activity. You cannot allow time registration for Amount activities if the "Disallow reg. on amount act. in time sheets" field is selected in the Systems Parameter window.  You cannot allow time registration for Summary activities.
<b>Allow Expense Registration</b>	Select this field to make the task available for the registration of expenses.  If you created a task with the Overwrite Activity field selected, the Allow Expense Registration field is derived from the activity.  You cannot allow expense registration for Time activities.
<b>Allow Mileage Registration</b>	Select this field to make the task available for mileage registrations.  If you created a task with the Overwrite Activity field selected, the Allow Mileage Registration field is derived from the activity.  You cannot allow mileage registration for Time activities.
<b>Allow Purchasing</b>	Select this field to make the task available in purchasing-related windows.  If you created a task with the Overwrite Activity field selected, the Allow Purchasing field is derived from the activity.  You cannot allow purchasing for Time activities.
<b>Allow Invoicing On Account</b>	Select this field to make the task available in invoicing on account-related windows.  If you created a task with the Overwrite Activity field selected, the Allow Invoicing on Account field is derived from the activity.
<b>Allow Invoicing Plan</b>	Select this field to make the task available in invoicing plan-related windows.  If you created a task with the Overwrite Activity field selected, the Allow Invoicing Plan field is derived from the activity.
<b>Requisition Type</b>	Select the type of requisition: Taxi, Car, or Courier.

Field	Description
<b>Access Level</b>	<p>In this field, you can specify the name of an access level. A user only has access to the current job price group if he or she is granted access to this level or a higher level in the window User Access Levels in the Set-Up module. Only users with access to the current job price group can see and edit the price group in this window. In other windows, for example, the windows Activities and Employees, it is only possible to assign an employee, activity or task to job price groups to which the user has access. In addition, the selection of job price groups in the window Job Price Lists will be limited to the job price groups to which the user has access.</p> <p>Please note that this access control model only applies if the standard access control configuration has not been changed in your Maconomy system. For further information about the standard access control configuration, please see the section “Introduction to the Access Control System” in the Set-Up module.</p> <p>If no access level is specified, all users have access to the current job price group.</p>
<b>Budget Update Access Level</b>	<p>In this field, you can enter an access level on the task in question to restrict its use in the Job Budgets window. A user only has access to the current task in the job budget if he has been assigned to this level or a level above this in the User Access Levels window. This access control ensures that when working on the budget, you can only enter a task to which you have access, and in this window you can only edit the tasks to which you have access. If you do not have the specified access level, you can still see the budget lines with that task, but you will not be able to change (or create) budget lines with the given task.</p>
<b>Use Daily Descriptions</b>	<p>If you select this field, making registrations on the current task in the Time Sheets window will require that you complete the “Daily Description” field also. Selecting or deselecting this field overrules the setting of the corresponding field in the card part. See the related field in the card part of this window for more details.</p>
<b>Approved</b>	<p>If you mark this field, the current task is approved. If you remove the mark, approval of the current task is revoked. Only users who have been allowed to approve tasks in the window Actions in the Set-Up module can mark or unmark this field. If you can approve tasks, this field is automatically marked when you create or change a task. Tasks can be approved in the window Approve Tasks as well.</p> <p>You can define whether tasks need to be approved or not, and whether approval is needed for activities of the type Amount, Time, or both types. This is determined on a system-wide level in the window System Information in the Set-Up module.</p>
<b>Approved by</b>	<p>This field shows the name of the user who last approved the current task. If the task is not approved, the field is blank.</p>
<b>Approval Date</b>	<p>This field shows the date of the latest approval of the current task. If the task is not approved, the field is blank.</p>

Field	Description
<b>Standard Note No.</b>	<p>In this field, you can specify the number of a note created in the window Notes in the Set-Up module. The field is used for adding a number of extra fields in which the user can enter information about the task on purchase lines (lines in the table part of the windows Requisitions, Requests for Quote and Purchase Orders) where the current note is used. This could, for example, be useful if the task information is too generic and therefore does not provide sufficiently specific information. For instance, if the task is for consultancy services, the basic information about the task is static, but each time a consultancy service is ordered, you may wish to also register such information as the type of work in question, the skill level required, and so on. It is therefore useful to add a number of fields so that a user ordering a consultancy service is allowed to enter this information. Once the line has been created and a note has automatically been assigned to it, you can enter the additional information by opening the window Notes in the Set-Up module, selecting the note assigned to the purchase line, and specifying the relevant data in the table part. You may have many types of generic tasks in your system, and most likely they do not all require the same additional information. Therefore Maconomy allows you to extend any task by any number of additional fields.</p> <p>Fields are added assigning the task to a note where the headings in the table part represent the additional fields in which the user should enter specific information about the specific task specified on a given purchase line. Whenever the task is entered on a purchase line, a copy of the note specified on the task is automatically created and assigned to the purchase line in question. However, if the system parameter "Standard note is derived from Activity before Task" is marked, and a standard note has been specified for the activity specified on the purchase line, the note assigned to the purchase line will be a copy of the one specified on the activity in question. In the window Notes, the user can then enter the required information in the table part of the note assigned to the purchase line. The information entered in the note will also appear on external printouts.</p> <p>For a description on how to set up standard notes for activities and tasks, see the description of the system parameter "Standard note is derived from Activity before Task" in the Set-Up module.</p>
<b>Note Description</b>	This field shows a description of the note specified in the field "Standard Note No." above.
<b>Task Group 1-6</b>	These fields retrieve their values from the budget of the current job, and only if the current task is job-specific. The fields show the text from the "Description" field on the top-level sum line of the group of budget lines in which the current task is selected. If the task is selected in more than one group, this field is blank. The grouping information is taken from the planning budget. If a task is not present in the planning budget, similar information will be taken from the baseline budget. Thus, in case of inconsistency between the baseline budget and the planning budget, the planning budget will override the baseline budget. The information will always be taken from the latest revision of the budget, regardless of whether that revision is approved

Field	Description
	or not. For further information on work breakdown structure and task groups, see the descriptions under “Job Tasks” and under “Job Budgets.”
<b>Dim. Comb. No.</b>	<p>In this field, you can enter the number of a dimension combination of the type “Dimension Derivation” created in the window Dimension Combinations.</p> <p>If you specify a dimension combination, Maconomy will use the values in this dimension combination when deriving dimensions from the current task. However, any dimension derivation values specified on the current line will be used instead of those specified for the same dimensions in the dimension combination. This means that the dimension combination only applies to the dimensions for which no value has been entered on the line.</p> <p>If Maconomy is deriving dimension values from the task, and a value can be found neither in the dimension combination nor on the line itself, Maconomy will attempt to find a value for the dimension in the card part in the window Task Lists. In the card part, the dimension value can also be specified in a dimension field or through a dimension combination. For a detailed description of the procedure used when Maconomy derives dimension values from tasks, please see the description of the fields “Dim. Comb. No.” and “Location” in the card part of the window Task Lists, and the description of the field “Derived Location” in the table part.</p>
<b>Derived Location</b>	<p>In this field, you can enter the name of a location. This location will be used when deriving dimension values from the current task. Even if you have specified a dimension combination in the field “Dim. Comb. No.,” a value entered in this field will be used rather than the value (if any) found for this dimension in the dimension combination in question.</p> <p>When deriving values from a task as a result of a registration being made, Maconomy uses the following list of priorities to find a dimension value to be derived for the dimension Location:</p> <p>If a location has been specified on the task, this location is used along with the line’s specification of whether to overwrite.</p> <p>If no location had been specified on the task, Maconomy will attempt to find a value for the dimension in the dimension combination specified on the task line (if any). If a dimension combination has been specified on the task, the following list of priorities is used for finding a location in the dimension combination:</p> <p>If a location has been specified on the topmost line comprising the company to which the registration pertains, this location is used along with the line’s specification of whether to overwrite.</p> <p>If no location was found in the table part of the dimension combination, Maconomy uses the location specified in the card part of the dimension combination, along with the card part’s specification of whether to overwrite.</p> <p>If no location could be found in the dimension combination of the task line—or if no dimension combination has been specified on the task line—Maconomy uses the location (if any) specified in the card part of the task list</p>

Field	Description
	<p>in the window Task Lists, along with the card part's specification of whether to overwrite.</p> <p>If no location has been specified in the card part of the task list, either, Maconomy will attempt to find a location in the dimension combination specified in the card part of the task list (if any) in the window Task Lists. The method used for finding a location here is similar to the one described in item 2.</p> <p>If no location could be found in the dimension combination in the card part of the task list in the window Task Lists—or if no dimension combination has been specified in the card part of the task list—no location is derived from the task.</p> <p>See the section on dimension derivation in “Introduction to the G/L Module” as well as the description of the windows Dimension Derivation and Dimension Combinations for further information about dimension derivation.</p>
<b>Overwrite Location</b>	In this field, you can specify if the location shown in the field “Derived Location” should overwrite any manually entered location.
<b>Derived Entity</b>	The functionality of this field is similar to that of the field “Derived Location” above.
<b>Overwrite Entity</b>	The functionality of this field is similar to that of the field “Overwrite Location” above.
<b>Derived Project</b>	The functionality of this field is similar to that of the field “Derived Location” above.
<b>Overwrite Project</b>	The functionality of this field is similar to that of the field “Overwrite Location” above.
<b>Derived Purpose</b>	The functionality of this field is similar to that of the field “Derived Location” above.
<b>Overwrite Purpose</b>	The functionality of this field is similar to that of the field “Overwrite Location” above.
<b>Derived Spec. 1-3</b>	The functionality of this field is similar to that of the field “Derived Location” above.
<b>Overwrite Spec. 1-3</b>	The functionality of this field is similar to that of the field “Overwrite Location” above.
<b>Derived Local Spec. 1-3</b>	The functionality of this field is similar to that of the field “Derived Location” above.

Field	Description
<b>Overwrite Local Spec. 1–3</b>	The functionality of this field is similar to that of the field “Overwrite Location” above.

## Actions

This section shows the Actions available in the Job Tasks workspace.

### Top Tab

Field	Description
<b>Require Tasks</b>	Select this action if you want the job to require a task list. By selecting this action, you connect the current list of job tasks to the job. If you had previously disallowed tasks (see the action below), tasks which were removed from the table part then will reappear.
<b>Disallow Tasks</b>	Select this action if you do not want to use tasks in registrations on this job. Any existing registrations will keep their tasks, however. Note that if you have already made registrations on the job, for instance in the job budget, when you select this action, inconsistencies may occur now that you can no longer use tasks in the budget.  Any tasks in the table part will disappear from view, but are brought back to view if you select the action “Require Tasks” above.
<b>Copy Job Tasks</b>	When you select this action, Maconomy copies the contents of the task list associated with the job specified in the island Copy Job Tasks in the card part of the window into the current task list. If the field “Overwrite when duplicated” in the card part is marked, a task in the current task list will be overwritten if a task with an identical name exists in the copied list; otherwise, the task is left out from the copied list. If the field “Overwrite Derived Dimensions” is marked, the dimension derivations specified per task in the table part of this window will be overwritten by the corresponding dimension derivations from the copied task list.  The copied tasks do not replace the current list, but are added to the list.
<b>Mark All for Daily Descriptions</b>	When you select this action, the field “Use Daily Descriptions” in the card part is marked, and all tasks in the table part are marked in the field “Use Daily Descriptions.” For more information about daily descriptions, see the description of the island Daily Descriptions in the card part of this window.
<b>Unmark All for Daily Descriptions</b>	When you select this action, the field “Use Daily Descriptions” in the card part is unmarked, and all tasks in the table part are unmarked in the field “Use Daily Descriptions.” For more information about daily descriptions, see the description of the island Daily Descriptions in the card part of this window.

## Employee Control Single Dialogs Workspace

Use this workspace to specify a list of employees who are permitted to create entries on a job. By only permitting certain employees to make entries on a job, you can avoid accidental or incorrect entries. You can create an employee list for each job.

You can also enable employee control in this workspace by selecting an action. In the Jobs workspace, you can choose a different method for employee control, where only employees who appear in the job's planning budget are permitted to make entries on the job. However, the recommended employee control method is to use employee lists that you define in this workspace.

You can add employees individually, or you can copy a list from another job and then edit it, or import the employees who are members of a certain employee category.

Use the Employees sub-tab to add employees to the job (if the job is open) and view information about the employees. You can also enter a range of dates to indicate when the employee can make entries on the job.

Any addition of an employee to any employee list must be approved. The approval can be done in this workspace or in the Employee Control Lines workspace. Alternatively, if you select the **Automatically approve employee control lines at creation** job parameter, employees are approved automatically when you add them to the control list.

### Employee Control Tab

This section includes the fields and descriptions for the Employee Control tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job. The current employee control list applies to this job only. This field also shows the name of the job.
<b>Project Manager</b>	This field shows the employee number and name of a project manager assigned to the job, if any.

#### Job Description Island

Copy to come

#### Customer Island

Field	Description
<b>Customer</b>	This field shows the number of the customer assigned to the job in question. This field also shows the name of the customer.

**Employee Control Island**

Field	Description
<b>Enabled</b>	If this field is marked, employee control using this employee list has been enabled for the current job. You can enable employee control in the window Jobs or by selecting the action "Enable Employee Control" in this window. Note that this field is not marked if employee control has been enabled by specifying the planning budget.

**Hours Island**

Field	Description
<b>Budgeted</b>	This field shows the budgeted number of hours for the job from the latest approved revision of the current budget.
<b>Assigned</b>	This field shows the assigned number of hours for the job from the latest approved revision of the current budget.

## Employees Sub-Tab

This section includes the fields and descriptions for the Employees sub-tab.

Field	Description
<b>Employee No.</b>	In this field you can enter the employee number of an employee. If employee control is enabled for the current job, this employee may register entries on the job.
<b>Employee Name</b>	This field shows the name of the current employee.
<b>Hours Expected</b>	When adding an employee to Employee Control you can specify the number of hours that you expect the employee to register on the job. This field shows this number of expected hours.
<b>Job Description</b>	This field shows the description of the job.
<b>Completed</b>	You can mark this field to show that the task is completed.
<b>Standard Task</b>	<p>In this field you can specify a task name from the task list of the current job. If you specify a task, the task will be used as the standard task for registration whenever the current employee makes registrations on the job.</p> <p>This way you can overrule the standard task for registration specified for the task list for the current job, on a per-employee basis. If you do not specify a task in this field, the task specified as standard task for registration in the task list will be used as standard task. Note that the task specified here will be considered the standard task for the employee, even if the employee control list is not enabled.</p>

Field	Description
	If the task entered in this field is deleted in the window Task Lists, or if the task list for the job is changed to one which does not include the task entered in this field, then this field is cleared. Maconomy shows a message first.
<b>Task Description</b>	This field shows the description of the selected standard task.
<b>Valid From</b>	In this field, you can enter a date from which the current employee may register on the job. For instance, if a certain task only applies to a series of seminars taking place during a week in May, you can enter the starting date of that week in this field, and the ending date in the field "Valid To" below. The employee may then only register time during the week to which the registrations apply. If this field is blank, the employee may register time on the current task immediately.
<b>Valid To</b>	In this field, you can enter a date to which the current employee may register time on the current task. See the field "Valid From" above. If this field is blank, the employee may register time on the current task indefinitely.
<b>Approved</b>	<p>This field shows if the insertion of the current employee into the employee control list has been approved. An employee must be approved to be able to register on a job. You can manually change the approval status of an employee. This way, it is easier to copy an employee control list from another job and adapt it for the current job by removing the approval status of individual employees. Furthermore, it is possible to remove or grant approval as the job progresses.</p> <p>The approval functionality in this window is also intended for use by other Maconomy processes. For instance, the information and the approval action in this window can be used to build custom workflows in the Maconomy Portal using M-Script.</p> <p>Note that if you do not wish to use the approval functionality, you can assign the value "Yes" to the job parameter attribute "Automatically approve employee control lines at creation" of the type "Registration" in the window Job Parameters. This way, any employee added to the job employee control list is automatically approved.</p> <p>The window Employee Control Lines also shows details about the approval.</p>
<b>Approved by</b>	This field shows the name of the user who approved the current employee in the list, if the field "Approved" above is marked.
<b>Approval Date</b>	This field shows the date on which the current employee was approved in the list, if the field "Approved" above is marked.
<b>Primary Empl Cat. No.</b>	This field shows the employee category assigned as primary employee category for the current employee.

Field	Description
<b>Primary Empl. Cat. Name</b>	This field shows the name of the primary employee category.
<b>Company No.</b>	This field shows the company number to which the current employee is assigned in the card part of the window Employees.
<b>Company Name</b>	This field shows the name of the company to which the current employee is assigned.
<b>Location</b>	This field shows the location to which the current employee is assigned in the card part of the window Employees.
<b>Location Description</b>	This field shows the description of the location to which the current employee is assigned.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Entity Description</b>	The functionality of this field is similar to that of the field "Location Description" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project Description</b>	The functionality of this field is similar to that of the field "Location Description" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose Description</b>	The functionality of this field is similar to that of the field "Location Description" above.
<b>Specification 1-3</b>	The functionality of these fields is similar to that of the field "Location" above. Specification 1-3 Description The functionality of these fields is similar to that of the field "Location Description" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3 Description</b>	The functionality of these fields is similar to that of the field "Location Description" above.

## Actions

This section shows the Actions available in the Employee Control workspace.

### Top Tab

Field	Description
<b>Enable Employee Control</b>	When you select this action, the employee list in this window will be used as employee control list for the current job. This corresponds to opening the window Jobs for the current job and selecting "Employee List" in the field "Employee Control."
<b>Disable Employee Control</b>	When you select this action, employee control will be disabled for the current job. This corresponds to opening the window Jobs for the current job and selecting the blank value in the field "Employee Control."
<b>Copy Employee List</b>	When you select this action, the employee list assigned to the job entered in the field "Copy from Job No." in the card part is appended to the employee list of the current job. Any existing employees are not overwritten (that is, any standard task already specified will be preserved).
<b>Copy Employees from Time Budget Resources</b>	Employees may have been selected as resources during job budgeting in the Time Budget Resources window. This action will add those employees to the employee control list of employees.
<b>Add Employees</b>	When you select this action, all employees for whom the employee category specified in the field "Primary Empl Cat. No." in the card part is the primary category are appended to the employee list of the current job. Any existing employees are not overwritten (that is, any standard task already specified will be preserved).
<b>Remove Employees</b>	When you select this action, all employees in the table part are removed from the list.

## Job Collections Single Dialogs Workspace

Use this workspace group jobs together into collections.

For example, you can specify on a job in a job collection that it shares its invoices on account with all of the other jobs in the collection. This means that the invoices on account on the job are available for reconciliation against invoices on other jobs in the collection.

When you invoice a job that belongs to a job collection where some of the jobs share their invoices on account, you can regard the invoices on account from these other jobs and from the job itself as one big pool from which to reconcile. However, you can still instead select specific invoices on account for reconciliation.

This enables you to use job collections as retainers by invoicing the retainer as invoices on account from one job in the collection (set up to share its invoices on account) and then set up the collection with the jobs that should be covered by the retainer.

The setup of job collections is flexible so that you can add and subtract jobs from a collection at any time.

In addition, you can set up the jobs in a job collection as fixed-price jobs, and for these jobs the on-account reconciliation among the jobs in the collection works as it does for time-and-material jobs. The job collection can contain a mix of fixed-price jobs and time-and-material jobs.

You can set up a job to allow on-account reconciliation across different bill-to customers.

Jobs in the same collection must share some characteristics, such as the same company number, department, and currency.

You can specify on a job collection that the jobs in the collection should be blanket invoiced separately. This means that they should not be blanket invoiced together with jobs that do not belong to that job collection. This enables you to blanket invoice the jobs that are covered by a retainer.

If you set up a job in a job collection with job invoice allocation, you can allocate the job entries on that job against the invoices on account that are shared from other jobs in the job collection.

For jobs that you have not set up for invoice allocation, you can only reconcile invoices on account that are included in the fixed price against other jobs that are also set up for job invoice allocation.

## Job Collections Tab

This section includes the fields and descriptions for the Job Collections tab.

### Job Collection Island

Field	Description
<b>Job Collection</b>	This field shows the number of the job collection. This field will also be displayed in the windows Jobs and Invoice Selection for jobs that belong to a job collection. You can also enter a description of the job collection in this field.
<b>Access Level</b>	Here you can specify an access level for a job collection. To view and edit a job collection, you must have the access to the given job collection. It does not affect access to the individual jobs or on account reduction across the jobs in the collection.
<b>Blanket Invoice Separately</b>	A check mark in this field indicates that jobs in the job collection will be invoiced separately and therefore not be mixed with jobs that do not belong to the collection.
<b>Share Invoices On Account</b>	If there is a check mark in this field, the invoices on account on the job will be shared with all other jobs in the collection. This means that the invoices on account on this job are available for reconciliation against invoices on other jobs in the collection. This also applies to job invoice allocation. By default, this field is not marked.
<b>Closed</b>	You can place a check mark in this field to indicate that a job collection must be marked as closed when all the jobs in the collection are closed. If you close all of the jobs in a job collection, that collection will be marked as closed. This

Field	Description
	allows you to narrow down a search for job collections to include only open job collections.  Note that if you reopen a job that belongs to a closed job collection, then the collection will be marked as not being closed.

### Job Collection Criteria Island

Field	Description
<b>Company</b>	This field shows the company number of the job collection. Only jobs belonging to this company can be added to the collection.
<b>Bill to Customer</b>	This field shows the bill-to customer number. Jobs in a job collection must have the same bill-to customer as the job collection. In particular, you cannot change the bill-to customer on a job that is assigned to a job collection.  To ease this, in the special case where you wish to change the bill-to customer on all jobs in a job collection, you can change the bill-to customer directly on the job collection. This then also changes the bill-to customer on all the jobs in the job collection.
<b>Department</b>	This field shows the department of the job collection. Only jobs in this department can be added to the collection.
<b>Currency</b>	This field shows the currency of the job collection. Only jobs using this currency can be added to the collection.
<b>Tax</b>	A check mark in this field indicates that tax is applied in the job collection. Only jobs with the same value (compare the field Tax in the window Job Information) can be added to the collection.
<b>Company Tax Code</b>	This is the company tax code of the job collection. Only jobs using this company tax code can be added to the job collection.

### Remarks Island

Enter any additional information as remarks.

### User Island

See the chapter "Getting Started" for a description of the fields in the island User.

### Job Collection Members Sub-Tab

This section includes the fields and descriptions for the Job Collection Members sub-tab.

Field	Description
<b>Job No.</b>	This is the number of a job in the collection. Jobs in the same job collection must be set up with the same company, department, bill-to

Field	Description
	customer, currency, VAT and company VAT code as specified in the island Job Collection Criteria in the card part of the window.
<b>Job Name</b>	This is the name of the job in the job collection.
<b>Share Invoices On Account</b>	If there is a check mark in this field, the invoices on account on the job will be shared with all other jobs in the collection. This means that the invoices on account on this job are available for reconciliation against invoices on other jobs in the collection. This also applies to job invoice allocation. By default, this field is not marked.
<b>Closed</b>	A check mark in this field indicates that the job is closed.
<b>Net On Account</b>	This field shows the amount net on account.
<b>Approved for Reconciliation</b>	This field shows the amount currently approved for reconciliation.
<b>Available for Reconciliation</b>	This field shows the amount currently available for reconciliation. This is the amount net on account less the amount approved for reconciliation.
<b>For Reconciliation</b>	This field shows the amount currently for reconciliation. You can control the amount for reconciliation by changing the value in this field. Note that you can also specify the details of the on-account reconciliation in the window Job Invoices On Account.
<b>Tax On Account</b>	This field shows the tax net on account.

## Job Phases Workspace

Use this workspace to split a job into phases and enter milestones.

This enables you to divide the progress of a job into sections, each of which has a starting and an ending date. The dates cannot overlap. To each phase, you assign an employee to be responsible for approving or completing the phase or milestone in question. You can create one job phase plan for each job.

A milestone is a measuring point for whether a subsidiary goal in a job flow has been met. As a point in a flow, not a period, it has no duration. Milestones are continuously approved and some must be customer approved. A milestone in the flow does not have to be approved (accepted) to begin or complete subsequent job phases.

Using an Analyzer report or report template for the report component, you can print relevant information about jobs, deadlines, responsible employees, and dates.

If you have created an invoicing plan for the job, you can assign a job phase or a milestone to a line on it. This way, the completion of one job phase or approval of a milestone can trigger an invoicing of the customer. See the Invoicing Plans workspace for details.

You can also create phases and milestones for a template job. If you do this, the lines that you create in this workspace also apply to the additional jobs that you create based on the template job.

## Job Phases Tab

This section includes the fields and descriptions for the Job Phases tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job to which the job phases and the milestones in the table part of the window are assigned. If the table part is empty, no job phases have been created for the job. This field also shows the name of the current job.
<b>Template</b>	This field shows whether the job is a template job or a normal job.
<b>Project Manager</b>	This field shows the employee number and name of the project manager of the current job. The project manager is specified in the window Jobs.

### Current Phase Island

Field	Description
<b>Phase</b>	This field shows the name of the current phase of the job. The field is blank until the first phase is initiated by using the action "Initiate First Phase." Once this action has been selected, this field will always show the earliest phase which has not been ended.
<b>Start Date</b>	This field shows the actual starting date of the current phase. The date is transferred from the field "Actual Starting Date" in the table part.
<b>Planned Ending Date</b>	This field shows the planned ending date of the current phase. The date is transferred from the field "Planned Ending Date" in the table part.
<b>Due</b>	This field is automatically marked by Maconomy if today's date is later than the date in the field "Planned Ending Date" in this island. The field thus shows whether the ending date of the current phase has been exceeded. The field cannot be changed manually.

**Customer Island**

Field	Description
<b>Customer</b>	This field shows the number and name of the customer which the current job concerns. Neither the name nor number of the customer can be changed in this window.

## Phases Sub-Tab

This section includes the fields and descriptions for the Phases sub-tab.

Field	Description
<b>Phase</b>	In this field, you can enter the name of a new job phase or a milestone. The name cannot be changed, once the phase has been created.  You can specify the name of a job phase or a milestone in the window Invoicing Plans if you want the completion of a job phase or a milestone to trigger an invoicing.
<b>Type</b>	In this field, you can select whether the new line in the table part is to concern a job phase or a milestone. The type cannot be changed, once it has been selected.
<b>Description</b>	In this field, you can enter a description of the current job phase or milestone. The description is included on job phase printouts.
<b>Responsible Employee No.</b>	In this field, enter the number of the employee responsible for the completion of the current job phase or approval of the current milestone. Maconomy suggests the employee specified as the job's project manager. A job phase cannot be the current phase until a responsible employee has been specified in this field, and the field must also be filled in for milestones before a subsequent phase can be made current.
<b>Employee Name</b>	This field shows the name of the employee specified in the field "Responsible Employee No." above.
<b>Current Phase</b>	This field is automatically marked by Maconomy if the job phase on the line in question is the current phase. The name of the current phase is also shown in the island Current Phase in the card part. There is no current phase until the first phase is initiated using the action "Initiate First Phase." Once this action has been selected, the table part will always contain one line with a mark in this field.  This field cannot be marked for lines concerning milestones.
<b>Planned Starting Date</b>	In this field, you can enter the date upon which the job phase on the current line should be initiated according to plan or the date upon which the milestone on the current line should be approved. If the current phase or milestone is the first line in the table part, Maconomy suggests today's date.  When you change the dates in the table part, the job phases adjust themselves according to the following principles: Closed job phases cannot be changed. When you change a job phase which has not been ended, the

Field	Description
	<p>duration on future phases are maintained while the planned starting and ending dates are changed. For phases before the changed phase, the duration of the phases are adjusted, so that the starting dates remain the same if possible, while the ending dates (and thereby also the durations) are changed.</p> <p>Generally, there cannot be gaps or overlaps between the phases. However, you can change the starting date of the current phase, causing a gap between the ending date of the previous phase and the starting date of the current phase, or an overlap of these dates. This can, for example, be due to the fact that a time schedule could not be kept, and you therefore wish to adjust the plan. If the previous phase is reopened, Maconomy will adjust its planned ending date to the day before the date in this field.</p> <p>For milestones it applies that they have no duration. This means that the date in the fields "Planned Starting Date" and "Planned Ending Date" must be the same date, and the value in the field "Planned Duration" must be zero.</p>
<b>Planned Duration</b>	<p>In this field, you can enter the planned duration of the job phase. The duration is entered as a number of days. The principles for specifying dates are described in the field "Planned Starting Date." Instead of entering a planned duration in this field, you can enter a planned ending date in the field "Planned Ending Date." If you do so, Maconomy will calculate a duration in this field, based on the planned starting and ending dates.</p> <p>For milestones, the date in this field must be zero.</p>
<b>Planned Ending Date</b>	<p>In this field, you can enter the planned ending date of the job phase. The principles for specifying dates are described in the field "Planned Starting Date." Instead of entering a planned ending date in this field, you can enter a planned duration in the field "Planned Duration." If you do so, Maconomy will calculate an ending date in this field, based on the planned starting and the duration.</p>
<b>First Starting Date</b>	<p>This field shows the date on which the job phase on the current line became the current phase for the first time. If the job phase is ended and then reopened, this field shows the date on which the phase originally became the current phase.</p>
<b>Actual Starting Date</b>	<p>This field shows the date on which the phase on the line in question was initiated. The date of the first phase corresponds to the date on which the action "Initiate First Phase" was selected. For other phases, the date corresponds to the date on which the previous phase was ended. If the job phase is ended and reopened, this field shows the date of the latest initiation of the phase.</p> <p>If the line concerns a milestone, this field shows the date on which it became possible to approve the milestone (that is, the date on which the previous job phase was ended).</p>
<b>Actual Duration</b>	<p>This field shows the actual duration of the job phase of the current line, that is, the difference between the actual starting and ending dates.</p>

Field	Description
	<p>If the phase has been reopened and ended several times, Maconomy calculates the total number of days in which the phase was current. However, Maconomy only calculates whole days, meaning that if the phase has been current for a number of hours on a given day, these hours are not included in the calculation. Therefore, the dates in the fields "Actual Starting Date," "Actual Duration" and "Actual Ending Date" do not necessarily correspond to each other.</p> <p>If the line concerns a milestone, this field shows the time it took to approve the milestone, that is, the difference between the dates in the fields "Actual Starting Date" and "Actual Ending Date."</p>
<b>Actual Ending Date</b>	<p>This field shows the date on which the job phase on the current line was actually ended using the action "End Phase."</p> <p>If the line concerns a milestone, this field shows the date on which the milestone was approved using the action "Approve Milestones."</p>
<b>Reopened</b>	<p>This field is automatically marked by Maconomy. The marking of this field depends on whether the current line concerns a phase or a milestone.</p> <p>If the line concerns a phase, this field is marked if the phase has been ended and then reopened using the actions "End Phase" and "Reopen Previous Phase." Note that the field is not marked if the reopening is made ahead in time that is if "Phase B" is the current phase and "Phase A" is reopened (and thereby becomes the current phase), "Phase B" will not be marked as reopened when "Phase A" is ended and "Phase B" becomes the current phase again.</p> <p>If the line concerns a milestone, the field is marked if the action "Cancel Approval of Milestone" is selected.</p>
<b>Approve</b>	<p>If you mark this field, you specify that the employee responsible for the next phase or the project manager of the job should approve the phase transition when you use the action "End Phase." For further information, please see the description of the action "Approve Phase Completion" in this window.</p>
<b>Cancel Approval</b>	<p>If the line concerns a milestone, you can mark this field to point out the milestones to be approved using the action "Approve Milestones." Only milestones placed within the time period of the current phase can be marked.</p>
<b>Ended By</b>	<p>This field shows the name of the user who ended the line using the action "End Phase." A phase can be ended by the project manager of the job in question or by the employee responsible for the job phase. The employee responsible for a given phase is specified in the field "Responsible Employee No."</p>
<b>Approved</b>	<p>This field is marked if the current phase or milestone is approved using the action "Approve Phase Completion," "End Phase" or "Approve Milestones." See the description of these actions for further information.</p>
<b>Approved By</b>	<p>This field shows the name of the employee who approved the phase or milestone in question.</p>

Field	Description
<b>Reference</b>	In this field, you can enter a reference to a customer, a contract, and so on. For example, you can enter the name of the customer's employee who accepted the approval of a milestone.
<b>Remarks 1-5</b>	In these fields, you can enter various remarks about the phase or the milestone on the current line.
<b>Created by</b>	This field shows the name of the user who created the job phase or the milestone on the current line.
<b>Created on</b>	This field shows the date on which the current line was created.
<b>Changed by</b>	This field shows the name of the user who made the latest change to the current line. In this connection, ending a phase or approving a milestone is not considered a change to a job phase line.
<b>Changed on</b>	This field shows the date on which the latest change to the line in question was made.
<b>Version No.</b>	This field shows the version number of the job phase or milestone on the line in question. The number is incremented by one each time a change is made to the job phase.

## Actions

This section shows the Actions available in the Job Phases workspace.

### Top Tab

Field	Description
<b>Delete Phase List</b>	When you select this action, all phases on the current phase list are deleted. If the phase list was created as a result of copying jobs in the window Jobs, you may need to delete all the phases on the list. The action cannot be selected, once the first phase has been initiated.
<b>Initiate First Phase</b>	When you select this action, the first phase is initiated. This means that the first phase in the list is marked as the current phase, and the field "Actual Starting Date" is set to today's date for the first phase. The action can only be selected if a responsible employee has been specified for the first phase.
<b>End Phase</b>	<p>When you select this action, you mark the completion of the current phase and a phase transition is carried out. Only the employee responsible for the current phase or the project manager of the job can end a phase.</p> <p>If the field "Approve" is marked on the current phase's line, the phase transition will not happen before the completion of the phase is approved.</p> <p>At a phase transition, the field "Actual Ending Date" is set to today's date on the current phase, and the following phase (if it exists) is marked as the new current phase. Furthermore, the field "Actual Starting Date" for the new current phase is set to today's date. If an invoicing plan has been assigned to the job,</p>

Field	Description
	and this plan indicates that the completion of the current phase should trigger an invoicing, you can now transfer the invoicing plan for invoicing in the windows Invoice Selection and Approve Invoice Selection.
<b>Approve Phase Completion</b>	<p>This action can be selected if the current phase has a mark in the field "Approve." The action can only be selected by the employee responsible for the next phase or by the job's project manager. At approval, a phase transition will take place as described above for the action "End Phase."</p> <p>If the employee responsible for the next phase is the same as for the current phase, you do not have to select both this action and the action "End Phase"; when you select one of these actions the other is automatically carried out as well as a phase transition. However, the job's project manager must carry out both actions to initiate a phase transition, if he or she is not explicitly specified as responsible for the current and the next phase.</p>
<b>Reopen Previous Phase</b>	<p>When you select this action, a backwards phase transition is carried out. This means that the phase that was current when the action was selected is no longer open, while the previous phase is made the current phase. At the same time, the field "Reopened" is marked for the previous phase.</p> <p>If all phases are ended, the last phase is reopened when this action is used. If the current phase is the first phase when this action is used, the phase will no longer be open. This corresponds to the first phase not being initiated. In this way, you can start all over on the job phase list.</p> <p>If there are approved milestones between the phase being current when selecting this action and the reopened phase, the approval of these will be cancelled when this action is selected.</p> <p>The action can only be selected by the employee responsible for the current phase, or for the previous phase or by the project manager of the job.</p>
<b>Approve Milestones</b>	When you select this action, the milestones placed ahead in time of the current phase are approved if the field "Approve" is marked and if the current employee is project manager or specified as responsible for the phase. After approval, the mark in the field "Approve" is removed.
<b>Cancel Milestone Approval</b>	When you select this action, the approval of previously approved milestones is cancelled, if the field "Cancel Approval" is marked, and if the current employee is project manager or specified as responsible for the milestone. After the cancellation, the mark in the field "Cancel Approval" is removed and the field "Reopened" is marked instead.

## Main Jobs Single Dialogs Workspace

Use this workspace to see an overview of the relationship between main jobs and subjobs.

In Maconomy, you can link jobs to each other in a hierarchical main job/subjob relationship.

The Main Jobs tab displays information about all open jobs except for jobs that are subjobs. A job becomes a main job when it has subjobs attached to it. The Subjobs sub-tab displays information about the subjobs that are associated with the main job that you select in the Main Jobs tab.

You can associate a subjob with a main job by creating a line in the Subjobs sub-tab that contains the job number of that subjob. Similarly, you can remove a subjob from a main job by removing the relevant line from the Subjobs sub-tab.

### Main Jobs Tab

This section includes the fields and descriptions for the Main Jobs tab.

#### Job Island

Field	Description
<b>Job</b>	This is the job number of the main job in the window. You cannot change it here. This field also shows the name of the main job as specified in the Jobs window. You can change the name here, or in the Jobs window.
<b>Job Group</b>	This is the job group to which the job is assigned. You can assign the job to a new job group. The pop-up shows the job groups created in the window Job Groups and you can only assign jobs to existing job groups.
<b>Status</b>	This is the current job status. The status will always be "Order," and it cannot be changed here; it can only be changed in the window Jobs.
<b>Responsible</b>	This is the name of the person responsible for the job. The name is derived when a job is created. It can be changed here as well as in the window Jobs.
<b>Project Manager</b>	This is the name and number of the project manager of the main job. If you specify a different project manager number, the project manager name will be updated as well.
<b>Department</b>	In this field, you choose the department to which the job belongs. Maconomy suggests the value from the customer's information card in the A/R module, but you can change it. Departments are defined in the window Posting References in the G/L module.
<b>Closed</b>	If this field is marked, the job has been closed. You cannot make changes to a closed job.
<b>Invoice Layout</b>	This field shows the invoice layout rule to be used when creating invoices for the main job. The invoice layout rule can also be changed from this window in accordance with the criteria specified in the description of the field in the Jobs window.
<b>Detailed Invoice Specification</b>	This field is similar to Invoice Layout, but it updates the field Detailed invoice Specification in the table.

**Job Status Island**

Field	Description
<b>Submitted</b>	This field shows whether the job is submitted. Note that this field and the <b>Approved</b> field only have relevance when jobs are set up to be approved through approval hierarchies.
<b>Approved</b>	This field shows whether the job is approved. Before a job is approved, it has Quote status and is blocked for budgeting, registration, and invoicing.

**Invoicing Status Island**

Field	Description
<b>Approved for Editing</b>	If the job parameter of the type Invoice Approval for the current job specifies that invoice editing is required, this field is marked by Maconomy when the invoice selection is approved using the approval functions in the Action menu. If invoice editing is not required according to the job parameter type "Invoice Selection," the functionality of this field is similar to that of the field "Approved for Invoicing" below.
<b>Submitted Draft</b>	This field indicates whether at least one invoice draft was submitted.
<b>Submitted by</b>	This field shows the name of user who submitted this draft.
<b>Submitted Date</b>	This field shows the date when the draft was submitted.
<b>Approved for Invoicing</b>	This field shows whether or not the job is approved for invoicing using the approval functions in the window Approve Invoice Selection. However, the job parameter of the type Invoice Approval for the current job may require that the invoice is edited in the window Invoice Editing before this field is marked. For more information, please see the description of the field "Approved for Editing" above and the job parameter type "Invoice Approval."
<b>Approved by</b>	This field displays the name of the user who approved the job for invoicing. The name of the approver is automatically saved when the job is approved using one of the actions "Approve Invoice Selection" and "Approve for Invoicing on Account." The field will be cleared if the invoice is reopened for editing.
<b>Approval Date</b>	This field displays the date on which the job was approved for invoicing. The approval date is automatically saved when the job is approved using one of the actions "Approve Invoice Selection" and "Approve for Invoicing on Account." The field will be cleared if the invoice is reopened for editing.

## Company Island

Field	Description
<b>Company</b>	This field shows the number and name of the company responsible for the current job. You cannot change the value here.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of the concepts of company base currency and enterprise currency.

## Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the number of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not check marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in "Introduction to the G/L Module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p> <p>This field also shows the name of the specified settling company.</p>

## Main Job Invoicing Island

Field	Description
<b>Includes Subjobs</b>	<p>This field is maintained by Maconomy. If the field is marked, it means the following:</p> <ul style="list-style-type: none"> <li>▪ The current job is a main job.</li> <li>▪ The current job is marked for blanket invoicing in the window Job Information.</li> <li>▪ Some or all of the subjobs of the current main job are marked for blanket invoicing.</li> <li>▪ The invoice layout rule for the current job specifies that subjobs should be invoiced as part of the main job (the field "Main Job Invoicing" is selected on the invoice layout rule).</li> </ul> <p>If the field is marked, Maconomy will treat the main job and its associated subjobs as one job with regard to invoicing. When you approve the invoice</p>

Field	Description
	selection of the main job, entries from the subjobs are approved also, and when you print an invoice from the main job, the subjobs are also printed. If this field is not marked, one or more of the criteria listed above are not fulfilled.
<b>Main Job Invoice Selection</b>	A check mark in this field indicates that the current job is part of a blanket invoicing that uses main job invoice selection.
<b>Combine Invoice Printout Lines</b>	A check mark in this field indicates that the current job is part of a blanket invoicing where lines on the invoice printout combines registrations from all subjobs. This means that each job does not have its own separate section on the invoice.
<b>Invoicing Group</b>	Maconomy can produce an invoice for each invoicing group when using main job invoicing. In this field you can assign an invoicing group to the job.

### Price Island

Field	Description
<b>Pricing Principle</b>	In this field, you select the pricing principle to be used for this main job. For more details of the parameters you can use, see the help for the window Job Parameters.
<b>Fixed Price on Main Job</b>	<p>This field shows the fixed price of the main job. The value displayed in this field is determined by the setup of the job parameter attribute "Fixed Price Basis" in the job parameter type "Pricing Method" which can have one of the values "Quote" and "Budget."</p> <p>If the job in question is a fixed price job and is assigned the job parameter attribute "Fixed Price Basis" with the value "Quote," the value displayed in this field is identical to the value displayed in the field "Effective Quote Price" in this island. The value in this field is calculated on the basis of the quote price approved for the job in the one of the windows Quote Editing and Approve Quote. If you need to change the fixed price, that is, the approved quote price of such a job, this can be done in one of the windows Quote Editing or Approve Quote.</p> <p>If the fixed price job in question is assigned the job parameter attribute "Fixed Price Basis" with the value "Budget," the value displayed in this field will be identical to the value of the latest approved budget of the job. Note that the value displayed in this field is the sum of the sales prices displayed in the table part of the window Job Budgets for those lines on which the field "Not incl. in fixed price" has not been marked, that is, the fixed price is the sum of the lines included in the fixed price of the job. See also the introduction of the window Invoice Selection for a description of how Maconomy determines whether or not entries are to be included in the fixed price of a job.</p>

Field	Description
	You can inspect the pricing method selected for the job in question in the window Job Parameter Selection.
<b>Fixed Price incl. Subjobs</b>	This field shows the fixed price for the main job including the fixed price for each of the subjobs belonging to the main job.
<b>Fixed Price for Main Job Inv.</b>	This field shows the fixed price for all the jobs among the main job and its subjobs that are included in main job invoicing.

### Customer Island

Field	Description
<b>Customer</b>	This is the number of the customer the job is for. Below the number is the first line of the customer's name. The customer number can be changed here and the name will automatically be updated.
<b>Bill to Customer</b>	This is the number of the customer who is paying for the job. Below the number is the first line of the customer's name. If the customer number is changed, the name will automatically be updated.

### Payment Island

Field	Description
<b>Pmt. Terms</b>	In this field, you can choose which payment terms to apply to the invoices for the job. Maconomy automatically suggests the payment terms normally applied to the customer. This information is retrieved from the window Payment Information in the Accounts Receivable module. You can change the payment terms here.
<b>Blanket Invoice</b>	<p>In this field, you can specify whether the job is to be included in a blanket invoice or blanket credit note to the customer. Maconomy supports blanket invoicing and crediting for both regular invoices and credit memos and for invoices and credit memos on account. Maconomy suggests the value from the field "Blanket Invoice" in the customer's information card in the A/R module, but you can change it here.</p> <p>Blanket invoicing means that all non-invoiced but approved invoice selections to the customer are invoiced together in one invoice. The jobs must have the same bill-to customer and be assigned to the same company, the same department, the same company tax code and the same currency code. Similar principles apply to blanket crediting all crediting to the same customer, and so on, can be joined in one credit memo. However, a credit memo selection will not be included in a blanket crediting if it was created from an invoice.</p> <p>If the system parameter "Blanket invoicing per main job" is check marked, only main jobs and their subjobs are joined in the blanket invoice or credit memo. For more information about main job invoicing and crediting, please see the description of the window Invoice Layout Rules.</p>

Field	Description
<b>Tax</b>	Place a check mark in this field if invoices for the job are subject to tax. Maconomy suggests the value from the customer's information card in the Accounts Receivable module, but you can change it here.
<b>Company Tax Code</b>	This is the tax code of the company whose jobs belong to this main job. The subjobs in a main job must have the same tax code.
<b>Currency</b>	In this field, you can choose the currency of the job. Maconomy automatically suggests the value normally applied to the customer, retrieving it from the window Customer Information Card. You cannot change the currency if you have made entries on the job. If you change the currency, any budget figures for the job will be recalculated to match the selected currency. The same applies to prices in job specific price lists in this window.
<b>Allocation %</b>	This field shows the allocation percentage assigned to the main job. You cannot change the percentage here but it is updated when you specify allocation percentages for each of the assigned subjobs in the table part.

### Subjobs Sub-Tab

This section includes the fields and descriptions for the Subjobs sub-tab.

Field	Description
<b>Sub Job No.</b>	This field shows the number of the job which was created as a subjob to the current main job. When attaching a new subjob to the main job in the card part, by creating a new line in the table you specify a job number in this field. The link between main job and subjobs can also be established in the window Jobs. The value cannot be changed in this window.
<b>Sub Job Name</b>	This field displays the name of the current subjob. The name can be changed here.
<b>Allocation Percentage</b>	<p>In this field, you can specify the allocation percentage to be assigned to the subjob.</p> <p>In the window Preferences in the Edit menu, you can specify the number of decimals to be shown in other number fields than amount fields, which always show two decimals. The number of decimals shown can be relevant when specifying precise allocation percentages.</p> <p>However, you should note that if you have specified a percentage in this field on a subjob assigned to a main job which is a template job, and a new job is created on the basis of this template job, the lines copied to the new job will not contain any specification of percentages, but will show the value "0" even though an allocation percentage has been specified on the lines assigned to the template job.</p>

Field	Description
<b>Customer No.</b>	In this field, you enter the number of the customer for whom the job is being performed. The field is mandatory unless the subjob is created based on a template.
<b>Customer Name</b>	This field shows the name of the customer shown in the field "Customer No."
<b>Payment Customer No.</b>	This field shows the number of the customer who must pay the invoice.
<b>Payment Customer Name</b>	This field shows the name of the customer who must pay the invoice.
<b>Main Job Invoicing</b>	This field shows if the subjob is being invoiced together with its main job. The field cannot be changed in this window. For more information about main job invoicing, see the description of the window "Invoice Layout Rules."
<b>Main Job Inv. Selection</b>	A check mark in this field indicates that invoice selection is performed from the main job only. For more information about main job invoicing, see the description of the window "Invoice Layout Rules."
<b>Combine Printout Lines</b>	A check mark in this field indicates that the current subjob is part of a blanket invoicing where lines on the invoice printout combines and summarizes registrations from all subjobs. This means that each job does not have its own separate section on the invoice.
<b>Invoicing Group</b>	Maconomy can produce an invoice for each invoicing group when using main job invoicing. In this field shows the invoicing group that is assigned to the job.
<b>Pricing Principle</b>	This field shows the pricing principle used for this subjob.
<b>Fixed Price</b>	This field shows the fixed price of the subjob. The value displayed in this field is determined by the setup of the job parameter attribute "Fixed Price Basis" in the job parameter type "Pricing Method" which can have one of the values "Quote" and "Budget."
<b>Approved for Invoice Editing</b>	If the job parameter of the type Invoice Approval for the current job specifies that invoice editing is required, this field is marked by Maconomy when the invoice selection is approved. If invoice editing is not required according to the job parameter type "Invoice Selection," the functionality of this field is similar to that of the field "Approved for Invoicing" below.
<b>Submitted Draft</b>	This field indicates whether at least one invoice draft was submitted.
<b>Submitted Draft by</b>	This field shows the name of user who submitted this draft.

Field	Description
<b>Submitted Draft Date</b>	This field shows the date when the draft was submitted.
<b>Approved for Invoicing</b>	This field shows whether or not the job is approved for invoicing using the approval functions in the window Approve Invoice Selection. However, the job parameter of the type Invoice Approval for the current job may require that the invoice is edited in the window Invoice Editing before this field is marked.
<b>Approved for Invoicing on Main Job</b>	This field shows whether or not the job is approved for invoicing on the main job using the approval functions in the window Approve Invoice Selection. However, the job parameter of the type Invoice Approval for the current job may require that the invoice is edited in the window Invoice Editing before this field is marked.
<b>Approved for Invoicing by</b>	This field shows the name of the user who approved the job for invoicing.
<b>Approved for Invoicing Date</b>	This field shows the date on which the job was approved for invoicing.
<b>Blanket Invoice</b>	A check mark in this field indicates that the invoices or credit memos created for the job are ready for blanket invoicing.
<b>Job Group</b>	In this field you enter the name of the job group to which the current subjob is assigned.
<b>Department No.</b>	In this field you enter the name of the department to which the current subjob is assigned.
<b>Payment Terms</b>	This field shows the payment terms that apply to the invoices for this job.
<b>Tax</b>	This field shows whether the invoices for this job are liable to tax.
<b>Currency</b>	This field shows the currency used for the invoice.
<b>Status</b>	This field shows the status of the subjob. The job can either be "On Order" or "On Quote." The value cannot be changed in this window.
<b>Project Manager No.</b>	In this field you can enter the number of the project manager for the job.
<b>Project Manager Name</b>	This field shows the name of the project manager.
<b>Responsible</b>	This field shows the name of the person who is responsible for the job.

Field	Description
<b>Blocked for Budgeting</b>	This field shows whether the job is blocked for budgeting. If you place a check mark in the field, you cannot register any information on the budgets for the job.
<b>Blocked for Time Registrations</b>	This field shows whether the job is blocked for time registration. If you place a check mark in the field, it is no longer possible to register time on the job.
<b>Blocked for Amount Registrations</b>	This field shows whether the job is blocked for amount registration. If you place a check mark in the field, it is no longer possible to register amounts on the job.
<b>Blocked for Invoicing</b>	This field shows whether the job is blocked for invoicing. If you place a check mark in the field, it is no longer possible to create invoices or credit memos for this job.
<b>Closed</b>	This field shows whether or not the current subjob has been closed.
<b>Submitted</b>	This field shows whether the job is submitted. Note that this field and the <b>Approved</b> field only have relevance when jobs are set up to be approved through approval hierarchies.
<b>Approved</b>	This field shows whether the job is approved. Before a job is approved, it has Quote status and is blocked for budgeting, registration, and invoicing.

## Actions

This section shows the Actions available in the Main Jobs workspace.

### Top Tab

Field	Description
<b>Allocate Evenly</b>	<p>When you choose this action, Maconomy calculates a distribution percentage for all subjobs, so that all linked subjobs are allocated the same percentage share of registrations on the main job, making the allocation percentage equal to 100.</p> <p>You can correct the distribution figures. Each time the action is used, the distribution percentages are recalculated.</p>

## Distribute to Subjobs Single Dialogs Workspace

Use this workspace in situations in which you want to have the entries on a main job automatically distributed to a number of subjobs.

This enables you to manage the hours spent on a job when they are invoiced according to usage, and when the invoice is sent to a number of different customers according to an agreed-on distribution scale.

**Note:** Before you can use this workspace, you must establish a link between the main job and the subjobs. Use the Jobs workspace to create that link.

The following criteria must be met before you can specify a distribution percentage between a main job and its subjobs:

1. The main job and subjob must belong to the same job group.
2. The main job and subjob must belong to the same company. Specify the responsible company in the Jobs workspace when you create a job. You cannot change this setting.
3. The main job and subjob must have the same setting in the **Non-Invoiceable** field in the Jobs workspace. This prevents activities from being distributed from an invoiceable job to a non-invoiceable subjob.

When you create a job as a main job, the Distribute to Subjobs tab of this workspace contains information about the main job, whereas the Subjobs sub-tab contains information about assigned subjobs. You can enter the distribution percentage of the different subjobs in the sub-tab. If you assign distribution percentages to subjobs that add up to less than 100 percent, Maconomy uses the remaining percentage as the distribution percentage for main jobs. Thus Maconomy enters part of the hours spent on the job with that percentage.

Use the **Allocate Evenly** action to specify that entries on the main job are distributed evenly on all subjobs, using the same distribution percentage.

If the subjobs have a currency that is different from the currency of the main job, Maconomy performs a number of currency conversions at allocation. If the main job uses fixed exchange rate information at entry (see the description of the Job Price Information workspace), Maconomy uses the same fixed exchange rate information for allocation to subjobs, regardless of whether you selected fixed exchange rate information for these jobs.

## Distribute to Subjobs Tab

This section includes the fields and descriptions for the Distribute to Subjobs tab.

### Main Job Island

Field	Description
<b>Job</b>	This field shows the number and name of the current main job. The value cannot be changed in this window.
<b>Job Group</b>	This field shows the job group assigned to the main job. The main and subjob must have identical job groups. The value cannot be changed in this window.
<b>Status</b>	This field shows the status of the main job. The job can either be "On Order" or "On Quote." The value in cannot be changed in this window.
<b>Template</b>	This field shows whether the job is a template job or a normal job.
<b>Responsible</b>	This field shows the name of the person who created the main job. The value in this field cannot be changed here.

Field	Description
<b>Closed</b>	This field shows whether the main job has been closed. If the main job has been closed, it is no longer possible to post to it. A closed job can be reopened by choosing the action "Reopen Job" in the window Jobs. The value cannot be changed in this window.

### Customer Island

Field	Description
<b>Customer</b>	This field shows the number of the customer to whom the current main job has been assigned. The value cannot be changed in this window.  The name of the customer is shown below. The value cannot be changed in this window.

### Price Island

Field	Description
<b>Currency</b>	This field shows the currency, which is valid for the current main job. The value of this field cannot be changed in this window.
<b>Allocation %</b>	This field shows the allocation percentage assigned to the main job. The percentage is fixed and changed once you specify allocation percentages for each of the assigned subjobs in the table part.

### Subjobs Sub-Tab

This section includes the fields and descriptions for the Subjobs sub-tab.

Field	Description
<b>Subjob</b>	This field shows the job number of the job that has been created as a subjob to the current main job. The link between main and subjobs can be established in the window Jobs. The value cannot be changed in this window.
<b>Status</b>	This field shows the status of the subjob. The job can either be "On Order" or "On Quote." The value cannot be changed in this window.
<b>Job Group</b>	This field shows the name of the job group, to which the current subjob has been assigned. The value cannot be changed in this window.
<b>Customer No.</b>	This field shows the number of the customer, to whom the current subjob has been assigned. The value cannot be changed in this window.
<b>Name</b>	This field shows the name of the customer shown in the field "Cust. No."
<b>Currency</b>	This field shows the currency, which is valid for the current main job. The value cannot be changed in this window.

Field	Description
<b>Allocation %</b>	<p>In this field, you can specify the allocation percentage to be assigned to the subjob.</p> <p>In the window Preferences in the Edit menu, you can specify the number of decimals to be shown in other number fields than amount fields, which always show 2 decimals. The number of decimals shown can be relevant when specifying precise allocation percentages.</p> <p>However, you should note that if you have specified a percentage in this field on a subjob assigned to a main job which is a template job, and a new job is created on the basis of this template job, the lines copied to the new job will not contain any specification of percentages, but will show the value "0" even though an allocation percentage had been specified on the lines assigned to the template job.</p>
<b>Subjob Name</b>	This field displays the name of the current subjob.
<b>Subjob Closed</b>	This field shows whether or not the current subjob has been closed.

## Actions

This section shows the Actions available in the Distribute to Subjobs workspace.

### Top Tab

Field	Description
<b>Allocate Evenly</b>	<p>When you choose this action, Maconomy calculates a distribution percentage for all subjobs, so that all linked subjobs are allocated the same percentage share of registrations on the main job, making the allocation percentage equal 100.</p> <p>You can correct the distribution figures. Each time the action is used, the distribution percentages are recalculated.</p>

## Roll Forward Jobs Single Dialogs Workspace

This workspace includes information about jobs to be rolled forward.

Jobs marked as recurring can be rolled forward in this workspace. Rolling a job forward means that it is copied, and on the new job, the year is increased and the job name is updated to include the year. You can also optionally close the old job from this workspace.

A job can only be rolled forward once, but the new job can be rolled forward next year.

## Roll Forward Jobs Tab

This section includes the fields and descriptions for the Roll Forward Jobs tab.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	Select this field to show the jobs that match the selection criteria.
<b>Company No.</b>	Use these fields to enter a range of company numbers.
<b>Customer No.</b>	Use these fields to enter a range of customer numbers.
<b>Job No.</b>	Use these fields to enter a range of job numbers.
<b>Project Manager</b>	Use these fields to select a project manager.
<b>Account Manager</b>	Use the fields to select an account manager.
<b>Expected Ending Date</b>	Use this field to enter a range of expected ending dates.
<b>Year</b>	Use this field to enter a year.
<b>Only Jobs Recurring Annually</b>	Select this option to only see jobs marked as recurring.
<b>Show Closed Jobs</b>	Select this option to include jobs that are already closed.
<b>Show Rolled Forward Jobs</b>	Select this option to include jobs that have already been rolled forward.

### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	Use these fields to enter an interval of location names.
<b>Entity</b>	Use these fields to enter an interval of entity names.
<b>Project</b>	Use these fields to enter an interval of project names.
<b>Purpose</b>	Use these fields to enter an interval of purpose names.

Field	Description
<b>Specification 1-3</b>	Use these fields to enter an interval of specification 1 – specification 3 names.
<b>Local Spec. 1-3</b>	Use these fields to enter an interval of local specification 1 – local specification 3 names.

## Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Roll Forward</b>	Use this field to specify that the job should be rolled forward. You can only select this if the job is marked as recurring, if it is not closed, and if it has not been rolled forward already.
<b>Close</b>	Use this field to specify that the job should be rolled forward. You can only select the action if the job is not already closed.
<b>Job No.</b>	This field displays the job number.
<b>Job Name</b>	This field displays the name of the job.
<b>Customer No.</b>	This field displays the customer number.
<b>Customer Name</b>	This field displays the customer name.
<b>Project Manager No.</b>	This field displays the project manager employee number.
<b>Project Manager</b>	This field displays the project manager name.
<b>Account Manager No.</b>	This field displays the account manager employee number.
<b>Account Manager</b>	This field displays the account manager name.
<b>Recurring Annually</b>	This field displays whether or not the job is marked as recurring.
<b>Rolled Forward To Job No.</b>	If the job has been rolled forward, this field displays the number of the new job.
<b>Rolled Forward to Job Name</b>	If the job has been rolled forward, this field displays the name of the new job.

Field	Description
<b>Closed</b>	This field displays whether or not the job is closed.
<b>No. of Pending Job Actions</b>	This field displays the number of pending job actions that prevent the job from being closed. The number is calculated when you try to close the job or by running the action "Calculate Pending Job Actions."
<b>Pending Job Actions Updated</b>	This field shows the date when the pending job actions were last updated.

## Actions

This section shows the Actions available in the Roll Forward Jobs workspace.

### Top Tab

Field	Description
<b>Mark All for Close</b>	Use this action to select close on all lines that are not already closed.
<b>Unmark All for Close</b>	Use this action to deselect close on all lines.
<b>Mark All for Roll Forward</b>	Use this action to select all jobs that are marked as recurring, are not closed, and are not already rolled forward, for roll forward.
<b>Unmark All for Roll Forward</b>	Use this action to deselect roll forward on all lines.
<b>Roll Forward and Close</b>	Use this action to execute the selected close and roll forward actions that have been selected.
<b>Refresh Pending Job Actions</b>	Use this action to calculate pending job actions.

## Postponed Job Budget Copying Single Dialogs Workspace

Use this workspace to review job budgets that are scheduled for copying and those that had copying problems. You can only use this workspace if you are a system administrator.

This workspace also acts as an API dialog for the scheduled task. You can execute the copying of a queued budget, try to copy a budget that has failed to copy before, or remove pending or failed budgets from the list.

## Postponed Job Budget Copying Tab

This section includes the fields and descriptions for the Postponed Job Budget Copying tab.

### Selection Criteria Island

Field	Description
<b>Job No.</b>	In these fields, you can enter a range of job numbers to specify which jobs you wish to see in the table part.
<b>Company No.</b>	In these fields, you can enter a range of job company numbers to specify which jobs you wish to see in the table part.
<b>Customer No.</b>	In these fields, you can enter a range of customer numbers to specify which jobs you wish to see in the table part.
<b>Project Manager No.</b>	In these fields, you can enter a range of project manager numbers to specify which jobs you wish to see in the table part.
<b>Date</b>	In these fields, you can enter a date interval for the date that the job was added to the queue to specify which jobs you wish to see in the table part.
<b>Budget Type</b>	In these fields, you can enter a budget type to specify which jobs you wish to see in the table part.
<b>Status</b>	Here you can restrict the table part to only show lines with a given status.

### Summary Island

Field	Description
<b>Number of budgets matching criteria</b>	This field shows the number lines that are currently displayed in the table part.

## Job Budget Copying Element Sub-Tab

This section includes the fields and descriptions for the Job Budget Copying Element sub-tab.

Field	Description
<b>Job No.</b>	This is the number of the job.
<b>Budget Type</b>	This is the budget type to be copied.
<b>Company No.</b>	This is the company number of the job.

Field	Description
<b>Customer No.</b>	This is the customer number of the job.
<b>Project Manager No.</b>	This is the project manager number of the job.
<b>Status</b>	This field can show: "Pending," which means that the job budget has not been copied yet, or it could show the type of message that was encountered when copying the budget (notification, warning, error or system error).
<b>Message</b>	For pending lines, this field is empty. Otherwise it shows the text of the message encountered when copying the budget.
<b>Date</b>	For pending lines, this is the date when the job budget was added to the queue. For processed lines, this is the date when the copy attempt was made.

## Actions

This section shows the Actions available in the Postponed Job Budget Copying workspace.

### Top Tab

Field	Description
<b>Copy All Budgets</b>	Copies all pending budgets that match the selection criteria. This action will run through the queue and try to copy all pending job budgets. If an error is encountered during copying, it will be recorded on the table line. This action is intended to be primarily used by the scheduled task.
<b>Remove All Lines</b>	<p>Deletes all lines that are currently shown in the table part. See "Delete Job Budget Copying Element" action above for a detailed explanation of the consequences of removing a line.</p> <p>Both pending and copied lines can be removed. If a pending line is removed, then no attempt to copy it from the template will be made and instead an empty budget will be created. The template budget can still be copied using the existing Copy Budget action in Job Budgets window.</p>

### Bottom Tab

Field	Description
<b>Copy Budget</b>	Copies a single budget that is currently selected in the table part. This action can be invoked both on pending budgets and on those for which the copy attempt has already been made, but possibly failed.

## Customer Tax Returns Single Dialogs Workspace

Use this workspace to enter the customer tax returns related to a specific job. See also the Tax Return Types workspace for more details.

### Job Tab

This section includes the fields and descriptions for the Job tab.

#### Job Island

Field	Description
<b>Job No.</b>	This field displays the job number.
<b>Job Name</b>	This field displays the job name.
<b>Year</b>	This field displays the job year.
<b>Customer No.</b>	This field displays the customer number.
<b>Name 1</b>	This field displays the customer name.
<b>Fiscal Year End Month</b>	This field displays the customers year end month.

### Tax Return Sub-Tab

This section includes the fields and descriptions for the Tax Return sub-tab.

Field	Description
<b>Tax Return Type Name</b>	Use this field to enter a tax return type. You can only select customer tax return types specified for the job year.
<b>Description</b>	This field displays the description of the tax return type.
<b>Original Due Date</b>	This field displays the due date. The due date is calculated by adding a number of months according to the customers fiscal year month to the due date from the tax return type. If the fiscal year month is December, then no months are added. If it is January, one month is added, and so on, until November when 11 months are added.
<b>Extension Due Date</b>	This field displays the extension date. The extension date is calculated similar to due date but using the extension day from the tax return type.

Field	Description
<b>Current Due Date</b>	This field display the current due date. The current due date equals the original due date as long as the status is not extended. If the status is extended then this field displays the extension date.
<b>Completed Date</b>	Use this field to enter a completed date for the tax return.
<b>Extension Filed Date</b>	Use this field to enter an extension filed date for the tax return.
<b>Committed Date</b>	Use this field to enter a committed date for the tax return.
<b>Received Date</b>	Use this field to enter a received date.
<b>Received By, Empl No.</b>	Use this field to enter an employee number.
<b>Received By</b>	This field displays the name of the receiver.
<b>Assigned Preparer, Empl No.</b>	Use this field to enter the employee number of the assigned preparer.
<b>Assigned Preparer</b>	This field displays the name of the assigned preparer.
<b>Assigned Reviewer, Empl No.</b>	Use this field to enter the employee number for the assigned reviewer.
<b>Assigned Reviewer</b>	Use this field to enter the name of the assigned reviewer.
<b>Actual Preparer, Empl No.</b>	Use this field to enter the employee number for the actual preparer.
<b>Actual Preparer</b>	This field displays the name of the actual preparer.
<b>Actual Reviewer, Empl No.</b>	Use this field to enter an employee number for the actual reviewer.
<b>Actual Reviewer</b>	This field displays the name of the actual reviewer.
<b>Tax Return Status</b>	Use this field to select the tax return status. Possible values are: <ul style="list-style-type: none"> <li>Completed</li> <li>Extended</li> </ul>

Field	Description
	<ul style="list-style-type: none"><li>Received</li><li>Final</li></ul>
<b>Disposition</b>	Use this field to select a disposition.
<b>Filing Status</b>	Use this field to select a filing status.
<b>E-Filed Date</b>	Use this field to enter an e-file date.
<b>Tax Processing Code</b>	Use this field to select a tax processing code.
<b>Engagement Letter Received</b>	Use this field to specify whether or not the engagement letter has been received.
<b>Client Status</b>	Use this field to select a client status.
<b>Created by</b>	This field shows the name of the user who created the customer tax return.
<b>Created on</b>	This field shows the date the customer tax return was created.
<b>Changed by</b>	This field shows the name of the last user who changed the customer tax return.
<b>Changed on</b>	This field shows the date when the customer tax return was last changed.
<b>Version</b>	This field displays the tax return version.

## Budgeting Section

This section includes the fields and descriptions for the Budgeting section workspaces.

### Job Budgets Single Dialogs Workspace

Use this workspace to enter and revise budgets for the jobs that you work with in the Job Cost module.

You define jobs in the Jobs and Job Information workspaces, where you can enter general and account information. In this workspace, you can create job budgets by entering a number of budget lines, specifying activity, task, employee (if applicable), and amount. Use the tab for general and account information and budget limits, which you can later use for comparing actual activities. Maconomy calculates budgeted gross margin and percentage gross margin. You enter the actual budget in the Job Budget Lines sub-tab.

You can work with several budgets for the same job. Create additional job budget types in the Popup Fields workspace. For each job, select a current budget from the types of job budgets. Maconomy regards the selected budget as the job's budget. As long as you have not created purchase orders or requisitions from the current budget, you can change the selection of budget. When you open this workspace, it displays the budget of the type you looked at last.

When you create a planning budget for a job, you can keep track of the progress of the work performed on the job in the Job Progress workspace.

When working with a planning budget, you can use the Resource Planning module to refine it.

Resource planning enables you to define which employee should perform tasks of the planning budget, for how long, and on which dates. In the Resource Planning module, enter employee skill information to the planning budget lines to require that the tasks be performed by employees with specific skills.

You can also plan a job process without having decided which employees should work on the job in question. You can do this by assigning an employee category to the job instead of assigning specific employees.

### Revision Control

You might want to control that the budget is only edited in the quote stage. To do this, in the Popup Fields workspace in the Set-Up module, select the **Change only for quotes** field for a job budget type.

### Audit Trail

A job budget can exist in many different revisions. This enables you to preserve a complete audit trail to track the changes in a budget throughout the lifetime of a job. Just as for time sheets, job budgets support a process of submission and approval. Use this workspace to submit, approve, and reopen a job budget to a new revision.

If needed, perform these actions on multiple job budgets at the same time in the Approve Job Budgets workspace. You can view all of the revisions of the budgets for the jobs to which you have access in the Job Budget Revisions workspace.

When you make changes to a submitted job budget, a warning is displayed. If you continue, the budget status changes to Not Submitted.

You can copy a budget with assigned budget lines to another budget that belongs to the same job. This enables you to save your current budget and edit it later. The Job Budgets tab displays the budget sums of the current budget. If you have not created a budget for a job, you can also copy the current budget to another job.

However, you cannot copy the lines of a budget to a planning budget under these conditions:

- If two lines with the same combination of activity and task are created on the planning budget.
- If one or both of these parameters has a value of No for the job:
  - **Duplicate lines (amount) on planning budget**
  - **Duplicate lines (time) on planning budget**

In addition, you cannot create two identical planning budget lines for amount or time activities in the same revision of the planning budget. You can only change the budget type of a planning

budget if the selected type does not contain more than one line with the same combination of activity and task. If you change the budget type, Maconomy issues a warning and deletes all job progress entries and task progress entries.

For amount activities, you can enter a vendor, which you can use later to automatically create requisitions or purchase orders based on the information in the budget lines.

If you want to assign items to budget lines, in the Job Budget Item Lines workspace ensure that the line refers to an amount activity, and the value of **Quantity** is 1.

### Actions

Select **Print This** from the File menu to print job budgets. Use the **Print Quote** action if the job has Quote status, and use the **Print Order Confirmation** action if the job has Order status.

### Editing Quotes

Transfer job budget information to the Quote Editing workspace to edit the information before printing the quote or order confirmation.

Use the Job Budget Texts workspace to assign text lines to each job budget line. You can transfer these lines to purchase orders and quotes.

You can also enter text lines and summary lines to create a better-organized layout. Text lines have blank activity number and task fields, and summary lines show \* in the activity number field. When you print the budget in the standard layout, a summary line shows an amount total for the budget lines above it, up to the next summary line.

You can only enter changes to a job budget if the **Change Job Budgets** field in the Actions workspace in the Set-Up module is enabled. If not, you can only change fields and use functions that pertain to purchase orders.

### Price Control from Budgets

When you enter tasks and employees on the lines in your budget, Maconomy derives the prices on the lines in various ways. However, the Price control from budgets feature enables you to set up your jobs so that the person(s) in charge of budgeting can establish pricing.

This process allows the project manager to:

- Adjust the billing prices for employees.
- Adjust the markup percentage for amount activities in the budget.
- Ensure that prices do not change.

When you add a line to the budget, you base it on an employee category. Maconomy shows an initial billing price that it derives from the employee category, but you can change it. When you click **Return**, Maconomy adds a line in the Job Price Information workspace with the same combination of task, activity, and employee category. You cannot edit the price in the Job Price Information workspace; you can only change it by changing the billing price or markup percentage in the Job Budgets workspace.

To use price control from budgets, you must set up the job to use a **Budgeting** type job parameter, and set the **Price Control from Budgets** attribute to Yes. In addition, you must meet the following conditions to enable this feature:

- You cannot use the same combination of task and activity more than once in the budget.

- When budgeting on an amount activity, adjust the price by adjusting the markup percentage.

The budget prices are controlled from the job budget of the type **Baseline**. You select the baseline job budget type for the job in the **Planning** job parameter type in the **Baseline, Budget Type** attribute value.

### Work Breakdown Structure

You can arrange your job budget lines in a work breakdown structure using task groups, thus gaining a better overview of jobs. Lines are arranged in a hierarchical structure. The structural setup of the budget is reflected in all workspaces that display budget information, for instance, Job Budget Revisions and Job Progress.

You can indent budget lines to the number of levels allowed by the **Max. Depth for Job Budget Hierarchy** system parameter. However, printouts of budget information and reports only include up to seven levels, including the top level.

Note that you cannot set up a work breakdown structure if the budget contains any manual sum lines created by entering \* in the **Act. No.** field. You must delete any such budget lines before you can set up a work breakdown structure. In addition, you can only assign lines of the **Sum/Text** line type as task group headers. Note that work breakdown structures that consist of task groups can have a maximum of six levels. This structure is referred to as Task Group 1-6 in the workspaces that display budget information. Task Group 1 is the top level of the hierarchy.

Maconomy does not fully transfer the work breakdown structure to quotes when you select the **Transfer to Quote** action. When you transfer to a quote, Maconomy only transfers the top-level group header lines. For more information, see the description of the **Transfer to Quote** action.

Note that the task group values can vary depending on the selected budget type. The planning budget controls task lists, while the current budget controls invoicing that pertains to the work breakdown structure. This is only relevant if you set up different work breakdown structures for these two budget types, causing different task groups to be assigned to the same task. In such cases, the task groups that the planning budget shows and the task groups that the actual invoice for the job shows might not be identical.

If you set up a work breakdown structure in which a task appears more than once on different task group paths, the task groups for this task do not appear in the Job Tasks workspace. Because every task in a job budget is unique, Maconomy has ambiguous data when multiple instances of a task exist in a work breakdown structure, causing all task groups for the particular task to be eliminated.

In this workspace unindenting a line causes it to become the group header to the lines below it in the group from which the line is unindented.

For more information about work breakdown structures and task groups, see the description for Job Tasks.

## Job Budgets Tab

This section includes the fields and descriptions for the Job Budgets tab.

## Job Island

Field	Description
<b>Job</b>	This is the number and name of the job to which the budget applies. The value cannot be changed manually, but you can retrieve other jobs using the search functions in the Find menu. The name is entered and can be changed in the window Jobs.
<b>Job Group</b>	This is the job group to which the job is assigned. It can be changed in the window Jobs as long as there is a quote for the job.
<b>Status</b>	<p>This is the job status. A job either has the status "Quote" or "Order." You cannot change it here.</p> <p>When a job is created, this field automatically shows "Quote," unless you have marked the "Created as Order" field in the window System Information. It can be converted to "Order" in the window Jobs.</p> <p>As long as a job has quotes, you can print the quotes in this window using the action "Print Quote." When the job has orders, you can print order confirmations using the action "Print Order Confirmation."</p>
<b>Template</b>	This field shows whether the job is a template job or a normal job. If the job is a template job, a number of the fields which are mandatory on a normal job will not be mandatory on the template job. This means that you only have to complete those fields that you want transferred to new jobs created on the basis of a template job. See the introduction of the window Jobs for information about the use of template jobs.
<b>Responsible</b>	This is the name of the employee responsible for the job. The name is retrieved from the window Jobs and cannot be changed here.
<b>Closed</b>	<p>If this field is marked, the job has been closed. You cannot change this field in this window. This field is marked by selecting "Close Job" in the Action menu in the window Jobs. It is removed by selecting "Reopen Job" in the Action menu in the window Jobs.</p> <p>As long as a job is closed, you cannot enter new budget lines, change existing budget lines, or make job entries. You can reopen a closed job.</p>

## Employee Category Prices Island

Field	Description
<b>Employee Category No.</b>	In this field, Maconomy shows the number of an employee category, or you can select one.
<b>Name</b>	This field shows the name of the current employee category.

Field	Description
<b>Billing Price (Per Hour or Per Day)</b>	This column shows the billing price per hour or per day depending on the time unit on the job.
<b>Cost Price (Per Hour or Per Day)</b>	This column shows the cost price per hour or per day depending on the time unit on the job
<b>Price Control Budget Type</b>	Only the baseline budget is used for controlling budget prices. This field shows the type of the baseline budget, as selected in the job parameter attribute "Baseline, Budget Type" of the type "Planning."
<b>Price Control from Budgets</b>	Maconomy marks this field if the current job is set up to control prices from the budget, that is, the job parameter attribute "Price Control from Budgets" of the type "Budgeting" is true for the current job.

### Budget, Base Island

The values in this island display the job budget in the base currency of the responsible company. You cannot change the values in this island.

Field	Description
<b>Time</b>	The values in the fields under this column are in hours or days depending on the time on unit on the job.
<b>Hours</b>	<p>This field shows the amount of employee hours you estimate will be spent on the job.</p> <p>The "Time" field shows the total of the budgeted hours, which have been entered for time activities in the "Quantity" field in the table part.</p> <p>Since the budget figure for amount activities cannot be estimated in hours, there is no figure in the "Amount" and "Total" fields.</p> <p>The "Total per" field shows the unit given in the Unit Analysis island.</p> <p>The field "Limit" displays the total number of employee hours you expect to use on the job. You can have a value displayed in this field by entering the value in the field "Hours" in the island Limit. See the description of this island for further information.</p> <p>Only users for whom the field "Can Change Job Budget" in the window Actions in the Set-Up module is marked may change this field.</p>
<b>Cost</b>	<p>In these fields the budgeted cost of the job in the base currency of the job's responsible company.</p> <p>The "Time," "Amount" and "Total" fields show three totals of costs from the budget lines entered in the table part of the window. They are the cost totals of time activities, amount activities and a total for all budget lines.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to "Time" and "Total" will be zero.</p>

Field	Description
	<p>The “Total per” field shows the quantity in the “Total” field immediately above it, divided by the quantity given in the Unit Analysis island.</p> <p>The field “Limit” displays the estimated or agreed billing price of the job. You can have a value displayed in this field by entering the value in the field “Hours” in the island Limit. See the description of this island for further information.</p>
<b>Billing Price</b>	<p>These fields show the budgeted cost of the job in the base currency of the job's responsible company.</p> <p>The “Time,” “Amount” and “Total” fields show three totals of billing prices from the budget lines entered in the table part of the window. They are the billing price totals of time activities, amount activities and a total for all budget lines.</p> <p>The “Total as of” field shows the quantity in the “Total” field immediately above it, divided by the quantity given in the Unit Analysis island.</p> <p>The field “Limit” displays the estimated or agreed billing price of the job. You can have a value displayed in this field by entering the value in the field “Billing Price, Currency” in the island Limit. See the description of this island for further information.</p> <p>The budget Limit can either be compared to the total of budgeted costs in the “Total” field, or you can use it in a subsequent budget control calculation, in which you compare budget with actual figures.</p> <p>If you create a quote from a job budget, by choosing “Transfer to Quote” in the Action menu, or if you change quotes in the window Quote Editing, the billing price in this field will automatically be changed to the total of the quote lines. It is then not possible to change it here.</p> <p>When you create invoice selections in the window Invoice Selection, you can transfer the quote price from this field to the total amount of the invoice.</p>
<b>GM</b>	<p>These three fields show the job's budgeted gross margin (GM) in the base currency. Gross margin is calculated by subtracting the cost in the “Cost” field from the billing price in the “Billing Price” field. Gross margin is calculated for the job's time activities, amount activities and total.</p> <p>The “Time” field shows the budgeted gross margin total for all time activities.</p> <p>The “Amount” field shows the budgeted gross margin total for all amount activities.</p> <p>The “Total” field shows the budgeted gross margin for the whole job.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to “Time” and “Total” will be zero.</p> <p>The “Total as of” field shows the quantity in the Total field immediately above it, divided by the quantity given in the Unit Analysis island.</p>
<b>GM %</b>	<p>These three fields show the job's budgeted gross margin percent (GM %). Gross margin percent is calculated as the gross margin percentage of the billing price in the “Billing Price” field. Gross margin is shown in the “GM” field. Gross margin percent is calculated for the job's time activities, amount activities and total.</p>

Field	Description
	<p>The “Time” field shows the average budgeted gross margin percentage for all time activities.</p> <p>The “Amount” field shows the average budgeted gross margin percentage for all amount activities.</p> <p>The “Total” field shows the average gross margin percent for the whole job budget.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to “Time” and “Total” will be zero.</p>
<b>Time</b>	This is the total of the budgeted hours, costs, billing prices and gross margin, which have been entered in the table part for time activities. It also shows the average gross margin percent for the budget’s time activities.
<b>Amount</b>	This field displays the total of the budgeted costs and billing prices which were entered for amount activities in the table part at the time when the revision was created.
<b>Total</b>	<p>This is the total of all the budgeted costs and billing prices entered in the table part of the window.</p> <p>Since it is not possible to enter hour estimates for amount activities, the “Hours” field is empty. The total of budgeted hours is shown in the “Time” field.</p>
<b>Hereof Outlays</b>	These fields show the budgeted costs for all amount activities, for which the cost type has been set to “Outlays.” This means that the field only shows the cost part of the relevant outlays, whereas the below field “Excluding Outlays” also includes the gross margin from the outlay. For more information about outlay activities, please see the description of the window Activities.
<b>Excluding Outlays</b>	These fields show the sum of the budgeted prices for all activities in the table part of this window, less the cost price for any amount activities for which the cost type has been set to “Outlays.” Furthermore, the resulting gross margin and GM % are shown excluding outlays.
<b>Total Per</b>	This field displays the unit given in the window Unit Analysis, as well as the values in the “Total” row, divided by the quantity given in the Unit Analysis island at the time when the revision was created.
<b>Limit</b>	This field displays a budget limit for the job which was entered at the time when the revision was created.
<b>Quote Price</b>	This field displays a quote for the entire job as it looked at the time when the revision was created.

### Budget, Currency Island

The fields in this island correspond to the fields in the island Budget, Base. The only difference is that here the amounts are shown in the currency used on the job. For further information about currency conversions, see “Appendix A: Price Calculation in the Job Cost Module.”

**Job Revenue Recognition Island**

Field	Description
<b>Revenue Recognition Date</b>	In this field, you can enter a date. The date specified is used as the basis for calculating revenue recognition forecasts on the basis of the budget currently shown in the window. As default, the date in this field is the last date of the previous month, but the date can be changed manually. See the description of the field "Calculate" below for further information about the possibility of calculating revenue recognition in this window.
<b>Calculate</b>	<p>If you mark this field, Maconomy will calculate the revenue to be recognized on the current job on the basis of the job's latest approved budget revision as well as the revenue to be recognized on the job on the basis of the current revision of the budget as of the date specified in the above field "Revenue Recognition Date." If you mark this field, you can hence make a forecast that displays the revenue implications for the job in question, if you approve the edited budget as it looks at the moment. The calculations are not transferred to any of the windows related to job revenue recognition and are for information only.</p> <p>Note that this field can only be marked if the job for which a budget is displayed uses revenue recognition by completion percentage, and if the current budget is of the same type as the budget type selected for the job in the job parameter attribute "Fixed Price Budget Type" in the job parameter Pricing Principle.</p>
<b>Revenue Recognized</b>	This field shows the amount revenue recognized on the job as of the date specified in the field "Revenue Recognition Date" above. The amount only includes revenue recognition of job entries which are included in the fixed price of the job.
<b>New Revenue Recognition</b>	If you mark the field "Calculate," this column will show the amounts to be revenue recognized on the basis of the date specified in the field "Revenue Recognition Date," if the new budget is approved. The amounts are displayed for the two fields "Current Budget" and "New Budget," and only include revenue recognition of job entries which are included in the fixed price of the job.
<b>Adjustment</b>	This column shows any adjustments between the revenue recognition of the new budget and the revenue recognition of the current budget, that is, the latest approved revision of the job budget.

**Remarks Island**

In these fields, you can assign remarks to the current job budget line. The remarks are for information only and can, for example, be used in reports.

**User Island**

See "Getting Started" for a description of the fields in the island User. Note, however, that until a quote, an order confirmation, an invoice, or a credit note has been printed for the current job, the field "Version No." will always show the value "1." The information in the island applies to the

current job, and therefore a change in this window will also be reflected in the island User in the windows Jobs, Job Descriptions, and Job Information.

### Budget Type Island

Field	Description
<b>Show Budget</b>	<p>In this field, you choose the budget you wish to see. The budget lines are shown in the table, and the sums are displayed in the Budget island. When you open the window Job Budgets, or browse through the different jobs in this window, you will see the budget of the type you looked at last.</p> <p>Each budget type has its own audit trail. This can be seen by the number in the field "Revision No.," which will often be different for the different budget types. Previous revisions of each budget type can be viewed in the window Job Budget Revisions.</p>
<b>Current Budget</b>	<p>In this field, you choose which budget you are currently using for the job. You can change it as long as you have not made any purchase orders. The budget chosen here is regarded as the job budget elsewhere in Maconomy. Budget types are created in the window Popup Fields in the Set-Up module.</p>
<b>Forecast Budget</b>	<p>In this field, you choose the budget to be used as the current job's forecast budget. In the forecast budget you can enter, for example, activities, cost and billing prices, and dates, and use these to evaluate potential jobs. Forecast budgets can be analyzed using the Analyzer report/report template Job Forecasts.</p>
<b>Planning Budget</b>	<p>In this field, you choose the budget to be used as the current job's planning budget. The planning budget is used to register dates, employees, and items to give an overview of the expected use of these resources. Planning budgets can be analyzed using the Analyzer report/report template Planning Budgets.</p> <p>If the value in this field is changed, Maconomy checks the existence of any planning lines in the window Detailed Planning in the Resource Planning module which have been created on the basis of the previous planning budget. If there are no such lines, the planning budget for the job in question will be changed. If such planning lines exist, however, Maconomy will issue a warning indicating that all planning lines assigned to the current budget will be removed from the detailed planning.</p> <p>If the current planning budget belongs to a job for which one or both of the job parameter attributes "Duplicate lines (amount) on planning budget" or "Duplicate lines (time) on planning budget" have the value "No," you can only change the budget type if the selected type does not contain more than one line with the same combination of activity and task. If you change the budget type, Maconomy will issue a warning and any job progress entries and task progress entries are deleted for the job.</p> <p>The table part of the window Job Planning shows budget lines from the planning budget of the current job.</p>

**Customer Island**

Field	Description
<b>Customer</b>	This is the number and name of the customer associated with the job (the ship-to customer). The number cannot be changed.

**Quote Price, Curr. Island**

Field	Description
<b>Effective Quote Price</b>	<p>This field displays the job's quote price in the currency used on the current job. The amount derives from the field "Effective Quote Price" in the window Jobs, but can be edited in this field if the job status is "Quote" and the quote has not been approved in the window Quote Editing. Otherwise, the price can be changed in the table part of the window Quote Editing. Furthermore, the amount is shown in the island Budget, Currency and in base currency in the island Budget, Base. The amount can be printed on a quote or an order confirmation to the customer from the window Quote Editing.</p> <p>For fixed-price jobs, the effective quote price can only be entered or changed in the window Quote Editing. For further information, please see the description of the window Quote Editing.</p>

**Limit Island**

Field	Description
<b>Hours</b>	In this field, you enter the amount of employee hours you estimate will be spent on the job. This figure can either be compared to the total budgeted hours in the field "Time" in the islands Budget, Base and Budget, Currency where the figure is also shown, or you can use it in a subsequent budget control calculation, in which you compare the customer budget with the job's actual figures.
<b>Cost, Base</b>	In this field, you enter the budgeted cost of the job in the job's base currency. The figure is shown in the islands Budget, Base and Budget, Currency. In the latter island, the amount is converted to the job's currency by means of the sales currency table. If fixed exchange rate information has been specified for the job, Maconomy uses the exchange rate table specified in the window Job Price Information. Otherwise, Maconomy uses the exchange rate table from the window System Information in the Set-Up module. The limit amount can either be compared to the total of budgeted costs in the field "Total" in the island Budget, Base and Budget, Currency, or you can use it in a subsequent budget control calculation, in which you compare the costs with the job's actual figures.
<b>Billing Price, Curr.</b>	In these fields you enter the budgeted cost of the job in the job's currency. The amount here is the same as the amount given in the field "Max. Billing Price" in the window Jobs. The figure is shown in the island Budget, Base (converted to base currency by means of the sales currency table according to the same principles as specified above for the field "Cost, Base") and in the island Budget, Currency. The limit amount can either be compared to the total of the budgeted billing prices in the field "Total" in the islands Budget, Base and Budget, Currency, or you can use it in a

Field	Description
	subsequent budget control calculation, in which you compare the billing price with the job's actual figures.

### Budgeted Realization Island

Field	Description
<b>Contracted Billing Price, Base</b>	Use this field to enter the contracted billing price for time activities for the job.
<b>Billing Price, Base</b>	This field shows the total budgeted billing prices in the company's base currency.
<b>Budgeted Up/Down</b>	This field shows the difference between the budgeted billing price and the standard billing price. The amount in this field is the write-up or write-down of the budgeted billing price compared to the standard billing price. For more information about standard billing price, please see "Appendix A: Price Calculation in the Job Cost Module."

### Forecast Island

Field	Description
<b>Probability %</b>	In this field, you can enter the probability percentage rating for whether the current job, which is on quote, will result in an order. When the job is converted to an order, Maconomy will automatically change the value of this field to "100." The value in this field is used in the Analyzer report/report template Job Forecasts to determine, for example, the expected profit on current jobs on quote.

### Billing Price Deviations Island

The fields in this island show any differences between the registered billing price, the standard billing price, and the invoiced billing price. Based on these figures, you can analyze the performance of for instance a department by comparing the standard billing price (the performance target) with the invoiced billing price (the sum actually invoiced to the clients). For more information, please see "Appendix A: Price Calculation in the Job Cost Module."

Field	Description
<b>Standard Billing Price, Base</b>	This field shows the total budgeted standard billing prices in the company's base currency.
<b>Billing Price, Base</b>	This field shows the total budgeted billing prices in the company's base currency.
<b>Budgeted Up/Down</b>	This field shows the difference between the budgeted billing price and the standard billing price. The amount in this field is the write-up or write-down of the budgeted billing price compared to the standard billing price.

Field	Description
	For more information about standard billing price, please see "Appendix A: Price Calculation in the Job Cost Module."

### Unit Analysis Island

Field	Description
<b>Quantity</b>	If the job is for several similar units, for example, two advertisements, three houses, or ten meters of cable, the quantity of these units can be given here. You can then use the Budget island in this window and the Summary island in the window Job Card to see the "Total" values per unit.
<b>Unit</b>	If there is a value in the "Quantity" field, you can enter the unit here.

### Company Island

Field	Description
<b>Company</b>	This field shows the number and name of the company responsible for the current job. The value is transferred from the island Company in the window Jobs and cannot be changed here.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

### Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the name and number of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see "Multiple Companies" in "Introduction to the G/L Module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

**Line Creation Island**

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field “Line Type” in the table part of the window. Every time you create a new line, the value selected here will be selected on the new line, and you may then change it to something else. Please see the description of the field “Line Type” in the table part for a description of the options in this field.

**Transfer Job Dates Island**

Field	Description
<b>Activity Type</b>	This field displays the type of the current activity.
<b>Overwrite Existing Dates</b>	With this check box, you can decide whether the “Transfer Job Dates” action should overwrite any dates already entered by the user in the job budget line “Planned Starting Date” and “Planned Ending Date” fields.

**Daily Descriptions Island**

Field	Description
<b>Use Daily Descriptions</b>	<p>A daily description is a descriptive text that you can add to any combination of task, activity, and day in a time sheet.</p> <p>For example: Without using daily descriptions, you register time on a task called “Client Meetings” two times in a given week, Tuesday and Friday. In the “Description” field you enter a description of these two meetings. Using daily descriptions, you could enter a description of each meeting separately, thus adding clarity to your registrations.</p> <p>This text can be used as a help to the person approving time sheets, or it can be included in invoice texts for the customer to see. If the invoice layout for the job specifies “Registration” at either level of the invoice text, any daily descriptions entered in the time sheet will be printed on the invoice. The project manager can edit the daily descriptions in the window Approve Time Sheet Lines before approving the time sheet line in question.</p> <p>If you mark this field, daily descriptions are turned on by default for all tasks registered on the job. However, the setting can be turned off or on for individual tasks in the table part. A number of factors come into play when changing the setting of this field:</p> <p>If you change the setting of this field, and the task list assigned to the job is shared with other jobs (that is, not yet made job-specific), you will receive an error message. The task list must be made job-specific, or the change should be made in the window Task Lists, in which case the change will affect all jobs sharing the task list in question.</p> <p>If the field is marked, and there are no tasks for the job, daily descriptions will be required on all time sheet registrations on the job. Similarly, if the field is not</p>

Field	Description
	<p>marked, and there are no tasks for the job, daily descriptions will not be required.</p> <p>To enable daily descriptions on job entries, Maconomy must be set up such that a time sheet line will result in a job entry for each day with a registration. This is done by setting the pop-up field "Allocation Method" in the island Job Cost to "One Entry per Day" in the window System Information in the Set-Up module.</p>

### Job Budget Resource Allocation island

Field	Description
<b>Resource Allocation Complete</b>	<p>Select this check box to update the budgeted number of hours in the latest revision of the planning budget to the sum of the allocated hours sent from People Planner.</p> <p>For budget lines on amount activities, the total cost price is similarly updated to the sum of the allocated cost sent from People Planner.</p> <p>However, if you have performed job progress evaluation on the latest budget revision when selecting this check box, the budgeted number of hours is updated to the sum of the actual hours registered as of the progress evaluation date and the hours allocated to future periods.</p> <p>For budget lines on amount activities, the budgeted cost is updated to the actual cost plus the cost of hours allocated to future periods.</p> <p>When you select this check box, the <b>Update Job Budget</b> action in the Update Job Budget Resource Allocations single dialog workspace updates budget quantity and budgeted cost as described above.</p> <p>If you select this check box when you perform a progress evaluation, the estimated hours/cost to completion is found as the hours/cost from resource allocations after the estimate date. With this setup, any estimated hours to completion on time sheets are ignored during progress evaluation.</p>
<b>Copy Resource Allocations</b>	<p>When you select this check box, the <b>Copy Budget</b> action also copies any resource allocations assigned to the job budget.</p>

### Description Island

Field	Description
<b>Internal</b>	<p>These three fields show the internal description of the job, which is entered in the window Jobs. The information cannot be changed here, but you can change it in the window Jobs.</p>
<b>Ref.</b>	<p>This is the reference from the "Ref." field in the window Jobs. You cannot change it here.</p>

**Status Island**

Field	Description
<b>Submitted</b>	This field displays if the job budget has been submitted. The field is completed automatically, when the action "Submit Budget" is selected.
<b>Submitted by</b>	This field displays the name of the user who submitted the job budget.
<b>Date</b>	This field displays the date on which the job budget was submitted.
<b>Approved</b>	This field displays if the job budget has been approved. The field is completed automatically, when the action "Approve Budget" is selected, and the mark is removed if the budget is reopened.
<b>Approved by</b>	This field displays the name of the user who approved the job budget.
<b>Date</b>	This field displays the date on which the job budget was approved.
<b>Reopened</b>	This field displays if the job budget has been reopened. The field is completed automatically when the budget is reopened.
<b>Reopened by</b>	This field displays the name of the user who reopened the job budget.
<b>Date</b>	This field displays the date on which the job budget was reopened.
<b>Last Budget Recalculation</b>	This field displays the time and date on which the job budget was last recalculated.
<b>Sent to People Planner</b>	If the People Planner integration add-on is enabled and the 'Integration Status Note Type' system parameter is set this field will show when the Job was last sent to People Planner.

**Revision Island**

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the job budget.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you enter a text, which is attached to the activity on quotes and order confirmations. If you enter an activity, Maconomy suggests either the activity text from the <b>Description</b> field in the Activities workspace or the description of the entered task (if any) in the Job Tasks workspace, but you can change it on the budget line. In the Activities workspace, you can set up which text to derive as budget line description for each activity. The original activity text is displayed in the <b>Activity Name</b> field.
<b>External Description</b>	<p>This field shows the text to be transferred to job quotes and is used instead of the internal description on the time budget line.</p> <p>If you enable the company-specific "External Description in Job Budgets defaults to Description" system parameter, when you add a new line in the Job Budget Lines sub-tab, this field automatically displays the value of the Description field.</p> <p>If you do not enable the parameter, this field is blank by default in any new lines added.</p>
<b>Line Type</b>	<p>In this pop-up field, you select the type of the current job budget line. Selecting a value is mandatory. In the Job Budgets tab, the <b>Default Line Type</b> field in the Line Creation island defines the default value of this field; that is the value that is automatically suggested when you create the line. You can then select something else. You can choose from the following values:</p> <ul style="list-style-type: none"> <li>Sum/Text — If you select this value, the current line can be used as a text line, simply adding a line of text to the budget, or as a sum line. A sum line is used as a grouping level when you use work breakdown structure as described in "Getting Started with the Java™ Client." In both cases, no reference to activity or task may be specified on the line, and the line cannot be marked as a milestone.</li> <li>Time — If you select this value, the current line is used for specifying a time activity. The activity number will change to the activity specified in the <b>Default Time Activity</b> job parameter attribute of the Budgeting type.</li> <li>Outlay — If you select this value, the current line is used for specifying an outlay activity. The activity number will change to the activity specified in the <b>Default Outlay Activity</b> job parameter attribute of the Budgeting type.</li> <li>Amount — If you select this value, the current line is used for specifying an amount activity. The activity number will change to the activity specified in the <b>Default Amount Activity</b> job parameter attribute of the Budgeting type.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>▪ <b>Milestone</b> — If you select this value, the current line is used for specifying a milestone. Any existing activity number will be removed, and the <b>Milestone</b> field will be selected (this field is not shown in the standard layout of the Job Budgets workspace).</li> </ul> <p>Note that by changing the line type, you change the activity number. See the description of the <b>Act. No.</b> field for considerations with regard to changing the activity number.</p> <p>If you specify an activity in the <b>Act. No.</b> field, this field will change to reflect the type of activity you entered, that is either “Time,” “Amount,” or “Outlay.”</p>
<b>Task</b>	<p>In this field, you can specify the task to which the job budget line is to be assigned. Specifying a task list is mandatory, if a task list has been specified for the job, typically via the template based on which the job was created, or if the <b>Require Tasks</b> action has been used in the Job Tasks workspace.</p> <p>If neither the <b>Create Tasks from Job Budgets</b> nor the <b>Extended Task Creation from Budgets</b> (see below) system parameters has been selected, you must enter a task that exists in the task list in question.</p> <p>If both this field and the <b>Act. No.</b> field are left blank, the line can be used as a text line for a more detailed budget description or as a grouping level in a work breakdown structure.</p> <p>If either the <b>Create Tasks from Job Budgets</b> or <b>Extended Task Creation from Budgets</b> system parameters has been selected, you can enter a task that does not already exist in the job’s task list. When you do, Maconomy will create the task in the job’s private task list, using the activity entered on the line as derived activity. If a job-specific task list does not already exist, the shared task list assigned to the job will be copied and made job-specific. For more information, see the description of the Job Tasks workspace.</p> <p>If the <b>Mark ‘Overwrite Activity’ On Tasks</b> system parameter is selected, the <b>Overwrite Activity</b> field is selected in the new task. The description entered in the <b>Description</b> field is transferred to the new task and used as task description according to the rules outlined in the description of the two system parameters that concern task creation. Be aware that the specified activity can be set up to derive either the activity text or the task description in the <b>Description</b> field. The way in which the new task is named is defined by and described in the <b>Number of Trailing Characters for Task Names</b> and <b>Extended Task Creation from Budgets</b> system parameters.</p> <p>Tasks may need to be approved (see the Approve Tasks workspace). If this is the case, you cannot use the <b>Submit Budget</b> or <b>Transfer to Sales Order</b> actions until all tasks in the budget have been approved.</p> <p>If dimension values have been specified for the task, these dimensions are automatically suggested on new budget lines unless other values have been entered manually. If the Job Tasks or Task Lists workspace specifies that derived dimension values should overwrite existing dimensions values, any manually entered dimensions will be overwritten.</p>

Field	Description
<b>Empl. Cat. No.</b>	<p>In this field, you can assign a certain employee category to the job budget. If no specific employee has been specified for this line, Maconomy will instead use the cost, intercompany or billing price for the specified employee category for price calculations, if the <b>Hourly Rate</b> field in the System Information workspace in the Set-Up module has been set to "By Employee" or "Employee Priority."</p> <p>If the current job is set up for price control from budgets (see "Price control from budgets"), the employee category is added to the island Employee category Prices island in the tab when you add or change the employee category, if it is not already present in that island.</p> <p>If you specify or change an employee category on an existing line, prices are only recalculated if the <b>Update prices upon dimension change</b> system parameter has been selected. For further information about price calculations, see "Appendix A: Price Calculation in the Job Cost Module" and the <b>Update prices upon dimension change</b> system parameter in the Set-Up module.</p> <p>If the <b>Empl. cat. on job budgets required</b> system parameter is selected, you cannot leave out an employee category number in this field, unless the <b>Empl.</b> field is also blank.</p>
<b>Quantity</b>	<p>In this field, you enter the budgeted quantity for the line. For time activities, this field is in hours or days, depending on the time unit on the job.</p> <p>If the activity is a time activity, the quantity is interpreted as number of hours. It is therefore totaled in the <b>Hours</b> field by the <b>Time</b> field in the tab.</p> <p>Maconomy alerts you if the sum of hours exceeds the hours limit. If you enter a number of hours, it is automatically converted into a number of days, which is inserted into the <b>Quantity, Days</b> field. The number of days is calculated by dividing the number of hours by the value in the <b>Hours per Man Day</b> field in the tab of the Jobs workspace.</p> <p>If you want to assign items to the job budget line in the Job Budget Item Lines workspace, the value here must be 1. You can then enter the relevant item quantity on the individual job budget item line.</p> <p>The quantity is used to calculate the budget lines' total in the <b>Total Cost, Base</b> and <b>Billing Price Total, Base</b> fields. It is multiplied by the amounts in the <b>Cost, Base</b> and <b>Billing Price, Base</b> fields on the budget line. This applies to both time and amount activities.</p> <p>Note that if you change the quantity specified in this field on a planning budget, and work has been entered on the current planning budget line since the quantity was specified, the reestimated quantity cannot be lower than the work that was entered if a new estimated time to completion is currently being specified for the job.</p>
<b>Quantity, Days</b>	<p>This field only applies to time activities. The field shows the number of days budgeted for the current job budget line.</p>
<b>Act. No.</b>	<p>In this field, you enter the number of the activity for which you want to create a budget estimate. If both this field and the <b>Task</b> field are blank, the line is a</p>

Field	Description
	<p>text line. If this field shows “*,” the line is a summary line that creates a subtotal when the budget is printed using the “Standard” layout. You cannot budget on summary activities. Note that you cannot enter a “*” if you use work breakdown structure. Instead use the <b>Line Type</b> field to specify that the current line is a line of the type “Sum/Text” and indent the relevant lines below it. You can enter more than one line for the same activity, but note that every job entry is entered to an activity, not to a budget line.</p> <p>If a job budget text from the Activities workspace has been assigned to one of the activities used in this workspace, the standard text will be transferred to the Job Budget Texts workspace. You can subsequently edit the text so that it fits each job budget line in the Job Budget Texts workspace.</p> <p>You can change the activity on a line if the line does not have sales orders, requisitions, or purchase orders assigned to it, and the budget is not closed. You can change the activity directly or by changing the line type in the <b>Line Type</b> field. If tasks are required for the current job, the activity may be derived from the task. If you change the activity, you will be asked to confirm the change, and the task will be updated in the job-specific task list to derive the new activity—provided that tasks can be created from budgets (see the preceding description of the <b>Task</b> field). In addition, the task may need to be approved again, if task approval is required.</p> <p>Note that if price control from budget is enabled, changing the activity to an activity of another type (for example from a time activity to an amount activity) will cause the price on the current line to be recalculated, even if the <b>Update prices upon dimension change</b> system parameter is not set.</p>
<b>Cost, Base</b>	<p>In this field, you enter the budgeted cost in the base currency for one unit of the activity on the budget line. For a more information about how Maconomy calculates these prices, refer to “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>Maconomy calculates the cost based on information from job price lists, item price lists, and employee or activity information cards. If the executing company behind the activity is different from the company that is responsible for the job, Maconomy suggests the intercompany price of that company. For a more information about how Maconomy calculates these prices, see “Appendix A: Price Calculation in the Job Cost module.”</p> <p>If the current job is set up for price control from budgets (see “Price control from budgets”), changing the cost in this field in such a way that the billing price is also changed, the corresponding job-specific price list line is updated with the new billing price in currency. The corresponding job-specific price list line is the price list line that has the same task and activity number as on the job budget line.</p> <p>If you have entered a tax code that includes an investment tax rate, the investment tax rate will be included in the cost. Investment tax rates are described in more detail in the <b>Tax Code</b> field.</p> <p>You can change the suggested cost for amount activities and sometimes for time activities. If you change it, Maconomy will recalculate the budget line</p>

Field	Description
	<p>billing price based on the new cost and the markup percentage in the <b>Markup %</b> field. However, if you have selected a tax code, you can only change the net cost.</p> <p>If the <b>Keep Billing Price when Changing Cost Price</b> system parameter is set, the billing price on the line will not be changed if the cost is changed manually. However, the value in the <b>Markup %</b> field will change to reflect the new ratio between cost and billing price. If the billing price or cost is subsequently changed manually, Maconomy will calculate the prices as outlined in "Appendix A: Price Calculation in the Job Cost Module."</p> <p>If the <b>Update prices upon dimension change</b> system parameter has been selected, the price in this field is updated when certain key information on the line is changed, for instance the activity, employee, or dimension values. For more information about this and for a complete list of the fields that cause the price to be updated, see the description of the <b>Update prices upon dimension change</b> system parameter. If that system parameter is not selected, and you want to ensure that all prices reflect the current set-up of the budget lines, use the <b>Recalculate Job Budget</b> action.</p> <p>You can change the costs in this field for time activities if the <b>Change Costs for Time</b> field is selected in the Actions workspace in the Set-Up module. In addition, you can only see the cost for time activities if the <b>See Time Cost</b> field is selected in the Actions workspace. If neither field is selected, the value here will be zero, and you cannot change it.</p> <p>Maconomy multiplies the cost from this field with the number in the <b>Quantity</b> field. The total cost of the line is calculated in the <b>Total Cost, Base</b> field.</p> <p>If purchase order lines have been created from the current line, and you decrease the amount in this field, Maconomy checks whether the new amount causes budget violations according to the rules set up in the <b>Limit Purchase Amount to Budget, Limit Purchase on Sum or Line Level, Limit Purchase, Currency Margin, and Limit Purchase, Percentage Margin</b> job parameter attributes for the job. If the change causes a budget violation, an error message is displayed.</p>
<b>Cost Per Day, Base</b>	<p>If you have access to cost information, this field shows the cost price per day in base currency. Otherwise, it shows 0.</p> <p>You can edit this value if the budget is open, and your access privileges allow you to change cost prices.</p>
<b>Billing Price, Curr.</b>	<p>In this field, you enter the budgeted billing price in the job's currency of one unit of the activity on the budget line. If the activity is non-invoiceable, you cannot enter a price here, and the value must be "0.00." In the Activities workspace you can mark the activity as invoiceable in the <b>Invoice</b> field.</p> <p>If you want to enter the billing price in another currency than the job's currency, use the <b>Billing Price, Purchase Currency</b> field.</p> <p>Maconomy calculates the billing price based on information from job price lists, item price lists, adjustment percentage, the employee or activity information card, and information in the System Information workspace in the</p>

Field	Description				
	<p>Set-Up module. For more information about how Maconomy calculates these prices, refer to “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>If the current job is set up for price control from budgets (see “Price control from budgets”), changing the billing price causes the corresponding job-specific price list line to be updated with the new billing price in currency. The corresponding job-specific price list line is the price list line that has the same task and activity number as on the job budget line. In addition, the <b>Line Specific</b> field is selected on the current line.</p> <p>If you change the billing price in this field, the markup percentage is changed proportionally in the <b>Markup %</b> field, and the billing price is hereafter interpreted as “Entered” when calculating the price.</p> <p>Maconomy multiplies the billing price in this field with the number in the <b>Quantity</b> field. The line’s total billing price is shown in the <b>Billing Price Total, Currency</b> field.</p> <p>The billing price in this field and the billing price total are converted to the base currency in the <b>Billing Price, Base</b> and <b>Billing Price Total, Base</b> fields according to the principles described in “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>If the <b>Update prices upon dimension change</b> system parameter has been selected, the price in this field is updated when certain key information on the line is changed, for instance the activity, employee, or dimension values. For more information about this and for a complete list of the fields that cause the price to be updated, see the description of the <b>Update prices upon dimension change</b> system parameter. If the system parameter is not selected, and you want to ensure that all prices reflect the current setup of the budget lines, use the <b>Recalculate Job Budget</b> action.</p> <p>If purchase order lines have been created from the current line, and you decrease the amount in this field, Maconomy checks whether the new amount causes budget violations according to the rules set up in the <b>Limit Purchase Amount to Budget</b>, <b>Limit Purchase on Sum or Line Level</b>, <b>Limit Purchase, Currency Margin</b>, and <b>Limit Purchase, Percentage Margin</b> job parameter attributes for the job. If the change causes a budget violation, an error message is displayed.</p> <table> <tr> <th>Field</th><th>Description</th></tr> <tr> <td><b>Billing Price Per Day, Curr.</b></td><td>This field only applies to time activities. This field displays the billing price per day that is budgeted for the current job budget line. This value is based on the value in the preceding <b>Billing Price, Currency</b> field and the number of hours per man day specified for the job in the <b>Hours per Man Day</b> field in the Jobs workspace.</td></tr> </table>	Field	Description	<b>Billing Price Per Day, Curr.</b>	This field only applies to time activities. This field displays the billing price per day that is budgeted for the current job budget line. This value is based on the value in the preceding <b>Billing Price, Currency</b> field and the number of hours per man day specified for the job in the <b>Hours per Man Day</b> field in the Jobs workspace.
Field	Description				
<b>Billing Price Per Day, Curr.</b>	This field only applies to time activities. This field displays the billing price per day that is budgeted for the current job budget line. This value is based on the value in the preceding <b>Billing Price, Currency</b> field and the number of hours per man day specified for the job in the <b>Hours per Man Day</b> field in the Jobs workspace.				
<b>Markup %</b>	If you have access to cost information, this field shows the markup percentage. Otherwise, it shows 0.				

Field	Description
<b>Line Specific Billing Price</b>	If the current job is set up for price control from budgets, this field indicates whether the billing price differs from the price originally derived from the employee category on the current line. If the line is not selected, the price is the original price.
<b>Total Cost, Base</b>	This field shows the total estimated cost in base currency for the budget line. The total cost is found by multiplying the number in the <b>Quantity</b> field by the cost per piece in the <b>Cost</b> field. Cost prices are totaled in the tab, and Maconomy alerts you if the grand total exceeds the budget limit, which is entered in the <b>Limit</b> field in the Budget island. You can also choose to enter a total in this field. Maconomy will then calculate the unit price in the <b>Cost, Base</b> field as the total cost price divided by the figure in the <b>Quantity</b> field. If you do not have access to see cost for time, as specified in the Actions workspace in the Set-Up module, the value here will be zero, and you cannot change it.
<b>Total Billing Price, Currency</b>	This shows the budget lines total budgeted billing price in the job currency. The total billing price is calculated by multiplying the number in the <b>Quantity</b> field by the billing price per piece in the <b>Billing Price, Currency</b> field. Billing prices are totaled in the tab of the workspace, and Maconomy alerts you if the grand total exceeds the billing price budget limit, which is entered in the <b>Limit</b> field in the Budget island.
<b>Purchase Currency</b>	This field displays the selected currency code.
<b>Cost, Purchase Currency</b>	This field displays the cost in the currency selected in the <b>Purchase Currency</b> field.
<b>Cost Per Day, Purchase Currency</b>	This field only applies to time activities. The field shows the value in the <b>Cost, Purchase Currency</b> field converted into a cost per day. The value is calculated by multiplying the value in the <b>Cost, Purchase Currency</b> field by the value specified in the <b>Hours per Man Day</b> field for the current job in the Jobs workspace.
<b>Total Cost, Purchase Currency</b>	This field displays the total budgeted cost in the current job's currency. Maconomy calculates the total cost price by multiplying the value of the <b>Quantity</b> field by the cost per unit in the <b>Cost, Purchase Currency</b> field. If you do not have access to see cost information, as specified in the Actions workspace in the Set-Up module, this field displays 0.
<b>Billing Price, Purchase Currency</b>	This field displays the billing price in another currency than the job's currency. Maconomy uses the currency specified in the <b>Purchase Currency</b> field for converting the amount to the job currency, using the current exchange rate table for purchase at the time of entry. If you change the currency later, Maconomy recalculates the value of this field.

Field	Description
<b>Billing Price Per Day, Purchase Currency</b>	This field only applies to time activities. The field shows the value in the <b>Billing Price, Purchase Currency</b> field converted into a billing price per day. The value is calculated by multiplying the value in the <b>Billing Price, Purchase Currency</b> field by the value specified in the <b>Hours per Man Day</b> field for the current job in the Jobs workspace.
<b>Billing Price Total, Purchase Currency</b>	This field displays the total sales price in purchase currency, that is, the <b>Billing Price, Purchase Currency</b> field multiplied by the number in the <b>Quantity</b> field.
<b>Cost Type</b>	This field displays the cost type selected for the current amount activity in the Activities workspace: Turnover or Outlays. The sum of activities of the type Outlays is deducted from the calculation of the gross margin percentage of a job. For more information about outlay activities, see the description of the Activities workspace.
<b>Incl. in Fixed Price</b>	This check box is selected if the entry that applies to the line is to be included in the fixed price of a job.  If a fixed-price job or a time-and-material job is assigned the <b>Fixed Price Basis</b> job parameter attribute with the value "Budget," the value of this field determines which budget lines are included in the fixed quote price of a job and which entries are not included in the fixed quote price of a job.
<b>Planned Starting Date</b>	<p>In this field, you can enter the date on which you plan to begin the activity. Maconomy uses the prices valid as of this date when deciding which version of the price list assigned to the job, if any, should be used for price calculation on job budget lines. If you do not specify a date in this field, Maconomy uses today's date for the calculation of prices.</p> <p>If you later change the value in this field, Maconomy will recalculate prices on job budget lines only if the budget has not been approved, and if the system is set up to update prices upon dimension change in the System Parameters workspace. You can also choose to have Maconomy recalculate prices by using the <b>Recalculate Job Budget</b> action. When you use this action, Maconomy will also use the price lists valid as of the date specified in this field, if any, for the recalculation.</p> <p>By using the <b>Transfer Job Dates</b> action, you can prepopulate this field with the value of the <b>Start Date</b> field in the Jobs workspace for the current job. At the same time, the <b>Planned Ending Date</b> field is populated with the value of the <b>Estimated Ending Date</b> field in the Jobs workspace.</p> <p>When you create requisitions or purchase orders from the current line, the date in this field is transferred to the <b>Pref. Deliv. Date</b> field in the tab of the requisition or purchase order and the <b>Delivery Date</b> field in the sub-tab. In addition, the specified date can be used in reports.</p> <p>If you copy a budget with a planned starting date to a new budget with the same job number, this field will also be copied to the new budget. However, you should note that a date in this field does not influence the possibility of assigning periods to the budget line in the Periodic Job Budgets workspace.</p>

Field	Description
<b>Planned Duration</b>	In this field, you can enter a planned duration of the activity. This duration will always be the number of days from the planned starting date to the planned ending date. If a week calendar has been selected in the <b>Standard Week Calendar</b> job parameter attribute of the Planning type, the date calculation adjusts for weekends and holidays as specified in the week calendar. Otherwise, calendar days are used. If the value of the field is changed, the <b>Planned Ending Date</b> field will automatically be adjusted correspondingly. If the <b>Planned Starting Date</b> or <b>Planned Ending Date</b> field is empty, the value of this field will be 0.
<b>Planned Ending Date</b>	In this field, you can enter the date you plan to end the activity. The date specified will be of importance in the Detailed Planning workspace in the Resource Planning module; the date specified in this field will be copied to planning lines created based on the budget in question.  By using the <b>Transfer Job Dates</b> action, you can prepopulate this field with the value of the <b>Estimated Ending Date</b> field in the Jobs workspace for the current job. At the same time, the <b>Planned Starting Date</b> field is populated with the value of the <b>Start Date</b> field in the Jobs workspace.
<b>Deliv. Remarks</b>	In this field, you can enter delivery remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field shows the amount from the <b>Billing Price, Currency</b> field on the current budget line converted into the base currency. For more information about how Maconomy calculates these prices, refer to "Appendix A: Price Calculation in the Job Cost Module."
<b>Billing Price Per Day, Base</b>	This field only applies to time activities. The field shows the value in the <b>Billing Price, Base</b> field converted into a billing price per day. The value is calculated by multiplying the value in the <b>Billing Price, Base</b> field by the value specified in the <b>Hours per Man Day</b> field for the current job in the Jobs workspace.
<b>Billing Price Total, Base</b>	This field shows the amount from the <b>Billing Price Total, Currency</b> field on the current budget line converted into the base currency. For more information about how Maconomy calculates these prices, refer to "Appendix A: Price Calculation in the Job Cost Module."
<b>Standard Billing Price, Base</b>	This field shows the standard billing price per unit in the base currency of the company. If you change the value in the <b>Billing Price, Purchase Currency</b> or <b>Billing Price, Currency</b> field, this number can only change if the standard billing price is calculated as a standard markup percentage.
<b>Total Standard Billing Price, Base</b>	This field shows the total standard billing price of the current budget entry in the base currency of the company.
<b>Vendor</b>	In this field, you can enter the number of a vendor, if the activity on the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.

Field	Description
	<p>This field is used to select which vendor is going to do any external work for you in connection with the job. If you enter a number, Maconomy automatically selects the <b>Selected</b> field, and when you remove the number, the selection is removed, too. When you use the <b>Create Requisitions</b> or <b>Create Purchase Order</b> action, Maconomy will automatically create a requisition or purchase order to correspond to the budget line. You can edit the requisition or purchase order in the Requisition and Purchase Orders workspaces, respectively, in the Accounts Payable module. When a purchase order is created from a budget line, the purchase order number is shown in the <b>Last Purchase Order No.</b> field on the budget line.</p> <p>If you assign items to a job budget line in the Job Budget Item Lines workspace on which this field has a value, Maconomy will retrieve the item's budgeted cost from the vendor's purchase price list. This requires that there is a purchase price list for the vendor and that the item is in it. However, prices are only retrieved when creating purchase orders, not requisitions.</p>
<b>Vendor Name</b>	This is the first line of the name of the vendor whose number is entered in the <b>Vendor</b> field. You cannot change the name here.
<b>Your Reference</b>	<p>In this field, you enter the reference person used on purchase orders that are created from the current budget line. You can only enter a reference person if the <b>Cust. No.</b> field has a value.</p> <p>When the <b>Cust. No.</b> field has a value, or you have changed it, the value is transferred from the corresponding field on the vendor information card with the current vendor number. The field can subsequently be altered manually, and the contact person is transferred to the corresponding field on purchase orders created when using the <b>Create Purchase Orders</b> action.</p>
<b>Create Sales Order</b>	If you select this field, Maconomy will create sales order lines for items and text lines assigned to the budget line in the Job Budget Item Lines workspace, when you use the <b>Transfer to Sales Order</b> action. This field can only be selected if the activity is an amount activity. The sales order lines can be edited and processed in the Sales Orders workspace in the Sales Orders module.
<b>Selected</b>	<p>If you select this field, Maconomy will create a requisition or purchase order line for the budget line when you use the <b>Create Requisitions</b> or <b>Create Purchase Orders</b> actions. For more information about the creation of requisitions and purchase orders, see the description of the <b>Create Requisitions</b> and <b>Create Purchase Orders</b> actions.</p> <p>The field can only be selected if the activity is an amount activity and if you have entered a vendor number on the line. Requisitions and purchase orders created here can be edited and processed in the Requisitions and Purchase Orders workspaces, respectively, in the Accounts Payable module.</p>
<b>Currency, Purchase Creation</b>	In this field, you can select a currency. Depending on whether you have entered the cost in base currency or in another currency, the value is calculated in the <b>Cost, Base</b> field or in the <b>Cost, Purchase Currency</b> field by means of this currency. If another currency is subsequently selected, the

Field	Description
	<p>value in the <b>Cost, Purchase Currency</b> field is then recalculated. For more information about how Maconomy calculates these prices, refer to “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>If the job budget is structured hierarchically, selecting a purchase currency on a group header line makes it possible to see the total purchase amount for the subordinate lines in a specific currency.</p>
<b>Number of Purchase Orders</b>	<p>This field shows how many purchase orders have been created based on this budget line. Purchase orders can be created based on a budget line by using the <b>Create Purchase Order</b> action when the <b>Selected</b> field is selected on the line in question. This can be repeated any number of times to create multiple purchase orders. Purchase orders can also be created by creating a purchase order from a requisition created based on the line or by converting a request to quote assigned to a requisition based on the budget line to a purchase order. The field shows the total number of purchase orders created, regardless of the method. For more information about creating purchase orders from requisitions and requests for quote, see the description of the Purchase Orders workspace in the Accounts Payable module.</p>
<b>Number of Requisitions</b>	<p>This field shows how many requisitions have been created based on this budget line. Requisitions can be created based on a budget line by using the <b>Create Requisition</b> action when the <b>Selected</b> field is selected on the line in question. This can be repeated any number of times to create multiple requisitions. For more information about creating purchase orders from requisitions and requests for quote, see the description of the Purchase Orders workspace in the Accounts Payable module.</p>
<b>Last Purchase Order No.</b>	<p>This field shows the number of the last purchase order created based on the current line. Purchase orders can be created based on a budget line by using the <b>Create Purchase Order</b> action when the <b>Selected</b> field is selected on the line in question, or by creating a purchase order from a requisition created based on the line. Purchase orders can also be created by converting a request to quote assigned to a requisition based on the budget line to a purchase order. The field shows the number of the last purchase orders created, regardless of the method. For more information about creating purchase orders from requisitions and requests for quote, see the description of the Purchase Orders workspace in the Accounts Payable module.</p> <p>Note that purchase orders created in the Purchase Orders workspace in the Accounts Payable module and manually assigned to a job there will not be shown in this field.</p> <p>If the last purchase order is deleted, this field is blank.</p>
<b>Purchase Order Total</b>	<p>This field shows the sum of the purchase order lines created based on the budget line. When a purchase order is created based on the current budget line, the sum of this purchase order line is calculated as the total budgeted cost on the budget line sum less the sum of previously created purchase order lines. If this is a negative amount, the amount on the purchase order line is set at 0.</p>

Field	Description
<b>Exec. Company No.</b>	This field shows the name of the company that performs the specified activity. You cannot change this field.
<b>Name</b>	This field shows the name of the executing company.
<b>Empl.</b>	<p>In this field, you can enter the number of the employee to be associated with the given activity.</p> <p>If you enter a value and the activity is a time activity, Maconomy will suggest a cost based on the employee. Similarly, if you have specified in the <b>Hourly Rate</b> field in the System Information workspace that hourly rates are determined by employees, Maconomy will suggest a billing price based on the employee. However, if you specify or change an employee on an existing line, prices are only recalculated if the <b>Update prices upon dimension change</b> system parameter has been selected. For more information about how Maconomy calculates these prices, refer to "Appendix A: Price Calculation in the Job Cost Module."</p> <p>If an employee category has been specified in the <b>Empl. Cat. No.</b> field, this field must either be blank, or the employee specified must be a member of the employee category. If an employee is specified in this field, you cannot specify that other employees than the one specified in this field should work on the job in the Detailed Planning workspace in the Resource Planning module. If, on the other hand, the field is blank, you can plan for one or more employees belonging to the specified category (or all employees if no category has been specified).</p> <p>If the system parameter <b>Empl. cat. on job budgets required</b> system parameter is selected, you cannot specify an employee unless an employee category is also specified.</p> <p>If the current job uses Traffic Control, and one or more teams have been selected for the job in the Timing Plans or Job Traffic Status window, the employee specified here must be member of that team. For more information, see the those workspaces and the Teams workspace in the Set-Up module.</p> <p>Note that if employee control of the Employee List type has been selected for the job, the employee must exist in the job's employee control list. For more information, see the description of the <b>Employee Control</b> field in the Jobs workspace.</p>
<b>Location</b>	<p>In this field, you can enter a value for the Location dimension. If you do not manually enter a value, Maconomy will attempt to derive a value, using the order of priority set up in the Dimension Derivation workspace in the G/L module. However, any manually entered value will be overwritten if Maconomy can derive a value for which overwriting has been selected. If no value can be derived, the standard value is transferred from the System Parameters workspace in the Set-Up module.</p> <p>If the <b>Update prices upon dimension change</b> system parameter has been selected, changing the location on a line will cause the prices on the line to</p>

Field	Description
	<p>be recalculated according to the method described in “Appendix A: Price Calculation in the Job Cost Module.” If the current job is set up for price control from budgets (see “Price control from budgets”), and the <b>Line Specific Billing Price</b> field is selected for the current line, the billing price is not changed upon recalculation.</p> <p>If the budget controls prices, the function of the <b>Update prices upon dimension change</b> system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines related to a time activity will cause a recalculation of the price, and the line will be considered line-specific. To recalculate the price after changing dimensions, use the <b>Recalculate Job Budget</b> action.</p> <p>See the section on dimension derivation in “Introduction to the G/L Module” and the description of the Dimension Derivation workspace for more information about dimension derivation.</p>
<b>Entity</b>	The functionality of this field is similar to that of the <b>Location</b> field.
<b>Project</b>	The functionality of this field is similar to that of the <b>Location</b> field.
<b>Purpose</b>	The functionality of this field is similar to that of the <b>Location</b> field.
<b>Spec. 1-3</b>	The functionality of this field is similar to that of the <b>Location</b> field.
<b>Local Spec. 1-3</b>	The functionality of this field is similar to that of the <b>Location</b> field.
<b>Net Cost, Base</b>	This field is only used in Norwegian systems. This field shows a net cost for amount activities.
<b>Net Cost Per Day, Base</b>	This field only applies to time activities. The field shows the net cost per day budgeted for the current job budget line. The value is based on the value in the <b>Net Cost, Base</b> field and the number of hours per man day specified for the job in the <b>Hours per Man Day</b> field in the Jobs workspace.
<b>Tax Code</b>	This field is only used in Norwegian systems. This field shows a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Name</b>	This field displays the text defined for the current activity. This text is suggested by Maconomy as entry text when a line is created in this window. The entry text can be changed, and this is then displayed in the <b>Description</b> field in this workspace's sub-tab.
<b>Task Description</b>	This field shows the text defined for the current task, if a description has been entered in the <b>Task</b> field.

Field	Description
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified in the <b>Empl. Cat. No.</b> field.
<b>Employee Name</b>	This field shows the name of the employee entered in the <b>Empl.</b> field.
<b>Job Budget Text</b>	In the Job Budget Texts workspace, you can assign text lines to a job budget line. This field, which you cannot change, displays whether such text lines are assigned to the current line.
<b>Standard Billing Price, Currency</b>	This field shows the standard billing price per unit in the currency of the job. If the <b>Update prices upon dimension change</b> system parameter has been selected, the price in this field is updated when certain key information on the line is changed, for instance the activity, employee, or dimension values. For more information about this and for a complete list of the fields that cause the price to be updated, see the description of the <b>Update prices upon dimension change</b> system parameter. If the system parameter is not selected, and you want to ensure that all prices reflect the current setup of the budget lines, use the <b>Recalculate Job Budget</b> action.
<b>Standard Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the value in the <b>Standard Billing Price, Currency</b> field converted into a standard billing price per day. The value is calculated by multiplying the value in the <b>Billing Price, Currency</b> field by the value specified in the <b>Hours per Man Day</b> field for the current job in the Jobs workspace.
<b>Total Standard Billing Price, Currency</b>	This field shows the total standard billing price of the current budget entry in the currency of the job. If the <b>Update prices upon dimension change</b> system parameter has been selected, the price in this field is updated when certain key information on the line is changed, for instance the activity, employee, or dimension values. For more information about this and for a complete list of the fields that cause the price to be updated, see the description of the <b>Update prices upon dimension change</b> system parameter. If the system parameter is not selected, and you want to ensure that all prices reflect the current setup of the budget lines, use the <b>Recalculate Job Budget</b> action.
<b>Remarks 1-10</b>	In these fields, you can assign remarks to the current job budget line. The remarks are for information only and can, for example, be used in reports.
<b>Quantity Planned</b>	This field shows how many hours have so far been planned for the job budget line in question in the Detailed Planning workspace in the Resource Planning module.
<b>Changed in Revision No.</b>	This field shows the number of the job budget revision in which the current line was last changed.
<b>Unit</b>	In this field, you can specify the unit associated with the quantity on the line. Select a value from the drop-down list.

Field	Description
	<p>When you create a new time line, the value for this field is derived automatically from the <b>Time Unit</b> field of the job.</p> <p>When you create new amount and outlay lines, you can select any non-time unit. The field is blank by default.</p> <p>For other line types, the field is blank and cannot be edited.</p> <p>Note: This field is not displayed by default, but the view can be customized to display it.</p>

## Actions

This section shows the Actions available in the Job Budgets workspace.

### Top Tab

Field	Description
<b>Calculate Job Surcharge</b>	<p>When you select this action, Maconomy will calculate surcharges for those lines in the table part that match the criteria for surcharge calculation. The surcharges are calculated from the job surcharge rule specified in the filed "Job Surcharge Rule" in the Price island. If no job surcharge rule has been specified for the job, you cannot select this action.</p> <p>Existing surcharge lines are deleted, and other surcharge lines are created. If the calculation of job surcharges results in the creation of several lines with the same combination of activity, employee, and dimensions, the lines will be summarized on one line.</p> <p>The functionality of job surcharge rules is described in further detail in the Job Surcharge Rules window.</p>
<b>Transfer from Budget</b>	<p>Use this action to create a quote or order confirmation selection, depending on whether the job status is quote or order. Both types can be edited, approved, and printed in the Quote Editing window. If a previous selection is available, Maconomy displays a warning message that the new selection will replace the previous one. If the <b>Automatic creation of quote revisions</b> system parameter is enabled, another revision of the quote is automatically created when you select this action. If the parameter is disabled, any existing quote is overwritten with the new quote. If the existing quote was already approved, it is automatically reopened first. You can only choose this action if the budget shown in the window is the current one.</p> <p>Selections are made according to your specifications in the Quote island in the Invoice Layout Rules window. If you only want the printout to show a total, the suggestion will not show lines, and the total price will be the one shown in the <b>Quote Price</b> field in the Budget island.</p> <p>If the job is a fixed-price job or if the quote was previously approved in the Quote Editing window, Maconomy shows a warning, and the <b>Effective Quote Price</b> field is not updated until the quote has once again been approved in the Quote Editing window. For further information, please see the description of the Quote Editing window.</p>

Field	Description
	<p>Quotes are created in accordance with the invoice layout rule specified for the job in the Jobs workspace. If the <b>Show Markup Separately</b> field is marked for the invoice layout rule in question, the use of this action leads to the creation of a quote in which the costs of all amount activities are shown in the table part with an extra line showing the markup. If different activities have different tax codes, a separate markup line for each tax code is created. If printouts are to be shown with a total only, the quote does not include individual lines, and the total price is thus equal to the price in the <b>Quote Price</b> field in the Budget, Currency and Budget, Base islands.</p> <p>If you have entered dimensions in the <b>Transfer from Budget</b> field on an invoice layout rule, Maconomy transfers the selected dimensions from budget lines to the quote.</p> <p>If printouts are to show more than the total, and if they are to show time and amount activities by entry, one budget line in this window will create one quote line in the table part of the Quote Editing window, provided that the budget line has a billing price. If time and amount activities are shown by activity, all budget lines with the same activity number will create one quote line. If time and amount activities are shown by summary activity, all budget lines for the same summary activity will create one quote line. Quote lines are sorted by activity number.</p> <p>Note that in the latter case, the quote lines will carry the same tax as the tax rate chosen for the sum activity. If you apply differentiated taxes or activities both subject and not subject to tax, the activities for the same summary activity should have the same tax code as the summary activity.</p> <p>The quote lines will have the same prices as those entered for the budget lines, provided that it is specified on the invoice layout rule that amounts are to be shown on lines. If amounts are not to be shown on lines, the field will show "0.00."</p> <p>When budgets are transferred to quotes, Maconomy changes the amount in the field "Effective Quote Price" in the card part of this window to the sum of the budget lines, if printouts are to show more than the total. Maconomy alerts you if the quote price is changed.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if "Include Text Lines" is marked on the invoice layout rule, the texts will be transferred to the quote. However, they will not be transferred if the printout is only showing totals, or if the level of detail is By Summary Activity or By Activity.</p> <p>If the quote layout is set to be created directly from the budget, and the budget is arranged hierarchically, that is, you have applied a work breakdown structure, the only group headers that are transferred to the quote are the ones at the top level. However, non-header lines in groups at lower levels in the structure are transferred to the quote as if they belonged to the header at the top level.</p> <p>Furthermore, instead of appearing as headers above the individual lines within their group, top level group headers appear below their subordinate lines. If the last line or lines in a group at level 3 or lower are text lines, these</p>

Field	Description												
	<p>lines are not transferred to the quote, as they would otherwise appear to concern the header at the top level, instead of their actual group header (which is not transferred). As a result if the job budget looks as follows:</p> <p><b>Analysis</b></p> <p>    Initiation</p> <p>    Site Inspection</p> <p>    <b>Analysis Report</b></p> <p>        Information Gathering</p> <p>        Layout</p> <p>        &lt;text line&gt;</p> <p>Transferring the quote to the budget will result in the following lines in the Quote Editing window:</p> <table> <tr> <th>Description</th><th>Sum Line</th></tr> <tr> <td>Initiation</td><td>No</td></tr> <tr> <td>Site Inspection</td><td>No</td></tr> <tr> <td>Information Gathering</td><td>No</td></tr> <tr> <td>Layout</td><td>No</td></tr> <tr> <td>Analysis</td><td>Yes</td></tr> </table> <p>In the preceding example, amounts have been disregarded. However, the sum lines that are created in the quote will sum up amounts from the relevant quote lines.</p> <p>If a job surcharge rule has been specified for the job, and a line in the table part of this window activates the surcharge rule in question, Maconomy will warn you that job surcharges should be calculated before you transfer the budget to a quote.</p> <p>A user can only carry out this action if the fields "Change Job Budgets" and "Transfer to Quote" in the Actions window in the Set-Up module are marked for the user in question. Also, if the transfer results in the reopening of a quote because the previous quote was already approved, the field "Reopen Job Quotes" must also be marked for the user in the Actions window.</p> <p>When you transfer a job budget to a quote, the value of the <b>Unit</b> field is also transferred.</p> <p>The invoice layout rule specified for the job controls how job budget lines are transferred to quote lines.</p> <p>If <b>Create Quote Directly From Budget</b> is selected on the invoice layout rule, or Level 1 specification is set to "Registration", then each leaf job budget line</p>	Description	Sum Line	Initiation	No	Site Inspection	No	Information Gathering	No	Layout	No	Analysis	Yes
Description	Sum Line												
Initiation	No												
Site Inspection	No												
Information Gathering	No												
Layout	No												
Analysis	Yes												

Field	Description
	<p>is copied to one quote line. In this case, the unit is transferred directly from the job budget line to the quote line.</p> <p>If Level 1 specification is set to "Activity", then job budget lines with the same activity are combined to form one job quote line. In this case, the unit is transferred only if the job budget lines with the same activity specify the same unit. Otherwise, the <b>Unit</b> field on the quote line is left blank.</p>
<b>Print Quote</b>	<p>When you select this action, you print a job quote to the customer. You can only choose this action if there is a quote for the job, that is, if the job status is <b>Quote</b>.</p> <p>A job quote must be approved before the quote can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, a quote can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote.</p> <p>If you have not previously edited or created the job quote in the Quote Editing window, Maconomy will create and print a job quote on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the budget lines.</p> <p>If there is an existing quote selection that is either entered directly in the Quote Editing window or created using the <b>Transfer from Budget</b> action in this window, Maconomy prints the existing quote. Note that you can also print a quote for a job that has been closed. However, if you do so, you cannot make and changes to the quote related to the job.</p> <p>You can also print job quotes in the Quote Editing window. You can print quotes in batches in the Print Job Quote window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Print Order Confirmation</b>	<p>Use this action to print a job order confirmation based on the existing quote revision. This action is available only when the job status is <b>Order</b>.</p> <p>A job quote must be approved before the order confirmation can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, an order confirmation can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision and the <b>Approval of Quote Required</b> job parameter attribute is disabled, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote as an order confirmation.</p> <p>If you have not previously edited or created a job quote or a job order confirmation in the Quote Editing window, Maconomy creates and prints a job order confirmation on the basis of the budget lines in this window and in</p>

Field	Description
	<p>accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the order confirmation lines.</p> <p>If there are existing quote or order confirmation selections that are either entered directly in the Quote Editing workspace or created in this workspace using the <b>Transfer to Quote</b> action, Maconomy prints the existing selection. Note that you can also print an order confirmation for a job that has been closed.</p> <p>You can also print job order confirmations in the Quote Editing window. You can print order confirmations in batches in the Print Job Order Confirmation window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Create Requisitions</b>	<p>When you select this action, Maconomy automatically creates requisitions for those amount activities in the job budget that have a vendor number and a mark in the field "Selected." A requisition is an internal request for the approval of purchase of services. This means that you can use this action to create requisitions that the person or department responsible for approving purchases can evaluate and approve, and this person or department can then, based on the input from the requisition, place the necessary orders with the relevant suppliers by means of a purchase order. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy creates a requisition for each combination of vendor and purchase order currency specified on the marked lines, and each of the requisitions is assigned to a separate, new purchase process (see "Purchase Processes" in the A/P module). The earliest date in the field "Planned Starting Date" on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting requisition. If there is no planned date, Maconomy uses today's date. Requisitions can be edited in the Requisitions window in the Accounts Payable module.</p> <p>When you create requisitions, Maconomy updates the filed "Number of Requisitions" on the budget lines.</p> <p>Information such as payment terms and delivery mode are retrieved from the vendor information card in the A/P module.</p> <p>The currency of each requisition is taken from the "Currency, Purchase Creation" field on the budget lines resulting in the requisition in question. If this field is blank, the currency is taken from the vendor's information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter "Fixed exchange rates in budgets only" has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the filed "Text Lines for Purchase" in the Job Information</p>

Field	Description
	<p>window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Create Purchase Orders</b>	<p>When you select this action, Maconomy automatically creates purchase orders for those amount activities in the job budget that have a vendor number and a mark in the field "Selected." A purchase order is an order for the vendor service described by the budget line's amount activity. The amount on the purchase order line will be the cost sum on the budget line less the sum of previously created purchase order lines. If this amount is negative, the amount on the purchase order line will be 0. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy checks that none of the lines selected for purchase order creation will cause budget violations according to the rules set up in the job parameter attributes "Limit Purchase Amount to Budget," "Limit Purchase on Sum or Line Level," "Limit Purchase, Currency Margin," and "Limit Purchase, Percentage Margin" for the job. If even only line causes a budget violation, the action is cancelled for all lines, including lines that do not cause any budget violations. Budget violations can, for example, take place if purchase orders already exist for the lines, and the new purchases combined with existing purchases will cause the budgeted about to be exceeded. For further information, see the descriptions of these attributes in the job parameter "Budgeting."</p> <p>Maconomy creates a purchase order for each combination of vendor and purchase order currency specified on the marked lines, and each of the purchase orders is assigned to a separate, new purchase process (see "Purchase Processes" in the A/P module). The earliest date in the field "Planned Starting Date" on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting purchase order. If there is no planned date, Maconomy uses today's date. Purchase orders can be edited in the Purchase Order window in the Accounts Payable module.</p> <p>When you create purchase orders, Maconomy updates the "Number of Purchase Orders" and "Purchase Order Total" fields on the budget lines. The purchase order number is then shown in the field "Last Purchase Order No." on every budget line.</p> <p>Information such as payment terms and delivery mode are retrieved from the vendor information card in the A/P module.</p> <p>The currency of each purchase order is taken from the "Currency, Purchase Creation" field on the budget lines resulting in the purchase order in question. If this field is blank, the currency is taken from the vendor's information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter "Fixed exchange rates in budgets only" has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the field "Text Lines for Purchase" in the Job Information</p>

Field	Description
	window is marked, the texts will be transferred to the relevant purchase orders.
<b>Transfer to Sales Order</b>	<p>When you select this action, Maconomy automatically creates sales order lines for job budget items lines, which are assigned to job budget lines marked in the "Create Sales Order" field. Text lines created in the Job Budget Item Lines window are also transferred. If you have previously created a sales order line for a job budget item line, it will not be processed again. The order lines are added to a sales order for the job. If such an order does not exist, Maconomy automatically creates a sales order for the job with a mark in the "Invoice in Job Cost" field. If there is more than one order assigned to the job, Maconomy chooses the order with the highest order number.</p> <p>If the field "New Order when Transf. to Sales" in the System Information window in the Set-Up module has been marked, an order will always be created when the action "Transfer to Sales Order" is selected.</p> <p>When you create sales order lines on the basis of job budget item lines, Maconomy copies the budgeted billing price to the order line. If you wish this price to be recalculated before it is transferred, use the "Recalculate Prices" action in the Job Budget Item Lines window.</p> <p>You cannot select this action if the current job has been closed. However, you can reopen a job using the "Reopen Job" action in the Jobs window.</p>
<b>Transfer Job Dates</b>	When you select this action, Maconomy transfers the starting date and the expected ending date of the job to the fields "Planned Starting Date" and "Planned Ending Date" in the job budget lines. The dates are transferred from the fields "Start Date" and "Estimated Ending Date" in the Jobs window.
<b>Delete Budget</b>	<p>Use this action to delete the selected budget.</p> <p>If you have set up the job to use imported resource allocations, this also deletes any resource allocations that have been imported to the budget. Approved budgets and the budget for a closed job cannot be deleted.</p>
<b>Remove Zero Lines</b>	<p>Use this action to remove any lines in the current budget that have a total cost and billing price of zero.</p> <p>Generally, Sum/Text and Milestone lines are not deleted. However, depending on the structure of the budget in question, some lines may be deleted if they are included in the same level as zero lines.</p> <p>For example, if you have a number of text lines together with regular lines in a subtree, and all of the regular lines are zero, all of the text lines in that subtree are also deleted.</p> <p>If you have set up a job to use imported resource allocations, this action also deletes resources allocated to the budget lines.</p> <p>Maconomy displays a warning message to confirm the deletion of budget lines.</p>
<b>Copy Budget</b>	When you select this action, Maconomy copies the budget shown in the Copy Budget island, meaning that an existing budget with a certain revision number

Field	Description
	<p>is either copied from another job or from the job currently shown in the window.</p> <p>If the system parameter “Recalculate Job Budget when Copying” in the System Parameters window in the Set-Up module is not marked, a simple line-by-line copying of the budget is made. However, currency amounts will be recalculated to the new job’s currency. If “Recalculate Job Budget when Copying” is marked, Maconomy will recalculate the budget when it is copied. This means that the price fields (costs, billing prices, and standard billing prices in base and currency, plus “Net Cost, Base”), the field “Markup %,” and the fields concerning purchase orders and requisitions are not copied, but recalculated on the basis of information of the job concerning the customer, the employees, and the job price list. That is why the new budget does not necessarily show the same amounts as the budget that it was copied from. If fixed exchange rate information has been specified in the Job Price Information window for the job to which information is copied, Maconomy recalculates currency amounts in the budget on the basis of the specified fixed exchange rate information.</p> <p>If a periodic job budget has been created for the job that is being copied, the periods of that budget are also copied to the new budget. The periodic job budget can be seen and edited in the Periodic Job Budgets window.</p> <p>If lines exist in the budget that is to be overwritten, it is not possible to copy. Furthermore, you can only copy from one budget to another if both budgets are created in advance.</p> <p>In addition, you cannot copy the lines of another budget to a planning budget if this implies that two identical lines are created on the planning budget, and one or both of the job parameter attributes “Duplicate lines (amount) on planning budget” or “Duplicate lines (time) on planning budget” has the value “No” for the job in question.</p> <p>If the task on a budget line to be copied does not exist in the task list for the current job, the line will not be copied, unless the system parameter “Extended Task Creation from Budgets” is marked. If it is marked, the task will be created in the job-specific task list of the current job.</p> <p>. When you copy a job budget from another revision or type on the same job, or from another job, the value of the <b>Unit</b> field is also copied.</p> <p>If you copy a budget between jobs that use different time units, Maconomy converts quantities on time lines between hours and days (by multiplying or dividing by the configured number of hours in a day).</p> <p>For time lines, the <b>Unit</b> field is rederived to match the value specified in the <b>Time Unit</b> field of the target job.</p>
<b>Recalculate Budget</b>	<p>When you select this action, Maconomy recalculates prices on the job budget lines currently displayed. Maconomy uses the price lists valid per the date specified in the field “Planned Starting Date” on each job budget line, or, if no such date has been specified, today’s date. If the recalculated price is 0, any price specified on a budget line will not be overwritten.</p>

Field	Description
	<p>You should be aware that Maconomy will also recalculate prices on lines where the field “Line Specific Billing Price” is marked, and update the job-specific prices list lines underlying the budget lines. This applies when you are recalculating the baseline budget, and the job uses price control from budgets (see “Price control from budgets”). When recalculating, prices are looked up much in the same way as if a line was created. If a price list determines a price different from the price specified for the relevant employee category, that price will be applied (and the line will be marked as having a line-specific billing price.)</p> <p>Moreover, you should note that the field “Job Budget Follows Periodic Job Budget” has been marked on the budget in question in the Periodic Job Budgets window, the figures specified in the periods on the relevant budget lines will also be recalculated when using this action. However, if the field “Job Budget Follows Periodic Job Budgets” has not been marked, regular figures and periodic figures are also recalculated, but the recalculation of the periodic figures carried out independently of the recalculation of the regular budget figures.</p> <p>The job parameter attributes “Keep Purchase Billing Price Upon Recalculation” and “Keep Purchase Cost Price Upon Recalculation” control how Maconomy should act when you recalculate the budget and the purchase currency differs from the base currency. For more information, see the description of the job parameter attribute type “Budgeting.”</p>
<b>Rederive Tax Codes on Job Budget</b>	<p>This action will rederive tax codes on all job budget lines according to the tax code setup, thus reverting any user settings on this job budget.</p>
<b>New Revision</b>	<p>Use this action to create another revision of the current job budget and the assigned periodic job budget, if any.</p> <p>If you have set up a job to use imported resource allocations, data regarding them is also saved in the revision.</p> <p>You cannot create another revision of an approved budget; it must be reopened first. The previous revision is locked, and except for revision remarks and revision code, it can no longer be changed. All previous revisions of the job budgets to which you have access can be viewed in the Job Budget Revisions workspace.</p>
<b>Submit Budget</b>	<p>When you select this action, the job budget currently displayed changes status to “Submitted.” This is a way of indicating that the budget is ready for approval. A job budget cannot be approved until it has been submitted. For more information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the field “Can Change Job Budget” in the Actions window in the Set-Up module is marked may submit budgets.</p>

Field	Description
<b>Approve Budget</b>	<p>When you select this action, the job budget currently displayed is approved. You can only approve a budget if it has been submitted. On approval, Maconomy takes a “snapshot” of the budget, which can then be viewed in the Job Budget Revisions window. The job budget can then no longer be changed, except for the following fields: “Planned Starting Date,” “Planned Ending Date,” “Deliv. Remarks,” “Vendor,” “Your Reference,” “Create Sales Order,” “Selected,” “Purchase Order Currency,” and “Remarks 1-10.” These fields all have in common that they are of no financial consequence for the job. If you want to change any other fields, you must first reopen the budget and edit the revision that is created as a result of the reopening.</p> <p>For further information about approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the field “Approve Job Budget” in the Actions window in the Set-Up module is marked may approve budgets.</p> <p>If the budget contains lines with tasks that are not included in the job’s task list, you must correct the error before approving the budget. If approval of tasks is mandatory, all tasks on which budgeting has been made must be approved to be able to approve the budget.</p> <p>If the budget is of the type specified as the job’s planning budget, all new/changed skill requirements specified for the job budget line in question, a warning will be issued for each violation.</p> <p>In addition, the booking type specified on the lines of the planning budget will be copied to the detailed plan upon approval, so that the booking type of each budget line will be transferred to its relating detailed planning line.</p> <p>If the current job is a fixed-price job with overrun handling, and if “Budget” is selected as the basis for the fixed price on the job parameter attribute “Fixed-Price Budget, a new fixed price can result in the creation, reduction, or increase of an overrun on the job when the budget is approved. This happens if already registered postings on the job before or after the approval of the budget have exceeded the fixed price. In this case, a job revenue recognition journal is created to be posted in the G/L module. For more information, see the description of the job parameter attribute “Handling of Overruns” of the job parameter type “Revenue Recognition” in the Job Parameters window.</p>
<b>Reopen Budget</b>	<p>When you select this action, the job budget currently displayed is reopened. At the same time, Maconomy creates another revision. A “snapshot” of the budget as it looked in the previous revision can be seen in the Job Budget Revisions window.</p> <p>Only users for whom the field “Reopen Job Budget” in the Actions window in the Set-Up module is marked may reopen budgets.</p>
<b>Reopen Budget</b>	<p>Use this action to reopen the selected budget. When you reopen an approved budget, Maconomy creates a new revision, which also provides a new revision of the resource allocations that have been imported to the budget.</p> <p>If fixed exchange rate information has been specified for the job in the Job Price Information window, and the information has changed since the budget</p>

Field	Description
	<p>was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p> <p>The job budget must then be submitted before it can be approved again. For further information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Reopening budgets is limited to users who have the authorization to do so. The <b>Reopen Job Budget</b> check box must be selected in the Actions tab in the Set-Up module to enable the user to reopen budgets.</p>
<b>Print Price Overview</b>	<p>This action is available if the current job uses price control from budgets (see "Price control from budgets"). When you select this action, Maconomy creates a printout providing an overview of employee category prices.</p> <p>Selecting this action is a shortcut to choosing Print, and printing the baseline budget for the current job using the layout "Price Overview." Therefore, for further information about the contents of the printout, see the description of the Print Job Budget window. Note that this action is available in the Job Price Information window as well, even though the layout "Price Overview" is not available in the Print Jobs window.</p>
<b>Copy Budget From Template</b>	<p>This action copies the budget from the template job.</p>
<b>Update Prices to Realization Rate</b>	<p>This action adjusts the billing prices on all budget lines with time activities so that the calculated realization rate will equal the realization rate entered in the Budgeted Realization Rate field.</p>
<b>Import Working Budget from People Planner</b>	<p>This action will connect to People Planner and import the changes that have been made to the working budget since the action Send Job to People Planner was carried out. See also the Send Job to People Planner action below.</p>
<b>Send Job to People Planner</b>	<p>This action will send the job, including budget, to People Planner. System parameters affecting this functionality are:</p> <ul style="list-style-type: none"> <li>Always Allow Send Action — If this is False, and Integration Status Notes are used, you can only push the job from Maconomy to People Planner once. After that, it will only be possible to import it from People Planner.</li> <li>Include Subjobs When Sending Job to People Planner — Allows including subjobs when sending jobs to People Planner.</li> <li>Default Job Budget Type — If a value is entered, this will be the budget type sent. If a value is not entered, the budget type currently shown in Job Budgets will be sent. There is an exception if the job has been sent to People Planner previously using another budget type. In that case, this budget type will be used again.</li> </ul>

Field	Description
	The action is only available if add-ons for People Planner and Custom Actions are installed and the Enable Custom People Planner Actions system parameter is set to True.

## Job Budgets Card by Type API Single Dialogs Workspace

Use this workspace in the workspace-authoring of more complex work spaces. This workspace includes only the tab part of job budgets, and thus omits the job budget lines.

This single-tab workspace is not intended for the user as is, but a workspace composed of this tab and other sub-tabs (including Job Budgets Table by Type API) allows users to select a job budget type from a filter, rather than the usual Show Job Budget Type drop-down in the standard Job Budgets workspace.

### Job Budget Tab

This section includes the fields and descriptions for the Job Budget tab.

#### Job Island

Field	Description
<b>Job No.</b>	This field shows the job number.
<b>Job Group</b>	This is shows the job group of the job.
<b>Template</b>	This check box is selected if the job is a template job.
<b>Closed</b>	This check box is selected if the current job is closed.

#### Employee Category Prices Island

Field	Description
<b>Employee Category No.</b>	This field shows the employee category number that comes from job budget lines or that you add manually in this window.
<b>Name</b>	This field shows the employee category name that is associated with this employee category number.
<b>Billing Price Hour</b>	This field shows the billing price per hour in job currency.
<b>Billing Price Day</b>	This field shows the billing price per day in job currency.
<b>Cost Price Hour</b>	copy to come

Field	Description
<b>Cost Price Day</b>	copy to come
<b>Price Control Budget Type</b>	Only the baseline budget is used for controlling budget prices. This field shows the type of the baseline budget, as selected in the job parameter attribute "Baseline, Budget Type" of the type "Planning."
<b>Price Control from Budgets</b>	Maconomy marks this field if the current job is set up to control prices from the budget, that is, the job parameter attribute "Price Control from Budgets" of the type "Budgeting" is true for the current job.

### Budget, Base Island

Field	Description
<b>Hours</b>	This field shows the total of the budgeted hours, costs, billing prices and gross margin, which have been entered in the table part for time activities. It also shows the average gross margin percent for the budget's time activities.
<b>Cost</b>	<p>In these fields the budgeted cost of the job in the base currency of the job's responsible company.</p> <p>The "Time," "Amount" and "Total" fields show three totals of costs from the budget lines entered in the table part of the window. They are the cost totals of time activities, amount activities and a total for all budget lines.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to "Time" and "Total" will be zero.</p> <p>The "Total per" field shows the quantity in the "Total" field immediately above it, divided by the quantity given in the Unit Analysis island.</p> <p>The field "Limit" displays the estimated or agreed billing price of the job. You can have a value displayed in this field by entering the value in the field "Hours" in the island Limit. See the description of this island for further information.</p>
<b>Billing Price</b>	<p>These fields show the budgeted cost of the job in the base currency of the job's responsible company.</p> <p>The "Time," "Amount" and "Total" fields show three totals of billing prices from the budget lines entered in the table part of the window. They are the billing price totals of time activities, amount activities and a total for all budget lines.</p> <p>The "Total as of" field shows the quantity in the "Total" field immediately above it, divided by the quantity given in the Unit Analysis island.</p> <p>The field "Limit" displays the estimated or agreed billing price of the job. You can have a value displayed in this field by entering the value in the field "Billing Price, Currency" in the island Limit. See the description of this island for further information.</p> <p>The budget Limit can either be compared to the total of budgeted costs in the "Total" field, or you can use it in a subsequent budget control calculation, in which you compare budget with actual figures.</p> <p>If you create a quote from a job budget, by choosing "Transfer to Quote" in the Action menu, or if you change quotes in the window Quote Editing, the billing price in this</p>

Field	Description
	<p>field will automatically be changed to the total of the quote lines. It is then not possible to change it here.</p> <p>When you create invoice selections in the window Invoice Selection, you can transfer the quote price from this field to the total amount of the invoice.</p>
<b>GM</b>	<p>These three fields show the job's budgeted gross margin (GM) in the base currency. Gross margin is calculated by subtracting the cost in the "Cost" field from the billing price in the "Billing Price" field. Gross margin is calculated for the job's time activities, amount activities and total.</p> <p>The "Time" field shows the budgeted gross margin total for all time activities.</p> <p>The "Amount" field shows the budgeted gross margin total for all amount activities.</p> <p>The "Total" field shows the budgeted gross margin for the whole job.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to "Time" and "Total" will be zero.</p> <p>The "Total as of" field shows the quantity in the Total field immediately above it, divided by the quantity given in the Unit Analysis island.</p>
<b>GM %</b>	<p>These three fields show the job's budgeted gross margin percent (GM %). Gross margin percent is calculated as the gross margin percentage of the billing price in the "Billing Price" field. Gross margin is shown in the "GM" field. Gross margin percent is calculated for the job's time activities, amount activities and total.</p> <p>The "Time" field shows the average budgeted gross margin percentage for all time activities.</p> <p>The "Amount" field shows the average budgeted gross margin percentage for all amount activities.</p> <p>The "Total" field shows the average gross margin percent for the whole job budget.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the cost shown next to "Time" and "Total" will be zero.</p>

### Budget, Currency Island

The fields in this island correspond to the fields in the island Budget, Base. The only difference is that here the amounts are shown in the currency used on the job. For further information about currency conversions, see "Appendix A: Price Calculation in the Job Cost Module."

### Job Revenue Recognition Island

revenue recognition forecasts on the basis of the budget currently shown in the window. As default, the date in this field is the last date of the previous month, but the date can be changed manually. See the description of the field "Calculate" below for further information about the possibility of calculating revenue recognition in this window.

Field	Description
<b>Calculate</b>	<p>If you select this field, Maconomy will calculate the revenue to be recognized on the current job on the basis of the job's latest approved budget revision as well as the revenue to be recognized on the job on the basis of the current revision of the budget as of the date specified in the above field "Revenue</p>

Field	Description
	Recognition Date.” If you mark this field, you can hence make a forecast that displays the revenue implications for the job in question, if you approve the edited budget as it looks at the moment. The calculations are not transferred to any of the windows related to job revenue recognition and are for information only.
<b>Revenue Recognized</b>	This field shows the amount revenue recognized on the job as of the date specified in the “Revenue Recognition Date” above. The amount only includes revenue recognition of job entries that are included in the fixed price of the job.
<b>Current Budget</b>	If the field “Calculate” is selected, this field shows the revenue recognized on the job as of the date specified in the field “Revenue Recognition Date.”
<b>This budget</b>	If the field “Calculate” is selected, this field shows the calculated revenue to be recognized on the basis of the new budget as of the date specified in the field “Revenue Recognition Date.” The revenue recognition amount shown in this field is thus based on the job budget entries which are currently being edited, and which are included in the fixed price of the job. The column “Adjustment” shows any difference between the new and the “current” figures, that is, the figures from the latest approved revision of the budget.
<b>Change</b>	This field shows any revenue recognition change in the amounts of the latest approved revision of the job budget and the new budget, that is, the budget which is currently being edited.

### Remarks Island

In these fields, you can assign remarks to the current job budget line. The remarks are for information only and can, for example, be used in reports.

### User Island

Field	Description
<b>Created by</b>	This field shows the user name of the user who created the job budget.
<b>Date</b>	This field shows the date when the job budget was created.
<b>Changed by</b>	This field shows the user name of the user who changed the job budget.
<b>Date</b>	This field shows the date when the job budget was changed.
<b>Version</b>	This field shows the job budget's version number. This is not the same as the Revision No. The version number is updated every time that a user makes a change to the job budget.

### Job Budget Island

Field	Description
<b>Budget Type</b>	This field shows the budget type of the job budget currently showing. Current Budget This field shows the Current Budget for the job.
<b>Forecast Budget</b>	This field shows the Forecast Budget for the job.
<b>Planning Budget</b>	This field shows the Planning Budget for the job.
<b>Fixed Price Budget</b>	This check box shows whether the job budget currently showing is selected as the Fixed Price Budget for the job.

### Customer Island

Field	Description
<b>Customer No.</b>	This field shows the customer number.

### Quote Price, Curr. Island

Field	Description
<b>Effective Quote Price</b>	This field shows the effective quote price of the job.

### Limit Island

Field	Description
<b>Hours</b>	This field shows the amount of employee hours you estimate will be spent on the job. This figure can either be compared to the total budgeted hours in the field "Time" in the islands Budget, Base and Budget, Currency where the figure is also shown, or you can use it in a subsequent budget control calculation, in which you compare the customer budget with the job's actual figures.
<b>Cost, Base</b>	This field shows the budgeted cost of the job you estimate will be spent on the job. The limit amount can either be compared to the total of budgeted costs in the field "Total" in the island Budget, Base and Budget, Currency, or you can use it in a subsequent budget control calculation, in which you compare the costs with the job's actual figures.
<b>Billing Price, Curr.</b>	This field shows the budgeted billing price of the job you estimate. The amount here is the same as the amount given in the field "Max. Billing Price" in the window Jobs. The limit amount can either be compared to the total of the budgeted billing prices in the field "Total" in the islands Budget, Base and Budget, Currency, or you can use it in a subsequent budget control calculation, in which you compare the billing price with the job's actual figures.

**Forecast Island**

Field	Description
<b>Probability %</b>	This field shows the probability percentage rating for whether the current job, which is on quote, will result in an order. When the job is converted to an order, Maconomy will automatically change the value of this field to "100." The value in this field is used in the Analyzer report/report template Job Forecasts to determine, for example, the expected profit on current jobs on quote.

**Billing Price Deviations Island**

Field	Description
<b>Standard Billing Price, Base</b>	This field shows the standard billing price per unit in the base currency of the company.
<b>Billing Price, Base</b>	This field shows the amount from the field "Billing Price, Currency" on the current budget line converted into the base currency.
<b>Budgeted Up/Down</b>	This field shows the difference between the budgeted billing price and the standard billing price. The amount in this field is the write-up or write-down of the budgeted billing price compared to the standard billing price. For more information about standard billing price, please see "Appendix A: Price Calculation in the Job Cost Module."

**Unit Analysis Island**

Field	Description
<b>Quantity</b>	If the job is for several similar units, for example, 2 advertisements, 3 houses or 10 meters of cable, the quantity of these units can be given here. You can then use the Budget island in this window and the Summary island in the window Job Card to see the "Total" values per unit.
<b>Unit</b>	If there is a value in the "Quantity" field, this field shows the unit.

**Company Island**

Field	Description
<b>Company No.</b>	This field shows the company number for the job.
<b>Company Name</b>	This field shows the name of the company shown in the field "Company No." above.
<b>Base Currency</b>	This field shows the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

**Settling Company Island**

Field	Description
<b>Settling Company No.</b>	This field shows the settling company for the job.
<b>Settling Company Name</b>	This field shows the name of the company shown in the field above.

**Line Creation Island**

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field "Line Type" in new job budget lines added to the job budget.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays if the job budget has been submitted. The field is automatically marked when the action "Submit Budget" is selected. Note that as this window and the window Job Budgets are linked, this field will be selected if the current job budget has been submitted in the window Job Budgets, and vice versa.
<b>Submitted by</b>	This field shows the name of the user who submitted the job budget.
<b>Submitted Date</b>	This field shows the date on which the job budget was submitted.
<b>Approved</b>	This field shows if the job budget has been approved. The field is automatically marked when the action "Approve Budget" is selected, and the mark is removed when the budget is reopened to a new revision.
<b>Approved by</b>	This field shows the name of the user who approved the job budget.
<b>Approved Date</b>	This field shows the date on which the job budget was approved.
<b>Reopened</b>	This field shows if the job budget has been reopened. The field is automatically marked when the action "Reopen Budget" is selected
<b>Reopened by</b>	This field shows the name of the user who reopened the job budget.
<b>Date Reopened</b>	If the job budget has been reopened, this field shows the date that it was reopened.
<b>Sent to People Planner</b>	This field shows the date and time stamp for when the budget type was last sent to People Planner.

## Revision Island

Field	Description
<b>Revision No.</b>	This field shows the job budget revision number.

## Actions

This section shows the Actions available in the Job Budgets Card by Type API workspace.

## Top Tab

Field	Description
<b>Calculate Job Surcharge</b>	<p>When you select this action, Maconomy will calculate surcharges for those lines in the table part that match the criteria for surcharge calculation. The surcharges are calculated from the job surcharge rule specified in the "Job Surcharge Rule" field in the Price island. If no job surcharge rule has been specified for the job, you cannot select this action.</p> <p>Existing surcharge lines are deleted, and additional surcharge lines are created. If the calculation of job surcharges results in the creation of several lines with the same combination of activity, employee, and dimensions, the lines will be summarized on one line.</p> <p>The functionality of job surcharge rules is described in further detail in the Job Surcharge Rules window.</p>
<b>Transfer from Budget</b>	<p>Use this action to create a quote or order confirmation selection, depending on whether the job status is quote or order. Both types can be edited, approved, and printed in the Quote Editing window. If a previous selection is available, Maconomy displays a warning message that the new selection will replace the previous one. If the <b>Automatic creation of quote revisions</b> system parameter is enabled, another revision of the quote is automatically created when you select this action. If the parameter is disabled, any existing quote is overwritten with the new quote. If the existing quote was already approved, it is automatically reopened first. You can only choose this action if the budget shown in the window is the current one.</p> <p>Selections are made according to your specifications in the Quote island in the Invoice Layout Rules window. If you only want the printout to show a total, the suggestion will not show lines, and the total price will be the one shown in the <b>Quote Price</b> field in the Budget island.</p> <p>If the job is a fixed-price job or if the quote was previously approved in the Quote Editing window, Maconomy shows a warning, and the <b>Effective Quote Price</b> field is not updated until the quote has once again been approved in the Quote Editing window. For further information, please see the description of the Quote Editing window.</p> <p>Quotes are created in accordance with the invoice layout rule specified for the job in the Jobs workspace. If the <b>Show Markup Separately</b> field is marked for the invoice layout rule in question, the use of this action leads to the creation of a quote in which the costs of all amount activities are shown in the</p>

Field	Description
	<p>table part with an extra line showing the markup. If different activities have different tax codes, a separate markup line for each tax code is created. If printouts are to be shown with a total only, the quote does not include individual lines, and the total price is thus equal to the price in the <b>Quote Price</b> field in the Budget, Currency and Budget, Base islands.</p> <p>If you have entered dimensions in the <b>Transfer from Budget</b> field on an invoice layout rule, Maconomy transfers the selected dimensions from budget lines to the quote.</p> <p>If printouts are to show more than the total, and if they are to show time and amount activities by entry, one budget line in this window will create one quote line in the table part of the Quote Editing window, provided that the budget line has a billing price. If time and amount activities are shown by activity, all budget lines with the same activity number will create one quote line. If time and amount activities are shown by summary activity, all budget lines for the same summary activity will create one quote line. Quote lines are sorted by activity number.</p> <p>Note that in the latter case, the quote lines will carry the same tax as the tax rate chosen for the sum activity. If you apply differentiated taxes or activities both subject and not subject to tax, the activities for the same summary activity should have the same tax code as the summary activity.</p> <p>The quote lines will have the same prices as those entered for the budget lines, provided that it is specified on the invoice layout rule that amounts are to be shown on lines. If amounts are not to be shown on lines, the field will show "0.00."</p> <p>When budgets are transferred to quotes, Maconomy changes the amount in the field "Effective Quote Price" in the card part of this window to the sum of the budget lines, if printouts are to show more than the total. Maconomy alerts you if the quote price is changed.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if "Include Text Lines" is marked on the invoice layout rule, the texts will be transferred to the quote. However, they will not be transferred if the printout is only showing totals, or if the level of detail is By Summary Activity or By Activity.</p> <p>If the quote layout is set to be created directly from the budget, and the budget is arranged hierarchically, that is, you have applied a work breakdown structure, the only group headers that are transferred to the quote are the ones at the top level. However, non-header lines in groups at lower levels in the structure are transferred to the quote as if they belonged to the header at the top level.</p> <p>Furthermore, instead of appearing as headers above the individual lines within their group, top level group headers appear below their subordinate lines. If the last line or lines in a group at level 3 or lower are text lines, these lines are not transferred to the quote, as they would otherwise appear to concern the header at the top level, instead of their actual group header (which is not transferred). As a result if the job budget looks as follows:</p>

Field	Description												
	<p><b>Analysis</b></p> <p>Initiation</p> <p>Site Inspection</p> <p><b>Analysis Report</b></p> <p>Information Gathering</p> <p>Layout</p> <p>&lt;text line&gt;</p> <p>Transferring the quote to the budget will result in the following lines in the Quote Editing window:</p> <table> <tr> <th>Description</th><th>Sum Line</th></tr> <tr> <td>Initiation</td><td>No</td></tr> <tr> <td>Site Inspection</td><td>No</td></tr> <tr> <td>Information Gathering</td><td>No</td></tr> <tr> <td>Layout</td><td>No</td></tr> <tr> <td>Analysis</td><td>Yes</td></tr> </table> <p>In the preceding example, amounts have been disregarded. However, the sum lines that are created in the quote will sum up amounts from the relevant quote lines.</p> <p>If a job surcharge rule has been specified for the job, and a line in the table part of this window activates the surcharge rule in question, Maconomy will warn you that job surcharges should be calculated before you transfer the budget to a quote.</p> <p>A user can only carry out this action if the fields "Change Job Budgets" and "Transfer to Quote" in the Actions window in the Set-Up module are marked for the user in question. Also, if the transfer results in the reopening of a quote because the previous quote was already approved, the field "Reopen Job Quotes" must also be marked for the user in the Actions window.</p> <p>When you transfer a job budget to a quote, the value of the <b>Unit</b> field is also transferred.</p> <p>The invoice layout rule specified for the job controls how job budget lines are transferred to quote lines.</p> <p>If <b>Create Quote Directly From Budget</b> is selected on the invoice layout rule, or Level 1 specification is set to "Registration", then each leaf job budget line is copied to one quote line. In this case, the unit is transferred directly from the job budget line to the quote line.</p> <p>If Level 1 specification is set to "Activity", then job budget lines with the same activity are combined to form one job quote line. In this case, the unit is</p>	Description	Sum Line	Initiation	No	Site Inspection	No	Information Gathering	No	Layout	No	Analysis	Yes
Description	Sum Line												
Initiation	No												
Site Inspection	No												
Information Gathering	No												
Layout	No												
Analysis	Yes												

Field	Description
	transferred only if the job budget lines with the same activity specify the same unit. Otherwise, the <b>Unit</b> field on the quote line is left blank.
<b>Print Quote</b>	<p>When you select this action, you print a job quote to the customer. You can only choose this action if there is a quote for the job, that is, if the job status is <b>Quote</b>.</p> <p>A job quote must be approved before the quote can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, a quote can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote.</p> <p>If you have not previously edited or created the job quote in the Quote Editing window, Maconomy will create and print a job quote on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the budget lines.</p> <p>If there is an existing quote selection that is either entered directly in the Quote Editing window or created using the <b>Transfer to Quote</b> action in this window, Maconomy prints the existing quote. Note that you can also print a quote for a job that has been closed. However, if you do so, you cannot make and changes to the quote related to the job.</p> <p>You can also print job quotes in the Quote Editing window. You can print quotes in batches in the Print Job Quote window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Print Order Confirmation</b>	<p>Use this action to print a job order confirmation based on the existing quote revision. This action is available only when the job status is <b>Order</b>.</p> <p>A job quote must be approved before the order confirmation can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, an order confirmation can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision and the <b>Approval of Quote Required</b> job parameter attribute is disabled, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote as an order confirmation.</p> <p>If you have not previously edited or created a job quote or a job order confirmation in the Quote Editing window, Maconomy creates and prints a job order confirmation on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the order confirmation lines.</p>

Field	Description
	<p>If there are existing quote or order confirmation selections that are either entered directly in the Quote Editing workspace or created in this workspace using the <b>Transfer from Budget</b> action, Maconomy prints the existing selection. Note that you can also print an order confirmation for a job that has been closed.</p> <p>You can also print job order confirmations in the Quote Editing window. You can print order confirmations in batches in the Print Job Order Confirmation window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Transfer Job Dates</b>	When you select this action, Maconomy transfers the starting date and the expected ending date of the job to the “Planned Starting Date” and “Planned Ending Date” fields in the job budget lines. The dates are transferred from the “Start Date” and “Estimated Ending Date” fields in the Jobs window.
<b>Delete Budget</b>	When you select this action, Maconomy deletes the budget in the window. Approved budgets and the budget for a closed job cannot be deleted.
<b>Remove Zero Lines</b>	When you select this action, Maconomy removes any lines in the current budget that have a total cost and billing price of zero. Generally, “Sum/Text” and “Milestone” lines will not be deleted. However, depending on the structure of the budget in question, some lines may be deleted if they are included in the same level as zero lines. For example, if you have a number of text lines together with regular lines in a subtree, and all of the regular lines are zero, all of the text lines in that subtree will also be deleted. Maconomy will issue a warning before deleting any budget lines.
<b>Copy Budget</b>	<p>When you select this action, Maconomy copies the budget shown in the Copy Budget island, meaning that an existing budget with a certain revision number is either copied from another job or from the job that is currently shown in the window.</p> <p>If the system parameter “Recalculate Job Budget when Copying” in the System Parameters window in the Set-Up module is not marked, a simple line-by-line copying of the budget is performed. However, currency amounts will be recalculated to the new job’s currency. If “Recalculate Job Budget When Copying” is marked, Maconomy will recalculate the budget when it is copied. This means that the price fields (costs, billing prices, and standard billing prices in base and currency plus “Net Cost, Base”), the “Markup %” field, and the fields concerning purchase orders and requisitions are not copied, but are recalculated on the basis of information of the job concerning the customer, the employees, and the job price list. That is why the new budget does not necessarily show the same amounts as the budget that it was copied from. If fixed exchange rate information has been specified in the Job Price Information window for the job to which information is copied, Maconomy recalculates currency amounts in the budget on the basis of the specified fixed exchange rate information.</p>

Field	Description
	<p>If a periodic job budget has been created for the job that is being copied, the periods of that budget are also copied to the new budget. The periodic job budget can be seen and edited in the Periodic Job Budgets window.</p> <p>If lines exist in the budget that is to be overwritten, it is not possible to copy. Furthermore, it is only possible to copy from one budget to another if both budgets are created in advance.</p> <p>In addition, it is not possible to copy the lines of another budget to a planning budget if this implies that two identical lines are created on the planning budget, and one or both of the job parameter attributes "Duplicate lines (amount) on planning budget" or "Duplicate lines (time) on planning budgets" has the value "No" for the job in question.</p> <p>If the task on a budget line to be copied does not exist in the task list for the current job, the line will not be copied, unless the system parameter "Extended Task Creation from Budgets" is marked. If it is marked, the task will be created in the job-specific task list of the current job.</p>
<b>Rederive Tax Codes on Job Budget</b>	<p>This action will derive tax codes on all job budget lines according to the tax code setup, thus reverting any user settings on this job budget.</p>
<b>Print Price Overview</b>	<p>The functionality of this action is similar to that of the "Print Price Overview" action in the Job Budgets window.</p>
<b>Create Requisitions</b>	<p>When you select this action, Maconomy automatically creates requisitions for those amount activities in the job budget that have a vendor number and a mark in the "Selected" field. A requisition is an internal request for the approval of the purchase of services. This means that you can use this action to create requisitions that the person or department responsible for approving purchases can evaluate and approve, and this person or department can then, based on the input from the requisition, place the necessary orders with the relevant suppliers by means of a purchase order. You can only use this action if the budget shown in the window is the current one and if the job in question has not been blocked.</p> <p>Maconomy creates a requisition for each combination of vendor and purchase order currency specified on the marked lines, and each of the requisitions is assigned to a separate, new purchase process (see "Purchase Processes" in the A/P module). The earliest date in the "Planned Starting Date" field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting requisition. If there is no planned date, Maconomy uses today's date. Requisitions can be edited in the Requisitions window in the Accounts Payable module.</p> <p>When you create requisitions, Maconomy updates the "Number of Requisitions" field on the budget lines.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p>

Field	Description
	<p>The currency of each requisition is taken from the "Currency, Purchase Creation" field on the budget lines that result in the requisition in question. If this field is blank, the currency is taken from the vendor's information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter "Fixed exchange rates in budgets only" has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the "Text Lines for Purchase" field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Create Purchase Orders</b>	<p>When you select this action, Maconomy automatically creates purchase orders for those amount activities in the job budget that have a vendor number and a mark in the "Selected" field. A purchase order is an order for the vendor service described by the budget line's amount activity. The amount on the purchase order line will be the cost sum on the budget line less the sum of previously created purchase order lines. If this amount is negative, the amount on the purchase order line will be 0. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy checks that none of the lines selected for purchase order creation will cause budget violations according to the rules set up in the job parameter attributes "Limit Purchase Amount to Budget," "Limit Purchase on Sum or Line Level," "Limit Purchase, Currency Margin," and "Limit Purchase, Percentage Margin" for the job. If even one line causes a budget violation, the action is cancelled for all lines, including lines that do not cause any budget violations. Budget violations can, for example, take place if purchase orders already exist for the lines, and the new purchases, combined with existing purchases, will cause the budgeted amount to be exceeded. For further information, see the descriptions of these attributes in the job parameter "Budgeting."</p> <p>Maconomy creates a purchase order for each combination of vendor and purchase order currency specified on the marked lines, and each of the purchase orders is assigned to a separate, new purchase process (see "Purchase Processes" in the A/P module). The earliest date in the "Planned Starting Date" field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting purchase order. If there is no planned date, Maconomy uses today's date. Purchase orders can be edited in the Purchase Orders window in the Accounts Payable module.</p> <p>When you create purchase orders, Maconomy updates the "Number of Purchase Orders" and "Purchase Order Total" fields on the budget lines. The purchase order number is then shown in the "Last Purchase Order No." field on every budget line.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p>

Field	Description
	<p>The currency of each purchase order is taken from the “Currency, Purchase Creation” field on the budget lines that result in the purchase order in question. If this field is blank, the currency is taken from the vendor’s information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter “Fixed exchange rates in budgets only” has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the “Text Lines for Purchase” field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Transfer to Sales Order</b>	<p>When you select this action, Maconomy automatically creates sales order lines for job budget item lines, which are assigned to job budget lines marked in the “Create Sales Order” field. Text lines created in the Job Budget Item Lines window are also transferred. If you have previously created a sales order line for a job budget item line, it will not be processed again. The order lines are added to a sales order for the job. If such an order does not exist, Maconomy automatically creates a sales order for the job with a mark in the “Invoice in Job Cost” field. If there is more than one order assigned to the job, Maconomy chooses the order with the highest order number.</p> <p>If the “New Order when Transf. to Sales” field in the System Information window in the Set-Up module has been marked, another order will always be created when the action “Transfer to Sales Order” is selected.</p> <p>When you create sales order lines on the basis of job budget item lines, Maconomy copies the budgeted billing price to the order line. If you wish this price to be recalculated before it is transferred, use the “Recalculate Prices” action in the Job Budget Item Lines window.</p> <p>You cannot select this action if the current job has been closed. However, you can reopen a job using the “Reopen Job” action in the Jobs window.</p>
<b>Recalculate Budget</b>	<p>Use this action to recalculate the budget. Note that a large batch of tasks/employees/dimensions on a budget may impact performance. Consider running this as a Scheduled Background Task so that it instead updates periodically.</p> <p>When you select this action, Maconomy recalculates prices on the job budget lines currently displayed. Maconomy uses the price lists that are valid as of the date specified in the “Planned Starting Date” field on each job budget line, or, if no such date has been specified, today’s date. If the recalculated price is 0, any price specified on a budget line will not be overwritten.</p> <p>You should be aware that Maconomy will also recalculate prices on lines where the “Line Specific Billing Price” field is marked and update the job-specific prices list lines underlying the budget lines. This applies when you are recalculating the baseline budget, and the job uses price control from budgets (see “Price control from budgets”). When recalculating, Maconomy looks up prices in much the same way as if another line was created. If a price list determines a price that is different from the price that is specified for</p>

Field	Description
	<p>the relevant employee category, that price will be applied (and the line will be marked as having a line-specific billing price).</p> <p>Moreover, you should note that if the “Job Budget Follows Periodic Job Budget” field has been marked on the budget in question in the Periodic Job Budgets window, the figures specified in the periods on the relevant budget lines will also be recalculated when using this action. However, if the “Job Budget Follows Periodic Job Budgets” field has not been marked, regular figures and periodic figures are also recalculated, but the recalculation of the periodic figures is carried out independently of the recalculation of the regular budget figures.</p> <p>The job parameter attributes “Keep Purchase Billing Price Upon Recalculation” and “Keep Purchase Cost Price Upon Recalculation” control how Maconomy should act when you recalculate the budget, and the purchase currency differs from the base currency. For more information, see the description of the job parameter attribute type “Budgeting.”</p>
<b>New Revision</b>	<p>When you select this action, Maconomy creates another revision of the current job budget and the assigned periodic job budget, if any. You cannot create a revision of an approved budget; it must be reopened first. The previous revision is locked, and except for revision remarks and revision code, it can no longer be changed. All previous revisions of the job budgets to which you have access can be viewed in the Job Budget Revisions window.</p>
<b>Submit Budget</b>	<p>When you select this action, the job budget currently displayed changes status to “Submitted.” This is a way of indicating that the budget is ready for approval. A job budget cannot be approved until it has been submitted. For more information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Can Change Job Budget” field in the Actions window in the Set-Up module is marked can submit budgets.</p>
<b>Approve Budget</b>	<p>When you select this action, the job budget currently displayed is approved. You can only approve a budget if it has been submitted. On approval, Maconomy takes a “snapshot” of the budget, which can then be viewed in the Job Budget Revisions window. The job budget can then no longer be changed except for the following fields: “Planned Starting Date,” “Planned Ending Date,” “Deliv. Remarks,” “Vendor,” “Your Reference,” “Create Sales Order,” “Selected,” “Purchase Order Currency,” and “Remarks 1-10.” These fields all have in common that they are of no financial consequence for the job. If you want to change any other fields, you must first reopen the budget and edit the revision that is created as a result of the reopening.</p> <p>For further information about approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Approve Job Budget” field in the Actions window in the Set-Up module is marked can approve budgets.</p> <p>If the budget contains lines with tasks that are not included in the job’s task list, you must correct the error before approving the budget. If approval of</p>

Field	Description
	<p>tasks is mandatory, all tasks on which budgeting has been done must be approved before you can approve the budget.</p> <p>If the budget is of the type specified as the job's planning budget, all new/changed skill requirements created in the Job Planning window or the Skill Requirements window in the Resource Planning module for budget lines on the current planning budget will be checked. If the employee specified on the planning line does not fulfill the new/changed skill requirements specified for the job budget line in question, a warning will be issued for each violation.</p> <p>In addition, the booking type specified on the lines of the planning budget will be copied to the detailed plan upon approval, so that the booking type of each budget line will be transferred to its related detailed planning line.</p> <p>If the current job is a fixed-price job with overrun handling, and if "Budget" is selected as the basis for the fixed price on the job parameter attribute "Fixed-Price Budget," a new fixed price can result in the creation, reduction, or increase of an overrun on the job when the budget is approved. This happens if already registered postings on the job before or after the approval of the budget have exceeded the fixed price. In this case, a job revenue recognition journal is created to be posted in the G/L module. For more information, see the description of the job parameter attribute "Handling of Overruns" of the job parameter type "Revenue Recognition" in the Job Parameters window.</p>
<b>Reopen Budget</b>	<p>When you select this action, the job budget currently displayed is reopened. At the same time, Maconomy creates a revision. A "snapshot" of the budget as it looked in the previous revision can be seen in the Job Budget Revisions window.</p> <p>If fixed exchange rate information has been specified for the job in the Job Price Information window, and the information has changed since the budget was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p> <p>The job budget must then be submitted before it can be approved again. For further information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the "Reopen Job Budget" field in the Actions window in the Set-Up module is marked can reopen budgets.</p>

## Job Budgets Table by Type API Single Dialogs Workspace

Use this workspace in the workspace-authoring of more complex work spaces. This workspace includes only the sub-tab part of the job budgets, and thus omits the job budget tab.

This single-tab workspace is not intended for the user as is, but as a workspace composed of this tab and other super-tabs. For example, you might hard code select to show only job budget lines from a particular job budget type in a special-purpose view.

## Job Budget Tab

This section includes the fields and descriptions for the Job Budget tab.

### Job Island

Field	Description
<b>Job No.</b>	This field shows the job number for the budget type.
<b>Template</b>	This check box is selected if the job is a template job.
<b>Closed</b>	This check box is selected if the job is closed.

### Revision Island

Field	Description
<b>Revision No.</b>	This field shows the job budget revision number.
<b>Remarks</b>	In these fields, you can enter information about the current revision of the job budget.

### User Island

Field	Description
<b>Created by</b>	This field shows the name of the user who created the job budget.
<b>Date</b>	This field shows the date when the job budget was created.
<b>Changed by</b>	This field shows the name of the user who changed the job budget
<b>Date</b>	This field shows the date the job budget was changed.
<b>Version</b>	This field shows the job budget's version number. This is not the same as the Revision No. The version number is updated every time that a user makes a change to the job budget.

### Job Budget Island

Field	Description
<b>Budget Type</b>	This field shows the budget type of the job budget currently showing.

### Company Island

Field	Description
<b>Company No.</b>	This field shows the company number for the job.

### Line Creation Island

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field “Line Type” in new job budget lines added to the job budget.

### Status Island

Field	Description
<b>Submitted</b>	This field displays if the job budget has been submitted. The field is automatically marked when the action “Submit Budget” is selected.
<b>Submitted by</b>	This field displays the name of the user who submitted the job budget.
<b>Submitted Date</b>	This field displays the date on which the job budget was submitted.
<b>Approved</b>	This field shows if the job budget has been approved. The field is automatically marked when the action “Approve Budget” is selected, and the mark is removed when the budget is reopened to a new revision.
<b>Approved by</b>	This field displays the name of the user who approved the job budget.
<b>Approved Date</b>	This field displays the date on which the job budget was approved.
<b>Reopened</b>	This field shows if the job budget has been reopened. The field is automatically marked when the action “Reopen Budget” is selected.
<b>Reopened by</b>	This field displays the name of the user who reopened the job budget.
<b>Date Reopened</b>	This field displays the date on which the job budget was reopened.

### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you enter a text, which is attached to the activity on quotes and order confirmations.

Field	Description
<b>External Description</b>	In this field, you enter a text, which can be multiline.
<b>Line Type</b>	In this pop-up field, you select the type of the current job budget line. Selecting a value is mandatory.
<b>Task</b>	In this field, you can specify the task to which the job budget line is to be assigned.
<b>Empl. Cat. No.</b>	In this field, you can assign a certain employee category to the job budget. If no specific employee has been specified for this line, Maconomy will instead use the cost, intercompany or billing price for the specified employee category for price calculations, if the field "Hourly Rate" in the window System Information in the Set-Up module has been set to "By Employee" or "Employee Priority."
<b>Quantity</b>	In this field, you enter the budgeted quantity for the line.
<b>Quantity, Days</b>	The functionality of this field is similar to that of the field "Quantity" above. However, this field only applies to time activities, and you enter the budgeted quantity as a number of days instead of a number of hours. If you enter a number of days, it is automatically converted into a number of hours which is inserted in the field "Quantity." The number of hours is calculated by multiplying the number of days by the value in the field "Hours per Man Day" in the card part of the window Jobs.
<b>Act. No.</b>	In this field, you enter the number of the activity for which you wish to make a budget estimate. If both this field and the field "Task" are blank, the line is a text line. If this field shows "*", the line is a summary line which creates a subtotal when the budget is printed using the "Standard" layout.
<b>Cost, Base</b>	In this field, you enter the budgeted cost in the base currency for one unit of the activity on the budget line. For a further description of how Maconomy calculates these prices, please refer to "Appendix A: Price Calculation in the Job Cost module."
<b>Cost Per Day, Base</b>	This field only applies to time activities. The field shows the value in the field "Cost, Base" converted into a cost per day. The value is calculated by multiplying the value in the field "Cost, Base" by the value specified in the field "Hours per Man Day" for the current job in the window Jobs.
<b>Billing Price, Curr.</b>	In this field, you enter the budgeted billing price in the job's currency of one unit of the activity on the budget line. If the activity is non-invoiceable, you cannot enter a price here, and the value must be "0.00."
<b>Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the value in the field "Billing Price, Currency" converted into a billing price per day. The value is calculated by multiplying the value in the field "Billing Price, Currency" by the value specified in the field "Hours per Man Day" for the current job in the window Jobs.

Field	Description
<b>Markup %</b>	In this field, you enter the budgeted gross margin % for the activity on the budget line.
<b>Line Specific Billing Price</b>	If the current job is set up for price control from budgets (see “Price control from budgets”), this field indicates if the billing price differs from the price originally derived from the employee category on the current line. If the line is not marked, the price is the original price.
<b>Total Cost, Base</b>	This field shows the total estimated cost in base currency for the budget line. The total cost is found by multiplying the number in the “Quantity” field by the cost per piece in the “Cost” field.
<b>Total Billing Price, Currency</b>	This field shows the budget lines total budgeted billing price in the job currency. The total billing price is calculated by multiplying the number in the “Quantity” field by the billing price per piece in the “Billing Price, Currency” field.
<b>Purchase Currency</b>	<p>In this field, you can select a currency. Depending on whether you have entered the cost in base currency or in another currency, the value is calculated in the “Cost, Base” field or the “Cost, Purchase Currency” field by means of this currency. If another currency is subsequently selected, the value in the “Cost, Purchase Currency” field is then recalculated. For a further description of how Maconomy calculates these prices, please refer to “Appendix A: Price Calculation in the Job Cost Module.”</p> <p>If the job budget is structured hierarchically, selecting a purchase currency on a group header line makes it possible to see the total purchase amount for the subordinate lines in a specific currency.</p>
<b>Cost, Purchase Currency</b>	In this field, you can enter or see the cost in the currency selected in the field “Purchase Currency.” If you enter a value here, the value in the field “Cost, Base” will be calculated.
<b>Total Cost, Purchase Currency</b>	In this field, you can see the total budgeted cost in the current job’s currency. The total cost price is calculated by multiplying the figure in the field “Quantity” by the cost per unit in the field “Cost, Purchase Currency.”
<b>Billing Price, Purchase Currency</b>	If you want to enter the billing price in another currency than the job’s currency, you can use this field.
<b>Billing Price Per Day, Purchase Currency</b>	If you want to enter the billing price in another currency than the job’s currency, you can use this field. Maconomy uses the currency specified in the field “Purchase Currency” for converting the amount to the job currency, using the current exchange rate table for purchase at the time of entry. If you change the currency later, Maconomy will recalculate the contents of this field. See also the description of the field “Billing Price, Currency.” For a further description of how Maconomy calculates these prices, please refer to “Appendix A: Price Calculation in the Job Cost Module.”

Field	Description
<b>Total Billing Price, Purchase Currency</b>	This field displays the total sales price in purchase currency, that is, the field "Billing Price, Purchase Currency" multiplied by the number in the field "Quantity."
<b>Cost Type</b>	This field shows the cost type selected for the current activity in the window Activities: "Turnover" or "Outlays."
<b>Inc. in Fixed Price</b>	In this field, you can mark whether or not the entry applying to the line should be included in the fixed price of a job. The set-up of the job in question determines whether or not this field is automatically marked when a line is created. The field can be marked/unmarked manually.
<b>Planned Starting Date</b>	In this field, you can enter the date you plan to begin the activity. Maconomy uses the prices valid per this date when deciding which version of the price list assigned to the job, if any, should be used for price calculation on job budget lines. If you do not specify a date in this field, Maconomy uses today's date for the calculation of prices.
<b>Planned Duration</b>	In this field, you can enter a planned duration of the activity. This duration will always be the number of days from the planned starting date to the planned ending date.
<b>Planned Ending Date</b>	In this field, you can enter the date you plan to end the activity. The date specified will be of importance in the window Detailed Planning in the Resource Planning module as the date specified in this field will be copied to planning lines created on the basis of the budget in question.
<b>Deliv. Remarks</b>	In this field, you can enter delivery remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field shows the amount from the field "Billing Price, Currency" on the current budget line converted into the base currency.
<b>Billing Price Per Day, Base</b>	This field only applies to time activities. The field shows the value in the field "Billing Price, Base" converted into a billing price per day.
<b>Billing Price Total, Base</b>	This field shows the amount from the field "Billing Price Total, Currency" on the current budget line converted into the base currency.
<b>Standard Billing Price, Base</b>	This field shows the standard billing price per unit in the base currency of the company.
<b>Total Standard Billing Price, Base</b>	This field shows the total standard billing price of the current budget entry in the currency of the job.
<b>Vendor</b>	In this field, you can enter the number of a vendor, if the activity on the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.

Field	Description
<b>Vendor Name</b>	This is the first line of the name of the vendor whose number is entered in the "Vendor" field. You cannot change the name here.
<b>Your Reference</b>	In this field, you enter the reference person used on purchase orders that are created from the current budget line. It is only possible to enter a reference person if the field "Cust. No." is completed.
<b>Create Sales Order</b>	If you mark this field, Maconomy will create sales order lines for items and text lines assigned to the budget line in the window Job Budget Item Lines when you select "Transfer to Sales Order."
<b>Selected</b>	If you mark this field, Maconomy will create a requisition or purchase order line for the budget line when you select "Create Requisitions" or "Create Purchase Orders," respectively, in the Action menu.
<b>Currency, Purchase Creation</b>	In this field, you can select the currency which should be transferred to requisitions and purchase orders created on the basis of the budget line. If you specify a blank value, the currency specified on the vendor's information card is used.
<b>Number of Purchase Orders</b>	This field shows how many purchase orders have been made on the basis of this budget line.
<b>Number of Requisitions</b>	This field shows how many requisitions have been made on the basis of this budget line.
<b>Last Purchase Order No.</b>	This field shows the number of the last purchase order created on the basis of the current line.
<b>Purchase Order Total</b>	This field shows the sum of the purchase order lines created on the basis of the budget line.
<b>Exec. Company No.</b>	This field shows the name of the company carrying out the specified activity. The field cannot be changed.
<b>Exec. Company Name</b>	This field shows the name of the executing company.
<b>Location</b>	This field shows the value of the location dimension specified on the current job budget.
<b>Entity</b>	This field shows the value of the entity dimension specified on the current job budget.
<b>Project</b>	This field shows the value of the project dimension specified on the current job budget.
<b>Purpose</b>	This field shows the value of the purpose dimension specified on the current job budget.

Field	Description
<b>Spec. 1-3</b>	This field shows the value of the spec. 1-3 dimension specified on the current job budget.
<b>Local Spec. 1-3</b>	This field shows the value of the local spec. 1–3 dimension specified on the current job budget.
<b>Net Cost, Base</b>	This field shows the budgeted net cost of the job in the job's base currency.
<b>Net Cost Per Day, Base</b>	This field only applies to time activities. The field shows the net cost per day budgeted for the current job budget line. The value is based on the value in the field "Net Cost, Base" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Tax Code</b>	This field shows a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Name</b>	This field displays the text defined for the current activity.
<b>Task Description</b>	This field shows the text defined for the current task, if a description has been entered in the field "Task."
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified in the field "Empl. Cat. No." above.
<b>Employee Name</b>	This field shows the name of the employee entered in the field "Empl." above.
<b>Job Budget Text</b>	In the window Job Budget Texts, it is possible to assign text lines to a job budget line. This field, which cannot be changed, displays whether such text lines are assigned to the current line.
<b>Standard Billing Price, Currency</b>	This field shows the standard billing price per unit in the currency of the job.
<b>Standard Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the value in the field "Standard Billing Price, Currency" converted into a standard billing price per day.
<b>Total Standard Billing Price, Currency</b>	This field shows the total standard billing price of the current budget entry in the currency of the job
<b>Remarks 1-10</b>	In these fields, you can assign remarks to the current job budget line. The remarks are for information only and can be used in reports.
<b>Quantity Planned</b>	This field shows how many hours have so far been planned for the job budget line in question in the window Detailed Planning in the Resource Planning module.

Field	Description
<b>Changed in Revision No.</b>	This field shows the number of the job budget revision in which the current line was last changed.

## Actions

This section shows the Actions available in the Job Budgets Table by Type API workspace.

### Top Tab

Field	Description
<b>Calculate Job Surcharge</b>	<p>When you select this action, Maconomy will calculate surcharges for those lines in the table part that match the criteria for surcharge calculation. The surcharges are calculated from the job surcharge rule specified in the "Job Surcharge Rule" field in the Price island. If no job surcharge rule has been specified for the job, you cannot select this action.</p> <p>Existing surcharge lines are deleted, and additional surcharge lines are created. If the calculation of job surcharges results in the creation of several lines with the same combination of activity, employee, and dimensions, the lines will be summarized on one line.</p> <p>The functionality of job surcharge rules is described in further detail in the Job Surcharge Rules window.</p>
<b>Transfer from Budget</b>	<p>Use this action to create a quote or order confirmation selection, depending on whether the job status is quote or order. Both types can be edited, approved, and printed in the Quote Editing window. If a previous selection is available, Maconomy displays a warning message that the new selection will replace the previous one. If the <b>Automatic creation of quote revisions</b> system parameter is enabled, another revision of the quote is automatically created when you select this action. If the parameter is disabled, any existing quote is overwritten with the new quote. If the existing quote was already approved, it is automatically reopened first. You can only choose this action if the budget shown in the window is the current one.</p> <p>Selections are made according to your specifications in the Quote island in the Invoice Layout Rules window. If you only want the printout to show a total, the suggestion will not show lines, and the total price will be the one shown in the <b>Quote Price</b> field in the Budget island.</p> <p>If the job is a fixed-price job or if the quote was previously approved in the Quote Editing window, Maconomy shows a warning, and the <b>Effective Quote Price</b> field is not updated until the quote has once again been approved in the Quote Editing window. For further information, please see the description of the Quote Editing window.</p> <p>Quotes are created in accordance with the invoice layout rule specified for the job in the Jobs workspace. If the <b>Show Markup Separately</b> field is marked for the invoice layout rule in question, the use of this action leads to the creation of a quote in which the costs of all amount activities are shown in</p>

Field	Description
	<p>the table part with an extra line showing the markup. If different activities have different tax codes, a separate markup line for each tax code is created. If printouts are to be shown with a total only, the quote does not include individual lines, and the total price is thus equal to the price in the <b>Quote Price</b> field in the Budget, Currency and Budget, Base islands.</p> <p>If you have entered dimensions in the <b>Transfer from Budget</b> field on an invoice layout rule, Maconomy transfers the selected dimensions from budget lines to the quote.</p> <p>If printouts are to show more than the total, and if they are to show time and amount activities by entry, one budget line in this window will create one quote line in the table part of the Quote Editing window, provided that the budget line has a billing price. If time and amount activities are shown by activity, all budget lines with the same activity number will create one quote line. If time and amount activities are shown by summary activity, all budget lines for the same summary activity will create one quote line. Quote lines are sorted by activity number.</p> <p>Note that in the latter case, the quote lines will carry the same tax as the tax rate chosen for the sum activity. If you apply differentiated taxes or activities both subject and not subject to tax, the activities for the same summary activity should have the same tax code as the summary activity.</p> <p>The quote lines will have the same prices as those entered for the budget lines, provided that it is specified on the invoice layout rule that amounts are to be shown on lines. If amounts are not to be shown on lines, the field will show "0.00."</p> <p>When budgets are transferred to quotes, Maconomy changes the amount in the field "Effective Quote Price" in the card part of this window to the sum of the budget lines, if printouts are to show more than the total. Maconomy alerts you if the quote price is changed.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if "Include Text Lines" is marked on the invoice layout rule, the texts will be transferred to the quote. However, they will not be transferred if the printout is only showing totals, or if the level of detail is By Summary Activity or By Activity.</p> <p>If the quote layout is set to be created directly from the budget, and the budget is arranged hierarchically, that is, you have applied a work breakdown structure, the only group headers that are transferred to the quote are the ones at the top level. However, non-header lines in groups at lower levels in the structure are transferred to the quote as if they belonged to the header at the top level.</p> <p>Furthermore, instead of appearing as headers above the individual lines within their group, top level group headers appear below their subordinate lines. If the last line or lines in a group at level 3 or lower are text lines, these lines are not transferred to the quote, as they would otherwise appear to concern the header at the top level, instead of their actual group header (which is not transferred). As a result if the job budget looks as follows:</p>

Field	Description												
	<p><b>Analysis</b></p> <p>Initiation</p> <p>Site Inspection</p> <p><b>Analysis Report</b></p> <p>Information Gathering</p> <p>Layout</p> <p>&lt;text line&gt;</p> <p>Transferring the quote to the budget will result in the following lines in the Quote Editing window:</p> <table> <tr> <th>Description</th><th>Sum Line</th></tr> <tr> <td>Initiation</td><td>No</td></tr> <tr> <td>Site Inspection</td><td>No</td></tr> <tr> <td>Information Gathering</td><td>No</td></tr> <tr> <td>Layout</td><td>No</td></tr> <tr> <td>Analysis</td><td>Yes</td></tr> </table> <p>In the preceding example, amounts have been disregarded. However, the sum lines that are created in the quote will sum up amounts from the relevant quote lines.</p> <p>If a job surcharge rule has been specified for the job, and a line in the table part of this window activates the surcharge rule in question, Maconomy will warn you that job surcharges should be calculated before you transfer the budget to a quote.</p> <p>A user can only carry out this action if the fields "Change Job Budgets" and "Transfer to Quote" in the Actions window in the Set-Up module are marked for the user in question. Also, if the transfer results in the reopening of a quote because the previous quote was already approved, the field "Reopen Job Quotes" must also be marked for the user in the Actions window.</p> <p>When you transfer a job budget to a quote, the value of the <b>Unit</b> field is also transferred.</p> <p>The invoice layout rule specified for the job controls how job budget lines are transferred to quote lines.</p> <p>If <b>Create Quote Directly From Budget</b> is selected on the invoice layout rule, or Level 1 specification is set to "Registration", then each leaf job budget line is copied to one quote line. In this case, the unit is transferred directly from the job budget line to the quote line.</p> <p>If Level 1 specification is set to "Activity", then job budget lines with the same activity are combined to form one job quote line. In this case, the unit is</p>	Description	Sum Line	Initiation	No	Site Inspection	No	Information Gathering	No	Layout	No	Analysis	Yes
Description	Sum Line												
Initiation	No												
Site Inspection	No												
Information Gathering	No												
Layout	No												
Analysis	Yes												

Field	Description
	transferred only if the job budget lines with the same activity specify the same unit. Otherwise, the <b>Unit</b> field on the quote line is left blank.
<b>Print Quote</b>	<p>When you select this action, you print a job quote to the customer. You can only choose this action if there is a quote for the job, that is, if the job status is <b>Quote</b>.</p> <p>A job quote must be approved before the quote can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, a quote can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote.</p> <p>If you have not previously edited or created the job quote in the Quote Editing window, Maconomy will create and print a job quote on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the budget lines.</p> <p>If there is an existing quote selection that is either entered directly in the Quote Editing window or created using the <b>Transfer to Quote</b> action in this window, Maconomy prints the existing quote. Note that you can also print a quote for a job that has been closed. However, if you do so, you cannot make and changes to the quote related to the job.</p> <p>You can also print job quotes in the Quote Editing window. You can print quotes in batches in the Print Job Quote window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Print Order Confirmation</b>	<p>Use this action to print a job order confirmation based on the existing quote revision. This action is available only when the job status is <b>Order</b>.</p> <p>A job quote must be approved before the order confirmation can be printed. The exception to this is if the <b>Approval of Quote Required</b> job parameter attribute of the Budgeting type has the value set to <b>No</b>. If that is the case, an order confirmation can be printed before approval, but only from this window.</p> <p>If you have not yet created a quote revision and the <b>Approval of Quote Required</b> job parameter attribute is disabled, this action transfers budget lines to the quote in the same way as the <b>Transfer from Budget</b> action, and prints the quote as an order confirmation.</p> <p>If you have not previously edited or created a job quote or a job order confirmation in the Quote Editing window, Maconomy creates and prints a job order confirmation on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the <b>Quote Price</b> field in the tab of this workspace to the sum of the order confirmation lines.</p>

Field	Description
	<p>If there are existing quote or order confirmation selections that are either entered directly in the Quote Editing workspace or created in this workspace using the <b>Transfer from Budget</b> action, Maconomy prints the existing selection. Note that you can also print an order confirmation for a job that has been closed.</p> <p>You can also print job order confirmations in the Quote Editing window. You can print order confirmations in batches in the Print Job Order Confirmation window.</p> <p>Only users for whom the <b>Can Change Job Budget</b> field in the Actions window in the Set-Up module is selected may perform this action.</p>
<b>Transfer Job Dates</b>	<p>When you select this action, Maconomy transfers the starting date and the expected ending date of the job to the "Planned Starting Date" and "Planned Ending Date" fields in the job budget lines. The dates are transferred from the "Start Date" and "Estimated Ending Date" fields in the Jobs window.</p>
<b>Delete Budget</b>	<p>When you select this action, Maconomy deletes the budget in the window. Approved budgets and the budget for a closed job cannot be deleted.</p>
<b>Remove Zero Lines</b>	<p>When you select this action, Maconomy removes any lines in the current budget that have a total cost and billing price of zero. Generally, "Sum/Text" and "Milestone" lines will not be deleted. However, depending on the structure of the budget in question, some lines may be deleted if they are included in the same level as zero lines. For example, if you have a number of text lines together with regular lines in a subtree, and all of the regular lines are zero, all of the text lines in that subtree will also be deleted. Maconomy will issue a warning before deleting any budget lines.</p>
<b>Copy Budget</b>	<p>When you select this action, Maconomy copies the budget shown in the Copy Budget island, meaning that an existing budget with a certain revision number is either copied from another job or from the job that is currently shown in the window.</p> <p>If the system parameter "Recalculate Job Budget when Copying" in the System Parameters window in the Set-Up module is not marked, a simple line-by-line copying of the budget is performed. However, currency amounts will be recalculated to the new job's currency. If "Recalculate Job Budget When Copying" is marked, Maconomy will recalculate the budget when it is copied. This means that the price fields (costs, billing prices, and standard billing prices in base and currency plus "Net Cost, Base"), the "Markup %" field, and the fields concerning purchase orders and requisitions are not copied, but are recalculated on the basis of information of the job concerning the customer, the employees, and the job price list. That is why the new budget does not necessarily show the same amounts as the budget that it was copied from. If fixed exchange rate information has been specified in the Job Price Information window for the job to which information is copied, Maconomy recalculates currency amounts in the budget on the basis of the specified fixed exchange rate information.</p>

Field	Description
	<p>If a periodic job budget has been created for the job that is being copied, the periods of that budget are also copied to the new budget. The periodic job budget can be seen and edited in the Periodic Job Budgets window.</p> <p>If lines exist in the budget that is to be overwritten, it is not possible to copy. Furthermore, it is only possible to copy from one budget to another if both budgets are created in advance.</p> <p>In addition, it is not possible to copy the lines of another budget to a planning budget if this implies that two identical lines are created on the planning budget, and one or both of the job parameter attributes “Duplicate lines (amount) on planning budget” or “Duplicate lines (time) on planning budgets” has the value “No” for the job in question.</p> <p>If the task on a budget line to be copied does not exist in the task list for the current job, the line will not be copied, unless the system parameter “Extended Task Creation from Budgets” is marked. If it is marked, the task will be created in the job-specific task list of the current job.</p>
<b>Rederive Tax Codes on Job Budget</b>	This action will derive tax codes on all job budget lines according to the tax code setup, thus reverting any user settings on this job budget.
<b>Print Price Overview</b>	The functionality of this action is similar to that of the “Print Price Overview” action in the Job Budgets window.
<b>Mark All for Daily Descriptions</b>	When you select this action, the “Use Daily descriptions” field in the card part is marked, and all tasks in the table part are marked in the “Use Daily Descriptions” field. For more information about daily descriptions, see the description of the Daily Descriptions island in the card part of the Job Tasks window.
<b>Unmark All for Daily Descriptions</b>	When you select this action, the “Use Daily Descriptions” field in the card part is unmarked, and all tasks in the table part are unmarked in the “Use Daily Descriptions” field. For more information about daily descriptions, see the description of the Daily descriptions field in the card part of the Job Tasks window.
<b>Create Requisitions</b>	<p>When you select this action, Maconomy automatically creates requisitions for those amount activities in the job budget that have a vendor number and a mark in the “Selected” field. A requisition is an internal request for the approval of the purchase of services. This means that you can use this action to create requisitions that the person or department responsible for approving purchases can evaluate and approve, and this person or department can then, based on the input from the requisition, place the necessary orders with the relevant suppliers by means of a purchase order. You can only use this action if the budget shown in the window is the current one and if the job in question has not been blocked.</p> <p>Maconomy creates a requisition for each combination of vendor and purchase order currency specified on the marked lines, and each of the</p>

Field	Description
	<p>requisitions is assigned to a separate, new purchase process (see “Purchase Processes” in the A/P module). The earliest date in the “Planned Starting Date” field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting requisition. If there is no planned date, Maconomy uses today’s date. Requisitions can be edited in the Requisitions window in the Accounts Payable module.</p> <p>When you create requisitions, Maconomy updates the “Number of Requisitions” field on the budget lines.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p> <p>The currency of each requisition is taken from the “Currency, Purchase Creation” field on the budget lines that result in the requisition in question. If this field is blank, the currency is taken from the vendor’s information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter “Fixed exchange rates in budgets only” has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the “Text Lines for Purchase” field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Create Purchase Orders</b>	<p>When you select this action, Maconomy automatically creates purchase orders for those amount activities in the job budget that have a vendor number and a mark in the “Selected” field. A purchase order is an order for the vendor service described by the budget line’s amount activity. The amount on the purchase order line will be the cost sum on the budget line less the sum of previously created purchase order lines. If this amount is negative, the amount on the purchase order line will be 0. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy checks that none of the lines selected for purchase order creation will cause budget violations according to the rules set up in the job parameter attributes “Limit Purchase Amount to Budget,” “Limit Purchase on Sum or Line Level,” “Limit Purchase, Currency Margin,” and “Limit Purchase, Percentage Margin” for the job. If even one line causes a budget violation, the action is cancelled for all lines, including lines that do not cause any budget violations. Budget violations can, for example, take place if purchase orders already exist for the lines, and the new purchases, combined with existing purchases, will cause the budgeted amount to be exceeded. For further information, see the descriptions of these attributes in the job parameter “Budgeting.”</p> <p>Maconomy creates a purchase order for each combination of vendor and purchase order currency specified on the marked lines, and each of the purchase orders is assigned to a separate, new purchase process (see “Purchase Processes” in the A/P module). The earliest date in the “Planned</p>

Field	Description
	<p>Starting Date” field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting purchase order. If there is no planned date, Maconomy uses today’s date. Purchase orders can be edited in the Purchase Orders window in the Accounts Payable module.</p> <p>When you create purchase orders, Maconomy updates the “Number of Purchase Orders” and “Purchase Order Total” fields on the budget lines. The purchase order number is then shown in the “Last Purchase Order No.” field on every budget line.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p> <p>The currency of each purchase order is taken from the “Currency, Purchase Creation” field on the budget lines that result in the purchase order in question. If this field is blank, the currency is taken from the vendor’s information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter “Fixed exchange rates in budgets only” has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the “Text Lines for Purchase” field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Transfer to Sales Order</b>	<p>When you select this action, Maconomy automatically creates sales order lines for job budget item lines, which are assigned to job budget lines marked in the “Create Sales Order” field. Text lines created in the Job Budget Item Lines window are also transferred. If you have previously created a sales order line for a job budget item line, it will not be processed again. The order lines are added to a sales order for the job. If such an order does not exist, Maconomy automatically creates a sales order for the job with a mark in the “Invoice in Job Cost” field. If there is more than one order assigned to the job, Maconomy chooses the order with the highest order number.</p> <p>If the “New Order when Transf. to Sales” field in the System Information window in the Set-Up module has been marked, another order will always be created when the action “Transfer to Sales Order” is selected.</p> <p>When you create sales order lines on the basis of job budget item lines, Maconomy copies the budgeted billing price to the order line. If you wish this price to be recalculated before it is transferred, use the “Recalculate Prices” action in the Job Budget Item Lines window.</p> <p>You cannot select this action if the current job has been closed. However, you can reopen a job using the “Reopen Job” action in the Jobs window.</p>
<b>Recalculate Budget</b>	<p>The functionality of this action is similar to that of the “Recalculate Job Budget” action in the Job Budgets window.</p>

Field	Description
<b>New Revision</b>	<p>When you select this action, Maconomy creates another revision of the current job budget and the assigned periodic job budget, if any. You cannot create a revision of an approved budget; it must be reopened first. The previous revision is locked, and except for revision remarks and revision code, it can no longer be changed. All previous revisions of the job budgets to which you have access can be viewed in the Job Budget Revisions window.</p>
<b>Approve Budget</b>	<p>When you select this action, the job budget currently displayed is approved. You can only approve a budget if it has been submitted. On approval, Maconomy takes a “snapshot” of the budget, which can then be viewed in the Job Budget Revisions window. The job budget can then no longer be changed except for the following fields: “Planned Starting Date,” “Planned Ending Date,” “Deliv. Remarks,” “Vendor,” “Your Reference,” “Create Sales Order,” “Selected,” “Purchase Order Currency,” and “Remarks 1-10.” These fields all have in common that they are of no financial consequence for the job. If you want to change any other fields, you must first reopen the budget and edit the revision that is created as a result of the reopening.</p> <p>For further information about approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Approve Job Budget” field in the Actions window in the Set-Up module is marked can approve budgets.</p> <p>If the budget contains lines with tasks that are not included in the job’s task list, you must correct the error before approving the budget. If approval of tasks is mandatory, all tasks on which budgeting has been done must be approved before you can approve the budget.</p> <p>If the budget is of the type specified as the job’s planning budget, all new/changed skill requirements created in the Job Planning window or the Skill Requirements window in the Resource Planning module for budget lines on the current planning budget will be checked. If the employee specified on the planning line does not fulfill the new/changed skill requirements specified for the job budget line in question, a warning will be issued for each violation.</p> <p>In addition, the booking type specified on the lines of the planning budget will be copied to the detailed plan upon approval, so that the booking type of each budget line will be transferred to its related detailed planning line.</p> <p>If the current job is a fixed-price job with overrun handling, and if “Budget” is selected as the basis for the fixed price on the job parameter attribute “Fixed-Price Budget,” a new fixed price can result in the creation, reduction, or increase of an overrun on the job when the budget is approved. This happens if already registered postings on the job before or after the approval of the budget have exceeded the fixed price. In this case, a job revenue recognition journal is created to be posted in the G/L module. For more information, see the description of the job parameter attribute “Handling of Overruns” of the job parameter type “Revenue Recognition” in the Job Parameters window.</p>
<b>Reopen Budget</b>	<p>When you select this action, the job budget currently displayed is reopened. At the same time, Maconomy creates a revision. A “snapshot” of the budget</p>

Field	Description
	<p>as it looked in the previous revision can be seen in the Job Budget Revisions window.</p> <p>If fixed exchange rate information has been specified for the job in the Job Price Information window, and the information has changed since the budget was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p> <p>The job budget must then be submitted before it can be approved again. For further information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the "Reopen Job Budget" field in the Actions window in the Set-Up module is marked can reopen budgets.</p>

**Bottom Tab**

Field	Description
<b>Calculate Job Surcharge</b>	<p>When you select this action, Maconomy will calculate surcharges for those lines in the table part that match the criteria for surcharge calculation. The surcharges are calculated from the job surcharge rule specified in the "Job Surcharge Rule" field in the Price island. If no job surcharge rule has been specified for the job, you cannot select this action.</p> <p>Existing surcharge lines are deleted, and additional surcharge lines are created. If the calculation of job surcharges results in the creation of several lines with the same combination of activity, employee, and dimensions, the lines will be summarized on one line.</p> <p>The functionality of job surcharge rules is described in further detail in the Job Surcharge Rules window.</p>
<b>Transfer to Quote</b>	<p>When you select this action, Maconomy creates a quote or order confirmation selection, depending on whether the job status is quote or order. Both types can be edited, approved, and printed in the Quote Editing window. If you have created a selection earlier, Maconomy warns you that the new selection will replace the previous one, which may have been edited. If the system parameter "Automatic creation of quote revisions" has been marked, another revision of the quote is automatically created when you select this action. If the parameter is not marked, any existing quote is overwritten with the new quote. If the existing quote was already approved, it is automatically reopened first. You can only choose this action if the budget shown in the window is the current one.</p> <p>Selections are made according to your specifications in the Quote island in the Invoice Layout Rules window. If you only want the printout to show a total, the suggestion will not show lines, and the total price will be the one shown in the "Quote Price" field in the Budget island.</p> <p>If the job is a fixed-price job, or if the quote was previously approved in the Quote Editing window, Maconomy shows a warning, and the "Effective Quote Price" field is not updated until the quote has once again been approved in</p>

Field	Description
	<p>the Quote Editing window. For further information, please see the description of the Quote Editing window.</p> <p>A quote is created in accordance with the invoice layout rule specified for the job in the Jobs window. If the “Show Markup Separately” field is marked for the invoice layout rule in question, the use of this action will lead to the creation of a quote in which the costs of all amount activities will be shown in the table part, with an extra line showing the markup. If different activities have different tax codes, a separate markup line for each tax code is created. If printouts are to be shown with a total only, the quote will not include individual lines, and the total price will thus be equal to the price in the “Quote Price” field in the Budget, Currency and Budget, Base islands.</p> <p>If printouts are to show more than the total, and if they are to show time and amount activities by entry, one budget line in this window will create one quote line in the table part of the Quote Editing window, provided that the budget line has a billing price. If time and amount activities are shown by summary activity, all budget lines for the same summary activity will create one quote line. Quote lines are sorted by activity number.</p> <p>Note that in the latter case, the quote lines will carry the same tax as the tax rate chosen for the sum activity. If you apply differentiated taxes or activities both subject and not subject to tax, the activities for the same summary activity should have the same tax code as the summary activity.</p> <p>The quote lines will have the same prices as those entered for the budget lines, provided that it is specified on the invoice layout rule that amounts are to be shown on lines. If amounts are not to be shown on lines, the field will show “0.00.”</p> <p>When budgets are transferred to quotes, Maconomy changes the amount in the “Effective Quote Price” field in the card part of this window to the sum of the budget lines, if printouts are to show more than the total. Maconomy alerts you if the quote price is changed.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if “Include Text Lines” is marked on the invoice layout rule, the texts will be transferred to the quote. However, they will not be transferred if the printout is only showing totals, or if the level of detail is By Summary Activity or By Activity.</p> <p>If the quote layout is set to be created directly from the budget, and the budget is arranged hierarchically—that is, you have applied a work breakdown structure—the only group headers that are transferred to the quote are the ones at the top level. However, non-header lines in groups at lower levels in the structure are transferred to the quote as if they belonged to the header at the top level.</p> <p>Furthermore, instead of appearing as headers above the individual lines within their group, top-level group headers appear below their subordinate lines. If the last line or lines in a group at level 3 or lower are text lines, these lines are not transferred to the quote, as they would otherwise appear to concern the header at the top level, instead of their actual group header (which is not transferred). As a result, if the job budget looks as follows:</p>

Field	Description												
	<p><b>Analysis</b></p> <p>Initiation</p> <p>Site Inspection</p> <p><b>Analysis Report</b></p> <p>Information Gathering</p> <p>Layout</p> <p>&lt;text line&gt;</p> <p>Transferring the quote to the budget will result in the following lines in the Quote Editing window:</p> <table> <tr> <th>Description</th><th>Sum Line</th></tr> <tr> <td>Initiation</td><td>No</td></tr> <tr> <td>Site Inspection</td><td>No</td></tr> <tr> <td>Information Gathering</td><td>No</td></tr> <tr> <td>Layout</td><td>No</td></tr> <tr> <td>Analysis</td><td>Yes</td></tr> </table> <p>In the example above, amounts have been disregarded. However, the sum lines created in the quote will sum up amounts from the relevant quote lines.</p> <p>If a job surcharge rule has been specified for the job, and a line in the table part of this window activates the surcharge rule in question, Maconomy will warn you that job surcharges should be calculated before you transfer the budget to a quote.</p> <p>A user can only carry out this action if the "Change Job Budgets" and "Transfer to Quote" fields in the Actions window in the Set-Up module are marked for the user in question. Also, if the transfer results in the reopening of a quote because the previous quote was already approved, the "Reopen Job Quotes" field must also be marked for the user in the Actions window.</p>	Description	Sum Line	Initiation	No	Site Inspection	No	Information Gathering	No	Layout	No	Analysis	Yes
Description	Sum Line												
Initiation	No												
Site Inspection	No												
Information Gathering	No												
Layout	No												
Analysis	Yes												
<b>Print Quote</b>	<p>When you select this action, you print a job quote to the customer. You can only choose this action if there is a quote for the job, that is, if the job status is "Quote."</p> <p>A job quote must be approved before the quote can be printed. The exception to this is if the job parameter attribute "Approval of Quote Required" of the type "Budgeting" has the value "No." If that is the case, a quote can be printed before approval, but only from this window.</p> <p>If you have not previously edited or created the job quote in the Quote Editing window, Maconomy will create and print a job quote on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also</p>												

Field	Description
	<p>change the amount in the “Quote Price” field in the card part of this window to the sum of the budget lines.</p> <p>If there is an existing quote selection that is either entered directly in the Quote Editing window or created using the action “Transfer Quote” in this window, Maconomy will print the existing quote. Note that you can also print a quote for a job that has been closed. However, if you do so, you cannot make any changes to the quote related to the job.</p> <p>It is also possible to print job quotes in the Quote Editing window. In the Print Job Quote window you can print quotes in batches.</p> <p>Only users for whom the “Can Change Job Budget” field in the Actions window in the Set-Up module is marked can perform this action.</p>
<b>Print Order Confirmation</b>	<p>When you select this action, you print a job order confirmation to the customer for the job in the window. This is only possible if the job status is “Order.”</p> <p>A job quote must be approved before the order confirmation can be printed. The exception to this is if the job parameter attribute “Approval of Quote Required” of the type “Budgeting” has the value “No.” If that is the case, an order confirmation can be printed before approval, but only from this window.</p> <p>If you have not previously edited or created a job quote or a job order confirmation in the Quote Editing window, Maconomy will create and print a job order confirmation on the basis of the budget lines in this window and in accordance with the information specified in the invoice layout rule assigned to the current job. Maconomy will also change the amount in the “Quote Price” field in the card part of this window to the sum of the order confirmation lines.</p> <p>If there are existing quote or order confirmation selections that are either entered directly in the Quote Editing window or that are created in this window using the action “Transfer Quote,” Maconomy will print the existing selection. Note that you can also print an order confirmation for a job that has been closed.</p> <p>It is also possible to print job order confirmations in the Quote Editing window. In the Print Job Order Confirmation window you can print order confirmations in batches.</p> <p>Only users for whom the “Can Change Job Budget” field in the Actions window in the Set-Up module is marked can perform this action.</p>
<b>Create Requisitions</b>	<p>When you select this action, Maconomy automatically creates requisitions for those amount activities in the job budget that have a vendor number and a mark in the “Selected” field. A requisition is an internal request for the approval of the purchase of services. This means that you can use this action to create requisitions that the person or department responsible for approving purchases can evaluate and approve, and this person or department can then, based on the input from the requisition, place the necessary orders with the relevant suppliers by means of a purchase order. You can only use this action if the budget shown in the window is the current one and if the job in question has not been blocked.</p>

Field	Description
	<p>Maconomy creates a requisition for each combination of vendor and purchase order currency specified on the marked lines, and each of the requisitions is assigned to a separate, new purchase process (see "Purchase Processes" in the A/P module). The earliest date in the "Planned Starting Date" field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting requisition. If there is no planned date, Maconomy uses today's date. Requisitions can be edited in the Requisitions window in the Accounts Payable module.</p> <p>When you create requisitions, Maconomy updates the "Number of Requisitions" field on the budget lines.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p> <p>The currency of each requisition is taken from the "Currency, Purchase Creation" field on the budget lines that result in the requisition in question. If this field is blank, the currency is taken from the vendor's information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter "Fixed exchange rates in budgets only" has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the "Text Lines for Purchase" field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Create Purchase Orders</b>	<p>When you select this action, Maconomy automatically creates purchase orders for those amount activities in the job budget that have a vendor number and a mark in the "Selected" field. A purchase order is an order for the vendor service described by the budget line's amount activity. The amount on the purchase order line will be the cost sum on the budget line less the sum of previously created purchase order lines. If this amount is negative, the amount on the purchase order line will be 0. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy checks that none of the lines selected for purchase order creation will cause budget violations according to the rules set up in the job parameter attributes "Limit Purchase Amount to Budget," "Limit Purchase on Sum or Line Level," "Limit Purchase, Currency Margin," and "Limit Purchase, Percentage Margin" for the job. If even one line causes a budget violation, the action is cancelled for all lines, including lines that do not cause any budget violations. Budget violations can, for example, take place if purchase orders already exist for the lines, and the new purchases, combined with existing purchases, will cause the budgeted amount to be exceeded. For further information, see the descriptions of these attributes in the job parameter "Budgeting."</p> <p>Maconomy creates a purchase order for each combination of vendor and purchase order currency specified on the marked lines, and each of the purchase orders is assigned to a separate, new purchase process (see</p>

Field	Description
	<p>“Purchase Processes” in the A/P module). The earliest date in the “Planned Starting Date” field on lines with the same combination of vendor and currency is used as the preferred delivery date in the card part of the resulting purchase order. If there is no planned date, Maconomy uses today’s date. Purchase orders can be edited in the Purchase Orders window in the Accounts Payable module.</p> <p>When you create purchase orders, Maconomy updates the “Number of Purchase Orders” and “Purchase Order Total” fields on the budget lines. The purchase order number is then shown in the “Last Purchase Order No.” field on every budget line.</p> <p>Information such as payment terms and delivery mode is retrieved from the vendor information card in the A/P module.</p> <p>The currency of each purchase order is taken from the “Currency, Purchase Creation” field on the budget lines that result in the purchase order in question. If this field is blank, the currency is taken from the vendor’s information card. If fixed exchange rate information has been specified for the job in the Job Price Information window, the specified fixed exchange rate information is applied, but only if the system parameter “Fixed exchange rates in budgets only” has not been marked.</p> <p>If you have assigned texts to the job budget lines in the Job Budget Texts window, and if the “Text Lines for Purchase” field in the Job Information window is marked, the texts will be transferred to the relevant purchase orders.</p>
<b>Transfer to Sales Order</b>	<p>When you select this action, Maconomy automatically creates sales order lines for job budget item lines, which are assigned to job budget lines marked in the “Create Sales Order” field. Text lines created in the Job Budget Item Lines window are also transferred. If you have previously created a sales order line for a job budget item line, it will not be processed again. The order lines are added to a sales order for the job. If such an order does not exist, Maconomy automatically creates a sales order for the job with a mark in the “Invoice in Job Cost” field. If there is more than one order assigned to the job, Maconomy chooses the order with the highest order number.</p> <p>If the “New Order when Transf. to Sales” field in the System Information window in the Set-Up module has been marked, another order will always be created when the action “Transfer to Sales Order” is selected.</p> <p>When you create sales order lines on the basis of job budget item lines, Maconomy copies the budgeted billing price to the order line. If you wish this price to be recalculated before it is transferred, use the “Recalculate Prices” action in the Job Budget Item Lines window.</p> <p>You cannot select this action if the current job has been closed. However, you can reopen a job using the “Reopen Job” action in the Jobs window.</p>
<b>Transfer Job Dates</b>	<p>When you select this action, Maconomy transfers the starting date and the expected ending date of the job to the “Planned Starting Date” and “Planned Ending Date” fields in the job budget lines. The dates are transferred from the “Start Date” and “Estimated Ending Date” fields in the Jobs window.</p>

Field	Description
<b>Delete Budget</b>	When you select this action, Maconomy deletes the budget in the window. Approved budgets and the budget for a closed job cannot be deleted.
<b>Remove Zero Lines</b>	When you select this action, Maconomy removes any lines in the current budget that have a total cost and billing price of zero. Generally, "Sum/Text" and "Milestone" lines will not be deleted. However, depending on the structure of the budget in question, some lines may be deleted if they are included in the same level as zero lines. For example, if you have a number of text lines together with regular lines in a subtree, and all of the regular lines are zero, all of the text lines in that subtree will also be deleted. Maconomy will issue a warning before deleting any budget lines.
<b>Copy Budget</b>	<p>When you select this action, Maconomy copies the budget shown in the Copy Budget island, meaning that an existing budget with a certain revision number is either copied from another job or from the job that is currently shown in the window.</p> <p>If the system parameter "Recalculate Job Budget when Copying" in the System Parameters window in the Set-Up module is not marked, a simple line-by-line copying of the budget is performed. However, currency amounts will be recalculated to the new job's currency. If "Recalculate Job Budget When Copying" is marked, Maconomy will recalculate the budget when it is copied. This means that the price fields (costs, billing prices, and standard billing prices in base and currency plus "Net Cost, Base"), the "Markup %" field, and the fields concerning purchase orders and requisitions are not copied, but are recalculated on the basis of information of the job concerning the customer, the employees, and the job price list. That is why the new budget does not necessarily show the same amounts as the budget that it was copied from. If fixed exchange rate information has been specified in the Job Price Information window for the job to which information is copied, Maconomy recalculates currency amounts in the budget on the basis of the specified fixed exchange rate information.</p> <p>If a periodic job budget has been created for the job that is being copied, the periods of that budget are also copied to the new budget. The periodic job budget can be seen and edited in the Periodic Job Budgets window.</p> <p>If lines exist in the budget that is to be overwritten, it is not possible to copy. Furthermore, it is only possible to copy from one budget to another if both budgets are created in advance.</p> <p>In addition, it is not possible to copy the lines of another budget to a planning budget if this implies that two identical lines are created on the planning budget, and one or both of the job parameter attributes "Duplicate lines (amount) on planning budget" or "Duplicate lines (time) on planning budgets" has the value "No" for the job in question.</p> <p>If the task on a budget line to be copied does not exist in the task list for the current job, the line will not be copied, unless the system parameter "Extended Task Creation from Budgets" is marked. If it is marked, the task will be created in the job-specific task list of the current job.</p>

Field	Description
<b>Recalculate Budget</b>	<p>When you select this action, Maconomy recalculates prices on the job budget lines currently displayed. Maconomy uses the price lists that are valid as of the date specified in the “Planned Starting Date” field on each job budget line, or, if no such date has been specified, today’s date. If the recalculated price is 0, any price specified on a budget line will not be overwritten.</p> <p>You should be aware that Maconomy will also recalculate prices on lines where the “Line Specific Billing Price” field is marked and update the job-specific prices list lines underlying the budget lines. This applies when you are recalculating the baseline budget, and the job uses price control from budgets (see “Price control from budgets”). When recalculating, Maconomy looks up prices in much the same way as if another line was created. If a price list determines a price that is different from the price that is specified for the relevant employee category, that price will be applied (and the line will be marked as having a line-specific billing price).</p> <p>Moreover, you should note that if the “Job Budget Follows Periodic Job Budget” field has been marked on the budget in question in the Periodic Job Budgets window, the figures specified in the periods on the relevant budget lines will also be recalculated when using this action. However, if the “Job Budget Follows Periodic Job Budgets” field has not been marked, regular figures and periodic figures are also recalculated, but the recalculation of the periodic figures is carried out independently of the recalculation of the regular budget figures.</p> <p>The job parameter attributes “Keep Purchase Billing Price Upon Recalculation” and “Keep Purchase Cost Price Upon Recalculation” control how Maconomy should act when you recalculate the budget, and the purchase currency differs from the base currency. For more information, see the description of the job parameter attribute type “Budgeting.”</p>
<b>Rederive Tax Codes on Job Budget</b>	<p>This action will derive tax codes on all job budget lines according to the tax code setup, thus reverting any user settings on this job budget.</p>
<b>New Revision</b>	<p>When you select this action, Maconomy creates another revision of the current job budget and the assigned periodic job budget, if any. You cannot create a revision of an approved budget; it must be reopened first. The previous revision is locked, and except for revision remarks and revision code, it can no longer be changed. All previous revisions of the job budgets to which you have access can be viewed in the Job Budget Revisions window.</p>
<b>Submit Budget</b>	<p>When you select this action, the job budget currently displayed changes status to “Submitted.” This is a way of indicating that the budget is ready for approval. A job budget cannot be approved until it has been submitted. For more information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Can Change Job Budget” field in the Actions window in the Set-Up module is marked can submit budgets.</p>

Field	Description
<b>Approve Budget</b>	<p>When you select this action, the job budget currently displayed is approved. You can only approve a budget if it has been submitted. On approval, Maconomy takes a “snapshot” of the budget, which can then be viewed in the Job Budget Revisions window. The job budget can then no longer be changed except for the following fields: “Planned Starting Date,” “Planned Ending Date,” “Deliv. Remarks,” “Vendor,” “Your Reference,” “Create Sales Order,” “Selected,” “Purchase Order Currency,” and “Remarks 1-10.” These fields all have in common that they are of no financial consequence for the job. If you want to change any other fields, you must first reopen the budget and edit the revision that is created as a result of the reopening.</p> <p>For further information about approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Approve Job Budget” field in the Actions window in the Set-Up module is marked can approve budgets.</p> <p>If the budget contains lines with tasks that are not included in the job’s task list, you must correct the error before approving the budget. If approval of tasks is mandatory, all tasks on which budgeting has been done must be approved before you can approve the budget.</p> <p>If the budget is of the type specified as the job’s planning budget, all new/changed skill requirements created in the Job Planning window or the Skill Requirements window in the Resource Planning module for budget lines on the current planning budget will be checked. If the employee specified on the planning line does not fulfill the new/changed skill requirements specified for the job budget line in question, a warning will be issued for each violation.</p> <p>In addition, the booking type specified on the lines of the planning budget will be copied to the detailed plan upon approval, so that the booking type of each budget line will be transferred to its related detailed planning line.</p> <p>If the current job is a fixed-price job with overrun handling, and if “Budget” is selected as the basis for the fixed price on the job parameter attribute “Fixed-Price Budget,” a new fixed price can result in the creation, reduction, or increase of an overrun on the job when the budget is approved. This happens if already registered postings on the job before or after the approval of the budget have exceeded the fixed price. In this case, a job revenue recognition journal is created to be posted in the G/L module. For more information, see the description of the job parameter attribute “Handling of Overruns” of the job parameter type “Revenue Recognition” in the Job Parameters window.</p>
<b>Reopen Budget</b>	<p>When you select this action, the job budget currently displayed is reopened. At the same time, Maconomy creates a revision. A “snapshot” of the budget as it looked in the previous revision can be seen in the Job Budget Revisions window.</p> <p>If fixed exchange rate information has been specified for the job in the Job Price Information window, and the information has changed since the budget was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p>

Field	Description
	<p>The job budget must then be submitted before it can be approved again. For further information about submitting and approving multiple job budgets at a time, please see the description of the Approve Job Budgets window.</p> <p>Only users for whom the “Reopen Job Budget” field in the Actions window in the Set-Up module is marked can reopen budgets.</p>
<b>Print Price Overview</b>	The functionality of this action is similar to that of the “Print Price Overview” action in the Job Budgets window.
<b>Mark All for Daily Descriptions</b>	When you select this action, the “Use Daily descriptions” field in the card part is marked, and all tasks in the table part are marked in the “Use Daily Descriptions” field. For more information about daily descriptions, see the description of the Daily Descriptions island in the card part of the Job Tasks window.
<b>Unmark All for Daily Descriptions</b>	When you select this action, the “Use Daily Descriptions” field in the card part is unmarked, and all tasks in the table part are unmarked in the “Use Daily Descriptions” field. For more information about daily descriptions, see the description of the Daily descriptions field in the card part of the Job Tasks window.

## Periodic Job Budgets Single Dialogs Workspace

Use this workspace to create and edit periodic job budgets. You can allocate budgeted quantities and cost and sales prices of each job budget line to financial periods.

Use periodic job budgets for making forecasts when you enter budgeted costs and sales. If you have created a job budget for a job that spans several months, the Job Budgets workspace does not tell you when you can enter a budgeted quantity of consulting hours as costs or invoiced. Therefore, you can use this workspace to define the periods when users should enter the activities on the budget lines, to give you an overview of a job's budgeted cash flow within a given time frame.

This workspace is an expansion of the Job Budgets workspace and provides information about all of the job budgets that you create in the Job Budgets workspace. With the linking between the workspaces, you can submit, approve, and reopen an item in either workspace.

This linking also applies to revisions. Revisions of a job budget in this workspace apply to that budget in the Job Budgets workspace. If you delete a job budget/job budget line in this workspace, it also applies to the Job Budgets workspace. If you have not created a job budget for a job, you can create the job budget in this workspace.

In the **Job Budget Follows Periodic Job Budget** field in the Properties island in the Periodic Job Budgets tab, you can choose whether or not changes that you make to allocations of quantities and prices on periods should also carry over to the regular job budget lines.

The Periodic Job Budgets tab shows general information about a job and the budget limits assigned to it. Enter a time span for a period to display a job's total budgeted quantities, costs, and sales prices. When you define this overall period, Maconomy automatically splits the period into up to six consecutive periods shown in the Budget island. For example, if you have specified

an overall period ranging from January 2015 to June 2015, Maconomy splits this period into six consecutive months shown in the Budget island.

A period can be a month, a quarter, half a year, or one year. The Budget island is dynamic so that you can change the view as needed. Use drop-down fields to select the periods. For example, this workspace can display figures for a period that consists of six months, six quarters, or two months, two quarters.

**Note:** You define period start and end dates in the Fiscal Year workspace in the G/L module.

If you enter figures for the months of the year (such as 2015) in the Job Budget Lines sub-tab, the Budget island displays these figures. If you then change the view of these figures to quarters in the Budget island, Maconomy sums the figures and displays them in quarters in the island. When you change the view back to months, the figures are again auto-configured.

Because you do not need to allocate quantities on a budget line to a period, the Budget island details allocated and non-allocated hours and amounts, respectively.

Use the Job Budget Lines sub-tab to enter budget lines and define periods for the costs and sales of each line's activity. This sub-tab is a grid with variable slots, and each slot covers a period of a month, a quarter, half a year, or one year, depending on your selection in the Periodic Job Budgets tab. For example, if you select the period type Month for the entire period from January 2015 to June 2015 in the tab, the sub-tab displays each month in a slot unit. For each of these slot units, four fields are available, and these fields are automatically populated with a text that corresponds to the current selections. If you select the month of January 2015 in the tab, the sub-tab displays the following four fields: **Jan. 15, Quantity**, **Jan. 15, Cost Total**, **Jan. 15, Quantity Sales** and **Jan. 15, Sales Total, Currency**. On each budget line, enter the budgeted quantities and prices for costs and sales for the defined periods. The sub-tab also links a number of fields to similar fields in the Job Budgets workspace. Information that you enter in this workspace is displayed in the Job Budgets workspace and vice-versa.

Maconomy calculates all prices on the basis of information from job price lists, item price lists, employee or activity information cards, and information specified in the System Information workspace in the Set-Up module.

If you need to reallocate an entire budget to new periods, enter a new starting date for the budget and use the **Reallocate Budget** action. In this way, you do not need to manually change the figures for all periods, if, for example, the starting date of the budget is postponed for a number of months.

Note that only certain users can make changes to job budgets. For access, select the **Can Change Job Budget** field in the Actions workspace in the Set-Up module.

If the job that this workspace displays is a template job, you can only create budget lines for the job if you have entered certain information, such as country, currency, and company tax code. If you do not have this information, an error appears. If you remove the necessary information from a job, Maconomy deletes all periodic job budget information from that job.

You can print all of the information that this workspace displays using the Print Periodic Job Budgets workspace.

## Periodic Job Budgets Tab

This section includes the fields and descriptions for the Periodic Job Budgets tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number and name of the job to which the current budget applies. The value cannot be changed manually.
<b>Job Group</b>	This field shows the job group to which the job is assigned. It can be changed in the window Jobs for as long as the job has the status "Quote."
<b>Status</b>	This field shows the job's status as specified in the window Jobs.
<b>Template</b>	This field shows whether the job is a template job or a normal job.
<b>Project Manager</b>	This field shows the name of the employee assigned to be responsible for the job.
<b>Closed</b>	If this field is marked, the job has been closed in the window Jobs. As long as a job is closed, you cannot enter new budget lines, change existing budget lines, or make job entries.

### Limit Island

Field	Description
<b>Hours</b>	In this field, you can enter the number of employee hours estimated to be spent on the job. This figure can be compared to the total budgeted number of hours displayed in the column "Hours" in the island Budget, or you can use it in a subsequent budget control calculation, in which you compare the customer budget with the job's actual figures.
<b>Cost, Base</b>	In this field, you enter the total budgeted cost of the job in the job's base currency.
<b>Billing Price, Curr.</b>	In these fields you enter the total budgeted billing price of the job in the job's currency. The amount in this field is the same as the amount given in the field "Max. Billing Price" in the window Jobs.

### Properties Island

Field	Description
<b>Link Quantity for Cost and Sales</b>	If this field is marked, quantities entered for cost and sales on each line are linked; that is, if the quantity for a cost on a line is changed, the quantity for sales on that line is changed accordingly. This also applies to cost and sales prices. However, marking this field will not affect already entered figures on the budget lines. If the field is not marked, cost and sales quantities are not linked, and any change made for one quantity is thus not reflected in another quantity.

Field	Description
<b>Price Look-Up per Period Start</b>	<p>If this field is marked, the first date of the period in which a quantity or amount is entered or changed is used as the basis for the calculation of cost and sales prices for the period in question. The calculation is performed on the basis of the usual price calculation principles used in the Job Cost module.</p> <p>If the field is not marked, the calculation will be based on the price list valid per the planned starting date specified on the line or, if no such date has been specified, the calculation will be based on today's date. The calculation is performed the first time the user enters a quantity in a period.</p>
<b>Job Budget Follows Periodic Job Budget</b>	<p>If you mark this field, the figures on the budget lines will be linked to the figures entered for the periods in this window; that is, the quantities, cost, and sales prices displayed on the regular budget lines will be equal to the sum of the quantities, cost, and sales prices specified for the corresponding fields in the periods in this window. In this connection you should note that Maconomy does not issue a warning before changing the amounts and quantities on the budget lines when this field is marked. Therefore, you should use this function with caution.</p> <p>The mark in this field is automatically removed when a budget line is created or if a figure in a field related to the regular budget is changed.</p> <p>By not marking this field, you can allocate quantities and prices to periods without having these changes reflected on the regular budget lines.</p>

### Budget Island

This island shows a job's total budgeted quantities, costs, and sales prices as well as calculated gross margins and gross margin percentages for the selected periods. The figures are displayed in the base currency of the company responsible for the job in question. The periods for which figures are to be displayed are selected in the leftmost column, in which you can choose among the period types month, quarter, half a year, and one year. The figures shown in the remaining part of this island are thus determined by the periods selected in this island and the quantities and prices specified for each period on each budget line in the table part of the window.

Field	Description
<b>Period Length</b>	<p>In these fields, you can select the length of the periods as first specified in the above island Periods. A period can have the length of a month, a quarter, half a year, or one year. The starting and ending dates of the periods are determined by the fiscal year periods as defined in the window Fiscal Year in the system. The periods selected are displayed with an abbreviation of the period, such as "Jan. 02" (January 2002), or "Q1 03" (first quarter 2003).</p> <p>You can change the period of each of the six pop-up fields to have the island display the desired figures; that is, you can choose to see figures for a period of, for example, six months with one month per line, a period of three quarters and three months, or a period of six quarters. The time span for which you can choose to see periods is determined by the period specified in the island Periods; that is, if you have specified a time span covering eight months, you can thus only choose to see periods within those eight months.</p>

Field	Description
<b>Prior, Periods</b>	This row shows the totals for all prior periods, that is, all quantities, prices, and margins budgeted on the current job budget before the first period selected in the leftmost column.
<b>Future Periods</b>	This row shows the totals for all later periods, that is, all quantities, prices and margins budgeted after the last period selected in the leftmost column.
<b>Non-allocated</b>	This row shows figures for the part of the budget totals which has not been allocated to a certain period.
<b>Total</b>	This row shows the total of the job's budgeted number of hours, costs, and billing prices specified in the table part of the window.
<b>Hours</b>	This column shows the number of employee hours regarding costs that have been estimated to be spent on the job. The figures displayed in this column depend on the period types selected in the leftmost column and the quantities entered for each period on each job budget line in the table part of the window. If you make changes to the cost quantities in the table part of the window or if you change one or more period types in the leftmost column from, for example, month to quarter, the figures in this column will change accordingly.
<b>Man Days</b>	copy to come
<b>Cost</b>	<p>This column shows the budgeted costs of the job in the base currency of the job's responsible company. The figures displayed depend on the period types selected in the leftmost column and the cost prices entered for each period on each job budget line in the table part of the window. Note that the figures in this column are the sum of the costs of both time and amount activities specified in the table part of the window.</p> <p>If the user does not have access to see cost for time, as specified in the window Actions in the Set-Up module, the costs shown in the column "Hours" will be zero.</p>
<b>Billing Price</b>	This column shows the budgeted sales of the job in the base currency of the job's responsible company. The figures displayed depend on the period types selected in the leftmost column and the sales prices entered for each period on each job budget line in the table part of the window.
<b>GM</b>	This column shows the job's budgeted gross margin in the base currency of the company responsible for the job. Gross margin is calculated by subtracting the cost in the "Cost" field from the billing price in the field "Billing Price."
<b>GM %</b>	This column shows the job's budgeted gross margin percentage. Gross margin percentage is calculated as the gross margin percentage of the billing price displayed in the column "Billing Price." Gross margin is shown in the column "GM."

**Reallocate Budget Island**

Field	Description
<b>New Starting Period</b>	In these fields, you can specify a new period to apply to the display of figures in the island Budget. When you specify a new starting period in this field and select the function "Reallocate Budget" in the Action menu, Maconomy automatically reallocates the budget to start with the period specified in this field. The change will apply to both the periods displayed in the island Budget and the corresponding fields in the table part of the window.

**Settling Company Island**

Field	Description
<b>Settling Company</b>	<p>This field shows the number and name of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in the chapter "Introduction to the G/L module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

**Description Island**

Field	Description
<b>Internal</b>	In these three fields, you can view and edit the internal description of the job. The information is initially transferred from the window Jobs, but can be changed here.
<b>Ref.</b>	This is the reference from the field "Ref." in the window Jobs.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays whether the job budget has been submitted. The field is automatically marked when the action "Submit Budget" is selected. Note that as this window and the window Job Budgets are linked, this field will be selected if the current job budget has been submitted in the window Job Budgets, and vice versa.
<b>Approved</b>	This field displays whether the job budget has been approved. The field is automatically marked when the action "Approve Budget" is selected, and the mark is removed if the budget is reopened.

Field	Description
<b>Reopened</b>	This field displays whether the job budget has been reopened. The field is automatically marked when the action "Reopen Budget" is selected.
<b>Reopened by</b>	This field displays the name of the user who reopened the job budget.

### Line Creation Island

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field "Line Type" in the table part of the window. Every time you create a line, the value selected here will be selected on the new line, and you can then change it to something else. Please see the description of the field "Line Type" in the table part.

### Budget Type Island

Field	Description
<b>Show Budget</b>	<p>In this field, you choose the budget you wish to see. The budget lines are shown in the table, and the sums of the defined periods are displayed in the island Budget. When you open this window or browse through the different jobs in this window, you will see the budget of the type you looked at last.</p> <p>Each budget type has its own audit trail, which is displayed through a number in the field "Revision No." in the island Revision. Previous revisions of each budget type can be viewed in the window Job Budget Revisions.</p>
<b>Current Budget</b>	In this field, you choose which budget you are currently using for the job. It can be changed as long as you have not made any purchase orders or requisitions. The budget chosen here is regarded as the job's overall budget elsewhere in Maconomy. Budget types are created in the window Popup Fields in the Set-Up module.
<b>Forecast Budget</b>	In this field, you choose the budget to be used as the current job's forecast budget. In the forecast budget you can enter, for example, activities, cost, billing prices, and dates, and use these to evaluate potential jobs. Forecast budgets can be analyzed using the Analyzer report/report template Job Forecasts.
<b>Planning Budget</b>	<p>In this field, you choose the budget to be used as the current job's planning budget. The planning budget is used to register dates, employees, and items to give an overview of the expected use of these resources. Planning budgets can be analyzed using the Analyzer report/report template Planning Budgets.</p> <p>If the value in this field is changed, Maconomy checks the existence of any planning lines in the window Detailed Planning in the Resource Planning module which have been created on the basis of the previous planning budget. If there are no such lines, the planning budget for the job in question will be changed. If such planning lines exist, however, Maconomy will issue a warning indicating that all planning lines assigned to the current budget will be removed from the detailed planning.</p>

Field	Description
	<p>If the current planning budget belongs to a job for which one or both of the job parameter attributes “Duplicate lines (amount) on planning budget” or “Duplicate lines (time) on planning budget” have the value “No,” you can only change the budget type if the selected type does not contain more than one line with the same combination of activity and task. If you change the budget type, Maconomy will issue a warning, and any job progress entries and task progress entries are deleted for the job.</p> <p>The table part of the window Job Planning shows budget lines from the planning budget of the current job.</p>

**Quote Price, Curr. Island**

Field	Description
<b>Quote Price</b>	<p>This field displays the job’s quote price in the currency used on the current job. The amount derives from the field “Effective Quote Price” in the window Jobs, but can be edited in this field if the job status is “Quote” and the quote has not been approved in the window Quote Editing. Otherwise, the price can be changed in the table part of the window Quote Editing.</p> <p>For fixed-price jobs, the effective quote price can only be entered or changed in the window Quote Editing. For further information, please see the description of the window Quote Editing.</p>

**Customer Island**

Field	Description
<b>Customer</b>	This field shows the number and name of the customer associated with the job (the ship-to customer).

**Forecast Island**

Field	Description
<b>Probability %</b>	<p>In this field, you can enter the probability percentage rating for whether the current job, which is on quote, will result in an order. When the job is converted to an order, Maconomy will automatically change the value of this field to “100.”</p> <p>The value in this field is used in the Analyzer report/report template Job Forecasts to determine, for example, the expected profit on current jobs in quote.</p>

**Periods Island**

Field	Description
<b>Show</b>	In these fields, you can specify a range of periods to be displayed in the island Budget and in the table part of the window. If, for example, you specify the period “1/2002 – 6/2002,” the leftmost column in the island Budget will display six lines, one for each

Field	Description
	month from January to June 2002. The periods displayed are determined by the way in which periods are set up in the window Fiscal Year in the G/L module.

### Company Island

Field	Description
<b>Company</b>	This field shows the number and name of the company responsible for the current job. The value is transferred from the island Company in the window Jobs and cannot be changed here.
<b>Base Currency</b>	This field shows the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

### Revision Island

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the job budget. The number in this field is automatically changed when you make a new revision by selecting the action "New Revision" in the Action menu.
<b>Remarks</b>	In these fields, you can enter information about the current revision of the job budget. If a new revision of the budget is made, the contents of these fields will be removed, allowing you to enter remarks about the new revision of the budget. These fields are the only fields in the budget which are affected by the creation of a revision. The remarks can still be viewed in the window Job Budget Revisions.

### User Island

See the chapter "Getting Started" for a description of the fields in the island User.

### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you can enter a text, which is attached to the activity on quotes and order confirmations. If you have specified an activity in the field "Activity No.," Maconomy suggests the activity description from the field "Description" in the window Activities, but you can change it on the budget line. The original activity description is displayed in the field "Activity Name."
<b>Line Type</b>	The functionality of this field is similar to that of the corresponding field "Line Type" in the table part of the window Job Budgets.
<b>Act. No.</b>	In this field, you enter the number of the activity for which you wish to make a budget estimate. When the activity has been entered, it cannot be

Field	Description
	<p>changed. If you only enter “*,” the line is a summary line which creates a sub-total when the budget is printed using the Standard layout. You cannot budget on summary activities. You can enter more than one line for the same activity, but note that every job entry is registered to an activity and not to a budget line.</p> <p>If a job budget text from the window Activities has been assigned to one of the activities used in this window, the standard text will be transferred to the window Job Budget Texts. You can subsequently edit the text so that it fits each job budget line in the window Job Budget Texts.</p> <p>Note that if a job budget has been made for a job in the window Job Budgets, the lines from the job budget are automatically displayed in this window.</p>
<b>Prior, Quantity</b>	<p>This field shows the total number of quantities budgeted on periods on the budget line in question prior to the period displayed as the first period in the island Budget. If you have, for instance, allocated a total quantity of 100 hours on a number of periods applying to year 2001 on the line in question, and you change the view of the budget to display periods for the first six months of year 2002, this field will display a quantity of 100, as you have budgeted that number of hours on periods prior to the starting date of the new periods. If you change the view back to display figures for year 2001, this field will be empty, and the 100 hours budgeted will appear on the line as originally entered.</p>
<b>Prior, Quantity, Days</b>	<p>copy to come</p>
<b>Prior, Cost</b>	<p>This field shows the sum of the costs budgeted on periods on the budget line in question prior to the period displayed as the first period in the island Budget. The functionality is similar to that of the above field “Prior, Quantity.”</p>
<b>Prior, Sales Price</b>	<p>This field shows the sum of sales budgeted on periods on the budget line in question prior to the period displayed as the first period in the island Budget. The functionality is similar to that of the above field “Prior, Quantity.”</p>
<b>Future, Quantity</b>	<p>This field shows the total number of quantities budgeted on periods on the budget line in question subsequent to the period displayed as the last period in the island Budget. If you have, for instance, allocated a total quantity of 100 hours on a number of periods applying to year 2003 on the line in question, and you change the view of the budget to display periods for the first six months of year 2002, this field will display a quantity of 100, as you have budgeted that number of hours on periods after the ending date of the new periods. If you change the view back to display figures for year 2003, this field will be empty, and the 100 hours budgeted will appear on the line as originally entered.</p>
<b>Future, Quantity, Days</b>	<p>copy to come</p>

Field	Description
<b>Future, Cost</b>	This field shows the sum of the costs budgeted on periods on the budget line in question subsequent to the period displayed as the last period in the island Budget. The functionality is similar to that of the above field "Future, Quantity."
<b>Future, Sales Price</b>	This field shows the sum of sales budgeted on periods on the budget line in question prior to the period displayed as the first period in the island Budget. The functionality is similar to that of the above field "Future, Quantity."
<b>Non-alloc. Quantity</b>	This field shows the line's total number of budgeted quantities which have not yet been allocated to a period. The field is automatically updated by Maconomy if you enter a quantity in the field "Quantity" on the budget line. As quantities entered in the field "Quantity" are not split into periods, any such quantity entered is thus displayed in this field, allowing you to manually allocate the desired quantity to periods. If you allocate only part of the quantity displayed in this field to periods, this field displays the remaining quantity to be allocated. You do not have to allocate the entire quantity displayed in this field to periods.
<b>Non-alloc. Cost</b>	This field shows the total cost price budgeted on the line which has not yet been allocated to a period. The field is automatically updated by Maconomy when you enter a cost price in the field "Cost, Base" on the line, and when you allocate costs to periods. As amounts entered in the field "Cost, Base" are not split into periods, any such amount entered is thus displayed in this field, allowing you to manually allocate the desired amount to periods. If you allocate only part of the amount displayed in this field to periods, this field displays the remaining amount to be allocated. You do not have to allocate the entire amount displayed in this field to periods.
<b>Non-alloc. Sales Price</b>	This field shows the sum of budgeted sales on the line which has not yet been allocated to a period. The field is automatically updated by Maconomy when you enter a sales price in the field "Billing Price, Curr." on the line, and when you allocate billing prices to periods. As amounts entered in the field "Billing Price, Curr." are not split into periods, any such amount entered is thus displayed in this field, allowing you to manually allocate the desired amount to periods. If you allocate only part of the amount displayed in this field to periods, this field displays the remaining amount to be allocated. You do not have to allocate the entire amount displayed in this field to periods.
<b>Empl. Cat. No.</b>	The functionality of this field is similar to that of the corresponding field "Empl. Cat. No." in the table part of the window Job Budgets.
<b>Empl.</b>	The functionality of this field is similar to that of the corresponding field "Empl." in the table part of the window Job Budgets.
<b>Quantity</b>	The functionality of this field is similar to that of the corresponding field "Quantity" in the table part of the window Job Budgets.
<b>Cost, Base</b>	The functionality of this field is similar to that of the corresponding field "Cost, Base" in the table part of the window Job Budgets.

Field	Description
<b>Billing Price, Curr.</b>	The functionality of this field is similar to that of the corresponding field "Billing Price, Curr." in the table part of the window Job Budgets.
<b>Markup %</b>	The functionality of this field is similar to that of the corresponding field "Markup %" in the table part of the window Job Budgets.
<b>Total Cost, Base</b>	The functionality of this field is similar to that of the corresponding field "Total Cost, Base" in the table part of the window Job Budgets.
<b>Total Billing Price, Currency</b>	The functionality of this field is similar to that of the corresponding field "Billing Price Total, Currency" in the table part of the window Job Budgets.
<b>Cost Type</b>	The functionality of this field is similar to that of the corresponding field "Cost Type" in the table part of the window Job Budgets.
<b>Incl. in Fixed Price</b>	The functionality of this field is similar to that of the corresponding field "Incl. in Fixed Price" in the table part of the window Job Budgets.
<b>Planned Starting Date</b>	The functionality of this field is similar to that of the corresponding field "Planned Starting Date" in the table part of the window Job Budgets.
<b>Planned Ending Date</b>	The functionality of this field is similar to that of the corresponding field "Planned Ending Date" in the table part of the window Job Budgets.
<b>Deliv. Remarks</b>	The functionality of this field is similar to that of the corresponding field "Deliv. Remarks" in the table part of the window Job Budgets.
<b>Quantity Planned</b>	The functionality of this field is similar to that of the corresponding field "Quantity Planned" in the table part of the window Job Budgets.
<b>Net Cost, Base</b>	This field displays a net cost for amount activities. This field is only used in Norwegian systems.
<b>Tax Code</b>	This field displays a G/L tax receivable code if the activity on the line is an amount activity.
<b>Task</b>	The functionality of this field is similar to that of the corresponding field "Task" in the table part of the window Job Budgets.
<b>Task Description</b>	The functionality of this field is similar to that of the corresponding field "Task Description" in the table part of the window Job Budgets.
<b>Activity Name</b>	The functionality of this field is similar to that of the corresponding field "Activity Name" in the table part of the window Job Budgets.
<b>Empl. Cat. Name</b>	The functionality of this field is similar to that of the corresponding field "Empl. Cat. Name" in the table part of the window Job Budgets.

Field	Description
<b>Employee Name</b>	The functionality of this field is similar to that of the corresponding field “Employee Name” in the table part of the window Job Budgets.
<b>Job Budget Text</b>	The functionality of this field is similar to that of the corresponding field “Job Budget Text” in the table part of the window Job Budgets.

## Actions

This section shows the Actions available in the Periodic Job Budgets workspace.

### Top Tab

Field	Description
<b>Recalculate Budget</b>	<p>Use this action to recalculate the budget. Note that a large batch of tasks/employees/dimensions on a budget may impact performance. Consider running this as a Scheduled Background Task so that it instead updates periodically.</p> <p>When you select this action, Maconomy recalculates prices on the job budget lines currently displayed. Maconomy uses the price lists valid per the date specified in the field “Planned Starting Date” on each job budget line, or, if no such date has been specified, today’s date. If the recalculated price is 0, any price specified on a budget line will not be overwritten. Moreover, you should note that if the field “Job Budget Follows Periodic Job Budget” has been marked, the figures specified in the periods on the relevant budget lines will also be recalculated when using this action. However, if the field “Job Budget Follows Periodic Job Budgets” has not been marked, regular figures and periodic figures are also recalculated, only the recalculation of the periodic figures is carried out independently of the recalculation of the regular budget figures.</p>
<b>New Revision</b>	When you select this action, Maconomy creates a revision of the current job budget. You cannot create a revision of an approved budget; it must be reopened first. The previous revision is locked, and except for revision remarks and revision code it can no longer be changed. All previous revisions of the job budgets to which you have access can be viewed in the window Job Budget Revisions.
<b>Submit Budget</b>	<p>When you select this action, the job budget currently displayed changes status to “Submitted.” This is a way of indicating that the budget is ready for approval. A job budget cannot be approved until it has been submitted. For more information about submitting and approving multiple job budgets at a time, please see the description of the window Approve Job Budgets.</p> <p>Only users for whom the field “Can Change Job Budget” in the window Actions in the Set-Up module is marked may submit job budgets.</p>
<b>Approve Budget</b>	When you select this action, the job budget currently displayed is approved. You can only approve a budget if it has been submitted. On approval, Maconomy takes a “snapshot” of the budget, which can then be viewed in the

Field	Description
	<p>window Job Budget Revisions. The job budget can then no longer be changed, except for the following fields: "Planned Starting Date," "Planned Ending Date," "Deliv. Remarks," "Vendor," "Your Reference," "Create Sales Order," "Selected," "Purchase Order Currency," and "Remarks 1-10." These fields all have in common the fact that they are of no financial consequence for the job. If you want to change any other fields, you must first reopen the budget, and edit the new revision created as a result of the reopening.</p> <p>For further information about approving multiple job budgets at a time, please see the description of the window Approve Job Budgets.</p> <p>Only users for whom the field "Approve Job Budgets" in the window Actions in the Set-Up module is marked may approve job budgets.</p> <p>If the budget is of the type specified as the job's planning budget, all new/changed skill requirements created in the window Job Planning or the window Skill Requirements in the Resource Planning module for budget lines on the current planning budget will be checked. If the employee specified on the planning line does not fulfill the new/changed skill requirements specified for the job budget line in question, a warning will be issued for each violation.</p> <p>In addition, the booking type specified on the lines of the planning budget will be copied to the detailed planning upon approval, so that the allocation type of each budget line will be transferred to its related detailed planning line.</p> <p>If the current job is a fixed-price job with overrun handling, and if "Budget" is selected as the basis for the fixed price on the job parameter attribute "Fixed-Price Budget," a new fixed price can give rise to the creation, reduction, or increase of an overrun on the job when the budget is approved. This happens if already registered postings on the job before or after the approval of the budget have exceeded the fixed price. In this case, a job revenue recognition journal is created to be posted in the G/L module. For more information, see the description of the job parameter attribute Handling of Overruns: For this attribute, you can specify whether a job assigned this job parameter should handle overruns. An overrun occurs when the costs registered on a job exceed the agreed-to fixed price of the job. The "fixed price" of a time and material job can either be the budgeted billing price of the latest approved job budget or the approved quote price of the time and material job.</p>
<b>Reopen Budget</b>	<p>When you select this action, the job budget currently displayed is reopened. At the same time, Maconomy creates a revision. A "snapshot" of the budget as it looked in the previous revision can be seen in the window Job Budget Revisions.</p> <p>If fixed exchange rate information has been specified for the job in the window Job Price Information, and the information has changed since the budget was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p> <p>The job budget must then be submitted before it can be approved again. For further information about submitting and approving multiple job budgets at a time, please see the description of the window Approve Job Budgets.</p>

Field	Description
	Only users for whom the field “Reopen Job Budgets” in the window Actions in the Set-Up module is marked may reopen budgets.
<b>Reallocate Budget</b>	When you use this function, the budget displayed in the window is reallocated in accordance with the new starting period specified in the field “New First Period” in the island Reallocate in the card part of the window.
<b>Transfer to Periodic Forecast</b>	copy to come
<b>Copy Budget From Template</b>	This action copies the budget from the template job.

## Periodic Forecasting Single Dialogs Workspace

Use this workspace to create periodic forecasts for your jobs and opportunities by distributing the budgeted revenue and costs across periods.

Regular job budgets do not provide information that indicates the time at which a budgeted task of, for example, 400 hours of consulting can be entered as costs or invoiced. By creating periodic forecasts in this workspace, you can analyze the expected distribution of revenue and costs. By combining forecasts for current jobs with forecasts for jobs in your pipeline or general expectations that are not attached to any specific jobs or sales cases, you are provided with a complete and clear picture of project cash flow and periodic fluctuations in terms of both finances and workload.

This workspace is only available if you have installed add-on 123: Portal Forecasting.

The Periodic Forecasting tab shows general information about a job and the budget totals from the job budget. The Totals island shows how the revenue and costs are budgeted in terms of hours and amounts, and also indicates the resulting gross margin. This island also shows the corresponding figures according to the periodic forecast entered in the Periodic Forecast Lines sub-tab. The deviations between the budgeted and forecasted figures are also displayed.

Maconomy retrieves the budget totals from the budget type selected in the **Show Budget** field. This budget type is also assigned to the periodic forecast created in the Periodic Forecast Lines sub-tab, enabling you to create periodic forecasts for multiple budget types.

Use the Periodic Forecast Lines sub-tab to distribute the expected costs and number of hours across periods for different types of activities. In the Show Budget Figures island in the Periodic Forecasting tab, enter the starting month for which you want to distribute figures. The Periodic Forecast Lines sub-tab then displays a column for this month and the eleven following months, allowing you to enter costs, revenue, and hours for these months. You can only enter forecasting data for jobs where information such as country, currency, and company tax code is specified.

**Note:** To edit job budgets and periodic forecasts, users must have access granted via the **Can Change Job Budget** field in the Actions workspace in the Set-Up module.

### Periodic Forecast Lines Sub-Tab Structure

The Periodic Forecast Lines sub-tab displays forecast information in a hierarchical structure, allowing you to forecast at multiple detail levels. At the top level, this sub-tab is divided into five sections: Revenue, Cost, Hours, GM, and GM%.

#### *The Revenue and Cost Sections*

The header lines for the Revenue and Cost sections contain a number of sublines to enter forecast data for the individual periods. The section header lines display the totals from the associated sub-lines.

#### *Time, Outlay, and Amount Totals*

The Revenue and Cost sections both contain these subtotal lines:

- Time — Use to specify the revenue or cost expected for time activities in each period.
- Outlay — Use to specify the revenue expected for outlay activities
- Amount — Use to specify the revenue expected for amount activities.

These subtotal lines can contain sublines of their own, which include more detailed specification of the forecast as well as the sum of data entered on their sublines.

Each of the Time, Outlay, and Amount lines in the Revenue and Cost sections always contains a Default subline. Enter figures on a Default line in the same way as on all other sublines; these figures are then included in the total calculated on the Time, Outlay, or Amount line to which the Default line belongs. However, when you enter a figure directly on a Time, Outlay, or Amount subtotal line, Maconomy changes the Default line accordingly. This means that if you enter a figure on the Time subtotal line, increasing its value by 50, Maconomy increases the value on the Default line by 50. This ensures that figures on the sublines add up to the value on the Time subtotal line. The **Default Line** field in the Periodic Forecast Lines sub-tab always indicates which line in each section is the default line.

### Example

The following figure shows an excerpt of the Revenue section of the sub-tab:

	Jan	Feb
<b>Revenue</b>	4250	5800
<b>Amount</b>	1250	
<b>Default</b>	1000	
<b>External</b>	250	
<b>Time</b>	3000	5800
<b>Default</b>	3000	5800

The Revenue header sums the Amount and Time subtotals (the Outlay subtotal is not included in the example). The Amount subtotal sums the values on its two sublines, Default and External, and the Time subtotal sums the values on its one subline, Default.

If you update the values on the two sublines under the Amount subtotal, the Amount subtotal and the Revenue header total reflect this change.

	Jan	Feb
<b>Revenue</b>	4450	5800
<b>Amount</b>	1450	
<b>Default</b>	1200	
<b>External</b>	250	
<b>Time</b>	3000	5800
<b>Default</b>	3000	5800

If you change the value directly on the Amount subtotal line, Maconomy adjusts the Default line accordingly. In this case, you write up the Amount total by 100, causing the value on the Default line to also be increased by 100. The Revenue header total immediately reflects this change.

	Jan	Feb
<b>Revenue</b>	4800	5800
<b>Amount</b>	1550	
<b>Default</b>	1300	
<b>External</b>	250	
<b>Time</b>	3000	5800
<b>Default</b>	3000	5800

### Adding Extra Lines for Detailed Forecasting

Add extra lines for more detail in a forecast. Add extra lines at the lowest level or at the same level as the Default lines. Values that you enter on a manually added line are included in the subtotal as well as the totals calculated on higher levels.

#### *The Hours Section*

The header line Hours always contains the subline Default. Use this subline to enter the number of expected hours for a job within each period. The link between the Hours subtotal line and the Default line is the same as described for the Revenue and Cost sections.

You can either enter hours to indicate the resource requirements within each period, or as a means of calculating costs and revenue for time activities. If you do not select the **Revenue and Cost from Hours** field, you can only enter hours in the Hours section as additional information, and they will not affect the rest of the forecast.

However, if you select the **Revenue and Cost from Hours** field in the Periodic Forecasting tab, Maconomy automatically calculates cost and revenue for time activities based on the number of hours that you enter and the cost and billing prices on the selected job budget.

#### *Employee Category Prices*

On manually created lines in the Hours section, you can enter an employee category. Select the **Revenue and Cost from Hours** field so that Maconomy calculates the revenue and cost using the employee category prices, allowing for a more accurate calculation.

#### *The GM and GM% Sections*

The Gross Margin and GM% header lines display the gross margin and gross ratio calculated from the figures on the Revenue and Cost header lines. You cannot manually change the values on these header lines or add new header lines.

### Shifting the Forecast

If you need to shift an entire forecast to new periods because of a delayed project start, for example, enter a new starting period in the Reallocate Budget island and use the **Reallocate** action. This updates the values for all periods.

### Periodic Forecasting Tab

This section includes the fields and descriptions for the Periodic Forecasting tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job to which the current forecast applies. If the forecast applies to an opportunity for which a budget has been created, this field shows the number of the temporary job assigned to the opportunity in question. This number corresponds to the number of the opportunity, preceded by an underscore. The value cannot be changed manually. For further information about the temporary jobs created for opportunities, see the introduction to the window Opportunity Budgets in the Contact Management module.
<b>Include in Forecast</b>	In this field, you can specify whether the current forecast should be included in forecast reports created using the Periodic Forecasting component in the Portal.

#### Show Budget Figures Island

Field	Description
<b>Show from Period</b>	In these fields, you can specify the starting month and year of the period for which you want to view and enter forecast figures. The first forecasting column in the table part will thus represent the month specified here, and the remaining forecast columns will represent the 11 following months.  Please note that the period specified here only applies to the columns shown in the table part. The budget and forecast totals specified in the island Totals always show the full totals of the job, regardless of the periods currently shown.
<b>Currency</b>	In this field, you can choose whether the figures in the window should be displayed and entered in the base currency of the company of the job, in the currency of the job or in the enterprise currency. The amounts are automatically converted using the exchange rate table for sales. The currency in question is displayed next to the pop-up field.
<b>Show Decimals</b>	In this field, you can specify whether decimals should be displayed for the figures in the window. If you do not mark the field, figures are shown as whole figures, automatically rounded off.

### Totals Island

This island contains three lines showing totals for the job budget, the forecast (the line “Periodic Budget”) and the deviations between the figures on the two first lines. A number of different totals and calculations are shown in the columns of the island. This allows you to compare your forecasts to your budgets. The individual columns are described below.

Field	Description
<b>Hours</b>	This column shows the number of hours budgeted on time activities, the total number of hours forecasted in the Hours section of the table part, and the difference between the budgeted and forecasted number of hours.
<b>Revenue</b>	This column shows the budgeted revenue, the revenue forecasted in the Revenue section of the table part, and the difference between the budgeted and forecasted revenue.
<b>Cost, Hours</b>	This column shows the cost budgeted for time activities, the cost forecasted in the Time subsection of the Cost section of the table part, and the difference between the budgeted and forecasted figures.
<b>Cost, Amount</b>	This column shows the cost budgeted for amount activities, the cost forecasted in the Amount subsection of the Cost section of the table part, and the difference between the budgeted and forecasted figures.
<b>Cost, Outlay</b>	This column shows the cost budgeted for outlay activities, the cost forecasted in the Outlay subsection of the Cost section of the table part, and the difference between the budgeted and forecasted figures.
<b>Gross Margin</b>	This column shows the gross margin, calculated as the revenue less the figures in the “Cost, Hours,” “Cost Amount” and “Cost, Outlay” columns. On the Deviation line, the column shows the difference between the budgeted and forecasted gross margins for the budget and the forecast.
<b>Gross Margin %</b>	This column shows the gross margin percentage (gross ratio). For the budgeted and forecasted figures, this expresses the gross margin as a percentage of the revenue.

### Budget Island

Field	Description
<b>Show Budget</b>	In this field, you choose the budget type for which you wish to forecast. The budgeted sums from the specified budget type are displayed in the island Totals, allowing you to compare the budgeted figures to the figures distributed across periods.

### Customer Island

Field	Description
<b>Customer</b>	This field shows the number and name of the customer associated with the job (the ship to customer).

**Reallocate Budget Island**

Field	Description																																																																								
New Starting Period	<p>If you need to shift the forecast, for instance due to delayed project start, you can do so using these fields. Using this functionality, you can shift the entire forecast without having to reenter all of the figures.</p> <p>In the fields, you can specify the month and year to which the earliest figures currently forecasted should be shifted. When you select the action Reallocate, the earliest forecasted figures are moved to the specified month, and all other figures are moved the same number of months, thus keeping the intervals intact. When the forecast has been shifted, the period selection is automatically changed so that the first period shown in the table corresponds to the new starting period entered in these fields. Please note that the whole forecast is shifted not only the months currently displayed in the table part. This means that if you are currently viewing figures from June 2006 to May 2007, shifting the forecast will also cause figures before and after this interval to be shifted. No recalculation of amounts takes place when shifting the forecast.</p> <p>Example: The forecast currently looks as follows:</p> <table><tr><th>Jan 06</th><th>Feb 06</th><th>Mar 06</th><th>Apr 06</th><th>May 06</th><th>Jun 06</th></tr><tr><td>500</td><td>800</td><td>800</td><td></td><td></td><td></td></tr><tr><td>150</td><td></td><td>100</td><td></td><td></td><td></td></tr><tr><td></td><td></td><td>250</td><td></td><td></td><td></td></tr><tr><td>50</td><td></td><td></td><td>50</td><td></td><td></td></tr><tr><td></td><td>90</td><td></td><td>90</td><td></td><td></td></tr></table> <p>Due to a project delay, the forecast should be shifted two months. As the earliest figures are currently forecasted for January, you specify month 3 (March) and 2006 in this island and select the action "Reallocate Budget." All figures in the table part are now shifted by two months, causing the table part to now look as follows.</p> <table><tr><th>Jan 06</th><th>Feb 06</th><th>Mar 06</th><th>Apr 06</th><th>May 06</th><th>Jun 06</th></tr><tr><td></td><td></td><td>500</td><td>800</td><td>800</td><td></td></tr><tr><td></td><td></td><td>150</td><td></td><td>100</td><td></td></tr><tr><td></td><td></td><td></td><td></td><td>250</td><td></td></tr><tr><td></td><td></td><td>50</td><td></td><td></td><td>50</td></tr><tr><td></td><td></td><td></td><td>50</td><td></td><td>90</td></tr></table>	Jan 06	Feb 06	Mar 06	Apr 06	May 06	Jun 06	500	800	800				150		100						250				50			50				90		90			Jan 06	Feb 06	Mar 06	Apr 06	May 06	Jun 06			500	800	800				150		100						250				50			50				50		90
Jan 06	Feb 06	Mar 06	Apr 06	May 06	Jun 06																																																																				
500	800	800																																																																							
150		100																																																																							
		250																																																																							
50			50																																																																						
	90		90																																																																						
Jan 06	Feb 06	Mar 06	Apr 06	May 06	Jun 06																																																																				
		500	800	800																																																																					
		150		100																																																																					
				250																																																																					
		50			50																																																																				
			50		90																																																																				

**Automatic Calculations Island**

Field	Description
<b>Revenue and Cost from Hours</b>	<p>In this field, you can specify whether Maconomy should automatically calculate revenue and cost amounts from the number of hours entered in the Hours section of the table part.</p> <p>If you do not mark the field, entering a number of hours on a line in the Hours section of the table part will not affect the cost and revenue section.</p> <p>If you mark the field, entering a number of hours on a line in the Hours section of the table part will cause Maconomy to automatically calculate cost and revenue based on the number of hours entered.</p> <p>The calculation of cost and revenue is based on information in the job budget using the following method:</p> <p>No employee category on forecast line</p> <p>If no employee category is specified on the forecast line on which a number of hours is specified, Maconomy first finds the average cost for time activities in the job budget, and multiplies this number by the difference between the previous and new number of hours specified on the line. The result added to the value on the Default line in the Cost section for the column in question. As a result, the cost is written up or down according to the change in number of hours. The calculation of revenue is calculated using a similar method, however multiplying the number of hours by the average billing price for time activities in the budget, and copying the result to the Time header line in the revenue section.</p> <p>Employee category specified on forecast line</p> <p>If an employee category has been specified on the line on which a number of hours is entered, and the job budget contains a line with this employee category for the activity type for which a forecasting figure is entered, the difference between the previous and new number of hours is calculated and the existing cost price of the line is multiplied by the hours for a new total cost price.</p> <p>If an employee category has been specified on the line on which a number of hours is entered, but the job budget does not contain a line with this employee category, Maconomy finds the standard cost and billing price, respectively, for the employee category in question and multiplies it by the difference between the previous and new number of hours specified. If, however, job-specific billing prices are applied, the billing price will be taken from that list instead. The results are added to the value on the Default line in the cost and revenue sections, respectively.</p>
<b>Revenue from Cost</b>	<p>In this field, you can specify whether Maconomy should automatically calculate revenue amounts from costs entered in the Cost section of the table part.</p> <p>If you mark the field, revenue will automatically be calculated from costs entered in the Cost section of the table part. The revenue is calculated by means of a quotient corresponding to the ratio between the total cost and total revenue of the job budget for the activity type in question (amount, time or outlay). This quotient is multiplied by the specified cost, and the result is added to the value on the corresponding line in the Revenue section.</p>

Field	Description
	<p>Example: According to the budget, the total cost for amount activities on the job is 1000 USD and the total revenue for amount activities is 1600. Therefore, the ratio between the cost and revenue is 1.6 (1600 divided by 1000). If you specify 50 on the Amount line in the Cost section, Maconomy will multiply 50 by 1.6 and enter the result (80) in the same column on the Amount line in the revenue section.</p> <p>If you do not mark the field, entering an amount on a line in the cost section of the table part will not affect the revenue section.</p>

### Periodic Forecast Lines Sub-Tab

This section includes the fields and descriptions for the Periodic Forecast Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you can enter a description of the current line. For pre-defined lines, you can only change the description on "Default" lines.
<b>Empl. Cat. No.</b>	In this field, you can select an employee category if the current line is in the Hours section of the table part. You cannot select an employee category on the Hours header line itself.
<b>Period 1-12 (For instance Mar 2007)</b>	<p>In these fields, you can specify the amount or number of hours expected to incur for the current line in the period indicated by the column heading.</p> <p>The heading of each column depends on the period selected in the field "Show from Period" in the card part. This means that if the field "Show from Period" is set to March 2007, the heading of period 1 will be set to "Mar 2007," period 2 will be set to "Apr 2007," and so on.</p> <p>For further information about the effects of entering figures in the individual sections of the table part, see the section "Table Part Structure" in the introduction to this window.</p>
<b>Total Shown</b>	This field shows the total amount or number of hours specified in the period columns currently viewed on the current line. Any figures entered for periods that are not currently viewed are not included. This means that if you are, for example, viewing the periods of March 2007 to February 2008, any figures entered for January 2007 will not be included in this total, as it is outside the period being viewed.
<b>Job Total</b>	This field shows the total amount or number of hours specified on the current line, regardless of the period being viewed. The figure thus includes both figures for the periods being viewed and for periods that are not currently viewed. This means that if you are, for example, viewing the periods of March 2007 to February 2008, any figures entered for January 2007 will also be included in this total.
<b>Default</b>	This field shows whether the current line is a default line automatically created by Maconomy. As mentioned in the introduction to this window, forecasts contain a number of default lines that cannot be deleted. This field is marked for these default lines. This allows you to see which lines are

Field	Description
	default lines, even if you have changed their description. For further information, see the section “The Revenue and Cost Sections” in the introduction to this window.
<b>Forecast Popup 1-5</b>	In these fields, you can select various information about the forecast as a further specification of its purpose or contents. You can choose from the options created for each field. The options are set up using the pop-up types “Forecast Popup 1-5” in the window Popup Fields.

## Actions

This section shows the Actions available in the Periodic Forecasting workspace.

### Top Tab

Field	Description
<b>Reallocate</b>	When you use this function, the budget displayed in the window is shifted in accordance with the new starting period specified in the island Reallocate Budget in the card part of the window. For further information, see the description of the field “New Starting Period.”
<b>Copy Budget From Template</b>	This action copies the budget from the template job.

### Bottom Tab

Field	Description
<b>Reallocate</b>	When you use this function, the budget displayed in the window is shifted in accordance with the new starting period specified in the island Reallocate Budget in the card part of the window. For further information, see the description of the field “New Starting Period.”

## Forecast Management Single Dialogs Workspace

Use this workspace to select a range of jobs and decide whether or not they should be included in the periodic budget on forecast reports.

The first time that you open this workspace, press **Enter** to activate the selection criteria for the jobs that you want to display. Subsequently, Maconomy remembers your specified selection criteria and shows them when you reopen the workspace.

In the Forecast Management tab, you can set up selection criteria to identify the jobs that should be shown in the Jobs sub-tab. The sub-tab displays a line for each job that matches the selection criteria, including information about each job. You can select or deselect the **Include in Forecast** field for each job.

## Forecast Management Tab

This section includes the fields and descriptions for the Forecast Management tab.

## Selection Criteria Island

Field	Description
<b>Show lines</b>	If this field is marked, the purchase order lines matching the criteria specified in the selection criteria will be shown in the table part of the window. Please note that Maconomy does not consider whether the lines are shown in the table part when you use the actions in the Action menu. The purchase order lines that match the selection criteria are affected by the functions regardless of whether they are shown in the table part.
<b>Show jobs with opportunity budgets</b>	In this field, you can specify whether the table part should include jobs for which an opportunity budget has been set up. For further information about opportunity budgets, see the window Opportunity Budgets in the Contact Management module.
<b>Show jobs with job budgets</b>	In this field, you can specify whether the table part should include jobs for which a job budget has been set up.
<b>Budget Type</b>	If you select a budget type in this field, only jobs using the selected budget type will be shown in the table part.
<b>Job No.</b>	In these fields, you can specify a range of job numbers. The table part will only include jobs whose number is within the specified range.
<b>Status</b>	In this field, you can select a job status (Quote or Order). If you select a status, the table part will only include jobs with the selected status.
<b>Job Group</b>	In this field, you can select a job group. If you select a job group, the table part will only include jobs belonging to the selected group.
<b>Department No.</b>	In this field, you can select a department. If you select a department, the table part will only include jobs assigned to the selected department.
<b>Project Manager No.</b>	In these fields, you can specify a range of employee numbers. The table part will only include jobs whose project manager is an employee whose number is within the specified range.
<b>Sales Person No.</b>	In these fields, you can specify a range of employee numbers. The table part will only include jobs whose sales representative is an employee whose number is within the specified range.
<b>Customer Group</b>	In this field, you can select a customer group. If you select a customer group, the table part will only include jobs assigned to customers within the selected group.
<b>Customer No.</b>	In these fields, you can specify a range of customer numbers. The table part will only include jobs assigned to customers with numbers within the specified range.

Field	Description
<b>Responsible</b>	In these fields, you can specify a range of employee numbers. The table part will only include jobs whose responsible is an employee whose number is within the specified range.
<b>Company No.</b>	In these fields, you can specify a range of company numbers. The table part will only include jobs assigned to a company whose number is within the specified range.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	In these fields, you can specify a range of location numbers. The table part will only include jobs assigned to a location whose number is within the specified range.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.

#### Show Figures Island

Field	Description
<b>Budget</b>	In this field, you can select a job budget type. The figures in the field "Forecasted" in the table part will be retrieved from the periodic forecast for the selected budget type.
<b>Forecast Figure</b>	In this field, you can select the type of figure to be shown in the field "Forecasted" in the table part. You can choose between various forecasted figures such as revenue, cost or gross margin.
<b>Currency</b>	In this field, you can specify the currency in which amounts in the field "Forecasted" in the table part should be shown.

## Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Job No.</b>	This field shows the number of the job to which the current line pertains.
<b>Job Name</b>	This field shows the name of the job whose number is shown in the field "Job No." above.
<b>Include in Forecast</b>	In this field, you can specify whether the forecast of the current job should be included in forecast reports created using the Periodic Forecasting component in the Portal.
<b>Budget Origin</b>	This field shows the origin of the budget associated with the job on the table line.
<b>Forecasted</b>	This field shows the job's forecasted ###, depending on the value selected in the field "Forecast Figure" in the card part.
<b>Currency</b>	This field shows the currency in which any amount in the field "Forecasted" is shown.
<b>Customer No.</b>	This field shows the number of the customer of the job on the current line.
<b>Customer name</b>	This field shows the name of the customer whose number is shown in the field "Customer No." above.
<b>Project Manager No.</b>	This field shows the number of the employee who is the project manager of the current job.
<b>Project Manager Name</b>	This field shows the name of the project manager of the current job, that is, the employee whose number is shown in the field "Project Manager No." above.
<b>Sales Rep. No.</b>	This field shows the number of the employee who is the sales representative on the current job.
<b>Sales Rep.</b>	This field shows the name of the sales representative on the current job, that is, the employee whose number is shown in the field "Sales Rep. No." above.
<b>Company No.</b>	This field shows the number of the company to which the current job is assigned.
<b>Location</b>	This field shows the number of the location to which the current job is assigned.
<b>Entity</b>	This field shows the number of the entity to which the current job is assigned.
<b>Project</b>	This field shows the number of the project to which the current job is assigned.

Field	Description
<b>Purpose</b>	This field shows the number of the purpose to which the current job is assigned.
<b>Spec. 1-10</b>	These fields show the spec. 1-10 values to which the current job is assigned.
<b>Local Spec.1-10</b>	These fields show the local spec. 1-10 values to which the current job is assigned.

## Actions

This section shows the Actions available in the Forecast Management workspace.

### Top Tab

Field	Description
<b>Include All</b>	This action will mark all lines in the table for inclusion in the forecast.
<b>Exclude All</b>	This action will mark all lines in the table for exclusion from the forecast.

## Time Budgets Single Dialogs Workspace

Use this workspace to budget time activities for a given budget type. The Job Budget Lines sub-tab displays time-related lines.

If you are working with a project that includes many tasks and many employees, the number of budget lines can increase significantly because there is typically a line for each combination of task and employee. This makes it difficult to review the budget and can be cumbersome to work with.

You can estimate time in the Job Budget Lines sub-tab with a row for each task and columns for employees or employee categories, that is, a matrix style for time budgeting.

This functionality is mostly applicable to the Workspace Client, where the functionality is exposed in the Jobs workspace in the Budgeting section.

## Time Budgets Tab

This section includes the fields and descriptions for the Time Budgets tab.

### Job Island

Field	Description
<b>Job No.</b>	This field shows the job number.
<b>Closed</b>	This check box is selected if the job is closed.

**Status Island**

Field	Description
<b>Submitted</b>	The first field shows the user name of the person who submitted the budget, if it has been submitted. The second field shows the date on which it was submitted.
<b>Approved</b>	The first field shows the user name of the person who approved the budget, if it has been approved. The second field shows the date on which it was approved.
<b>Reopened</b>	The first field shows the user name of the person who reopened the budget, if it has been reopened. The second field shows the date on which it was reopened.

**Budget Island**

Field	Description
<b>Budget Type</b>	This field shows the type of the budget.
<b>Revision No.</b>	This field shows the budget's current revision number.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	Enter text for a description of the time budget line.
<b>External Description</b>	Enter text to be transferred to job quotes and used instead of the internal description on the time budget line.
<b>Line Type</b>	<p>Select the line type: Sum/Text or Time.</p> <ul style="list-style-type: none"> <li>Sum/Text — If you select this value, you can use the current line as a text line, adding a line of text to the budget, or as a sum line. A sum line functions as grouping level when you use a work breakdown structure. In both cases, you cannot specify a reference to an activity or task on the line, and you cannot mark the line as a milestone.</li> <li>Time — If you select this value, Maconomy uses the current line to specify a time activity. The activity number changes to the activity that the Default Time Activity job parameter attribute of the Budgeting type specifies.</li> </ul>
<b>Remarks 1</b>	Enter any additional information as remarks.
<b>Task</b>	Enter the task that is related to the time budget line. You cannot enter a task that overwrites the activity with an amount activity.

Field	Description
<b>Task Description</b>	This field shows the description of the task that is related to the time budget line.
<b>Activity No.</b>	Enter the activity number that is related to the time budget line. You can only enter time activities.
<b>Activity Name</b>	This field shows the name of the activity that is related to the time budget line.
<b>Employee Category No.</b>	This field shows the employee category number that is related to the budget line.
<b>Employee No.</b>	This field shows the employee number that is related to the budget line.
<b>Quantity</b>	This field shows the total quantity on the budget line. If you selected Time Budget in Days for the job, this quantity appears in days; otherwise, it is the number of hours. If you change this value, the value of the field Not Allocated also changes.
<b>Quantity, Days</b>	This field only applies to time activities. The field shows the number of days budgeted for the current job budget line.

## Amount Budgets Single Dialogs Workspace

Use this workspace to estimate amount activities for a given budget type.

The Job Budget Lines sub-tab displays amount-related lines and is identical to the Job Budgets workspace, except for the fields that are related to lines with time activities.

### Amount Budgets Tab

This section includes the fields and descriptions for the Amount Budgets tab.

#### Job Island

Field	Description
<b>Job No.</b>	This field displays the job number.
<b>Closed</b>	This check box is selected if the job is closed.

#### Budget Island

Field	Description
<b>Budget Type</b>	This field displays the budget type.

Field	Description
<b>Revision No.</b>	This field displays the current revision number of the budget.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays the name of the user who submitted and the submission date, if the budget has been submitted.
<b>Approved</b>	This field displays the name of the user who approved and the approval date, if the budget has been approved.
<b>Reopened</b>	This field displays the name of the user who reopened and the reopening date, if the budget has been reopened.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	Enter text for a description of the amount budget line.
<b>Line Type</b>	<p>Select the type of the current job budget line. This field must have a value. In the card part, the Default Line Type field in the Line Creation island defines the default value of this field; this value is automatically suggested when you create the line. You can select a different value. Values are:</p> <ul style="list-style-type: none"> <li>■ <b>Outlay</b> — If you select this value, Maconomy uses the current line to specify an outlay activity. The activity number changes to the activity that the Default Outlay Activity job parameter attribute of the type Budgeting specifies.</li> <li>■ <b>Sum/Text</b> — If you select this value, you can use the current line as a text line, adding a line of text to the budget, or as a sum line. A sum line functions as grouping level when you use a work breakdown structure. In both cases, you cannot specify a reference to an activity or task on the line, and you cannot mark the line as a milestone.</li> </ul>
<b>Task</b>	Enter the task that is related to the amount budget line.
<b>Quantity</b>	Enter the budgeted quantity for the line.
<b>Activity No.</b>	Enter the activity number that is related to the amount budget line. You can only enter amount activities.
<b>Cost, Base</b>	Enter the budgeted cost of the job in the job's base currency. Maconomy converts the amount to the job's currency using the sales currency table. If

Field	Description
	you specified fixed exchange rate information for the job, Maconomy uses the exchange rate table specified in the Job Price Information window. Otherwise, Maconomy uses the exchange rate table from the System Information window in the Set-Up module.
<b>Billing Price, Curr.</b>	Enter the budgeted billing price in the job's currency of one unit of the activity on the budget line.
<b>Markup %</b>	<p>If you have access to cost information, this field displays the markup percentage. Otherwise, it displays 0.</p> <p>You can edit this value if the budget is open and your access privileges allow you to change cost prices.</p>
<b>Line Specific Billing Price</b>	<p>If the current job is set up for price control from budgets, this field indicates if the billing price differs from the price originally derived from the employee category on the current line. If the line is not marked, the price is the original price. If you change the billing price (for time activities) or markup percentage (for amount activities) on the line, Maconomy marks the field, and the underlying job specific price list line is updated.</p> <p>You can mark the field manually to specify that the current price is just the price you want, and that changes in the Employee Category Prices island should not be reflected on this line. If you mark the field on the only line in the budget referring to a certain employee category, Maconomy removes the employee category in question from the Employee Category Prices island.</p> <p>If you remove the mark, Maconomy replaces the current billing price with the original price from the employee category, and the employee category appears in the Employee Category Prices island (if it was not there already).</p> <p>If prices are not controlled from the budget, or if the current budget type is not the price controlling budget type, this field is always unmarked.</p>
<b>Total Cost, Base</b>	<p>This field displays the total estimated cost in base currency for the budget line. Maconomy calculates the total cost by multiplying the number in the Quantity field by the cost per piece in the Cost field. You can also choose to enter a total in this field. Maconomy then calculates the unit price in the field Cost, Base as the total cost price divided by the figure in the Quantity field.</p> <p>If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0, and you cannot change the value.</p>
<b>Total Billing Price, Currency</b>	This field displays the budget lines total budgeted billing price in the job currency. Maconomy calculates the total billing price by multiplying the number in the Quantity field by the billing price per piece in the Billing Price, Currency field. Billing prices are totaled in the card part of the window, and Maconomy alerts you if the grand total exceeds the billing price budget limit, which is entered in the Limit field in the Budget island.

Field	Description
<b>Purchase Currency</b>	<p>In this field, you can select a currency. Depending on whether you have entered the cost in base currency or in another currency, the value is calculated in the Cost, Base field or in the Cost, Purchase Currency field by means of this currency. If another currency is subsequently selected, the value in the Cost, Purchase Currency field is then recalculated.</p> <p>If the job budget is structured hierarchically, selecting a purchase currency on a group header line makes it possible to see the total purchase amount for the subordinate lines in a specific currency.</p>
<b>Cost, Purchase Currency</b>	<p>Enter the cost in the currency selected in the Purchase Currency field. If you enter a value here, Maconomy calculates the value in the Cost, Base field. If you enter a value in the Cost, Base field, Maconomy displays the calculated cost in this field. You cannot enter values in both of these fields at the same time.</p> <p>If the "Update prices upon dimension change" system parameter was marked, Maconomy updates the price in this field when certain key information on the line is changed, such as the activity, employee, or dimension values.</p> <p>If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0, and you cannot change the value.</p> <p>Maconomy multiplies the cost in this field by the value in the Quantity field, so that the total cost is calculated in the Total Cost, Purchase Currency field.</p> <p>If purchase order lines have been created from the current line, and you decrease the amount in this field, Maconomy checks whether the new amount causes budget violations according to the rules set up in the job parameter attributes Limit Purchase Amount to Budget; Limit Purchase on Sum or Line Level; Limit Purchase, Currency Margin; and Limit Purchase, Percentage Margin for the job. If the change causes a budget violation, Maconomy displays an error message.</p>
<b>Total Cost, Purchase Currency</b>	<p>This field displays the total budgeted cost in the current job's currency. Maconomy calculates the total cost price by multiplying the value of the Quantity field by the cost per unit in the Cost, Purchase Currency field.</p> <p>You can also choose to enter a value in this field. Maconomy then calculates the unit price in the Cost, Purchase Currency field as the total cost price divided by the value in the Quantity field.</p> <p>If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0, and cannot change the value.</p>
<b>Billing Price, Purchase Currency</b>	<p>Use this field to enter the billing price in another currency than the job's currency. Maconomy uses the currency specified in the Purchase Currency field for converting the amount to the job currency, using the current exchange rate table for purchase at the time of entry. If you change the currency later, Maconomy recalculates the value of this field.</p>

Field	Description
<b>Total Billing Price, Purchase Currency</b>	This field displays the total sales price in purchase currency, that is, the Billing Price, Purchase Currency field multiplied by the number in the Quantity field.
<b>Cost Type</b>	This field displays the cost type selected for the current activity in the Activities window: Turnover or Outlays. Maconomy deducts the sum of activities of the type Outlays from the calculation of the gross margin percentage of a job.
<b>Incl. in Fixed Price</b>	<p>Select this check box to include the entry that applies to the line in the fixed price of a job. The set-up of the job determines whether or not this field is automatically selected when a line is created. You can select or deselect this field manually.</p> <p>If a fixed-price job or a time-and-material job is assigned the job parameter attribute "Fixed Price Basis with the value Budget, the value of this field determines which budget lines are included in the fixed quote price of a job and which entries are not included in the fixed quote price of a job.</p>
<b>Deliv. Remarks</b>	Enter delivery remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field displays the amount from the Billing Price, Currency field on the current budget line converted to the base currency.
<b>Total Billing Price, Base</b>	This field displays the amount from the Billing Price Total, Currency field on the current budget line converted to the base currency.
<b>Standard Billing Price, Base</b>	This field displays the standard billing price per unit in the base currency of the company. If you change the value in the Billing Price, Purchase Currency field or the Billing Price, Currency field, this value can only change if the standard billing price is calculated as a standard markup percentage.
<b>Total Standard Billing Price, Base</b>	This field displays the total standard billing price of the current budget entry in the base currency of the company.
<b>Vendor</b>	<p>Enter the number of a vendor if the activity on the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.</p> <p>This field is used to select which vendor does any external work for you in connection with the job. If you enter a number, Maconomy automatically marks the field Selected, and when you remove the number, the mark is removed. When you select Create Requisitions or Create Purchase Order in the Action menu, Maconomy automatically creates a requisition or purchase order to correspond to the budget line. You can edit the requisition or purchase order in the Requisition and Purchase Orders windows, respectively, in the Accounts Payable module. When you create a purchase</p>

Field	Description
	<p>order from a budget line, the purchase order number is displayed in the Last Purchase Order No. field on the budget line.</p> <p>If you assign items to a job budget line in the Job Budget Item Lines window on which this field has a value, Maconomy retrieves the item's budgeted cost from the vendor's purchase price list. This requires that there is a purchase price list for the vendor and that the item is in that list. However, Maconomy only retrieves prices when creating purchase orders, not requisitions.</p>
<b>Vendor Name</b>	This field displays the first line of the name of the vendor whose number is entered in the Vendor field. You cannot change the name here.
<b>Your Reference</b>	<p>Enter the reference person used on purchase orders that are created from the current budget line. You can only enter a reference person if the field Cust. No. has a value.</p> <p>When you enter or change the value of the Cust. No. field, Maconomy transfers the value from the corresponding field on the vendor information card with the current vendor number. You can then manually change the field value. Maconomy transfers the contact person to the corresponding field on purchase orders that are created when you use the action Create Purchase Orders.</p>
<b>Create Sales Order</b>	Select this check box to have Maconomy create sales order lines for items and text lines that are assigned to the budget line in the Job Budget Item Lines window when you use the Transfer to Sales Order action. You can only select this check box if the activity is an amount activity. You can edit and process the sales order lines processed in the Sales Orders window in the Sales Orders module.
<b>Selected</b>	<p>Select this check box to have Maconomy create a requisition or purchase order line for the budget line when you use the Create Requisitions or Create Purchase Orders action, respectively.</p> <p>You can only select this check box if the activity is an amount activity and if you entered a vendor number on the line. You can edit and process requisitions and purchase orders that you create here in the Requisitions and Purchase Orders windows, respectively, in the Accounts Payable module.</p>
<b>Currency, Purchase Creation</b>	Select the currency to transfer to requisitions and purchase orders that are created based on the budget line. If you do not select this check box, Maconomy uses the currency that you specified on the vendor's information card. When you create a requisition or purchase order, Maconomy changes the value in this field from blank to the vendor's currency.
<b>Number of Purchase Orders</b>	This field displays the number of purchase orders that have been made based on this budget line, regardless of the method you used to create the purchase orders. You can create purchase orders on the basis of a budget line by using the Create Purchase Order action when the field Selected is marked on the line in question. You can repeat this any number of times to create multiple purchase orders. You can also create purchase orders by creating a purchase order from a requisition that was created on the basis of

Field	Description
	the line or by converting a request to quote assigned to a requisition based on the budget line to a purchase order.
<b>Number of Requisitions</b>	This field displays the number requisitions that have been made based on this budget line. You can create requisitions on the basis of a budget line by using the Create Requisition action when the Selected field is marked on the line in question. You can repeat this any number of times to create multiple requisitions.
<b>Last Purchase Order No.</b>	<p>This field displays the number of the last purchase order that was created based on the current line, regardless of the method that you use to create the purchase order. You can create purchase orders based on a budget line by using the Create Purchase Order action when the Selected field is marked on the line in question, or by creating a purchase order from a requisition that was created based on the line. You can also create purchase orders by converting a request to quote assigned to a requisition based on the budget line to a purchase order.</p> <p>Note that purchase orders that you create in the Purchase Orders window in the Accounts Payable module and manually assign to a job there are not displayed in this field.</p> <p>If the last purchase order is deleted, this field is blank.</p>
<b>Purchase Order Total</b>	This field displays the sum of the purchase order lines that you created based on the budget line. When you create a purchase order based on the current budget line, Maconomy calculates the sum of this purchase order line as the total budgeted cost on the budget line sum less the sum of previously created purchase order lines. If this is a negative amount, the amount on the purchase order line is set at 0.
<b>Exec. Company No.</b>	This field displays the number of the company that is performing out the specified activity. You cannot change the value of this field.
<b>Exec. Company Name</b>	This field displays the executing company's name.
<b>Location</b>	<p>Enter a value for the dimension Location. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the "Update prices upon dimension change" system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the Line Specific Billing Price field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p>

Field	Description
	<p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the Recalculate Job Budget action.</p>
<b>Entity</b>	<p>Enter a value for the dimension Entity. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Project</b>	<p>Enter a value for the dimension Project. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific.</p>

Field	Description
	To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.
<b>Purpose</b>	<p>Enter a value for the dimension Purpose. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Spec. 1 – 3</b>	<p>Enter a value for the dimensions Spec. 1 - 3. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Local Spec. 1 – 3</b>	Enter a value for the dimensions Local Spec. 1 - 3. If you do not manually enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L

Field	Description
	<p>module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Net Cost, Base</b>	Enter the budgeted net cost of the job in the job’s base currency.
<b>Tax Code</b>	This field displays a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Name</b>	This field displays the text defined for the current activity. Maconomy suggests this text as entry text when you create a line in this window. You can change the entry text; it is then displayed in the Description field in the table part of the window.
<b>Task Description</b>	This field displays the text defined for the current task, if you entered a description in the Task field.
<b>Job Budget Text</b>	This field displays whether text lines are assigned to the current line. You can assign text lines to a job budget line in the Job Budget Texts window.
<b>Standard Billing Price, Currency</b>	<p>This field displays the standard billing price per unit in the job’s currency.</p> <p>If the “Update prices upon dimension change” system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the “Update prices upon dimension change” system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the “Recalculate Job Budget” action.</p>

Field	Description
<b>Total Standard Billing Price, Currency</b>	This field displays the standard billing price per unit in the job's currency. If the "Update prices upon dimension change" system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields that cause the price to be updated, see the description of the "Update prices upon dimension change" system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the "Recalculate Job Budget" action.
<b>Remarks 1-10</b>	Use these fields, to assign remarks to the current job budget line. These remarks are for information only and can be used in reports.
<b>Quantity Planned</b>	This field displays the number of hours that have been planned so far for the job budget line in question in the Detailed Planning window in the Resource Planning module.
<b>Changed in Revision No.</b>	This field displays the number of the job budget revision in which the current line was last changed.

## Actions

This section shows the Actions available in the Amount Budgets workspace.

### Top Tab

Field	Description
<b>Create Requisitions</b>	<p>When you use this action, Maconomy automatically creates requisitions for those amount activities in the job budget that have a vendor number and for which the field Selected is selected. A requisition is an internal request for the approval of purchase of services. This means that you can use this action to create requisitions that the person or department responsible for approving purchases can evaluate and approve, and this person or department can then, based on the input from the requisition, place the necessary orders with the relevant suppliers by means of a purchase order. You can only use this action if the budget displayed in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy creates a requisition for each combination of vendor and purchase order currency specified on the marked lines, and each of the requisitions is assigned to a separate, new purchase process (see Purchase Processes in the A/P module). Maconomy uses the earliest date in the Planned Starting Date field on lines that have the same combination of vendor and currency as the preferred delivery date in the card part of the resulting requisition. If there is no planned date, Maconomy uses today's date. You can edit requisitions in the Requisitions window in the Accounts Payable module.</p> <p>When you create requisitions, Maconomy updates the Number of Requisitions field on the budget lines.</p>

Field	Description
	<p>Maconomy retrieves information such as payment terms and delivery mode from the vendor information card in the A/P module.</p> <p>Maconomy takes the currency of each requisition from the Currency, Purchase Creation field on the budget lines resulting in the requisition in question. If this field is blank, Maconomy takes the currency from the vendor's information card. If you specified fixed exchange rate information for the job in the Job Price Information window, Maconomy applies the specified fixed exchange rate information, but only if the Fixed exchange rates in budgets only system parameter is not marked.</p> <p>If you assigned texts to the job budget lines in the Job Budget Texts window, and if you selected the Text Lines for Purchase field in the Job Information window, Maconomy transfers the texts to the relevant purchase orders.</p>
<b>Create Purchase Orders</b>	<p>When you use this action, Maconomy automatically creates purchase orders for those amount activities in the job budget that have a vendor number and for which the Selected field is selected. A purchase order is an order for the vendor service described by the budget line's amount activity. The amount on the purchase order line is the cost sum on the budget line less the sum of previously created purchase order lines. If this amount is negative, the amount on the purchase order line is 0. You can only use this action if the budget shown in the window is the current one, and if the job in question has not been blocked.</p> <p>Maconomy checks that none of the lines selected for purchase order creation causes budget violations according to the rules set up in the Limit Purchase Amount to Budget; Limit Purchase on Sum or Line Level; Limit Purchase, Currency Margin; and Limit Purchase, Percentage Margin job parameter attribute for the job. If just one line causes a budget violation, the action is cancelled for all lines, including lines that do not cause any budget violations. Budget violations can occur if purchase orders already exist for the lines, and the new purchases combined with existing purchases cause the budgeted amount to be exceeded. For further information, see the descriptions of these attributes in the Budgeting job parameter.</p> <p>Maconomy creates a purchase order for each combination of vendor and purchase order currency specified on the marked lines, and Maconomy assigns each of the purchase orders to a separate, new purchase process (see Purchase Processes in the A/P module). Maconomy uses the earliest date in the Planned Starting Date field on lines that have the same combination of vendor and currency as the preferred delivery date in the card part of the resulting purchase order. If there is no planned date, Maconomy uses today's date. You can edit purchase orders in the Purchase Orders window in the Accounts Payable module.</p> <p>When you create purchase orders, Maconomy updates the Number of Purchase Orders and Purchase Order Total fields on the budget lines. Maconomy then displays the purchase order number in the Last Purchase Order No. field on every budget line.</p>

Field	Description
	<p>Maconomy retrieves information such as payment terms and delivery mode from the vendor information card in the A/P module.</p> <p>Maconomy takes the currency of each purchase order is taken from the Currency, Purchase Creation field on the budget lines, resulting in the purchase order in question. If this field is blank, Maconomy takes the currency from the vendor's information card. If you specified fixed exchange rate information for the job in the Job Price Information window, Maconomy applies the specified fixed exchange rate information, but only if the Fixed exchange rates in budgets only system parameter is not marked.</p> <p>If you assigned texts to the job budget lines in the Job Budget Texts window, and if you marked the Text Lines for Purchase field in the Job Information window, Maconomy transfers the texts to the relevant purchase orders.</p>
<b>Transfer to Sales Order</b>	<p>When you use this action, Maconomy automatically creates sales order lines for job budget item lines, which are assigned to job budget lines marked in the Create Sales Order field. Maconomy also transfers text lines that you created in the Job Budget Item Lines window. If you previously created a sales order line for a job budget item line, Maconomy does not process it again.</p> <p>Maconomy adds the order lines to a sales order for the job. If such an order does not exist, Maconomy automatically creates a sales order for the job with the Invoice in Job Cost field selected. If there is more than one order assigned to the job, Maconomy chooses the order with the highest order number.</p> <p>If you selected the New Order when Transf. to Sales field in the System Information window in the Set-Up module, Maconomy always creates an order when you use the action Transfer to Sales Order.</p> <p>When you create sales order lines on the basis of job budget item lines, Maconomy copies the budgeted billing price to the order line. If you want Maconomy to recalculate this price before it is transferred, use the Recalculate Prices action in the Job Budget Item Lines window.</p> <p>You cannot select this action if the current job has been closed. However, you can reopen a job using the Reopen Job action in the window Jobs.</p>

## Job Budget Time Details Single Dialogs Workspace

Use this workspace to view the price breakdown for a given budget time line.

When you add hours in the budget matrix, Maconomy creates lines in this workspace. You can adjust details about the hours and prices.

## Job Budget Time Details Tab

This section includes the fields and descriptions for the Job Budget Time Details tab.

### Job Budget Island

Field	Description
<b>Job Number</b>	This field shows the job number and name.
<b>Budget Type</b>	This field shows the budget type.
<b>Revision No.</b>	This field shows the revision number of the job budget to which the current job budget line pertains. You can only create or change job budget texts in the latest revision of the job budget.

### Budget Line Island

Field	Description
<b>Description</b>	This field shows a description for the budget line.
<b>Remarks 1</b>	This field shows any remark for the budget line.
<b>Task</b>	This field shows the task that is on the budget line.
<b>Activity No.</b>	This field shows the number of the activity that is on the budget line.

## Time Budget Resources Sub-Tab

This section includes the fields and descriptions for the Time Budget Resources sub-tab.

Field	Description
<b>Heading</b>	This field shows the heading for the time estimate category entered in the time estimate categories window.
<b>Employee Category No.</b>	This field shows the employee category number.
<b>Employee Category Name</b>	This field shows the employee category name associated with the employee category number shown above. Employee No. This field shows the employee number.
<b>Employee Name</b>	This field shows the name of the employee associated with the employee number.

Field	Description
<b>Quantity</b>	This field shows the budgeted quantity for the line
<b>Cost, Base</b>	This field contains the expected cost of the job in base currency at the time when the revision was created.
<b>Markup %</b>	If you have access to cost information, this field shows the markup percentage. Otherwise, it shows 0.
<b>Billing Price, Currency</b>	This field contains the expected billing price of the job in base currency at the time when the revision was created.
<b>Billing Price, Base</b>	This field shows the billing price of the job budget line in the base currency. It is the sum of the billing prices on the item lines in the window. It cannot be changed here.
<b>Total Cost, Base</b>	This field shows the total cost of the current job budget item line in base currency. The total cost is calculated as the cost multiplied by the value in the field "Quantity" specified on the line.
<b>Total Billing Price, Currency</b>	This field shows the budget line's total budgeted billing price in the job currency.
<b>Total Billing Price, Base</b>	This field displays the amount from the Billing Price Total, Currency field on the current budget line converted to the base currency.
<b>Standard Billing Price, Currency</b>	This field shows the standard billing price per unit in the currency of the job
<b>Standard Total Billing Price, Currency</b>	This field shows the total standard billing price in job currency.
<b>Standard Billing Price, Base</b>	This field shows the total budgeted standard billing prices in the company's base currency at the time when the revision was created.
<b>Standard Total Billing Price, Base</b>	This field shows the total standard billing price in job base currency.
<b>Quantity, Days</b>	This field only applies to time activities. The field shows the number of days budgeted for the current job budget line.
<b>Cost Per Day, Base</b>	<p>If you have access to cost information, this field shows the cost price per day in base currency. Otherwise, it shows 0.</p> <p>You can edit this value if the budget is open, and your access privileges allow you to change cost prices.</p>

Field	Description
<b>Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the billing price per day budgeted for the current job budget line. The value is based on the value in the field "Billing Price, Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Billing Price per Day, Base</b>	This field only applies to time activities. The field shows the billing price per day budgeted for the current job budget line. The value is based on the value in the field "Billing Price, Base" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Standard Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the standard billing price per day per unit in the currency of the job. The value is based on the value in the field "Standard Billing Price, Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Standard Billing Price Per Day, Base</b>	This field only applies to time activities. The field shows the standard billing price per day per unit in the base currency of the job. The value is based on the value in the field "Standard Billing Price, Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."

## Time Budget Resources Single Dialogs Workspace

Use this workspace to predefine employee and/or employee category resources that can be budgeted hours in the Job Budget Time Details workspace for the job.

### Time Budget Resources Tab

This section includes the fields and descriptions for the Time Budget Resources tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the job number and name.
<b>Closed</b>	If this field is marked, the job was closed at the time when the revision was created.

## Time Budget Resources Sub-Tab

This section includes the fields and descriptions for the Time Budget Resources sub-tab.

Field	Description
<b>Employee Category No.</b>	Enter an employee category number to be displayed in the Time Estimating window. You can specify a combination of employee and employee category only once. You can only change the employee category if the time budget category is not used in the latest revision of any budget.  If you selected the system parameter Empl. Cat. On job budgets required, you must provide a value for the Employee Category field.
<b>Empl. Cat. Name</b>	This field shows the employee category name that is associated with this employee category number.
<b>Employee No.</b>	Enter the number of an employee to be displayed in the Time Estimating window.  If you entered an employee category, you can only enter employee numbers for those employees who have that employee category.  You can only change the employee number if the time budget category is not used in the latest revision of any budget.  If you did not enter an employee category, you must enter an employee number.
<b>Empl. Name</b>	This field shows the employee's name.
<b>Heading</b>	This field shows the title that is displayed in the Time Estimate Window. The default title is constructed from the employee category name and the employee name. You can edit this value.

## Actions

This section shows the Actions available in the Time Budget Resources workspace.

### Top Tab

Field	Description
<b>Copy resources from Job Employees</b>	Use this action to create a category for each employee specified in the Employee Control window.

## Job Budget Texts Single Dialogs Workspace

Use this workspace to assign a number of text lines to a job budget line.

If you select the **Text Lines for Purchase** field in the Job Information workspace, Maconomy transfers these lines to requisitions and purchase orders that you create in the Job Budgets

workspace using the Create Requisitions and **Create Purchase Orders** actions, respectively. If you select the **Incl. Text Lines** field in the Quote island of the invoice layout rule that you assigned to the current job, Maconomy transfers the lines to the Quote Editing workspace when you use the **Transfer to Quote** and **Print Quote** actions in the Job Budgets workspace.

You can assign job budget texts to the latest revisions of a job budget that you have not yet approved. If you assign texts to a submitted budget, Maconomy displays a warning. If you continue, the budget status changes to Not Submitted.

To save time entering data, you can create standard texts in the Standard Job Budget Texts workspace. Retrieve these texts if you have not entered texts for a budget line, and edit the standard text to fit the budget line.

## Job Budget Texts Tab

This section includes the fields and descriptions for the Job Budget Texts tab.

### Budget Line Island

Field	Description
<b>Job</b>	This field shows the number and name of the budget the job budget line belongs to. You cannot change it here.
<b>Budget Type</b>	This field shows the budget type of the job budget.
<b>Revision No.</b>	This field shows the revision number of the job budget to which the current job budget line pertains. You can only create or change job budget texts in the latest revision of the job budget.
<b>Line No.</b>	This field shows the line number in the job budget. If the job budget is arranged hierarchically, the line number indicates the position of the line in the hierarchy using a decimal separated number, for instance 1.7 or 2.5.3.
<b>Description</b>	This field shows the description of the budget line. The value in this field is transferred from the field "Description" on the job budget line.

### Get Standard Job Budget Text Island

Field	Description
<b>Name</b>	In this field, you enter the name of the standard job budget text you wish to assign to the budget line. It will only be retrieved if you have not already entered a text. You can only specify texts created in the window Standard Job Budget Texts.

## Job Budget Text Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Text Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you can enter a text to be assigned to the budget line in the window Job Budgets which is specified in the field "Line No." in the card part of this window.
<b>Changed in Revision No.</b>	This field shows the number of the revision in which the current job budget line was last changed.

## Job Budget Item Lines Single Dialogs Workspace

Use this workspace to assign items from the Inventory module to a job budget, thus combining item sales with the entry of job cost activities.

First, you create a number of job budget lines on a given job in the Job Budgets workspace. Next, you assign items to each job budget line that has an amount activity. You assign items to a budget line in this workspace by making sure that the correct budget line is shown in the Job Budget Item Lines tab and adding the appropriate item lines in the Job Budget Item Lines sub-tab. Thus, the prices on the item lines are included in the calculation of the total budget.

Later in the process, you can use these item lines for creating sales orders.

Maconomy uses the principles from the Sales Orders workspace to calculate the budgeted billing price of item lines that you create in this workspace.

The budgeted cost is the item's cost in the related warehouse according to the cost method at the time of the budget. However, if you entered a vendor on the job budget line, then there is a purchase price list and Maconomy takes the budgeted cost from this price list. Since prices change over time, you can recalculate the budgeted prices according to these methods by using the **Recalculate Prices** action.

Create text lines as needed to enter more information about an item line in a budget (lines on which you do not enter an item number). Maconomy also transfers text lines to the sales order when you use the **Transfer to Sales Order** action in the Job Budgets workspace.

After you close a job, you cannot create additional job budget item lines on that job. However, you can reopen a job for entry by using the **Reopen Job** action.

You can assign job budget item lines to the latest revision of a job budget, but only if the budget has not been approved. If you assign item lines to a submitted budget, Maconomy displays a warning. If you continue, the budget status changes to Not Submitted.

You cannot assign bills of materials that are yet to be specified to job budgets in this workspace. Before you assign items to a job budget line, the quantity must be one, and both cost and billing price must be zero.

## Job Budget Item Lines Tab

This section includes the fields and descriptions for the Job Budget Item Lines tab.

## Job Budget Island

Field	Description
<b>Job</b>	This field shows the job number and name of the job to which the current job budget line belongs.
<b>Budget Type</b>	This field shows the budget type of the current job budget line. The value is transferred from the window Job Budgets and it cannot be changed here.
<b>Revision No.</b>	This field shows the revision number of the job budget to which the current job budget line pertains. You can only create or change job budget texts in the latest revision of the job budget.
<b>Job Budget Line No.</b>	This field shows the line number of current the job budget line. If the job budget is arranged hierarchically, the line number indicates the position of the line in the hierarchy using a decimal separated number, for instance 1.7 or 2.5.3.
<b>Activity No.</b>	This field shows the activity number for the current job budget line.
<b>Employee No.</b>	This field shows the employee number of the employee assigned to the job budget line, if applicable.
<b>Name</b>	This field shows the name of the employee shown in the field "Employee No."
<b>Date</b>	This is the date of the job budget line. When you create a new line in the table of this window, this date is copied to the "Delivery Date" field on the line.
<b>Delivery Remarks</b>	This field shows the delivery remark entered on the current job budget line in the window Job Budgets. If no remark has been entered in the window Job Budgets, the field is blank. When you create a new line in the table part of this window, the value in this field is automatically suggested in the corresponding field on the new line.
<b>Description</b>	This field shows the description of the current job budget line.
<b>Create Sales Order</b>	This field shows whether the job budget line is marked for transfer to a sales order from the Job Budgets window.

**Price Island**

Field	Description
<b>Cost, Base</b>	This field shows the cost of the job budget line. It is the sum of the costs on the item lines in the table. It cannot be changed here.
<b>Billing Price, Curr.</b>	<p>This field shows the billing price of the job budget line in the job's currency. It is the sum of the billing prices on the item lines in the window. It cannot be changed here.</p> <p>Please note that even if fixed exchange rate information has been specified for the job in the window Job Price Information, this information is not used in this window as the prices in this field relate to items in the Inventory module.</p>
<b>Billing Price, Base</b>	This field shows the billing price of the job budget line in the base currency. It is the sum of the billing prices on the item lines in the window. It cannot be changed here.
<b>Markup %</b>	<p>If you have access to cost information, this field displays the markup percentage. Otherwise, it displays 0.</p> <p>You can edit this value if the budget is open and your access privileges allow you to change cost prices.</p>

**Company Island**

Field	Description
<b>Company</b>	This field shows the number and name of the company responsible for the current job. The value cannot be changed here. For more information, please see the description of the field "Company No." in the window Jobs.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

## Job Budget Item Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Item Lines sub-tab.

Field	Description
<b>Item No.</b>	<p>In this field, you enter the number of the item you expect to use for the activity. Maconomy verifies that the item number exists, and that the item is not discontinued. If the item is discontinued, Maconomy checks if the warehouse assigned to the job's responsible company contains the sufficient number of units.</p> <p>You cannot enter bills of materials that are to be specified.</p> <p>If you do not enter a value in this field, the line is considered a text line. You can use text lines to specify further information about an item line in a</p>

Field	Description
	budget. Text lines are also transferred to the sales order when the action "Transfer to Sales Order" is selected in the window Job Budgets.
<b>Quantity</b>	In this field, you enter the quantity of units of the item which you expect to use for the current activity. If you later change the quantity in this field, you should select the action "Recalculate Prices" to recalculate any quantity discount defined in the current price list.
<b>Unit</b>	In this field, you can choose the unit of the item. Maconomy suggests the value from the inventory the item is in, retrieving it from the Item Information Card, but you can change it.
<b>Description</b>	This is the item text from the "Description Lang. 1" field in the Item Information Card. You can change it. If the current line is a text line, enter the text here and leave the remaining fields on the line blank.
<b>Cost, Base</b>	This is the item's budgeted cost in base currency. It is the item's cost specified in the current warehouse according to the cost method at the time of the budget, unless you have entered a vendor on the job budget line, for which there is a purchase price list, which includes the given item. In this case, the budgeted cost is taken from the price list. If no units of the item have been purchased for the warehouse in question before, or if the cost relevant to the selected costing method is 0, the standard cost of the item specified in the relevant warehouse is used. When the items are priced, the delivery date entered on the line is used as reference to the valid edition of the price list at the time of delivery.
<b>Total Cost, Base</b>	This field shows the total cost of the current job budget item line in base currency. The total cost is calculated as the cost multiplied by the value in the field "Quantity" specified on the line.
<b>Billing Price, Curr.</b>	This is the budgeted billing price in the job's currency. It is calculated in the same way as in the Sales Orders window. For the same reason, currency amounts are not converted according to the fixed exchange rate information that may have been specified for the current job. Please note that when items are assigned to a job budget line, the standard billing price on the budget line is set to equal the billing price. This way, job budget items do not influence the write up/write down of the budget.
<b>Extended Price, Currency</b>	This is the extended price, found by multiplying the units with the billing price. It is in the job's currency.
<b>Extended Price, Base</b>	This is the extended price in the base currency.
<b>Deliv. Date</b>	In this field, you enter the expected delivery date for the item. This field must be completed. When you create a new item line, Maconomy suggests the date from the job budget line.

Field	Description
<b>Deliv. Remarks</b>	In this field, you can enter remarks about the delivery of the item in question. When you create a new item line, the remarks are transferred from the delivery remarks field on the current job budget line to this field.
<b>External Desc.</b>	This is an item for the item. The text is taken from the Item Information Card in the Inventory module from one of these three fields: "Description Lang. 1," "Description Lang. 2" or "Description Lang. 3" depending on whether the case is assigned to the first, second or third language in the list of language codes. The text can be changed here.
<b>Internal Desc.</b>	This is the internal text entered in the Item Information Card. It can be changed here.
<b>Location</b>	<p>In this field, you can enter a value for the dimension Location. If you do not manually enter a value, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. However, any manually entered value will be overwritten if Maconomy can derive a value for which overwriting has been selected. If no value can be derived, Maconomy transfers the value from the field "Location" in the card part of the window, and if no value has been entered in the card part, the standard value is transferred from the window System Parameters in the Set-Up module.</p> <p>See the section on dimension derivation in the chapter "Introduction to the G/L module" as well as the description of the window Dimension Derivation for further information about dimension derivation.</p>
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Qty. Transf. to Sales Order</b>	This shows the number of units for which you have made order lines in the Job Budgets window. The order lines themselves can be viewed in the window Sales Orders in the Sales Orders module. If the number is different from zero, you will not be able to create new order lines from the line.
<b>Text Line Transf. to Sales Order</b>	This field only applies to text lines. The field is automatically marked when the current line is transferred to a sales order, using the action "Transfer to Sales Order" in the window Job Budgets. If you change the text on a text line which has already been transferred to a sales order, Maconomy issues a warning and unmarks the field. Note that the sales order is not updated until you transfer the line again.

Field	Description
<b>Changed in Revision No.</b>	This field shows the number of the job budget revision in which the current line was last changed.

## Actions

### Top Tab

Field	Description
<b>Recalculate Prices</b>	<p>Since cost and billing prices can change over time, Maconomy lets you recalculate the budgeted prices on the individual item lines.</p> <p>The budgeted billing price is calculated according to the same principles as for order lines in the Sales Orders window. The budgeted cost is the item's cost in the relevant warehouse according to the cost method at the time of the budget, unless you have entered a vendor on the job budget line, for which there is a purchase price list, which includes the given item. In this case, the budgeted cost is retrieved from the price list.</p>

## Job Budget Revisions Single Dialogs Workspace

Use this workspace to view all revisions of a job budget and see the changes that have been made to the budget over time.

You can see a full audit trail throughout the lifetime of a job budget. This workspace displays all of the locked revisions of the job budgets for those jobs to which you have access. In other words, this workspace displays all of the revisions that are older than the one that you can work on in the Job Budgets workspace.

You can print any revision of the job budgets.

When you create a revision of the budget (either manually or automatically by approving a job budget) Maconomy takes a snapshot of the budget. This workspace displays these snapshots. This workspace resembles the Job Budgets workspace, except that you cannot change any of the fields here except for the **Revision Code** and **Remarks 1-10** fields in the Revision island. The information in this workspace displays the job budget as it looked when you locked the revision and might not reflect the current contents of the job budget.

### Job Budget Revisions Tab

This section includes the fields and descriptions for the Job Budget Revisions tab.

#### Job Island

Field	Description
<b>Job No.</b>	This field shows the number of the job to which the budget applies.

Field	Description
<b>Job Name</b>	This field shows the job's name.
<b>Job Group</b>	This field shows the job group to which the job was assigned at the time when the revision was created.
<b>Status</b>	This field shows the status of the current job at the time when the revision was created. A job can either be "Quote" or "Order."
<b>Responsible</b>	This field shows the name of the employee who was responsible for the job at the time when the revision was created.
<b>Closed</b>	If this field is marked, the job was closed at the time when the revision was created.

**Customer Island**

Field	Description
<b>Cust. No.</b>	This is the number of the customer associated with the job (the ship-to customer) at the time when the revision was created.
<b>Name</b>	This is the first line of the ship-to customer's name, retrieved from the window Jobs.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays if the job budget was submitted at the time when the revision was created.
<b>Approved</b>	This field displays if the job budget was approved at the time when the revision was created.
<b>Reopened</b>	This field displays if the job budget was reopened at the time when the revision was created.

**Limit Island**

Field	Description
<b>Hours</b>	This field contains the approximate number of hours to be spent on the job at the time when the revision was created.
<b>Cost, Base</b>	This field contains the expected cost of the job in base currency at the time when the revision was created.
<b>Billing Price, Currency</b>	This field contains the expected billing price of the job in base currency at the time when the revision was created.

**Budget, Base Island**

Field	Description
<b>Hours</b>	The values in this island display the job budget in base currency at the time when the revision was created. For more information, please see the description of the window Job Budgets.
<b>Cost</b>	These fields display the budgeted cost of the job in the job's currency at the time when the revision was created.
<b>Billing Price</b>	These fields display the budgeted billing price of the job in the job's currency at the time when the revision was created.
<b>GM</b>	These fields show the job's budgeted gross margin (GM) in base currency at the time when the revision was created.
<b>GM %</b>	These fields show the job's budgeted gross margin percent (GM %) at the time when the revision was created.
<b>Time</b>	This field displays the total of the budgeted hours, costs, billing prices and gross margin, which were entered in the table part for time activities at the time when the revision was created.
<b>Amount</b>	This field displays the total of the budgeted costs and billing prices which were entered for amount activities in the table part at the time when the revision was created.
<b>Total</b>	This field displays the total of all the budgeted costs and billing prices entered in the table part of the window at the time when the revision was created.
<b>Hereof Outlays</b>	These fields show the budgeted costs for all amount activities, for which the cost type has been set to "Outlays." This means that the field only shows the cost part of the relevant outlays, whereas the below field "Excluding Outlays" also includes the gross margin from the outlay. For more information about outlay activities, please see the description of the window Activities.
<b>Excluding Outlays</b>	These fields show the sum of the budgeted prices for all activities in the table part of this window, less the cost price for any amount activities for which the cost type has been set to "Outlays." Furthermore, the resulting gross margin and GM % are shown excluding outlays.
<b>Total Per</b>	This field displays the unit given in the window Unit Analysis, as well as the values in the "Total" row, divided by the quantity given in the Unit Analysis island at the time when the revision was created.
<b>Limit</b>	This field displays a budget limit for the job which was entered at the time when the revision was created.
<b>Quote Price</b>	This field displays a quote for the entire job as it looked at the time when the revision was created.

**Budget, Currency Island**

The fields in this island correspond to the fields in the island Budget, Base. The only difference is that here the amounts are shown in the currency used on the job.

**Billing Price Deviations Island**

Field	Description
<b>Standard Billing Price, Base</b>	This field shows the total budgeted standard billing prices in the company's base currency at the time when the revision was created.
<b>Billing Price, Base</b>	This field shows the total budgeted billing prices in the company's base currency at the time when the revision was created.
<b>Budgeted Deviation</b>	This field shows the difference between the budgeted billing price and the standard billing price at the time when the revision was created. The amount in this field is the write-up or write-down of the budgeted billing price compared to the standard billing price. For more information about standard billing price, please see "Appendix A: Price Calculation in the Job Cost Module."

**Company Island**

Field	Description
<b>Company No.</b>	This field shows the number of the company responsible for the current job.
<b>Name</b>	This field shows the name of the company shown in the field "Company No." above.
<b>Base Currency</b>	This field shows the base currency of the company responsible for the current job.

**User Island**

See the chapter "Getting Started" for a description of the fields in the island User.

**Budget Type Island**

Field	Description
<b>Show Budget</b>	This field shows the budget type of the current revision of the job budget. The budget lines are shown in the table, and the sums are displayed in the Budget island.
<b>Current Budget</b>	This field shows which budget was the current budget for the job at the time when the revision was created.
<b>Forecast Budget</b>	This field shows which budget was the forecast budget for the job at the time when the revision was created.
<b>Planning Budget</b>	This field shows which budget was the planning budget for the job at the time when the revision was created.

**Revision Island**

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the job budget.
<b>Revision Code</b>	<p>In this field, you can enter a revision code to mark the current revision of the job budget in a certain way. The same revision code can only appear on one revision of a budget of a given type and for a given job.</p> <p>If you want to put restrictions to the texts entered in this field, the contents can be delimited by applying an option list to the revision code. Option lists are created in the window Option Lists in the Set-Up module and are subsequently specified in the attribute "Revision Code Option List" in the job parameter type "Job Text Option Lists" for the job in question. If you have specified an option list in the above-mentioned attribute, only values belonging to that option list can be entered in this field.</p>
<b>Remarks</b>	<p>If no values have been defined in the attribute "Revision Code Option List," you can enter any text you like in this field.</p> <p>In these fields, you can enter information about the current revision of the job budget.</p>

**Forecast Island**

Field	Description
<b>Probability %</b>	If the current job had a "Quote" status at the time when the revision was created, this field shows the probability percentage rating for the current job resulting in an order. If the job was on order, Maconomy automatically changed the value of this field to "100."

**Unit Analysis Island**

Field	Description
<b>Quantity</b>	If the job is for several similar units, for example, two advertisements, three houses or ten meters of cable, the quantity of these units can be given here. You can then use the Budget island in this window and the Summary island in the window Job Card to see the "Total" values per unit.
<b>Unit</b>	If there is a value in the "Quantity" field, you can enter the unit here.

**Description Island**

Field	Description
<b>Internal</b>	These fields show the internal description of the job, entered in the window Jobs, at the time when the revision was created.

Field	Description
<b>Ref.</b>	This is the reference from the "Ref." field in the window Jobs at the time when the revision was created.

### Settling Company Island

Field	Description
<b>Company No.</b>	This field shows the number of the settling company that applies to the current job.
<b>Name</b>	This field shows the name of the company shown in the field "Company No." above.

### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

For more information about the fields in the table part of this window, please see the description of the window Job Budgets.

Field	Description
<b>Description</b>	This field shows a text attached to the activity on quotes and order confirmations.
<b>Line Type</b>	<p>This field shows the line type: Sum/Text or Time.</p> <ul style="list-style-type: none"> <li>Sum/Text — If you select this value, you can use the current line as a text line, adding a line of text to the budget, or as a sum line. A sum line functions as grouping level when you use a work breakdown structure. In both cases, you cannot specify a reference to an activity or task on the line, and you cannot mark the line as a milestone.</li> <li>Time — If you select this value, Maconomy uses the current line to specify a time activity. The activity number changes to the activity that the Default Time Activity job parameter attribute of the Budgeting type specifies.</li> </ul>
<b>Task Name</b>	This field shows the task to which the job budget line may have been assigned.
<b>Empl. Cat. No.</b>	This field shows the number of employee category specified for the job budget line in question.
<b>Quantity</b>	This field shows the budgeted quantity for the line.
<b>Quantity, Days</b>	This field only applies to time activities. The field shows the number of days budgeted for the current job budget line.
<b>Act. No.</b>	This field shows the number of the activity to which the current job budget line pertains.

Field	Description
<b>Cost, Base</b>	This field shows the budgeted cost in the base currency for one unit of the activity.
<b>Cost, Per Day, Base</b>	This field only applies to time activities. The field shows the cost per day budgeted for the current job budget line. The value is based on the value in the field "Cost, Base" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window Jobs.
<b>Purchase Currency</b>	This field shows the selected currency code.
<b>Cost, Purchase Currency</b>	This field shows the cost in the currency selected in the field "Purchase Currency."
<b>Cost Per Day, Purchase Currency</b>	This field only applies to time activities. The field shows the cost per day budgeted for the current job budget line. The value is based on the value in the field "Cost, Purchase Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window Jobs.
<b>Total Cost, Base</b>	This field shows the total estimated cost in base currency for the budget line.
<b>Total Cost, Purchase Currency</b>	This field shows the total budgeted cost in the current job's currency.
<b>Billing Price, Purchase Currency</b>	This field shows the billing price in the currency selected in the field "Purchase Currency."
<b>Billing Price Per Day, Purchase Currency</b>	This field only applies to time activities. The field shows the billing price per day budgeted for the current job budget line. The value is based on the value in the field "Billing Price, Purchase Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window Jobs.
<b>Billing Price Total, Purchase Currency</b>	This field displays the total sales price in purchase currency, that is, the field "Sales Price, Purchase Currency" multiplied by the number in the field "Quantity."
<b>Billing Price, Curr.</b>	This field shows the budgeted billing price in the job's currency of one unit of the activity on the budget line.
<b>Billing Price Per Day, Curr.</b>	This field only applies to time activities. The field shows the billing price per day budgeted for the current job budget line. The value is based on the value in the field "Billing Price, Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."

Field	Description
<b>Total Billing Price, Currency</b>	This field shows the budget line's total budgeted billing price in the job currency.
<b>Markup %</b>	This field shows the budgeted gross margin % for the activity on the budget line.
<b>Incl. in Fixed Price</b>	<p>This check box is selected if the entry that applies to the line is to be included in the fixed price of a job.</p> <p>If a fixed-price job or a time-and-material job is assigned the job parameter attribute "Fixed Price Basis" with the value "Budget," the value of this field determines which budget lines are included in the fixed quote price of a job and which entries are not included in the fixed quote price of a job.</p>
<b>Planned Starting Date</b>	This field shows the date you planned to begin the activity.
<b>Planned Duration</b>	This field shows the planned duration of the activity. This duration will always be the number of calendar days from the planned starting date to the planned ending date. The field "Planned Ending Date" will thus depend on this field.
<b>Planned Ending Date</b>	This field shows the date you planned to end the activity. The date is for information only, and can, for example, be used in reports.
<b>Deliv. Remarks</b>	This field shows delivery remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field shows the amount from the field "Billing Price, Currency" on the current budget line converted into the base currency.
<b>Billing Price per Day, Base</b>	This field only applies to time activities. The field shows the billing price per day budgeted for the current job budget line. The value is based on the value in the field "Billing Price, Base" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Billing Price Total, Base</b>	This field shows the amount from the field "Billing Price Total, Currency" on the current budget line converted into the base currency.
<b>Standard Billing Price, Base</b>	This field shows the standard billing price per unit in the base currency of the company.
<b>Total Standard Billing Price, Base</b>	This field shows the total standard billing price of the current budget entry in the base currency of the vendor, if the activity on the budget line is an amount activity.

Field	Description
<b>Vendor</b>	<p>This field displays the number of a vendor if the activity in the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.</p> <p>This field is used to select which vendor does any external work for you in connection with the job. If there is a value in this field, Maconomy automatically marks the field Selected, and when you remove the number, the mark is removed. When you Select the Create Requisitions or Create Purchase Order action, Maconomy automatically creates a requisition or purchase order in the Requisition and Purchase Orders windows, respectively, in the Accounts Payable module. When you create a purchase order from a budget line, the purchase order number is displayed in the Last Purchase Order No. field on the budget line.</p> <p>If you assign items to a job budget line in the Job Budget Item Lines window on which this field has a value, Maconomy retrieves the item's budgeted cost from the vendor's purchase price list. This requires that there is a purchase price list for the vendor, and that the item is in that list. However, Maconomy only retrieves prices when creating purchase orders, not requisitions.</p>
<b>Vendor Name</b>	This field shows the name of a vendor, if the activity on the budget line is an amount activity.
<b>Your Reference</b>	This field shows the reference person used on requisitions and purchase orders that are created from the current budget line.
<b>Purch. Order No.</b>	This field shows the number of the last purchase order created on the basis of the current budget line by means of the action "Create Purchase Order."
<b>Number of Purchase Orders</b>	This field shows how many purchase orders have been created on the basis of this budget line.
<b>Purchase Order Total</b>	This field shows the sum of the purchase order lines created on the basis of the budget line.
<b>Currency, Purchase Creation</b>	This field shows the currency of a purchase order created on the basis of the budget line.
<b>Empl.</b>	This field shows the number of the employee associated with the given activity.
<b>Location</b>	This field shows a manually entered or derived value for the dimension Location.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.

Field	Description
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Net Cost, Base</b>	This field is only used in Norwegian systems. This field shows a net cost for amount activities.
<b>Net Cost Per Day, Base</b>	This field only applies to time activities. The field shows the net cost per day budgeted for the current job budget line. The value is based on the value in the field "Net Cost, Base" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."
<b>Tax Code</b>	This field is only used in Norwegian systems. This field shows a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Type</b>	This field displays the type of the current activity.
<b>Tax Code</b>	This field shows the tax payable code selected for the current activity. If multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2" and, if three tax levels are enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Activity Name</b>	This field displays the text defined for the current activity.
<b>Task Description</b>	This field shows the text defined for the current task, if a task has been entered in the field "Task."
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified for the job budget line in question.
<b>Job Budget Text</b>	This field displays whether there are text lines assigned to the current line.
<b>Standard Billing Price, Currency</b>	This field shows the standard billing price per unit in the currency of the job
<b>Standard Billing Price Per Day, Currency</b>	This field only applies to time activities. The field shows the standard billing price per day per unit in the currency of the job. The value is based on the value in the field "Standard Billing Price, Currency" above and the number of hours per man day specified for the job in the field "Hours per Man Day" in the window "Jobs."

Field	Description
<b>Total Standard Billing Price, Currency</b>	This field shows the total standard billing price of the current budget entry in the currency of the job.
<b>Remarks 1-10</b>	These fields show any remarks assigned to the current job budget line.
<b>Quantity Planned</b>	If the current revision is the latest approved revision of the planning budget, this field shows how many hours have so far been planned for the job budget line in question in the window Detailed Planning in the Resource Planning module. Is the current revision approved but not the latest approved revision, this field shows how many hours were planned for the job budget line in question when this revision was the latest approved revision of the planning budget.
<b>Changed in Revision No.</b>	This field shows the number of the job budget revision in which the current line was last changed.

## Time Budget Revisions Single Dialogs Workspace

Use this workspace to view previous revisions of time budgeting details of job budgets.

**Note:** See the description of the Time Budgets workspace for details.

### Amount Budget Revisions Tab

This section includes the fields and descriptions for the Amount Budget Revisions Tab.

#### Job Island

Field	Description
<b>Job No.</b>	This field displays the job number.
<b>Job Name</b>	This field displays the job name.

#### Budget Island

Field	Description
<b>Budget Type</b>	This field displays the budget type.
<b>Revision No.</b>	This field displays the current revision number of the budget.

## Status Island

Field	Description
<b>Submitted</b>	This field displays the name of the user who submitted the budget and the submission date, if the budget has been submitted.
<b>Approved</b>	This field displays the name of the user who approved and the approval date, if the budget has been approved.
<b>Reopened</b>	This field shows the name of the user who reopened and the reopening date, if the budget has been reopened.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	This field displays a description of the amount budget line.
<b>Line Type</b>	This field displays the selected line type, which is one of the following values: Outlay, Sum/Text, or Time.
<b>Task</b>	This field displays the task that is related to the amount budget line.
<b>Quantity</b>	This field displays the budgeted quantity for the line.
<b>Activity No.</b>	This field displays the activity number that is related to the amount budget line.
<b>Cost, Base</b>	This field displays the budgeted cost of the job in the job's base currency for one unit of the activity.
<b>Billing Price, Curr.</b>	This field displays the budgeted cost of the job in the job's currency. This amount is the same as the amount in the Max. Billing Price field in the Jobs window.
<b>GM %</b>	This field displays the budgeted gross margin percent for the activity on the budget line.
<b>Line Specific Billing Price</b>	If the current job is set up for price control from budgets, this field indicates if the billing price differs from the price originally derived from the employee category on the current line. If the line is not marked, the price is the original price.
<b>Total Cost, Base</b>	This field displays the total estimated cost in base currency for the budget line. Maconomy calculates the total cost by multiplying the number in the Quantity field by the cost per piece in the Cost field.  If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0.

Field	Description
<b>Total Billing Price, Currency</b>	This field displays the budget line's total budgeted billing price in the job currency.
<b>Purchase Currency</b>	This field displays the selected currency code.
<b>Cost, Purchase Currency</b>	This field displays the cost in the currency selected in the Purchase Currency field.
<b>Total Cost, Purchase Currency</b>	This field displays the total budgeted cost in the current job's currency. Maconomy calculates the total cost price by multiplying the value of the Quantity field by the cost per unit in the Cost, Purchase Currency field. If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0.
<b>Billing Price, Purchase Currency</b>	This field displays the billing price in another currency than the job's currency. Maconomy uses the currency specified in the Purchase Currency field for converting the amount to the job currency, using the current exchange rate table for purchase at the time of entry. If you change the currency later, Maconomy recalculates the value of this field.
<b>Total Billing Price, Purchase Currency</b>	This field displays the cost type selected for the current activity in the Activities window: Turnover or Outlays. Maconomy deducts the sum of activities of the type Outlays from the calculation of the gross margin percentage of a job.
<b>Cost Type</b>	This field displays the cost type selected for the current amount activity in the Activities window: Turnover or Outlays.
<b>Incl. in Fixed Price</b>	This check box is selected if the entry that applies to the line is to be included in the fixed price of a job.  If a fixed-price job or a time-and-material job is assigned the job parameter attribute "Fixed Price Basis" with the value "Budget," the value of this field determines which budget lines are included in the fixed quote price of a job and which entries are not included in the fixed quote price of a job.
<b>Deliv. Remarks</b>	This field displays remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field displays the amount from the Billing Price, Currency field on the current budget line converted to the base currency.
<b>Total Billing Price, Base</b>	This field displays the amount from the Billing Price Total, Currency field on the current budget line converted to the base currency.

Field	Description
<b>Standard Billing Price, Base</b>	This field displays the standard billing price per unit in the base currency of the company. If you change the value in the Billing Price, Purchase Currency field or the Billing Price, Currency field, this value can only change if the standard billing price is calculated as a standard markup percentage.
<b>Total Standard Billing Price, Base</b>	This field displays the total standard billing price of the current budget entry in the base currency of the company.
<b>Vendor</b>	<p>This field displays the number of a vendor if the activity in the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.</p> <p>This field is used to select which vendor does any external work for you in connection with the job. If there is a value in this field, Maconomy automatically marks the field Selected, and when you remove the number, the mark is removed. When you Select the Create Requisitions or Create Purchase Order action, Maconomy automatically creates a requisition or purchase order in the Requisition and Purchase Orders windows, respectively, in the Accounts Payable module. When you create a purchase order from a budget line, the purchase order number is displayed in the Last Purchase Order No. field on the budget line.</p> <p>If you assign items to a job budget line in the Job Budget Item Lines window on which this field has a value, Maconomy retrieves the item's budgeted cost from the vendor's purchase price list. This requires that there is a purchase price list for the vendor, and that the item is in that list. However, Maconomy only retrieves prices when creating purchase orders, not requisitions.</p>
<b>Vendor Name</b>	This field displays the first line of the name of the vendor whose number is displayed in the Vendor field.
<b>Your Reference</b>	<p>This field displays the reference person used on purchase orders that are created from the current budget line.</p> <p>When you enter or change the value of the Cust. No. field, Maconomy transfers the value from the corresponding field on the vendor information card with the current vendor number. You can then manually change the field value. Maconomy transfers the contact person to the corresponding field on purchase orders that are created when you use the Create Purchase Orders action.</p>
<b>Create Sales Order</b>	This check box is selected if Maconomy is to create sales order lines for items and text lines that are assigned to the budget line in the Job Budget Item Lines window and you use the Transfer to Sales Order action. You cannot select or deselect this check box. You can edit and process the sales order lines processed in the Sales Orders window in the Sales Orders module.
<b>Selected</b>	This check box is selected if Maconomy is to create a requisition or purchase order line for the budget line when you use the Create

Field	Description
	Requisitions or Create Purchase Orders action, respectively. You cannot select or deselect this check box. You can edit and process requisitions and purchase orders that you create here in the Requisitions and Purchase Orders windows, respectively, in the Accounts Payable module.
<b>Currency, Purchase Creation</b>	This field displays the currency to transfer to requisitions and purchase orders that are created based on the budget line. If this check box is not selected, Maconomy uses the currency that you specified on the vendor's information card. When you create a requisition or purchase order, Maconomy changes the value in this field from blank to the vendor's currency.
<b>Number of Purchase Orders</b>	This field displays the number of purchase orders that have been made based on this budget line, regardless of the method you used to create the purchase orders. You can create purchase orders on the basis of a budget line by using the Create Purchase Order action when the field Selected is marked on the line in question. You can repeat this any number of times to create multiple purchase orders. You can also create purchase orders by creating a purchase order from a requisition that was created on the basis of the line or by converting a request to quote assigned to a requisition based on the budget line to a purchase order.
<b>Number of Requisitions</b>	This field displays the number of requisitions that have been made based on this budget line. You can create requisitions on the basis of a budget line by using the Create Requisition action when the Selected field is marked on the line in question. You can repeat this any number of times to create multiple requisitions.
<b>Last Purchase Order No.</b>	<p>This field displays the number of the last purchase order that was created based on the current line, regardless of the method that you use to create the purchase order. You can create purchase orders based on a budget line by using the Create Purchase Order action when the Selected field is marked on the line in question, or by creating a purchase order from a requisition that was created based on the line. You can also create purchase orders by converting a request to quote assigned to a requisition based on the budget line to a purchase order.</p> <p>Note that purchase orders that you create in the Purchase Orders window in the Accounts Payable module and manually assign to a job there are not displayed in this field.</p> <p>If the last purchase order is deleted, this field is blank.</p>
<b>Purchase Order Total</b>	This field displays the sum of the purchase order lines that you created based on the budget line. When you create a purchase order based on the current budget line, Maconomy calculates the sum of this purchase order line as the total budgeted cost on the budget line sum less the sum of previously created purchase order lines. If this is a negative amount, the amount on the purchase order line is set at 0.

Field	Description
<b>Exec. Company No.</b>	This field displays the number of the company that is performing the specified activity.
<b>Exec. Company Name</b>	This field displays the executing company's name.
<b>Location</b>	<p>This field displays the value that you entered for the dimension Location. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the "Update prices upon dimension change" system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the "Line Specific Billing Price" field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the "Update prices upon dimension change" system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the "Recalculate Job Budget" action.</p>
<b>Entity</b>	<p>This field displays the value that you entered for the dimension Entity. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the "Update prices upon dimension change" system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the "Line Specific Billing Price" field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the "Update prices upon dimension change" system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific.</p>

Field	Description
	To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.
<b>Project</b>	<p>This field displays the value that you entered for the dimension Project. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Purpose</b>	<p>This field displays the value that you entered for the dimension Purpose. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Spec. 1 – 3</b>	<p>This field displays the value that you entered for the dimensions Spec. 1 - 3. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the</p>

Field	Description
	<p>G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Local Spec. 1 – 3</b>	<p>This field displays the value that you entered for the dimensions Local Spec. 1 - 3. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Net Cost, Base</b>	This field displays a net cost for amount activities. This field is only used in Norwegian systems.
<b>Tax Code</b>	This field displays a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Name</b>	This field displays the activity name.

Field	Description
<b>Task Description</b>	This field displays the task description.
<b>Job Budget Text</b>	This field displays whether text lines are assigned to the current line. You can assign text lines to a job budget line in the Job Budget Texts window.
<b>Standard Billing Price, Currency</b>	This field displays the standard billing price per unit in the job's currency. If the "Update prices upon dimension change" system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields that cause the price to be updated, see the description of the "Update prices upon dimension change" system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the "Recalculate Job Budget" action.
<b>Total Standard Billing Price, Currency</b>	This field displays the standard billing price per unit in the job's currency. If the "Update prices upon dimension change" system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields that cause the price to be updated, see the description of the "Update prices upon dimension change" system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the "Recalculate Job Budget" action.
<b>Remarks 1 – 10</b>	These fields display any remarks that are assigned to the current job budget line. These remarks are for information only and can be used in reports.
<b>Quantity Planned</b>	This field displays the number of hours that have been planned so far for the job budget line in question in the Detailed Planning window in the Resource Planning module.
<b>Changed in Revision No.</b>	This field displays the number of the job budget revision in which the current line was last changed.

## Amount Budget Revisions Single Dialogs Workspace

Use this workspace to view revisions of amount budgets.

**Note:** See the description of the Amount Budgets workspace for more details.

## Amount Budget Revisions Tab

This section includes the fields and descriptions for the Amount Budget Revisions Tab.

### Job Island

Field	Description
<b>Job No.</b>	This field displays the job number.
<b>Job Name</b>	This field displays the job name.

### Budget Island

Field	Description
<b>Budget Type</b>	This field displays the budget type.
<b>Revision No.</b>	This field displays the current revision number of the budget.

### Status Island

Field	Description
<b>Submitted</b>	This field displays the name of the user who submitted the budget and the submission date, if the budget has been submitted.
<b>Approved</b>	This field displays the name of the user who approved and the approval date, if the budget has been approved.
<b>Reopened</b>	This field shows the name of the user who reopened and the reopening date, if the budget has been reopened.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	This field displays a description of the amount budget line.
<b>Line Type</b>	This field displays the selected line type, which is one of the following values: Outlay, Sum/Text, or Time.
<b>Task</b>	This field displays the task that is related to the amount budget line.
<b>Quantity</b>	This field displays the budgeted quantity for the line.

Field	Description
<b>Activity No.</b>	This field displays the activity number that is related to the amount budget line.
<b>Cost, Base</b>	This field displays the budgeted cost of the job in the job's base currency for one unit of the activity.
<b>Billing Price, Curr.</b>	This field displays the budgeted cost of the job in the job's currency. This amount is the same as the amount in the Max. Billing Price field in the Jobs window.
<b>GM %</b>	This field displays the budgeted gross margin percent for the activity on the budget line.
<b>Line Specific Billing Price</b>	If the current job is set up for price control from budgets, this field indicates if the billing price differs from the price originally derived from the employee category on the current line. If the line is not marked, the price is the original price.
<b>Total Cost, Base</b>	This field displays the total estimated cost in base currency for the budget line. Maconomy calculates the total cost by multiplying the number in the Quantity field by the cost per piece in the Cost field. If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0.
<b>Total Billing Price, Currency</b>	This field displays the budget line's total budgeted billing price in the job currency.
<b>Purchase Currency</b>	This field displays the selected currency code.
<b>Cost, Purchase Currency</b>	This field displays the cost in the currency selected in the Purchase Currency field.
<b>Total Cost, Purchase Currency</b>	This field displays the total budgeted cost in the current job's currency. Maconomy calculates the total cost price by multiplying the value of the Quantity field by the cost per unit in the Cost, Purchase Currency field. If you do not have access to see cost information, as specified in the Actions window in the Set-Up module, this field displays 0.
<b>Billing Price, Purchase Currency</b>	This field displays the billing price in another currency than the job's currency. Maconomy uses the currency specified in the Purchase Currency field for converting the amount to the job currency, using the current exchange rate table for purchase at the time of entry. If you change the currency later, Maconomy recalculates the value of this field.
<b>Total Billing Price, Purchase Currency</b>	This field displays the cost type selected for the current activity in the Activities window: Turnover or Outlays. Maconomy deducts the sum of activities of the type Outlays from the calculation of the gross margin percentage of a job.

Field	Description
<b>Cost Type</b>	This field displays the cost type selected for the current amount activity in the Activities window: Turnover or Outlays.
<b>Incl. in Fixed Price</b>	<p>This check box is selected if the entry that applies to the line is to be included in the fixed price of a job.</p> <p>If a fixed-price job or a time-and-material job is assigned the job parameter attribute "Fixed Price Basis" with the value "Budget," the value of this field determines which budget lines are included in the fixed quote price of a job and which entries are not included in the fixed quote price of a job.</p>
<b>Deliv. Remarks</b>	This field displays remarks to be used in connection with the delivery of the items.
<b>Billing Price, Base</b>	This field displays the amount from the Billing Price, Currency field on the current budget line converted to the base currency.
<b>Total Billing Price, Base</b>	This field displays the amount from the Billing Price Total, Currency field on the current budget line converted to the base currency.
<b>Standard Billing Price, Base</b>	This field displays the standard billing price per unit in the base currency of the company. If you change the value in the Billing Price, Purchase Currency field or the Billing Price, Currency field, this value can only change if the standard billing price is calculated as a standard markup percentage.
<b>Total Standard Billing Price, Base</b>	This field displays the total standard billing price of the current budget entry in the base currency of the company.
<b>Vendor</b>	<p>This field displays the number of a vendor if the activity in the budget line is an amount activity. Maconomy verifies that the vendor exists in the Accounts Payable module.</p> <p>This field is used to select which vendor does any external work for you in connection with the job. If there is a value in this field, Maconomy automatically marks the field Selected, and when you remove the number, the mark is removed. When you Select the Create Requisitions or Create Purchase Order action, Maconomy automatically creates a requisition or purchase order in the Requisition and Purchase Orders windows, respectively, in the Accounts Payable module. When you create a purchase order from a budget line, the purchase order number is displayed in the Last Purchase Order No. field on the budget line.</p> <p>If you assign items to a job budget line in the Job Budget Item Lines window on which this field has a value, Maconomy retrieves the item's budgeted cost from the vendor's purchase price list. This requires that there is a purchase price list for the vendor, and that the item is in that list. However, Maconomy only retrieves prices when creating purchase orders, not requisitions.</p>

Field	Description
<b>Vendor Name</b>	This field displays the first line of the name of the vendor whose number is displayed in the Vendor field.
<b>Your Reference</b>	<p>This field displays the reference person used on purchase orders that are created from the current budget line.</p> <p>When you enter or change the value of the Cust. No. field, Maconomy transfers the value from the corresponding field on the vendor information card with the current vendor number. You can then manually change the field value. Maconomy transfers the contact person to the corresponding field on purchase orders that are created when you use the Create Purchase Orders action.</p>
<b>Create Sales Order</b>	This check box is selected if Maconomy is to create sales order lines for items and text lines that are assigned to the budget line in the Job Budget Item Lines window and you use the Transfer to Sales Order action. You cannot select or deselect this check box. You can edit and process the sales order lines processed in the Sales Orders window in the Sales Orders module.
<b>Selected</b>	This check box is selected if Maconomy is to create a requisition or purchase order line for the budget line when you use the Create Requisitions or Create Purchase Orders action, respectively. You cannot select or deselect this check box. You can edit and process requisitions and purchase orders that you create here in the Requisitions and Purchase Orders windows, respectively, in the Accounts Payable module.
<b>Currency, Purchase Creation</b>	This field displays the currency to transfer to requisitions and purchase orders that are created based on the budget line. If this check box is not selected, Maconomy uses the currency that you specified on the vendor's information card. When you create a requisition or purchase order, Maconomy changes the value in this field from blank to the vendor's currency.
<b>Number of Purchase Orders</b>	This field displays the number of purchase orders that have been made based on this budget line, regardless of the method you used to create the purchase orders. You can create purchase orders on the basis of a budget line by using the Create Purchase Order action when the field Selected is marked on the line in question. You can repeat this any number of times to create multiple purchase orders. You can also create purchase orders by creating a purchase order from a requisition that was created on the basis of the line or by converting a request to quote assigned to a requisition based on the budget line to a purchase order.
<b>Number of Requisitions</b>	This field displays the number of requisitions that have been made based on this budget line. You can create requisitions on the basis of a budget line by using the Create Requisition action when the Selected field is marked on the line in question. You can repeat this any number of times to create multiple requisitions.

Field	Description
<b>Last Purchase Order No.</b>	<p>This field displays the number of the last purchase order that was created based on the current line, regardless of the method that you use to create the purchase order. You can create purchase orders based on a budget line by using the Create Purchase Order action when the Selected field is marked on the line in question, or by creating a purchase order from a requisition that was created based on the line. You can also create purchase orders by converting a request to quote assigned to a requisition based on the budget line to a purchase order.</p> <p>Note that purchase orders that you create in the Purchase Orders window in the Accounts Payable module and manually assign to a job there are not displayed in this field.</p> <p>If the last purchase order is deleted, this field is blank.</p>
<b>Purchase Order Total</b>	<p>This field displays the sum of the purchase order lines that you created based on the budget line. When you create a purchase order based on the current budget line, Maconomy calculates the sum of this purchase order line as the total budgeted cost on the budget line sum less the sum of previously created purchase order lines. If this is a negative amount, the amount on the purchase order line is set at 0.</p>
<b>Exec. Company No.</b>	<p>This field displays the number of the company that is performing the specified activity.</p>
<b>Exec. Company Name</b>	<p>This field displays the executing company's name.</p>
<b>Location</b>	<p>This field displays the value that you entered for the dimension Location. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the "Update prices upon dimension change" system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the "Line Specific Billing Price" field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the "Update prices upon dimension change" system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the "Recalculate Job Budget" action.</p>

Field	Description
<b>Entity</b>	<p>This field displays the value that you entered for the dimension Entity. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Project</b>	<p>This field displays the value that you entered for the dimension Project. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Purpose</b>	<p>This field displays the value that you entered for the dimension Purpose. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy</p>

Field	Description
	<p>cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Spec. 1 – 3</b>	<p>This field displays the value that you entered for the dimensions Spec. 1 - 3. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p> <p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Local Spec. 1 – 3</b>	<p>This field displays the value that you entered for the dimensions Local Spec. 1 - 3. If you did not enter a value, Maconomy attempts to derive a value, using the order of priority that you set up in the Dimension Derivation window in the G/L module. However, Maconomy overwrites any manually entered value if it can derive a value for which overwriting has been selected. If Maconomy cannot derive a value, it transfers the standard value from the System Parameters window in the Set-Up module.</p> <p>If the “Update prices upon dimension change” system parameter is marked, changing the location on a line causes Maconomy to recalculate the prices on the line.</p>

Field	Description
	<p>If the current job is set up for price control from budgets, and the “Line Specific Billing Price” field is marked for the current line, Maconomy does not change the billing price upon recalculation.</p> <p>If the budget controls prices, the function of the “Update prices upon dimension change” system parameter is different. Even if the parameter is set, changing dimensions does not affect the prices. Only changing the employee category on lines that are related to a time activity causes Maconomy to recalculate the price, and the line is considered line-specific. To recalculate the price after you change dimensions, use the “Recalculate Job Budget” action.</p>
<b>Net Cost, Base</b>	This field displays a net cost for amount activities. This field is only used in Norwegian systems.
<b>Tax Code</b>	This field displays a G/L tax receivable code if the activity on the line is an amount activity.
<b>Activity Name</b>	This field displays the activity name.
<b>Task Description</b>	This field displays the task description.
<b>Job Budget Text</b>	This field displays whether text lines are assigned to the current line. You can assign text lines to a job budget line in the Job Budget Texts window.
<b>Standard Billing Price, Currency</b>	<p>This field displays the standard billing price per unit in the job’s currency.</p> <p>If the “Update prices upon dimension change” system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields that cause the price to be updated, see the description of the “Update prices upon dimension change” system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the “Recalculate Job Budget” action.</p>
<b>Total Standard Billing Price, Currency</b>	<p>This field displays the standard billing price per unit in the job’s currency.</p> <p>If the “Update prices upon dimension change” system parameter is marked, Maconomy updates the price in this field when you change certain key information on the line, such as the activity, employee, or dimension values. For further information on this and for a complete list of the fields that cause the price to be updated, see the description of the “Update prices upon dimension change” system parameter. If the system parameter is not marked, and you want to ensure that all prices reflect the current set-up of the budget lines, use the “Recalculate Job Budget” action.</p>
<b>Remarks 1 – 10</b>	These fields display any remarks that are assigned to the current job budget line. These remarks are for information only and can be used in reports.

Field	Description
<b>Quantity Planned</b>	This field displays the number of hours that have been planned so far for the job budget line in question in the Detailed Planning window in the Resource Planning module.
<b>Changed in Revision No.</b>	This field displays the number of the job budget revision in which the current line was last changed.

## Approve Job Budgets Single Dialogs Workspace

Use this workspace to select a group of job budgets and perform a number of functions on them.

You can select a group of job budgets for submission, approval, reopening, or creation of a revision. You can only see job budgets for jobs to which you have access.

In the Approve Job Budgets tab you can select the job budgets that you want to display in the Job Budgets sub-tab, define how the assignment of a revision code should be performed, and indicate whether you want to create revisions of the job budgets, even if they have not been changed since a revision was last created.

You can also use this workspace to indicate that a budget be assigned a revision code and assign a revision code to the selected group of budgets. A revision code can function as an internal signal. For example, when a job budget has a certain revision code, it can flag that a certain person has reviewed the budget.

You can also perform these functions in the Job Budgets workspace, but only for one budget at a time. Because selection criteria in this workspace require you to limit to one particular job budget type, you can only perform actions on one job budget per job at a time.

Users must have access granted via the **Change Job Budgets**, **Approve Job Budgets**, and **Reopen Job Budgets** fields in the Actions workspace in the Set-Up module to submit, approve, and reopen job budgets, respectively.

### Approve Job Budgets Tab

This section includes the fields and descriptions for the Approve Job Budgets tab.

#### Selection Criteria Island

Field	Description
<b>Show Lines</b>	When you mark this field, the lines matching the values specified in the selection criteria below are shown in the table part of this window. Please note that Maconomy will not consider whether the job budget revisions are shown in the table part when you apply the functions in the Action menu. The job budgets that meet the selection criteria are affected by the function regardless of whether they are shown in the table part.
<b>Job No.</b>	In these fields, you can specify a range of job numbers. The table part will only display job budget revisions within the specified range. If you do not enter a range, the job numbers will not be considered in the selection.

Field	Description
	Maconomy never shows job budget revisions for closed jobs and jobs that are blocked for registration.
<b>Job Group</b>	In these fields, you can specify a job group. The table part will only display job budget revisions within this job group. If you do not enter a job group, the job group will not be considered in the selection.
<b>Budget Type</b>	In this field, you can specify a budget type. The table part will only display job budget revisions for job budgets of the selected budget type. If you do not enter a budget type, the budget type will not be considered in the selection.
<b>Company No.</b>	In these fields, you can specify a range of company numbers. The table part will only display job budget revisions with a responsible company within the specified range. If you do not enter a range, the responsible company assigned to the jobs will not be considered.
<b>Customer No.</b>	The functionality of this field is similar to that of the field "Company No."
<b>Bill to Customer</b>	The functionality of this field is similar to that of the field "Company No."
<b>Department</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Language</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Responsible</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Sales Rep.</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Popup 1-5</b>	The functionality of this field is similar to that of the field "Job Group."

### Job Budgets Sub-Tab

This section includes the fields and descriptions for the Job Budgets sub-tab.

Field	Description
<b>Job No.</b>	This field displays the number of the job to which the job budget belongs. Maconomy only shows the budgets of the jobs selected in the island Selection Criteria in the card part of the window.
<b>Job Name</b>	This field displays the name of the job to which the job budget pertains.
<b>Submit</b>	In this field, you can specify that you want to submit the job budget when you select the action "Submit Budgets."

Field	Description
<b>Approve</b>	In this field, you can specify that you want to approve the job budget when you select the action "Approve Budgets."
<b>Reopen</b>	In this field, you can specify that you want to reopen the job budget when you select the action "Reopen Budgets."
<b>New Revision</b>	In this field, you can specify that you want to create a new revision of the job budget when you select the action "New Revisions." A new revision will not be created, however, if the field "Include Changed Only" in the card part is marked, and no changes have been made in the job budget since a new revision was last created.
<b>Assign Code</b>	In this field, you can specify that you want to assign a revision code to the job budget when you select the action "Assign Revision Code." A revision code will only be assigned to an approved job budget, however, if the field "Assign Approved" in the card part is marked.
<b>Sales Currency</b>	This field shows the currency of the job.
<b>Billing Price, Curr.</b>	This field displays the total budgeted billing price of the job budget, specified in the job's currency.
<b>Sales Price Adjustment, Currency</b>	This field displays the change in the total budgeted billing price of the job budget since the previous revision, specified in the job's currency.
<b>Base Currency</b>	This field shows the currency used as base currency for the company responsible for the job.
<b>Billing Price, Base</b>	This field displays the total budgeted billing price of the job budget, specified in base currency.
<b>Sales Price Adjustment, Base</b>	This field displays the change in the total budgeted billing price of the job budget since the previous revision, specified in base currency.
<b>Cost</b>	This field displays total budgeted cost of the job budget, specified in base currency.
<b>Cost Adjustment</b>	This field displays the change in the total budgeted cost of the job budget since the previous revision, specified in base currency.
<b>Customer No.</b>	This field displays the number of the customer to which the job budget pertains.
<b>Customer Name</b>	This field displays the name of the customer to which the job budget pertains.
<b>Company No.</b>	This field displays the number of the company responsible for the job to which the job budget pertains.
<b>Company Name</b>	This field displays the name of the company responsible for the job to which the job budget pertains.

Field	Description
<b>Bill To Customer No.</b>	This field displays the number of the bill-to customer to be invoiced for the current job.
<b>Bill To Customer Name</b>	This field displays the name of the bill-to customer to be invoiced for the current job.
<b>Settling Company No.</b>	This field displays the number of the company which has been specified as settling company for the job whose job budget is displayed on the current line. The settling company is specified in the window Jobs.
<b>Settling Company Name</b>	This field displays the name of the settling company shown in the field "Settling Company No." above
<b>Department</b>	This field displays the department to which the current job is assigned.
<b>Description</b>	This field displays the first line of the internal name of the job as specified in the field "Internal" in the window Jobs.
<b>Revision Code</b>	This field displays any revision code assigned to the latest revision of the job budget, that is, the latest revision visible in the window Job Budget Revisions.
<b>Revision Remarks</b>	This field displays any revision remarks assigned to the latest revision of the job budget, that is, the latest revision visible in the window Job Budget Revisions.

## Actions

This section shows the Actions available in the Approve Job Budgets workspace.

### Top Tab

Field	Description
<b>Mark Lines</b>	<p>Provides the following marking options:</p> <ul style="list-style-type: none"> <li>■ Mark for Submission — When you select this action, Maconomy marks the field "Submit" for the job budgets in the table part, if possible. The field is, for example, not marked if the budget is approved.</li> <li>■ Mark for Approval — When you select this action, Maconomy marks the field "Approve" for the job budgets in the table part, if possible. The field is not marked if the budget has already been approved or is not submitted.</li> <li>■ Mark for Reopening — When you select this action, Maconomy marks the field "Reopen" for the job budgets in the table part, if possible. The field is not marked if the budget has not been approved.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>■ <b>Mark for New Revision</b> — When you select this action, Maconomy marks the field “New Revision” for the job budgets in the table part, in accordance with the mark in the field “Include Changed Only” in the card part. The field is not marked if the field “Include Changed Only” in the card part is marked, and the job budget has not been changed since a new revision was last created. If you have manually marked the field “New Revision,” and the budget has not changed since the previous revision, the mark in the field is removed when you select this action if the field “Include Changed Only” has been marked.</li> <li>■ <b>Mark for Revision Code</b> — When you select this action, Maconomy marks the field “Assign Code” for the job budgets in the table part, in accordance with the mark in the field “Assign Approved” in the card part of the window. The field is not marked if the field “Assign Approved” in the card part has been marked, and no approved revision of the job budget exists. If you have manually marked the fields “Assign Code” and “Assign Approved,” and no approved revision of the budget exists, the mark in the field is removed when you select this action if the field “Assign Approved” is marked.</li> <li>■ <b>Submit Budgets</b> — When you select this action, the job budgets with a mark in the field “Submit” are submitted.</li> <li>■ <b>Approve Budgets</b> — When you select this action, the job budgets with a mark in the field “Approve” are approved. When a job budget is approved, it is locked, and it can no longer be changed unless it is reopened first. The different revisions of the job budget can be viewed in the window Job Budget Revisions.</li> <li>■ <b>Reopen Budgets</b> — When you select this action, the job budgets with a mark in the field “Reopen” are reopened. When a job budget is reopened, the revision number is incremented by one, and it is possible to change the new revision of the job budget.</li> <li>■ <b>New Revisions</b> — When you select this action, Maconomy creates a revision of the marked job budgets. The previous revision of the job budget is locked, and any subsequent changes in the job budget take place in the new revision. The different revisions of the job budget can be viewed in the window Job Budget Revisions.</li> <li>■ <b>Assign Revision Code</b> — When you select this action, Maconomy assigns the revision code in the field “Revision Code” in the card part of the window to the marked job budgets. If the field “Assign Approved” in the card part is marked, the revision code is assigned to the latest approved revision of the budget visible in the window Job Budget Revisions – that is, not necessarily the latest revision. If the field “Overwrite Codes” in the card part has been marked, any existing revision code on the job budget is overwritten; otherwise Maconomy will not overwrite existing codes.</li> </ul>

## Job Budget Merging Single Dialogs Workspace

Use this workspace to merge job budgets.

This is useful for integration with People Planner, but you can also use this functionality for other purposes.

The Job Budget Merging tab contains information about the job and the customer and includes fields for selecting the two budgets to merge, an island that displays the total number of conflicts between the two budgets, and a count of how many of these conflicts are yet to be resolved.

The Job Budget Line Merging sub-tab contains lines that give you a preview of what a merge of the two selected budgets might be like.

When you use People Planner and Maconomy, you can create job budgets in Maconomy and then export them to People Planner for resource planning. Afterwards, you can import the job budget from People Planner back into Maconomy. This results in two budgets for a job: the version that you created in Maconomy, and the version that you imported back from People Planner. The two budgets have different budget types. For example, the project that you created in Maconomy might have the budget type Original, while the budget that you imported from People Planner might have the budget type of People Planner. You set up the budget types when you configure the integration.

When you select the budget types, the result of a previous merge or a previous conflict resolution is shown in the Job Budget Line Merging sub-tab. Use the **Load Job Budgets for Merging** action to update the sub-tab. This is useful when you are working on resolving conflicts and need to interrupt your work for a while.

### Matching Lines

The two budgets that you are merging, the Budget to Update and the Budget to Merge with, both have job budget lines. Some of these lines originate from the budget that you exported (the Maconomy version). After the export, lines might have been added in both Maconomy and in the exported budget (for example, in People Planner).

Lines that exist in only one of the budgets are added to the preview of the merged version (this means that the line was either added in Maconomy after exporting or added in the external application). These lines are marked as conflicts of the type Line Added.

Many lines exist in both budgets. For example, all of the lines that were created in Maconomy and that were exported to People Planner are present in the version that is imported back into Maconomy. This is always the case; job budget lines that are present in the Budget to Update must be present in the Budget to Merge with. You cannot change the structure of the budget in the external application. This means that you cannot remove lines, though you can move them around in the structure.

Lines are matched on the basis of a key that is stored in both Maconomy and in People Planner. This field is not visible in the standard layout, and you should never change it.

When two matching lines are found, they are compared. If one or more values in the fields of the line are different, the line is marked as having a conflict. The columns to the right in the Job Budget Line Merging sub-tab display the values from both budgets so that you can decide how to resolve the conflict. The columns on the left show what the merged budget will look like if it you approve it. You can also see the work breakdown structure of the budget.

## Resolving Conflicts

The Job Budget Line Merging sub-tab contains information about conflicts, and it provides the means to resolve these conflicts.

For lines that have a conflict, the **Conflict** field contains a short description of the conflict. Columns to the right of this field show the conflicting values of the fields from each budget.

In the left part of the sub-tab, the fields contain the result of merging the budgets with the current selection of how to resolve any conflicts. You can think of this as a preview of the merge. The merge itself only happens when you use the **Approve Merge** action; only then is data actually changed.

Each line also contains the fields **Keep <Budget to Update>** and **Keep <Budget to Merge with>**. Selecting one of these mutually exclusive fields selects the values from that budget as the value to be used in the merged budget.

In certain situations, selecting one of these fields either causes the selection of additional fields or notifies you about fields that you might want to select:

- If lines in the work breakdown structure (WBS) might be left dangling, the lines higher in the structure are automatically selected to avoid this.
- If lines farther down in the WBS are affected by a selection that you make, a notification prompts you to examine those lines.

The following actions are useful for resolving conflicts: **Mark All from Budget to Update**, **Mark All from Budget to Merge with**, and **Auto-Resolve Conflicts**. You must resolve each line that has a conflict by selecting the budget from which the values should be taken. This can, for large budgets, be a tedious process. These actions can help you to select the conflict lines more quickly.

You must resolve all of the conflicts before you can approve the merge. You can, however, save the job without resolving conflicts (if, for example, you want to continue resolving at a later time).

## Approving a Merge

After you resolve all of the conflicts, you can perform the actual merge by using the **Approve Merge** action.

Note that new conflicts can appear after the merge if the Budget to Update changes after you first loaded it.

## Job Budget Merging Tab

This section includes the fields and descriptions for the Job Budget Merging tab.

### Job Island

Field	Description
<b>Job No.</b>	This is the number of the job to which the budgets to be merged apply. The value cannot be changed, but you can go to another job by using the search functions in the Find menu.
<b>Job Name</b>	This is the job's name.

Field	Description
<b>Job Group</b>	This is the job group to which the job is assigned.
<b>Status</b>	This is the job status.
<b>Project Manager</b>	This field displays the name and employee number of the project manager of the job.
<b>Responsible</b>	This field displays the name of the employee who is responsible for the job.
<b>Opportunity</b>	This field is marked if the job is actually not a job, but an opportunity. There are some differences in budgeting between jobs and opportunities (for example: opportunity budgets are not versioned, while job budgets are) but these differences are handled by Maconomy: this window is used in the same way no matter whether it is a job or an opportunity. This field is for information only.
<b>Customer Remarks</b>	copy to come

#### Selection Criteria Island

Field	Description
<b>Show Only Conflicts</b>	If this check box is marked, only lines with conflicts will be shown in the table part.

#### Budgets Island

Field	Description
<b>Budget to Update</b>	This field is used to select the job budget type of the budget that should be updated when the job budget merge is approved. This would, for example, be the job budget type of the job budget that was originally created in Maconomy and then transferred to People Planner for further processing. A job budget type must be selected.
<b>Budget to Merge with</b>	This field is used to select the job budget type of the budget that should be used to merge into the budget to update. This is typically the job budget that was exported from Maconomy, and then was processed and changed in, for example, People Planner, and has now been imported back into Maconomy. This budget could be said to originate from the "Budget to Update." A job budget type must be selected.

**Customer Island**

Field	Description
<b>Customer</b>	This field displays the customer number and name of the customer for whom the job is performed.

**Conflicts Island**

Field	Description
<b>No. of Conflicts</b>	This field shows the total number of conflicts between the “Budget to Update” and the “Budget to Merge with.”
<b>No. of Unresolved Conflicts</b>	This field shows the number of unresolved conflicts between the “Budget to Update” and the “Budget to Merge with.”

## Job Budget Line Merging Sub-Tab

This section includes the fields and descriptions for the Job Budget Line Merging sub-tab.

Field	Description
<b>Description</b>	<p>This field shows the description that would result if the two budgets were merged with the current selections.</p> <p>The budgets are actually only merged by the Approve Merge action, so this field should be regarded as a preview.</p>
<b>Quantity</b>	<p>This field shows the quantity that would result if the two budgets were merged with the current selections. If the line is a sum line, the value is the sum of the subordinated lines.</p> <p>The budgets are actually only merged by the Approve Merge action, so this field should be regarded as a preview.</p>
<b>Start Date</b>	<p>This field shows the start date in the merged budget. If the line is a sum line, the date will be the earliest date in the set of start dates in the subordinate lines (and if all the dates in these lines are blank, this field will be blank, too.)</p> <p>The budgets are actually only merged by the Approve Merge action, so this field should be regarded as a preview.</p>
<b>End Date</b>	<p>This field shows the end date in the merged budget. If the line is a sum line, the date will be the latest date in the set of end dates in the subordinate lines (and if all the dates in these lines are blank, this field will be blank, too.)</p> <p>The budgets are actually only merged by the Approve Merge action, so this field should be regarded as a preview.</p>
<b>Employee Category No.</b>	This field shows the employee category that would result if the two budgets were merged with the current selections.

Field	Description																
	The budgets are actually only merged by the Approve Merge action, so this field should be regarded as a preview.																
<b>Keep &lt;Budget to Update&gt;</b>	<p>&lt;Budget to Update&gt; in the header will dynamically be substituted with the name of the budget type presently selected as the “Budget to Update” in the Budgets island.</p> <p>If you mark this field, the value from the budget with this budget type will be used in the merged budget.</p> <p>Note that if there are no conflicts between the two budgets, you cannot mark any of the Keep &lt;Budget.&gt; fields. Also, when there is a conflict, both fields cannot be marked at the same time.</p>																
<b>Keep &lt;Budget to Merge with&gt;</b>	<p>&lt;Budget to Merge with&gt; in the header will dynamically be substituted with the name of the budget type presently selected as the “Budget to Merge with” in the Budgets island.</p> <p>If you mark this field, the value from the budget with this budget type will be used in the merged budget.</p> <p>Note that if there are no conflicts between the two budgets, you cannot mark any of the Keep &lt;Budget.&gt; fields. Also, when there is a conflict, both fields cannot be marked at the same time.</p>																
<b>Conflict</b>	<p>When there is a conflict between the two budgets, this field contains a textual description of the conflict. The following conflict descriptions are defined:</p> <table> <tr> <th>Conflict Field Contains</th><th>Explanation</th></tr> <tr> <td>Several Values Differ</td><td>More than one field differs between the two budget lines. You can use the fields to the right in the table part to see the contents of the relevant fields in the two budget lines.</td></tr> <tr> <td>Line Added (&lt;Budget Type&gt;)</td><td>The line was added in the budget with the budget type &lt;Budget Type&gt; (this is dynamically replaced with the real name).</td></tr> <tr> <td>Line Removed (&lt;Budget Type&gt;)</td><td>The line was removed in the budget with the budget type &lt;Budget Type&gt; (this is dynamically replaced with the real name).</td></tr> <tr> <td>Descriptions Differ</td><td>Only the Description field differs between the two budget lines.</td></tr> <tr> <td>Quantities Differ</td><td>Only the Quantity field differs between the two budget lines.</td></tr> <tr> <td>Start Dates Differ</td><td>Only the Start Date field differs between the two budget lines.</td></tr> <tr> <td>End Dates Differ</td><td>Only the End Date field differs between the two budget lines.</td></tr> </table>	Conflict Field Contains	Explanation	Several Values Differ	More than one field differs between the two budget lines. You can use the fields to the right in the table part to see the contents of the relevant fields in the two budget lines.	Line Added (<Budget Type>)	The line was added in the budget with the budget type <Budget Type> (this is dynamically replaced with the real name).	Line Removed (<Budget Type>)	The line was removed in the budget with the budget type <Budget Type> (this is dynamically replaced with the real name).	Descriptions Differ	Only the Description field differs between the two budget lines.	Quantities Differ	Only the Quantity field differs between the two budget lines.	Start Dates Differ	Only the Start Date field differs between the two budget lines.	End Dates Differ	Only the End Date field differs between the two budget lines.
Conflict Field Contains	Explanation																
Several Values Differ	More than one field differs between the two budget lines. You can use the fields to the right in the table part to see the contents of the relevant fields in the two budget lines.																
Line Added (<Budget Type>)	The line was added in the budget with the budget type <Budget Type> (this is dynamically replaced with the real name).																
Line Removed (<Budget Type>)	The line was removed in the budget with the budget type <Budget Type> (this is dynamically replaced with the real name).																
Descriptions Differ	Only the Description field differs between the two budget lines.																
Quantities Differ	Only the Quantity field differs between the two budget lines.																
Start Dates Differ	Only the Start Date field differs between the two budget lines.																
End Dates Differ	Only the End Date field differs between the two budget lines.																

Field	Description	
	Conflict Field Contains	Explanation
	Start and End Dates Differ	Both start and end dates differ between the two budget lines.
	Employee Categories Differ	Only the Employee Category field differs between the two budget lines.
Description, <Budget to Update>	This field contains the description from the budget of the type selected in “Budget to Update” (<Budget to Update> is dynamically replaced by the real name of the budget type).	
Description, <Budget to Merge with>	This field contains the description from the budget of the type selected in “Budget to Merge with” (<Budget to Merge with> is dynamically replaced by the real name of the budget type).	
Start Date, <Budget to Update>	This field contains the start date from the budget of the type selected in “Budget to Update” (<Budget to Update> is dynamically replaced by the real name of the budget type).	
Start Date, <Budget to Merge with>	This field contains the start date from the budget of the type selected in “Budget to Merge with” (<Budget to Merge with> is dynamically replaced by the real name of the budget type).	
End Date, <Budget to Update>	This field contains the end date from the budget of the type selected in “Budget to Update” (<Budget to Update> is dynamically replaced by the real name of the budget type).	
End Date, <Budget to Merge with>	This field contains the end date from the budget of the type selected in “Budget to Merge with” (<Budget to Merge with> is dynamically replaced by the real name of the budget type).	
Empl. Cat. No, <Budget to Update>	This field contains the employee category from the budget of the type selected in “Budget to Update” (<Budget to Update> is dynamically replaced by the real name of the budget type).	
Empl. Cat. No, <Budget to Merge with>	This field contains the employee category from the budget of the type selected in “Budget to Merge with” (<Budget to Merge with> is dynamically replaced by the real name of the budget type).	

## Actions

### Top Tab

Field	Description
<b>Load Job Budgets for Merging</b>	When you select this action, the budgets to merge are loaded. The fields "Budget to Update" and "Budget to Merge with" must have a selection before the action be used.
<b>Mark All from Budget to Update</b>	When you select this action, all conflicts are resolved by selecting the line from "Budget to Update." You will see a tick mark appear in all relevant Conflict fields in the table part of the window. This corresponds to rejecting all changed from Budget to Merge with (for example, all changes made in People Planner.)
<b>Mark all from Budget To Merge with</b>	When you select this action, all conflicts are resolved by selecting the line from "Budget to Merge with." You will see a tick mark appear in all relevant Conflict fields in the table part of the window. This corresponds to accepting all changed made in, for example, People Planner.
<b>Auto-resolve Conflicts</b>	<p>When you select this action, conflicts are resolved automatically. The following rules are used:</p> <ul style="list-style-type: none"> <li>■ If a job budget line exists in both budgets, but changes have been made in only one, the line that has been changed is kept</li> <li>■ If a line has been added or removed in one of the budgets, this change will be kept.</li> <li>■ If a line has been changed in both budgets, the conflict cannot be resolved automatically.</li> </ul> <p>Note that the action does not approve the merge: it is necessary to do this explicitly (by selecting the Approve Merge action).</p> <p>When merging two budgets with a lot of lines, using this action can often very effective: it makes a "natural" selection in many cases so that you can concentrate on the conflicts that require more investigation.</p>
<b>Approve Merge</b>	When you select this action, the budgets are merged, and the "Budget to Update" will be changed to look like the preview. This action can only be performed when all conflicts between the two budgets have been resolved. Note, though, that the Budget to Update can, possibly, have been changed while the conflicts were being resolved. In this case, new conflicts can appear after the approval.

## Show Purchase Orders Single Dialogs Workspace

Use this workspace to view the purchase orders that have been created for jobs in the Job Cost module.

Use the Find menu to retrieve the right job; you can then see all of the relevant information about its purchase orders. A job's status must be Order to appear in this workspace.

The Show Purchase Orders tab displays general and account information, and the Purchase Orders sub-tab contains information about the purchase orders that you have created for the job. You cannot change the contents of any of the fields.

Use the **Print This** function in the File menu to print a list of the purchase orders for the current job. Use the **Print...** function to print a list of purchase orders for more than one job.

**Note:** You manage purchase orders in the Purchase Orders workspace in the Accounts Payable module.

## Show Purchase Orders Tab

This section includes the fields and descriptions for the Show Purchase Orders tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the job's name and unique job number. The name was entered in the Jobs window.
<b>Job Group</b>	This is the job group the job belongs to. Job groups are created in the window Job Groups.
<b>Status</b>	This is the job status. It must be "Order" to be shown here. A job initially has "Quote" status.
<b>Responsible</b>	In this field, you can see who is responsible for the job. The name is entered in the Jobs window.
<b>Closed</b>	This field is marked if the job has been closed. You can reopen a job in the Jobs window by selecting "Reopen Job."

### Customer Island

Field	Description
<b>Customer</b>	This is the name and number of the customer the job is for. The name is retrieved from the Job Information window.

### Description Island

Field	Description
<b>Internal</b>	This is the internal description of the job. It is retrieved from the Jobs window.
<b>Description 2</b>	copy to come
<b>Description 3</b>	copy to come

Field	Description
<b>Ref.</b>	This is the job's reference text. It is retrieved from the Jobs window.

### Purchase Orders Sub-Tab

This section includes the fields and descriptions for the Purchase Orders sub-tab.

**Purch. Order No.** This is the number of the purchase order. It is taken from the "Purchase Order" number series in the Numbers window.

Field	Description
<b>Vendor</b>	This is the number of the vendor the purchase order was made to.
<b>Name</b>	This is the name of the vendor. It is retrieved from the Purchase Orders window in the Accounts Payable module.
<b>Country</b>	This is the country the vendor comes from. It is retrieved from the Vendor Information Card in the Accounts Payable module.
<b>Language</b>	This is the language the vendor uses. It is retrieved from the Vendor Information Card in the Accounts Payable module.
<b>Currency</b>	This is the currency the vendor uses. It is retrieved from the Vendor Information Card in the Accounts Payable module.  Purchase Order Total This is the amount the vendor was paid for the service you bought. It is the same as the cost of the corresponding amount activity. Please note that the purchase order total does not include any discount granted by the supplier. This is due to the fact that a purchase order can contain purchase order lines referring to different jobs.
<b>Created on</b>	This is the date the purchase order was created.
<b>Closed</b>	This field is marked if the purchase order is closed, which is done in the Purchase Orders window in the Accounts Payable module.
<b>Date Closed</b>	This is the date the purchase order was closed in the Purchase Orders window. This field is blank if the purchase order is still open.

## Job Planning Single Dialogs Workspace

Use this workspace to outline the tasks to be completed for a job.

Just as you use the Job Budget workspace to keep track of job costs, you use this workspace to plan the time aspect of a job at a general level.

The Job Planning tab displays some of the standard information for the job. Use the Job Budget Lines sub-tab to maintain information about how the job is being performed. The lines correspond to the lines in the planning budget as entered in the Job Budgets workspace. However, this workspace does not display prices, markup, tax, and so on.

Use the **Show Budget** field to select the budget. By default, Maconomy suggests the planning budget for the current job. This workspace always displays the latest revision of a job budget. You can create, delete, and edit lines as you do in the Job Budgets workspace, which then reflects the changes that you make.

You have access to edit all of the open fields in the Job Budget Lines sub-tab if the **Change Job Budgets** field in the Actions workspace in the Set-Up module is selected. However, if the job budget on a line is approved, you cannot change the **Empl. Field** on that line.

Information in this workspace is shared with the detailed planning in the Resource Planning module. Automatic exchange of data between the two modules ensures that jobs' planning budgets and the detailed planning are updated on an ongoing basis.

If a job that is displayed in this workspace is a template job, you can only create lines for the job if certain information, such as country, currency, and company tax code, has been entered for it. If you try to create a budget line for a template job for which the appropriate information has not yet been provided, Maconomy issues a message informing you about the missing information.

## Job Planning Tab

This section includes the fields and descriptions for the Job Planning tab.

### Job Island

Field	Description
<b>Job</b>	This is the name and number of the job whose budget is shown in the window. It cannot be changed here. The name is entered, and can only be changed, in the Jobs window.
<b>Job Group</b>	This is the job group the job is assigned to. You cannot change it here. The job group can be changed in the Jobs window as long as the job is on quote.
<b>Status</b>	This is the job's status. It is either "Quote" or "Order." It cannot be changed here. When you create a job, it has "Quote" status. By choosing "Convert to Order" in the Jobs window, the status is changed to "Order."
<b>Template</b>	This field shows whether the job is a template job or a normal job.
<b>Responsible</b>	This is the name of the person in the company who is responsible for the job. You can change the name in the Jobs window.
<b>Closed</b>	<p>This field shows whether the job is closed. If it is marked, the job is closed. You cannot change it here.</p> <p>A job is closed by choosing "Close Job" in the Action menu in the Jobs window, and it is reopened by choosing "Reopen Job," also in the Action menu in the Jobs window.</p> <p>As long as a job is marked as closed, it is not possible to enter new budget lines or to change the information in existing budget lines. Nor is it possible to make entries to the job. However, you can always reopen the job.</p>

**Company Island**

Field	Description
<b>Company</b>	This field shows the name and number of the company responsible for the current job. The number is specified in the window Jobs when the job is created. It cannot be changed here.

**Line Creation Island**

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field “Line Type” in new job budget lines added to the job budget.

**Transfer Job Dates Island**

Field	Description
<b>Activity Type</b>	This field displays the type of the current activity.
<b>Overwrite Existing Dates</b>	With this check box, you can decide whether the “Transfer Job Dates” action should overwrite any dates already entered by the user in the job budget line “Planned Starting Date” and “Planned Ending Date” fields.

**User Island**

See the chapter “Getting Started” for a description of the fields in the island User.

**Budget Type Island**

Field	Description
<b>Show Budget</b>	In this field, you can specify which budget lines you want to see. When you open the window Job Planning or browse through a different job in this window, you will see the budget of the type you looked at last.
<b>Planning Budget</b>	<p>In this field, you choose the budget to be used as the current job’s planning budget. The planning budget is used to register dates, employees, and items to give an overview of the expected use of these resources. Planning budgets can be analyzed using the Analyzer report/report template Planning Budgets.</p> <p>If the value in this field is changed, Maconomy checks the existence of any planning lines in the window Detailed Planning in the Resource Planning module which have been created on the basis of the previous planning budget. Are there no such lines, the planning budget for the job in question will be changed. If such planning lines exist, however, Maconomy will issue a warning indicating that all planning lines assigned to the current budget will be removed from the detailed planning.</p> <p>If the current planning budget belongs to a job for which one or both of the job parameter attributes “Duplicate lines (amount) on planning budget” or “Duplicate lines (time) on planning budget” have the value “No,” you can only change the</p>

Field	Description
	budget type if the selected type does not contain more than one line with the same combination of activity and task. If you change the budget type, Maconomy will issue a warning, and any job progress entries and task progress entries are deleted for the job. The table part of the window Job Planning shows budget lines from the planning budget of the current job.

### Customer Island

Field	Description
<b>Customer</b>	This is the name and number of the ship-to customer the job is for. It cannot be changed. The customer's name is entered in the Jobs window.

### Settling Company Island

Field	Description
<b>Settling Company</b>	<p>This field shows the name and number of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in the chapter "Introduction to the G/L Module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

### Resource Planning Island

Field	Description
<b>Booking Type</b>	<p>In this field, you can specify a default booking type to apply to all budget lines for the planning budget, as well as to all detailed planning lines associated with the budget lines. The three booking types are "Preliminary," "Requested," and "Confirmed." The type selected in this field is automatically suggested on lines created in the table part of the window.</p> <p>If you change the value in this field, the booking type is changed on all budget lines and related detailed planning lines. Note that the value of the field can be changed to "Preliminary" or "Requested" as required, but it can only be changed to "Confirmed" if the current allocation does not conflict with other confirmed allocations specified for the employee in question. If a conflict occurs so that the current allocation and one or more other confirmed allocations would cause the planning time of the employee on the current line to be exceeded, the booking type of the current line will automatically be set to "Requested." For more</p>

Field	Description
	information, please see the description of the field "Booking Type" in the table part.
<b>On Hold</b>	If this field is marked, it means that the action "Put on Hold" has been selected for the job. The field is unmarked if the action "Resume" is selected. For more information, see the action "Put on Hold."
<b>Date</b>	This field shows the date on which the current job was put on hold, if the field "On Hold" above is marked.
<b>By</b>	This field shows the name of the user who put the current job on hold, if the field "On Hold" above is marked.
<b>Expected Resume Date</b>	In this field you can specify the date on which you expect the current job to be resumed, if it is currently on hold. The field is for information only.
<b>Resumed</b>	If this field is marked, it means that the current job has once been put on hold, but has been resumed through the use of the action "Resume." The field cannot be unmarked. For more information, see the action "Resume."
<b>Date</b>	This field shows the date on which the current job was resumed, if the field "Resumed" above is marked.
<b>By</b>	This field shows the name of the user who resumed the current job, if the field "Resumed" above is marked.
<b>Automatic Allocation Method</b>	<p>Sometimes it is known at the time of the planning of a job that a certain employee should carry out a given task, and the distribution of allocations in the detailed plan is inconsequential. You can let Maconomy take over the planning of time activities on the lines in the table part, provided that the budget shown in the window is the latest approved revision of the planning budget by specifying a value in this field.</p> <p>This field can have three values:</p> <ul style="list-style-type: none"> <li>Blank — If you select this option, no automatic allocation is made. If you have previously made automatic allocations and then reset this field to the blank value, the detailed planning allocations will be preserved, but they will no longer be automatically updated.</li> <li>Early Allocation — If you select this option, Maconomy will allocate as many hours as possible as early in the plan as possible, when a number of hours is specified in the field "Quantity" on a line in the table part of the window.</li> <li>Even Allocation — If you select this option, Maconomy will allocate the number of hours specified in the field "Quantity" evenly on the detailed planning line within the time span defined in the window Detailed Planning.</li> </ul> <p>For more information about these options, please see the field "Method" in the window Detailed Planning in the Resource Planning module.</p>

Field	Description
	<p>When a value other than blank is selected, any existing planning lines are deleted from the budget, and new planning lines are created according to the specified method. This takes place when the budget is approved (from any window, including Job Budgets and Job Progress), but only for lines where an employee, a starting date, and an ending date have been specified. If any of these items of information is later removed, it corresponds to selecting the blank value for the line—the detailed planning line is not removed, but is no longer updated automatically.</p> <p>If no employee has been specified on a line when you approve the budget, the automatic allocation will not be performed until an employee is assigned to the task in the Resource Planning module.</p> <p>Maconomy tries to make a confirmed allocation, but if the specified number of hours cannot be allocated within the available planning time of the employee in question, the allocation will be marked as “Requested.”</p> <p>If the Job Progress or Task Progress functionality is being used, the starting date for the allocation will be the latest estimate date instead of the planned starting date, and you cannot let the estimate date exceed the planned ending date.</p> <p>Detailed planning lines created as a result of automatic allocation in this window cannot be locked.</p> <p>It is possible to specify an automatic allocation method for jobs set up with the <b>Day</b> time unit.</p>

### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	In this field, you can enter the description of the activity. If you have entered an activity number in the “Act. No.” field, Maconomy suggests the activity text from the Job Budgets window when you print quotes and order confirmations, but you can always change the text on the budget line. The original activity text is shown in the field “Activity Name.”
<b>Line Type</b>	<p>In this pop-up field, you select the type of the current job budget line. Selecting a value is mandatory. In the card part, the field “Default Line Type” in the island Line Creation defines the default value of this field, that is the value which is automatically suggested when you create the line. You may then select something else. You can choose from the following values:</p> <ul style="list-style-type: none"> <li>Sum/Text — If you select this value, the current line can be used as a text line, simply adding a line of text to the budget, or as a sum line. A sum line is used as a grouping level when you use work breakdown structure as described in “Getting Started with the Java™ Client.” In</li> </ul>

Field	Description
	<p>both cases, no reference to activity or task may be specified on the line, and the line cannot be marked as a milestone.</p> <ul style="list-style-type: none"> <li>■ Time — If you select this value, the current line is used for specifying a time activity. The activity number will change to the activity specified in the job parameter attribute “Default Time Activity” of the type “Budgeting.”</li> <li>■ Outlay — If you select this value, the current line is used for specifying an outlay activity. The activity number will change to the activity specified in the job parameter attribute “Default Outlay Activity” of the type “Budgeting.”</li> <li>■ Amount — If you select this value, the current line is used for specifying an amount activity. The activity number will change to the activity specified in the job parameter attribute “Default Amount Activity” of the type “Budgeting.”</li> <li>■ Milestone — If you select this value, the current line is used for specifying a milestone. Any existing activity number will be removed, and the field “Milestone” will be marked (this field is not shown in the standard layout of the Job Budgets window).</li> </ul> <p>Note that by changing the line type, you change the activity number. See the description of the field “Act. No.” for considerations with regard to changing the activity number.</p> <p>If you specify an activity in the field “Act. No.,” this field will change to reflect the type of activity you entered, that is either “Time,” “Amount,” or “Outlay.”</p>
<b>Act. No.</b>	<p>In this field, you enter the number of the activity you wish to plan for the budget line. When the activity has been entered, it cannot be changed. If the field is blank, the line is a text line which you can use for a description of the budget. If the field shows the sign “*,” the line is a sum line, which creates a subtotal when you print the budget with the standard layout from the Job Budgets window.</p> <p>If a job budget text from the window Activities has been assigned to one of the activities used in this window, the standard text will be transferred to the window Job Budget Texts. You can subsequently edit the text so that it fits each job budget line in the window Job Budget Texts.</p>
<b>Empl. Cat. No.</b>	<p>In this field, you can assign a certain employee category to the job budget. If no specific employee has been specified for this line, Maconomy will instead use the cost, intercompany, or billing price for the specified employee category for price calculations.</p> <p>If the system parameter “Empl. cat. on job budgets required” is marked, it will not be possible to leave out an employee category number in this field, unless the field “Empl.” is also blank.</p>
<b>Empl.</b>	<p>In this field, you can enter the number of the employee who is assigned to the activity. If employee control by budget or by approved budget has been selected for the current job, all employees for whom registrations are made</p>

Field	Description
	<p>on the job must appear in the job's budget of the type specified by means of the system parameters "Use Fixed Budget Type for Employee Control" and "Budget Type No. for Employee Control." If, for instance, the system parameter "Use Fixed Budget Type for Employee Control" has been marked, and the system parameter "Budget Type No. for Employee Control" indicates the budget type "Standard," a job registration for a given employee is only allowed if the employee in question appears in the latest revision of the job's budget of the type "Standard."</p> <p>Registrations are not limited to the activities entered for the employee in the budget. Employee control is selected in the window Jobs. See also the description of the window Employee Control for information about a better way of limiting the number of employees who can register on the job.</p> <p>If an employee category has been specified in the field "Empl. Cat. No.," this field must either be blank, or the employee specified must be a member of the employee category. If an employee is specified in this field, it will not be possible to specify that employees other than the one specified in this field should work on the job in the window Detailed Planning in the Resource Planning module. If, on the other hand, the field is blank, it is possible to plan for one or more employees belonging to the specified category (or all employees, if no category has been specified).</p> <p>If the system parameter "Empl. cat. on job budgets required" is marked, it is not possible to specify an employee unless an employee category is also specified.</p> <p>If the current job uses Traffic Control, and one or more teams has been selected for the job in the windows Timing Plans or Job Traffic Status, the employee specified here must be member of that team. For more information, see the windows mentioned and the window Teams in the Set-Up module.</p>
<b>Quantity</b>	<p>In this field, you can enter the budgeted quantity for the budget line.</p> <p>For time activities, the quantity is interpreted as hours. It is therefore totaled in the "Hours" field in the "Time" column in the Job Budgets window. If you enter a number of hours, it is automatically converted into a number of days which is inserted into the field "Quantity, Days." The number of days is calculated by dividing the number of hours by the value in the field "Hours per Man Day" in the card part of the window Jobs.</p> <p>If you wish to assign items to the job budget line in the Job Budget Item Lines window, the value here must be 1. You can then enter the quantity on the job budget item lines.</p>
<b>Quantity, Days</b>	<p>The functionality of this field is similar to that of the field "Quantity" above. However, this field only applies to time activities, and you enter the budgeted quantity as a number of days instead of a number of hours. If you enter a number of days, it is automatically converted into a number of hours which is inserted into the field "Quantity." The number of hours is calculated by multiplying the number of days by the value in the field "Hours per Man Day" in the card part of the window Jobs.</p>

Field	Description
<b>Estimated Time to Completion</b>	This field shows the number of hours required to complete the task on the planning budget line. If the activity on the current planning budget line is an amount activity, this field is blank. The value of the field cannot be edited, as it displays the most recent estimate made in the window Task Progress. The estimate of this field is considered valid as of the date specified in the field "Estimate Date" below. The value of this field is relevant only if that field is not blank.
<b>Estimate Date</b>	This field shows the date for which the estimated time or costs required to completion on the planning budget line is considered valid. If the field is blank, it means that no estimated requirements for completion have been specified. The value of the field cannot be edited, as it displays the date of the most recent estimate made in the window Task Progress.
<b>Estimated Cost to Completion</b>	This field shows the amount of costs required to complete the task on the planning budget line. The value of the field cannot be edited, as it displays the most recent estimate made in the window Task Progress. The estimate of this field is considered valid on the date specified in the field "Estimate Date" above. The value of this field is relevant only if that field is not blank.
<b>Quantity Unstaffed</b>	This field displays the number of hours still remaining to be staffed for the current planning budget line. The value of the field can be edited by allocating the current task to one or more employees in the Resource Planning module.
<b>Planned Starting Date</b>	<p>In this field, you can enter the planned starting date for the activity. This date is also shown in the field "Planned Starting Date" in the window Job Budgets. By selecting the action "Transfer Job Dates," you can prefill this field with the value of the field "Start Date" in the window Jobs for the current job. At the same time, the field "Planned Ending Date" is completed with the value of the field "Estimated Ending Date" in the window Jobs.</p> <p>If automatic allocation is selected for the current line or in the card part, changing the planned starting date will cause the hours on the current line to be redistributed on the associated planning line.</p>
<b>Planned Ending Date</b>	<p>In this field, you can enter the planned ending date of the activity. This date is also shown in the field "Planned Ending Date" in the window Job Budgets. By selecting the action "Transfer Job Dates," you can prefill this field with the value of the field "Estimated Ending Date" in the window Jobs for the current job. At the same time, the field "Planned Starting Date" is completed with the value of the field "Start Date" in the window Jobs.</p> <p>If automatic allocation is selected for the current line or in the card part, changing the planned ending date will cause the hours on the current line to be redistributed on the associated planning line.</p>
<b>Completed</b>	You can mark this field to show that the activity is completed.
<b>Skill No.</b>	In this field, you can enter the number of a skill. If a specific employee has been indicated for the job budget line, a warning will be issued if the skills of

Field	Description
	the employee do not comply with the specification of this field and the below fields "Level" and "Requirement Type."
<b>Skill Name</b>	This field shows the name of the skill entered in the field "Skill No."
<b>Level</b>	In this field, you can enter the required level for the skill specified in the field "Skill No." This means that an employee assigned to the task on the job budget line should possess the skill at this level or better. Note that if you specify a level which does not comply with the one specified for the employee on the job budget line, a warning will be issued.
<b>Requirement Type</b>	<p>In this pop-up field, you can specify to what degree employees should possess a skill level to be allowed to be assigned to the task. If an employee has been specified on the job budget line in the card part, Maconomy will issue a warning each time the skill requirement is entered or changed if the change means that the specified employee does not meet the skill requirement.</p> <p>The default value of the field is "Mandatory," but you can choose among the following options:</p> <ul style="list-style-type: none"> <li>■ <b>Mandatory</b> — If you select this option, only employees possessing the skill at the specified level or higher should be assigned to the task.</li> <li>■ <b>Preferred</b> — This option means that employees possessing the skill at the specified level or higher are preferred to employees who do not.</li> <li>■ <b>Undesired</b> — This option means that employees that either do not possess the specified skill at all or possess the skill at a level below the specified level are preferred to employees who do.</li> <li>■ <b>Disallowed</b> — If you select this option, only employees that do not possess the skill at the specified level or higher should be assigned to the task. This means that only employees that either do not possess the specified skill at all or possess the skill at a level below the one specified for the skill should be assigned to the task.</li> </ul>
<b>Exec. Company No.</b>	This field shows the name of the company carrying out the specified activity. The field cannot be changed.
<b>Name</b>	This field shows the name of the executing company. The field cannot be changed.
<b>Task</b>	In this field, you can specify the task to which the job budget line is to be assigned. If neither of the system parameters "Create Tasks from Job Budgets" or "Extended Task Creation from Budgets" has been marked, and a task list exists for the job, you must enter a task which exists in the task list in question. If dimension values have been specified in the task list, these dimensions are automatically suggested on new budget lines unless another value has been entered manually. If the window Task Lists specifies that

Field	Description
	derived dimension values should overwrite existing dimensions values, any manually entered dimensions will be overwritten. If either of the system parameters “Create Tasks from Job Budgets” or “Extended Task Creation from Budgets” has been marked, you can enter a task which does not already exist in the job’s task list. When you do, Maconomy will create the task in the job’s private task list, using the activity entered on the line as derived activity.
<b>Location</b>	<p>In this field, you can enter a value for the dimension Location. If you do not manually enter a value, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. However, any manually entered value will be overwritten if Maconomy can derive a value for which overwriting has been selected. If no value can be derived, Maconomy transfers the value from the field “Location” in the card part of the window, and if no value has been entered in the card part, the standard value is transferred from the window System Parameters in the Set-Up module.</p> <p>See the section on dimension derivation in the chapter “Introduction to the G/L Module” as well as the description of the window Dimension Derivation for further information about dimension derivation.</p>
<b>Entity</b>	The functionality of this field is similar to the functionality of the field “Location” above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field “Location” above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field “Location” above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field “Location” above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field “Location” above.
<b>Activity Name</b>	This field displays the text defined for the current activity. The text is suggested by Maconomy as entry text when a line is created in this window. The entry text can be changed, and this is then displayed in the field “Description” in the table part of this window.
<b>Task Description</b>	In this field, you can specify the task to which the job budget line is to be assigned. If neither of the system parameters “Create Tasks from Job Budgets” or “Extended Task Creation from Budgets” has been marked, and a task list exists for the job, you must enter a task which exists in the task list in question. If dimension values have been specified in the task list, these dimensions are automatically suggested on new budget lines unless another value has been entered manually. If the window Task Lists specifies that derived dimension values should overwrite existing dimensions values, any manually entered dimensions will be overwritten. If either of the system parameters “Create Tasks from Job Budgets” or “Extended Task Creation

Field	Description
	from Budgets” has been marked, you can enter a task which does not already exist in the job’s task list. When you do, Maconomy will create the task in the job’s private task list, using the activity entered on the line as derived activity.
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified in the field “Empl. Cat. No.” above.
<b>Employee Name</b>	This field displays the name of the employee specified in the field “Empl.”
<b>Booking Type</b>	<p>In this field, you can specify one of the booking types “Preliminary,” “Requested,” or “Confirmed.” The default value of the field is transferred from the field “Booking Type” in the island Resource Planning in the card part.</p> <p>By specifying a booking type, you can indicate whether the planned hours should be considered tentative or permanent. Allocations of the booking type “Confirmed” are considered permanent, whereas less-restricted allocations are of the booking type “Preliminary.” Allocations of the booking type “Requested” are allocations that either could not be converted from “Preliminary” to “Confirmed,” or allocations that are to be reviewed by some other person before they are converted to “Confirmed.”</p> <p>Any detailed planning lines based on the current planning budget line are automatically provided the booking type specified in this field, but the type can be changed in the window “Detailed Planning.” If you update the booking type on a line at a later time and reapprove the budget, Maconomy will check the associated detailed planning line to see if its current booking type matches the booking type specified on the planning budget line at the previous approval. If it does, the booking type on the detailed planning line is updated with the new booking type from the planning budget line, thus keeping the booking type on the planning budget line and the detailed planning line synchronized. If it does not, it means that the booking type on the detailed planning line was explicitly changed, and Maconomy will therefore not update the booking type on the detailed planning line when the planning budget is reapproved.</p> <p>You can convert the booking type selected into another type. Note, however, that if the booking type is changed from “Preliminary” to “Confirmed,” the system will try to implement the change on the related detailed planning lines. Any allocations in the detailed planning that could not be changed from the type “Preliminary” to “Confirmed” because of conflicts with other confirmed allocations will automatically be assigned the booking type “Requested.” Conflicts arise if the conversion of the current allocation and other, confirmed allocations with the same employee would cause the planning time of the employee on the current line to be exceeded.</p> <p>You cannot create more than three versions, one for each booking type, of budget lines which are similar, that is, have the same combination of job, activity, task, and employee and/or employee category.</p>

Field	Description
<b>First Possible Starting Date</b>	In this field, you can enter the first possible starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Last Possible Ending Date</b>	In this field, you can enter the last possible ending date of the activity.
<b>Actual Starting Date</b>	In this field, you can enter the actual starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Actual Ending Date</b>	In this field, you can enter the actual ending date of the activity. The specified date is for reference only, for example, for use in reports.
<b>On Hold</b>	If you mark this field, the current task is put on hold. This has the same effect for the current line as selecting the action "Put on Hold" has for the entire job. The field is unmarked if the action "Resume" is selected. For more information, see the action "Put on Hold."
<b>Put on Hold On</b>	This field shows the date on which the current job was put on hold, if the field "On Hold" above is marked.
<b>Put on Hold By</b>	This field shows the name of the user who put the current job on hold, if the field "On Hold" above is marked.
<b>Expected Resume Date</b>	In this field you can specify the date on which you expect the current task to be resumed, if it is currently on hold. The field is for information only.
<b>Resumed</b>	If this field is marked, it means that the current task has once been put on hold, but has been resumed through the use of the action "Resume" or by removing the mark in the field "On Hold" for the current line. The field cannot be unmarked. For more information, see the action "Resume."
<b>Resumed On</b>	This field shows the date on which the current task was resumed, if the field "Resumed" above is marked.
<b>Resumed By</b>	This field shows the name of the user who resumed the current task, if the field "Resumed" above is marked.
<b>Plan Locked</b>	<p>By marking this field, you specify that the current job budget line is "locked." This means that Maconomy will show a warning if you try to delete or move the allocation on the line. Locking is typically used for fixtures such as customer meetings, and so on, which cannot be moved without affecting a third party.</p> <p>When you mark or unmark the field in this window, all underlying detailed planning lines in the window Detailed Planning or Detailed Employee Planning in the Resource Planning module are updated accordingly. You can, however, mark or unmark individual planning lines in the windows mentioned.</p>

Field	Description
	Note that you cannot change this field if the budget is set up to use automatic resource allocation.
<b>Automatic Allocation Method</b>	In this field, you can specify that the current task should be allocated automatically. The functionality of this field is similar to that of the <b>Automatic Allocation Method</b> field in the tab, but only applies to the current job budget line.
<b>Remarks 1-10</b>	In these fields, you can enter remarks regarding the current line.

## Actions

This section shows the Actions available in the Job Planning workspace.

### Top Tab

Field	Description
<b>Transfer Job Dates</b>	The functionality of this action is similar to that of the action "Transfer Job Dates" in the window Job Budgets.
<b>New Revision</b>	The functionality of this action is similar to that of the action "New Revision" in the window Job Budgets.
<b>Submit Budget</b>	The functionality of this action is similar to that of the action "Submit Budget" in the window Job Budgets.
<b>Approve Budget</b>	The functionality of this action is similar to that of the action "Approve Budget" in the window Job Budgets. Note that if the job or individual budget lines were put on hold or resumed while the latest revision of the budget was still not approved, the planning lines will not be updated until you carry out this action.
<b>Reopen Budget</b>	The functionality of this action is similar to that of the action "Reopen Budget" in the window Job Budgets.
<b>Convert to Preliminary</b>	When you select this action, Maconomy converts the booking type of all planning budget lines in the table part into "Preliminary."
<b>Convert to Requested</b>	When you select this action, Maconomy converts the booking type of all planning budget lines in the table part into "Requested."
<b>Convert to Confirmed</b>	When you select this action, Maconomy converts the booking type of all planning budget lines in the table part from "Preliminary" to "Confirmed." If the conversion of the booking type on a budget line would conflict with other confirmed allocations for the employee allocated on the line, that is, the current allocation and one or more other confirmed allocations would cause the planning time of the employee on the current line to be exceeded,

Field	Description
	this line will instead be converted into "Requested," and a warning will be issued.
<b>Put on Hold</b>	<p>It can sometimes be necessary suspend working on a specific task or a whole job for a period of time. This could, for instance, be because you are waiting for a delivery from the customer or a third party. To be able to account for this, you can mark jobs or tasks as being "on hold." When a job or task is marked in this way, it does not appear in employee resource plans. Later, for example, when the customer or third party has made the delivery, you can resume the job.</p> <p>With this action, the entire job is put on hold. This means that the following happens:</p> <ul style="list-style-type: none"> <li>■ All lines in the table part are marked in the field "Put On Hold," provided they belong to the latest approved revision of the planning budget, and the booking type corresponds to the booking type specified for the job.</li> <li>■ All allocations on detailed planning lines for the job are deleted. The planning lines, as such, are not deleted, but the planned hours are cleared. This way, the information about who was assigned to the task is preserved. Note that the planning lines are not affected until the budget is approved.</li> <li>■ You can no longer create allocations in detailed planning lines for the job until the job is resumed.</li> <li>■ It is still possible to add lines to the planning budget, but the lines will be added with the default status "Put on Hold."</li> <li>■ Jobs or tasks which have been put on hold will not appear in the "Unstaffed Tasks" Portal report.</li> <li>■ When you select the action, the field "On Hold" in the Resource Allocation island in the card part is marked, and the current date and your user name are shown in the island as a record of who put the job on hold.</li> </ul> <p>Note that to put individual tasks on hold, you simply mark them in the table part.</p> <p>See also the description of the "Resume" action below and the action "Approve Budget" above.</p>
<b>Resume</b>	<p>When you select this action, Maconomy cancels the "On Hold" status of the entire job, and it is once again possible to create detailed planning lines for the job. In the Resource Allocation island in the card part, the field "Resumed" is marked, and the current date and your user name are shown in the island as a record of who resumed the job. Note that the mark in the field "Resumed" will not disappear if you put the job on hold again; it serves as a record that the job was once put on hold and subsequently resumed.</p>

Field	Description
	Note that to resume individual tasks, you simply unmark the field "Put on Hold" in the table part.
<b>Copy Budget From Template</b>	This action copies the budget from the template job.

## Timing Plans Single Dialogs Workspace

Use this workspace to view all relevant deadlines for tasks, for both internal and external reporting.

The Timing Plans tab displays the information that is relevant for the Traffic Manager. The Job Budget Lines sub-tab displays lines from the latest revision of the job's planning budget.

This workspace is part of Maconomy Traffic Management.

The actual planning of job traffic takes place in this workspace and the Job Traffic Status workspace. For example, the timing plan forms the basis for the traffic reports that are used in job status meetings.

Each timing plan line corresponds to a task in the job's timing plan. You adjust the timing of the tasks by using the planned starting and ending dates on the individual lines. You can adjust them manually by changing the date fields or automatically by defining a suggested duration and delay on each line. Use the **Calculate Dates** action to compute all of the dates using the suggested durations and delays on the lines. Dates are calculated from the starting date on the first line and subsequent durations on lines in line order from the top. Thus it is important to put the plans on lines in the correct order.

If you selected a week calendar in the **Standard Week Calendar** job parameter attribute of the type Planning, the date calculation adjusts for weekends and holidays as defined in the week calendar. Otherwise, calendar days are used. The following table shows how Maconomy fills in dates. Note that you can also inject delays between tasks (see the **Delay** field in the Job Budget Lines sub-tab), but no delays are included in this example. Note that in the example below, June 7 is a Tuesday.

Description	Planned Start	Planned End	Duration
Creative Brief	YYYY.06.07		2
Brief, First Creative Internal			2
First Team Internal			1
First Creative Internal			1
Final Team Internal			1

After you use the **Calculate Dates** action, the timing plan looks like the following.

Description	Planned Start	Planned End	Duration
Creative Brief	YYYY.06.07	2005.06.08	2

Brief, First Creative Internal	YYYY.06.09	2005.06.10	2
First Team Internal	YYYY.06.13	2005.06.13	1
First Creative Internal	YYYY.06.14	2005.06.14	1
Final Team Internal	YYYY.06.15	2005.06.15	1

The week calendar in this workspace uses Monday-Friday as working days and skips weekends when calculating the deadlines for a job.

You can assign up to six teams to the job and to the planning lines in this workspace. Teams are groups of employees who work together on a task or the whole job. The division into teams is used for reporting purposes, such as in the Traffic Status Report workspace. In addition, you can only assign an employee to the job budget line in other workspaces if the employee is member of a team selected for the budget line. The teams identified in the Traffic island in the Timing Plans tab are transferred to the corresponding fields in the timing plan lines if the **Derive Teams** field is selected on the individual lines.

You can designate some lines as milestones. A milestone is characterized by not having any duration—the starting date and the ending date are the same. Milestones are used for traffic reporting purposes and should not be confused with the milestones in the Invoicing Plans workspace.

In addition, the timing plan uses primary dates, which are the most important dates in the timing plan, assembled into a catalog. These might be dates that occur on all timing plans in the organization and should always be available when reporting across jobs, using the Traffic Status Report in the Portal. Primary dates can be milestones that have no duration or tasks associated with work that has to be done. In the latter case, the planned ending date of the task counts as the primary date. You can define up to ten primary dates in the Popup Fields workspace in the Set-Up module.

Because timing plan lines are actually job budget lines, you cannot change them if the budget is approved. If the budget is approved, you can reopen it in this workspace by using the **Reopen Budget** action.

As in the Job Budgets workspace, this workspace has actions for submitting, approving, reopening, and creating revisions of job budgets. Any changes that you make to the status of a planning budget or to the budget lines in the Job Budget Lines sub-tab of this workspace are also shown in the Job Budgets workspace.

You can print the timing plan for a range of jobs using the Timing Plan layout.

## Timing Plans Tab

This section includes the fields and descriptions for the Timing Plans tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the name number of the job whose budget is shown in the window. The name is entered, and can only be changed, in the Jobs window.

Field	Description
<b>Job Group</b>	This field shows the name of the job group to which the current job belongs.
<b>Status</b>	This field shows whether the current job has “Quote” or “Order” status.
<b>Template</b>	If this field is marked, the current job is a template job. The changes you make in this window will be used by all future jobs created from this template.
<b>Responsible</b>	This field shows the name of the employee who is responsible for the job.
<b>Closed</b>	If this field is marked, the current job is closed. You cannot edit the traffic plan of a closed job.

**Customer Island**

Field	Description
<b>Customer</b>	This field shows the name and number of the customer assigned to the job. The name is entered in the Jobs window.

**Traffic Island**

Field	Description
<b>Team 1-6</b>	<p>In these fields you can enter up to six teams which may apply to this job. A team is a group of employees. When you enter the team number, the name is shown to the right of the number. In the table part, you can assign a team from among these teams to timing plan lines.</p> <p>If the customer has a preference for a certain team or set of teams, the teams may be specified in the customer card. When a job is created for the customer, the specified teams will be copied to the job when it is created. Otherwise, the teams can be specified on the job or the template job, or teams can be changed or added in this window.</p> <p>When a team is specified on a timing plan/job budget line, you are restricted to selecting among the members of that team when assigning an employee to the task on the budget line in other windows.</p> <p>For information about setting up the teams, see the window Teams in the Set-Up module.</p>

**Company Island**

Field	Description
<b>Company</b>	This field shows the number and name of the responsible company of the job.

**Line Creation Island**

Field	Description
<b>Default Line Type</b>	In this pop-up field, you can select a default value for the field “Line Type” in the table part of the window. Every time you create a new line, the value selected here will be selected on the new line, and you may then change it to something else. Please see the description of the field “Line Type” in the table part for a description of the options in this field.

**Revision Island**

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the timing plan/job budget. By selecting the action “New Revision” in the Action menu, you can make a new revision of the job budget.
<b>Remarks</b>	In these fields, you can enter information about the current revision of the timing plan/job budget. When you choose to create a revision of the budget, the contents of these fields will be removed, allowing you to enter remarks about the new revision of the budget. These fields are the only fields in the budget which are affected by the creation of a new revision. The remarks can still be viewed in the window Job Budget Revisions.

**Employees Island**

Field	Description
<b>Project Manager</b>	In this field, you can enter the number of an employee created in the Employees window in the Set-Up module. The name of the employee is shown in the “Name” column. For further information about the functionality of the project manager, see the description of the “Project Manager No.” field in the Jobs window. In this window, the project manager information can be used in the automatic creation of teams using the “Create Teams” action.
<b>Sales Rep.</b>	In this field, you enter the number of an employee who is registered as a sales representative in the Employees window in the Set-Up module. The name of the employee is shown in the “Name” column.  For further information about the functionality of the sales representative, see the description of the “Sales Rep. No.” field in the Jobs window. In this window, the sales representative information can be used in the automatic creation of teams using the “Create Teams” action.
<b>Employee 1-10</b>	In these fields, you can assign up to ten employees to the current company-specific customer. The employees will be suggested as Employees 1-10 when you create a job on the given company-specific customer

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	<p>In this field, you can edit the description of the current timing plan/job budget line.</p> <p>Note that in the description of the following fields, the timing plan/job budget line is called a “task.” For more information, please see the description of the window Job Budgets.</p>
<b>Line Type</b>	<p>In this pop-up field, you select the type of the current job budget line. Selecting a value is mandatory. In the card part, the field “Default Line Type” in the island Line Creation defines the default value of this field, that is the value which is automatically suggested when you create the line. You may then select something else. You can choose from the following values:</p> <ul style="list-style-type: none"> <li>■ <b>Sum/Text</b> — If you select this value, the current line can be used as a text line, simply adding a line of text to the budget, or as a sum line. A sum line is used as a grouping level when you use work breakdown structure as described in “Getting Started with the Java™ Client.” In both cases, no reference to activity or task may be specified on the line, and the line cannot be marked as a milestone.</li> <li>■ <b>Time</b> — If you select this value, the current line is used for specifying a time activity. The activity number will change to the activity specified in the job parameter attribute “Default Time Activity” of the type “Budgeting.”</li> <li>■ <b>Outlay</b> — If you select this value, the current line is used for specifying an outlay activity. The activity number will change to the activity specified in the job parameter attribute “Default Outlay Activity” of the type “Budgeting.”</li> <li>■ <b>Amount</b> — If you select this value, the current line is used for specifying an amount activity. The activity number will change to the activity specified in the job parameter attribute “Default Amount Activity” of the type “Budgeting.”</li> <li>■ <b>Milestone</b> — If you select this value, the current line is used for specifying a milestone. Any existing activity number will be removed, and the field “Milestone” will be marked (this field is not shown in the standard layout of the Job Budgets window).</li> </ul> <p>Note that by changing the line type, you change the activity number. See the description of the field “Act. No.” for considerations with regard to changing the activity number.</p> <p>If you specify an activity in the field “Act. No.,” this field will change to reflect the type of activity you entered, that is either “Time,” “Amount,” or “Outlay.”</p>

Field	Description
<b>Planned Starting Date</b>	In this field, you can edit the date on which you plan to start the current task. Note that the planned starting and ending dates might change when you select the action "Calculate Dates," according to the description of that action and the introduction to this window.
<b>Planned Ending Date</b>	The functionality of this field is similar to that of the field "Planned Starting Date."
<b>Task</b>	In this field, you can edit the task selected for the current timing plan/job budget line. If the current line is a milestone, you cannot enter a task in this field.
<b>Activity No.</b>	In this field, you can edit the activity selected for the current timing plan/job budget line. If the current line is a milestone, you cannot enter an activity in this field.
<b>Team 1</b>	In this field, you can enter or edit the number of the team of employees to be assigned as "Team 1" to the job. If the field "Derive Teams" is marked for the line, the team specified as "Team 1" in the card part for the job is transferred to this field. If a team is selected, it is only possible to assign an employee to the job budget line in other windows if the employee is member of the selected team. For more information, see the introduction to this window.
<b>Team Name 1</b>	This field shows the name of the team entered in the field "Team 1."
<b>Depending on Line No.</b>	<p>You can use this field to enter a reference to the line number of another line in the timing plan. By doing so, you add a dependency to the task of the referenced line, so that the current task depends on both the preceding task and the referenced task. The line number should refer to the hierarchical number according to the table part structure. The hierarchical line numbers can be seen by setting the table part to show line identifiers (see "Viewing/Hiding Structure Line Numbers" in the chapter "Getting Started with the Java™ Client").</p> <p>You can delete or otherwise manipulate dependencies in the window Job Budget Line Dependencies or use the graphical Gantt Chart component in the Portal (preferred). For more information, please see the section on "Graphical Resource Planning" in the Portal Modules reference manual.</p> <p>To reset the dependencies to the starting position where each task depends on the previous task with a date, select the action "Create Dependencies." For more information, see the description of the action "Create Dependencies."</p> <p>If you use the action "Create Dependencies" to make dependencies between the tasks, this field is completed automatically. You can also add any number of dependencies in this field manually, making the current task depend on multiple tasks. After making manual dependencies in the field, you can delete the line number in this field to delete the added dependencies one at a time. When you delete a dependency, Maconomy will show the next dependency in this field. In the window Job Budget Line Dependencies, you can get a better</p>

Field	Description
	overview of dependencies involving multiple tasks, and you can add dependencies to tasks which belong to other jobs.
<b>Primary Date</b>	<p>In this pop-up field you can select a primary date. Primary dates are created in the window Popup Fields in the Set-Up module, where a maximum of ten different primary dates can be set up. By using primary dates, you can ensure that all jobs use the same framework for certain events or milestones. For instance, say that all jobs go through the same sequence: "Creative Brief," "Brief, First Creative Internal," "First Team Internal," "Final Creative Internal," and "Final Team Internal." By setting up this sequence as primary dates, you can assign a task or milestone to each primary date. This makes it possible to compare reports for a number of different jobs you can, for example, read from a report how many jobs have passed the "First Team Internal" date but not the "Final Creative Internal" date.</p> <p>You cannot select the same primary date for multiple tasks.</p>
<b>Quantity</b>	This field shows the number of hours specified for the current task.
<b>Quantity, Days</b>	The functionality of this field is similar to that of the field "Quantity" above. However, this field only applies to time activities, and you enter the quantity as a number of days instead of a number of hours. If you enter a number of days, it is automatically converted into a number of hours which is inserted into the field "Quantity." The number of hours is calculated by multiplying the number of days by the value in the field "Hours per Man Day" in the card part of the window Jobs.
<b>Completed</b>	By marking this field, you mark the current task or milestone as completed. The field is for information only.
<b>Suggested Duration</b>	In this field you can enter an estimate of the duration of the current task. The number of days entered here will affect the planned starting and ending dates of this task and all subsequent tasks when you select the action "Calculate Dates."
<b>Suggested Delay</b>	In this field you can enter a number of days of delay between the previous and the current task. When you select the action "Calculate Dates," the delay entered in this field will be added to the starting date of the current task.
<b>External Date</b>	If you mark this field, the current timing plan line will be included in timing plan printouts if you mark the field "Include External Dates Only" in the window Print Job Budgets (also opened if you select Print... in this window). This is a way to print an external timing plan, that is, a timing plan which you can send to a customer.
<b>Fixed Date</b>	If this field is marked, any planned starting and ending dates on this line cannot be changed automatically when carrying out the action "Calculate Dates" or when using the Gantt component to manipulate the dates. If a duration and a planned ending date are specified on the line, the planned starting date will be calculated as the ending date less the duration when the

Field	Description
	action “Calculate Dates” is selected, and the dates of subsequent lines are calculated from the specified ending date on this line.
<b>Derive Teams</b>	<p>If you mark this field, the current timing plan line will inherit the team or teams specified in the table part. Team 1 in the table part will be copied to the field “Team 1,” team 2 will be copied to “Team 2,” and so on, when you mark this field or when you enter or change teams in the card part.</p> <p>If you have specified or derived one or more teams on the line, and you remove the mark in this field, the specified team or teams will remain on the line.</p>
<b>Activity Name</b>	This field shows the name of the activity on the current timing plan line.
<b>Task Description</b>	This field shows the description of the task on the current timing plan line.
<b>Team 2-6</b>	The functionality of these fields is similar to that of the field “Team 1” above.
<b>Team Name 2-6</b>	The functionality of these fields is similar to that of the field “Team Name 1” above.
<b>Milestone</b>	— If you mark this field, the task on the current line is considered to be a milestone. This means that the task has no duration (the planned starting date and the planned ending date are identical). Furthermore, no activity or task can be assigned to a milestone line the line must be a text line. Milestones are used for traffic reporting purposes, and should not be confused with the milestones in the window Invoicing Plans.
<b>Location</b>	In this field you can see or edit a value for the dimension Location for the current timing plan line. For more information, see the corresponding field in the window Job Budgets.
<b>Entity</b>	The functionality of this field is similar to that of the field “Location” above.
<b>Project</b>	The functionality of this field is similar to that of the field “Location” above.
<b>Purpose</b>	The functionality of this field is similar to that of the field “Location” above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Location” above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Location” above.

## Actions

This section shows the Actions available in the Timing Plans workspace.

### Top Tab

Field	Description																																						
New Revision	The functionality of this action is similar to that of the action “New Revision” in the window Job Budgets.																																						
Submit Budget	The functionality of this action is similar to that of the action “Submit Budget” in the window Job Budgets.																																						
Approve Budget	The functionality of this action is similar to that of the action “Approve Budget” in the window Job Budgets.																																						
Reopen Budget	The functionality of this action is similar to that of the action “Reopen Budget” in the window Job Budgets.																																						
Calculate Dates	<p>When you select this action, the planned starting and ending dates are calculated. As described in the introduction to this window, Maconomy makes a linear calculation based on the first starting date entered in the table part (the topmost starting date appearing in the table). Any sum-level structure applied to the lines does not affect the calculation, and the calculation is based on the order in which the lines appear in the table part. Dates are calculated according to the following formulas:</p> <table><tr><td>Starting Date 1 (that is, the first task)</td><td>Entered by user</td></tr><tr><td>Starting Date 2 (that is, subsequent tasks)</td><td>Starting Date 1 + Suggested Duration + Suggested Delay</td></tr><tr><td>Ending Date 1</td><td>Starting Date 1 + Suggested Duration</td></tr><tr><td>Ending Date 2</td><td>Starting Date 2 + Suggested Duration</td></tr></table> <p>Dates are also calculated for tasks preceding the first task for which a starting date has been specified. For instance, your timing plan may look as follows:</p> <table><tr><th>Line No.</th><th>Starting Date</th><th>Ending Date</th><th>Duration</th><th>Sugg. Delay</th><th>Sugg. Duration</th></tr><tr><td>1</td><td></td><td></td><td></td><td></td><td>2</td></tr><tr><td>2</td><td></td><td></td><td></td><td>3</td><td>5</td></tr><tr><td>3</td><td>June 16</td><td>June 17</td><td></td><td>2</td><td>2</td></tr><tr><td>4</td><td>June 18</td><td>June 18</td><td></td><td>0</td><td>1</td></tr></table>	Starting Date 1 (that is, the first task)	Entered by user	Starting Date 2 (that is, subsequent tasks)	Starting Date 1 + Suggested Duration + Suggested Delay	Ending Date 1	Starting Date 1 + Suggested Duration	Ending Date 2	Starting Date 2 + Suggested Duration	Line No.	Starting Date	Ending Date	Duration	Sugg. Delay	Sugg. Duration	1					2	2				3	5	3	June 16	June 17		2	2	4	June 18	June 18		0	1
Starting Date 1 (that is, the first task)	Entered by user																																						
Starting Date 2 (that is, subsequent tasks)	Starting Date 1 + Suggested Duration + Suggested Delay																																						
Ending Date 1	Starting Date 1 + Suggested Duration																																						
Ending Date 2	Starting Date 2 + Suggested Duration																																						
Line No.	Starting Date	Ending Date	Duration	Sugg. Delay	Sugg. Duration																																		
1					2																																		
2				3	5																																		
3	June 16	June 17		2	2																																		
4	June 18	June 18		0	1																																		

Field	Description
	<p>Line 3 is the first line with a starting date. Using this starting date and the suggested delay and duration for lines 1 and 2, Maconomy is able to calculate starting and ending days for these lines as well.</p> <p>If no starting dates have been specified, but one or more ending dates have been specified, Maconomy starts by calculating a starting date for the first line with an ending date. Based on the calculated starting date, Maconomy then proceeds, calculating starting and ending dates for the remaining lines using the method described above. This allows you to calculate dates of all tasks based on the preferred ending date of the last task.</p> <p>Tasks for which the field "Fixed Date" is marked will not be moved in time by this action, and the starting date of tasks following fixed-date tasks will be calculated relative to the day after the planned ending date of the fixed-date task. All days are working days according to the week calendar selected for the job in the job parameter attribute "Standard Week Calendar." If no calendar is selected there, Maconomy uses regular calendar days.</p> <p>The dates are calculated in a linear fashion, meaning that Maconomy assumes that the first task in the table part should be carried out before the next, and so on. This is the same as saying that task 2 is dependent on task 1, task 3 is dependent on task 2, and so on. You can, however, add other dependencies in the field "Depending on Line No." For more information, see the description of that field.</p> <p>The dates can be altered in other windows as well, including the detailed resource plan and the Portal Gantt Chart component.</p>
<b>Create Dependencies</b>	<p>When you select this action, Maconomy creates or restores the original dependencies between tasks in the table part. As explained above in the description of the action "Calculate Dates," Maconomy assumes that the first task in the table part should be carried out before the next. The action is based on the order in which the lines appear in the table part. Choosing this action creates a dependency of a task to the preceding task, if the task has a starting and ending date, and if the task is either a milestone or has an activity number specified. For more information about manipulating dependencies, please see the description of the window Job Budget Line Dependencies and the section on "Graphical Resource Planning" in the Portal Modules reference manual.</p>
<b>Create Teams</b>	<p>When you select this action, Maconomy attempts to create teams for the team fields ("Team 1-6") that have not already been completed. This is done using the team generators defined in the window Team Generators. There is a team generator for each of the six team fields.</p> <p>The team generator for a given team field defines which of the employees referenced on the job in question (for example, the project manager, sales representative, and the employees in the fields "Employee 1-10") should be members of the team assigned to the team field to which the team generator pertains. For instance, team generator 3 may indicate that the</p>

Field	Description
	<p>team in the field "Team 3" should consist of the project manager of the job in question and the sales representative.</p> <p>For each blank team field, Maconomy checks the corresponding team generator to see if it will result in any team members. If not (for instance, if the generator specifies that the team should consist of the employees in the fields "Employee 1" and "Employee 3," but none of these fields has been completed for the job, or if none of the checkboxes in the island Members of the generator has been marked), no team is created and assigned to the team field in question. If the generator specifications will result in a set of team members, Maconomy then checks if a team with exactly the same members already exists. If it does, this team is assigned to the team field in question. Please note that if this team is blocked, it is automatically unblocked before being assigned to the job.</p> <p>If no team with the members indicated by the team generator exists, a team is automatically created with these members, according to the specifications in the team generator, and assigned to the team field in question.</p> <p>For further information about setting up team generators, see the window Team Generators in the Set-Up module.</p>
<b>Copy Budget From Template</b>	This action copies the budget from the template job.

## Job Traffic Status Single Dialogs Workspace

Use this workspace to prepare a traffic status report.

The traffic manager uses the traffic status report as a basis for discussing the progress and status of multiple jobs at status meetings. The traffic status report is based on information in the Timing Plans workspace and status information collected from the employees who are responsible for the various jobs.

This workspace is part of Maconomy Traffic Management.

When traffic managers want to work out a new version of the traffic status report, they create a revision of the report. This way, a traffic history is preserved, and the traffic manager can include comparisons with previous reports in the report. You can view previous reports in the Job Traffic Status Revisions workspace.

In the Job Traffic Status tab, you can enter selection criteria to select a number of jobs. When you press **Return**, the Jobs sub-tab displays timing plan information for the selected jobs.

The Jobs sub-tab enables you to enter a status text, assign or edit primary dates, select primary date tasks as completed, and assign teams and status flags to the jobs.

## Job Traffic Status Tab

This section includes the fields and descriptions for the Job Traffic Status tab.

### Selection Criteria Island

Field	Description
<b>Project Manager No.</b>	In this field, you can specify the employee number of a project manager. The table part will only include jobs for which the specified employee is project manager.
<b>Team</b>	The functionality of this field is similar to that of the field "Project Manager No." To be included in the table part, the team specified must exist in one of the six "Team" fields on the job.
<b>Customer No.</b>	In these fields, you can specify a range of customer numbers. The table part will only include jobs with responsible customers within this range.
<b>Job No.</b>	The functionality of these fields is similar to that of the field "Customer No."
<b>Customer Remark 15</b>	The functionality of these fields is similar to that of the field "Customer No." In Maconomy Agency Solution (MAS) systems, this field is called "Client."
<b>Customer Remark 17</b>	The functionality of this field is similar to that of the field "Project Manager No." In Maconomy Agency Solution (MAS) systems, this field is called "Brand."
<b>Flag</b>	In this pop-up field, you can select a flag specification. The table part will only include jobs for which the selected flag has been specified.
<b>Employee No. 1-10</b>	The functionality of these fields is similar to that of the field "Project Manager No."
<b>Revision Closed, Date</b>	The functionality of these fields is similar to that of the field "Project Manager No." The table part will only include jobs for which the latest job traffic status revision was closed on the specified date.
<b>Revision Closed by</b>	The functionality of these fields is similar to that of the field "Project Manager No." The table part will only include jobs for which the latest job traffic status revision was closed by the specified user.

### Compare to Island

Field	Description
<b>Revision Code</b>	In this field, you can enter a revision code. The values from the specified revision of the current traffic status report will be shown in the "Compare" fields in the table part.

**Revision Code Island**

Field	Description
<b>Revision Code</b>	<p>In this field, you can enter a revision code. When you select the action “Close Revision,” the specified revision code will be transferred to each of the jobs in the table part. Instead of thinking up a revision code yourself, you can let Maconomy generate one for you automatically of the form “&lt;YEAR&gt;/&lt;WEEK&gt;” and enter it in this field.</p> <p>A system parameter might require you to enter a code in this field before you can close the revision. For more information, see the description of the system parameters “Automatically generate traffic status revision codes” and “Traffic Status Revision Codes Required” in the window System Parameters.</p>

**Jobs Sub-Tab**

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Job No.</b>	This field shows the job number of the current job.
<b>Job Name</b>	This field shows the name of the current job.
<b>&lt;Primary Date 1&gt;</b>	<p>The name of this field is determined by the setup of the pop-up field “Primary Dates” in the window Popup Fields in the Set-Up module.</p> <p>Primary dates supply the framework which makes it possible to compare multiple jobs. The field displays the planned ending date of the timing plan line on which this primary date has been selected. You can edit the date in this field, which will update the corresponding timing plan line and job budget line. The job budget line will be updated regardless of whether the budget is approved.</p>
<b>Completed, &lt;Primary Date 1&gt;</b>	As for the field above, the name of this field is determined by the setup of the pop-up field “Primary Dates” in the window Popup Fields in the Set-Up module. The field shows whether the field “Completed” has been marked on the timing plan line on which this primary date has been selected. You can mark or unmark this field, which will update the corresponding timing plan line and job budget line. The job budget line will be updated regardless of whether the budget is approved.
<b>&lt;Primary Date 2-10&gt;</b>	The functionality of these fields is similar to that of the field “<Primary Date 1>.”
<b>Completed, &lt;Primary Date 2-10&gt;</b>	The functionality of these fields is similar to that of the field “<Completed, Primary Date 1>.”

Field	Description
<b>Flag</b>	In this pop-up field, you can choose among the flag types set up in the pop-up field "Traffic Status Flag" in the window Popup Fields in the Set-Up module. Flags provide a uniform way of assigning a status to the job. A flag could, for example, be "Requires Attention" or "Possible Delay." The flag can be used for grouping jobs that share common properties; in the card part, you can search for jobs having a certain flag.
<b>Status</b>	In this field, you can enter a text describing the status of the current job. You can enter a maximum of 255 characters.
<b>Next Step</b>	This field shows the next step in the timing plan of the job. The field shows the description of the first line in the latest revision of the timing plan that remains to be completed and represents either a time activity or a milestone.
<b>Team 1</b>	This field shows which team is selected as team 1 on the job in the window Timing Plans. You can change the team in this field.
<b>Team Name 1</b>	This field shows the name of the team entered in the field "Team 1" above.
<b>Team 2-6</b>	The functionality of these fields is similar to that of the field "Team 1" above.
<b>Team Name 2-6</b>	The functionality of these fields is similar to that of the field "Team Name 1" above.
<b>Project Manager No.</b>	This field shows the employee number of the project manager of the current job.
<b>Name of Project Manager</b>	This field shows the name of the project manager entered in the field "Project Manager No." above.
<b>Customer</b>	This field shows the customer number of the responsible customer of the current job.
<b>Customer Description</b>	This field shows the name of the customer entered in the field "Customer No." above.
<b>Customer Remark 15-20</b>	These fields show the values of the fields "Remark 15-20" in the information card of the current customer, respectively. In Maconomy Agency Solution (MAS) systems, the fields "Remark 15," "Remark 17," and "Remark 19" are called "Client," "Brand," and "Product," respectively.
<b>Revision Code</b>	This field shows the code of the latest revision of the current job.
<b>Revision Closed by</b>	This field shows the name of the user who closed the latest revision of the current job.

Field	Description
<b>Revision Closed, Date</b>	This field shows the date on which the latest revision of the current job was closed.
<b>&lt;Primary Date 1-10&gt;, Comp. Rev.</b>	The names of these fields are determined by the setup of the pop-up field "Primary Dates" in the window Popup Fields in the Set-Up module. The field shows the dates for primary dates as specified on the revision of the job traffic status specified in the field "Revision Code" in the island Compare To in the card part. This way you can, for example, compare the job traffic status of two consecutive weeks.
<b>Status, Comp. Rev.</b>	This field shows the content of the field "Status" as specified on the revision of the job traffic status specified in the field "Revision Code" in the island Compare To in the card part.
<b>Next Step, Comp. Rev.</b>	copy to come
<b>Team 1-6, Comp. Rev.</b>	The functionality of these fields is similar to that of the field "Status, Comp. Rev." above.
<b>Team Name 1-6, Comp. Rev.</b>	The functionality of these fields is similar to that of the field "Status, Comp. Rev." above.
<b>Revision Code, Comp. Rev.</b>	This field shows the revision code of the job traffic status revision with which the current job traffic status is compared.

## Actions

This section shows the Actions available in the Job Traffic Status workspace.

### Top Tab

Field	Description
<b>Close Revision</b>	When you select this action, the current revision of the traffic status is closed. This means that no values on the jobs shown in the table part can be changed until a revision is created using the action "New Revision." At the same time, the revision code entered in the island Revision Code in the card part is transferred to each of the lines in the table part. If the system parameter "Automatically generate traffic status revision codes" is marked, a revision code is automatically generated if you did not add one manually.
<b>New Revision</b>	When you select this action, a revision is created, and the values shown for the jobs are copied to this new revision, except for the revision code. In the window Job Traffic Status Revisions you can inspect the values for all previous revisions.

## Job Traffic Status Revisions Single Dialogs Workspace

Use this workspace to view past revisions of traffic status reports.

The Job Traffic Status Revisions tab displays one job at a time. The Job Traffic Revisions sub-tab displays all of the traffic status revisions that have been created for the particular job. You cannot edit any of the fields in the workspace.

This workspace is part of Maconomy Traffic Management.

When traffic managers want to work out a new version of the traffic status report, they create a revision of the report in the Job Traffic Status workspace. This preserves a traffic history, and the traffic manager can include comparisons with previous reports in the report. You can view previous reports in this workspace.

For more information about traffic status reports, see the description of the Job Traffic Status workspace.

### Job Traffic Status Revisions Tab

This section includes the fields and descriptions for the Job Traffic Status Revisions tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the current job. All information in this window applies to this job.

#### Customer Island

Field	Description
<b>Customer</b>	This field shows the name and customer number of the responsible customer of the current job.
<b>Customer Remark 15-20</b>	These fields show the value of the fields "Remark 15-20" in the information card of the current customer, respectively. In Maconomy Agency Solution (MAS) systems, the fields "Remark 15," "Remark 17," and "Remark 19" are called "Client," "Brand," and "Product," respectively. Note that if the system parameter "Use Product level" is not marked, the field "Customer Remark 19" will not be shown in this window.

### Job Traffic Revisions Sub-Tab

This section includes the fields and descriptions for the Job Traffic Revisions sub-tab.

Field	Description
<b>Traffic Revision No.</b>	This field shows the revision number of the revision on the current line. Maconomy assigns this number to the revision automatically. It is only used for sorting the revisions in the table part in reverse order.

Field	Description
<b>Revision Closed, Date</b>	This field shows the date on which the revision on the current line was closed.
<b>Revision Code</b>	This field shows the code of the revision on the current line.
<b>Traffic Status</b>	This field shows the status text entered for the revision on the current line.
<b>Team 1</b>	This field shows which team was selected as team 1 on the job for the revision on the current line.
<b>Team Name 1</b>	This field shows the name of the team entered in the field "Team 1" above.
<b>Team 2-6</b>	The functionality of these fields is similar to that of the field "Team 1" above.
<b>Team Name 2-6</b>	The functionality of these fields is similar to that of the field "Team Name 1" above.
<b>&lt;Primary Date 1-10&gt;</b>	The names of these fields are determined by the setup of the pop-up field "Primary Dates" in the window Popup Fields in the Set-Up module. These fields show the dates specified for the primary dates for the revision on the current line.
<b>Flag</b>	This field shows any flag specified for the revision on the current line.
<b>Next Step</b>	This field shows the description of the task representing the next step in the timing plan for the current revision.
<b>Revision Closed by</b>	This field shows the name of the user who closed the revision on the current line.

## Job Progress Single Dialogs Workspace

Use this workspace to create an overview of the progress of jobs and see whether they are on track in terms of time and cost.

This workspace shows the historic development of the progress of a job budget, compared with actual entries on the job. The Job Progress tab displays information about the current job. The Job Budget Lines sub-tab contains budget lines with information about the activity, task, and employee category that are associated with each planning budget line.

A historic entry is created when you create a progress estimate. This enables you to re-estimate one or more tasks and approve the budget again. The approved estimate is also taken into account in the detailed planning in the Resource Planning module.

The progress estimate is based on the job's planning budget. You select the planning budget for it in the Job Budgets workspace. Use the **Planning job** parameter type to set the job up to compare the job's progress with an additional budget, the baseline budget.

A baseline budget is typically used for storing the budget on which a contract is based, and is rarely changed. However, if the job changes scope, such as when you are requested to perform new tasks in addition to those already on order, you should also update the baseline budget. If you were only measuring job progress based on the regular planning budget, a deviation between the planned work and the actual work would occur, and it would not be immediately apparent that the extra work was performed due to a scope change. By comparing with the baseline budget as well, the deviation can be explained by the job scope change.

The progress of a job can be measured by the amount of hours spent on the job or by the total cost incurred on the job. The amount of hours is collected from job entries on time activities. The amount of costs is collected from job entries on amount activities and from the cost of entered time activities.

The Progress island in the Job Progress tab contains lines with history entries that display the five most recent progress estimates.

The Job Budget Lines sub-tab displays the quantity of hours or the amount planned for the line, the number of hours completed, the estimated completion requirement of the budget line, and the date on which this information is considered valid. If the budget has been structured hierarchically, group headers display summarized information from their subordinate lines. You cannot enter information directly on group header lines. To further examine each planning budget line, the project manager can use the Task Progress workspace, which shows information on each budget line, as well as any estimates for the requirements for completion as per the entries entered on the job.

The Job Budget Lines sub-tab shows the progress status of the latest estimate shown in the Job Progress tab. If you want to see the updated progress information for each of the job budget lines, enter a date in the Progress island in the Job Progress tab to indicate the date through which you want to measure progress for this job. Maconomy then performs a calculation of the progress estimates as of that date and show the updated progress information in both parts of the workspace

If the job budget currently displayed in this workspace is approved, most fields appear closed. Since re-estimating a job budget in this workspace changes the budget, you can only do that if the budget is not yet approved. If the budget is approved, you can reopen it in this workspace using the **Reopen Planning Budget** action.

You can choose to re-estimate either the entire job or just one or several of the planning budget lines shown in the Job Budget Lines sub-tab. To re-estimate the entire job, enter a new estimated time or amount to completion along with an estimate date on the last line in the table in the Progress island. Depending on whether you have selected the **Get Est. to Compl. from All Resources** field in the Time To Completion Estimates island, Maconomy performs a calculation to find the number of planned and completed hours for each job budget line since the last estimate date, as well as any new estimates provided by time sheet users. Maconomy can also find the number of planned and completed hours for each job budget line for all of those employees who have entered an estimated time to completion at a given time on the relevant job.

If you choose to re-estimate only one of the planning budget lines shown in the Job Budget Lines sub-tab, you can enter a new estimate for the selected line. The total estimate of the job is automatically written up/down accordingly. Similarly, the total estimate is reflected in the **Quantity** field on the planning budget line in the Job Budgets workspace.

## Re-Evaluating Budget Lines

When re-estimating a planning budget line, you might also want to re-evaluate it. You can do that in the Task Progress workspace, which corresponds to this workspace, except that the Task Progress workspace displays progress information for the individual planning budget lines, as well as the completion requirements specified by job entries, whereas this workspace displays information at the job level.

In some cases, finding out to which job budget line a job entry refers may be ambiguous if more than one planning budget line exists with the same combination of job, activity, and task. This is the case, for example, if two budget lines exist for job J, both with activity A and task T. In this case, Maconomy picks one of the planning budget lines and suggests that the planned/entered amount of hours should be linked to that line. If there is ambiguity due to duplicate budget lines, modify the fields in the Job Budget Lines sub-tab that contain progress information. Maconomy also indicates any ambiguity for each time sheet line in the sub-tab of the Task Progress workspace.

To avoid ambiguity concerning which planning budget line belongs to which time sheet line, you can ensure that only one planning budget line exists for each activity/task combination by setting the **Duplicate lines (time) on planning budget** and **Duplicate lines (amount) on planning budget** job parameter attributes to the value **No**. This means that only one planning budget line that is related to the same job, activity, and task can be created. This ensures that when historic entries are created, the correct planning budget lines are updated.

As in the Job Budgets workspace, this workspace has three actions for submitting, approving, and reopening job budgets. Any changes made to the status of a planning budget or to the budget lines in the Job Budget Lines sub-tab are also displayed in the Job Budgets workspace. However, when approving a planning budget in this workspace for a budget with a new estimate to completion, a progress history entry is made for all of the assigned budget lines. The current estimate is then moved up from the Job Budget Lines sub-tab to the Job Progress tab as a historic entry. This allows the project manager to view the progress history of a job.

You can print out the progress history information for a range of jobs, together with progress history information for the planning budget lines.

## Job Progress Tab

This section includes the fields and descriptions for the Job Progress tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the number of the job whose budget is shown in the window. This field also shows the job name. The name is entered, and can only be changed, in the window Jobs.
<b>Project Manager</b>	This field shows the employee number of the project manager assigned to the job.
<b>Planning Budget</b>	This field shows the name of the budget type used as planning budget, as assigned in the window Job Budgets.

**Customer Island**

Field	Description
<b>Customer</b>	This field shows the number of the customer assigned to the job. This field also shows the first line of the customer's name, which is entered in the window Jobs.

**Progress Island**

Field	Description
<b>Date</b>	<p>This field shows the date for which the progress information for each row was created. You can enter a date in the empty field in the bottom row of the island if you want to make a new estimate. If you enter a date which is on or before the date of the latest progress estimate, you will be warned that all progress estimates as of the specified date will be deleted.</p> <p>When the job budget is approved, this date will be the one for which the reestimate is considered valid. If you do not specify a date, approving the planning budget will not create a new progress history row in this island, and the lines in the table part of the window will show the most recent estimate. If this field is blank, the other fields on this row in the table will have a zero value.</p>
<b>Planned</b>	<p>If the value of the field "Unit of Measure" is "Hours," this field displays the number of hours planned in the detailed planning for the job, calculated as the number of hours planned for the previous row in the table plus the number of hours planned for the job between the date of the previous row and the date on this row. Note that any hours planned for a combination of activity and task which is not represented by a planning budget line will be included. This means that the number of hours shown in this field is not necessarily the sum of the number of hours planned for each of the job budget lines.</p> <p>If hours are subsequently inserted into or removed from the detailed planning related to dates before the date specified in the field "Date" above, the content of this field will not be affected.</p> <p>If the value of the field "Unit of Measure" is "Cost Price," this field displays the text "n/a," meaning "Not Applicable."</p>
<b>Actual</b>	<p>This field shows the number of hours or the amount of costs that have been completed on the current planning budget line. The number of hours or the cost amount is calculated as the value of the field "Prev. Actual" plus the actual value between the previous estimate date and the current estimate date.</p> <p>You can change the value of this field, if Maconomy cannot determine which planning budget line a given estimate relates to because there are more than one budget line with the same combination of job, activity, and task. Moreover, you can change the value of this field even though the current registration unambiguously corresponds to the current budget line. If you do so, Maconomy will issue a message informing you about the change. See the introduction to the window for further information. If you modify the value of this field, the value cannot be lower than the value of the field "Prev. Actual."</p> <p>If you choose to modify the value of this field, the field "Quantity" on the budget line in the window Job Budgets will be updated with the sum of this field and</p>

Field	Description
	<p>the fields “Planned” and “Estimate to Completion” to show the reestimated total of budgeted hours or costs for the task as of the estimate date.</p> <p>Note that the value in this field may depend on whether the field “Show Original Figures” in the card part is marked or not. See this field and the field “Actual” in the card part.</p>
<b>ETC</b>	<p>This field is applicable for time activities and amount activities for progress by quantity only when the unit of measure is Hours.</p> <p>This field shows the number of hours/quantity or the expected costs required to complete the planning budget line as of the date specified in the field “Date.” The field thus shows the suggested estimate to completion, but you can change the value if you want to modify the suggested estimate.</p>
<b>Total</b>	<p>This field is applicable for time activities and amount activities for progress by quantity only when the unit of measure is Hours.</p> <p>This field shows the resulting total number of hours/quantity or costs estimated for the job. The number is calculated as the sum of the fields Actual and Estimate to Compl., and the sum total corresponds to the value of the field Quantity (if you are currently showing Hours) or the field Total Cost, Base (if you are currently showing Cost Price) in the window Job Budgets.</p> <p>The value of this field may change depending on whether or not the field “Show Original Figures” is marked.</p>
<b>Baseline</b>	<p>This field shows the baseline value for activities.</p> <p>This field shows the number of hours or the costs of the baseline budget for the current line. The field corresponds to the field “Total” above, but displays the budgeted quantity on the baseline budget line instead of the planning budget, and the field cannot be changed in this window.</p>
<b>Baseln. Dev.</b>	<p>This field shows the current deviation of the planning budget from the baseline budget, that is, the difference between the value in the field “Total” and the field “Baseline.”</p>
<b>Acc. Dev.</b>	<p>This field shows the accumulated deviation, which is the sum of the “Dev.” fields of all the previous rows related to the job, including the current one. Also lines regarding the job which are not shown will be included. The value of this field corresponds to the current deviation compared to the first progress history entry for the job. If no previous row exists, this field will have the value “0.”</p> <p>If baseline comparison is selected for the job, this field will show the accumulated deviation since the latest change of the baseline budget, not the current planning budget. Hence, a change in the baseline budget will affect the accumulated deviation, since the deviation is calculated on the basis of the baseline budget.</p>
<b>CP %</b>	<p>This field is applicable for time activities and amount activities for progress by quantity only when the unit of measure is Hours.</p> <p>This field shows the completion percentage of the job. The value is calculated as the value of the field “Actual” divided by the value of the field “Total,” expressed as a percentage value.</p>

Field	Description
<b>Remarks</b>	This field may show a remark associated with the progress entry, if any. If this row is the last in the table, that is, the row which has not yet been finalized, you can assign a remark to the current progress entry.
<b>Show Original Figures</b>	If this field is marked, this island and the table part of the window will show the original figures for historic entries. If you do not mark the field, the window will display updated figures for a historic entry. The updated figures include any registrations or estimates made on the job after the creation of the historic entry that would have affected the original numbers, if these were subsequently made on the job for dates prior to the date of the historic entry in question. See also the description of the field "Actual" above.
<b>Create Budget Lines for Unbudgetted Tasks</b>	<p>Select this check box to create job budget lines (lines in the table part) for current actuals on activities not yet budgeted.</p> <p>When making a job progress evaluation, Maconomy considers all the job budget lines on the planning budget and shows the actuals per job budget line in the table part. However, registrations may be made on tasks for which no budget line exists.</p> <p>If you mark this field, Maconomy will automatically create budget lines for registrations on combinations of task and activity for which no budget lines exist. If you do not mark the field, Maconomy will issue a warning if registrations have been made on unbudgeted tasks. The unbudgeted registrations are then summed and shown in the card part only.</p> <p>If the Create Budget Lines for Unbudgetted Tasks check-box is selected when running a job progress evaluation, and the job is set up with the job parameter Budget Time by Employee enabled, then any new lines should be created with an employee number (from the actuals).</p>
<b>Unit of Measure</b>	<p>In this pop-up field, you can choose how you want to present the figures shown in this table and in the table part of the window. You can choose between two values:</p> <ul style="list-style-type: none"> <li>■ <b>Hours</b> — If you select this value, progress information is presented as number of hours. This information relates to time activities only, and the value is automatically selected if you choose "Time" in the field "Show Activity Type" above</li> <li>■ <b>Cost Price</b> — If you select this value, progress information is presented as amounts, in the base currency of the job. This information relates to all costs, that is, both time and amount activities, and the value is automatically selected if you choose the values "Amount" in the field "Show Activity Type" above.</li> </ul>

**Pending Registrations Island**

Field	Description
<b>Pending Reg.</b>	<p>If this field is marked, there are open registrations on the job, that is, registrations on dates prior to the date specified in the field "Date" on the last row in the table, which have not been included in the value of the field "Actual." This could be the case if, for example, there are time sheet lines pertaining to the current job or other registrations on this job made before the estimate date. If these entries are not posted, they are not included in the field "Actual."</p> <p>If the field "Date" is blank, this field is unmarked.</p>
<b>Hours</b>	<p>This field shows the number of hours specified on open registrations on the job on dates prior to the date specified in the field "Date" on the last row in the table. The hours are calculated by Maconomy when you mark the field "Calculate" and press Return. If open registrations exist on the job, as shown by a mark in the field "Pending Reg." above, but you have not had Maconomy perform a calculation, this field will show a question mark.</p>
<b>Cost</b>	<p>This field shows the costs specified on open registrations on the job on dates prior to the date specified in the field "Date" on the last row in the table. The costs are calculated by Maconomy when you mark the field "Calculate" and press Return. If open registrations exist on the job, as shown by a mark in the field "Pending Reg." above, but you have not had Maconomy perform a calculation, this field will show a question mark.</p>

**Planning Budget Status Island**

Field	Description
<b>Submitted</b>	This field shows whether the planning budget has been submitted.
<b>Submitted by</b>	If the budget was submitted, this field displays the name of the user who submitted the planning budget.
<b>Date</b>	This field displays the date on which the job budget was submitted.
<b>Approved</b>	This field shows whether the planning budget has been approved.
<b>Approved by</b>	If the budget was approved, this field displays the name of the user who approved the job budget.
<b>Date</b>	This field displays the date on which the job budget was approved.
<b>Reopened</b>	This field shows whether the planning budget has been reopened.
<b>Reopened by</b>	If the budget was reopened, this field displays the name of the user who reopened the job budget.

Field	Description
<b>Date</b>	This field displays the date on which the job budget was reopened.

**Show Progress Status Island**

Field	Description
<b>Idle</b>	If this field is marked, lines marked as "Idle" will be shown in the table part. See also the description of the field "Progress Status" in the table part.
<b>Behind Schedule</b>	If this field is marked, lines marked as "Behind Schedule" will be shown in the table part. See also the description of the field "Progress Status" in the table part.
<b>On Schedule</b>	If this field is marked, lines marked as "On Schedule" will be shown in the table part. See also the description of the field "Progress Status" in the table part.
<b>Ahead of Schedule</b>	If this field is marked, lines marked as "Ahead of Schedule" will be shown in the table part. See also the description of the field "Progress Status" in the table part.
<b>Delay Threshold %</b>	<p>In this field and the field "Delay Threshold, Hours" below, you can define two components which together make up a threshold. The threshold is calculated on the basis of the percentage specified in this field and the number of hours specified in the field below.</p> <p>If you specify a threshold, you indicate that jobs which have actually exceeded their expected time to completion should still be considered on schedule, and thereby be shown in the table part, as long as their expected time to completion does not exceed the specified threshold. See the description of the field "Progress Status" in the table part for a description of the use of this threshold.</p>
<b>Delay Threshold, Hours</b>	<p>In this field and the field "Delay Threshold %" above, you can define two components which together make up a threshold. The threshold is calculated on the basis of the number of hours specified in this field and the percentage specified in the field above.</p> <p>See the description of the field "Delay Threshold %" above and the field "Progress Status" in the table part for a description of the use of this threshold.</p>
<b>Show Activity Type</b>	<p>In this pop-up field, you can choose which kind of activities you want to see in this window. You can choose among three values:</p> <ul style="list-style-type: none"> <li>Blank — Budget lines referring to both time and amount activities are shown in this window — that is, all budget lines except text lines.</li> <li>Time — Only job budget lines referring to time activities are shown in this window.</li> <li>Amount — Only job budget lines referring to amount activities are shown in this window.</li> </ul>

Field	Description
	<p>When you change the value of this field to "Time," the value of the field "Unit of Measure" in the island Progress is changed to "Hours." When you change the value to "Amount," the field "Unit of Measure" is changed to "Cost Price."</p> <p>Maconomy will remember the setting in this field the next time you open this window.</p>

### Time to Completion Estimates Island

Field	Description
<b>Get Est. to Compl. from All Resources</b>	<p>In this field, you can specify if time to completion estimates should be calculated from all time sheets or only from time sheets submitted since the previous estimate date.</p> <p>If the field is not marked, time to completion estimates specified on time sheets are only included in the calculation of a new estimate to completion in the island Progress if they are specified at a later date than the date of the last estimate in this window. This is for instance useful if time sheet users work on the job consecutively, that is, if the time to completion estimate in the time sheets represents the work left to be done since the last estimate in this window.</p> <p>If the field is marked, time to completion estimates specified on time sheets are included in the calculation of a new estimate to completion in the island Progress, regardless of when they are specified. Only the most recent estimate entered by an employee is considered, but estimates by different employees are aggregated for all employees who have entered estimates for the current job, also if they have not entered a new estimate since the last time an estimate was made in this window.</p> <p>In the illustration below, the original estimated time to completion on the job is 100 hours. Between the first and second estimate dates, three different employees, "A," "B," and "C," register a total of 30 hours on the job and a total of 120 hours left to do. Between the second and third estimate dates, employees "A" and "C" register another 20 hours on the job, and estimate that another 75 hours remain.</p> <p><u>Original total estimated time to completion = 100</u></p>

Field	Description																															
	<p>The effect of the status of this field is shown in the following table:</p> <table><tr><th>Status of Field</th><th>Estimate Date</th><th>Actuals</th><th>Suggested Estimate to Compl.</th><th>Total Job Progress Estimate</th></tr><tr><td rowspan="3">Unmarked</td><td>1</td><td>0</td><td>100</td><td>100</td></tr><tr><td>2</td><td>30</td><td>120</td><td>120</td></tr><tr><td>3</td><td>50</td><td>75</td><td>125</td></tr><tr><td rowspan="3">Marked</td><td>1</td><td>0</td><td>100</td><td>100</td></tr><tr><td>2</td><td>30</td><td>120</td><td>120</td></tr><tr><td>3</td><td>50</td><td>105</td><td>155</td></tr></table>	Status of Field	Estimate Date	Actuals	Suggested Estimate to Compl.	Total Job Progress Estimate	Unmarked	1	0	100	100	2	30	120	120	3	50	75	125	Marked	1	0	100	100	2	30	120	120	3	50	105	155
Status of Field	Estimate Date	Actuals	Suggested Estimate to Compl.	Total Job Progress Estimate																												
Unmarked	1	0	100	100																												
	2	30	120	120																												
	3	50	75	125																												
Marked	1	0	100	100																												
	2	30	120	120																												
	3	50	105	155																												
	<p>The difference is apparent the third time the estimate is made in this window. When this field is not marked, Maconomy only recognizes the estimates specified in time sheets after the previous estimate was made. So, at the third estimate, only 75 hours are estimated to be left on the job. If the field is marked, Maconomy aggregates the estimates to completion by all employees. However, the estimates of individual time sheet users overwrite former estimates. Hence, at the third estimate, Maconomy adds the estimate made by employee "B" and the second estimates by employees "A" and "C," reaching a total of 105.</p>																															

### Planning Budget Revision Island

Field	Description
<b>Revision No.</b>	This field displays the number of the latest revision of the job budget currently displayed.
<b>Remarks</b>	In these fields, you can enter information about the current revision of the job budget.

### User Island

See the chapter "Getting Started" for a description of the fields in the island User.

### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Description</b>	This field shows the description assigned to the current planning budget line, if any.
<b>Act. No.</b>	This field shows the activity number of the planning budget line.

Field	Description
<b>Task</b>	This field shows the task of the planning budget line.
<b>Progress Status</b>	<p>This field shows the status of the current planning budget line and can have one of the following four values:</p> <ul style="list-style-type: none"> <li>■ <b>Idle</b> — This value means that no work has been registered on the planning budget line since the previous re-estimate of this line, and that nothing was planned in that period either.</li> <li>■ <b>Behind Schedule</b> — This value means that the suggested estimated time required to complete the task on the planning budget line is larger than the value specified in the field “Exp. Time to Compl.” plus the threshold specified in the card part. The threshold is calculated on the basis of the percentage and number of hours specified in the fields “Delay Threshold %” and “Delay Threshold, Hours” in the following way:   If the value of the fields “Delay Threshold %” and “Delay Threshold, Hours” are both 0, the threshold will also be 0.  If the value of one of the above two fields is 0, the other determines the threshold alone. If both of the fields contain values which differ, the threshold is the smallest of the two threshold components.  Assume, for example, that the value of the field “Exp. Time to Compl.” is 60 hours, and the threshold fields are set to 10% and 4 hours. The threshold component is then 10% of 60 hours = 6 hours and the absolute threshold is 4 hours. As the smallest threshold is the 4 hours, this will be the threshold used. Then if the value of the field “Est. Time to Compl.” is larger than 60 + 4, the progress status will be “Behind Schedule.”</li> <li>■ <b>On Schedule</b> — This value means that the suggested estimated time required to complete the task on the planning budget line equals the values specified in the field “Exp. Time to Compl.” plus or minus the selected threshold, as described above.</li> <li>■ <b>Ahead of Schedule</b> — This means that the suggested estimated time required to complete the task on the planning budget line is less than the values specified in the field “Exp. Time to Compl.” minus the selected threshold, as described above.</li> </ul>
<b>Empl. Cat. No.</b>	This field shows the employee category number specified on the job budget line.
<b>Planned</b>	<p>If the value of the field “Measuring Unit” in the card part is “Hours,” this field displays the number of hours that have been planned in the detailed resource planning for the planning budget line. The number is calculated as the value of the field “Prev. Planned” plus the number of hours planned between the previous estimate date and the current estimate date.</p> <p>You can change the value of this field, if, for example, deciding to which planning budget line the detailed planning belongs is related with ambiguity because there are more than one budget line with the same job/activity/task</p>

Field	Description
	<p>combination. However, you can also change the value of this field, even though the current registration unambiguously corresponds to the current budget line. If you do so, Maconomy will issue a message informing you about the change. See the introduction to the window for further information. If you modify the value of this field, the value cannot be lower than the value of the field "Prev. Planned."</p> <p>Note that the value in this field may depend on whether the field "Show Original Figures" in the card part is marked or not. See this field and the field "Actual" in the card part.</p> <p>If the value of the field "Unit of Measure" is "Cost Price," this field displays the text "n/a," meaning "Not Applicable."</p>
<b>Used</b>	Shows the quantity of actuals also for amount activities marked for progress by quantity when the unit of measure is Hours. When the unit of measure is Cost Price then this field shows the cost price of actuals.
<b>Estimate to Completion</b>	<p>This field is applicable only for time activities.</p> <p>If the value of the field "Unit of Measure" in the card part is "Hours," this field shows the expected time required to complete the task on the planning budget line for the date specified in the field "Date" in the card part. The value is calculated as the previous estimated time required to complete less the number of hours planned for the period between the previous estimate date and the current estimate date.</p> <p>For example, on April 29 the estimated time required to completion is 80 hours. Between April 29 and May 6, 20 hours are registered on the task. The expected time required to complete for May 6 will then be 80 minus 20, which is 60 hours.</p>
<b>Est. Time to Compl., Days</b>	The functionality of this field is similar to that of the field "Estimate to Completion." However, this field only applies when the unit of measure is "Hours," and you enter the estimate to completion as a number of days instead of a number of hours. If you enter a number of days, it is automatically converted into a number of hours which is inserted in the field "Estimate to Completion." The number of hours is calculated by multiplying the number of days by the value in the field "Hours per Man Day" in the card part of the window Jobs.
<b>Total</b>	<p>This field shows the sum of used and estimate to completion quantity, also for amount activities marked for progress by quantity.</p> <p>This field shows the new estimated total as of the estimate date. This field equals the sum of the values of the fields "Actual" and "Estimate to Completion." The field corresponds to the total estimate of the field "Quantity" in the window Job Budgets.</p>
<b>Rounding Diff.</b>	This field shows the rounding difference for activities.
<b>Baseline</b>	This field shows the baseline value for activities.

Field	Description
	This field shows the number of hours or the costs of the baseline budget for the current line. The field corresponds to the field "Total" above, but displays the budgeted quantity on the baseline budget line instead of the planning budget, and the field cannot be changed in this window.
<b>Baseln. Dev.</b>	This field shows the current deviation of the planning budget line from the baseline budget line, that is, the difference between the value in the field "Total" and the field "Baseline."
<b>Deviation</b>	This field shows the deviation of the estimated total compared to the previously estimated total for the current planning budget line. The value of this field is calculated as the value of the field "Total" less the value of the field "Prev. Total."
<b>Acc. Deviation</b>	This field shows the accumulated deviation of the estimated total, which is the difference between the estimated total on the first progress history entry for the planning budget line and the value of the field "Total."
<b>Expected estimate to completion</b>	This field is applicable only for time activities.
<b>Expected estimate to compl., Days</b>	The functionality of this field is similar to that of the field "Estimate to Completion." However, this field shows the expected estimate to completion as a number of days instead of a number of hours. The number of days is calculated by dividing the number of hours by the value in the field "Hours per Man Day" in the card part of the window Jobs.
<b>CP %</b>	<p>This field shows the completion percentage based on quantity for amount activities marked for progress by quantity.</p> <p>This field shows the completion percentage of the current task. The value is calculated as the value of the field "Actual" divided by the value of the field "Total," expressed as a percentage value.</p>
<b>Remarks</b>	In this field, you can enter a remark about the completion estimate of the current task. The remark can be seen in the window Task Progress.
<b>Prev. Planned</b>	This field shows the number of hours that have been planned for the planning budget line as at the date of the previous estimate date.
<b>Prev. Actual</b>	<p>If the value of the field "Unit of Measure" in the card part is "Hours," this field shows the number of hours that have been completed for the planning budget line as at the previous estimate date. The number is calculated as the total number of hours registered as time activities on the current planning budget line by means of time sheets or job journals.</p> <p>Note that the value in this field may depend on whether the field "Show Original Figures" in the card part is marked or not. See this field and the field "Actual" in the card part.</p>

Field	Description
<b>Prev. Estimate to Completion</b>	This field shows the number of hours or the amount previously required to complete the task on the planning budget line.
<b>Prev. Estimate to Compl., Days</b>	The functionality of this field is similar to that of the field “Prev. Estimate to Completion.” However, this field shows the previous estimate to completion as a number of days instead of a number of hours. The number of days is calculated by dividing the number of hours by the value in the field “Hours per Man Day” in the card part of the window Jobs.
<b>Prev. Total</b>	<p>This field shows the estimated total as of the previous estimate date. This field equals the sum of the values of the fields “Prev. Actual” and “Prev. Estimate to Completion.”</p> <p>Note that the value of this field may depend on whether the field “Show Original Figures” in the card part is marked or not. See this field and the field “Actual” in the card part.</p>
<b>Activity Name</b>	This field shows the activity name of the current planning budget line.
<b>Task Description</b>	This field shows the task of the planning budget line.
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified on the current planning budget line.
<b>Suggested Est. to Compl.</b>	<p>This field shows the suggested estimate to completion for activities.</p> <p>This field shows the estimated time or cost to complete as suggested by Maconomy. When an estimate date is entered in the card part, the contents of this field and the field “Estimate to Completion” will be the same. However, if you change the value of the field “ETC,” this field will remind you of the original value suggested by Maconomy.</p>
<b>Suggested Est. to Compl., Days</b>	This field shows the suggested estimate to completion as a number of days instead of a number of hours. The number of days is calculated by dividing the number of hours by the value in the field “Hours per Man Day” in the card part of the window Jobs.
<b>ETC from Time Sheet</b>	This field shows number of hours estimated to complete the task as specified on the Time Sheet.

## Actions

This section shows the Actions available in the Job Progress workspace.

### Top Tab

Field	Description
<b>Submit Planning Budget</b>	The functionality of this action is similar to that of the action “Submit Budget” in the window Job Budgets.
<b>Approve Planning Budget</b>	<p>The functionality of this action is similar to that of the action “Approve Budget” in the window Job Budgets. However, if a new estimate date has been entered in the field “Date” in the card part of the window, a progress history entry will be made for all planning budget lines. The entry will contain the information specified in the island Progress. A similar progress history entry is created for the job. If the estimate required to complete a given task has been specified as “0,” the line will automatically be marked as “Completed” when you select this action. If the estimate date is after the planned ending date of a line marked for automatic allocation in the window Job Planning, an error message is shown, unless the estimated time to completion on the line in question is 0.</p> <p>When the progress has been approved, the content of this window appears as read-only and shows the latest approved figures in the table part.</p>
<b>Reopen Planning Budget</b>	The functionality of this action is similar to that of the action “Reopen Budget” in the window Job Budgets.
<b>New Progress Evaluation</b>	<p>This action is used for entering a date and remark and creating a new job progress estimate. It acts as a supplement to the existing functionality of entering the date and remarks in the last line of the History island. This action is mostly relevant in the workspace client where it will prompt the user to enter the date and remarks.</p> <p>Note on a large project with a large batch of budget lines performance is impacted with this process.</p>
<b>Calculate Pending Registrations</b>	The action has the same behavior as selecting the existing Pending Registrations field, and it calculates the number of hours and cost that are submitted but yet to be approved.
<b>Copy Budget From Template</b>	This action copies the budget from the template job.
<b>Update ETC from People Planner</b>	<p>Use this action to update the values in the <b>Estimate to Completion</b> field with allocated hours from People Planner.</p> <p>This action applies only to budget lines for time activities. You must enter an estimate date, and select the <b>Hours</b> unit.</p>

Field	Description
	<p>The action is only available if add-ons for People Planner and Custom Actions are installed and the <b>Enable Custom People Planner Actions</b> system parameter is enabled.</p> <p>Note on with a large batch of allocations made in People Planner, performance is impacted with this process. However, it is possible to set up a Scheduled Background Task to recalculate job budgets periodically and therefore reduce the need to manually choose this action</p> <div> <p><b>Note:</b> Using this action in jobs that are set up to use imported job resource allocations will cause an error.</p> </div>

## Job Progress History Single Dialogs Workspace

Use this workspace to view the historic entries of the job progress evaluations.

### Job Progress History Tab

This section includes the fields and descriptions for the Job Progress History tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the job displayed.
<b>Customer</b>	This field shows the name and number of the customer for whom the job was created.
<b>Job Group</b>	This is the job group to which the job is assigned. You cannot change it here. The job group can only be changed in the Jobs window, and only as long as the job has "Quote" status.
<b>Status</b>	<p>This is the job's current status. A job is either "Quote" or "Order." You cannot change its status here.</p> <p>When a job is created, it is automatically in "Quote," unless you have marked the field "Created as Order" in the System Information window. In the Jobs window, you can convert jobs in quote to "Order" and vice versa.</p> <p>As long as a job is on quote, you can only assign it to quotes (not sales orders) in the Sales Orders module. If there are quotes or sales orders for the job, these will be shown in the table part of the window.</p>

### Responsible Island

Field	Description
<b>Project Manager</b>	This field shows the name and employee number of the project manager assigned to the job.
<b>Sales Person</b>	This field shows the name and employee number of the sales person who is responsible for the customer.

### Totals, Original Island

Field	Description
<b>Hours</b>	This row shows the original values of the job progress evaluation in hours. For detailed descriptions of the columns in this row, see the description of the Job Progress window.
<b>Cost, Time</b>	This row shows the original values of the job progress evaluation in terms of the cost of time related activities. For detailed descriptions of the columns in this row, see the description of the Job Progress window.
<b>Cost, Amount</b>	This row shows the original values of the job progress evaluation in terms of the cost of amount related activities. For detailed descriptions of the columns in this row, see the description of the Job Progress window.
<b>Cost, Total</b>	This row shows the original values of the job progress evaluation in terms of the total cost. For detailed descriptions of the columns in this row, see the description of the Job Progress window.

### Totals, Updated Island

Hours This row shows the updated values of the job progress evaluation in hours.

For detailed descriptions of the columns in this row, see the description of the Job Progress window.

Field	Description
<b>Cost, Time</b>	This row shows the updated values of the job progress evaluation in terms of the cost of time related activities. For detailed descriptions of the columns in this row, see the description of the Job Progress window.
<b>Cost, Amount</b>	This row shows the updated values of the job progress evaluation in terms of the cost of amount related activities. For detailed descriptions of the columns in this row, see the description of the Job Progress window.
<b>Cost, Total</b>	This row shows the updated values of the job progress evaluation in terms of the total cost.

Field	Description
	For detailed descriptions of the columns in this row, see the description of the Job Progress window.

#### Budget Information Island

Field	Description
<b>Planning Budget</b>	This field shows the name of the budget type used as planning budget, as assigned in the Job Budgets window.
<b>Baseline Budget, Budget Type</b>	copy to come
<b>Baseline Budget, Rev. No.</b>	copy to come

#### User Island

See the chapter “Getting Started” for a description of the fields in the island User.

#### Currency Island

Field	Description
<b>Currency</b>	This field shows the actual currency used in the job.
<b>Base Currency</b>	This field shows the base currency.

#### Progress Evaluation Island

Field	Description
<b>Estimate Date</b>	This field shows the estimate date.
<b>Revision Number</b>	This field shows the number of the latest revision of the job budget currently displayed.
<b>Remarks</b>	This field shows remarks about the completion estimate for the current task.

#### Planning Budget Status Island

Field	Description
<b>Submitted</b>	This field displays whether the planning budget has been submitted. The field is automatically marked when the action “Submit Budget” is selected.

Field	Description
<b>Approved</b>	This field displays whether the planning budget has been approved. The field is automatically marked when the action "Approve Budget" is selected, and the mark is removed if the budget is reopened.
<b>Reopened</b>	This field displays whether the planning budget has been reopened. The field is automatically marked when the action "Reopen Budget" is selected.

## Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

The Job Budget Lines Sub-Tab of the Job Progress History window shows all of the fields from the job budget line and task progress entry. This sub-tab always shows the latest revisions of the job budget lines regardless of the job budget revision selected in the Job Progress History tab.

Since the sub-tab always shows the latest revisions of job budget lines, some historic progress evaluations may have job budget lines that do not have progress information because that information did not exist yet when the evaluation was performed. In such cases, all fields for the affected job budget lines are empty. To indicate whether progress evaluation information is available for a budget line, the sub-tab has a column called Has Task Progress History.

For more information about the fields shown in the sub-tab, see the descriptions of the Job Progress and Task Progress windows.

## Task Progress Single Dialogs Workspace

Use this workspace to examine the progress estimates of each of the planning budget lines that the Job Progress workspace shows.

You can view the progress history of individual planning budget lines and re-estimate the tasks of the planning budget based on the specified required time to completion that time sheet users report. You can then estimate whether the individual task meets the estimated time or amount to completion, or whether it exceeds the estimate.

This workspace corresponds to the Job Progress workspace, except that in that workspace you can see progress information at the job level.

The Job Budget Line tab displays a planning budget line and includes the Progress island, which shows its progress history. You can enter information in the bottom line of the table in this island if you need to re-estimate the requirements for completion for the task shown. If the job budget is structured hierarchically, you cannot enter any information when a group header is displayed in the Job Budget Line tab, because group header lines display sums from their subordinate budget lines. However, you can select a unit of measurement and specify whether to display original figures.

For each job budget line that pertains to time activities in the Job Budget Line tab, the Specification of Estimated Time to Completion sub-tab displays the corresponding estimate to completion as estimated by users on time sheet lines that are related to the same combination of job, activity, and task as the job budget line. This sub-tab displays the most recent estimate for each employee. Only information that is related to time sheet lines that have been transferred for posting are applied.

For example, consider the use of such an estimate for two project employees, E1 and E2, working on a specific task, T. Suppose task T has been budgeted at 100 hours. Employee E1 then works for 20 hours on this task, and employee E2 works for 25 hours. Based on their experience, E1 and E2 each estimate how much time is left on their own parts of the task. So, E1 estimates that as of date D he needs another 40 hours to complete his part, and E2 estimates that as of date D he needs another 35 hours to complete his part. This input can be seen in this workspace, which will show that all together E1 and E2 have worked for  $20 + 25 = 45$  hours, and their estimates imply that another  $40 + 35 = 75$  hours are needed to complete the task. Based on his experience, the project manager now decides that 75 hours are not sufficient to complete the task, and instead enters a new estimated time to completion of 80 hours. The new total estimate for the task is then  $45 + 80 = 125$  hours. This information is updated in the planning budget, which now shows a total budgeted number of hours for the task of 125 hours.

In some cases, finding out which job budget line an estimate refers to may be related with ambiguity if more than one planning budget line exists with the same combination of job, activity, and task as the one on the time sheet line. This is the case, for example, if two budget lines exist for job J, both with activity A and task T. In this case, Maconomy picks one of the planning budget lines and suggests that the entered amount of hours should be linked to that line. For each line in the Specification of Estimated Time to Completion sub-tab, Maconomy then indicates which job budget line has been picked as the one to which the current time sheet line belongs. In case of ambiguity, this is also indicated for each line in the sub-tab.

To avoid ambiguity about which planning budget lines belong to which time sheet line, you can ensure that only one planning budget line exists for each combination of activity and task by setting one or both of the **Duplicate lines (amount) on planning budget** or **Duplicate lines (time) on planning budget** job parameter attributes to the value **No**. This means that only one planning budget line that is related to the same job, activity, and task can be created. This also ensures that when historic entries are created, the correct planning budget lines are updated.

Note that if the current planning budget is approved, you cannot enter information in this workspace.

You can print out the progress information with a layout that corresponds to the one found in the Job Progress workspace.

## Task Progress Tab

This section includes the fields and descriptions for the Task Progress tab.

### Job Budget Line Island

This island shows information in two columns: "No." and "Name." For each information type as specified in the fields in this island, both number and name are displayed, with the exception of the field "Budget Type," where only the name is shown.

Field	Description
<b>Job</b>	This field shows the number and name of the job to which the job budget line belongs.
<b>Activity</b>	This field shows the number and name of the activity specified on the job budget line.

Field	Description
<b>Task</b>	This field shows the name and description of the task specified on the job budget line.
<b>Employee Category</b>	This field shows the number and description of the employee category specified on the job budget line.
<b>Line</b>	This field shows the number and description of the job budget line. The line number refers to the hierarchical number according to the job budget line structure.
<b>Budget Type</b>	This field shows the budget type of the job budget line.

### Progress Island

This island is structured as a table with five rows displaying information about the five most recent progress estimates for the planning budget line. The rows are sorted so that the oldest progress history entry is displayed first. The bottom row is the current entry. When a budget is approved, the figures on that row will be moved up in the table as a historic entry.

If you have specified "Hours" in the field "Unit of Measure" in this island, and the current budget line refers to a time activity, the fields in this table display hours. If the value is "Cost Price," the fields in this table (with the exception of the field "Planned") display the combined value of time and amount activities in the base currency of the job.

Field	Description
<b>Date</b>	This field shows the date for which the progress information for each row was created in the window Job Progress.
<b>Planned</b>	<p>If the value of the field "Unit of Measure" is "Hours," this field displays the number of hours planned in the detailed planning for the planning budget line, calculated as the number of hours planned for the previous row in the table plus the number of hours planned for the planning budget line between the date of the previous row and the date on this row.</p> <p>If hours are subsequently inserted into or removed from the detailed planning related to dates before the date specified in the field "Date" above, the content of this field will not be affected.</p> <p>If the value of the field "Unit of Measure" is "Cost Price," this field displays the text "n/a," meaning "Not Applicable."</p>
<b>Actual</b>	<p>Depending on the value of the field "Unit of Measure," the default value of this field is the number of hours or the value of the work completed for the combination of job, activity, and task on the current job budget line up to and including the date specified in the field "Date." The number of hours is calculated as the sum of all registered hours for this planning budget line; the costs are calculated as the sum of all registered entries for this planning budget line.</p> <p>For historic entries, the value of this field will show one of the following possibilities, depending on whether the field "Show Original Figures" is marked or not:</p>

Field	Description
	<p>If the field "Show Original Figures" is marked, this field shows the number of completed hours or the completed costs at the time when the historic entry was created. If registrations are subsequently made on this job for dates prior to the field "Date" of the historic entry, this field will not be updated with the number of hours or the costs imposed by the new registration.</p> <p>If the field "Show Original Figures" is not marked, the number of completed hours or the completed costs in this field are updated with any hours or costs registered after the creation of the historic entry that would have affected the original numbers if the registrations had been made previously.</p>
<b>ETC</b>	<p>This field shows the number of hours or the expected costs required to complete the planning budget line as of the date specified in the field "Date." The field thus shows the suggested estimate to completion, but you can change the value if you want to modify the suggested estimate. Note, however, that the sum of this field and the field "Actual" must correspond to the total planned number of hours specified in the field "Total" below.</p>
<b>Total</b>	<p>This field shows the resulting total number of hours or costs estimated for the job. The number is calculated as the sum of the fields "Actual" and "Estimate to Compl.," and the sum total corresponds to the value of the field "Quantity" (if you are currently displaying Hours) or the field "Total Cost, Base" (if you are currently displaying Cost Price) in the window Job Budgets.</p> <p>If the planned quantity on a line in the planning budget is written up or down in the window Job Budgets, the value of this field will thus be changed accordingly.</p> <p>The value of this field may change depending on whether the field "Show Original Figures" is marked or not. See the description of the field "Actual" above.</p>
<b>Baseline</b>	<p>This field shows the number of hours or the costs of the baseline budget line. The field corresponds to the field "Total" above, but displays the total budgeted quantity on the baseline budget instead of the planning budget, and the field cannot be changed in this window. For more information about the baseline budget, please see the introduction to the window Job Progress.</p>
<b>Baseln. Dev.</b>	<p>This field shows the current deviation of the planning budget line from the baseline budget, that is, the difference between the value in the field "Total" and the field "Baseline."</p>
<b>Dev.</b>	<p>This field shows the deviation of the field "Total" compared to the same field of the previous row. If no previous row exists, this field will have the value "0." In other words, this field shows the difference between the current and the previous progress evaluation with respect to the total number of hours or costs as planned on the planning budget line.</p>
<b>Acc. Dev.</b>	<p>This field shows the accumulated deviation, which is the sum of the "Dev." fields of all the previous rows related to the planning budget line, including the current one. The value of this field corresponds to the current deviation compared to the first progress history entry for the planning budget line. If no previous row exists, this field will have the value "0."</p> <p>If baseline comparison is selected for the job, this field will show the accumulated deviation since the latest change of the baseline budget, not the current planning</p>

Field	Description
	budget line. Hence, a change in the baseline budget will affect the accumulated deviation, since the deviation is calculated on the basis of the baseline budget.
<b>CP %</b>	This field shows the completion percentage of the planning budget line. The value is calculated as the value of the field "Actual" divided by the value of the field "Total," expressed as a percentage value.
<b>Remarks</b>	This field may show a remark associated with the progress entry, if any. If this row is the last in the table, that is, the row which has not yet been finalized, you can assign a remark to the current task progress entry.
<b>Unit of Measure</b>	<p>In this pop-up field, you can choose how you want to present the figures shown in this table and in the table part of the window. You can choose between two values:</p> <p>Hours — If you select this value, progress information is presented as a number of hours. This information relates to time activities only, and the value is automatically selected when a time activity is displayed. You cannot select this option for amount activities.</p> <p>Cost Price — If you select this value, progress information is presented as amounts, in the base currency of the job. This information relates to all costs, that is, both time and amount activities, and the value is automatically selected when an amount activity is displayed.</p>
<b>Show Original Figures</b>	If this field is marked, this island and the table part of the window will show the original figures for historic entries. If you do not mark the field, the window will display updated figures for a historic entry. The updated figures include any registrations or estimates made on the planning budget line after the creation of the historic entry that would have affected the original numbers, if these were subsequently made on the planning budget line for dates prior to the date of the historic entry in question. See also the description of the field "Actual" above.

### Pending Registrations Island

Field	Description
<b>Pending Reg.</b>	If this field is marked, there are registrations with the same combination of job, activity and task as the planning budget line (on dates prior to the date specified in the field "Date" on the last row in the table) which have not been included in the value of the field "Actual." This could be the case if, for example, there are time sheet lines for the combination of job, activity, and task on the planning budget line that have not yet been transferred for posting, or if registrations on this combination are found in a non-posted job journal. If the field "Date" is blank, this field is unmarked.
<b>Calculate</b>	If you mark this field and press Return, Maconomy will calculate the quantity of hours or the amount specified on any open registrations with the same combination of job, activity, and task as the planning budget line. Only registrations on dates prior to the date specified in the field "Date" on the last row in the table will be considered. The result will be shown in the field "Hours" or "Cost" below for time and amount activities, respectively.

Field	Description
	It is recommended that you mark this field in case you want to check any open registrations and then unmark the field when the calculation has been performed and you have examined the number of open hours and costs.
<b>Hours</b>	This field shows the number of hours specified on open registrations on same the combination of job, activity, and task as the planning budget line on dates prior to the date specified in the field "Date" on the last row in the table. The hours are calculated by Maconomy when you mark the field "Calculate" and press Return. If there are open registrations on this combination, as shown by a mark in the field "Pending Reg." above, but you have not had Maconomy perform a calculation, this field will show a question mark.
<b>Cost</b>	This field shows the amount of costs specified on open registrations on same the combination of job, activity, and task as the planning budget line on dates prior to the date specified in the field "Date" on the last row in the table. The costs are calculated by Maconomy when you mark the field "Calculate" and press Return. If there are open registrations on this combination, as shown by a mark in the field "Pending Reg." above, but you have not had Maconomy perform a calculation, this field will show a question mark.

### Employee Estimates Island

Number of Estimates This field shows the number of estimates included in the calculations provided by the other fields in this island.

Field	Description
<b>Total</b>	This field shows the sum of the estimated time to completion provided by employees on time sheets for the current planning budget line.
<b>Average</b>	This field shows the average of time sheet users' estimates of time to completion in the field "Sum" for the planning budget line.
<b>Maximum</b>	This field shows the highest estimated time required to completion provided by time sheet users for the current planning budget line.
<b>Minimum</b>	This field shows the lowest estimated time required to completion provided by time sheet users for the current planning budget line.

### Specification of Estimated Time to Completion Sub-Tab

This section includes the fields and descriptions for the Specification of Estimated Time to Completion sub-tab.

Field	Description
<b>Empl. No.</b>	This field shows the number of the employee who entered the current estimate to completion. The field cannot be changed.
<b>Employee Name</b>	This field shows the name of the employee specified in the field "Empl. No." above.

Field	Description
<b>Estimate to Completion</b>	This field shows the estimated number of hours or the estimated costs required to complete for this employee. If the field has the value "0," the employee is of the opinion that he or she has completed the task.
<b>Estimate to Completion, Days</b>	This field only applies to time activities. The field shows the number of days or required to complete for this employee. The value is based on the number of hours shown in the field "Estimate to Compl." above, and the number of hours per day specified in the field "Hours per Man Day" in the window Jobs.
<b>Estimate Date</b>	This field shows the date valid for the estimate to completion.
<b>Include Estimate</b>	If you mark this field, the current line will be included in the calculations in the island Employee Estimates in the card part of the window. This applies to time activities only.
<b>Belongs To Budget Line No.</b>	<p>This field shows the number of the planning budget line to which the current job entry belongs.</p> <p>Deciding to which planning budget line a job entry refers may be related with ambiguity if two or more planning budget lines refer to the same combination of job, activity and task. In this case, Maconomy will pick one of the planning budget lines and suggest the line number of that line in this field. Any ambiguity as to which planning budget line the current job entry belongs will be shown in the field "Ambiguous Relation" below.</p>
<b>Ambiguous Relation</b>	If this field is marked, Maconomy found ambiguity when picking the planning budget line to which the current job entry belongs, as indicated in the field "Belongs to Budget Line No." above. Ambiguity arises if two or more planning budget lines refer to the same activity, if, for example, two budget lines exist for job J, both with activity A and task T. In this case, Maconomy will pick one of the planning budget lines and suggest that any job entry registrations on that combination of job, activity and task should be linked to that budget line.

## Actions

This section shows the Actions available in the Task Progress workspace.

### Top Tab

Field	Description
<b>Include No Estimates</b>	When this action is selected, the field "Include Estimate" will be unmarked on all lines in the table part of the window.
<b>Include All Estimates</b>	When this action is selected, the field "Include Estimate" will be marked on all lines in the table part of the window.

## Job Budget Line Dependencies Single Dialogs Workspace

Use this workspace to see an overview of dependencies created between job budget lines in the Timing Plans workspace or the Gantt component in the Portal.

A dependency is an indication that one task must be completed before the next one can or should be started. This means that the planned starting day of the depending task must be later than the planned ending day of the task on which the depending task depends.

The Timing Plans workspace lets you assign dependencies between lines that all belong to the same job. However, you cannot specify a dependency of a job budget line for another job.

The Gantt component in the Portal has a graphical interface for ease of use. In addition, you can specify dependencies between job budget lines that belong to multiple jobs, and you can edit and delete existing dependencies.

### Job Budget Line Dependencies Tab

This section includes the fields and descriptions for the Job Budget Line Dependencies tab.

#### Job Budget Line Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the current job budget line belongs.
<b>Activity</b>	This field shows the name and number of the activity specified on the current job budget line. The name can only be changed in the Activities window.
<b>Activity Type</b>	This field shows type of the current activity Time, Amount, or Outlay.
<b>Task</b>	This field shows the name of the task specified on the current job budget line.
<b>Task Description</b>	This field shows the description of the current task. The description can be changed in the windows Job Tasks or Task Lists.
<b>Employee Category No.</b>	In this field, you can assign a certain group of employees to work on the activity/task of the current job budget line. If no specific employee has been specified for this line, Maconomy will instead use the cost, intercompany or billing price for the specified employee category for price calculations.  If the system parameter "Empl. cat. on job budgets required" is marked, it will not be possible to leave out an employee category number in this field, unless an employee has been selected in another window.
<b>Name</b>	This field shows the name of the employee category specified in the field "Employee Category No." above.
<b>Budget Type</b>	This field shows the budget type of the current job budget. Maconomy automatically selects the budget type selected as planning budget for the job.

Field	Description
<b>Revision No.</b>	This field shows the revision number of the current job budget. Maconomy uses the latest revision of the job budget when making dependencies.
<b>Line</b>	This field shows the line number of the current job budget line. If the job budget is arranged hierarchically, the line number indicates the position of the line in the hierarchy using a decimal separated number, for instance 1.7 or 2.5.3.

**Work Island**

Field	Description
<b>Quantity</b>	<p>In this field, you can enter the budgeted quantity of the current job budget line.</p> <p>If you specify a number of hours for a time activity, the corresponding number of days is automatically calculated and copied to the field "Quantity, Days." The number of days is calculated by dividing the number of hours by the number of hours per man day specified for the job in the field "Hours per Man Day" in the window Jobs. Similarly, if you specify a number of days, the corresponding number of hours is calculated by multiplying the number of days by the number of hours per man day.</p>
<b>Quantity, Days</b>	<p>This field only applies to time activities. In the field, you can enter the number of days budgeted for the current job budget line.</p> <p>If you specify a number of days, the corresponding number of hours is automatically calculated and copied to the field "Quantity." The number of hours is calculated by multiplying the number of days by the number of hours per man day specified for the job in the field "Hours per Man Day" in the window Jobs. Similarly, if you specify a number of hours, the corresponding number of days is calculated by dividing the number of hours by the number of hours per man day.</p>
<b>Est. Time to Compl.</b>	This field shows any estimated time to completion of the current job budget line.
<b>Estimate Date</b>	This field shows the estimate date of the current budget line's completion percentage.
<b>Completion %</b>	This field shows the completion percentage of the current job budget line.

**Planning Island**

Field	Description
<b>Planned Starting Date</b>	This field shows the planned starting date of the task on the current job budget line. You can change the date here. For more information, please see the description of the window Job Budgets.

Field	Description
<b>Planned Ending Date</b>	This field shows the planned ending date of the task on the current job budget line. Please see the description of the window Job Budgets.
<b>First Possible Starting Date</b>	This field shows the first possible starting date of the task on the current budget line. Please see the description of the window Job Budgets.
<b>Last Possible Ending Date</b>	This field shows the last possible ending date of the task on the current budget line. Please see the description of the window Job Budgets.
<b>Booking Type</b>	In this field, you can select a booking type for the current budget line. You can change the budget line's booking type by selecting it in this field and pressing Return, or you can use one of the corresponding three actions: "Convert to Confirmed / Requested / Preliminary." For more information, please see the description of the window Detailed Planning in the Resource Planning module.

### Dependencies Sub-Tab

This section includes the fields and descriptions for the Dependencies sub-tab.

Field	Description
<b>First Job No.</b>	In this field, you specify the number of the job from which the dependency is to be created. Note that it is only possible to create a dependency from the budget line shown in the card part.
<b>First Budget Type</b>	This field shows the name of the planning budget type assigned to the current job.
<b>First Line No.</b>	<p>In this field, you can specify the line number of the budget line from which the dependency is to be made. It is only possible to create a dependency from the budget line shown in the card part.</p> <p>Note that dependencies are created from the current line to the line stated in the field "Other Line No." below. This means that the task of the "other line" is made dependent upon the current line in the card part.</p> <p>If the job budget is arranged hierarchically, you must enter the hierarchical line number, for instance, 1.7 or 2.5.3. Hierarchical line numbers can be displayed in the window Job Budgets by clicking the small arrow button above the line number column.</p>
<b>First Revision No.</b>	This field shows the revision number of the current job budget line.

Field	Description
<b>Second Job No.</b>	In this field, you specify the number of the job for which a job budget line is to be made dependent on the task in the card part. In the window Timing Plans, you can only create dependencies between tasks within a single job, but in this window you can make the execution of tasks dependent on tasks in other jobs.
<b>Other Budget Type</b>	This field shows the name of the planning budget type assigned to the job specified in the field "Second Job No." above.
<b>Other Line No.</b>	<p>In this field, you can specify the line number of the budget line from the job specified in the field "Second Job No." above, to which the dependency is to be made. It is only possible to create a dependency from the budget line shown in the card part.</p> <p>Note that dependencies are created from the current line to the line stated in the field "Other Line No." below. This means that the task of the "other line" is made dependent upon the current line in the card part.</p> <p>If the job budget is arranged hierarchically, you must enter the hierarchical line number, for instance, 1.7 or 2.5.3. Hierarchical line numbers can be displayed in the window Job Budgets by clicking the small arrow button above the line number column.</p>
<b>Other Revision No.</b>	This field shows the revision number of the budget line specified in the field "Other Line No." above.

## Actions

This section shows the Actions available in the Job Budget Line Dependencies workspace.

### Top Tab

Field	Description
<b>Convert to Confirmed</b>	<p>When you select this action, Maconomy converts the booking type of the current budget line from "Preliminary" to "Confirmed."</p> <p>If the conversion of the booking type on a budget line would conflict with other confirmed allocations for the employee allocated on the line— that is, the current allocation and one or more other confirmed allocations would cause the planning time of the employee on the current line to be exceeded — this line will instead be converted into "Requested," and a warning will be issued.</p>
<b>Convert to Requested</b>	When you select this action, Maconomy converts the booking type of the current budget line into "Requested."
<b>Convert to Preliminary</b>	When you select this action, Maconomy converts the booking type of the current budget line into "Preliminary."

## Job Budget Line Overview Single Dialogs Workspace

Use this workspace to see an overview of the job budget lines from various job planning budgets.

You can see which jobs a certain employee has been involved in within a specific period of time. This workspace always shows the latest revision of the job budgets, and only budgets from jobs on order, including closed jobs.

The lines in the Job Budget Lines sub-tab are limited by the selection criteria that you define in the Job Budget Line Overview tab.

For more information about planning budgets, see the description of the Job Budgets workspace.

If you have been granted access to changing job budgets in the Actions workspace in the Set-Up module, you can change all open fields in the Job Budget Lines sub-tab. However, if the job budget on a line is approved, you cannot change the **Empl. No.** field on that line.

### Job Budget Line Overview Tab

This section includes the fields and descriptions for the Job Budget Line Overview tab.

#### Selection Criteria Island

Field	Description
<b>Job No.</b>	In these fields, you can specify a range of job numbers and thus limit the overview to include only job budget lines assigned to a job number within the specified range. If no range is specified, all budget lines will be shown regardless of job number.
<b>Act. No.</b>	In these fields, you can specify a range of activity numbers and thus limit the overview to include only job budget lines assigned to an activity number within the specified range. If no range is specified, all budget lines will be shown regardless of activity number.
<b>Empl. No.</b>	In these fields, you can specify a range of employee numbers and thus limit the overview to include only job budget lines assigned to an employee number within the specified range. If no range is specified, all budget lines will be shown regardless of employee number.
<b>Empl. Cat. No.</b>	In these fields, you can specify a range of employee category numbers and thus limit the overview to include only job budget lines assigned to an employee category within the specified range.
<b>Start Date</b>	In these fields, you can specify a range of start dates and thus limit the overview to include only job budget lines assigned to a planned starting date within the specified range. If no range is specified, all budget lines will be shown regardless of starting date.
<b>Closing Date</b>	In these fields, you can specify a range of closing dates and thus limit the overview to include only job budget lines assigned to a planned ending date within the specified range. If no range is specified, all budget lines will be shown regardless of closing date.

Field	Description
<b>Task</b>	In these fields, you can specify a range of tasks and thus limit the overview to include only job budget lines assigned to a task within the specified range. If no range is specified, all budget lines will be shown regardless of task.
<b>Company</b>	In these fields, you can specify a range of company numbers and thus limit the overview to include only job budget lines for jobs assigned to a company within the specified range. If no range is specified, all budget lines will be shown regardless of company.
<b>Executing Company</b>	The functionality of these fields is similar to that of the field "Task."
<b>Show Completed</b>	In these fields, you can specify that already completed job budget lines will be shown.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Task."
<b>Entity</b>	The functionality of these fields is similar to that of the field "Task."
<b>Project</b>	The functionality of these fields is similar to that of the field "Task."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task."

#### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Job No.</b>	In this field, the number of the job, to which the job budget line has been assigned, is shown.
<b>Job Name</b>	In this field, the name of the assigned job is shown.
<b>Act. No.</b>	In this field, the number of the activity, to which the current job budget line has been assigned, is shown.
<b>Act.</b>	In this field, a description of the assigned activity is shown. The description can only be changed in the window Activities.

Field	Description
<b>Empl. No.</b>	In this field, you can change the number of the employee to whom the current job budget line has been assigned, unless the job budget to which the line belongs has been approved. If the job budget has been submitted, the job budget will change status to "Not Submitted" if you change this field.
<b>Employee Name</b>	In this field, the name of the assigned employee is shown.
<b>Empl. Cat. No.</b>	<p>In this field, you can assign a certain group of employees to work on the activity/task of the job budget line in question. If no specific employee has been specified for this line, Maconomy will instead use the cost, intercompany, or billing price for the specified employee category for price calculations.</p> <p>If the system parameter "Empl. cat. on job budgets required" is marked, it will not be possible to leave out an employee category number in this field, unless the field "Empl." is also blank.</p>
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified in the field "Empl. Cat. No." above.
<b>Description</b>	In this field, the description of the activity in the windows Job Budgets and Job Planning is shown. The description can only be changed in those windows.
<b>Planned Starting Date</b>	In this field, you enter the planned starting date of the current job budget line. The date is equivalent to the date shown in the field "Planned Starting Date" on the lines in the window Job Budgets. The specified date is for reference only, for example, for use in reports.
<b>Planned Ending Date</b>	In this field, the planned ending date of the current job budget line is shown. The date is equivalent to the date shown in the field "Planned Ending Date" on the lines in the window Job Budgets. The specified date is for reference only, for example, for use in reports.
<b>Completed</b>	In this field, you can see whether the current job budget line has been completed. You can complete the field manually when the activity on the line has been carried out.
<b>Quantity</b>	In this field, the budgeted quantity of units of the current activity shown on the job budget line is shown.
<b>Quantity, Days</b>	This field only applies to time activities. The field shows the number of days budgeted for the current job budget line.
<b>Current Budget</b>	In this field, the budget, to which the current job budget line has been assigned, is shown.
<b>Task</b>	In this field, the task of the job budget line is shown.
<b>Company No.</b>	This field shows the number of the company responsible for the job to which the current job budget line is assigned.

Field	Description
<b>Name</b>	This field shows the name of the company shown in the field "Company No." above.
<b>Exec. Company</b>	This field shows the number of the company to which the employee who has carried out the activity shown in the current job budget line belongs.
<b>Name</b>	This field shows the name of the executing company whose number is shown in the field above.
<b>Location</b>	In this field, the location of the job budget line is shown.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location."
<b>Project</b>	The functionality of this field is similar to that of the field "Location."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>First Possible Starting Date</b>	In this field, you can enter the first possible starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Last Possible Ending Date</b>	In this field, you can enter the last possible ending date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Actual Starting Date</b>	In this field, you can enter the actual starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Actual Ending Date</b>	In this field, you can enter the actual ending date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Remarks 1-10</b>	In these fields, you can enter remarks regarding the current line.

## Employee Budget Line Overview Single Dialogs Workspace

Use this workspace to view and edit information about an employee's tasks in various jobs.

This information is similar to what the Job Budgets workspace, which you use for maintaining job finances, displays.

In the Employee Budget Line Overview tab you enter the selection criteria for the employee information that you want to see in the Job Budget Lines sub-tab. Use the sub-tab to view and

edit information about the job's execution. The lines correspond to the lines in the Job Budgets workspace; you can change them in the same way as in that workspace.

This workspace only shows the information for the job's current planning budgets, and only for jobs on order.

The allocation of tasks for each employee is transferred from the planning budget in the Job Budgets workspace.

Maconomy displays each job budget line for which the current employee is specified. The information that is displayed comes from the latest revision of the job budget from which the line is retrieved. Changing information here does not change the status of the job budget, such as from Submitted to Not Submitted. You can change the fields for approved budgets.

You can only change the fields in this workspace if the **Change Job Budgets** field in the Actions workspace in the Set-Up module is selected for you.

### Employee Budget Line Overview Tab

This section includes the fields and descriptions for the Employee Budget Line Overview tab.

#### Employee Information Island

Field	Description
<b>Employee No.</b>	This field shows the employee number. It cannot be changed here.
<b>Name</b>	This is employee's name. It cannot be changed here.

#### Company Island

Field	Description
<b>Company</b>	This field displays the name and number of the employee's company assignment. The value in this field cannot be changed here.

#### Selection Criteria Island

Field	Description
<b>Category No.</b>	In these fields, you can specify a range of employee category numbers. The list will only show tasks planned for employees assigned to employee category numbers within the specified range.
<b>Job No.</b>	In this field, you can enter a range of job numbers. The task list will only be for the jobs entered here.
<b>Start Date</b>	In this field, you can enter a range of dates. The list will only show tasks planned to start in this period.
<b>Closing Date</b>	In this field, you can enter a range of dates. The list will only show tasks planned to end in this period.

Field	Description
<b>Activity No.</b>	In these fields, you can specify a range of activity numbers. The list will only include job budget lines for activities within the specified range.
<b>Task</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Company No.</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Show Completed</b>	If you mark this field, the list will also show tasks which have been completed.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Project</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Spec. 1-3</b>	The functionality of this field is similar to that of the field "Activity No." above.
<b>Local Spec. 1-3</b>	The functionality of this field is similar to that of the field "Activity No." above.

#### Postpone Task Island

Field	Description
<b>No. of Days</b>	In this field, you enter how many days you wish to postpone the tasks in the table when you select "Postpone Tasks" in the Action menu.

#### Job Budget Lines Sub-Tab

This section includes the fields and descriptions for the Job Budget Lines sub-tab.

Field	Description
<b>Job No.</b>	This is the number of the job the task is for.
<b>Act. No.</b>	This is the activity number the line is for.

Field	Description
<b>Description</b>	This field displays the text assigned to the line activity. The text can be changed in the windows Job Budgets and Job Planning. The original activity text is displayed in the field "Activity Name."
<b>Task</b>	This field displays the task selected for the current budget line.
<b>Empl. Cat. No.</b>	This field shows the group of employees assigned to work on the activity/task of the job budget line in question. If no specific employee has been specified for this line in the job budget, Maconomy will instead use the cost, intercompany or billing price for the specified employee category for price calculations.
<b>Location</b>	This field displays a value for the dimension Location derived from the current job budget line.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Company No.</b>	This field displays a value for the dimension Company. The company in this field is the company responsible for the job related to the current line.
<b>Name</b>	This field displays the name of the company shown in the field "Company No." above.
<b>Planned Starting Date</b>	In this field, you enter the planned starting date of the current job budget line. The date is equivalent to the date shown in the field "Planned Starting Date" on the lines in the window Job Budgets.
<b>Planned Ending Date</b>	In this field, you enter the planned ending date of the current job budget line. The date is equivalent to the date shown in the field "Planned Ending Date" on the lines in the window Job Budgets.
<b>Completed</b>	You can mark this field to show that the activity is completed.
<b>Quantity</b>	In this field, you can enter the budgeted quantity for the budget line. For time activities, the quantity is interpreted as hours. It is therefore totaled in the "Hours" field in the "Time" column in the Job Budgets window.

Field	Description
<b>Planning Budget</b>	This field shows which budget is the job's current planning budget.
<b>Job Name</b>	This field displays the name of the job to which the current line pertains.
<b>Activity Name</b>	This field displays the text defined for the current activity. The text is suggested by Maconomy as entry text when a line is created in this window. The entry text can be changed and this is then displayed in the field "Description" in the table part of this window.
<b>Task Description</b>	This field shows the text defined for the current task, if a task has been entered in the field "Task."
<b>Empl. Cat. Name</b>	This field shows the name of the employee category specified in the field "Empl. Cat. No." above.
<b>First Possible Starting Date</b>	In this field, you can enter the first possible starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Last Possible Ending Date</b>	In this field, you can enter the last possible ending date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Actual Starting Date</b>	In this field, you can enter the actual starting date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Actual Ending Date</b>	In this field, you can enter the actual ending date of the activity. The specified date is for reference only, for example, for use in reports.
<b>Remarks 1-10</b>	In these fields, you can enter remarks regarding the current line.

## Actions

This section shows the Actions available in the Employee Budget Line Overview workspace.

### Top Tab

Field	Description
<b>Postpone Task</b>	When you select this action, you postpone both the starting and closing dates of the tasks which are not marked as having been completed. The dates are moved forward by the number of days entered in the field "Postpone Tasks" in the card part of the window.

## Quote Editing Single Dialogs Workspace

Use this workspace to create or edit a draft quote or order confirmation before you print it and send it to a customer.

The Quote Editing tab displays some of the general and account information about the job, as well as budget, price, and revision information. The Quote Lines sub-tab displays the lines in the quote or order confirmation.

In this workspace, you can add lines to the quote or order confirmation. You can also change the job price by changing the prices on individual lines. A line can either be a text line, a subtotal, or an amount line, which must specify a quantity.

You can at any time print a draft quote using the **Print Draft Quote** action. After editing and approving the quote or order confirmation, you can print it using the **Print Quote** or **Print Order Confirmation** actions. You can also print the quote or order confirmation in the Job Budgets workspace using the **Print Quote** or **Print Order Confirmation** action. Finally, you can print approved quotes or order confirmations in batches from the Print Job Quote or Print Job Order Confirmation workspaces.

If you create the quote from a job budget using the **Transfer to Quote** action, Maconomy bases the quote on the specifications of the invoice layout rule selected for the current job in the Jobs workspace. You can create a draft quote from a job budget by using the **Transfer to Quote** action in the Job Budgets workspace. You can also enter the quote or order confirmation directly in this workspace after you create the job in the Jobs workspace. You can create quotes as long as the job status is Quote. You can create order confirmations when the job's status changes to Order. A job changes status from Quote to Order when you use the **Convert to Order** action in the Jobs workspace.

A job quote must be approved before you can print the quote or order confirmation. The exception to this is if the **Approval of Quote Required** job parameter attribute of the type Budgeting has the value No. If that is the case, you can print a quote or order confirmation before it is approved, but only from the Job Budgets workspace.

A quote can exist in many different revisions. This preserves an audit trail to track the changes in a quote throughout the lifetime of a job. Just as with time sheets, job quotes support a process of submission and approval. You can submit, approve, and reopen job quotes in this workspace. In addition, Maconomy creates a revision of the quote when you transfer a job budget to quote if you select the **Automatic creation of quote revisions** system parameter.

You can view all of the revisions of the quotes for the jobs to which you have access in the Quote Revisions workspace.

When you make changes in a submitted quote, Maconomy displays a warning. If you choose to continue, the budget changes its status to Not Submitted.

## Quote Editing Tab

This section includes the fields and descriptions for the Quote Editing tab.

## Job Island

Field	Description
<b>Job</b>	This is the name and number of the job for which you are generating a quote or order confirmation. The job must be invoiceable.
<b>Job Group</b>	This is the job group to which the job belongs. The job group can be changed in the Jobs window as long as the job status is "Quote."
<b>Status</b>	<p>This is the current job status. The status is either "Quote" or "Order." You cannot change a job's status here.</p> <p>As long as a job has "Quote" status, you can print quotes to the customer using the "Print Quote" action. When the job has "Order" status, you can print order confirmations with the "Print Order Confirmation" action.</p> <p>When a job is created, it is automatically given "Quote" status, unless you have marked the "Created as Order" field in the System Information window. You can change the status to "Order" in the window Jobs.</p>

## Budget Island

Field	Description
<b>Currency</b>	This field shows the currency the job is handled in. The currency is selected in the window Job Information. All amounts in this window are converted to the job's currency.
<b>Billing Price, Budget</b>	This field shows any budgeted billing price for the whole job in the job's currency. Job budgets are entered in the window Job Budgets. The amount here is the sum of all the amounts on the budget lines of the latest revision of the current budget. The amount is also shown in the window Job Budgets in the "Billing Price"/"Total" field.
<b>Max. Billing Price</b>	This field shows the expected or agreed-on billing price for the whole job in the job's currency. The amount is entered and can be changed in the window Jobs. It can also be changed in the window Job Budgets in the island Limit.
<b>Revision No.</b>	This field shows the revision number of the latest approved revision of the current job budget, if it exists and if the job parameter attribute "Check Budget Against Quote" has the value "Yes." For more information, please see the description of the job parameter type "Budgeting." A revision of the budget is created every time a budget is approved or when a user selects the action "New Revision" in the window Job Budgets.
<b>Budget Type</b>	This field shows the budget type of the current job budget if the job parameter attribute "Check Budget Against Quote" has the value "Yes."
<b>Deviation</b>	If the job parameter attribute "Check Budget Against Quote" has the value "Yes," this field shows any deviation between the total budgeted billing price, as

Field	Description
	displayed in the field "Billing Price, Budget" above, and the quote price according to this window. If there is a difference between the two amounts, Maconomy will issue an alert when you approve the quote. For more information, please see the description of the action "Approve Quote."

### Revision Island

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the quote. You make a revision of a quote by selecting the action "New Revision" in the Action menu or by reopening an approved quote.
<b>Remarks</b>	In these fields, you can enter information about the current revision of the quote. When you choose to create a revision of the quote, the contents of these fields will be removed, allowing you to enter remarks about the new revision of the quote. These fields are the only fields in the quote which are affected by the creation of a revision. The remarks can still be viewed in the window Quote Revisions.

### Company Island

Field	Description
<b>Company</b>	This field shows the name and number of the company responsible for the current job. The value cannot be changed here.

### Settling Company Island

Field	Description
<b>Settling Company</b>	This field shows the name and number of the settling company assigned to the current job.

### Customer Island

Field	Description
<b>Customer</b>	This is the number of the customer to whom the quote or order confirmation applies. It cannot be changed here. Below the customer number is the first line of the customer's name, which is retrieved from the window Job Information. The name cannot be changed here either.
<b>Bill to Customer</b>	This is the number of the paying customer. It cannot be changed here. Below the customer number is the first line of the bill-to customer's name, which is retrieved from the window Job Information. The name cannot be changed here either.

## Quote Island

Field	Description
<b>New Quote Price</b>	<p>This is the total price of the quote or order confirmation. The amount is converted into the job's currency. It is printed as the line total on the quote or order confirmation.</p> <p>If you edit the quote or order confirmation manually by changing the price or prices on the lines, the amount will be equal to the sum of the lines' billing prices in the "Billing Price, Total" field in the table part of this window.</p> <p>If the quote or order confirmation has been created in this window by transferring a job budget to quote using the action "Transfer to Quote" in the window Job Budgets, and if the current job's invoice layout rule specifies that amounts for this job are not to be shown only as a total, the amount here will, before it is edited, be the sum of the job budget lines. If the current job's invoice layout rule specifies that amounts must be shown on lines, the amount here will be equal to the sum of the amounts in the field "Billing Price, Total" in the table part of this window.</p> <p>If the current job's invoice layout rule specifies that amounts for the job are only to be shown as a total, or if the quote has not been created using the action "Transfer to Quote" in the window Job Budgets, the amount here will, before it is edited, be the sum from the field "Effective Quote Price" field in either the Jobs or Job Budgets window.</p> <p>When you create invoice selections in the Invoice Selection window, you can retrieve the quote price from this field to the invoice selection and use it as the total amount to be invoiced.</p> <p>If the fixed price of a job is set up to be determined by the quote price specified for the job, you can specify the desired quote price in this field or in the field "Current Quote Price" in the window Job Budgets.</p>
<b>Invoice Disc.</b>	<p>This is the invoice discount given for the job. Invoice discount is shown both as a percentage and an amount in the job's currency.</p> <p>The invoice discount percentage is entered in the Job Information window. You can change it in the Invoice Selection window before the job is invoiced.</p> <p>You cannot change either discount percentage or amount here.</p>
<b>Tax</b>	<p>This is the total tax amount for the quote or order confirmation. The amount is the sum of the tax amounts on the lines in the table part. If a line contains a tax code which is not blank, the tax amount is found from the "Billing Price Total" field and the standard tax code, which is entered in the System Information window in the Set-Up module. This only applies if you are not applying differentiated tax. If differentiated tax rates are being used, the line's tax amount is found using the tax code on the line.</p> <p>If multiple tax codes are enabled, the "Tax" field will be replaced by the following fields: "Tax 1," "Tax 2," and, if three tax levels are enabled, "Tax 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Balance Due</b>	<p>This field shows the total quote or order confirmation price in the job's currency. The amount is printed as grand total on the quote or order confirmation. It is the sum of the three fields above it: "Quote Price," "Invoice Disc.," and "Tax."</p>

Field	Description
<b>Effective Quote Price</b>	This field shows the effective quote price of the job. This is the price shown in other Maconomy windows, including the windows Jobs and Job Budgets. The amount is originally calculated as described in the field "New Quote Price" above. If the job is billed based on time and materials, the amount in this field is constantly updated according to the amount in the field "New Quote Price." After the first quote approval, the price in this field is the effective quote price of the latest approved revision of the quote. The quote must be approved each time the quote price is changed for the new quote price to become the effective quote price.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays if the quote has been submitted. The field is completed automatically, when the action "Submit Quote" is selected.
<b>Approved</b>	This field displays if the quote has been approved. The field is completed automatically, when the action "Approve Quote" is selected, and the mark is removed if the quote is reopened.
<b>Reopened</b>	This field displays if the quote has been reopened. The field is completed automatically when the quote is reopened.

**Copy Quote Island**

Field	Description
<b>Copy from Job No.</b>	In this field, you enter a job number if you wish to copy a quote from another job. See the description of the action "Copy Quote" for more information about quote copying.
<b>Copy From Revision No.</b>	In this field, you can select which revision of the quote from the job entered above you wish to copy. If the revision number is "0" or the field is blank, the current quote of the selected job will be copied when you select the action "Copy Quote."

**Restore Quote Revision Island**

Field	Description
<b>Restore from Revision No.</b>	In this field, you can restore the current quote to a previous revision. Enter the revision of the quote to which you want to restore the quote in this field, and select the action "Restore Quote Revision." If the revision number in this field is "0" or the field is blank, the latest revision of the quote will be restored when you select the action. For more information, please see the description of the action "Restore Quote Revision."

## Quote Lines Sub-Tab

This section includes the fields and descriptions for the Quote Lines sub-tab.

Field	Description
<b>Description</b>	<p>In this field, you can enter a text for the quote or order confirmation line. Maconomy suggests the text based on the information in the Quote island of the window Invoice Layout Rules, if the quote or order confirmation is created in the Job Budgets window using the action "Transfer to Quote." If you have marked the Use External Description field in the window Invoice Layout Rules, then the External Description on the job budget line will be used when transferring budget lines to quotes.</p> <p>If you have specified in the window Invoice Layout Rules that printouts should show more than just the totals, and that time or amount activities should be printed by entry, the text in the "Description" field will be retrieved from the budget line. If time and amount activities are shown by activity, Maconomy suggests the name of the activity as text here. If time and amount activities are shown by summary activity, the name of the summary activity is suggested here.</p>
<b>Quantity</b>	<p>In this field, you enter the quantity of job services you are offering on the line. The number is used to calculate the line's total billing price in the "Billing Price Total" field, which is found by multiplying the "Billing Price" by the number here.</p> <p>If the suggestion in this window is created with the action "Transfer to Quote" in the Job Budgets window, Maconomy will suggest a quantity using the information in the Quote island in the Invoice Layout Rules window. A quantity is only suggested if printouts are to show amounts on lines and not just a total.</p> <p>If you have specified in the window Invoice Layout Rules that activities are to be printed by entry, Maconomy suggests the number from the "Quantity" field on the budget line. If time and amount activities are to be shown by summary activity, the quantity will be the sum of the quantities on the budget lines. Budget lines without billing price do not appear on a quote line.</p>
<b>Billing Price</b>	<p>In this field, you enter the service's billing price per piece in the job's currency. The line's total billing price in the "Billing Price Total" field is found by multiplying the amount here with the number in the "Quantity" field.</p> <p>If the suggestion in this window is created with the action "Transfer to Quote" in the Job Budgets window, Maconomy will suggest an amount based on the information in the window Invoice Layout Rules. An amount is only suggested if printouts are to show amounts on lines and not just a total.</p> <p>If you have specified in the window Invoice Layout Rules that activities are to be printed by entry, Maconomy suggests the amount from the "Billing Price" field on the budget line. If time and amount activities are to be shown by summary activity, the amount will show an average of the billing prices per piece on the budget lines. Budget lines without billing price are not included in the average price per piece.</p>

Field	Description
	Note that the average price can be rounded off, which means the quantity multiplied by the price per piece is not equal to the line's total billing price in the "Billing Price Total" field.
<b>Billing Price Total</b>	<p>This is the total billing price of the quote or order confirmation line, shown in the job's currency. The amount cannot be changed here.</p> <p>Maconomy calculates the total billing price by multiplying the "Quantity" by the "Billing Price" amount.</p> <p>If the suggestion in this window is created with the action "Transfer to Quote" in the Job Budgets window, Maconomy will suggest an amount based on the information in the Quote island in the Invoice Layout Rules window. An amount is only suggested if printouts are to show amounts on lines and not just a total.</p> <p>If you have specified in the window Invoice Layout Rules that activities are to be printed by entry, Maconomy suggests the amount from the "Billing Price Total" field on the budget line. If time and amount activities are to be shown by summary activity, the amount will be the sum of the amounts in the "Billing Price Total" fields on the budget lines. Budget lines without billing price are not included in the average price per piece.</p> <p>Note that if the amount here is retrieved from a job budget, it may be different from the figure found by multiplying the "Quantity" by the average price per piece, which may be rounded off.</p>
<b>Tax Code</b>	<p>In this field, you select the tax code for the quote or order confirmation line. Maconomy calculates tax from the lines' individual billing price totals, less invoice discount. Maconomy shows the sum of the lines' tax amounts in the tax field in the card part of the window.</p> <p>If you have specified in the System Information window that you are not applying differentiated tax, Maconomy will use the standard tax rate to calculate tax on lines that do not show a blank tax code. If you are working with different rates of tax, Maconomy uses the tax rates selected for individual lines.</p> <p>Note that if you have selected to print activities by summary activity in the Invoice Layout Rules window, Maconomy will suggest the summary activity's tax rate, which is entered in the window Activities. You should, therefore, apply the same tax rate to activities that belong to the same summary activity.</p> <p>You can add up to three different tax codes if necessary. To enable multiple tax codes, the system parameters "Show Three Tax Levels" and/or "Show Two Tax Levels" must be marked in the System Parameters window. When multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Subtotal</b>	If you mark this field, the line will act as a subtotal line on quotes and order confirmations. The subtotal sums up the quote or order lines above the subtotal line. Only the fields "Description" and "Subtotal" can be completed on a subtotal line.

Field	Description
<b>Total Price Only</b>	If you mark this field, the current line in the quote will only show the total price that is, the unit price and the quantity are omitted. In the window Invoice Layout Rules it can be specified that quotes should default to showing total prices only. If this is the case, this field will be marked for all lines in the quote, but the mark can be removed.
<b>Unit</b>	In this field, you can specify the unit associated with the quantity on the line. Select a value from the drop-down list. If you are specifying a time unit, you can only select the value specified in the <b>Time Unit</b> field of the job. This field can be filled out of left blank. No automatic derivation takes place.
<b>Text 1-2</b>	Enter information related to the quote in these fields. If you have enabled transferring of dimensions from budget lines, these fields automatically display the values of the specified dimensions. These fields are editable even after the quote is submitted or approved.

## Actions

This section shows the Actions available in the Quote Editing workspace.

### Top Tab

Field	Description
<b>Print Quote</b>	When you select this action, you print the job quote shown in the window. You can only select this action when the job status is "Quote." If the job is a fixed-price job or if the quote has previously been approved, the quote must be approved before you can print it. You can also print the job quote in the window Job Budgets. In the window Print Job Quotes you can print job quotes in batches.
<b>Print Draft Quote</b>	When you select this action, you print a draft of the job quote shown in the window. You can select this action at any time.
<b>Print Order Confirmation</b>	When you select this action, you print the job order confirmation shown in the window. You can only select this action when the job status is "Order." If the job is a fixed-price job or if the quote has previously been approved, the quote must be approved before you can print it. You can also print the job order confirmation in the window Job Budgets. In the window Print Job Order Confirmations you can print job order confirmations in batches.
<b>Delete Quote Lines</b>	When you select this action, Maconomy deletes all of the lines shown in the table part. This action is not available when the job is closed.

Field	Description
<b>Copy Quote</b>	<p>Click this action to copy the field values from another revision or job to the current quote. Note that the value of the <b>Unit</b> field is also copied.</p> <p>You cannot copy quotes between jobs that use different time units.</p> <div> <p><b>Note:</b> If you copy a quote from a job that has a different basis for budget, the dimensions are still copied to the quote.</p> </div>
<b>New Revision</b>	<p>When you select this action, Maconomy creates a revision of the current job quote. You cannot create a revision of an approved quote; it must be reopened first, whereby a revision is created. The previous revision is locked, and except for revision remarks it can no longer be changed. All previous revisions of the job quotes to which you have access can be viewed in the window Quote Revisions.</p> <p>If the system parameter “Automatic creation of quote revisions” is marked, Maconomy automatically creates a revision of the quote when a job budget is transferred to quote.</p>
<b>Restore Quote Revision</b>	<p>Use this action to restore the quote to a previous revision. If the previous revision includes transferred dimensions from a budget, the system also restores those values.</p> <p>Maconomy copies the quote revision entered in the <b>Restore Quote Revision</b> field. If this field is blank, the latest revision of the quote is restored.</p> <p>This action is disabled if the job is closed.</p> <div> <p><b>Note:</b> When restoring a previous quote revision, Maconomy deletes all lines in the current quote.</p> </div>
<b>Submit Quote</b>	<p>When you select this action, the job quote currently displayed changes status to “Submitted.” This is a way of indicating that the quote is ready for approval. A quote cannot be approved until it has been submitted.</p> <p>To submit a quote, the field “Change Quotes” in the window Actions in the Set-Up module must be marked for the current user.</p>
<b>Approve Quote</b>	<p>When you select this action, the current quote is approved. When the approval takes place, the sum of the lines in the table part (shown in the field “New Quote Price” in the card part) is transferred to the field “Effective Quote Price” in the card part. The change is also reflected in the corresponding fields in other Maconomy windows, including the windows Jobs and Job Budgets. If the fixed price of a fixed-price job or a time and material job is determined by the quote price of the job, the quote price must be approved before the quote can be used as a basis for the fixed price of a job. If the fixed price of a job is determined by the billing price of the latest approved budget assigned to the job, the quote price does not have any effect on the job’s fixed price. The fixed-price basis of a job is defined in a job parameter attribute of the type “Pricing Principle.”</p> <p>If the current job is set up to check budgets against the quote by means of the job parameter attribute “Check Budget against Quote” of the type</p>

Field	Description
	<p>"Budgeting," Maconomy will issue an alert when you approve the quote if no approved budget for the job is found, or if the total billing price of that budget does not correspond to the current quote price.</p> <p>If the current job uses overrun handling (set up by means of job parameters), the new quote price can cause the creation of or increase or reduce a job overrun. This happens if the existing entries on the job exceed the new quote price before or after the approval. If an overrun takes place, Maconomy creates a revenue recognition journal in the G/L module to adjust or create the overrun. This journal must be posted in the G/L module. For more information on handling of overruns see the description of the job parameter type "Revenue Recognition" in the window Job Parameters.</p> <p>In the window Actions in the Set-Up module you can specify for each user whether he is allowed to approve quotes in this window. If the quote price has been changed, the user must also have access to change job budgets to be allowed to approve the quote.</p>
<b>Reopen Quote</b>	<p>When you select this action, the job quote currently displayed is reopened. At the same time, Maconomy creates a revision. A "snapshot" of the quote as it looked in the previous revision can be seen in the window Quote Revisions.</p> <p>If fixed exchange rate information has been specified for the job in the window Job Price Information, and the information is changed since the quote was last submitted, Maconomy will recalculate the budget on the basis of the new currency information when the budget is reopened.</p> <p>The quote must be submitted before it can be approved again.</p> <p>Only users for whom the field "Reopen Quotes" in the window Actions in the Set-Up module is marked can reopen job quotes.</p>

## Quote Revisions Single Dialogs Workspace

Use this workspace to view all of the revisions of a job quote for those jobs to which you have access.

When you create a revision of the quote, either manually or automatically by approving a quote or transferring a job budget to quote, Maconomy takes a "snapshot" of the quote. This workspace displays these snapshots.

This workspace resembles the Quote Editing workspace, except that you cannot change any of the fields other than the **Revision No.** and **Remarks 1-10** fields in the Revision island. The information in the fields shows the job quote as it looked at the time when the revision was locked, so it might not reflect the present contents of the quote. The only exception to this is the **Effective Quote Price** field in the Quote island. This field displays information about the current quote as seen in the Quote Editing workspace. You can use this field to see how the revision that you are viewing compares to the latest quote in the Quote Editing workspace.

Using the **Restore Quote Revision** action you can restore the quote revision that is displayed to the Quote Editing workspace. Note that this action overwrites any lines in the Quote Editing workspace.

You can print any revision of the job quotes.

For more information about the individual fields in this workspace, see the description of the Quote Editing workspace.

### Quote Revisions Tab

This section includes the fields and descriptions for the Quote Revisions tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name number of the job to which the quote applies.
<b>Job Group</b>	This field shows the job group to which the job was assigned at the time when the revision was created.
<b>Status</b>	This field shows the status of the current job at the time when the revision was created. A job can either be "Quote" or "Order."

#### Budget Island

Field	Description
<b>Currency</b>	This field shows the currency the job is handled in. The currency is selected in the window Job Information.
<b>Billing Price, Budget</b>	This field shows any budgeted billing price for the whole job in the job's currency, at the time when the revision was created. The amount here is the sum of all the amounts on the budget lines of the latest revision of the current budget.
<b>Max. Billing Price</b>	This field shows the expected or agreed-on billing price for the whole job in the job's currency, at the time when the revision was created.
<b>Revision No.</b>	This field shows the revision number of the current job budget, at the time when the quote revision was created.
<b>Budget Type</b>	This field shows the budget type of the current job budget, at the time when the revision was created.
<b>Deviation</b>	This field shows any difference between the total budgeted billing price, as displayed in the field "Billing Price, Budget" above, and the quote price according to this window, at the time when the revision was created.

#### Revision Island

Field	Description
<b>Revision No.</b>	This field displays the number of the current revision of the quote.

Field	Description
<b>Remarks</b>	In these fields, you can enter information about the current revision of the quote.

**Company Island**

Field	Description
<b>Company No.</b>	This field shows the number of the company responsible for the current job.
<b>Name</b>	This field shows the name of the company shown in the field "Company No." above.

**Customer Island**

Field	Description
<b>Ship to Customer</b>	This field shows the number and name of the customer associated with the job (the ship-to customer) at the time when the revision was created.
<b>Bill to Customer</b>	This field shows the number and name of the bill-to customer associated with the job, that is, the customer who pays for the job.

**Quote Island**

Field	Description
<b>New Quote Price</b>	This is the total price of the quote or order confirmation, at the time when the revision was created. The amount is converted into the job's currency.
<b>Invoice Disc.</b>	This is the invoice discount given for the job, at the time when the revision was created. Invoice discount is shown both as a percentage and an amount in the job's currency.
<b>Tax</b>	<p>This is the total tax amount for the quote or order confirmation at the time when the revision was created. The amount is the sum of the tax amounts on the lines in the table part.</p> <p>If multiple tax codes are enabled, the "Tax" field will be replaced by the following fields: "Tax 1," "Tax 2," and, if three tax levels are enabled, "Tax 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Balance Due</b>	This field shows the total quote or order confirmation price in the job's currency, at the time when the revision was created. It is the total of the three fields above it: "New Quote Price," "Invoice Disc.," and "Tax."
<b>Effective Quote Price</b>	This field shows the current, effective quote price of the job. You can use this field to see how the revision you are viewing compares to the latest quote in the window Quote Editing.

**Status Island**

Field	Description
<b>Submitted</b>	This field displays whether the quote was submitted at the time when the following revision was created.
<b>Submitted by</b>	If the quote was submitted, this field displays the name of the user who submitted the quote.
<b>Date</b>	This field displays the date on which the quote was submitted.
<b>Approved</b>	This field displays whether the quote was approved at the time when the following revision was created.
<b>Approved by</b>	If the quote was approved, this field displays the name of the user who approved the quote.
<b>Date</b>	This field displays the date on which the quote was approved.
<b>Reopened</b>	This field displays whether the quote was reopened at the time when the following revision was created.
<b>Reopened by</b>	If the quote was reopened, this field displays the name of the user who reopened the quote.
<b>Date</b>	This field displays the date on which the quote was reopened.
<b>Latest Revision</b>	This field is marked by Maconomy if the current revision is the latest revision created for the current quote.

**Settling Company Island**

Field	Description
<b>Company No.</b>	This field shows the number of the settling company that applies to the customer of the current job.
<b>Name</b>	This field shows the name of the company shown in the field "Company No." above.

## Quote Lines Sub-Tab

This section includes the fields and descriptions for the Quote Lines sub-tab.

For more information about the fields in the table part of this window, please see the description of the window Quote Editing.

Field	Description
<b>Description</b>	This field shows the description of the current quote line.

Field	Description
<b>Quantity</b>	This field shows the quantity of the current quote line, at the time when the revision was created.
<b>Billing Price</b>	This field shows the unit billing price of the current quote line, at the time when the revision was created.
<b>Billing Price Total</b>	This field shows the total billing price (quantity times billing price per unit) of the current quote line, at the time when the revision was created.
<b>Tax Code</b>	This field shows the tax code of the current quote line, at the time when the revision was created.  If multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if three tax levels are enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Subtotal</b>	If this field is marked, the current quote line acted as a subtotal in the quote or order confirmation printout, at the time when the revision was created.
<b>Total Price Only</b>	If this field is marked, the current quote line only showed the total price, that is, the unit price and the quantity were omitted from the quote or order confirmation printout, at the time when the revision was created.
<b>Unit</b>	This field displays the unit specified for the quantity on the line.

## Actions

This section shows the Actions available in the Quote Revisions workspace.

### Top Tab

Field	Description
<b>Restore Quote Revision</b>	If you select this action, the revision currently displayed is restored in the window Quote Editing. Note that all lines in that window are overwritten by the quote revision restored from this window.

## Print Job Quote Single Dialogs Workspace

Use this workspace to print job quotes in batches from the Quote Editing workspace or to print quotes that you create from job budgets in the Job Budgets workspace.

You can only print job quotes for jobs that have "Quote" status. You can define the printouts in the selection criteria fields. You can print job quotes individually in the Job Budgets and Quote Editing workspaces using the **Print Quote** action.

## Print Job Quote Tab

This section includes the fields and descriptions for the Print Job tab.

## Selection Criteria Island

Field	Description
<b>Job No.</b>	In this field, you can enter a range of job numbers for which to print a quote. If you leave these fields blank, job number has no influence on the selection criteria.
<b>Job Group</b>	In this field, you can enter a job group. Maconomy will only print quotes for jobs within the selected group. If you leave this field blank, job group has no influence on the selection criteria. The options shown are the job groups you have created in the window Job Groups.
<b>Company No.</b>	In these fields, you can enter a range of company numbers, so that only quotes for jobs where the responsible company is within the specified range are printed.
<b>Settling Company No.</b>	In these fields, you can enter a range of company numbers, so that only quotes for jobs where the settling company is within the specified range are printed.
<b>Department</b>	In this field, you can select a department. Maconomy only prints quotes for jobs assigned to this department. If you leave the field blank, job status has no influence on the selection criteria. The options shown are the departments you have created in the window Posting References in the G/L module.
<b>Customer No.</b>	In this field, you can enter a range of customer numbers. Maconomy will only print quotes for jobs for customers within this range. If you leave this field blank, customer number has no influence on the selection criteria.
<b>Cust. Group</b>	In this field, you can select a customer group. Maconomy will only print quotes for jobs for customers in this group. If you leave this field blank, customer group has no influence on the selection criteria. The options shown are the customer groups you have created in the window Popup Fields in the Set-Up module.
<b>Language</b>	In this field, you can choose a language code. Maconomy will then only print quotes with this language code.
<b>Responsible</b>	In this field, you can enter the identification of an employee responsible for jobs. Maconomy will only print quotes for jobs for which this person is responsible. If you leave this field blank, it has no influence on the selection criteria.

### Print Control Island

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, "Standard" is the only option.

### Actions

This section shows the Actions available in the Print Job Quote workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print the job quote.

## Print Job Order Confirmation Single Dialogs Workspace

Use this workspace to print job order confirmations in batches that you enter in the Quote Editing workspace or create from job budgets in the Job Budgets workspace.

You can only print job order confirmations for jobs that have "Order" status. You can define the printouts in the selection criteria fields. You can print job order confirmations individually in the Job Budgets and Quote Editing workspaces using the **Print Order Confirmation** action.

### Print Job Order Confirmation Tab

This section includes the fields and descriptions for the Print Job Order Confirmation tab.

### Selection Criteria Island

Field	Description
<b>Job No.</b>	In this field, you can enter a range of job numbers for which to print an order confirmation. If you leave these fields blank, job number has no influence on the selection criteria.
<b>Job Group</b>	In this field, you can enter a job group. Maconomy will only print order confirmations for jobs within the selected group. If you leave this field blank, job group has no influence on the selection criteria. The options shown are the job groups you have created in the window Job Groups.
<b>Company No.</b>	In these fields, you can enter a range of company numbers, so that only order confirmations for jobs where the responsible company is within the specified range are printed.

Field	Description
<b>Settling Company No.</b>	In these fields you can enter a range of company numbers, so that only order confirmations for jobs where the settling company is within the specified range are printed.
<b>Department</b>	In this field, you can select a department. Maconomy only prints order confirmations for jobs assigned to this department. If you leave this field blank, job status has no influence on the selection criteria. The options shown are the departments you have created in the window Posting References in the G/L module.
<b>Customer No.</b>	In this field, you can enter a range of customer numbers. Maconomy will only print order confirmations for jobs for customers within this range. If you leave this field blank, customer number has no influence on the selection criteria.
<b>Cust. Group</b>	In this field, you can select a customer group. Maconomy will only print order confirmations for jobs for customers in this group. If you leave this field blank, customer group has no influence on the selection criteria. The options shown are the customer groups you have created in the window Popup Fields in the Set-Up module.
<b>Language</b>	In this field, you can choose a language code. Maconomy will then only print order confirmations with this language code.
<b>Responsible</b>	In this field, you can enter the identification of an employee responsible for jobs. Maconomy will only print order confirmations for jobs for which this person is responsible. If you leave this field blank, it has no influence on the selection criteria.

### Print Control Island

Field	Description
<b>Layout</b>	In this field, you can select which layout to use for the printout. If no additional layouts for the current printout have been added in the window Print Layout in the Set-Up module, "Standard" is the only option.

### Actions

This section shows the Actions available in the Print Job Order Confirmation workspace.

### Top Tab

Field	Description
<b>Print</b>	Use this action to print the job order confirmation.

## Job Registers Workspace

Use this workspace to identify and mitigate risk over the life cycle of a job.

The Job Registers workspace allows managers to better identify and mitigate risk over the life cycle of a job. This feature allows you to record actual or anticipated risks directly on a job, and track mitigation costs. You can use Maconomy to track risk characteristics, such as cost, probability percentage, weighted cost, due date for mitigation, owner, impacts, and time needed.

You can also record and track change requests as needed. Maconomy enables you to track the attributes of job changes, including description, time, cost, status, the reason for the change, and who initiated it.

Job Registers use the concept of budgeted and actual risk funds so that risks are tracked as budget line items on a job. This allows you to track monetary and time-related impacts on the job and enter risk information as the need to do so occurs.

This feature includes:

- Job Registers Window
- Task Lists and Budgeted Risk Fund
- Support Doc Archive Attachments
- Support Job Templates
- Import of Risks and Changes
- Notification for Job Risk Line Owner

### Job Registers Tab

This section includes the fields and descriptions for the Job Registers tab.

#### Job Budget island

Field	Description
<b>Job No.</b>	Copy to come.
<b>Risk Profile</b>	Select the level of the overall job risk profile.
<b>Approved</b>	Copy to come.
<b>Current</b>	Copy to come.
<b>Approved Budgeted Risk Fund</b>	This field displays the sum of cost in base currency from budget lines on risk related tasks. This is from the latest approved job budget revision.
<b>Approved Budgeted Risk Fund, Enterprise</b>	This field displays the approved budgeted risk fund in enterprise currency.

Field	Description
<b>Current Revision Budgeted Risk Fund</b>	This field displays the sum of cost in base currency from budget lines on risk related tasks. This is from the current revision (not approved or approved).
<b>Current Revision Budgeted Risk Fund, Enterprise</b>	This field displays the current budgeted risk fund in enterprise currency.

#### Risks Summary island

Field	Description
<b>Assigned Risk Fund, Base</b>	Copy to come.
<b>Assigned Risk Fund</b>	This field displays the sum of the Assigned Risk Fund table column regardless of Risk selection criteria.
<b>Weighted Risk Cost</b>	This field displays the sum of the Weighted Risk Cost table column regardless of Risk selection criteria.
<b>Weighted Mitigated Risk Cost</b>	This field displays the sum of the Weighted Mitigated Risk Cost table column regardless of Risk selection criteria.
<b>Weighted Assigned Risk Fund, Base</b>	Copy to come.
<b>Cost Price, Base</b>	Copy to come.
<b>Weighted Cost Price, Base</b>	Copy to come.
<b>Time</b>	This field displays the sum of the Time table column regardless of Risk selection criteria.
<b>Mitigated Cost Price, Base</b>	Copy to come.
<b>Weighted Mitigated Cost Price, Base</b>	Copy to come.
<b>Mitigated Time</b>	This field displays the sum of the Mitigated Time regardless of Risk selection criteria.

#### Selection Criteria island

The sum amount values in the job register are not influenced by the selection criteria.

Field	Description
<b>Type</b>	Select an option from the drop-down list to show only lines of the selected Type in the risk table.
<b>Status</b>	Select an option from the drop-down list to show only lines of the selected Status in the risk table.
<b>Category</b>	Select an option from the drop-down list to show only lines of the selected Category in the risk table.
<b>Probability</b>	Enter a value in these two fields to limit the lines in the risk table to show only those with probability in between from and to. The user will get an error message if he adds a number less than zero or more than 100.
<b>Show Open Only</b>	Select this check box to hide all closed risks.

#### Changes Summary island

Field	Description
<b>Cost Price, Time, Base</b>	Copy to come.
<b>Cost Price, Amount, Base</b>	Copy to come.
<b>Billing Price, Currency</b>	Copy to come.
<b>Time</b>	Copy to come.

#### Selection Criteria island

Field	Description
<b>Show Approved Only</b>	Select this check box to hide all unapproved changes.
<b>Status</b>	Select an option from the drop-down list to show only lines of the selected Status in the change table.
<b>Reason</b>	Select an option from the drop-down list to only show lines of the selected Reason for Change in the change table.
<b>Initiated By</b>	Select an option from the drop-down list to only show lines of the selected Initiated By in the change table.
<b>Impact on Scope</b>	Select this check box to only show lines with a non-empty description of this kind of impact.
<b>Impact on Plan</b>	Select this check box to only show lines with a non-empty description of this kind of impact.

Field	Description
<b>Impact on Resources</b>	Select this check box to only show lines with a non-empty description of this kind of impact.
<b>Impact on Job Pipeline</b>	Select this check box to only show lines with a non-empty description of this kind of impact.
<b>Impact on Other</b>	Select this check box to only show lines with a non-empty description of this kind of impact.
<b>Cost Price, Time, Base</b>	Copy to come.
<b>Cost Price, Amount, Base</b>	Copy to come.
<b>Billing Price, Currency</b>	Copy to come.
<b>Cost, Time</b>	Enter a value in these fields to only show lines where time related cost is between from and to.
<b>Cost, Amount</b>	To Enter a value in these fields to only show lines where amount related cost is between from and to.
<b>Billing Price</b>	Enter a value in these fields to only show lines where impact on billing price is between from and to.

## Actions

This section shows the actions available in the Job Registers workspace.

### Job Registers Tab

Field	Description
<b>Create</b>	Use this action to create a job register for the job.
<b>Delete</b>	Use this action to delete a job register from the job.
<b>Copy Risks from Job</b>	Use this action to open a wizard, which asks for a job number and the risks will be copied over. All previously existing entries are removed from the table. If attached documents exist, then the user gets an error message and have to remove them manually before. The same is copied as for when creating a job from a template.
<b>Copy Changes from Job</b>	Use this action to open a wizard, which asks for a job number and the changes will be copied over. All previously existing entries are removed from the table. If attached documents exist, then the user gets an error message and have to remove them manually before. The same is copied as for when creating a job from a template.

## Job Risk Registers Workspace

Use this workspace to identify and mitigate risks over the life cycle of a job.

Copy to come.

### Job Risk Registers Tab

This section includes the fields and descriptions for the Job Risk Registers tab.

#### Job Risk Registers island

Field	Description
<b>Job No.</b>	Copy to come.
<b>Risk Profile</b>	Copy to come.
<b>Approved Budgeted Risk Fund</b>	Copy to come.
<b>Approved Budgeted Risk Fund, Enterprise</b>	Copy to come.

#### Selection Criteria

Field	Description
<b>Risk Type</b>	Copy to come.
<b>Risk Status</b>	Copy to come.
<b>Risk Category</b>	Copy to come.
<b>Risk Probability</b>	Copy to come.

### Job Risks Sub-Tab

This section includes the fields and descriptions for the Job Risks sub-tab.

Field	Description
<b>Name</b>	Specify a name for the risk.
<b>Status</b>	Risk status types

Field	Description
<b>Type</b>	Risk types
<b>Category</b>	Risk category
<b>Description</b>	Risk description text
<b>Owner</b>	Copy to come.
<b>Owner Employee</b>	Mandatory field. By default it is the Project Manager and could be changed to any employee. See notification too.
<b>Owner Name</b>	Name of the employee
<b>Due Date</b>	The risk due date is set by the project manager. Due date decides a notification.
<b>Closed</b>	This checkbox is controlled by Close and Reopen actions. When ticked, the row is read only. When unticked, the line will become editable.
<b>Resolution</b>	Copy to come.
<b>Probability %</b>	% field where the user can enter 0-100%. If the value is outside of range the user will get an error.
<b>Impact on Time</b>	The user enters the number of days / hours the project plan could be impacted by the potential risk. The choice of days or hours really should be according to the budgeting which is in days or hours set in job setup.
<b>Assigned Risk Fund</b>	The user can assign a cost in Company Base Currency.
<b>Assigned Risk Fund, Enterprise</b>	Read only. The cost in enterprise currency will be available for display. The exchange rate will be according to the job's budgeting exchange rate setup.
<b>Cost Price</b>	The user can assign an additional cost amount in Company Base Currency.
<b>Cost Price, Enterprise</b>	Read only. The cost in enterprise currency will be available for display. The exchange rate will be according to the job's budgeting exchange rate setup.
<b>Mitigation</b>	Copy to come.
<b>Mitigation Probability</b>	The probability of weather the mitigation will work(100%) or not(0%). The user can enter 0..100% manually.

Field	Description
<b>Mitigated Time</b>	Copy to come.
<b>Mitigated Cost Price</b>	Copy to come.
<b>Mitigated Cost Price, Enterprise</b>	Copy to come.
<b>Weighted Risk Cost, Base</b>	This is a calculated field in base currency: Risk Cost * Risk Probability / 100.
<b>Weighted Risk Cost, Enterprise</b>	Weighted Risk Cost in enterprise currency
<b>Mitigated Risk Cost</b>	The user can assign a cost in Company Base Currency.
<b>Mitigated Risk Cost, Enterprise</b>	Read only. The cost in enterprise currency will be available for display. The exchange rate will be according to the job's budgeting exchange rate setup.
<b>Weighted Mitigated Risk Cost</b>	This is the Mitigated Risk Cost * Mitigated Probability / 100.
<b>Mitigated Impact On Time</b>	The user could enter the number of days that the schedule is impacted with due to the risk mitigation.
<b>Risk Mitigation</b>	Where the user describes the risk mitigation.
<b>Risk Resolution</b>	Risk resolution text.

## SD\_JC\_Job Change Registers Workspace

Use up to 35 words to describe this conceptual topic. Write complete sentences.

This is the start of your concept.

Job Change Registers Tab

This section includes the fields and descriptions for the Job Change Registers tab.

### Job Register island

Field	Description
<b>Job No.</b>	Copy to come.

### Selection Criteria

Field	Description
<b>Show Approved Only</b>	Copy to come.
<b>Status</b>	Copy to come.
<b>Reason</b>	Copy to come.
<b>Initiated By</b>	Copy to come.
<b>Impact on Scope</b>	Copy to come.
<b>Impact on Plan</b>	Copy to come.
<b>Impact on Resources</b>	Copy to come.
<b>Impact on Job Pipeline</b>	Copy to come.
<b>Impact on Other</b>	Copy to come.
<b>Cost Price, Time, Base</b>	Copy to come.
<b>Cost Price, Amount, Base</b>	Copy to come.
<b>Billing Price, Currency</b>	Copy to come.

### Job Changes Sub-Tab

This section includes the fields and descriptions for the Job Changes sub-tab.

Field	Description
<b>Name</b>	Copy to come.
<b>Status</b>	Configurable popup type.
<b>Status Changed Date</b>	When the Change Status changes
<b>Reason for Change</b>	Configurable popup type.

Field	Description
<b>Initiated By</b>	Configurable popup type.
<b>Initiated Date</b>	Date of initiation free date field
<b>"Hours" or "Days"</b>	The user enters the number of days / hours the project plan must include in order to implement the change. Dynamic title on the field Time according to job setup: The choice of days or hours according to the budgeting which is in days or hours set in job setup.
<b>Description</b>	Copy to come.
<b>Contact</b>	Copy to come.
<b>Time</b>	Copy to come.
<b>Time Cost, Base</b>	The user can assign a cost in Company Base Currency.
<b>Cost Price, Time</b>	Copy to come.
<b>Cost Price, Time, Enterprise</b>	Read only. The cost in enterprise currency will be available for display. The exchange rate will be according to the job's budgeting exchange rate setup.
<b>Cost Price, Amount</b>	Copy to come.
<b>Amount Cost, Base</b>	The user can assign a cost in Company Base Currency.
<b>Cost Price, Amount, Enterprise</b>	Read only and. The cost in enterprise currency will be available for display. The exchange rate will be according to the job's budgeting exchange rate setup.
<b>Billing Price</b>	Here the project manager indicates if the change will have an impact on the job's billing price. Amount field for manual input
<b>Billing Price, Currency</b>	Copy to come.
<b>Billing Price, Base</b>	Impact on Billing Price in base currency
<b>Billing Price, Enterprise</b>	Impact on Billing Price in enterprise currency
<b>Impact on Scope</b>	Here the project manager describes the impact on features . quality etc. if the change is executed. Free text field.

Field	Description
<b>Impact on Plan</b>	Here the project manager describes the impact on the timing plan if the change is executed ie. if more or less time is needed.
<b>Impact on Resources</b>	Here the project manager describes the impact on resources if the change is executed ie. if more employees or equipment is needed. Free text field.
<b>Impact on Job Pipeline</b>	Here the project manager indicates if the change will have an impact on the pipeline of jobs in the company ie. if other jobs will be delayed or impacted on resources etc. Yes / No boolean field
<b>Impact on Other</b>	Here the project manager describes any other possible impacts that don't fit in the rest of the impact categories. Free text field.
<b>Document Archive No.</b>	Copy to come.
<b>Approved</b>	This tick field is marked using the Approve action(the action is available in the card dialog). If another field on the change is changed by a user then this field is unmarked after a warning.
<b>Approved by</b>	The user employee name is added in by Maconomy when the Approved tick field is marked. The field is cleared when the Approved tick field is unmarked.
<b>Approved by Employee</b>	The user employee number is added in by Maconomy when the Approved tick field is marked. The field is cleared when the Approved tick field is unmarked.
<b>Approval Date</b>	The current date is added in by Maconomy when the Approved tick field is marked. The field is cleared when the Approved tick field is unmarked.
<b>Approved by Employee Position</b>	The position of the approver from the employee.

## Object Missing

This object is not available in the repository.

## Registration Section

This section includes the fields and descriptions for the Registration section workspaces.

### Job Journal Workspace

Use this workspace to create job entries that primarily involve time spent by your employees on jobs managed in the Job Cost module.

You can also use this workspace to create job entries for photocopies, film, or other materials used on the job.

To avoid double entry, do not use this workspace to enter employee hours that are already entered in the Time Sheets workspace, or purchase orders that are already entered in the Vendor Invoices workspace in the A/P module.

Job entries are entered in a job journal for future posting. You can change the information in the job journal until it is posted.

You can also use the job journal to re-enter entries to a job or between jobs by entering the amount as a negative figure in the Job Journal Entries sub-tab. You can also do this in the Job Reallocation workspace.

You enter job entries in a job journal, which you then post in this workspace or in the Posting workspace in the General Ledger. The Job Journal tab shows the sum of hours and cost and billing prices for the time and amount activity entries that you enter in the Job Journal Entries sub-tab.

You can change the information in a job journal until it is posted. You cannot post the job journal if it is being used in this workspace. When you post it, you can invoice the job entries in the Invoice Selection and Itemize Invoice Selection workspaces. Depending on the setting of the **Submission of Job Journal required** system parameter, you might need to submit the journal before you can post it.

If you selected employee control for the current job in the Jobs workspace, you can only create entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list. For more information, see the description of the **Employee Control** field in the Jobs workspace.

However, employees who are specified in the resource planning of a job in the Detailed Planning workspace can always create entries for this job, regardless of the job's employee control setup. For more information about controlling employee entries, see the description of the Jobs workspace.

The calculation of cost, intercompany prices, and billing prices is performed each time that you press the Return key on a new line in the Job Journal Entries sub-tab. The calculation is not repeated if you change information in existing lines.

You can print a job journal using the **Print This** function in the File menu. You can reprint posted job journals from the Print Posting Journal workspace in the G/L module.

## Job Journal Tab

This section includes the fields and descriptions for the Job Journal tab.

### Journal Island

Field	Description
<b>Journal No.</b>	This field shows the job journal number, which identifies the journal. Maconomy automatically gives a new journal the next available journal number. The number cannot be changed manually, but you define the journal number series in the window System Numbers in the Set-Up module.
<b>Created</b>	This field shows the name of the user who created the job journal. It cannot be changed.
<b>Submitted</b>	This field shows the name of the user who submitted the current job journal.

Field	Description
<b>Repeat Auto.</b>	You can mark this field to show that Maconomy automatically suggests the last used job, activity, task, and employee numbers when you create lines in the sub-tab. This field is marked by Maconomy when you create a journal and when you retrieve an old journal.
<b>Post</b>	If you mark this field, the journal will automatically be marked as ready to be posted in the window Posting. The mark is transferred to the "Post" field in the Posting window sub-tab.

### Company Island

Field	Description
<b>Company</b>	<p>In this field, you can enter the name and number of the company responsible for the job journal. If you do not enter a value manually, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard value is transferred from the window System Information in the Set-Up module.</p> <p>If you create job journal lines with an executing company different from the one specified in this field, Maconomy will automatically create intercompany entries at the posting of the job journal. In the intercompany entries, the company in this field will be the responsible company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company. See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" and the window Intercompany Accounts in the G/L module for a further description of the concept of responsible companies and intercompany entries.</p>
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

### Time, Base Island

Field	Description
<b>No. Hours</b>	This field shows the total number of hours registered to time activities in the journal.
<b>Cost</b>	This field shows the sum of costs registered on time activities in the journal. The sum is shown in the company's base currency.
<b>Billing Price</b>	This field shows the sum of billing prices registered on time activities in the journal. The sum is shown in the company's base currency.
<b>Standard Billing Price</b>	This field shows the sum of standard billing prices registered on time activities in the journal. The sum is shown in the company's base currency.

### Amount, Base Island

Field	Description
<b>Cost</b>	This field shows the sum of costs registered on amount activities in the journal. The sum is shown in the company's base currency.
<b>Billing Price</b>	This field shows the sum of billing prices registered on amount activities in the journal. The sum is shown in the company's base currency.
<b>Hereof Outlays</b>	This field shows the sum of cost prices on entries registered on amount activities of the type "Outlays" in the sub-tab. The sum is shown in the company's base currency.
<b>Standard Billing Price</b>	This field shows the sum of standard billing prices registered on amount activities in the journal. The sum is shown in the company's base currency.

### Entries Island

Field	Description
<b>Trans. No.</b>	This is the transaction number used for all entries in the job journal. Maconomy automatically selects the next available transaction number. It cannot be changed manually, but you can define the transaction number series in the window Trans. No. Series in the G/L module.
<b>Trans. Type</b>	This field shows the transaction type of the job entry.

### Posting Island

Field	Description
<b>Layout</b>	In this field, you can select which layout to use when the journal is posted. The layout "Standard" includes detailed information on each entry. The layout "Journal Overview" shows summary information with totals for the journal, including any resulting intercompany journals.

### Document Archive Island

Field	Description
<b>Document Archive</b>	<p>In this field, you can assign a document archive to the job description in question. By assigning a document archive to a job description, you can keep track of the various documents related to the job description. Document archives are created in the window Document Archives in the Set-Up module. See the description of that window for further information on the use of document archives.</p> <p>This field also shows a description of the specified document archive.</p>

Field	Description
<b>Document Count</b>	This field shows the total number of documents in the Document Archive.

### Job Journal Entries Sub-Tab

This section includes the fields and descriptions for the Job Journal Entries sub-tab.

Field	Description
<b>Entry Date</b>	In this field, you give the date the entry is entered. The date must be within the open posting period, which is entered in the window Posting Period Setup in the General Ledger Setup menu. Note that you can enter different entry dates on different lines. Maconomy suggests today's date on the first line. On every subsequent line Maconomy suggests the same date as on the line before it.
<b>Job No.</b>	<p>In this field, you enter the number of the job the entry involves.</p> <p>If the parameter "Allow Multi-Company Job Journal" has been marked in the window System Parameters in the Set-Up module, you can use this field to specify the number of a job which belongs to a company different from the one shown in the main tab. The number of the company responsible for the job is shown in the field "Company No."</p> <p>When posting, Maconomy uses the current journal for job entries concerning the company specified in the main tab. In addition, Maconomy automatically creates and posts a journal for each of the other companies that have been associated with job entries, if any.</p> <p>If the "Repeat Auto." field is marked, Maconomy suggests the job number on the previous line.</p> <p>The job number is shown on the job entry in the window Itemize Invoice Selection when the job journal has been posted.</p>
<b>Task</b>	<p>In this field, you can specify the task to which the job budget line is to be assigned. If a task list exists for the job, you must enter a task from the task list in question. If dimension values have been specified in the task list, these dimensions are automatically suggested on the new journal line, but you can change these. However, if the window Task Lists specifies that derived dimension values should overwrite existing dimensions values, any manually entered dimensions will be overwritten. If no task list has been assigned to the job, you cannot enter a task.</p> <p>If the "Repeat Auto." field is marked, Maconomy suggests the task name on the previous line.</p>
<b>Act. No.</b>	<p>In this field, you enter the number of the activity the job entry involves. Maconomy verifies that the activity is created in the window Activities.</p> <p>If the "Repeat Auto." field is marked, Maconomy suggests the activity number on the previous line.</p>

Field	Description
	The activity number is shown with the job entry in the window Itemize Invoice Selection when the job journal has been posted.
<b>Empl. No.</b>	<p>In this field, you enter the number of the employee. You must enter an employee for time activities. Use the search functions in the Find menu if you cannot remember the number of an employee.</p> <p>If the "Repeat Auto." field is marked, Maconomy suggests the employee number on the previous line.</p> <p>The employee number is shown with the job entry in the window Itemize Invoice Selection when the job journal has been posted.</p>
<b>Description</b>	In this field, you enter the job entry text. The entry text is shown with the job entry in the window Itemize Invoice Selection when the job journal has been posted.
<b>Quantity</b>	<p>In this field, you enter the quantity of activity units. Maconomy suggests the value "1."</p> <p>If the entry involves a time activity, the quantity represents a number of hours or days, depending on the time unit on the job. Hours are totaled in the "No. Hours" field. Cost and billing prices in base currency are totaled in the "Cost, Base" and "Billing Price, Currency" fields, respectively.</p> <p>If the entry is for an amount activity, the cost and billing prices in base currency are added to the "Cost, Base" and "Billing Price, Currency" fields, respectively, in the "Amount" island.</p> <p>In the Invoice Selection and Itemize Invoice Selection windows, you can invoice your customers for more hours than you have entered here. You can, therefore, enter zero quantity here, so that you can invoice the customer for an estimated time usage, while not actually using any time on the job. Maconomy also allows you to register negative figures, which is useful for reentries and entry transfers.</p>
<b>Base Currency</b>	This field shows the base currency of the company responsible for the job.
<b>Cost, Base</b>	<p>In this field, you can enter the cost per unit to be used for the job entry in question.</p> <p>Maconomy calculates the cost based on information from job price lists, item price lists, and employee or activity information tabs. If the executing company behind the activity is different from the company responsible for the job, Maconomy suggests the intercompany price instead of the cost price. You can find a more detailed description of how Maconomy calculates these prices in "Appendix A: Price Calculation in the Job Cost module."</p> <p>You can only change the suggested cost here if the entry is for an amount activity.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when entering a new entry date on the line. For further information, see the description of the system parameter "Update prices upon dimension change."</p>

Field	Description
<b>Sales Currency</b>	<p>This field shows the currency of the job. It is retrieved from the window Job Information.</p> <p>Maconomy uses the exchange rate valid on the line entry date when converting between different currencies.</p> <p>When using different currencies, Maconomy performs a conversion. You can find a more detailed description of price calculations in "Appendix A: Price Calculation in the Job Cost module."</p>
<b>Billing Price, Curr.</b>	<p>In this field, you enter the billing price per unit in the job's currency.</p> <p>Maconomy calculates the billing price based on information from job price lists, item price lists, regulation percentage, the employee or activity information tab, and information in the window System Information in the Set-Up module. For a further description of how Maconomy calculates these prices, please refer to "Appendix A: Price Calculation in the Job Cost Module."</p> <p>If you change the billing price in this field, the markup percentage is changed proportionally in the field "Markup %," and the billing price is hereafter interpreted as "Entered" when calculating the price. This may influence the price calculation.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when you change the entry date on the line. For further information, see the description of the system parameter "Update prices upon dimension change."</p> <p>The amount is included in the invoice selection made for the job when the job journal is posted. The amount can be changed when you edit the invoice in the windows Invoice Selection and Itemize Invoice Selection.</p> <p>You can change the billing price suggested by Maconomy.</p>
<b>Markup %</b>	<p>This field shows gross margin as a percentage of the cost. If you change this value, the billing price is changed proportionally, and the billing price is hereafter interpreted as "Entered" when calculating the price (see "Appendix A: Price Calculation in the Job Cost module"). If you change the values in the fields "Billing Price, Currency" and "Markup %" at the same time, the entered billing price is used, and the markup percentage is then adjusted proportionally.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the markup in this field is updated when you change the entry date on the line. For further information, see the description of the system parameter "Update prices upon dimension change."</p>
<b>Standard Billing Price, Currency</b>	<p>This field shows the standard billing price of the entry in the currency shown in the field "Sales Currency" above. The field cannot be changed. The difference between the standard billing price, the registered billing price, and the invoiced billing price (as found in the window Invoice Selection) can be used for performance analyses. For more information, please see "Appendix A: Price Calculation in the Job Cost Module."</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when you change the entry date on</p>

Field	Description
	the line. For further information, see the description of the system parameter "Update prices upon dimension change."
<b>Company No.</b>	This field shows the number of the company responsible for the job that the current job entry concerns. See the description of the field "Job No." in this window.
<b>Company Name</b>	This field displays the name of the responsible company shown in the field "Company No." above.
<b>Exec. Company No.</b>	This field shows the number of the company which carried out the activity. For time activities, Maconomy looks up the company to which the specified employee is assigned in the window Employees in the Set-Up module. If no company has been specified on the employee information tab, Maconomy will use the job's responsible company. For amount activities, Maconomy uses the company specified on the activity in the island Company No. If no company has been specified in this field, Maconomy will use the company to which the employee is assigned. If no employee is specified, Maconomy will use the company responsible for the job.
<b>Name</b>	This field shows the name of the company specified in the field "Executing Company" above.
<b>Base Currency, Exec. Company</b>	This field shows the base currency selected for the executing company in the window Company Information.
<b>Cost, Exec. Company</b>	In this field, you can enter the cost of one piece of the current activity within the executing company. If the company responsible for the current job journal is the same as the executing company, the amount in this field will be identical to the one in the field "Cost, Base." If the responsible company is different from the executing company, and the activity is a time activity, Maconomy suggests the cost of the employee specified on the line. If the activity is an amount activity, Maconomy suggests the cost of the activity. The cost is shown in the currency of the executing company.
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you do not enter a value manually, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard value is transferred from the window System Parameters in the Set-Up module. See the chapter "Introduction to the G/L Module" and the window Dimension Derivation for a further description of dimension derivation.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.

Field	Description
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Accrual</b>	<p>In this field, you can mark the entry as an accrual. The field can only be completed if the selected activity is an amount activity, and if the company responsible for the activity is also the executing company.</p> <p>An accrual is an advance registration of a coming invoice. By using this facility, you can invoice a customer before having received and registered any vendor invoices. When you post the entries, Maconomy updates all the job-related accounts as if you had actually received a vendor invoice for the given amount. The job will be registered with the cost, but instead of being posted to the activity's offset account, it will be posted to the account for job accruals. Furthermore, Maconomy will keep track of accumulated job accruals for each activity assigned to the job.</p> <p>To be able to manage job costs with accruals, the posting algorithms for job journals, general journals, vendor invoice journals, and transfer journals function as described below:</p> <p>When you post a debit entry to a combination of job and activity to which there are accruals, Maconomy includes the accruals according to the following rules.</p> <p>If the entry amount is less than or the same as the accrual, Maconomy creates a job entry with zero amount, while the G/L entry is entered to the account for job accruals. The job accrual account is specified by means of a dimension combination in the window Posting References. Please note that this dimension combination may include other dimension values which are to be used in this connection. If the entry amount exceeds the accruals by a given amount, Maconomy creates a job entry and G/L entry with this amount. In addition, Maconomy enters an amount to the account for job accruals corresponding to the accrual amount. In both cases, the accumulated job accrual is reduced.</p> <p>This field cannot be used if the system parameter "Job accruals from purchase order" has been marked in the Set-Up module. If this parameter is marked, job accruals must be made in the window Job Accruals.</p>
<b>Job Name</b>	This is the name of the job to which the entry is made. It is retrieved from the window Jobs and cannot be changed here.
<b>Employee Name</b>	This field displays the name of the employee to which the entry in the field "Employee No." has been assigned.
<b>Activity Name</b>	This field displays the activity name. The text is retrieved from the window Activities.

Field	Description
<b>Task Description</b>	This field displays the task description. The task description is retrieved from the window Tasks Lists for the task in question.
<b>Employee Category No.</b>	This field shows the employee category number that comes from job budget lines or that you add manually in this window.
<b>Item No.</b>	This field displays an item number.
<b>External Cost</b>	Select this field to indicate that an expense displays as External in the Job Journal.
<b>Started</b>	<p>In this field, you can enter the time a time activity starts. You cannot enter a value for amount activities.</p> <p>If you complete this field, you must complete the field "Finished." The two fields can be used as an alternative to the field "Quantity" to specify how many hours are used on an activity.</p> <p>If you change or enter a time here and in the field "Finished," Maconomy will change the value in the field "Quantity." If the time entered here is later than the time entered in the field "Finished," Maconomy regards the activity as having finished on the following day.</p> <p>If you enter the number of hours in the field "Quantity," Maconomy will not change the value entered here.</p>
<b>Finished</b>	<p>In this field, you enter the time the activity finished. You cannot enter a value for amount activities.</p> <p>If you complete this field, you must complete the field "Started." The two fields can be used as an alternative to the field "Quantity" to specify how many hours are used on an activity.</p> <p>If you change or enter a time here and in the field "Started," Maconomy will change the value in the field "Quantity." If the time entered here is before the time entered in the field "Started," Maconomy regards the activity as having started on the previous day.</p> <p>If you enter the number of hours in the field "Quantity," Maconomy will not change the value entered here.</p>
<b>Remarks</b>	In this field, you can enter a note regarding the current line. The note is transferred to the job entry when the journal is posted.
<b>Quantity 1</b>	In this field, you can enter a quantity used on the current activity. The information can be used in reporting and statistics.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field "Quantity 1" above.
<b>Overtime Spec.</b>	In this pop-up field, you can select an overtime specification for a time activity on the current line. Overtime specifications are defined in the window Popup Fields in the Set-Up module.

Field	Description
	When entering time, you can specify that the work was performed using overtime by selecting one of the values in this field. For instance, if you have been working over the weekend, you can specify this by selecting the pop-up value "Weekend" in this field (provided that the value has been defined in your system). The price list assigned to the job for which you entered overtime registrations may add an additional charge for over-time entries, which will be reflected in the subsequent processing of the time sheet, for example, when creating invoices for the job.
<b>Accrual Type</b>	If you select a value in this field, Maconomy will create an accrual entry for each period covered by the interval specified in the fields "Period From" and "Period To." The accrual entries are posted to the relevant accrual-related posting references on the activity in question or in the window Posting References, depending on whether the field "Post by Activity" is marked in the window System Information. The offset entries are posted to the accounts referenced for the selected accrual type in the window Popup Fields. The amount is distributed evenly on the selected periods. Both cost and billing prices are accrued.
<b>Period From, Accrual</b>	In this field and the field "Period To" you can enter a range of dates. If you select a value in the field "Accrual Type" above, Maconomy will create an accrual entry on the specified G/L account for each period covered by the interval specified in the fields "Period From" and "Period To." The amount is distributed evenly on the selected periods.  Please note that the last period must be no later than the accrual ending period set up in the field "Accrual Period, Ending" in the information tab of the company specified on the entry. If no ending period has been specified there, the ending period set up in the corresponding field in the window System Information applies instead. If an ending period has been set up neither in the company information tab nor in the system information, period, you can specify any period in the field "Period To."
<b>Period To, Accrual</b>	See the field "Period From" above.
<b>Transaction Type</b>	This field shows the transaction type of the job entry.

## Actions

This section shows the actions available in the Job Journal workspace.

### Top Tab

Field	Description
<b>Post</b>	When you select this action, Maconomy posts the journal in the window and prints a posting journal.

Field	Description
	<p>Maconomy checks the field "Post" in the window Actions to verify that you have access to posting journals.</p> <p>If the system parameter "Submission of Job Journal required" has been marked, this action is only available if the journal has been submitted using the action Submit. Furthermore, if this system parameter has been marked, and the system parameter "Allow Posting of Own Journals" has not been marked, the journal can only be posted by a different user than the one who submitted the journal. However, users for whom the field "Post Own Journals" is marked in the window Actions can always post journals that they submitted.</p> <p>If the journal contains lines on which the activity was executed within another company than the one responsible for the journal, Maconomy will automatically create intercompany entries in each of the companies involved. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>Maconomy uses the current journal for job entries concerning the company specified in the main tab. In addition, Maconomy automatically creates and posts a journal for each of the other companies that have been associated with job entries, if any.</p>
<b>Submit</b>	<p>When you select this action, you submit the current job journal as an indication that the journal is complete and ready to be posted. If the system parameter "Submission of Job Journal required" has been marked, the journal must be submitted before it can be posted.</p> <p>Maconomy checks the field "Submit Journals" in the window Actions to verify that you have access to submitting journals.</p> <p>If you change the information on a line in the journal once it has been submitted, the journal is no longer registered as submitted.</p>
<b>Reopen</b>	<p>If the current journal has been submitted, you can use this action to cancel the submission.</p>
<b>Delete Job Journal Lines</b>	<p>When you select this action, all lines in the sub-tab of the current journal are deleted. Maconomy issues a warning before deleting the lines.</p>
<b>Attach Document</b>	<p>Use this action to attach a document to the General Journal. For example, this could be a scanned voucher or invoice which serves as documentation for the General Journal.</p> <div style="border: 1px solid blue; padding: 5px;"> <p><b>Note:</b> You can only attach one document per journal, so if you try and add a new document when one is already attached, a dialog displays to give you an option to replace the current document with the new document. The current document is permanently deleted when the new document is attached. Documents are attached at a journal level, and not a table line level. All the lines refer to the same attached document.</p> </div>

Field	Description
<b>View Document</b>	Select the needed Job Journal, then use this action to display the document attached to it, if any.

## Time Sheets Workspace

Use this workspace to record how you spend the hours of your working day, for up to an entire week.

Use this workspace to record how you spend the hours of your working day, for up to an entire week. In the Daily Time Sheets workspace, you can enter one time sheet per day.

Your time sheet entries are the basis for customer billing and internal reporting. Therefore, it is important that you enter time accurately and in a timely fashion, both for customer projects and internal projects.

The sooner that you enter your time, the sooner your company can bill the customer, which is good for the company's cash flow. If your entries are accurate, the whole company continually improves its project forecasting skills; by knowing exactly how long something has taken in the past, it is easier to create realistic budgets and customer quotes for similar jobs in the future.

If you select the **Allow Incomplete Time Registrations** system parameter, you do not need to enter all of the details about your work when you create a job entry. Instead, you can enter a brief note about what you were doing and for how long, and leave the details for later.

The Time Sheet workspace relies on the use of favorites to automate entry. If you often work on the same job, task, and activity, you can create a favorite for that combination. Project managers and department managers can share favorites with their teams.

You can enter time via weekly (standard) or monthly time registration. See the Set-Up section below for more details. Additionally, you can specify your time as hours or days, via the **Time Unit** field. If your Time Unit is Hours, 1.0 means 1 hour. If the Time Unit is Days, then 1.0 means 1 work day (typically 8 hours).

### Set-Up

Use these system parameters to manage how your company uses timesheets:

- **Used Fixed Working Time Stamped on Time Sheets**

Maconomy always "stamps" the fixed hours from the weekly calendar on the employees' time sheets as they are created. If the parameter is marked, then the actual, reported working hours of the employee will be compared with the employee's fixed hours from the same period.

If the parameter is not marked, Maconomy will compare the actual, reported working hours of an employee with the fixed hours currently in force for the employee in question. This may not always produce a historically correct result.

- **Monthly Time Reporting**

To set up monthly registration, select the parameters Monthly Time Reporting and Split Week Time Sheet in the System Parameters workspace in the Set-Up module. This creates a link between time sheets that belong to the same month. For example, if a time sheet is created on Monday, March 2 2015, Maconomy creates five time sheets, with fifth time sheet covering Monday, March 30th through Tuesday, March 31st (split week, see

below). When a line is created or changed in a week, it is created or changed in all time sheets covering that month. Additionally, temporarily submitting, submitting, releasing, approving, and reopening a time sheet will apply to the whole month. Using Maconomy's layout editing tools, you can add fields to the time sheet which show the aggregate hours for the entire month, corresponding to the ones which are normally shown for the week in the Total island.

- **Split Week Time Sheet**

Split-week time sheets are optional when using weekly time reporting, and mandatory when using monthly time reporting. To enable this feature, select the system parameter Split Week Time Sheet in the System Parameters workspace in the Set-Up module. If you do this, Maconomy create two time sheets for weeks that extend from one month to the next. The **Part** field in the Period island shows whether the time sheet belongs to the first or the second part of the week (part A or B).

### **Relationship of Daily, Weekly, and Monthly Timesheets**

Using this workspace does not prevent you from using the DailyTime Sheets workspace for reporting hours when you want to report on just one day at a time. Nor does it matter whether you select the **Monthly Time Reporting** system parameter. This is because the weekly/monthly time sheets are closely connected to the daily time sheets.

Below, the term "weekly" refers to both weekly and monthly time sheets.

The connection between weekly and daily time sheets consists of the following:

- When you create a daily time sheet, Maconomy automatically creates a weekly time sheet that covers the period (week or month) to which the day belongs. Maconomy creates the weekly time sheet only if it does not already exist. However, Maconomy does not create any daily time sheets when you create a weekly time sheet.
- When you create a line in a daily time sheet, Maconomy automatically creates a line on the corresponding weekly time sheet, if such a line does not already exist. The line has the same combination of favorite, job number, activity, dimensions, note, and overtime specification as the daily line. If such a line already exists in the weekly time sheet, Maconomy updates it.
- When you create a line in a weekly time sheet, Maconomy creates daily time sheets for the days for which you have entered hours. If daily time sheets already exist for these days, Maconomy creates lines in the existing daily time sheets. Maconomy does not automatically create daily time sheet lines for weekly time sheet lines selected in the **Keep Line** field or for lines created based on resource planning.
- When you delete a weekly time sheet, Maconomy deletes the corresponding daily time sheets.
- When you delete a line in a daily time sheet, Maconomy resets the corresponding line in the weekly time sheet. Maconomy does not delete the line in the weekly time sheet, but it sets the hours for all days on the line to zero.
- When you delete a line in a weekly time sheet, Maconomy removes the hours from all of the daily time sheets that the weekly time sheet covers. Maconomy does not delete any daily time sheets, even if the deletion of the line causes the time sheet to be empty.

- When you create a daily time sheet, and the date belongs in a week for which the weekly time sheet has already been fully transferred, Maconomy reopens the weekly time sheet and all daily time sheets that correspond to the week.
- If you reopen a daily time sheet in this workspace, Maconomy also reopens the corresponding weekly time sheet.

If you perform an action on the Time Sheets Workspace, Maconomy also performs the action for all of the corresponding daily time sheets. This means that if you use the **Submit Time Sheet** action for week 23 in the year 2014, all daily time sheets in that period (7 June 2014 to 13 June 2014) are also submitted. The same principle applies to the **Submit Time Sheet Temporarily**, **Release Time Sheet**, and **Reopen Time Sheet** actions. However, daily time sheets do not have to exist for you to perform these actions; Maconomy does not create any "missing" daily time sheets when you perform these actions in the Time Sheets workspace.

If you perform the same action for each day in the period (for example, if you submit a Daily Time Sheet for each day in the period), the same action is performed on the weekly time sheet. "Each day in the period" means any day for which the employee's fixed number of hours is different from zero. The fixed number of hours is specified in the Employees workspace in the Set-Up module, either through a week calendar or by entering specific hours for the employee. Typically an employee has fixed hours (greater or less than zero) for Monday through Friday, in which case the action would be applied to the weekly time sheet when the employee applies the action to Friday (assuming that the action is already applied to Monday through Thursday) .

Additionally, Maconomy has automatic timesheet entries from the absence calendar registrations. The employee uses the calendar to select the type of absence and period, and Maconomy automatically creates a timesheet line with correct job number and additional information for the employee when the absence is approved.

You can see or create a time sheet for an employee in these situations:

- You are the employee for whom the time sheet is being created.
- You are either the employee's supervisor, secretary, or mentor.
- You are designated as proxy for the employee.
- You are the designated approver, substitute approver, or super approver, depending on the approval hierarchies set up on the time sheet. Access through approval hierarchies is granted by specifying an employee in the Approval Hierarchies single dialog workspace.

If you selected employee control for the current job in the Jobs workspace, you can only make entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list. For more information, see the description of the **Employee Control** field in the Jobs workspace.

Note that if you specified a date in the **Work Completed On** field in the Jobs workspace, you cannot enter time sheet entries for that job after the specified date unless you are the job's project manager. See the description of the **Work Completed On** field in the Jobs workspace for more information about the functionality of this field.

## Approvals

You can opt to have supervisors or project managers approve employee time sheets. You can also set up an approval hierarchy. A hierarchical approval means that you can set up multiple users as part of the approval process and create a hierarchy between them. For example, if you

set up two levels (hierarchies), the approvals then follow that order. In this scenario, approvals might first go through a supervisor and then through a project manager.

See the Approval Hierarchies section of the Concepts Guide for more details.

## Time Sheets Tab

This section includes the fields and descriptions for the Time Sheets tab.

### Employee Information Island

Field	Description
<b>Employee No.</b>	In this field you can enter the number of the employee the time sheet is for. Maconomy suggests the employee number of the current user.
<b>Name</b>	This field shows the name of the employee.
<b>Department</b>	This is the department to which the employee belongs. The field shows the number of the department assigned to the employee according to the employee revision applying on the first day of the time sheet.

### Period Island

Field	Description
<b>Week</b>	<p>In this field you enter the number of the week to which the time sheet applies. Maconomy automatically suggests the current week.</p> <p>If split-week time sheets are used, and the current week extends across the change of a month, Maconomy will automatically create two time sheets: Part "A," covering Monday through the end of the month, and part "B," covering the beginning of the following month through Sunday. The part currently in use is also displayed in this field.</p> <p>You can specify a week in which at least one day is within the open posting period for job entries. This period is defined in the window Posting Period Setup in the G/L module. You can also specify a week which comes after the open posting period, if you, for example, need to register time on a job before you go on vacation. However, you should note that Maconomy will give a warning when you specify hours in the fields "Monday–Sunday" in the sub-tab for dates after the open posting period. In addition, it will only be possible to submit such time sheets, but not to perform any actions that will result in a posting. Whether it is the submission, release, or approval that determines when a time sheet is transferred for posting depends on the approval principle of each job. For further information about approval principles, please see the description of the island Approval in the window Jobs. If no open posting period has been specified for job entries, Maconomy uses the open posting period for G/L entries instead.</p> <p>The open posting period for job entries is different from the one applying to G/L entries in that it can allow the registration of hours in the window Time Sheets and amounts in the window Expense Sheets on dates prior to the open G/L posting period. For further information, please see the introduction to this window.</p>

Field	Description
	If the system parameter “Disallow the Creation of Time Sheets Outside Period of Employment” is marked, Maconomy will issue an error message if you attempt to create a time sheet for an employee for a period outside the employee’s period of employment—that is, before he was employed or after he ceased working for the company.
<b>Year</b>	In this field, you enter the year of the week. Maconomy automatically suggests the current year.
<b>Date</b>	This field displays the date range covered by the current time sheet. If split-week time sheets are used, the field shows the date range for the part of the week covered by the current time sheet.
<b>Week Calendar No.</b>	This field shows the number of the week calendar assigned to the employee according to the employee revision applying on the first day of the time sheet. The week calendar is used for calculating the number of working hours in each day.

**Total Island**

Field	Description
<b>Time Unit</b>	This field shows the unit for time on the time sheet. When you create a time sheet, the time unit is derived from the employee revision that contains the starting date of the time sheet. In the case of split-week time sheets, the two parts may have different time units if the employee has been set up to change time unit between the period start dates of the two time sheet parts. In the case of monthly time reporting, where Maconomy creates time sheets for the entire month when you create a time sheet, each time sheet is created using the time unit that was set up for the employee revision for the given period.
<b>Date</b>	In these fields, the dates of the individual weekdays are shown.
<b>Total</b>	This column of fields shows the total time in hours or days depending, on the Time Unit.
<b>Fixed</b>	<p>This column of fields will show the fixed time in hours or days depending on the Time Unit. For each day, the fixed time unit is found using the following procedure:</p> <ol style="list-style-type: none"> <li>1. Maconomy looks up the fixed working Time Unit for the weekday in question in the employee revision, that occurs on the date in question. For instance, to find the fixed time for Thursday, November 6, 2014, Maconomy looks up the fixed time amount for Thursdays in the employee revision that occur on November 6, 2014.</li> <li>2. Maconomy then looks up the week calendar in the employee revision applying on the date in question. In this week calendar, Maconomy checks the <b>Time Unit</b> field for the date in question.</li> </ol>

Field	Description
	3. The lower of these figures is used as the fixed time for the date.
<b>Overtime</b>	This column of fields shows the total overtime in hours or days depending on the Time Unit.
<b>Balance</b>	Copy to come.
<b>Check-in Enabled, Monday-Sunday</b>	This field specifies whether multiple check-in entries are enabled for each day.
<b>Check-in Enabled, Week</b>	This field specifies whether multiple check-in entries are enabled for the week.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Balance, Week</b>	This field shows the total remaining check-in balance for the week.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for each day.
<b>Check-in Time, Week</b>	This field shows the total check-in time registered for the week.
<b>External</b>	This column (one row per weekday) of fields shows the total time for external jobs in hours or days, depending on the Time Unit.
<b>Internal</b>	This column of fields shows the total time for internal jobs in hours or days, depending on the Time Unit.

### Working Hours Island

This island has a row for every day in the week, and a row displaying the totals for each column. The fields are used for registering check-in and check-out times to capture actual working time. These times are called actual work time intervals. The actual working time is compared to the expected working time set up for the current employee. Depending on setup, you may be required to register any difference in overtime or flextime. Note that it is possible to specify an interval which spans midnight. In this case, the working time is considered to belong to the date on which work was begun. For more information, please see the description of the window Employees in the Set-Up module.

**Note:** For all fields in this island, if the **Registration** field in the Check-in / out Time Entry island on the Employees workspace is set to Not Allowed, then these fields are not calculated and are not available for entering data.

Field	Description
<b>Expected Check-in</b>	<p>These fields show the expected check-in time as specified for the current employee.</p> <p>These fields show the employee's fixed number of working hours for each day covered by the time sheet. For each day, the expected check-in time is found using the following procedure:</p> <ol style="list-style-type: none"> <li>1. Maconomy looks up the check-in time for the weekday in question in the employee revision applying on the date in question. For instance, to find the expected check-in time for Tuesday, November 6, 2007, Maconomy looks up the check-in time for Tuesdays in the employee revision applying on November 6, 2007.</li> <li>2. Maconomy then looks up the week calendar in the employee revision applying on the date in question. In this week calendar, Maconomy checks the check-in time for the date in question.</li> <li>3. If no check-in times are identified in steps 1 and 2, Maconomy leaves the field blank.</li> </ol> <p>Maconomy may be configured to allow the user to edit the expected check-in and check-out. If this is the case, the fixed working hours are not changed — that is, the new expected work time interval applies to the date in question only.</p>
<b>Expected Check-out</b>	The functionality of these fields is similar to that of the field "Expected Check-in" above.
<b>Actual Check-in</b>	In this field, you can enter the time when you actually came to work.
<b>Actual Check-out</b>	In this field, you can enter the time when you actually left work.
<b>Absence</b>	In this field, you can enter how many hours you were absent on a particular day. The absence is used in the calculation of actual working hours. For instance, if you need to be absent for two hours due to a dentist's appointment, you can enter that number of hours in this field. You can also enter a comment regarding your absence in the fields "Remark 1-2."
<b>Working Hours</b>	This field shows the actual working hours. The working hours are calculated from the difference between the check-in time and the check-out time, less any registered absence.
<b>Reg.</b>	This field shows the actual time registered on lines in the sub-tab.

Field	Description
<b>Bal.</b>	This field shows the balance between the actual working hours from the field "Working Hours" and the registered hours from the field "Reg."
<b>Var.</b>	<p>This field shows any variance between the expected and the actual working hours. Note that if the system parameter "Popup 1 required if difference between exp. and act. work hours" is marked, you are required to select a value in the field "Popup 1" before you can submit the time sheet.</p> <p>Note that if no working hours are entered (that is, "Actual Check-in" and "Actual Check-out" are empty), the variance is considered to be zero.</p>
<b>Popup 1</b>	In this field, you can select a pop-up value. The pop-up field values are created in the pop-up "Time Sheet Popup 1" in the window Popup Fields in the Set-Up module. If the system parameter "Popup 1 required if difference between exp. and act. work hours" is marked, you are required to select a value in this field before you can submit the time sheet, if the value in the field "Var." is different from zero. This way, you can specify to the accounting department what you want them to do with the difference. For instance, the values in this pop-up field could be "Overtime" and "Flextime." You could thus specify that the difference should be paid out ("Overtime") or added to/subtracted from your Flextime account ("Flextime"). Note that the fields are for information only.

### Activities Island

Field	Description
<b>Time Activity 1-3</b>	These fields show the total time for activities in hours or days, depending on the Time Unit. Time activity can be used to calculate overtime among others. The activity references can be created in the window Time Sheet References.
<b>Total Time Activities</b>	This field shows the total time for Activities 1-3 in hours or days, depending on the Time Unit.
<b>Balance</b>	This field shows the balance in hours or days, depending on the Time Unit.
<b>Amount Activity 1-4</b>	In these fields, the total quantity registered for each of the fields "Amount Activity 1-4" in the sub-tab is shown. Activity references can be created in the window Time Sheet References.

### Employee Remarks Island

These fields show the employee remarks entered in the island Remarks of the window Employees.

### Transaction Island

Field	Description
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.

### Status Island

Field	Description
<b>Created By</b>	This field shows the name of the user who created the time sheet.
<b>Date</b>	This is the date the time sheet was created.
<b>Submitted</b>	This field shows whether the time sheet has been submitted. This field will be marked automatically when you select the action "Submit Time Sheet."
<b>Submitted by</b>	This field shows the name of the user who submitted the current time sheet.
<b>Date</b>	This field shows the date when the time sheet was submitted.
<b>Temp. Submitted</b>	This field shows whether the time sheet has been temporarily submitted. This field will be marked automatically when you select the action "Submit Temp. Time Sheet."
<b>Temp. Submitted by</b>	This field shows the name of the user who submitted the current time sheet.
<b>Date</b>	This field shows the date when the time sheet was temporarily submitted.
<b>Transferred</b>	If this field is marked, the time sheet has been transferred to a time sheet journal or the time sheet transfer queue (if the system parameter "Central transferral of time sheets" is marked). This field will be marked automatically when all lines on the time sheet have been transferred. The criteria determining when a time sheet line is transferred for posting depends on the selected approval principle. For further information, please see the description of the island Approval in the window Jobs.
<b>Transferred by</b>	This field shows the name of the user who transferred the current time sheet.
<b>Date</b>	This field shows the date when the current time sheet was transferred.
<b>Approved</b>	This field shows whether the time sheet has been approved by the supervisor. This field is automatically marked when the time sheet is approved, and the mark is removed if the time sheet is reopened. Note that even though this field is marked on a time sheet, the time sheet might not

Field	Description
	be fully approved, as a time sheet is not fully approved until it has been approved by all relevant instances.
<b>Approved by</b>	This field shows the name of the user who approved the current time sheet and thus indicated the approval of the supervisor. If no approval is necessary for any of the lines, this field shows the name of the user who submitted the time sheet.
<b>Date</b>	This field shows the date on which the current time sheet was fully approved.
<b>Reopened</b>	This field shows if the time sheet has been reopened. This field is filled in automatically when the time sheet is reopened.

### Supervisor Island

Field	Description
<b>Supervisor</b>	This field shows the name and number of the supervisor related to the employee specified on the time sheet. A supervisor has access to approving the current time sheet. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

### Secretary Island

Field	Description
<b>Secretary</b>	This field shows the name and number of the employee's secretary. The secretary can, for instance, handle the time sheet registration and transfer for employees if the field "Release Time Sheets" in the window Actions in the Set-Up module has been marked for the individual employee. If the system parameter "Secretary can Approve Time Sheets" is marked, the secretary can also approve the current time sheet. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

### Mentor Island

Field	Description
<b>Mentor</b>	This field shows the name and number of any mentor assigned to the employee, for example, to assist in the training of the employee. The status of mentor grants access to seeing (but not changing) the time sheets of the employee in question. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

**Update Fixed Hours Island**

Field	Description
<b>Update Fixed Hours at Approval</b>	<p>If you mark this field, the fields “Fixed” and “Overtime” in the sub-tab will be updated to reflect the current number of fixed hours specified for the employee in question in the windows Employees or Week Calendars in the Set-Up module upon approval.</p> <p>If the number of fixed hours has been changed for the employee, it will affect the calculation of overtime. The calculation is only affected as of the date when the number of fixed hours was changed; it does not affect the calculation of overtime for previously approved time sheets.</p> <p>For the update of fixed hours to be recorded on the time sheets in the sub-tab, this field must be marked when the time sheets are approved.</p>

**Copy Time Sheet Island**

Field	Description
<b>Date</b>	In this field you can enter a date. Maconomy will copy the time sheet created for this date when the action “Copy Time Sheet” is selected. By default, Maconomy suggests the date of the most recent period for which a time sheet exists when you create a time sheet and press Return.
<b>Week</b>	This field and the field “Year” determine which time sheet Maconomy should copy when the action “Copy Time Sheet” is selected. By default, Maconomy suggests the week of the most recent period for which a time sheet exists when you create a time sheet and press Return.
<b>Year</b>	The functionality of this field corresponds to that of the field “Week.”

## Time Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Time Sheet Lines sub-tab.

Field	Description
<b>Job No.</b>	<p>In this field, you enter the number of the job the work is for.</p> <p>When a time sheet is approved and then reopened, you cannot change the job number on existing lines.</p>
<b>Act. No.</b>	<p>In this field, you enter the number of the activity on which the work was performed. When a time sheet is approved and then reopened, you can no longer change the activity number on existing lines. If the system parameter “Disallow reg. on amount act. in time sheets” has been selected, registration on amount activities cannot be performed in this window.</p>
<b>Task</b>	In this field, you enter the task related to the specified hours.

Field	Description
<b>Monday – Sunday</b>	<p>These fields show registered time in hours or days, depending on the Time Unit of the time sheet. In these fields you enter the time used every day of the week on the specific job, dimension, task, and activity. You cannot register more hours in one day than the maximum number of hours entered for the employee in the employee revision applying to the date in question. Moreover, if a value has been entered in the field “Time Sheets” in the island Registration Limits in the window Activities for the activity for which you wish to register hours or amounts, you cannot enter a larger quantity for the activity than specified in that field. If there are several time sheet lines for a given employee with the activity in question, the sum of the registrations on these lines cannot exceed the daily registration limit specified for the activity in question.</p> <p>It is possible to enter a negative number of hours. If the field “Minimum Hours” has been marked on the employee revision applying on the date in question, Maconomy will check whether the employee has registered the minimum number of hours that the employee in question is supposed to register. If the number of hours registered is lower than this number, the time sheet cannot be submitted. It can be temporarily submitted, however. See the description of the window Employees in the Set-Up module for further information.</p> <p>If time sheet lines are automatically created from the detailed resource planning, these fields will automatically be filled in with the quantity of hours planned for the employee on the task specified on the current line. In this way, you only need to enter hours in these fields if you need to make any changes to the pre-filled quantity of hours. However, the fields are only pre-filled on time sheet lines referring to jobs for which the job parameter attribute “Pre-fill Time Sheet Lines” has the value “By Day.”</p> <p>You cannot enter hours for days that are before the open posting period for the job specified on the current line. For further information, please see the description of the island Job Cost in the window Company Information in the G/L module. If you enter hours for a date that comes after the open posting period, Maconomy will issue a warning. In addition, it will only be possible to submit such time sheets, but not to perform any actions that will result in a posting. Whether it is the submission, release, or approval that determines when a time sheet is transferred for posting depends on the approval principle of each job. For further information about approval principles, please see the description of the island Approval in the window Jobs.</p> <p>By changing the MDL layout of this window, you can insert variable day names in the sub-tab. This way, the column which was previously called “Monday” can, for example, be changed to “Mon. &lt;date&gt;.” For more information, please see the description of the Window Layouts window in the Set-Up module.</p>
<b>Total</b>	<p>This is the total number of hours or days, depending on the Time Unit of the time sheet, entered for the given combination of job, dimension, task, and activity during the week in question.</p>

Field	Description
<b>Planned</b>	<p>This field shows the number of hours planned for the current task in the period covered by the time sheet. This field is only filled in for time sheet lines created automatically from the detailed resource planning and only if the job parameter attribute "Pre-Fill Time Sheet Lines" of the job on the current line has the value "By Period" or "By Day."</p> <div> <b>Note:</b> For time sheets with a Time Unit set to Day, this field is zero ( 0 ). </div>
<b>Est. Time to Compl.</b>	<p>In this field, you can enter estimated time to completion in hours or days, depending on the Time Unit of the time sheet. So if the unit of the time sheet is Day, evaluation of progress on the given job will take the given estimate in days, and convert it to the unit of the job.</p> <p>If you enter an estimate to completion, the number of hours is automatically converted into a number of days which is inserted in the field "Est. Time to Compl., Days." The number of days is calculated by multiplying the time by the value in the field "Hours per Man Day" in the window Jobs.</p>
<b>Est. Time to Compl. Days</b>	<p>The functionality of this field is similar to that of the field "Est. Time to Comp." However, in this field you enter the estimate to completion as a number of days instead of a number of hours. If you enter a number of days, it is automatically converted into a number of hours which is inserted in the field "Est. Time to Compl." The number of hours is calculated by multiplying the number of days by the value in the field "Hours per Man Day" in the window Jobs.</p>
<b>Completed</b>	<p>If you mark this field, you indicate that you are of the opinion that your part of the work represented by the task on the current line has been completed. You can only mark this field on time sheet lines for which time activities have been specified on jobs for which the job parameter attribute "Specify Required Time to Completion" has the value "Optional" or "Mandatory."</p>
<b>Estimate Date</b>	<p>In this field, you can specify the date as of which the values of the fields "Est. Time to Compl." and "Completed" apply. The date must be within the period covered by the current time sheet. For monthly time sheets, the date must be within the dates covered by the part of the month currently displayed, and for weekly time sheets the date should be within the (split) week in question. The default value of this field is the last date covered by the time sheet.</p>
<b>Proposed Time</b>	<p>This field shows the proposed time for the week in hours or days, depending on the time unit on the time sheet.</p> <p>The number of hours suggested for invoicing in the Invoice Selection and Itemize Invoice Selection windows is based on the number of proposed hours, pending final approval by the invoicing department.</p> <p>Please note that if the system parameters "Keep quantity at write-ups" or "Keep quantity at write-downs" are enabled, the amount of time in the field "Proposed Time" cannot be written up or down, respectively.</p>

Field	Description
<b>Job Name</b>	This is the name of the job for which you are registering entries.
<b>Billing Price, Currency</b>	This field shows the billing price in job currency per hour or day, depending on the Time Unit on the time sheet.
<b>Billing Price Total, Currency</b>	This field shows the total billing price of the time sheet line in the currency of the job.
<b>Billing Price Total, Base</b>	This field shows the billing price in base currency per hour or day, depending on the Time Unit on the time sheet.
<b>Billing Price Total, Enterprise</b>	This field shows the billing price in enterprise currency per hour or day, depending on the Time Unit on the time sheet.
<b>Proposed Billing Price, Unit</b>	This field shows the proposed billing price in job currency per hour or day, depending on the Time Unit on the time sheet. Note that this field cannot be changed in the time sheet but may be changed by the project manager.
<b>Description</b>	In this field, you can enter or change a description of the current entry. When you create a line, Maconomy will suggest a text in this field, depending on how the current activity is set up. The activity can be set up to derive the description of the activity or the description of the currently selected task, or to leave the field blank. For more information, please see the description of the window Activities.
<b>Company No.</b>	This field shows the name of the company responsible for the job on which the work was performed. The number cannot be changed here. See the section "Multiple Companies" in the chapter "Introduction to the G/L Module" for a further description of companies.
<b>Favorite</b>	In this field you can select a favorite. If you are using the Maconomy Client for Java™, the field is a drop-down list showing the favorites available in the current context. The favorites derive from the window Favorites. You can create and edit your own personal favorites, or other people—for instance a project manager, your department manager, or the finance department can create favorites and distribute them to a selection of employees from the window Job Employees.  See the description of the window SpeedSheet for more information about favorites.
<b>Note</b>	In this field, you can enter a brief description of what you have been working on. This will serve as a reminder in case you cannot remember (or you do not want to spend time finding) the correct registration combination just now, and Maconomy permits incomplete registrations (see the introduction).  If the current time sheet line was created as a result of the transfer of a detailed plan or due to an event, this field contains the job name or number

Field	Description
	and description of the planning line or event number and event flow description, respectively.
<b>Keep Line</b>	<p>In this field, you can mark time sheet lines as “permanent.” Lines marked in this way will be copied automatically from the previous period at the creation of time sheets. New lines created will inherit this status, which means that they will automatically be copied to all new time sheets until you remove the mark from this field on the lines in question.</p> <p>However, if the field “Duplicate Lines on Time Sheets” in the window System Information has not been marked, Maconomy will only copy the time sheet lines that do not already exist on the new time sheet. This may be the case if the system is set up to automatically create time sheet lines on the basis of resource planning in the job parameter type “Planning” for the job in question. If a new time sheet contains a line created on the basis of resource planning which is identical to a line marked as permanent in a previous time sheet, Maconomy will copy this status to the new time sheet line.</p> <p>However, you should note that if the field “Duplicate Lines on Time Sheets” has been marked, and you create two duplicate time sheet lines on a time sheet, both with a mark in the field “Keep Line,” only one of the two identical lines will be copied to a new time sheet when copying the time sheet manually. This is to prevent too many lines on a time sheet.</p> <p>If you use the functionality of split weeks and you mark this field on a line on the “A” part of a split-week time sheet, a corresponding line is created on the “B” part of the split-week time sheet with a mark in the field “Keep Line.” If a corresponding line already exists on the “B” part of the time sheet, this field is automatically marked on the line of the “B” part time sheet upon marking of the field on the “A” part of the time sheet.</p> <p>Moreover, you should also note that Maconomy does not copy time sheet lines marked as “permanent” from a previous time sheet to a new time sheet if the new time sheet has been created automatically. If, for example, you have marked the field “Keep Line” on lines in a weekly time sheet for week 1 and then create a daily time sheet for a day in week 2, Maconomy automatically creates a corresponding weekly time sheet for week 2, but will not copy the permanent lines from the weekly time sheet for week 1 to the weekly time sheet for week 2.</p>
<b>Employee Category No.</b>	This field shows the employee category number that comes from job budget lines or that you add manually in this window.
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you do not enter a value manually, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard value is transferred from the window System Parameters in the Set-Up module. See the chapter “Introduction to the G/L Module” and the window Dimension Derivation for a further description of dimension derivation.

Field	Description
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Approval, Project Manager</b>	<p>In this field, Maconomy shows the status which the project manager of the job on the current line has assigned to the line in the window Approve Time Sheet Lines. When the time sheet has been submitted, the project manager can use the window Approve Time Sheet Lines to approve, reject, or release each line if the approval principle of the job indicates that approval of time registrations by the project manager is mandatory or optional. For more information, please see the description of the window Approve Time Sheet Lines. Time sheet lines can be approved in the window Approval Time Sheets also.</p> <p>If the status of the line is "Approved" or "Released," and the line is changed, the status changes to blank. If the line has the status "Rejected," and the line is changed, the status of rejected is maintained.</p>
<b>Approved by</b>	This field shows the name of the project manager who assigned the current approval status (shown in the field "Approval, Project Manager") to the line.
<b>Approval Date</b>	This field shows the date on which the project manager who assigned the current approval status (shown in the field "Approval, Project Manager") assigned the approval status to the line.
<b>Comment</b>	This field shows any comments entered by the project manager in connection with the approval, release, or rejection of the line.
<b>Activity Type</b>	In this field, you can see whether the activity is a time or amount activity.
<b>Time Activity 1-3</b>	In these fields, you can specify time registration for activities as set up in Time Sheet References. This field is in hours or days, depending on the Time Unit on the time sheet.
<b>Amount Activity 1-4</b>	In these fields, you can enter a quantity of hours for the amount activities specified in the window Time Sheet References. Amount activities can for instance be used to register transport costs, meals, and so on.
<b>Internal</b>	This field is marked automatically if the current job, which is specified in the field "Job No.," has been created as an internal job in the window Jobs. If the field is not marked, the job is external. This field cannot be changed in this window.

Field	Description
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Remarks</b>	In this field, you can enter remarks relating to the current time sheet line.
<b>Job Description</b>	This field shows a description of the job specified in the field "Job No." If it is an internal job, the description will contain the job name, whereas the description of an external job will contain the name of the customer to whom the job has been assigned.
<b>Quantity 1</b>	In this field, you can enter a quantity used on the current activity. The information can be used in reporting and statistics.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field "Quantity" above.
<b>Activity Name</b>	This field displays the text defined for the current activity. The text is suggested by Maconomy as entry text when a line is created in this window. The entry text can be changed, and this is then displayed in the field "Description" in the sub-tab.
<b>Task Description</b>	This field displays the description defined for the current task.
<b>Task Path</b>	This field shows any task path of the task (see the description of hierarchical tables in the section "Task Path" in the chapter "Getting Started with the Java™ Client").
<b>Customer No.</b>	This field shows the number of the bill-to customer assigned to the job on the current line.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job on the current line.
<b>Language</b>	This field shows the language specified for the customer assigned to the job on the current line.
<b>Overtime Spec.</b>	<p>In this pop-up field, you can select an overtime specification for the current line. Overtime specifications are defined in the window Popup Fields in the Set-Up module.</p> <p>When entering time, you can specify that the work was performed using overtime by selecting one of the values in this field. For instance, if you have been working over the weekend, you can specify this by selecting the pop-up value "Weekend" in this field (provided that the value has been defined in your system). The price list assigned to the job for which you entered overtime registrations may add an additional charge for overtime entries, which will be reflected in the subsequent processing of the time sheet, for example, when creating invoices for the job.</p>

Field	Description
<b>Description, Monday – Sunday</b>	<p>In these fields, you can enter a daily description of the task specified on the current line. If daily descriptions are required for the task in question, Maconomy will ensure that you enter a description for the task for the day in question before you can submit the time sheet. Example: You register hours on Monday and Thursday on a task called “Client Meetings.” In the job-specific task list, that task has a mark in the field “Use Daily Descriptions.” Therefore, you must complete the fields “Description, Monday” and “Description, Thursday” with additional information about the nature of the client meetings held.</p> <p>If the current line was created from an event or as a result of the transfer of a plan, daily descriptions will not be required (even if the task requires them).</p> <p>You can enter descriptions even if the task in question does not require you to do so.</p>
<b>Details</b>	This field contains a status message for the current line.
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.
<b>Expense Amount, Base</b>	This field shows the expense amount in base currency.
<b>Mileage Amount, Base</b>	This field shows the mileage amount in base currency.
<b>Mileage Quantity</b>	This field shows the mileage quantity that has been registered in connection to the hours registered on this time sheet line.
<b>Purchase Order Number</b>	<p>In this field, you can specify a purchase order number.</p> <p>This field is not displayed by default. Only subcontractors logged in as employees can view and edit this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.</p>
<b>Purchase Order Line Number</b>	<p>In this field, you can specify a purchase order line number.</p> <p>This field is not displayed by default. Only subcontractors logged in as employees can view this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.</p>

## Actions

This section shows the actions available in the Time Sheets workspace.

### Top Tab

Field	Description
<b>Submit Time Sheet</b>	<p>Use this action to submit the time sheet. If you try to edit a line in a time sheet which has been submitted, but not yet approved, Maconomy issues a warning. If you continue, the time sheet is no longer registered as submitted.</p> <p>To submit the time sheet, all lines in the sub-tab must contain at least a job number, an activity number, and a task (if tasks are required for the job on the line).</p> <p>If you are required to enter your actual work time as intervals in the island Working Hours, either always or in connection with overtime, the balance between the actual work time and the number of hours registered on jobs for any given day must be less than the allowed deviation as set up for you in the window Employees.</p> <p>If multiple check-in entries are enabled, and at least one check-in entry has been registered on the time sheet, Maconomy calculates the check-in balance.</p> <div style="border: 1px solid blue; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> You cannot edit check-in entries on a time sheet that has been submitted.</p> </div> <p>If the <b>Popup 1 required if difference between exp. and act. work hours</b> system parameter is enabled, and there is a difference between expected and actual work hours, a value must be selected in the <b>Popup 1</b> field in the Working Hours island, typically as an explanation of the difference. Note that even if entering actual work time intervals is optional, you cannot submit the time sheet unless the intervals are complete--that is, either specify nothing or specify both check-in and check-out times.</p> <p>If daily descriptions are required for any of the tasks in the time sheet, the <b>Description</b> field for the weekday(s) for which registrations were made on the task in question must be completed before submission.</p> <p>When the time sheet is submitted, Maconomy evaluates each line with regard to approval and posting as explained in the Posting Time Sheet Entries section in the introduction to this window.</p>
<b>Submit Temp. Time Sheet</b>	<p>Use this action to temporarily submit the current time sheet. After this is done, you can release the time sheet for posting so that it can be made part of the basis for invoicing customers. You can continue registering hours on the time sheet, and then submit it as usual. A time sheet cannot be approved until it has been submitted in its final form. On temporary submission, no check is made on minimum hours. Please note that you cannot delete lines which have been temporarily submitted and then transferred, and changing dimension values on such lines is not allowed. You can submit a time sheet temporarily several times, until you submit it finally.</p> <p>When the time sheet is temporarily submitted, Maconomy evaluates each line with regard to approval and posting according to the section "Posting Time Sheet Entries" in the introduction to this window.</p>

Field	Description
<b>Release Time Sheet</b>	<p>Use this action to release the current time sheet. You can only release time sheets that have been submitted or temporarily submitted. Reopened time sheets cannot be released.</p> <p>This action is available if the <b>Trans. Non-Appr. Time Sheets</b> check box is selected in setup, and you meet one of the following requirements:</p> <ul style="list-style-type: none"> <li>You are the supervisor of the current employee</li> <li>You have access to transfer time sheets as specified in the Actions window</li> <li>You are the employee of the current time sheet, are the secretary of the current employee, or you have access to see all time sheets.</li> </ul> <p>When you use this action, the current time sheet is transferred for posting, allowing you to invoice the customer before the time sheet lines have been approved according to the approval principles of the jobs involved. This can, for example, be useful if the supervisor who needs to approve the time sheet is on vacation or otherwise indisposed. For more information about posting, see the Posting Time Sheet Entries section in the introduction to this window.</p>
<b>Approve Time Sheet</b>	<p>Use this action to approve the time sheet. Maconomy evaluates each line with regard to further approval and posting according to the Posting Time Sheet Entries section in the introduction to this window.</p> <div style="border: 1px solid blue; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> If multiple check-ins are enabled, you cannot edit check-in entries after the time sheet is approved.</p> </div> <p>A time sheet can only be approved if it has been submitted. You can only make changed to an approved time sheet if you reopen it using the <b>Reopen Timesheet</b> action.</p> <p>Time sheets can also be approved from the Approve Time Sheets and Approval Time Sheets windows.</p>
<b>Reopen Time Sheet</b>	<p>Use this action to reopen a time sheet which has been approved or released and transferred. To select this action, you must have been given access to do so in the window Actions in the Set-Up module. When the sheet is reopened, the time sheet no longer has the status of being submitted. You can edit already reported numbers of hours and to create lines, but approved lines cannot be deleted, and you cannot change job and activity numbers, dimensions, or tasks on the time sheet lines.</p> <p>If you reopen a time sheet which has registrations of hours on a date that comes after the open posting period, Maconomy displays a warning message. In addition, you can only submit such reopened time sheets, but not perform any actions that will result in a posting. Whether it is the submission, release, or approval that determines when a time sheet is transferred for posting depends on the approval principle of each job. For more information, see the Posting Time Sheet Entries section in the introduction to this window.</p>

Field	Description
<b>Copy Time Sheet</b>	<p>Use this action to copy lines from a previous period to the current period, including dimension values. Time usage is reset to zero. The action copies the lines from the week specified in the Copy Time Sheet island, in the <b>Date</b> or <b>Week</b> and <b>Year</b> fields. By default, Maconomy suggests the time sheet from the latest period for which a time sheet exists.</p> <p>Lines that pertain to blocked activities or blocked or closed jobs are not copied. In addition, Maconomy will only copy time sheet lines that do not already exist on the new time sheet when you select this action, regardless of whether the system has been set up to use duplicate lines in the window System Information. If a line contains a favorite which is not valid for the current week, it is not copied, except if the field "Keep Line" is marked on the line.</p> <p>Information about check-in time, check-out time, and absence is not copied.</p> <p>If the <b>Rederive when copying time sheets</b> system parameter is enabled, Maconomy keeps the values in the <b>Job</b>, <b>Activity Number</b>, and <b>Task</b> fields, while the remaining dimensions (the G/L dimensions) are rederived to ensure the correct reflection of any changes to dimension derivation rules.</p>
<b>Transfer Plan</b>	<p>Use this action to transfer planned hours to the time sheet. It is disabled for time sheets with the time unit value set to <b>Day</b>.</p> <p>If you use detailed planning, and the <b>Pre-fill Time Sheets</b> job parameter attribute in the <b>Planning</b> job parameter type is set to any value excluding <b>Do Not Create Lines</b> for a job, Maconomy creates a number of time sheet lines corresponding to the detailed planning lines for the current employee for the week in question when a time sheet is created. If lines are added to the detailed plan after the time sheet is created, you can use this action to update the time sheet with the lines added to the plan. Note that lines are only transferred to the current time sheet if they do not already exist in the time sheet, and if they relate to jobs for which the <b>Pre-fill Time Sheets</b> job parameter attribute is set to any value excluding <b>Do Not Create Lines</b>.</p>
<b>Create Favorite</b>	<p>Use this action to create a favorite from the current combination of job, task, and activity. If this combination does not exist as a favorite already, it is named using a combination of job name, task description, and activity text. You can inspect and edit the favorite in the Favorites or Favorite windows.</p> <p>The new favorite is immediately available in the Time Sheets window.</p>

## Daily Time Sheets Workspace

Use this workspace to record how you spend the hours of your working day.

You can enter one time sheet per day. If you use the Time Sheets workspace, you can enter information for a full week.

Your time sheet entries are the basis for customer billing and internal reporting. Therefore, it is important to enter your time accurately and in a timely fashion, both for customer projects and internal projects.

Using daily time sheets makes sense if your company needs up-to-date information on time consumption so that it can invoice customers quickly.

You can use this workspace only if your installation of Maconomy is set up to use daily time sheets by means of the **Use Daily Time Sheets** system parameter. If you did not select this system parameter, Maconomy only maintains existing daily time sheets.

See the description of Time Sheets Workspace for further details.

## Approvals

In this workspace, you cannot see the approval status and similar information from the Approve Time Sheet Lines workspace, because time sheet lines are approved for one week at a time. The hours entered in this workspace are displayed in the Approve Time Sheet Lines workspace because they are also part of the weekly time sheet. However, this only applies if the weekly time sheet has the status **Approved**.

## Daily Time Sheets Tab

The functionality of the fields in this window are similar to the those described for the corresponding islands in the window Time Sheets.

### Employee Information Island

Field	Description
<b>Employee No.</b>	In this field you can enter the number of the employee the time sheet is for. Maconomy suggests the employee number of the current user.
<b>Name</b>	This field shows the name of the employee.
<b>Department</b>	This is the department to which the employee belongs. The field shows the number of the department assigned to the employee according to the employee revision applying on the first day of the time sheet.

### Period Island

Field	Description
<b>Week</b>	<p>In this field you enter the number of the week to which the time sheet applies. Maconomy automatically suggests the current week.</p> <p>If split-week time sheets are used, and the current week extends across the change of a month, Maconomy will automatically create two time sheets: Part "A," covering Monday through the end of the month, and part "B," covering the beginning of the following month through Sunday. The part currently in use is also displayed in this field.</p> <p>You can specify a week in which at least one day is within the open posting period for job entries. This period is defined in the window Posting Period Setup in the G/L module. You can also specify a week which comes after the open posting period, if you, for example, need to register time on a job before you go on vacation. However, you should note that Maconomy will give a warning when you specify hours in the fields "Monday–Sunday" in the sub-tab for dates after the open posting period. In addition, it will only be possible to submit such time sheets, but not to perform any actions that will result in a posting. Whether it is the</p>

Field	Description
	<p>submission, release, or approval that determines when a time sheet is transferred for posting depends on the approval principle of each job. For further information about approval principles, please see the description of the island Approval in the window Jobs. If no open posting period has been specified for job entries, Maconomy uses the open posting period for G/L entries instead.</p> <p>The open posting period for job entries is different from the one applying to G/L entries in that it can allow the registration of hours in the window Time Sheets and amounts in the window Expense Sheets on dates prior to the open G/L posting period. For further information, please see the introduction to this window.</p> <p>If the system parameter “Disallow the Creation of Time Sheets Outside Period of Employment” is marked, Maconomy will issue an error message if you attempt to create a time sheet for an employee for a period outside the employee’s period of employment—that is, before he was employed or after he ceased working for the company.</p>
<b>Year</b>	In this field, you enter the year of the week. Maconomy automatically suggests the current year.
<b>Date</b>	This field displays the date range covered by the current time sheet. If split-week time sheets are used, the field shows the date range for the part of the week covered by the current time sheet.
<b>Week Calendar No.</b>	This field shows the number of the week calendar assigned to the employee according to the employee revision applying on the first day of the time sheet. The week calendar is used for calculating the number of working hours in each day.

### Check-in Island

Field	Description
<b>Check-in Enabled</b>	Select this check box to enable multiple check-in entries per day for the employee.
<b>Check-in Balance</b>	This field shows the employee's total remaining balance for the day.
<b>Check-in Time</b>	This field shows the employee's total rounded check-in time registered for the day.
<b>Missed Meal</b>	<p>This field specifies whether the employee utilized their daily break for the day.</p> <p>If the field value is <b>Yes</b>, the employee skipped their break.</p>

**Resubmission Island**

Field	Description
<b>Resubmission Explanation Required</b>	Select this check box to require the user to enter an explanation for resubmitting the time sheet.
<b>Resubmission Explanation</b>	Enter a reason for resubmission of the time sheet.

**Working Hours Island**

This island has a row for every day in the week, and a row displaying the totals for each column. The fields are used for registering check-in and check-out times to capture actual working time. These times are called actual work time intervals. The actual working time is compared to the expected working time set up for the current employee. Depending on setup, you may be required to register any difference in overtime or flextime. Note that it is possible to specify an interval which spans midnight. In this case, the working time is considered to belong to the date on which work was begun. For more information, please see the description of the window Employees in the Set-Up module.

**Note:** For all fields in this island, if the **Registration** field in the Check-in / out Time Entry island on the Employees workspace is set to Not Allowed, then these fields are not calculated and are not available for entering data.

Field	Description
<b>Expected Check-in</b>	<p>These fields show the expected check-in time as specified for the current employee.</p> <p>These fields show the employee's fixed number of working hours for each day covered by the time sheet. For each day, the expected check-in time is found using the following procedure:</p> <ol style="list-style-type: none"> <li>1. Maconomy looks up the check-in time for the weekday in question in the employee revision applying on the date in question. For instance, to find the expected check-in time for Tuesday, November 6, 2007, Maconomy looks up the check-in time for Tuesdays in the employee revision applying on November 6, 2007.</li> <li>2. Maconomy then looks up the week calendar in the employee revision applying on the date in question. In this week calendar, Maconomy checks the check-in time for the date in question.</li> <li>3. If no check-in times are identified in steps 1 and 2, Maconomy leaves the field blank.</li> </ol> <p>Maconomy may be configured to allow the user to edit the expected check-in and check-out. If this is the case, the fixed working hours are not changed — that is, the new expected work time interval applies to the date in question only.</p>
<b>Expected Check-out</b>	The functionality of these fields is similar to that of the field "Expected Check-in" above.

Field	Description
<b>Actual Check-in</b>	In this field, you can enter the time when you actually came to work.
<b>Actual Check-out</b>	In this field, you can enter the time when you actually left work.
<b>Absence</b>	In this field, you can enter how many hours you were absent on a particular day. The absence is used in the calculation of actual working hours. For instance, if you need to be absent for two hours due to a dentist's appointment, you can enter that number of hours in this field. You can also enter a comment regarding your absence in the fields "Remark 1-2."
<b>Working Hours</b>	This field shows the actual working hours. The working hours are calculated from the difference between the check-in time and the check-out time, less any registered absence.
<b>Reg.</b>	This field shows the actual time registered on lines in the sub-tab.
<b>Bal.</b>	This field shows the balance between the actual working hours from the field "Working Hours" and the registered hours from the field "Reg."
<b>Var.</b>	<p>This field shows any variance between the expected and the actual working hours. Note that if the system parameter "Popup 1 required if difference between exp. and act. work hours" is marked, you are required to select a value in the field "Popup 1" before you can submit the time sheet.</p> <p>Note that if no working hours are entered (that is, "Actual Check-in" and "Actual Check-out" are empty), the variance is considered to be zero.</p>
<b>Popup 1</b>	In this field, you can select a pop-up value. The pop-up field values are created in the pop-up "Time Sheet Popup 1" in the window Popup Fields in the Set-Up module. If the system parameter "Popup 1 required if difference between exp. and act. work hours" is marked, you are required to select a value in this field before you can submit the time sheet, if the value in the field "Var." is different from zero. This way, you can specify to the accounting department what you want them to do with the difference. For instance, the values in this pop-up field could be "Overtime" and "Flexitime." You could thus specify that the difference should be paid out ("Overtime") or added to/subtracted from your Flexitime account ("Flexitime"). Note that the fields are for information only.

**Total Island**

Field	Description
<b>Time Unit</b>	This field shows the unit for time on the time sheet. When you create a time sheet, the time unit is derived from the employee revision that contains the starting date of the time sheet. In the case of split-week time sheets, the two parts may have different time units if the employee has been set up to change time unit between the period start dates of the two time sheet parts.

Field	Description
	In the case of monthly time reporting, where Maconomy creates time sheets for the entire month when you create a time sheet, each time sheet is created using the time unit that was set up for the employee revision for the given period.
<b>Date</b>	In these fields, the dates of the individual weekdays are shown.
<b>Total</b>	This column of fields shows the total time in hours or days depending, on the Time Unit.
<b>Fixed</b>	<p>This column of fields will show the fixed time in hours or days depending on the Time Unit. For each day, the fixed time unit is found using the following procedure:</p> <ol style="list-style-type: none"> <li>1. Maconomy looks up the fixed working Time Unit for the weekday in question in the employee revision, that occurs on the date in question. For instance, to find the fixed time for Thursday, November 6, 2014, Maconomy looks up the fixed time amount for Thursdays in the employee revision that occur on November 6, 2014.</li> <li>2. Maconomy then looks up the week calendar in the employee revision applying on the date in question. In this week calendar, Maconomy checks the <b>Time Unit</b> field for the date in question.</li> <li>3. The lower of these figures is used as the fixed time for the date.</li> </ol>
<b>Overtime</b>	This column of fields shows the total overtime in hours or days depending on the Time Unit.
<b>Balance</b>	Copy to come.
<b>Check-in Enabled, Monday-Sunday</b>	This field specifies whether multiple check-in entries are enabled for each day.
<b>Check-in Enabled, Week</b>	This field specifies whether multiple check-in entries are enabled for the week.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Balance, Week</b>	This field shows the total remaining check-in balance for the week.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for each day.

Field	Description
<b>Check-in Time, Week</b>	This field shows the total check-in time registered for the week.
<b>External</b>	This column (one row per weekday) of fields shows the total time for external jobs in hours or days, depending on the Time Unit.
<b>Internal</b>	This column of fields shows the total time for internal jobs in hours or days, depending on the Time Unit.

### Supervisor Island

Field	Description
<b>Supervisor</b>	This field shows the name and number of the supervisor related to the employee specified on the time sheet. A supervisor has access to approving the current time sheet. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

### Secretary Island

Field	Description
<b>Secretary</b>	This field shows the name and number of the employee's secretary. The secretary can, for instance, handle the time sheet registration and transfer for employees if the field "Release Time Sheets" in the window Actions in the Set-Up module has been marked for the individual employee. If the system parameter "Secretary can Approve Time Sheets" is marked, the secretary can also approve the current time sheet. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

### Mentor Island

Field	Description
<b>Mentor</b>	This field shows the name and number of any mentor assigned to the employee, for example, to assist in the training of the employee. The status of mentor grants access to seeing (but not changing) the time sheets of the employee in question. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

### Employee Remarks Island

These fields show the employee remarks entered in the island Remarks of the window Employees.

**Copy Time Sheet Island**

Field	Description
<b>Date</b>	In this field you can enter a date. Maconomy will copy the time sheet created for this date when the action "Copy Time Sheet" is selected. By default, Maconomy suggests the date of the most recent period for which a time sheet exists when you create a time sheet and press Return.
<b>Week</b>	This field and the field "Year" determine which time sheet Maconomy should copy when the action "Copy Time Sheet" is selected. By default, Maconomy suggests the week of the most recent period for which a time sheet exists when you create a time sheet and press Return.
<b>Year</b>	The functionality of this field corresponds to that of the field "Week."

**Status Island**

Field	Description
<b>Created By</b>	This field shows the name of the user who created the time sheet.
<b>Date</b>	This is the date the time sheet was created.
<b>Submitted</b>	This field shows whether the time sheet has been submitted. This field will be marked automatically when you select the action "Submit Time Sheet."
<b>Submitted by</b>	This field shows the name of the user who submitted the current time sheet.
<b>Date</b>	This field shows the date when the time sheet was submitted.
<b>Temp. Submitted</b>	This field shows whether the time sheet has been temporarily submitted. This field will be marked automatically when you select the action "Submit Temp. Time Sheet."
<b>Temp. Submitted by</b>	This field shows the name of the user who submitted the current time sheet.
<b>Date</b>	This field shows the date when the time sheet was temporarily submitted.
<b>Transferred</b>	If this field is marked, the time sheet has been transferred to a time sheet journal or the time sheet transfer queue (if the system parameter "Central transferral of time sheets" is marked). This field will be marked automatically when all lines on the time sheet have been transferred. The criteria determining when a time sheet line is transferred for posting depends on the selected approval principle. For further information, please see the description of the island Approval in the window Jobs.

Field	Description
<b>Transferred by</b>	This field shows the name of the user who transferred the current time sheet.
<b>Date</b>	This field shows the date when the current time sheet was transferred.
<b>Approved</b>	This field shows whether the time sheet has been approved by the supervisor. This field is automatically marked when the time sheet is approved, and the mark is removed if the time sheet is reopened. Note that even though this field is marked on a time sheet, the time sheet might not be fully approved, as a time sheet is not fully approved until it has been approved by all relevant instances.
<b>Approved by</b>	This field shows the name of the user who approved the current time sheet and thus indicated the approval of the supervisor. If no approval is necessary for any of the lines, this field shows the name of the user who submitted the time sheet.
<b>Date</b>	This field shows the date on which the current time sheet was fully approved.
<b>Reopened</b>	This field shows if the time sheet has been reopened. This field is filled in automatically when the time sheet is reopened.

### Transaction Island

Field	Description
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.

### Time Sheet Lines Sub-Tab

The functionality of the fields in the sub-tab of this window is similar to that described for the Time Sheets window sub-tab. However, several of the fields in the Time Sheets window sub-tab are not included in this window, as they are not relevant for daily time sheets.

### Actions

This section shows the actions available in the Daily Time Sheets workspace.

### Top Tab

Field	Description
<b>Submit Time Sheet</b>	The functionality of this action is similar to that of the action "Submit Time Sheet" in the window Time Sheets.

Field	Description
<b>Submit Temp. Time Sheet</b>	The functionality of this action is similar to that of the action “Submit Temp. Time Sheet” in the window Time Sheets.
<b>Release Time Sheet</b>	The functionality of this action is similar to that of the action “Release Time Sheet” in the window Time Sheets.
<b>Approve Time Sheet</b>	The functionality of this action is similar to that of the action “Approve Time Sheet” in the window Time Sheets.
<b>Reopen Time Sheet</b>	The functionality of this action is similar to that of the action “Reopen Time Sheet” in the window Time Sheets.
<b>Copy Time Sheet</b>	When you select this action, Maconomy copies the lines from a previous day to the current period, including dimension values. Time usage is reset to 0. The action copies the lines from the date specified in the field “Date.” By default, Maconomy suggests the time sheet from the latest date for which a time sheet exists. This also means days covered by a weekly time sheet. If, for instance, you have created a time sheet for Tuesday, 6 June, and Thursday, 8 June, with no weekly time sheet for the week in question, and you select this action on 8 June, Maconomy will copy the lines from Tuesday, 6 June. If a weekly time sheet had existed, the lines from this time sheet would have been copied instead.

## Weekly SpeedSheet Workspace

Use this workspace to record how you spend the hours of your work week.

You can enter up to one week of information. The SpeedSheet workspace provides an easy way to enter time quickly as you work, so that you capture information while it is still fresh in your mind.

The difference between the SpeedSheet workspace and the Time Sheets workspace is that you navigate in the SpeedSheets workspace by using a calendar. In the Time Sheets workspace, you search for a time sheet to display by using a filter.

Access to this workspace requires add-on number 122.

Use the **Employee Number** field in the Time section of the Time & Expense workspace to view and access the different time sheets. The field defaults to your own employee number, and has a drop-down listing of the employees for whom you are set up as supervisor, secretary, proxy, or mentor. This gives you access to view and submit time capabilities on behalf of these employees.

## Weekly SpeedSheet Tab

This section includes the fields and descriptions for the Weekly SpeedSheet tab.

Field	Description
<b>Calendar</b>	Select and navigate a week at a time to enter time sheet information. See the calendar definition in Daily SpeedSheet for more details. The currently selected day—that is, the day for which time registrations in the Time Sheet Lines sub-tab are shown—is marked in the calendar in bold and with red brackets. See the Legend Island below for color-code descriptions.
<b>Employee</b>	In this field, you can enter an employee name and number.
<b>Week No.</b>	This field shows the week number that corresponds to the selected period.
<b>Time Unit</b>	This field shows the unit for time on the time sheet. The time unit is derived from the employee revision that contains the starting date of the time sheet. In the case of split-week time sheets, the two parts may have different time unit if the employee has been set up to change time unit between the period start dates of the two time sheet parts. In the case of monthly time reporting, where Maconomy creates time sheets for the entire month when you create a time sheet, each time sheet is created using the time unit that was set up for the employee.

### Legend Island

The days in the calendar are color-coded. The colors have the following meaning:

Field	Description
<b>Red</b>	Your time sheet is due.
<b>Green</b>	Your time sheet has been submitted.
<b>Light Blue</b>	Your time sheet has been submitted and approved.
<b>Dark Blue</b>	Your time sheet has been fully approved.
<b>Yellow</b>	Your time sheet contains one or more lines that have been rejected.
<b>None</b>	Your time sheet is not due, or you are not expected to submit a time sheet for that day according to your week calendar.

**Time Information Island**

Field	Description
<b>Total</b>	This row of fields shows the total time in hours or days depending on the Time Unit.
<b>Fixed</b>	This row (one column per weekday) of fields shows the fixed time in hours or days depending on the Time Unit. If the number of fixed hours is changed for the employee, it affects the calculation of overtime.
<b>Balance</b>	This field shows the balance between fixed expected working hours and the total hours registered for the day.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Balance, Week</b>	This field shows the total remaining check-in balance for the week.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for the day.
<b>Check-in Time, Week</b>	This field shows the total check-in time registered for the week.
<b>Invoiceable</b>	This field shows the invoiceable hours for a given day.
<b>Invoiceable %</b>	This field shows the invoiceable percentage for a given day.

**Time Sheet Lines Sub-Tab**

This section includes the fields and descriptions for the Time Sheet Lines sub-tab.

Field	Description
<b>Keep</b>	In this field, you can mark time sheet lines as "permanent." Lines marked in this way will be copied automatically from the previous period at the creation of time sheets. New lines created will inherit this status, which means that they will automatically be copied to all new time sheets until you remove the mark from this field on the lines in question.
<b>Favorite</b>	In this field you can select a favorite. Note: Choosing a favorite may change other details selected in this window, such as the job, task, or activity.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job related to the hours on the current line.

Field	Description
<b>Job No.</b>	This field shows the number of the job related to the hours on this line.
<b>Job Name</b>	This field shows the name of the job related to the hours on this line.
<b>Task Description</b>	This field shows a description of the task.
<b>Description</b>	In this field the user may enter an entry description of the work for which hours are registered. The description is copied to a job entry upon posting. Notice the default value of the description field is the task description or the activity description.
<b>Mon – Sun</b>	This field shows registered time for each day of the week in hours or days, depending on the Time Unit of the time sheet.
<b>Total</b>	This field shows the total hours worked for the week for the job, task and activity registered on this line.
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Details</b>	This field contains a status message for the current line. The field can have a number of messages indicating that the line is not yet complete, for example, if the job or task is missing on the line the status will indicate this with a message Job? or Task? respectively.
<b>Billing Price Total, Base</b>	This field shows the total billing price of the time sheet line in the currency of the company of the job.
<b>Missed Meal, Monday-Sunday</b>	This field specifies whether the employee utilized their daily break for the day. If the field value is <b>Yes</b> , the employee skipped their break.

## Actions

This section shows the actions available in the Weekly SpeedSheet workspace.

### Weekly SpeedSheet Tab

Field	Description
<b>Submit</b>	The functionality of this action is similar to that of the action “Submit Time Sheet” in the window Time Sheets.
<b>Reopen</b>	The functionality of this action is similar to that of the action “Reopen Time Sheet” in the window Time Sheets.
<b>Create favorite</b>	Select this action to create a new favorite with the specified combination of job, task, and activity.

Field	Description
<b>Create Time Sheet</b>	<p>Select a week in the calendar, then click this action to create a time sheet for that week.</p> <p>This action is enabled/visible if the following conditions apply:</p> <ul style="list-style-type: none"> <li>▪ The <b>Create Time Sheets Automatically</b> system parameter is disabled.</li> <li>▪ A time sheet is not yet created for the selected week.</li> </ul>

#### Time Sheet Lines Sub-Tab

Field	Description
<b>Add Time Sheet Line</b>	<p>Use this action to create a time sheet line. If the <b>Automatically Create Time Sheet Lines from Approved Absence</b> system parameter is enabled, a time sheet line appears upon absence approval.</p>

## SpeedSheet Workspace

Use this workspace to record how you spend the hours of your working day.

You can enter one time sheet per day. The SpeedSheet workspace provides an easy way to enter time quickly as you work, so that you capture information while it is still fresh in your mind.

Access to this workspace requires add-on number 122.

If you select the **Allow Incomplete Time Registrations** system parameter, you do not need to enter all of the details about your work at the time when you create a job entry. Instead, you can enter a brief note about what you were doing and for how long, and leave the details for later.

The SpeedSheet relies on the use of favorites to automate entry. If you often work on the same job, task, and activity, you can create a favorite for that combination. Project managers and department managers can share favorites with their teams.

The main factor that makes entering time seem inconvenient is that it can be difficult to remember entry details such as job number, activity number, and task. These details are necessary for your company for accounting, invoicing, and reporting purposes, and you must enter them even though it seems inconvenient. The SpeedSheet solves this conflict with a combination of two features:

- You do not need to enter all of the details about a job entry at the time of entry. In fact, the SpeedSheet does not, at first glance, permit you to enter any details. You can just enter a brief note about what you were doing and for how long, and leave the details for later.
- The use of favorites automates the input of entry details. If you find that you often enter information for the same job, task, and activity, you can create a shortcut (favorite) to quickly insert that registration combination. Project managers or your department manager can even share relevant favorites with you, so you do not need to ask them for correct entry combinations

A built-in calendar makes it easy to navigate to any date.

Note that the SpeedSheet is a front end to the regular Time Sheet workspace. Each line that you enter in the SpeedSheet is a daily time sheet line that you can view and edit in the Time Sheets

or Daily Time Sheets workspace. When you navigate to a date by clicking in the calendar, Maconomy creates the underlying daily time sheet.

## SpeedSheet Tab

This section includes the fields and descriptions for the SpeedSheet tab.

Field	Description
<b>Calendar</b>	<p>The SpeedSheet opens on the current day. The name and year of the currently displayed month is shown at the top of the calendar. Using the small navigation buttons, you can browse to the previous month or next month, or go to today (the middle button). You can move to a day by clicking it, or you can use the arrow keys to move between days.</p> <p>The currently selected day—that is, the day for which time registrations in the Time Sheet Lines sub-tab are shown—is marked in the calendar in bold and with red brackets. See the Legend Island below for color-code descriptions.</p>
<b>Employee</b>	In this field, you can enter an employee name and number.
<b>Week No.</b>	This field shows the week number that corresponds to the selected period.
<b>Time Unit</b>	This field shows the unit for time on the time sheet. The time unit is derived from the employee revision that contains the starting date of the time sheet. In the case of split-week time sheets, the two parts may have different time unit if the employee has been set up to change time unit between the period start dates of the two time sheet parts. In the case of monthly time reporting, where Maconomy creates time sheets for the entire month when you create a time sheet, each time sheet is created using the time unit that was set up for the employee.

## Legend Island

The days in the calendar are color-coded. The colors have the following meaning:

Field	Description
<b>Red</b>	Your time sheet is due.
<b>Green</b>	Your time sheet has been submitted.
<b>Light Blue</b>	Your time sheet has been submitted and approved.
<b>Dark Blue</b>	Your time sheet has been fully approved.
<b>Yellow</b>	Your time sheet contains one or more lines that have been rejected.

Field	Description
<b>None</b>	Your time sheet is not due, or you are not expected to submit a time sheet for that day according to your week calendar.

#### Time Information Island

Field	Description
<b>Total</b>	This field shows the total time in hours or days, depending on the Time Unit.
<b>Fixed</b>	This field shows the fixed time in hours or days, depending on the Time Unit. If the number of fixed hours is changed for the employee, it affects the calculation of overtime.
<b>Balance</b>	The balance between fixed expected working hours and the total hours registered for the day.
<b>Check-in Balance</b>	This field shows the employee's total remaining balance for the day.
<b>Check-in Time</b>	This field shows the employee's total rounded check-in time registered for the day.
<b>Invoiceable</b>	This field shows the invoiceable hours for a given day.
<b>Invoiceable %</b>	This field shows the invoiceable percentage for a given day.

#### Time Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Time Sheet Lines sub-tab.

Field	Description
<b>Keep</b>	In this field, you can mark time sheet lines as "permanent." Lines marked in this way will be copied automatically from the previous period at the creation of time sheets. New lines created will inherit this status, which means that they will automatically be copied to all new time sheets until you remove the mark from this field on the lines in question.
<b>Favorite</b>	The functionality of this field is similar to that of the field "Favorite" in the main tab.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job related to the hours on the current line.
<b>Job Name</b>	This field shows the name of the job related to the hours on this line.
<b>Task Description</b>	This field shows a description of the task.

Field	Description
<b>Description</b>	The functionality of this field is similar to that of the field “Description” in the main tab.
<b>Time</b>	This field shows registered time in hours or days depending, on the Time Unit of the time sheet.
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Details</b>	<p>This field contains a status message for the current line in the SpeedSheet. Note that when you point to the field using the mouse, Maconomy will display a more detailed message about the status of the current line, along with information about the current registration.</p> <p>This field can have the following messages:</p> <ul style="list-style-type: none"> <li>OK — The registration is complete, and Maconomy does not need to know any more about the registration. The line will not prevent you from submitting the SpeedSheet for the current day.</li> <li>Job? — No job was specified for the current line. Before submitting the Speed-Sheet for the current day, you need to specify a job.</li> <li>Task? — No task was specified for the current line, and tasks are required for the job in question. Before submitting the SpeedSheet for the current day, you need to specify a task.</li> <li>Activity? — No activity was specified for the current line. Before submitting the SpeedSheet for the current day, you need to specify an activity.</li> <li>Est. time to compl.? — The job requires estimates for time to completion, and you did not enter any. Before submitting the SpeedSheet for the current day, you need to specify an estimate or mark the line as completed.</li> </ul> <p>Note that if several things are missing from the registration, for example both Job and Activity, Maconomy will only show one message (“Job?”). If you fix the error by specifying a job, but not an activity, the status will change to “Activity?”.</p> <p>The field is also a link. When you follow the link, the window SpeedSheet Details is opened, showing the different fields in the daily time sheet line underlying the current SpeedSheet line. You can then fix what is missing from the line, close the window, and observe that the status message in this field changes to “OK.” For more information, see the description of the window SpeedSheet Details.</p> <p>If you find yourself often fixing errors in your SpeedSheet, you should consider creating a favorite for the registration, and ask your project manager or superior to distribute commonly used registration combinations to you in the form of favorites. For more information, see the description of the windows Favorites and Job Employees.</p>

Field	Description
<b>Billing Price Total, Base</b>	This field shows the total billing price of the time sheet line in the currency of the company of the job.

## Actions

This section shows the actions available in the SpeedSheet workspace.

### Top Tab

Field	Description
<b>Submit</b>	When you select this action, the time sheet for the current day or week is submitted. For more information, see the description of the action “Submit Time Sheet” in the window Time Sheets.  Note that you cannot submit your time sheet until all registrations are complete, that is, the field “Details” contains the text “OK.”
<b>Reopen</b>	When you select this action, the submitted time sheet for the current day or week is reopened. For more information, see the description of the action “Reopen Time Sheet” in the window Time Sheets.
<b>Create favorite</b>	Select this action to create a new favorite with the specified combination of job, task, and activity.
<b>Create Time Sheet</b>	Select a date in the calendar, then click this action to create a time sheet for that date.  This action is enabled/visible if the one of the following sets of conditions apply: <ul style="list-style-type: none"> <li>▪ The <b>Create Time Sheets Automatically</b> system parameter is disabled.</li> <li>▪ A time sheet is not yet created for the selected date.</li> </ul> Or: <ul style="list-style-type: none"> <li>▪ The <b>Create Time Sheets Automatically</b> system parameter is disabled.</li> <li>▪ The <b>Create Daily Time Sheets for Non-working Days</b> system parameter is disabled.</li> <li>▪ The selected date falls on a non-working day.</li> <li>▪ A time sheet is not yet created for the selected date.</li> </ul>

## Daily Check-in Workspace

Use this workspace to record check-in entries for your working day.

Copy to come.

## Daily Check-in Header Tab

This section includes the fields and descriptions for the Daily Check-in Header tab.

### Check-in Island

Field	Description
<b>Check-in Duration</b>	This field shows the total number of hours the employee has checked in for the current day.
<b>Check-in Balance</b>	This field shows the remaining check-in balance for the current day.

### General Island

Field	Description
<b>Employee Number</b>	This field shows the number of the employee related to the check-in entries.
<b>Date</b>	This field shows the date on which the check-in entries are registered.
<b>Check-in Enabled</b>	This field shows whether multiple check-ins are enabled for the current date.
<b>Missed Meal</b>	This field specifies whether the employee utilized their daily break for the day. If the field value is <b>Yes</b> , the employee skipped their break.

### Extra Fields Island

Field	Description
<b>Remark 1</b>	Enter a description for the check-in entries in this field.
<b>Boolean 1</b>	Use this field to create a customized check box for your daily check-in header.

## Daily Check-in Lines Sub-Tab

This section includes the fields and descriptions for the Daily Check-in Lines sub-tab.

Field	Description
<b>Checked In</b>	Enter a check-in time. If you enter a very precise time that includes the seconds, such as 11:15:25, Maconomy automatically removes the seconds and registers the check-in time as 11:15:00.

Field	Description
<b>Checked Out</b>	Enter a check-out time. If you enter a very precise time that includes the seconds, such as 11:15:25, Maconomy automatically removes the seconds and registers the check-out time as 11:15:00.
<b>Hours Checked in</b>	This field shows the duration of the entry in hours.
<b>Minutes Checked in</b>	This field shows the duration of the entry in minutes.
<b>Date</b>	This field shows the date on which the check-in entries are registered.
<b>Employee Number</b>	This field shows the employee number of the user who registered the check-in entry.

## Actions

This section shows the actions available in the Daily Check-in workspace.

### Sub-Tab Actions

Field	Description
<b>Add Daily Check-in Entry</b>	Use this action to add a new entry.
<b>Delete Daily Check-in Entry</b>	Use this action to delete the current line.

## Weekly Check-in Workspace

Use this workspace to record check-in entries for your work week.

Copy to come.

### Weekly Check-in Tab

This section includes the fields and descriptions for the Weekly Check-in tab.

### General Island

Field	Description
<b>Check-in Time for Period</b>	This field shows the employee's total rounded check-in time for the current period.
<b>Check-in Balance for Period</b>	This field shows the employee's total remaining check-in balance for the current period.

**Time Information Island**

Field	Description
<b>Date, Monday-Sunday</b>	This field shows the corresponding date for each day.
<b>Check-in Enabled, Monday-Sunday</b>	This field specifies whether multiple check-in entries are enabled for the day.
<b>Check-in Enabled, Week</b>	This field specifies whether multiple check-in entries are enabled for the week.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Balance, Week</b>	This field shows the total check-in balance for the week.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for the day.
<b>Check-in Time, Week</b>	This field shows the total check-in time registered for the week.
<b>Missed Meal, Monday-Sunday</b>	This field specifies whether the employee utilized their daily break for the day. If the field value is <b>Yes</b> , the employee skipped their break.

## Expense Sheets Workspace

Use this workspace to record expenses that employees incur that are related to jobs that you maintain in the Job Cost module, and associate these expenses with jobs, tasks and activities.

Use this workspace to record all expenses other than mileage, which you enter in the Mileage Sheets workspace.

You can create an expense sheet for yourself or you can create an expense sheet for another employee if you are the employee's secretary or supervisor. Some users have access to create expense sheets for all employees.

You enter the expenses for jobs and amount activities created in Maconomy.

The Expense Sheets tab contains information about the employee as well as remarks about the expense sheet. In the Expense Sheet Lines sub-tab, you enter the expenses, split by jobs, tasks, and activities.

When you press the Return key to create a new line in the Expense Sheet Lines sub-tab, the job, activity, and task name from the previous line are repeated on the new line, to help with data entry. To disable this functionality, select the **Do Not Inherit Job Dim. From Previous Expense Sheet Line** system parameter.

When you enter data on the Expense Sheet Lines sub-tab, Maconomy automatically calculates the unit price of the activity that you enter each time that you press the Return key. Maconomy

does not repeat the calculation if you change information in existing lines unless you set the **Update prices upon dimension change** parameter in the System Parameters workspace. If you set this parameter, Maconomy recalculates values if you change dimensions or entry dates.

When you complete an expense sheet, use the **Submit Expense Sheet** action to submit it

### Access to Expense Sheets

You can only see or create an expense sheet for an employee if one of the following requirements is met:

- You are the employee for whom the expense sheet is being created.
- You are either the employee's supervisor, secretary, or mentor.
- You are the designated approver, substitute approver, or super approver, depending on the approval hierarchies set up on the expense sheet. Access through approval hierarchies is granted by specifying an employee in the Approval Hierarchies single dialog workspace.

If you selected employee control for the current job in the Jobs workspace, you can only make entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list. For more information, see the description of the **Employee Control** field in the Jobs workspace.

However, employees who have been specified in the resource planning of a job in the Detailed Planning workspace can always perform entries on this job, regardless of the setup of employee control on the job. For more information about controlling employee entries, see the description of the Jobs workspace.

Note that if you specified a date in the **Work Completed On** field in the Jobs workspace, you cannot enter expense sheet entries for that job after the specified date unless you are the job's project manager. See the description of the **Work Completed On** field in the Jobs workspace for more information about the functionality of this field.

If you use activities, specifications, and tasks in connection with expense sheets, Maconomy can reject combinations of these if legal combinations have been specified in the Job Allocation Combinations workspace.

### Approvals

When a user submits an expense sheet, Maconomy checks whether the expense sheet requires approval. The criteria for whether an expense sheet requires approval, and who needs to perform the approval can be, for example, the amount of the expense or the job number. You cannot transfer the expense sheet or post the amount until all of the required people have approved the expense sheet.

A submitted expense sheet must be approved according to the approval principle selected in the Jobs workspace. Depending on the selected principle, the lines in an expense sheet must be approved either by the employee's supervisor or by the project manager of the job, by both, or by neither of them. You can also set up an approval hierarchy.

If you have access to change all expense sheets (set in the Actions workspace in the Set-Up module), you can also approve all expense sheets.

If the approval principle requires that the employee's supervisor must approve the expense sheet, he or she can do this using the **Approve Expense Sheet** action in this workspace.

Any line that pertains to a job for which the employee is the project manager automatically receives project manager approval if project manager approval is optional or required, and the **Automatically Approve Project Manager's Expense Lines** job parameter is set to **Yes**.

In addition, expense sheet approval can be performed at several levels, coordinated by an approval hierarchy. Create and maintain approval hierarchies in the Approval Hierarchies workspace in the Set-Up module. You assign an approval hierarchy to a selection criterion specification of expense sheets in the Approval Hierarchy Selection workspace. If you use an approval hierarchy, you cannot also use the **Automatically Approve Project Manager's Expense Lines** feature.

## Posting

When you transfer an expense sheet for posting, Maconomy creates an expense sheet journal that contains the information entered in the Expense Sheets workspace. The approval principle for the job determines when an expense sheet is transferred for posting.

If you select the **Automatic posting of expense sheets** system parameter, the expense sheet journal is posted automatically. If you do not select this system parameter, you must post the expense sheet journal in the Posting workspace in the G/L module.

After you post the expense sheet journal, employees can be reimbursed for expenses. You can reimburse an employee through the Maconomy Accounts Payable module, if you assigned the employee to a vendor in the main tab of the Employees workspace in the Set-Up module, and if you selected the **Settle via Vendor** field in the Activities workspace for one or more of the activities for which the employee has entered expenses.

Use the **Reopen Expense Sheet** action to reopen an expense sheet after it is transferred. You can change quantities and create lines, but you cannot delete lines that you already transferred for posting, nor can you change posting dates, job and activity numbers, tasks, or other dimensions on the lines. You cannot change a line that is already transferred and that has an entry date that is outside of the current posting period.

## Expense Sheets Tab

This section includes the fields and descriptions for the Expense Sheets tab.

### Expense Sheet Island

Field	Description
<b>Expense Sheet</b>	This field shows the name and number of the expense sheet. The number is retrieved from the system number series "Expense Sheets" from the employee's company. The value in the field cannot be changed.

### Employee Information Island

Field	Description
<b>Employee</b>	In this field, you can enter the name and number of the employee assigned to the current expense sheet. Maconomy automatically suggests the number of the current employee.

**Status Island**

Field	Description
<b>Created By</b>	This field shows the name of the user who created the expense sheet. It cannot be changed.
<b>Date</b>	This is the date the expense sheet was created. It cannot be changed.
<b>Submitted</b>	This field shows whether the expense sheet has been submitted. The field will be marked automatically if you select the action "Submit Expense Sheet." If changes are made in an expense sheet that is not transferred or approved, the mark will be removed from this field again.
<b>Submitted by</b>	This field shows the name of the user who submitted the current expense sheet. The contents of this field cannot be changed.
<b>Date</b>	This field shows the date when the expense sheet was submitted. The date cannot be changed here.
<b>Transferred</b>	This field shows whether the expense sheet has been transferred to an expense sheet journal. The field is automatically completed when all lines in the expense sheet have been transferred. The criteria determining when an expense sheet is transferred for posting depends on the approval principle of each job. For further information about approval principles, please see the description of the island Approval in the window Jobs.
<b>Transferred by</b>	This field shows the name of the user who transferred the last line of the current expense sheet. An expense sheet line does not necessarily have to be approved to be transferred. Please see the description of the field "Approved By" below and the description of the island Approval in the window Jobs.
<b>Date</b>	This field shows the date when the current expense sheet was transferred.
<b>Approved</b>	This field shows whether the expense sheet is fully approved. If you use approval hierarchies, this field is marked when the last approver has approved the expense sheet. Otherwise, the field is automatically marked when the supervisor approves the expense sheet, and the mark is removed if the sheet is reopened.
<b>Approved by</b>	This field shows the name of the user whose approval resulted in the expense sheet being fully approved as described under the field "Approved." If approval is not required, the name of the user who submitted the expense sheet is displayed.
<b>Date</b>	This field shows the date when the current expense sheet was approved.
<b>Settlement Status</b>	This field shows whether or not the related vendor entries have been settled (paid).

Field	Description
<b>Reopened</b>	This field shows whether the current expense sheet was reopened. The field is automatically completed when the expense sheet is reopened.

**Job Island**

Field	Description
<b>Job</b>	<p>In this field, you can enter the name and number of a job. When you create a line in the sub-tab, the job number will be suggested in the field "Job No." in the sub-tab.</p> <p>If the system parameter "Allow expense sheets for multiple jobs" is not marked, you can only enter the job number specified in this field in the sub-tab. In this way, it is ensured that only expenses for the specified job are approved, when the expense sheet is approved. If you do not enter a job number in this field, Maconomy automatically fills in this field with the job number specified on the first line in the sub-tab. If the system parameter is marked, you can enter any job number in the sub-tab, as the number in this field is then only a suggestion.</p> <p>The effects of changing the value in this field after creating lines in the sub-tab depend on whether the system parameter "Allow expense sheets for multiple jobs" has been marked. If this parameter is not marked, changing the value in this field causes the job number on all lines to be changed accordingly. If the parameter is marked, the job number is only updated accordingly on lines where the job number corresponds to the job number present in this field before the change was made.</p>

**Copy Expense Sheet Island**

Field	Description
<b>Expense Sheet No.</b>	In this field, you can enter the number of an existing expense sheet that you want to copy to the current expense sheet. See the description of the action "Copy Expense Sheet" for further information on this action.

**Mentor Island**

Field	Description
<b>Mentor</b>	This field shows the name and number of any mentor assigned to the employee, for example, to assist in the training of the employee. The status of mentor grants access to seeing (but not changing) the expense sheets of the employee in question. The information is transferred from the window Employees in the Set-Up module and cannot be changed here.

**Note Island**

Field	Description
<b>Note</b>	In this field, you can specify the name and number of a note relating to the current expense sheet, for further specification of the nature of the expenses of the current expense sheet.

Field	Description
	Notes are created in the window Job Descriptions in this module or in the window Notes in the Set-Up module.

**Approval Island**

Field	Description
<b>Remarks</b>	In this field, you can enter a remark to the current approval. However, a remark can only be entered by the employee/employees who are given access to approve the current expense sheet on the current level. The remark is assigned to the current approval level. If the current expense sheet is reopened, this field is automatically cleared by Maconomy. However, the remark can still be seen on the approval line in question in the Approvals window sub-tab.

**Company Island**

Field	Description
<b>Company</b>	This field shows the name and number of the employee's company.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

**Total Island**

Field	Description
<b>Tax, Base</b>	This field shows the total tax amount in base currency for the lines in the sub-tab.
<b>Amount, Base</b>	This field shows the total amount including tax for the lines in the sub-tab.

**Exchange Rate Island**

Field	Description
<b>Currency</b>	In this field, you can choose a currency. By also specifying an exchange rate for the selected currency in the field "Exchange Rate," the exchange rate specified will be used as default on expense sheet lines in the sub-tab having the same currency as the one specified in this island. Hence, the exchange rate specified in this island will override the exchange rate usually used by Maconomy. The functionality is useful in situations in which a user needs to be able to override the existing exchange rate because the exchange rate used on, for example, a credit card transaction is different from the one specified in the exchange rate table.

Field	Description
<b>Exchange Rate</b>	<p>In this field, you can enter an exchange rate for the currency specified in the field "Currency." If you do not enter an exchange rate, Maconomy suggests the exchange rate specified for the currency in question in the window Exchange Rates.</p> <p>The value suggested can be changed manually. See the description of the field "Currency" for further information of the functionality of this field.</p>

### Transaction Island

Field	Description
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.

### Period Island

Field	Description
<b>Date</b>	In these fields, you can enter the period for which the expense sheet is assigned. The fields are for information only.

### Supervisor Island

Field	Description
<b>Supervisor</b>	This field displays the name and number of the supervisor of the employee associated with the expense sheet. The information is transferred from the window Employees in the Set-Up module and cannot be changed here.

### Secretary Island

Field	Description
<b>Secretary</b>	This field displays the name and number of the secretary of the employee associated with the expense sheet. The information is transferred from the window Employees in the Set-Up module and cannot be changed here.

### Document Archive Island

Field	Description
<b>Document Archive</b>	In this field, you can assign an existing document archive to the expense sheet. Notice that the "Attach Document" action will automatically add a new document archive if no archive is already assigned.

### Remarks Island

In these three fields, you can enter general remarks to the expense sheet. The remarks are shown on printouts of expense sheets when the layout "Standard" is used.

## Expense Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Expense Sheet Lines sub-tab.

Field	Description
<b>Entry Date</b>	In this field, you enter an entry date. Maconomy suggests the current date. You can only enter dates within the open posting period for job entries applying to the company responsible for the job specified on the current line. For further information, please see the description of the island Job Cost in the window Company Information in the G/L module.
<b>Favorite</b>	In this field you can select a favorite. If you are using the Maconomy client for Java™, the field is a drop-down list showing the favorites available in the current context. The favorites derive from the window Favorites. You can create and edit your own personal favorites, or other people, for instance a project manager, your department manager, or the finance department, can create favorites and distribute them to a selection of employees from the window Job Employees.
<b>Job No.</b>	In this field, you enter the number of the job to which the current expense pertains. If the system parameter "Allow expense sheets for multiple jobs" is not marked, you can only enter the job number specified in the main tab of this window. In this way, it is ensured that only expenses for the specified job are approved when the expense sheet is approved. If the system parameter is marked, you can enter any job number in this field.  If you change the job number in the main tab, the effects depend on whether the system parameter "Allow expense sheets for multiple jobs" has been marked. If this parameter is not marked, changing the value in the main tab causes the job number on all lines to be changed accordingly. If the parameter is marked, the job number is only updated accordingly on lines where the job number corresponds to the job number present in the main tab before the change was made.
<b>Act. No.</b>	In this field, you enter the number of the amount activity on which the expense should be entered. It is only possible to find activities of the type "Amount" if you use the search functions in the Find menu.
<b>Transaction Type</b>	This field shows the transaction type of the entry. The field is for reference only.
<b>Description</b>	In this field, you can enter or change a description of the current entry. When you create a line, Maconomy will suggest a text in this field, depending on how the current activity is set up. The activity can be set up to derive the description of the activity or the description of the currently selected task, or to leave the field blank. For more information, please see the description of the window Activities.  When the expense sheet is posted, the description in this field is used as entry text for the current expense sheet line, along with the word "Outlay"

Field	Description
	and the currency entered on the line. If you do not enter a description, the entry text will only be "Outlay" and the currency.
<b>Quantity</b>	<p>In this field, you can specify the number of units of the current activity for which an expense is incurred.</p> <p>However, if a value has been entered in the field "Expense Sheets" in the island Registration Limits in the window Activities for the activity for which you wish to register amounts, you cannot enter a larger quantity for the activity than specified in that field. If there are several expense sheet lines for a given employee with the activity in question, the sum of the registrations on these lines cannot exceed the daily registration limit specified in the above-mentioned field for the activity in question.</p> <p>If the field "Quantity 1 from Quantity on Expense Sheet" and/or the field "Quantity 2 from Quantity on Expense Sheet" is marked in the window Activities for the current activity, the quantity entered here is automatically transferred to the field "Quantity 1" and/or "Quantity 2" on the current line. In this way, the quantity can be transferred to the General Ledger. Please note that if a value has already been entered in the field "Quantity 1" or "Quantity 2," the value in the field "Quantity" is not transferred. For more information, please see the description of the window Activities.</p>
<b>Unit Price, Currency</b>	<p>In this field, you enter the expense amount in the currency selected in the field "Currency." The amount should be entered including tax, if any. Maconomy calculates the total amount based on information from job price lists and activity information tabs. The amount is shown in the field "Amount, Currency." For a more detailed description of price calculation, please see "Appendix A: Price Calculation in the Job Cost module." You can change the value suggested by Maconomy. Even though fixed exchange rate information is applied to a job on which registrations are made, Maconomy does not convert on the basis of fixed exchange rate information in this field, as the registration represents a balance between an employee and his or her company. The real conversion to the job currency will not take place until the journal that the expense sheet results in is posted.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance the activity or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change."</p>
<b>Amount, Currency</b>	This field shows the total expense amount for the current activity in the currency chosen in the field "Currency." The amount is calculated as the value in the field "Quantity" multiplied by the value in the field "Unit Price, Currency."
<b>Tax Code (Tax Code 1-3)</b>	In this pop-up field, you select the tax code to be used. You cannot change the tax code on a reopened expense sheet line if the line has been transferred for posting.

Field	Description
	<p>You can add up to three different tax codes if necessary. To enable multiple tax codes, the system parameters “Show Three Tax Levels” and/or “Show Two Tax Levels” must be marked in the System Parameters window. When multiple tax codes are enabled, the “Tax Code” field will be replaced by the following fields: “Tax Code 1,” “Tax Code 2,” and, if enabled, “Tax Code 3.” For further information on multiple tax codes, please see the description in “Tax Codes.”</p>
<b>Tax, Currency (Tax Total, Currency and Tax 1-3, Currency)</b>	<p>This field shows the tax amount in the currency selected in the field “Currency.” The tax can be calculated in two ways, depending on whether the system parameter “Tax from extended price in expense sheets” is marked. For further information about the functionality of this system parameter, see the description of the window System Parameters in the Set-Up module.</p> <p>The value in this field can also be changed manually. However, changing the tax amount on an expense sheet line will not give rise to a change in the fields “Amount, Currency/Base” and “Unit Price, Currency/Base,” as the amount specified on the line is the outlay/expense that the employee has had on a certain job, and this amount is thus not dependent on a certain tax amount.</p> <p>Changing the tax amount thus only affects the costs registered on the job in question.</p> <p>Note that you cannot enter a tax amount exceeding the total amount on the line and that it is not possible to change the tax amount on an expense sheet which has already been posted.</p> <p>If multiple tax codes are enabled, the “Tax, Currency” field will be replaced by the following fields: “Tax Total, Currency,” “Tax 1, Currency,” “Tax 2, Currency,” and, if enabled, “Tax 3, Currency.” The “Tax Total, Currency” field calculates the sum of the other individual tax fields. For further information on multiple tax codes, please see the description in “Tax Codes.”</p>
<b>Currency</b>	<p>In this field, you can select the currency of the expense. Maconomy suggests the enterprise currency. You cannot change the currency on a reopened expense sheet line if the line has been transferred for posting.</p>
<b>Exchange Rate</b>	<p>This field shows the exchange rate between the currency on the line and the base currency of the employee assigned to the expense sheet. The exchange rate displayed in the field can either be the exchange rate specified in the “Exchange Rate” field in the main tab or a default exchange rate transferred from the relevant exchange rate table. The value displayed can be changed manually, if the currency used on the line is different from the employee’s base currency. If the currency is similar to the employee’s base currency, the exchange rate in this field must be 100 and thus cannot be changed manually. The system issues a warning if the exchange rate entered differs more than 10% from the relevant exchange rate in the exchange rate table.</p>
<b>Task</b>	<p>In this field, you can enter the task assigned to the specified expense.</p>

Field	Description
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you do not enter a value manually, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard value is transferred from the window System Parameters in the Set-Up module. See the chapter "Introduction to the G/L Module" and the window Dimension Derivation for a further description of dimension derivation.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Approval, Project Manager</b>	<p>In this field, Maconomy shows the status which the project manager of the job on the current line has assigned to the line in the window Approve Expense Sheet Lines. When the expense sheet has been submitted, the project manager can use the window Approve Expense Sheet Lines to approve, reject, or release each line if the approval principle of the job indicates that approval by the project manager is mandatory or optional. However, if the line pertains to a job for which the employee in question is the project manager, the line automatically receives project manager approval if the job parameter "Automatically approve Project Manager's Expense Lines" has been set to "Yes" for the job in question. For further information, please see the description of the window Approve Expense Sheet Lines.</p> <p>If the status of the line is "Approved" or "Released," and the line is changed, the status changes to blank. If the line has the status "Rejected," and the line is changed, the status of rejected is maintained.</p>
<b>Approved by</b>	This field shows the name of the project manager who assigned the current approval status (shown in the field "Approval, Project Manager") to the line.
<b>Approval Date</b>	This field shows the date on which the project manager assigned the current approval status (shown in the field "Approval, Project Manager") to the line.
<b>Comment</b>	This field shows any comments entered by the project manager in connection with the approval, release or rejection of the line.
<b>Job Name</b>	This field shows the name of the job assigned to the current expense.
<b>Activity Name</b>	This field displays the text defined for the current activity.

Field	Description
<b>Task Description</b>	This field shows the description defined for the current task, if such has been entered.
<b>Task Path</b>	This field shows any task path of the task (see the description of hierarchical tables in the section “Task Path” in the chapter “Getting Started with the Maconomy Java™ Client”).
<b>Unit Price, Base</b>	<p>In this field, you enter the expense amount for one unit of the current activity in the base currency of the company responsible for the job. The amount should be entered including tax, if any. Maconomy calculates the total price based on information from job price lists or activity information tabs. For a more detailed description of price calculation, please see “Appendix A: Price Calculation in the Job Cost module.” You can change the value suggested by Maconomy.</p> <p>If the system parameter “Update prices upon dimension change” has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the activity or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter “Update prices upon dimension change.”</p>
<b>Amount, Base</b>	This field shows the expense amount in base currency. Maconomy calculates the amount by multiplying the value in the field “Quantity” with the value in the field “Unit Price, Base,” and uses the current exchange rate table for purchases for the currency conversion.
<b>Tax, Base (Tax Total, Base and Tax 1-3, Base)</b>	<p>This field shows any tax on the expense amount in base currency. Maconomy uses the current purchase currency table for currency conversion. If the tax amount is changed manually in the field “Tax, Currency,” the value in this field is updated accordingly.</p> <p>If multiple tax codes are enabled, the “Tax, Base” field will be replaced by the following fields:</p> <ul style="list-style-type: none"> <li>■ Tax Total, Base</li> <li>■ Tax 1, Base</li> <li>■ Tax 2, Base</li> <li>■ Tax 3, Base (if enabled)</li> </ul> <p>The “Total Tax, Base” field calculates the sum of the other individual tax fields. For further information on multiple tax codes, please see the description in “Tax Codes.”</p>
<b>Reference</b>	In this field, you can enter a text as reference to the expense, for example, a transaction number.
<b>Start Date</b>	In this field, you can specify the date at which an expense began. It can, for example, be expenses in connection with a hotel stay.

Field	Description
<b>Started</b>	In this field, you can specify the time on which an expense began.
<b>Closing Date</b>	In this field, you can specify the date on which an expense was closed.
<b>Finished</b>	In this field, you can specify the time on which an expense ended.
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Expense Justification Help Text</b>	This field shows the Expense Justification Help Text from the activity. The information is used as guidance for the user to complete the Expense Justification field.
<b>Expense Justification</b>	In this field, you can enter a justification for the expense.
<b>Remarks 1-3</b>	In these fields, you can write remarks connected to the current expense sheet line.
<b>Quantity 1</b>	In this field, you can enter a quantity used on the current activity, for instance, the number of miles driven for a mileage report. The quantity is transferred to the expense sheet journal, and the information can be used in reporting and statistics. The quantity entered in the field "Quantity" can be transferred to this field automatically. For more information, please see the description of the field "Quantity" above.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field "Quantity 1" above.
<b>Document Name</b>	In this field, you can enter the name of one of the documents in the document archive specified in the main tab. This way, if you have scanned the vouchers related to each expense, and assigned them to a document archive, you can specify which of the documents contains the voucher relevant to each line. By selecting this line in the table and then selecting the action "View Document," the document specified in this field is displayed in a third-party program.
<b>Customer No.</b>	This field shows the number of the bill-to customer assigned to the job on the current line.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job on the current line.
<b>Level 1-3 Name</b>	These fields show the customers in the hierarchy levels above the customer on the line. These fields are only available if customer levels are set up using the designated System Parameters.
<b>Language</b>	This field shows the language specified for the customer assigned to the job on the current line.

Field	Description
<b>Details</b>	This field contains a status message for the current line. Additionally, a link is available on the status text that will open a new window focusing on the line details.
<b>Purchase Order Number</b>	In this field, you can specify a purchase order number. This field is not displayed by default. Only subcontractors logged in as employees can view and edit this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.
<b>Purchase Order Line Number</b>	In this field, you can specify a purchase order line number. This field is not displayed by default. Only subcontractors logged in as employees can view this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.

## Actions

This section shows the actions available in the Expense Sheets workspace.

### Top Tab

Field	Description
<b>Submit Expense Sheet</b>	<p>When you select this action, you submit the expense sheet in the window. If you try to edit a submitted expense sheet, Maconomy issues a warning. If you then continue, the expense sheet is no longer registered as submitted.</p> <p>When the expense sheet is submitted, Maconomy checks all lines on the sheet to see if there are lines that do not require approval according to the approval principle of the job to which each individual line refers. Lines that do not require approval are transferred for posting. Furthermore, any line pertaining to a job for which the employee in question is the project manager automatically receives project manager approval if project manager approval is optional or required, and the job parameter “Automatically approve Project Manager’s Expense Lines” has been set to “Yes” for the job in question.</p> <p>If you use approval hierarchies — that is, if an approval hierarchy has been selected for expense sheets in the window Approval Hierarchies in the Set-Up module — Maconomy will find out who is to approve the expense sheet in question on the basis of the current approval hierarchy. Information on approval hierarchies and the next approver is shown in the fields in the island Approval.</p> <p>If you do not use approval hierarchies, the expense sheet can be approved by the employee’s supervisor. See the description of the windows Approval Hierarchy Selection and Approval Hierarchies in the Set-Up module for further information on creation and use of approval hierarchies.</p>
<b>Release Expense Sheet</b>	This action can only be used if the field “Trans. Non-Appr. Time Sheets” has been marked in the window System Information, and the current user has access to transferring time sheets as specified in the window Actions. The employee specified as the supervisor for the current employee, however, always has the right to release expense sheets for the employee in question if the

Field	Description
	<p>above-mentioned field in the window System Information has been marked. The user naturally needs access to view the expense sheets to be released.</p> <p>When this action is selected, the current expense sheet is transferred to a journal of the type "Expense Sheet Journal" which can be posted in the G/L module. This allows you to invoice the customer before the expense sheet has been approved using the action "Approve Expense Sheet." However, the transfer depends on the approval principle selected for the job in the window Jobs. If both the employee's supervisor and the project manager of a given job need to approve expense sheets, the expense sheet lines concerning the job in question are only transferred if both project manager and supervisor have either released or approved the lines. The project manager releases or approves the individual expense sheet lines in the window Approve Expense Sheet Lines, while the supervisor does it for a whole expense sheet at a time by selecting this action.</p> <p>An expense sheet can only be released if it has been submitted. Any dimension values from the employee, activity, job, or company are copied to the expense sheet journal.</p> <p>When the invoice is posted, Maconomy creates a number of entries which are placed in an expense sheet journal. Once the number of entries in a journal reaches 500, Maconomy automatically creates a journal for the next 500 entries. Maconomy creates one entry per expense sheet line.</p> <p>When posting expense sheet journals, Maconomy checks if the journal in question contains entries where the posting date is outside the open posting period for G/L entries in the companies affected by the expense sheet lines. If the journal contains such entries, the G/L entries created as a result of the posting will be assigned a posting date corresponding to the first date in the open G/L posting period of the company in question. The job entries created are assigned the posting dates specified in this window, as well as a reference date identical to the one used on the G/L entries.</p> <p>If an employee has been working on a job which is to be invoiced by another company (the responsible company) than the one to which the employee is assigned (the executing company), the transfer will result in intercompany entries between the two companies involved. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>When expense sheets have been posted, the expense sheet journals will be settled on the account for expense settlement. The account for expense settlement is specified by means of a dimension combination in the window Posting References. Please note that the dimension combination may include other dimension values that are to be used in this connection.</p> <p>If the employee who filled in the expense sheet has been assigned to a vendor in the window Employees in the Set-Up module, Maconomy checks if any of the expenses were registered on activities for which the window Activities indicates that expenses are to be settled through a vendor. For such expense sheet lines, Maconomy will create entries on the vendor to which the employee is assigned,</p>

Field	Description
	<p>instead of on the account for expense settlement. When posting expense sheets containing more than one line to be settled through a vendor, Maconomy creates only one vendor entry covering all these expense sheet lines, provided that the currency and entry date are the same on the expense sheet lines in question. This means that when posting a vendor-related expense sheet, Maconomy will create one vendor entry per currency and per entry date. The vendor entries created in this process must be approved for payment before reimbursement can take place, unless the system parameter "Automatically approve expense sheets for payment" has been marked, in which case the vendor entries are approved automatically.</p>
<b>Approve Expense Sheet</b>	<p>When this action is selected, the expense sheet shown in the window is approved, and unless the expense sheet has already been transferred, a number of entries in an existing expense sheet journal will automatically be created as described above in the section "Release Expense Sheet." However, the transferal depends on the approval principal as described in the action "Release Expense Sheet" above.</p> <p>Once an expense sheet has been approved, you can only make changes to it by first selecting the action "Reopen Expense Sheet." You can find more information about access and expense sheet journals above in the description of the action "Release Expense Sheet."</p> <p>An expense sheet can only be released if it has been submitted.</p> <p>When an expense sheet is approved, the fields "Transferred" and "Approved" in the island Status will automatically be marked. An expense sheet journal created by using this action contains the same entries as a journal created by using the action "Release Expense Sheet."</p>
<b>Reopen Expense Sheet</b>	<p>This action is used for reopening an approved and transferred expense sheet for changes, if the expense sheet is within the open posting period for job entries. It is possible to edit already reported quantities and to create lines, but approved lines cannot be deleted, and it is also not possible to change entry date, job and activity numbers, dimensions, or tasks on these expense sheet lines.</p> <p>When the expense sheet is reapproved, Maconomy creates a journal with the difference between the previous registration and the new one. If, for instance, you have first approved USD 400 on a given job, activity, and day, and you later change it to USD 600, the new job journal will include an entry of USD 200. Contrarily, if you change the entry to USD 300, the journal will include an entry of USD -100. If the expense sheet is approved without new changes, Maconomy does not create an expense sheet journal.</p> <p>In the window Actions in the Set-Up module, you can specify which users are allowed to reopen expense sheets.</p>
<b>Copy Expense Sheet</b>	<p>This action is used for copying the lines from an already submitted expense sheet to the expense sheet in question. In the island Copy Expense Sheet, you can enter the number of the expense sheet from which lines should be copied. You can only copy expense sheets that you submitted. When copying, job numbers, activity numbers, and dimensions are included on the lines, whereas quantities and amounts are reset to zero.</p>

Field	Description
<b>Attach Document</b>	This action allows you to attach a new document to the expense sheet.
<b>Create Favorite</b>	When you select this action, Maconomy will attempt to create a new favorite from the current combination of job, task, and activity. If this combination does not exist as a favorite already, a new favorite named by a combination of job name, task description, and activity text is created – for instance “XYZ Corp Campaign, Client Meeting, Analysis“. You can inspect and edit the favorite in the windows Favorites or Favorite. The new favorite is immediately available in the Expense Sheets window.
<b>Attach Document to Line</b>	This action allows you to attach a new document to the expense sheet line in the sub-tab.
<b>View Document</b>	When you select this action, any document assigned to the expense sheet in the Document Name field in the sub-tab is displayed in a third party program such as Acrobat Reader or a browser. For example, this could be a scanned voucher or invoice which serves as documentation for the expenses.

## Mileage Sheets Workspace

Use this workspace to record mileage expenses that employees incur that are related to jobs that you maintain in the Job Cost module, and associate these expenses with jobs, tasks and activities.

Record non-mileage employee expenses in the Expense Sheets workspace.

Maconomy automatically fills in many of the fields in this workspace. You only need to enter the entry date, job number, and quantity. Maconomy supplies the unit price automatically, provided that you set up rules in the Mileage Rules Workspace in Job Cost > Set-up.

You can create a mileage sheet for yourself or you can create a mileage sheet for another employee if you are the employee's secretary or supervisor. Some users have access to create mileage sheets for all employees.

Note that if you specified a date in the **Work Completed On** field in the Jobs workspace, you cannot enter mileage sheet entries for that job after the specified date unless you are the job's project manager. See the description of the **Work Completed On** field in the Jobs workspace for more information about the functionality of this field.

If you use activities, specifications, and tasks in connection with mileage sheets, Maconomy can reject combinations of these if legal combinations have been specified in the Job Allocation Combinations workspace.

The Mileage Sheets tab contains information about the employee, as well as remarks about the mileage sheet. In the Mileage Sheet Lines sub-tab, you enter the mileage, split by jobs, tasks and activities.

### Access to Mileage Sheets

You can only see or create a mileage sheet for an employee if one of the following requirements is met:

- You are the employee for whom the mileage sheet is being created.
- You are either the employee's supervisor, secretary, or mentor.
- You are the designated approver, substitute approver, or super approver, depending on the approval hierarchies set up on the mileage sheet. Access through approval hierarchies is granted by specifying an employee in the Approval Hierarchies single dialog workspace.

If you selected employee control for the current job in the Jobs workspace, you can only create entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list. For more information, see the description of the **Employee Control** field in the Jobs workspace.

However, employees who have been specified in the resource planning of a job in the Detailed Planning workspace can always create entries on this job, regardless of the setup of employee control on the job. For more information about controlling employee entries, see the description of the Jobs workspace.

When you press Return to create a line in the Mileage Sheet Lines sub-tab, Maconomy repeats the job, activity, and task name from the previous line on the new line, to help with data entry to help with data entry. To disable this functionality, select the **Do Not Inherit Job Dim. From Previous Expense Sheet Line** system parameter.

### Approval

When a user submits a mileage sheet, Maconomy checks whether the mileage sheet requires approval. The criteria for whether a mileage sheet requires approval, and who needs to perform the approval can be, for example, the amount of the mileage expense or the job number. You cannot transfer the mileage sheet or post the amount until all of the required people have approved the mileage sheet.

A submitted mileage sheet must be approved according to the approval principle selected in the Jobs workspace. Depending on the selected principle, the lines in an mileage sheet must be approved either by the employee's supervisor or by the project manager of the job, by both, or by neither of them. You can also set up an approval hierarchy.

If you have access to change all mileage sheets (set in the Actions workspace in the Set-Up module), you can also approve all mileage sheets.

Any line that pertains to a job for which the employee is the project manager automatically receives project manager approval if project manager approval is optional or required, and the **Automatically Approve Project Manager's Expense Lines** job parameter is set to **Yes**.

In addition, mileage sheet approval can be performed at several levels, coordinated by an approval hierarchy. Create and maintain approval hierarchies in the Approval Hierarchies workspace in the Set-Up module. You assign an approval hierarchy to a selection criterion specification of mileage sheets in the Approval Hierarchy Selection workspace. If you use an approval hierarchy, you cannot also use the **Automatically Approve Project Manager's Expense Lines** feature.

## Posting

When you transfer a mileage sheet for posting, Maconomy creates a mileage sheet journal that contains the information entered in the Mileage Sheets workspace. The approval principle for the job determines when a mileage sheet is transferred for posting.

If you select the **Automatic posting of expense sheets** system parameter, the mileage sheet journal is posted automatically. If you do not select this system parameter, you must post the mileage sheet journal in the Posting workspace in the G/L module.

After you post the mileage sheet journal, employees can be reimbursed for mileage expenses. You can reimburse an employee through the Maconomy Accounts Payable module, if you assigned the employee to a vendor in the main tab of the Employees workspace in the Set-Up module, and if you selected the **Settle via Vendor** field in the Activities workspace for one or more of the activities for which the employee has entered mileage.

Use the **Reopen Mileage Sheet** action to reopen a mileage sheet after it is transferred. You can change the number of miles and create lines, but you cannot delete lines that you already transferred for posting, nor can you change posting dates, job and activity numbers, tasks, or other dimensions on the lines. You cannot change a line that is already transferred and that has an entry date that is outside of the current posting period.

## Mileage Sheets Tab

This section includes the fields and descriptions for the Mileage Sheets tab.

### Mileage Sheet Island

Field	Description
<b>Mileage Sheet No.</b>	This field shows the number of the mileage sheet. The number is retrieved from the system number series "Expense Sheets" from the employee's company. The value in the field cannot be changed.
<b>Description</b>	In this field, you can enter a description of the current mileage sheet.

### Employee Information Island

Field	Description
<b>Employee</b>	In this field, you can enter the name and number of the employee assigned to the current mileage sheet. Maconomy automatically suggests the number of the current employee.

### Status Island

Field	Description
<b>Created By</b>	This field shows the name of the user who created the mileage sheet. It cannot be changed.
<b>Date</b>	This is the date the mileage sheet was created. It cannot be changed.

Field	Description
<b>Submitted</b>	This field shows whether the mileage sheet has been submitted. This field will be marked automatically if you select the action "Submit Mileage Sheet." If changes are made in a mileage sheet that is not transferred or approved, the mark will be removed from this field again.
<b>Submitted by</b>	This field shows the name of the user who submitted the current mileage sheet. The contents of this field cannot be changed.
<b>Date</b>	This field shows the date when the mileage sheet was submitted. The date cannot be changed here.
<b>Transferred</b>	This field shows whether the mileage sheet has been transferred to a mileage sheet journal. The field is automatically completed when all lines in the mileage sheet have been transferred. The criteria determining when a mileage sheet is transferred for posting depend on the approval principle of each job. For further information about approval principles, please see the description of the island Approval in the window Jobs.
<b>Transferred by</b>	This field shows the name of the user who transferred the last line of the current mileage sheet. A mileage sheet line does not necessarily have to be approved to be transferred. Please see the description of the field "Approved By" below and the description of the island Approval in the window Jobs.
<b>Date</b>	This field shows the date when the current mileage sheet was transferred.
<b>Approved</b>	This field shows whether the mileage sheet is fully approved. If you use approval hierarchies, this field is marked when the last approver has approved the mileage sheet. Otherwise, this field is automatically marked when the supervisor approves the mileage sheet, and the mark is removed if the sheet is reopened.
<b>Approved by</b>	This field shows the name of the user whose approval resulted in the mileage sheet being fully approved as described under the field "Approved." If approval is not required, the name of the user who submitted the mileage sheet is displayed.
<b>Date</b>	This field shows the date when the current mileage sheet was approved.
<b>Reopened</b>	This field shows whether the current mileage sheet was reopened. This field is automatically completed when the mileage sheet is reopened.

### Period Island

Field	Description
<b>Date</b>	In these fields, you can enter the period for which the mileage sheet is assigned. The fields are for information only.

**Supervisor Island**

Field	Description
<b>Supervisor</b>	This field displays the name and number of the supervisor of the employee associated with the mileage sheet. The information is transferred from the main tab of the window Employees in the Set-Up module and cannot be changed here.

**Secretary Island**

Field	Description
<b>Secretary</b>	This field shows the name and number of the employee's secretary. The secretary can, for instance, handle the time sheet registration and transfer for employees, if the individual employee has marked the field "Release Time Sheets" in the window Actions in the Set-Up module. The information is transferred from the window Employees in the Set-Up module and cannot be changed here.

**Note Island**

Field	Description
<b>Note</b>	<p>In this field, you can specify the name and number of a note relating to the current mileage sheet, for further specification of the nature of the expenses of the current mileage sheet.</p> <p>Notes are created in the window Job Descriptions in this module or in the window Notes in the Set-Up module.</p>

**Approval Island**

Field	Description
<b>Remark</b>	<p>In this field, you can enter a remark to the current approval.</p> <p>However, a remark can only be entered by the employee/employees who are given access to approve the current mileage sheet on the current level. The remark is assigned to the current approval level. If the current mileage sheet is reopened, this field is automatically cleared by Maconomy. However, the remark can still be seen on the approval line in question in the Approvals window sub-tab.</p>

**Company Island**

Field	Description
<b>Company</b>	This field shows the name and number of the employee's company.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

**Total Island**

Field	Description
<b>Tax, Base</b>	This field shows the total tax amount in base currency for the lines in the sub-tab.
<b>Amount, Base</b>	This field shows the total amount, including tax, for the lines in the sub-tab.
<b>Mileage</b>	This field shows the total mileage (in km or miles) for the lines in the sub-tab.
<b>Mileage, Year</b>	This field shows the employee's total mileage (in km or miles) for all of his or her jobs, accumulated from the first day when the mileage rule applies to the current date.

**Exchange Rate Island**

Field	Description
<b>Currency</b>	In this field, you can choose a currency. By also specifying an exchange rate for the selected currency in the below field "Exchange Rate," the exchange rate specified will be used as default on mileage sheet lines in the sub-tab having the same currency as the one specified in this island. Hence, the exchange rate specified in this island will override the exchange rate usually used by Maconomy. This functionality is useful in situations in which a user needs to be able to override the existing exchange rate because the exchange rate used on, for example, a credit card transaction is different from the one specified in the exchange rate table.
<b>Exchange Rate</b>	In this field, you can enter an exchange rate for the currency specified in the above field "Currency." If you do not enter an exchange rate, Maconomy suggests the exchange rate specified for the currency in question in the window Exchange Rates. The value suggested can be changed manually. See the description of the above field "Currency" for further information on the functionality of this field.

**Transaction Island**

Field	Description
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.

**Job Island**

Field	Description
<b>Job</b>	In this field, you can enter the name and number of a job. When you create a line in the sub-tab, the job number will be suggested in the field "Job No." in the sub-tab. If the system parameter "Allow expense sheet for multiple jobs" is not marked, you can only enter the job number specified in this field in the sub-tab. In this way, it is ensured

Field	Description
	<p>that only expenses for the specified job are approved when the mileage sheet is approved. If you do not enter a job number in this field, Maconomy automatically fills in this field with the job number specified on the first line in the sub-tab. If this system parameter is marked, you can enter any job number in the sub-tab, as the number in this field is then only a suggestion.</p> <p>The effects of changing the value in this field after creating lines in the sub-tab depend on whether the system parameter "Allow expense sheet for multiple jobs" has been marked. If this parameter is not marked, changing the value in this field causes the job number on all lines to be changed accordingly. If the parameter is marked, the job number is only updated accordingly on lines where the job number corresponds to the job number present in this field before the change was made.</p>

### Copy Mileage Sheet Island

Field	Description
<b>Mileage Sheet No.</b>	In this field, you can enter the number of an existing mileage sheet that you want to copy to the current mileage sheet. See the description of the action "Copy Mileage Sheet" for further information on this action.
<b>Copy All Fields</b>	<p>A check mark in this field indicates that you want to create an identical copy of the source mileage sheet lines.</p> <p>It will copy the lines from an already submitted mileage sheet to the current mileage sheet. When copying, job numbers, activity numbers, and dimensions are included on the lines. All mileage sheet lines will have the current date as the Entry Date. Only the fields which are opened in the Mileage Sheets dialog sub-tab can be copied; the closed fields will keep their values.</p> <p>See the description of the action "Copy Mileage Sheet" for further information on this action.</p>

### Mentor Island

Field	Description
<b>Tutor</b>	This field shows the name and number of any mentor assigned to the employee, for example, to assist in the training of the employee. The status of mentor grants access to seeing (but not changing) the mileage sheets of the employee in question. The information is transferred from the window Employees in the Set-Up module and cannot be changed here.

### Remarks Island

In these three fields, you can enter general remarks to the mileage sheet. The remarks are shown on printouts of mileage sheets when the layout "Standard" is used.

## Mileage Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Mileage Sheet Lines sub-tab.

Field	Description
<b>Entry Date</b>	<p>In this field, you enter an entry date. Maconomy suggests the current date. You can only enter dates within the open posting period for job entries applying to the company responsible for the job specified on the current line.</p> <p>If you update this field, and there are mileage rules that fulfill the conditions on the mileage lines, then the Activity, Unit Price, Currency, and Task fields will be overwritten with the value derived by the system.</p> <p>For further information, see the description of the island Job Cost in the window Company Information in the G/L module.</p>
<b>Favorite</b>	<p>In this field you can select a favorite. If you are using the Maconomy client for Java™, the field is a drop-down list showing the favorites available in the current context. The favorites derive from the window Favorites. You can create and edit your own personal favorites, or other people, for instance a project manager, your department manager, or the finance department, can create favorites and distribute them to a selection of employees from the window Job Employees.</p>
<b>Job No.</b>	<p>In this field, you enter the number of the job to which the current mileage expense pertains. If the system parameter “Allow expense sheets for multiple jobs” is not marked, you can only enter the job number specified in the main tab of this window. In this way, it is ensured that only expenses for the specified job are approved when the mileage sheet is approved. If the system parameter is marked, you can enter any job number in this field.</p> <p>If you change the job number in the main tab, the effects depend on whether the system parameter “Allow expense sheets for multiple jobs” has been marked. If this parameter is not marked, changing the value in the main tab causes the job number on all lines to be changed accordingly. If the parameter is marked, the job number is only updated accordingly on lines where the job number corresponds to the job number present in the main tab before the change was made.</p>
<b>From</b>	In this field, you enter the name of the location from which your journey starts.
<b>To</b>	In this field, you enter the destination of your journey.
<b>Via</b>	In this field, you can enter a location via which you travel. The field is used to indicate any deviation from the shortest route between the From and To locations.
<b>Vehicle</b>	In this field, you enter, for example, whether you use your own car or a company car. In some countries, it is mandatory to enter this information for tax purposes.

Field	Description
	If you update this field, and there are mileage rules that fulfill the conditions on the mileage lines, then the Activity, Unit Price, Currency, and Task fields will be overwritten with the value derived by the system.
<b>Quantity</b>	<p>In this field, you can specify the number of units of the current activity for which an expense is incurred. However, if a value has been entered in the field "Mileage Sheets" in the island Registration Limits in the window Activities for the activity for which you wish to register amounts, you cannot enter a larger quantity for the activity than specified in that field. If there are several mileage sheet lines for a given employee with the activity in question, the sum of the registrations on these lines cannot exceed the daily registration limit specified in the above-mentioned field for the activity in question. If you update this field, and there are mileage rules that fulfill the conditions on the mileage lines, then the Activity, Unit Price, Currency, and Task fields will be overwritten with the value derived by the system.</p> <p>If the field "Quantity 1 from Quantity on Mileage Sheet" and/or the field "Quantity 2 from Quantity on Mileage Sheet" is marked in the window Activities for the current activity, the quantity entered here is automatically transferred to the field "Quantity 1" and/or "Quantity 2" on the current line. In this way, the quantity can be transferred to the General Ledger. Note that if a value has already been entered in the field "Quantity 1" or "Quantity 2", the value in the field "Quantity" is not transferred. For more information, see the description of the window Activities.</p>
<b>Unit Price, Currency</b>	<p>In this field, you enter the expense amount in the currency selected in the field "Currency." The amount should be entered including tax, if any. Maconomy calculates the total amount based on information from job price lists and activity information tabs. The amount is shown in the field "Amount, Currency." For a more detailed description of price calculation, please see "Appendix A: Price Calculation in the Job Cost module." You can change the value suggested by Maconomy. Even though fixed exchange rate information is applied to a job on which registrations are made, Maconomy does not convert on the basis of fixed exchange rate information in this field, as the registration represents a balance between an employee and his or her company. The real conversion to the job currency will not take place until the journal that the mileage sheet results in is posted.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the activity or dimension values. If there is a mileage rule which can be applied to the mileage sheet line, this field will be derived automatically by the system.</p> <p>For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change."</p>
<b>Amount, Currency</b>	This field shows the total expense amount for the current mileage in the currency selected in the field "Currency." The amount is calculated as the

Field	Description
	value in the field "Quantity" multiplied by the value in the field "Unit Price, Currency."
<b>Transaction Type</b>	By default, this field shows the transaction type selected in the main tab, but you can change the type if you want.
<b>Description</b>	<p>In this field, you can enter or change a description of the current entry. When you create a line, Maconomy will suggest a text in this field, depending on how the current activity is set up. The activity can be set up to derive the description of the activity or the description of the currently selected task, or to leave the field blank. For more information, please see the description of the window Activities.</p> <p>When the mileage sheet is posted, the description in this field is used as entry text for the current mileage sheet line, along with the word "Outlay" and the currency entered on the line. If you do not enter a description, the entry text will only be "Outlay" and the currency.</p>
<b>Job Name</b>	This field shows the name of the job assigned to the current expense.
<b>Act. No.</b>	<p>In this field, you enter the number of the activity on which the expense should be entered. It is only possible to find activities of the type "Amount" if you use the search functions in the Find menu.</p> <p>If a mileage rule has been set up which can be applied to the mileage sheet line, Maconomy will automatically update this field accordingly.</p>
<b>Activity Name</b>	This field displays the text defined for the current activity.
<b>Task</b>	<p>In this field, you can enter the task assigned to the specified expense.</p> <p>If a mileage rule has been set up which can be applied to the mileage sheet line, Maconomy will automatically update this field accordingly.</p>
<b>Tax Code (Tax Code 1-3)</b>	<p>In this pop-up field, you select the tax code to be used. You cannot change the tax code on a reopened mileage sheet line if the line has been transferred for posting.</p> <p>You can add up to three different tax codes if necessary. To enable multiple tax codes, the system parameters "Show Three Tax Levels" and/or "Show Two Tax Levels" must be marked in the System Parameters window. When multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Tax, Currency (Tax Total, Currency and Tax 1-3, Currency)</b>	This field shows the tax amount in the currency selected in the field "Currency." The tax can be calculated in two ways, depending on whether the system parameter "Tax from extended price in mileage sheets" is marked. For further information about the functionality of this system parameter, see the description of the window System Parameters in the Set-Up module.

Field	Description
	<p>The value in the field can also be changed manually. However, changing the tax amount on a mileage sheet line will not give rise to a change in the fields "Amount, Currency/Base" and "Unit Price, Currency/Base," as the amount specified on the line is the outlay/expense that the employee has had on a certain job, and this amount is thus not dependent on a certain tax amount. Changing the tax amount thus only affects the costs registered on the job in question.</p> <p>Note that you cannot enter a tax amount exceeding the total amount on the line, and that it is not possible to change the tax amount on a mileage sheet which has already been posted.</p> <p>If multiple tax codes are enabled, the "Tax, Currency" field will be replaced by the following fields: "Tax Total, Currency," "Tax 1, Currency," "Tax 2, Currency," and, if enabled, "Tax 3, Currency." The "Tax Total, Currency" field calculates the sum of the other individual tax fields. For further information on multiple tax codes, please see the description in "Tax Codes."</p>
<b>Currency</b>	In this field, you can select the currency of the expense. Maconomy suggests the enterprise currency. You cannot change the currency on a reopened mileage sheet line if the line has been transferred for posting.
<b>Exchange Rate</b>	This field shows the exchange rate between the currency on the line and the base currency of the employee assigned to the mileage sheet. The exchange rate displayed in the field can either be the exchange rate specified in the "Exchange Rate" field in the main tab or a default exchange rate transferred from the relevant exchange rate table. The value displayed can be changed manually, if the currency used on the line is different from the employee's base currency. If the currency is similar to the employee's base currency, the exchange rate in this field must be 10,0 and thus cannot be changed manually. The system issues a warning if the exchange rate entered differs more than 10% from the relevant exchange rate in the exchange rate table.
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you do not enter a value manually, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. If no value can be derived, the standard value is transferred from the window System Parameters in the Set-Up module. See the chapter "Introduction to the G/L Module" and the window Dimension Derivation for a further description of dimension derivation.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.

Field	Description
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Approval, Project Manager</b>	<p>This field shows the status of the job assigned by the project manager in the window Approve Mileage Sheet Lines. When the mileage sheet has been submitted, the project manager can use the window Approve Mileage Sheet Lines to approve, reject or release each line if the approval principle of the job indicates that approval by the project manager is mandatory or optional. However, if the line pertains to a job for which the employee in question is the project manager, the line automatically receives project manager approval if the job parameter "Automatically approve Project Manager's Expense Lines" has been set to "Yes" for the job in question. For further information, please see the description of the window Approve Mileage Sheet Lines.</p> <p>If the status of the line is "Approved" or "Released," and the line is changed, the status changes to blank. If the line has the status "Rejected," and the line is changed, the status of rejected is maintained.</p>
<b>Approved by</b>	This field shows the name of the project manager who assigned the current approval status (shown in the field "Approval, Project Manager") to the line.
<b>Approval Date</b>	This field shows the date on which the project manager assigned the current approval status (shown in the field "Approval, Project Manager") to the line.
<b>Comment</b>	This field shows any comments entered by the project manager in connection with the approval, release or rejection of the line.
<b>Task Description</b>	This field shows the description defined for the current task, if such has been entered.
<b>Task Path</b>	This field shows any task path of the task (see the description of hierarchical tables in the section "Task Path" in the chapter "Getting Started with the Java™ Client").
<b>Unit Price, Base</b>	<p>In this field, you enter the expense amount for one unit of the current activity in the base currency of the company responsible for the job. The amount should be entered including tax, if any. Maconomy calculates the total price based on information from job price lists or activity information tabs. For a more detailed description of price calculation, please see "Appendix A: Price Calculation in the Job Cost module." You can change the value suggested by Maconomy.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance the activity or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change."</p>
<b>Amount, Base</b>	This field shows the expense amount in base currency. Maconomy calculates the amount by multiplying the value in the field "Quantity" with the value in the

Field	Description
	“Unit Price, Base” field, and uses the current exchange rate table for purchases for the currency conversion.
<b>Tax, Base (Tax Total, Base and Tax 1-3, Base)</b>	<p>This field shows any tax on the expense amount in base currency. Maconomy uses the current purchase currency table for currency conversion. If the tax amount is changed manually in the field “Tax, Currency,” the value in this field is updated accordingly.</p> <p>If multiple tax codes are enabled, the “Tax, Base” field will be replaced by the following fields: “Tax Total, Base,” “Tax 1, Base,” “Tax 2, Base,” and, if enabled, “Tax 3, Base.” The “Total Tax, Base” field calculates the sum of the other individual tax fields. For further information on multiple tax codes, please see the description in “Tax Codes.”</p>
<b>Reference</b>	In this field, you can enter a text as reference to the expense, for example, a transaction number.
<b>Start Date</b>	In this field, you can specify the date at which an expense began. It can, for example, be expenses in connection with a hotel stay.
<b>Started</b>	In this field, you can specify the time on which an expense began.
<b>Closing Date</b>	In this field, you can specify the date on which an expense was closed.
<b>Finished</b>	In this field, you can specify the time on which an expense ended.
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Remark 1-3</b>	In these fields, you can write remarks connected to the current mileage sheet line.
<b>Quantity 1</b>	In this field, you can enter a quantity used on the current activity, for instance the number of miles driven for a mileage report. The quantity is transferred to the mileage sheet journal, and the information can be used in reporting and statistics. The quantity entered in the field “Quantity” can be transferred to this field automatically. For more information, please see the description of the field “Quantity” above.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field “Quantity 1” above.
<b>Document Name</b>	In this field, you can enter the name of one of the documents in the document archive specified in the main tab. This way, if you have scanned the vouchers related to each expense, and assigned them to a document archive, you can specify which of the documents contains the voucher relevant to each line. By selecting this line in the table and then selecting the action “View Document,” the document specified in this field is displayed in a third-party program.

Field	Description
<b>Customer No.</b>	This field shows the number of the bill-to customer assigned to the job on the current line.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job on the current line.
<b>Level 1 Name – Level 5 Name</b>	These fields show the customers in the hierarchy levels above the customer on the line. These fields are only available if customer levels are set up using the designated System Parameters.
<b>Language</b>	This field shows the language specified for the customer assigned to the job on the current line.
<b>Details</b>	This field contains a status message for the current line. Additionally, a link is available on the status text that will open a new window focusing on the line details.
<b>Purchase Order Number</b>	In this field, you can specify a purchase order number. This field is not displayed by default. Only subcontractors logged in as employees can view and edit this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.
<b>Purchase Order Line Number</b>	In this field, you can specify a purchase order line number. This field is not displayed by default. Only subcontractors logged in as employees can view this field in their time/expense/mileage sheets. All other users can display this field but cannot edit the value.

## Actions

This section shows the actions available in the Mileage Sheets workspace.

### Top Tab

Field	Description
<b>Submit Mileage Sheet</b>	<p>When you select this action, you submit the mileage sheet in the window. If you try to edit a submitted mileage sheet, Maconomy issues a warning. If you then continue, the mileage sheet is no longer registered as submitted.</p> <p>When the mileage sheet is submitted, Maconomy checks all lines on the sheet to see if there are lines that do not require approval according to the approval principle of the job to which each individual line refers. Lines that do not require approval are transferred for posting. Furthermore, any line pertaining to a job for which the employee in question is the project manager automatically receives project manager approval if project manager approval is optional or required, and the job parameter “Automatically approve Project Manager’s Expense Lines” has been set to “Yes” for the job in question.</p> <p>If you use approval hierarchies — that is, if an approval hierarchy has been selected for mileage sheets in the window Approval Hierarchies in the Set-Up module — Maconomy will find out who is to approve the mileage sheet in question</p>

Field	Description
	<p>on the basis of the current approval hierarchy. Information on approval hierarchies and the next approver is shown in the fields in the island Approval.</p> <p>If you do not use approval hierarchies, the mileage sheet can be approved by the employee's supervisor. See the description of the windows Approval Hierarchy Selection and Approval Hierarchies in the Set-Up module for further information on creation and use of approval hierarchies.</p>
<b>Release Mileage Sheet</b>	<p>This action can only be used if the field "Transf. Non-Appr. Time Sheets" has been marked in the window System Information, and the current user has access to transferring time sheets as specified in the window Actions. The employee specified as the supervisor for the current employee, however, always has the right to release mileage sheets for the employee in question if the above mentioned field in the window System Information has been marked. The user naturally needs access to view the mileage sheets to be released.</p> <p>When the action is selected, the current mileage sheet is transferred to a journal of the type "Mileage Sheet Journal" which can be posted in the G/L module. This allows you to invoice the customer before the mileage sheet has been approved using the action "Approve Mileage Sheet." However, the transfer depends on the approval principle selected for the job in the window Jobs. If both the employee's supervisor and the project manager of a given job need to approve mileage sheets, the mileage sheet lines concerning the job in question are only transferred if both project manager and supervisor have either released or approved the lines. The project manager releases or approves the individual mileage sheet lines in the window Approve Mileage Sheet Lines, while the supervisor does it for a whole mileage sheet at a time by selecting this action.</p> <p>A mileage sheet can only be released if it has been submitted. Any dimension values from the employee such as activity, job, or company are copied to the mileage sheet journal.</p> <p>When the invoice is posted, Maconomy creates a number of entries which are placed in a mileage sheet journal. Once the number of entries in a journal reaches 500, Maconomy automatically creates a journal for the next 500 entries. Maconomy creates one entry per mileage sheet line.</p> <p>When posting mileage sheet journals, Maconomy checks whether the journal in question contains entries where the posting date is outside the open posting period for G/L entries in the companies affected by the mileage sheet lines. If the journal contains such entries, the G/L entries created as a result of the posting will be assigned a posting date corresponding to the first date in the open G/L posting period of the company in question. The job entries created are assigned the posting dates specified in this window, as well as a reference date identical to the one used on the G/L entries.</p> <p>If an employee has been working on a job which is to be invoiced by another company (the responsible company) than the one to which the employee is assigned (the executing company), the transfer will result in intercompany entries between the two companies involved. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p>

Field	Description
	<p>When mileage sheets have been posted, the mileage sheet journals will be settled on the account for expense settlement. The account for expense settlement is specified by means of a dimension combination in the window Posting References. Notice that the dimension combination may include other dimension values that are to be used in this connection.</p> <p>If the employee who filled in the mileage sheet has been assigned to a vendor in the window Employees in the Set-Up module, Maconomy checks if any of the expenses were registered on activities for which the window Activities indicates that expenses are to be settled through a vendor. For such mileage sheet lines, Maconomy will create entries on the vendor to which the employee is assigned, instead of on the account for expense settlement. When posting mileage sheets containing more than one line to be settled through a vendor, Maconomy creates only one vendor entry covering all these mileage sheet lines, provided that the currency and entry date are the same on the mileage sheet lines in question. This means that when posting a vendor-related mileage sheet, Maconomy will create one vendor entry per currency and per entry date. The vendor entries created in this process must be approved for payment before reimbursement can take place, unless the system parameter "Automatically approve expense sheets for payment" has been marked, in which case the vendor entries are approved automatically.</p>
<b>Approve Mileage Sheet</b>	<p>When this action is selected, the mileage sheet shown in the window is approved, and unless the mileage sheet has already been transferred, a number of entries in an existing mileage sheet journal will automatically be created as described above in the section "Release Mileage Sheet." However, the transferal depends on the approval principal as described in the action "Release Mileage Sheet" above.</p> <p>Once a mileage sheet has been approved, you can only make changes to it by first selecting the action "Reopen Mileage Sheet." You can find more information about access and mileage sheet journals above in the description of the action "Release Mileage Sheet."</p> <p>A mileage sheet can only be released if it has been submitted.</p> <p>When a mileage sheet is approved, the fields "Transferred" and "Approved" in the island Status will automatically be marked. A mileage sheet journal created by using this action contains the same entries as a journal created by using the action "Release Mileage Sheet."</p>
<b>Reopen Mileage Sheet</b>	<p>This action is used for reopening an approved and transferred mileage sheet for changes if the mileage sheet is within the open posting period for job entries. It is possible to edit already reported quantities and to create lines, but approved lines cannot be deleted, and it is not possible to change entry date, job and activity numbers, dimensions, or tasks on these mileage sheet lines.</p> <p>When the mileage sheet is reapproved, Maconomy creates a journal with the difference between the previous registration and the new one. If, for instance, you have first approved USD 400 on a given job, activity, and day, and you later change it to USD 600, the new job journal will include an entry of USD 200. In contrast, if you change the entry to USD 300, the journal will include an entry of USD -100. If the mileage sheet is approved without new changes, Maconomy does not create a mileage sheet journal.</p>

Field	Description
	In the window Actions in the Set-Up module, you can specify which users are allowed to reopen mileage sheets.
<b>Copy Mileage Sheet</b>	This action is used for copying the lines from an already submitted mileage sheet to the mileage sheet in question. In the island Copy Mileage Sheet, you can enter the number of the mileage sheet from which lines should be copied. You can only copy mileage sheets that you submitted. When copying, job numbers, activity numbers, and dimensions are included on the lines, whereas quantities and amounts are reset to zero. Only the fields which are opened in the Mileage Sheets window sub-tab can be copied; the closed fields will keep their values.
<b>Create favorite</b>	Select this action to create a new favorite with the specified combination of job, task, and activity.

## Favorites Workspace

Use this workspace to create shortcuts that make it faster to enter data.

For example, if you frequently work on the same job/task/activity combination, you can create a favorite for it, so that you do not need to enter the job number, task number, and activity number over and over on time sheets. Instead, you can use a descriptive name to identify the combination.

You can create your own personal favorites, or someone else can create a favorite and distribute it to others.

You use favorites in connection with time entry—in the SpeedSheet, Time Sheets, and Daily Time Sheets workspaces—and in various portal components, as an easy way to identify an entry combination.

A favorite is a link between a descriptive text (the favorite name) and an entry combination (that is, a combination of job number, task name, activity number, location, and other dimensions). The entry combination of a favorite does not have to be complete.

As an employee, you have a set of favorites that you can maintain in this workspace. The name of a favorite is a unique identification of the favorite for each employee. This means that by selecting a favorite in a time entry workspace, you select an unambiguous entry combination.

You can create your own personal favorites, and favorites can be distributed from a job. For instance, the finance department, your department manager, or project managers can set up jobs and distribute favorites to those users who are expected to enter time on the jobs. This distribution of favorites is performed in the Job Employees workspace.

### Rules Governing Favorites

- All favorites in this workspace are visible to you (and only you) in the time entry workspaces, unless you mark a favorite to be hidden in this workspace.
- A favorite can be blocked, in which case it is not displayed in the sub-tab or in the time entry workspaces previously mentioned. When a job is closed or blocked for entry, the favorites that have been distributed for the job are also blocked so that they are no longer visible to users.

- If a job is later reopened or unblocked, Maconomy unblocks the favorites that have been distributed for the job. To resolve name clashes, Maconomy automatically renames a favorite that is unblocked whenever an employee already has a favorite with the same name.
- A favorite can include a date range that specifies when the favorite can be used. If the date of the intended entry is outside the date range of a favorite, the favorite is not displayed in the time entry workspaces.

## Favorites Tab

This section includes the fields and descriptions for the Favorites tab.

### Selection Criteria Island

Field	Description
<b>Valid Dates</b>	In these fields, you can enter a range of dates to limit the number of favorites shown in the sub-tab. If you enter a range of dates, only favorites valid on the dates within the range are shown in the sub-tab. If you leave out the ending date, you see all currently valid favorites in the sub-tab. Maconomy automatically completes the first field with the date of the Monday of the current week.
<b>Show Hidden</b>	If you mark this field, the sub-tab will include hidden favorites.

## Favorites Sub-Tab

This section includes the fields and descriptions for the Favorites sub-tab.

Field	Description
<b>Favorite Name</b>	In this field, you can edit the name of the current favorite. When you change the name, it is changed immediately on all unsubmitted time sheet lines using this favorite.
<b>Job No.</b>	In this field, you can select a job. When you register time on this favorite, this is the job on which the time registration will be posted. The field to the right of this field shows the name and the selected job.
<b>Job Name</b>	This field shows the name of the job specified in the field "Job No.," if any.
<b>Task</b>	In this field, you can select a task. If a job is selected in the field "Job" above, you can only choose a task from the current job. The field to the right of this field shows the description of the selected task.
<b>Task Description</b>	This field shows the description of the task specified in the field "Task," if any.
<b>Activity No.</b>	In this field, you can select an activity.

Field	Description
<b>Activity Name</b>	This field shows the name of the selected activity.
<b>Activity Type</b>	This field shows the type of selected activity
<b>Valid From</b>	In these fields, you can enter a range of dates between which the current favorite should be valid. For instance, if a certain favorite only applies to a series of seminars taking place during a week in May, you can enter the starting date of that week in the first field, and the ending date in the second field. The favorite will then only appear in time registration windows during the week to which the registrations apply.
<b>Valid To</b>	This field is related to the "Valid From" field, above.
<b>Hide</b>	If you mark this field, the current favorite will no longer appear in time registration windows.
<b>Created by</b>	This field shows the name of the user who created the current favorite. If the name in this field is not your own, it is an indication that the favorite has been distributed to you from the window Job Employees.
<b>Created on</b>	This field shows the date when the current favorite was created.
<b>Changed by</b>	This field shows the name of the user who made the latest change to the current favorite.
<b>Changed on</b>	This field shows the date when the change to the line in question was made.
<b>Version</b>	This field shows the version number of the current favorite. The number is incremented by one each time a change is made to the favorite.

## Actions

This section shows the actions available in the Favorites workspace.

### Top Tab

Field	Description
<b>Copy from Other Employee</b>	<p>When you select this action, favorites from the employee that you specify in the Copy Favorites dialog are copied to the sub-tab in this window. To be copied, a favorite must meet the following requirements:</p> <ul style="list-style-type: none"> <li>It must be valid in this window.</li> <li>It must not be blocked.</li> <li>The current employee must have access to the job on the favorite.</li> </ul> <p>Favorites that do not meet the requirements will be skipped.</p>

Field	Description
	This is useful for, for example, quickly setting up a list of applicable favorites for a new employee.
<b>Create from Time Sheets</b>	When you select this action, a favorite is created for each (daily) time sheet line for the last four weeks on which the field "Keep Line" has been marked. The favorite will take the job dimensions (job, activity, and task) from the time sheet line, and it will be automatically named as a combination of these job dimensions. If a favorite with the same combination of job dimensions already exists, the new favorite will not be created.

## Favorite Workspace

Use this workspace to review your favorites, one at a time.

Select a favorite from the List of Favorites tab, and details about the favorite display in the Favorite sub-tab below.

A favorite is a shortcut that makes it faster to enter data. For example, if you frequently work on the same job/task/activity combination, you can create a favorite for it, so that you do not need to enter the job number, task number, and activity number over and over on time sheets. Instead, you can use a descriptive name to identify the combination.

Create favorites in the Favorites workspace. You can create your own personal favorites, or someone else can create a favorite and distribute it to others.

### Favorite Tab

This section describes the Favorite tab.

#### Copy to Come

Field	Description

## Approve Time Sheets Workspace

Use this workspace to work on a group of time sheets at the same time.

For example, you can select a number of time sheets for submission, release, approval, or reopening. You can perform the same functions in the Time Sheets workspace, but for only one time sheet at a time.

You can submit, release, or reopen all of the time sheets for employees for whom you are the supervisor or secretary. Depending on security settings, you may also have permission to approve these employees' time sheets or to submit, release, reopen, and approve all employees' time sheets.

Being able to see and handle several time sheets at a time can be practical if, for example, you need to approve many time sheets but do not need to examine the content of each time sheet.

## Access to Time Sheets

A user can submit, release, or reopen all time sheets for employees for whom he or she is the supervisor or secretary. The user can also approve all time sheets for which he or she is the supervisor or secretary, if you selected the **Secretary can Approve Time Sheets** system parameter.

In addition, users who have been given access to view all time sheets in the Actions workspace in the Set-Up module can also see time sheets in this workspace. If they have also been given access to change all time sheets, they can also perform the actions that are associated with the time sheets.

## Selection Criteria

The Approve Time Sheets tab contains an island with selection criteria. Use these criteria to select the timesheets on which you want to work. The first time that you open this workspace, you must specify criteria, but after you have done this once, Maconomy saves the selection criteria for each user. Each time that you open the workspace, Maconomy displays the selection criteria you last entered.

If you select the **Show Lines** field in the Selection Criteria island, the Time Sheets sub-tab displays the time sheets that you selected. For each individual line in the sub-tab, you can specify a status. Depending on the status you select, the time sheet line is submitted, submitted temporarily, released, approved, or reopened when you use the one of the functions in the Action menu.

You should note that the actions in the Action menu apply to all time sheets that the selection criteria identify, regardless of whether they are displayed in the sub-tab.

In addition, if you select the **Monthly Time Reporting** system parameter, the time sheets that belong to the same month are linked. Time sheets that belong to the same month are handled together, which means that if, for example, you select one time sheet for approval, all of the other time sheets that belong to the same month are also selected.

## Approve Time Sheets Tab

This section includes the fields and descriptions for the Approve Time Sheets tab.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	If you mark this field, the entries which match the criteria in this island are displayed in the sub-tab. Please note that Maconomy includes all selected entries when you select the actions in this window, regardless of whether or not they are displayed in the sub-tab.
<b>Employee No.</b>	In these fields, you can specify a range of employee numbers. The sub-tab will only display time sheets within the specified range of employee numbers.
<b>Week/Year</b>	In these fields, you can enter a period from week/year to week/year. The sub-tab will only display time sheets within the specified period.
<b>Date</b>	In these fields, you can enter a period from a starting date to an ending date. The sub-tab will only display time sheets within the specified period. If you have

Field	Description
	entered a range of weeks in the above fields "Week/Year," these fields show the starting and ending dates of the period specified.
<b>Company No.</b>	The functionality of these fields is similar to that of the field "Employee No."
<b>Show</b>	In this field, you can choose to only see time sheets with a specific approval status that match the selection criteria in this island. You can choose one of the following actions: Submission, Submission Temporarily, Release, Approval, and Reopening. The sub-tab will only show time sheets for which the specified action can be selected.

### Time Unit Island

Field	Description
<b>Time Unit</b>	Use this field to specify the Time Unit (Hour or Day) for the display of time in the window.

### Time Sheet and Hour Totals Island

Field	Description
<b>Show Totals</b>	If you mark this field, Maconomy makes a count on the basis of the lines displayed in the sub-tab. The result as regards the number of time sheets currently marked for submission, release, approval, or reopening is displayed in the islands. Note that the islands will not display any summary information if you have not marked this field.
<b>Time Sheets</b>	This field shows the total number of time sheets in the sub-tab that have been marked in the field "Submit." The field is automatically updated if you have marked the field "Show Totals" in the island Selection Criteria.
<b>Hours / Days</b>	The title of the field depends on the Time Unit chosen above. The field shows the time that will be submitted in hours or days depending on Time Unit.

### Update Fixed Time Island

Field	Description
<b>Update Fixed Time at Approval</b>	<p>If you select this field, the fields "Fixed" and "Overtime" in the sub-tab will be updated to reflect the current number of fixed time specified for the employee in question in the windows Employees or Week Calendars in the Set-Up module upon approval.</p> <p>If the amount of fixed time has been changed for the employee, it will affect the calculation of overtime. The calculation is only affected as of the date when the amount of fixed time was changed; it does not affect the calculation of overtime for previously approved time sheets.</p> <p>For the update of fixed hours to be recorded on the time sheets in the sub-tab, this field must be marked when the time sheets are approved.</p>

**Selection Criteria, Employees Island**

Field	Description
<b>Supervisor</b>	In this field, you can specify a supervisor employee name and number. The sub-tab will only display time sheets for employees for whom this person is supervisor.
<b>Secretary</b>	The functionality of this field is similar to that of the field "Supervisor."

## Time Sheets Sub-Tab

This section includes the fields and descriptions for the Time Sheets sub-tab.

Field	Description
<b>Year</b>	This field shows the year of the current time sheet.
<b>Week</b>	This field shows the week number of the current time sheet. If the week is a split week, the value will also contain either an "A" or a "B," indicating which part of the week is currently displayed.
<b>Employee No.</b>	This field shows the number of the employee assigned to the current time sheet.
<b>Employee Name</b>	This field shows the name of the employee specified in the field "Empl. No." above.
<b>Hours / Days, Total</b>	This field shows the total amount of time registered on the current time sheet. The title of the field and content within depend on the Time Unit selected in the tab of this workspace.
<b>Submit</b>	In this field, you can specify that the current time sheet is to be submitted when the action "Submit Time Sheets" is selected. By default the field is unmarked. This field cannot be marked if the current time sheet has already been submitted.
<b>Submit, Temporarily</b>	In this field, you can specify that the current time sheet is to be submitted temporarily when the action "Submit Temp. Time Sheets" is selected. By default the field is unmarked. This field cannot be marked if the current time sheet has already been submitted or submitted temporarily.
<b>Release</b>	In this field, you can specify that the current time sheet is to be released when the action "Release Time Sheets" is selected. By default the field is unmarked. This field cannot be marked if the current time sheet has already been transferred. The action can only be used if the field "Trans. Non-Appr. Time Sheets" has been marked in the window System Information.
<b>Approve</b>	In this field, you can specify that the current time sheet is to be approved when the action "Approve Time Sheets" is selected. By default the field is unmarked. This field cannot be marked if the current time sheet has already been approved.

Field	Description
<b>Reopen</b>	In this field, you can specify that the current time sheet is to be reopened when the action "Reopen Time Sheets" is selected. By default the field is unmarked. This field can only be marked if the current time sheet is approved or is submitted and transferred.
<b>Submitted</b>	This field displays whether or not the current time sheet has been submitted.
<b>Temporarily Submitted</b>	This field displays whether or not the current time sheet has been temporarily submitted.
<b>Transferred</b>	This field displays whether or not the current time sheet has been transferred for posting.
<b>Approved</b>	This field displays whether or not the current time sheet has been approved.
<b>Start Date</b>	This field displays the date at which an expense began. It can, for example, be expenses in connection with a hotel stay.
<b>External Hours / Days, Total</b>	This field displays the total number of hours or days registered on external jobs for the current time sheet. The title of and information in this field depends on the Time Unit chosen.
<b>Internal Hours / Days, Total</b>	This field displays the total number of hours or days registered on internal jobs for the current time sheet. The title of and information in this field depends on the Time Unit chosen.
<b>Fixed</b>	The field shows fixed time for the time sheet in hours or days, depending on the Time Unit selected in the tab of this workspace. For a detailed description of how the fixed hours are determined, see the <b>Fixed</b> field in the Time Sheets workspace.
<b>Overtime</b>	The field shows calculated overtime for the time sheet in hours or days, depending on the Time Unit selected in the tab of this workspace.
<b>Supervisor, No.</b>	This field displays the employee number of the supervisor specified for the employee registered on the current time sheet.
<b>Supervisor, Name</b>	This field displays the name of the employee specified as supervisor for the employee registered on the current time sheet.
<b>Secretary, No.</b>	This field displays the employee number of the person specified as secretary for the employee registered on the current time sheet.
<b>Secretary, Name</b>	This field displays the name of the person specified as secretary for the employee registered on the current time sheet.
<b>Time Activity 1-3</b>	These three field shows time registered on the three fixed activities for the time sheet in hours or days depending, on the Time Unit selected in the tab of this workspace.
<b>Amount Activity 1-4</b>	The functionality of these fields is similar to that of the field "Time Activity 1–3."

Field	Description
<b>Check-in Balance for Period</b>	This field shows the total remaining check-in balance for the current period.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Enabled for Period</b>	This field specifies whether multiple check-in entries are enabled for the current period.
<b>Check-in Enabled, Monday-Sunday</b>	This field specifies whether multiple check-in entries are enabled for the day.
<b>Check-in Time for Period</b>	This field specifies whether multiple check-in entries are enabled for the current period.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for each day.
<b>Checked in, Expected Time, Monday-Sunday</b>	This field shows the estimated total check-in time registered for the day.
<b>Checked In, Time, Monday-Sunday</b>	This field shows the actual total check-in time registered for the day.
<b>Checked out, Expected Time, Monday-Sunday</b>	This field shows the estimated total check-out time registered for the day.
<b>Checked Out, Time, Monday-Sunday</b>	This field shows the actual total check-out time registered for the day.
<b>Missed Meal, Monday-Sunday</b>	<p>This field specifies whether the employee utilized their daily break for the day.</p> <p>If the field value is <b>Yes</b>, the employee skipped their break.</p>

## Actions

This section shows the actions available in the Approve Time Sheets workspace.

### Top Tab

Field	Description
<b>Submit Time Sheets</b>	<p>When you select this action, all time sheets that are marked for submission in the sub-tab will be submitted. After the action has been performed, the field "Submit" will be unmarked.</p> <p>However, if, for some reason, one or more time sheets fails, the entire submission process stops, and only the time sheets already processed will be submitted. The remainder of the marked time sheets can only be submitted by this action if the failing time sheet is unmarked, or if the reason for the failure is found and corrected.</p> <p>For more information, please see the description of the action "Submit Time Sheet."</p>
<b>Submit Time Sheets Temporarily</b>	<p>The functionality of this field is similar to that of the field "Submit Time Sheets." For more information, please see the description of the action "Submit Temp. Time Sheet."</p>
<b>Release Time Sheets</b>	<p>The functionality of this field is similar to that of the field "Submit Time Sheets." For more information, please see the description of the action "Release Time Sheet."</p>
<b>Approve Time Sheets</b>	<p>The functionality of this field is similar to that of the field "Submit Time Sheets." For more information, please see the description of the action "Approve Time Sheet."</p>
<b>Reopen Time Sheets</b>	<p>The functionality of this field is similar to that of the field "Submit Time Sheets." For more information, please see the description of the action "Reopen Time Sheet."</p>
<b>Mark for Submission</b>	<p>When you select this action, all time sheets covered by the selection criteria that can be submitted are marked for submission.</p>
<b>Mark for Temporary Submission</b>	<p>The functionality of this field is similar to that of the field "Mark for Submission."</p>
<b>Mark for Release</b>	<p>The functionality of this field is similar to that of the field "Mark for Submission."</p>
<b>Mark for Approval</b>	<p>The functionality of this field is similar to that of the field "Mark for Submission."</p>
<b>Mark for Reopening</b>	<p>The functionality of this field is similar to that of the field "Mark for Submission."</p>

Field	Description
<b>Unmark for Submission</b>	When you select this action, all time sheets covered by the selection criteria are unmarked for submission. This means that the check mark in the field "Submit" is removed for all entries in the sub-tab.
<b>Unmark for Temporary Submission</b>	When you select this action, all time sheets covered by the selection criteria are unmarked for temporary submission. This means that the check mark in the field "Submit, Temp." is removed for all entries in the sub-tab.
<b>Unmark for Release</b>	When you select this action, all time sheets covered by the selection criteria are unmarked for release. This means that the check mark in the field "Release" is removed for all entries in the sub-tab.
<b>Unmark for Approval</b>	When you select this action, all time sheets covered by the selection criteria are unmarked for approval. This means that the check mark in the field "Approve" is removed for all entries in the sub-tab.
<b>Unmark for Reopening</b>	When you select this action, all time sheets covered by the selection criteria are unmarked for reopening. This means that the check mark in the field "Reopen" is removed for all entries in the sub-tab.

## Approval Time Sheets Workspace

Use this workspace to approve time sheets if you are a supervisor.

This workspace is a combination of the Time Sheets workspace and the Approve Time Sheet Lines workspace, designed to make it easy for supervisors to approve time. It is similar to the Time Sheets workspace except that only approval-related fields and actions are available for use, and the workspace layout is designed to be more efficient for approvers.

This workspace is similar to the Time Sheets workspace, but there are a number of important differences that make this workspace easier to use for approvals than the regular Time Sheets workspace:

- All fields except for approval-related fields are read-only, so that supervisors cannot inadvertently change numbers on the time sheet.
- In the Time Sheet Lines sub-tab, the fields related to approval are placed to the far left, so that supervisors do not need to scroll through sub-tab to see these fields. Supervisors can also do this in the Time Sheets workspace, but it makes it more difficult for supervisors to complete their own time sheets.
- Fields for time sheet line approval (from the Approve Time Sheet Lines workspace) appear in the Time Sheet Lines sub-tab.
- Time sheet lines with zero entries are omitted from the sub-tab.
- Time sheet lines are sorted by job number.
- Supervisors who are also project managers can use this workspace to approve time sheet lines.
- Irrelevant actions from the Time Sheets workspace are omitted, and relevant actions from the Approve Time Sheet Lines workspace are included.

- Supervisors can use the **Approve All Possible** action to approve all of the lines for which the current supervisor is responsible.

Note that Maconomy calculates the proposed billing prices from the current job price list when the employee submits a time sheet, expense sheet, or mileage sheet. If the job price list is changed after the employee submits the sheet, the original amount is invoiced unless you enter different values before invoicing.

### Access Control

The following table describes the access rights for various roles.

Role	Can See	Can Approve	Other Actions
<b>Supervisor Only</b>	All	Time sheets	All
<b>Supervisor and Project manager</b>	Lines for jobs managed	Lines	No
<b>Secretary</b>	All	Time sheets	All
<b>Mentor</b>	All	No	No

### Approval Time Sheets Tab

This section includes the fields and descriptions for the Approval Time Sheets tab.

This window is very similar to the Time Sheets window, except that all fields are read-only, and the Copy Time Sheet island is left out. For more information, please see the description of the Time Sheets window.

### Time Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Time Sheet Lines sub-tab.

This sub-tab is very similar to the Time Sheets window sub-tab, except that the field "Keep Line" is left out. For more information, please see the description of the Time Sheets window.

To simplify the approval of time sheet lines, some differences exist compared to the regular Time Sheets window:

- The order of the fields is different.
- The fields "New Approval Status," "Approval Status," "Proposed Hours," "Proposed Billing Price, Unit," "Proposed Billing Price, Total," "Billing Price Registered," and "Transferred for Posting" from the window Approve Time Sheet Lines are included.
- The lines are sorted by job.
- Lines with zero registrations are filtered out.

For more information, see the introduction to this window.

## Actions

This section shows the actions available in the Approval Time Sheets workspace.

### Top Tab

Field	Description
<b>Approve All Possible</b>	When you select this action, it corresponds to selecting the actions “Mark All Lines for Approval” and “Carry Out Approval of Lines” followed by “Approve Time Sheet.” In other words, selecting this action first marks all lines for which the current user is project manager for approval. Then, the approval of marked lines is carried out, concluding the user’s task as a project manager. Finally, the entire time sheet is approved, thus concluding the user’s task as a supervisor.  For more information, please see a description of the mentioned actions in the windows Approve Time Sheet Lines and Time Sheets.
<b>Release Time Sheet</b>	The functionality of this action is similar to that of the action “Release Time Sheet” in the window Time Sheets.
<b>Approve Time Sheet</b>	The functionality of this action is similar to that of the action “Approve Time Sheet” in the window Time Sheets.
<b>Carry Out Approval</b>	The functionality of this action is similar to that of the action “Carry Out Approval” in the window Approve Time Sheet Lines.
<b>Mark all Lines for Approval</b>	The functionality of this action is similar to that of the action “Mark all Lines for Approval” in the window Approve Time Sheet Lines.
<b>Mark all Lines for Rejection</b>	The functionality of this action is similar to that of the action “Mark all Lines for Rejection” in the window Approve Time Sheet Lines.
<b>Mark Rejected Lines for Approval</b>	The functionality of this action is similar to that of the action “Mark Rejected Lines for Approval” in the window Approve Time Sheet Lines.
<b>Mark all Lines for Release</b>	The functionality of this action is similar to that of the action “Mark all Lines for Release” in the window Approve Time Sheet Lines.
<b>Unmark Lines for Approval</b>	The functionality of this action is similar to that of the action “Unmark Lines for Approval” in the window Approve Time Sheet Lines.
<b>Unmark Lines for Release</b>	The functionality of this action is similar to that of the action “Unmark Lines for Release” in the window Approve Time Sheet Lines.

## Approve Time Sheet Lines Workspace

Use this workspace to review time sheet lines that are not yet fully approved, sorted by the jobs to which they belong.

Time sheet lines that are not yet fully approved are according to the Project Manager approval functionality, which can be set up for the job. A project manager can use this workspace to review and approve time entries for his or her jobs.

### Approve Time Sheet Lines Tab

This section includes the fields and descriptions for the Approve Time Sheet Lines tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the time sheet lines in the sub-tab pertain. If the sub-tab is empty, the selection criteria do not include any submitted or temporarily submitted time sheet registrations for the job.
<b>Non-Invoiceable</b>	If this field is marked, the job is non-invoiceable. The mark is set in the window Jobs.
<b>Project Manager</b>	This field shows the name and number of the employee assigned as the project manager for the current job in the window Jobs.

#### Customer Island

Field	Description
<b>Customer</b>	This field shows the name and number of the customer which the current job concerns. Neither number nor name of the customer can be changed in this window.
<b>Customer Level</b>	This field shows the Customer Level number for the customer in question.

#### Customer Hierarchy Island

Field	Description
<b>Level 1-5.</b>	These fields display Customer No. and Name.

**Comment Island**

Field	Description
<b>Standard Comment</b>	In this field you can enter a comment to be transferred to a number of lines in the sub-tab. When you select the action "Transfer Comment to Rejected," "Transfer Comment to Approved," or "Transfer Comment to Released," the comment entered in this field is transferred to time sheet lines with the status indicated by the action name.
<b>Overwrite</b>	If you mark this field, existing comments on time sheet lines are overwritten when you choose to transfer comments in the Action menu. The field is by default not marked.

**Selection Criteria Island**

Field	Description
<b>Employee No.</b>	In these fields you can specify a range of employee numbers. The sub-tab will only show time sheet registrations entered by employees within the specified range. If the range is not completed, the fields do not affect which time sheet registrations are displayed in the sub-tab.
<b>Week</b>	In this field you can specify the week for which you want to see time sheet lines for the current job. Maconomy resets the field "Month" if you enter a number in this field.  If you use weekly time reporting, Maconomy suggests the current week. The field "Period Starting" shows the date range for the week you specify in this field.
<b>Month</b>	In this field you can specify the month for which you want to see time sheet lines for the current job. Maconomy resets the field "Week" if you enter a number in this field.  If you use monthly time reporting, Maconomy suggests the current month. The field "Period Starting" shows the date range for the month you specify in this field.
<b>Year</b>	In this field you can specify the year for which you want to see time sheet lines for the current job. If you enter a number in this field, you must also enter a number in the field "Week" or "Month." Maconomy suggests the current year in this field.
<b>Period Starting</b>	These fields show the range of dates for which time sheet lines are shown for the current job. The range corresponds to the range selected in the fields "Week," "Month," and "Year" above. You can also choose to enter a date range manually. If you do this, Maconomy will reset the fields "Week," "Month," and "Year."
<b>Activity No.</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Task</b>	The functionality of these fields is similar to that of the field "Employee No." above.

Field	Description
<b>Include Approved</b>	<p>If this field is marked, partially approved time sheet lines for the current job are also shown, provided that they match the selection criteria in this island. The field is by default not marked.</p> <p>Partially approved lines are lines that have already been approved by the project manager, but not by the supervisor. By marking this field, you are able to redisplay lines that you have already approved, but now want to reject, provided that they have not already been fully approved.</p>
<b>Include Unsubmitted</b>	<p>If this field is marked, unsubmitted time sheet lines for the current job are also shown, provided that they match the selection criteria in this island. The field is not marked by default.</p>
<b>Include Neutral</b>	<p>If this field is marked, neutral time sheet lines for the current job are also shown, provided that they match the selection criteria in this island.</p> <p>A neutral time sheet line is a line with no registrations, or the registration has already been posted to the G/L — for instance, a line may have been reopened, but is unchanged. Consequently, no further posting will be made to the G/L. This means the line is neutral in terms of the G/L, as the time on the line has already been posted to the G/L.</p>
<b>New Approval Status</b>	<p>In this field you can choose to show only those time sheet lines with a specific approval status in the field “New Approval Status” that matches the selection criteria in this island. You can choose between blank, “Approved,” “Rejected,” and “Released.” This field is by default not marked, thus allowing the display of lines with all types of approval status.</p>

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field “Employee No.” above.
<b>Entity</b>	The functionality of these fields is similar to that of the field “Employee No.” above.
<b>Project</b>	The functionality of these fields is similar to that of the field “Employee No.” above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field “Employee No.” above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Employee No.” above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Employee No.” above.

**Time Island**

Field	Description
<b>Monday – Sunday</b>	For every day in the week, the “Approve”, “Reject”, and “Balance” columns show a total of the number of hours in the sub-tab which are marked in a corresponding way in the <b>New Approval Status</b> field. The “Approve” column shows the total number of hours with the status “Approved”. The “Reject” column shows the total number of hours with the status “Rejected”. The “Balance” column shows the total number of hours with either no status in the <b>New Approval Status</b> field or with the status “Rejected.” Thus, the island shows the total number of hours which are approved, rejected, or left untouched when the <b>Carry Out Approval</b> action is selected. For lines from time sheets with the <b>Day</b> time unit, the quantity is converted to hours by multiplying with the number of hours per man day as specified on the job.
<b>Total</b>	These fields show the total of the number of hours for the various status types in the columns above. For lines from time sheets with the <b>Day</b> time unit, the quantity is converted to hours by multiplying with the number of hours per man day as specified on the job.

**Activities Island**

Field	Description
<b>Time Activity 1-3</b>	The functionality of these fields is similar to that of the <b>Monday – Sunday</b> fields in the Time island above, but the fields display the totals for the <b>Time Activity 1</b> , <b>Time Activity 2</b> , and <b>Time Activity 3</b> fields in the Time Sheet Lines sub-tab. The time activities are activities which are created as time sheet references. For lines from time sheets with the <b>Day</b> time unit, the quantity is converted to hours by multiplying with the number of hours per man day as specified on the job. For more information, please see the description of the Time Sheet References workspace.
<b>Amount Activity 1-4</b>	The functionality of these fields is similar to that of the <b>Monday – Sunday</b> fields in the Time island above, but the fields display the totals for the <b>Amount Activity 1</b> , <b>Amount Activity 2</b> , <b>Amount Activity 3</b> , and <b>Amount Activity 4</b> fields in the Time Sheet Lines sub-tab. The amount activities are activities which are created as time sheet references. For lines from time sheets with the <b>Day</b> time unit, the quantity is converted to hours by multiplying with the number of hours per man day as specified on the job. For more information, please see the description of the Time Sheet References workspace.

**Quantities Island**

Field	Description
<b>Quantity</b>	The functionality of these fields is similar to that of the fields “Monday – Sunday” in the island Hours above, but the fields display the totals for the field “Quantity” in the sub-tab.

Field	Description
<b>Quantity 2</b>	The functionality of these fields is similar to that of the fields “Monday – Sunday” in the island Hours above, but the fields display the totals for the field “Quantity 2” in the sub-tab.

## Time Sheet Lines Sub-Tab

This section includes the fields and descriptions for the Time Sheet Lines sub-tab.

Field	Description
<b>Week</b>	This field shows the number of the week in which the current time sheet line was entered. The field cannot be changed.
<b>Year</b>	This field shows the year in which the current time sheet line was entered. The field cannot be changed.
<b>Empl. No.</b>	This field shows the number of the employee who entered the current time sheet line. The field cannot be changed.
<b>Employee Name</b>	This field shows the name of the employee specified in the field “Empl. No.” above.
<b>Send Email</b>	This link opens a new email dialog in your operating system’s default email client. The To email address is populated with the email address of the employee on the time sheet line.  The current user (Project Manager) must add the subject and message and send the email.
<b>Submitted</b>	This field shows whether the time sheet line has been submitted. If it has been submitted, the field will be marked.
<b>Act. No.</b>	This field shows the activity on which the employee entered his or her hours. The field cannot be changed.
<b>Task</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>New Approval Status</b>	In this field you can enter the status you wish to assign to the current time sheet line when you select the action “Carry Out Approval.”  This field can be changed by the project manager or by users who have been given access to change all time sheets in the window Actions in the Set-Up module. When you press Return on the current line, the totals in the islands Hours, Activities, and Quantities are updated. If you use monthly time reporting, this field is updated for all lines belonging to the same month. The field can have one of four values: <ul style="list-style-type: none"> <li>▪ <b>Blank</b> — The blank (or empty) value means that you have not yet decided whether to approve or reject the current line. Time sheet lines with no status in this field are not transferred to posting when you select the action “Carry Out Approval.”</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>▪ <b>Approved</b> — If you select this value, the current time sheet line will be approved when you select the action “Carry Out Approval.” This means that the time sheet line will be transferred to posting if the supervisor has also approved the time sheet from which the time sheet line originates, provided that this is required by the approval principle selected for the job in the window Jobs. If the supervisor is not required to approve time sheets pertaining to the current job, the time sheet lines are transferred without the approval of the supervisor.</li> <li>▪ <b>Rejected</b> — If you select this value, the current time sheet line will be rejected when you select the action “Carry Out Approval.” This means that the time sheet line cannot be transferred to posting, and the time sheet from which the line originates cannot be marked as transferred in the window Time Sheets if the approval principle of the current job requires approval by the project manager.</li> <li>▪ <b>Released</b> — If the <b>Transf. Non-Appr. Time Sheets</b> field in the window System Information in the Set-Up module has been marked, you can choose to release the current time sheet line. This means that the time sheet line will be transferred to posting, if the supervisor has also approved or released the time sheet from which the line originates, provided that this is required by the approval principle selected for the job in the window Jobs. The time sheet line is not approved, however. Select this status if you cannot decide whether the line should be approved or rejected, but you want it to be released for posting.</li> </ul> <p>If a time sheet line originates from a time sheet which was temporarily submitted, you can only select blank or <b>Released</b> in this field.</p>
<b>Approval Status</b>	This field shows the approval status of the current line. The value in the <b>New Approval Status</b> field is transferred to this field when you select the <b>Carry Out Approval</b> action. The field cannot be changed manually.
<b>Comment</b>	In this field you can enter a comment on the current line. The comment is also displayed on the time sheet line in the window Time Sheets, and can be used to display a message to the employee who entered the line. For instance, you can enter a reason for the rejection of the current line. You can also transfer the standard comment from the field “Standard Comment” in the main tab to this field, depending on the status in the field “New Approval Status” on the line. See also the description of the three actions below which regard the transfer of comments.
<b>Total</b>	This field displays the total number of hours entered on the current time sheet line. The number is the sum of the hours entered in the <b>Monday – Sunday</b> fields on the current line. For time sheets in days, the quantity is converted to hours.

Field	Description
<b>Total for Employee</b>	<p>If the activity on the current line is a time activity, this field displays the total number of hours which the employee has registered on time activities on the job in question in the week to which the current line pertains. This means that the field shows the sum of hours entered in the <b>Monday – Sunday</b> fields on all lines pertaining to the job in the employee's time sheet of the week in question. For time sheets in days, the quantity is converted to hours.</p> <p>If the activity on the current line is an amount activity, the field displays the sum of quantities registered by the employee on the activity and job in question in the week to which the current line pertains.</p>
<b>Proposed Time</b>	<p>This field allows the project manager to specify the number of hours to be invoiced. The employee may have proposed a value for invoicing on the time sheet line, in which case this field suggests the value proposed by the employee. If the employee has not proposed a different number of hours to be invoiced, the initial value is equal to the number of registered hours.</p> <p>The number of hours suggested for invoicing in the Invoice Selection and Itemize Invoice Selection workspaces is based on the number of proposed hours in this field, pending final approval by the invoicing department. For time sheets in days, the quantity is converted to hours.</p>
<b>Proposed Billing Price, Unit</b>	<p>This field allows the project manager to propose a unit billing price for the registered hours. The value of this field is initially identical to the value in the <b>Billing Price Registered</b> field, but the project manager can adjust the value to propose a different unit billing price on a time sheet line.</p> <p>The unit billing price suggested for invoicing in the Invoice Selection and Itemize Invoice Selection workspaces is based on the proposed unit billing price in this field, pending final approval by the invoicing department.</p> <p>Please note that the proposed unit billing price overrides any price list changes made during the week in question. For instance, if a new price list is introduced during a week that spans across two months, the unit billing price proposed by the project manager or the employee is still applied for the entire week.</p>
<b>Proposed Billing Price, Total</b>	<p>This field allows the project manager to propose a total billing price for the registered hours. The value of this field equals the product obtained from multiplying the values in the fields "Proposed Hours" and "Proposed Billing Price, Unit." The project manager can adjust the value to propose a different total billing price. This will cause a subsequent adjustment of the value in the "Proposed Hours" field, leaving the value in the "Proposed Billing Price, Unit" field unchanged.</p> <p>However, if the project manager proposes a write-up or write-down in this field, while the system parameters "Keep quantity at write-up" or "Keep quantity at write-downs," respectively, are enabled, the value in the "Proposed Hours" field will remain unchanged. Instead, the value in the "Proposed Billing Price, Unit" field will be adjusted in accordance with this change.</p>

Field	Description
	<p>The total billing price suggested for invoicing in the Invoice Selection and Itemize Invoice Selection windows will be based on the proposed total billing price in this field, pending final approval by the invoicing department.</p> <p>Please note that the proposed total billing price overrides any price list changes made during the week in question. For instance, if a different unit billing price is introduced in a new price list during a week that spans across two months, the total billing price proposed by the project manager or the employee will still be applied for the entire week.</p>
<b>Billing Price, Currency</b>	This field shows the hourly billing price of the time sheet line in the currency of the job.
<b>Previously Transferred</b>	<p>This field indicates whether the time sheet line has already been approved and transferred – and subsequently reopened, changed, and resubmitted for approval.</p> <p>If the field is marked, the project manager is not allowed to propose changes in the fields “Proposed Hours,” “Proposed Billing Price, Unit,” and “Proposed Billing Price, Total.” In such cases, any additional changes to the unit billing price, the total billing price, or the invoiceable hours must be made in the Invoice Selection or Itemize Invoice Selection window.</p>
<b>Time Activity 1-3</b>	These fields show the number of hours entered by the employee on time activity 1-3 on the current line. For time sheets in days, the quantity is converted to hours.
<b>Amount Activity 1-4</b>	The functionality of these fields is similar to that of the fields “Time Activity 1-3.”
<b>Quantity</b>	The functionality of this field is similar to that of the fields “Time Activity 1-3.”
<b>Quantity 2</b>	The functionality of this field is similar to that of the fields “Time Activity 1-3.”
<b>Monday – Sunday</b>	The functionality of these fields is similar to that of the fields “Time Activity 1-3.” For time sheets in days, the quantity is converted to hours.
<b>Description</b>	This field shows the entry text entered by the employee on the time sheet line in question.
<b>Activity Type</b>	This field shows whether the activity registered on the line, shown in the field “Act. No.,” is of the type “Time” or “Amount.”
<b>Activity Name</b>	This field shows the name of the activity registered on the line, shown in the field “Act. No.”
<b>Task Description</b>	The functionality of this field is similar to that of the field “Activity Name.”

Field	Description
<b>Task Path</b>	This field shows any task path of the task. (See the description of hierarchical tables in the section “Task Path” in the chapter “Getting Started with the Java™ Client.”)
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Remarks</b>	This field shows any remarks entered on the line by the employee when registering the current line.
<b>Location</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Entity</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Project</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Purpose</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Act. No.”
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Act. No.”
<b>Overtime Spec.</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Description, Monday – Sunday</b>	These fields show the daily description of the task specified on the current line. For more information, see the description of the corresponding field in the window Time Sheets. You can change the description in these fields until you approve the time sheet line.
<b>Checked In, Time, Monday-Sunday</b>	This field shows the total check-in time entered on each day.
<b>Checked Out, Time, Monday-Sunday</b>	This field shows the total check-out time entered on each day.
<b>Checked in, Expected Time, Monday-Sunday</b>	This field shows the estimated total check-in time entered on each day.
<b>Checked out, Expected Time, Monday-Sunday</b>	This field shows the estimated total check-out time entered on each day.

Field	Description
<b>Check-in Enabled, Monday-Sunday</b>	This field specifies whether multiple check-in entries are enabled for each day.
<b>Check-in Enabled for Period</b>	This field specifies whether multiple check-in entries are enabled for the current period.
<b>Check-in Time, Monday-Sunday</b>	This field shows the total check-in time registered for each day.
<b>Check-in Time for Period</b>	This field shows the total check-in time registered for the current period.
<b>Check-in Balance, Monday-Sunday</b>	This field shows the remaining check-in balance for each day.
<b>Check-in Balance for Period</b>	This field shows the total remaining check-in balance for the current period.

## Actions

This section shows the actions available in the Approve Time Sheet Lines workspace.

### Top Tab

Field	Description
<b>Carry Out Approval</b>	<p>When you select this action, all status indications in the field "New Approval Status" are put into effect. If any time sheet lines are thus fully approved or released — that is, the time sheet from which the time sheet line originates was already approved or released by all the relevant persons, if this is required by the approval principle selected for the job in the window Jobs the lines in question are transferred to a time sheet journal which can then be posted. If the system parameter "Automatic posting of time sheets" is marked, the journal is posted automatically. If this system parameter is not marked, the journal must be posted in the window Posting in the G/L module. Please see the description of the field "New Approval Status" for more information about the effect of the different status indications.</p> <p>The field "Approval Status" is updated with the value of the field "New Approval Status."</p>
<b>Mark All for Approval</b>	When you select this action, all time sheet lines in the sub-tab are marked for approval. This means that the value in the field "New Approval Status" is set to the value "Approved" on all lines.

Field	Description
<b>Mark All for Rejection</b>	When you select this action, all time sheet lines in the sub-tab are marked for rejection. This means that the value in the field "New Approval Status" is set to the value "Rejected" on all lines.
<b>Mark Rejected for Approval</b>	When you select this action, all time sheet lines in the sub-tab that were previously marked for rejection are marked for approval. This means that the value in the field "New Approval Status" is set to the value "Approved" on all lines on which the field "Approval Status" was previously "Rejected."
<b>Mark All for Release</b>	When you select this action, all time sheet lines in the sub-tab are marked for release. This means that the value in the field "New Approval Status" is set to the value "Released" on all lines.  You can only select this action if the field "Transf. Non-Appr. Time Sheets" in the window System Information in the Set-Up module has been marked.
<b>Transfer Comment to Rejected</b>	When you select this action, the comment entered in the field "Standard Comment" in the main tab is transferred to the field "Comment" on all lines with an approval status of "Rejected" in the field "New Approval Status." If a comment is already entered on the line, it is overwritten by the standard comment if the field "Overwrite" in the island Comment has been marked. Otherwise, the existing comment in the field is retained.
<b>Transfer Comment to Approved</b>	When you select this action, the comment entered in the field "Standard Comment" in the main tab is transferred to the field "Comment" on all lines with an approval status of "Approved" in the field "New Approval Status." If a comment is already entered on the line, it is overwritten by the standard comment if the field "Overwrite" in the island Comment has been marked. Otherwise, the existing comment in the field is retained.
<b>Transfer Comment to Released</b>	When you select this action, the comment entered in the field "Standard Comment" in the main tab is transferred to the field "Comment" on all lines with an approval status of "Released" in the field "New Approval Status." If a comment is already entered on the line, it is overwritten by the standard comment if the field "Overwrite" in the island Comment has been marked. Otherwise, the existing comment in the field is retained.

## Approve Expense Sheet Lines Workspace

Use this workspace to review expense sheet and mileage sheet lines that are not yet fully approved, sorted by the jobs to which they belong.

A project manager can use this workspace to review and approve expense and mileage entries for his or her jobs.

The Approve Expense Sheet Lines workspace displays all of the expense sheet and mileage sheet lines that are not yet fully approved.

A submitted expense sheet or mileage sheet must be approved according to the approval principle selected in the Jobs workspace. Depending on the selected principle, the lines in an expense sheet or mileage sheet must be approved either by the employee's supervisor or by the

project manager of the job, by both, or by neither of them. You can also set up an approval hierarchy.

Note that you cannot use approval hierarchies and project manager approval together.

For example, if the approval principle specifies that both the supervisor and the project manager must approve entries for a job, an expense or mileage line is only fully approved when both have approved it. If only one has approved it, and the other has, for example, released it, the lines are only partially approved, even though they have been transferred for posting.

This workspace is primarily designed for use by project managers to approve expense and mileage lines for which approval by the project manager is optional or mandatory. However, users who have access to view all expense sheets and mileage sheets (set up in the Actions workspace in the Set-Up module) can also see the expense and mileage lines in this workspace. If they have access to change all expense sheets and mileage sheets, they can also approve expense and mileage lines here.

The project manager can browse through the expense and mileage lines by job and assign a status and a comment to each line. Depending on a line's status, the line is approved, rejected, or released when the project manager performs the **Carry Out Approval** action. This action can cause a number of lines to be transferred for posting, and expense sheets and mileage sheets to be marked as transferred in the Expense Sheets and Mileage Sheets workspaces.

If the approval principle for the job specifies that both the project manager and the supervisor must approve expense sheets and mileage sheets, both individuals must approve expense and mileage lines before those lines are transferred or considered fully approved.

You can view the status and comments of expense and mileage lines in the Expense Sheets or Mileage Sheets workspace.

Note that Maconomy calculates the proposed billing prices from the current job price list when the employee submits a time sheet, expense sheet, or mileage sheet. If the job price list is changed after the employee submits the sheet, the original amount is invoiced unless you enter different values before invoicing.

## Approve Expense Sheet Lines Tab

This section includes the fields and descriptions for the Approve Expense Sheet Lines tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the expense sheet lines in the sub-tab pertain. If the sub-tab is empty, the selection criteria do not include any submitted expense sheet registrations for the job.
<b>Non-Invoiceable</b>	If this field is marked, the job is non-invoiceable. The mark is set in the window Jobs.
<b>Project Manager</b>	This field shows the name and number of the employee assigned as the project manager for the current job in the window Jobs.

### Amount Island

Field	Description
<b>Approve</b>	This field shows the total of the amounts in the sub-tab with the mark "Approved" in the field "New Approval Status." The amount is displayed in the currency shown in the field "Currency" in this island.
<b>Reject</b>	This field shows the total of the amounts in the sub-tab with the mark "Rejected" in the field "New Approval Status." The amount is displayed in the currency shown in the field "Currency" in this island.
<b>Balance</b>	This field shows the total of the submitted amounts in the sub-tab that are neither marked "Approved" nor "Rejected." The amount is displayed in the currency shown in the "Currency" field in this island.
<b>Unsubmitted</b>	This field shows the total of the amounts in the sub-tab that come from unsubmitted expense sheets. Notice that unsubmitted expense sheet lines are only included if you mark the "Include Unsubmitted" check box. The amount is displayed in the currency shown in the "Currency" field in this island.
<b>Total</b>	This field shows the total of the amounts in the sub-tab. The amount is displayed in the currency shown in the "Currency" field in this island.
<b>Currency</b>	In this field you can select the currency in which you want to display the amounts in the fields above. You can choose between the currencies defined in the Popup Fields window in the Set-Up module. By default, Maconomy will show the base currency of the company to which the current employee is assigned. If the current user has not been assigned an employee number in the Users window in the Set-Up module, the enterprise currency is used by default.

### Customer Island

Field	Description
<b>Customer</b>	This field shows the name and number of the customer which the current job concerns. Neither number nor name of the customer can be changed in this window.
<b>Customer Level</b>	This field shows the Customer Level number for the customer in question.

### Customer Hierarchy Island

Field	Description
<b>Level 1-5</b>	These fields show the customers in the hierarchy levels above the customer on the line. The customer on the line will be among the names, thus that customer is a member of the hierarchy. These fields are only available if customer levels are set up using the designated System Parameters.

**Comment Island**

Field	Description
<b>Standard Comment</b>	In this field you can enter a comment to be transferred to a number of lines in the sub-tab. When you select the action "Transfer Comment to Rejected," "Transfer Comment to Approved," or "Transfer Comment to Released," the comment entered in this field is transferred to expense sheet lines with the status indicated by the action name.
<b>Overwrite</b>	If you mark this field, existing comments on expense sheet lines are overwritten when you choose to transfer comments in the Action menu. The field is by default not marked.

**Selection Criteria Island**

Field	Description
<b>Employee No.</b>	In these fields you can specify a range of employee numbers. The sub-tab will only show expense sheet registrations entered by employees within the specified range. If the range is not completed, the fields do not affect which expense sheet registrations are displayed in the sub-tab.
<b>Activity</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Task</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Include Approved</b>	<p>If this field is marked, partially approved expense sheet lines for the current job are also shown if they match the other selection criteria in this island. The field is by default not marked.</p> <p>"Partially approved" means lines which have already been approved by the project manager, but not by the supervisor. By marking this field, you are able to redisplay lines which you have already approved, but which you now want to reject, provided they have not already been fully approved.</p>
<b>Include Unsubmitted</b>	<p>If this field is marked, unsubmitted expense sheet lines for the current job are also shown if they match the other selection criteria in this island.</p> <p>"Unsubmitted" means lines which have been created but not yet submitted. Marking this field allows the supervisor to gain an overview of future expenses and identify employees with outstanding expense sheet lines.</p>
<b>New Approval Status</b>	In this field you can choose to show only those expense sheet lines with a specific approval status in the field "New Approval Status" that matches the other selection criteria in this island. You can choose between blank, "Approved," "Rejected," and "Released." The field is by default not marked, thus allowing the display of lines with all types of approval status.

**Selection Criteria, Dimensions Island**

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Employee No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Employee No." above.

**Quantities Island**

Field	Description
<b>Quantity</b>	The functionality of these fields is similar to that of the fields "Approve," "Reject," and "Missing" in the island Amount above, but the fields display the totals for the field "Quantity" in the sub-tab.
<b>Quantity 2</b>	The functionality of these fields is similar to that of the fields "Approve," "Reject," and "Remainder" in the island Amount above, but the fields display the totals for the field "Quantity 2" in the sub-tab.

**Expense Sheet Lines Sub-Tab**

This section includes the fields and descriptions for the Expense Sheet Lines sub-tab.

Field	Description
<b>Empl. No.</b>	This field shows the number of the employee who entered the current expense sheet line. The field cannot be changed.
<b>Submitted</b>	This field shows whether the time sheet line has been submitted. If it has been submitted, the field will be marked.
<b>Employee Name</b>	This field shows the name of the employee specified in the field "Empl. No." above.
<b>Send Email</b>	This link will open up a new email dialog in your operating system default email client. The to email address will be prefilled with the email address of the employee on the expense sheet line.  The current user (the project manager) must add a subject and message and send the email.

Field	Description
<b>Act. No.</b>	This field shows the activity on which the employee entered his or her expenses. The field cannot be changed.
<b>Task</b>	The functionality of this field is similar to that of the field "Act. No."
<b>New Approval Status</b>	<p>In this field you can enter the status you wish to assign to the current expense sheet line when you select the action "Carry Out Approval."</p> <p>This field can be changed by the project manager or by users who have been given access to change all time sheets in the window Actions in the Set-Up module. When you press Return on the current line, the totals in the islands Amount and Quantities are updated. The field can have one of four values:</p> <ul style="list-style-type: none"> <li>Blank — The blank (or empty) value means that you have not yet decided whether to approve or reject the current line. Expense sheet lines with no status in this field are not transferred to posting when you select the action "Carry Out Approval."</li> <li>Approved — If you select this value, the current expense sheet line will be approved when you select the action "Carry Out Approval." This means that the expense sheet line will be transferred to posting if the supervisor has also approved the expense sheet from which the expense sheet line originates, provided that this is required by the approval principle selected for the job in the window Jobs. If the supervisor is not required to approve expense sheets pertaining to the current job, the expense sheet lines are transferred without the approval of the supervisor.</li> <li>Rejected — If you select this value, the current expense sheet line will be rejected when you select the action "Carry Out Approval." This means that the expense sheet line cannot be transferred to posting, and the expense sheet from which the line originates cannot be marked as transferred in the window Expense Sheets if the approval principle of the current job requires approval by the project manager.</li> <li>Released — If the field "Transf. Non-Appr. Time Sheets" in the window System Information in the Set-Up module is selected, you can choose to release the current expense sheet line. This means that the expense sheet line will be transferred to posting if the supervisor has also approved or released the expense sheet from which the line originates, provided that this is required by the approval principle selected for the job in the window Jobs. The expense sheet line is not approved, however. Select this status if you cannot decide whether the line should be approved or rejected, but you want it to be released for posting.</li> </ul>
<b>Approval Status</b>	This field shows the approval status of the current line. The value in the field "New Approval Status" is transferred to this field when you select the action "Carry Out Approval." The field cannot be changed manually.

Field	Description
<b>Comment</b>	In this field you can enter a comment on the current line. The comment is also displayed on the expense sheet line in the window Expense Sheets and can be used to display a message to the employee who entered the line. For instance, you can enter a reason for the rejection of the current line. You can also transfer the standard comment from the field "Standard Comment" in the main tab to this field, depending on the status in the field "New Approval Status" on the line. See also the description of the three actions below which regard the transfer of comments.
<b>Quantity</b>	This field displays the total number of units entered on the current expense sheet line.
<b>Unit Price, Base</b>	This field displays the price of one unit of the expense registered on the line. The price, which includes tax, is shown in the base currency of the company responsible for the job.
<b>Amount, Base</b>	This field displays the total price of the expense registered on the line. The price, which includes tax, is shown in the base currency of the company responsible for the job.
<b>Base Currency</b>	This field displays the base currency of the company to which the current employee is assigned. If the employee is not assigned to a company, the enterprise currency is used.
<b>Total Amount, Employee</b>	This field displays the total amount which the employee on the current line has registered on the expense sheet lines matching the selection criteria set up in the main tab. The amount is shown in the base currency entered on the expense sheet.
<b>Base Currency, Employee</b>	This field shows the base currency of the company to which the employee on the current line is assigned.
<b>Tax Code (Tax Code 1-3)</b>	This field displays the tax code for the expense registered on the line. If multiple tax codes are enabled, the "Tax Code" field will be replaced by the following fields: "Tax Code 1," "Tax Code 2," and, if three tax levels are enabled, "Tax Code 3." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Tax, Base (Tax 1-3, Base)</b>	This field displays the tax part of the amount registered on the line, in base currency. If multiple tax codes are enabled, the "Tax, Base" field will be replaced by the following fields: "Tax 1, Base," "Tax 2, Base," and, if enabled, "Tax 3, Base." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Proposed Quantity</b>	This field allows the project manager to adjust the invoiceable quantity entered by the employee on an expense sheet line. By default, the proposed quantity will equal the quantity entered by the employee.

Field	Description
	The quantity suggested for invoicing in the Invoice Selection and Itemize Invoice Selection windows will be based on the proposed quantity in this field, pending final approval by the invoicing department.
<b>Proposed Billing Price, Unit</b>	<p>This field allows the project manager to propose a unit billing price for the registered quantity. The value of the field will initially be identical to the value in the Billing Price Registered field, but the project manager can adjust the unit billing price on an expense sheet line.</p> <p>The unit billing price suggested for invoicing in the Invoice Selection and Itemize Invoice Selection windows will be based on the proposed unit billing price in this field, pending final approval by the invoicing department.</p> <p>Please note that the proposed unit billing price overrides any price list changes made during the week in question. For instance, if a new price list is introduced during a week that spans across two months, the unit billing price proposed by the project manager will still be applied for the entire week.</p>
<b>Proposed Billing Price, Total</b>	<p>This field allows the project manager to propose a total billing price for the registered quantity. The value of the field is calculated by multiplying the values in the fields "Proposed Hours" and "Proposed Billing Price, Unit." The project manager can adjust the value to propose a different total billing price. This will cause an automatic adjustment of the value in the field "Proposed Quantity," leaving the value in the field "Proposed Billing Price, Unit" unchanged.</p> <p>However, if the project manager proposes a write-up or write-down in this field while the system parameters "Keep quantity at write-up" or "Keep quantity at write-downs," respectively, are enabled, the value in the "Proposed Hours" field will remain unchanged. Instead, the value in the "Proposed Billing Price, Unit" field will be adjusted in accordance with this change.</p> <p>The total billing price suggested for invoicing in the Invoice Selection and Itemize Invoice Selection windows will be based on the proposed total billing price in this field, pending final approval by the invoicing department.</p> <p>Please note that the proposed total billing price overrides any price list changes made during the week in question. For instance, if a new price list is introduced during a week that spans across two months, the unit billing price proposed by the project manager will still be applied for the entire week.</p>
<b>Billing Price Registered</b>	This field shows the unit billing price derived from the currently applied price list. The project manager can use the value in this field for reference in case the project manager needs to undo proposed changes to the unit billing price.
<b>Previously Transferred</b>	This field indicates whether the expense sheet line has already been approved and transferred, and subsequently reopened, changed, and resubmitted for approval.

Field	Description
	If this field is marked, the project manager is not allowed to propose changes in the fields "Proposed Quantity," "Proposed Billing Price, Unit," and "Proposed Billing Price, Total." In such cases, any additional changes to the unit billing price, the total billing price, or the invoiceable quantity must be made in the Invoice Selection or Itemize Invoice Selection window.
<b>Quantity</b>	This field displays the number registered in the field "Quantity" on the current expense sheet line.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field "Quantity" above.
<b>Unit Price, Currency</b>	This field displays the price of one unit of the expense registered on the line. The price is shown in the currency in which the expense was paid, including tax.
<b>Amount, Currency</b>	This field displays the total price of the expense registered on the line. The price is shown in the currency in which the expense was paid, including tax.
<b>Tax, Currency (Tax 1-3, Currency)</b>	This field displays the tax part of the amount registered on the line, in the currency in which the expense was paid. If multiple tax codes are enabled, the "Tax, Currency" field will be replaced by the following fields: "Tax 1, Currency," "Tax 2, Currency," and, if enabled, "Tax 3, Currency." For further information on multiple tax codes, please see the description in "Tax Codes."
<b>Currency</b>	This field displays the currency in which the expense was paid.
<b>Expense Type</b>	This field shows whether the expense in this line is to be treated as a normal expense or a mileage expense.
<b>Mileage From</b>	This field displays from which point the mileage expenses should be calculated.
<b>Mileage To</b>	This field displays to which point the mileage expenses should be calculated.
<b>Mileage Via</b>	This field displays a point or location on the route between the Mileage From and Mileage To points.
<b>Mileage, Vehicle</b>	This field displays whether the vehicle used is a company car or a private car.
<b>Description</b>	This field shows the entry text entered by the employee on the expense sheet line in question. The text specified in this field is applied to the job entry at posting.
<b>Activity Name</b>	This field shows the name of the activity registered on the line, shown in the field "Act. No."
<b>Task Description</b>	The functionality of this field is similar to that of the field "Activity Name."

Field	Description
<b>Task Path</b>	This field shows any task path of the task. (See the description of hierarchical tables in the section “Task Path” in the chapter “Getting Started with the Java™ Client.”)
<b>Reference</b>	This field shows any reference entered on the line by the employee when registering the current line.
<b>Start Date</b>	The functionality of this field is similar to that of the field “Reference.”
<b>Started</b>	The functionality of this field is similar to that of the field “Reference.”
<b>Closing Date</b>	The functionality of this field is similar to that of the field “Reference.”
<b>Finished</b>	The functionality of this field is similar to that of the field “Reference.”
<b>Invoiceable</b>	This field shows whether or not the line is invoiceable.
<b>Expense Justification Help Text</b>	The information in this field is available on the expense sheet line and informs the user about the type of information required to complete the Expense Justification field. If this field is not empty, the user will have to complete the Expense Justification before submitting the expense sheet.
<b>Expense Justification</b>	In this field, you can enter a justification for the expense.
<b>Remarks 1-3</b>	The functionality of these fields is similar to that of the field “Reference.”
<b>Location</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Entity</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Project</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Purpose</b>	The functionality of this field is similar to that of the field “Act. No.”
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Act. No.”
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Act. No.”

## Actions

This section shows the actions available in the Approve Expense Sheet Lines workspace.

### Top Tab

Field	Description
<b>Carry out Approval</b>	<p>When you select this action, all status indications in the field "New Approval Status" are put into effect. If any expense sheet lines are thus fully approved or released — that is, the expense sheet from which the time sheet line originates was already approved or released by the supervisor, if this is required by the approval principle selected for the job in the window Jobs the lines in question are transferred to an expense sheet journal which can then be posted. If the system parameter "Automatic posting of expense sheets" is marked, the journal is posted automatically. If the system parameter is not marked, the journal must be posted in the window Posting in the G/L module. Please see the description of the field "New Approval Status" for more information about the effect of the different status indications.</p> <p>The field "Approval Status" is updated with the value of the field "New Approval Status."</p>
<b>Mark All for Approval</b>	<p>When you select this action, all expense sheet lines in the sub-tab are marked for approval. This means that the value in the field "New Approval Status" is set to the value "Approved" on all lines.</p>
<b>Mark All for Rejection</b>	<p>When you select this action, all expense sheet lines in the sub-tab are marked for rejection. This means that the value in the field "New Approval Status" is set to the value "Rejected" on all lines.</p>
<b>Mark Rejected for Approval</b>	<p>When you select this action, all expense sheet lines in the sub-tab that were previously marked for rejection are marked for approval. This means that the value in the field "New Approval Status" is set to the value "Approved" on all lines on which the field "Approval Status" was previously "Rejected."</p>
<b>Mark All for Release</b>	<p>When you select this action, all expense sheet lines in the sub-tab are marked for release. This means that the value in the field "New Approval Status" is set to the value "Released" on all lines.</p> <p>This action can only be used if the field "Trans. Non-Appr. Time Sheets" has been marked in the window System Information, and the current user has access to transferring expense sheets as specified in the window Actions. The employee specified as the project manager for the current job, however, always has the right to release time sheets for the employee in question.</p>
<b>Transfer Comment to Rejected</b>	<p>When you select this action, the comment entered in the field "Standard Comment" in the main tab is transferred to the field "Comment" on all lines with an approval status of "Rejected" in the field "New Approval Status." If a comment is already entered on the line, it is overwritten by the standard comment if the field "Overwrite" in the island Comment has been marked. Otherwise, the existing comment in the field is retained.</p>

Field	Description
<b>Transfer Comment to Approved</b>	When you select this action, the comment entered in the field “Standard Comment” in the main tab is transferred to the field “Comment” on all lines with an approval status of “Approved” in the field “New Approval Status.” If a comment is already entered on the line, it is overwritten by the standard comment if the field “Overwrite” in the island Comment has been marked. Otherwise, the existing comment in the field is retained.
<b>Transfer Comment to Released</b>	When you select this action, the comment entered in the field “Standard Comment” in the main tab is transferred to the field “Comment” on all lines with an approval status of “Released” in the field “New Approval Status.” If a comment is already entered on the line, it is overwritten by the standard comment if the field “Overwrite” in the island Comment has been marked. Otherwise, the existing comment in the field is retained.

## Approve Job Registrations Workspace

Use this workspace to review time sheet and expense sheet lines that are not yet fully approved, sorted by the jobs to which they belong.

Then you can process lines in batches, releasing, approving, or rejecting multiple lines at once. A project manager can use this workspace to review and approve entries for his or her jobs.

Use this workspace to review all jobs that have unapproved time sheet and/or expense sheet entries that require the approval of a given project manager within a given time interval. This workspace only displays information about those jobs for which **Required** or **Optional** has been specified for project manager approval in the Approval island in the Jobs workspace.

Use the Approve Job Registrations tab to enter selection criteria that determine which jobs display and for what date range. the information that is shown. In the Jobs sub-tab, information is summarized and displayed in one line for each job.

If you selected the **Show Totals** field, the Approve Job Registrations tab displays summarized information about the total number of hours (from time sheets) and amounts (from expense sheets) entered for approved and unapproved entries for the selected jobs.

You can assign a status to each line in the Jobs sub-tab. Depending on the selected status, the lines are approved, rejected, or released when you use the **Approve Time** or **Approve Expenses** action in the Action menu. These actions can cause a number of lines to be transferred for posting.

If the approval principle for the job specifies that both the project manager and the supervisor must approve time sheets and expense sheets, both individuals must approve time and expense lines before those lines are transferred or considered fully approved.

All of the time and expenselines in the Jobs sub-tab can be batch selected or deselected for release, approval, or rejection, using the actions in this workspace. However, if you need to review the lines in more detail, you can see and approve the lines individually in the Approve Time Sheet Lines and Approve Expense Sheet Lines workspaces. If you have already selected time sheet lines or expense sheet lines for approval or approved them for posting in the Time Sheet Lines and Approve Expense Sheet Lines, this action is reflected on the lines in this workspace.

If you select the **Include Approved Jobs** field, the Jobs sub-tab also displays those jobs for which all time and expense entries have already been approved. However, the sub-tab never shows information about jobs for which no entries have been made.

### Approve Job Registrations Tab

This section includes the fields and descriptions for the Approve Job Registrations tab.

#### Selection Criteria Island

Field	Description
<b>Show Lines</b>	If you mark this field, the sub-tab will display information about the jobs meeting the selection criteria specified in this island.
<b>Show Totals</b>	Only if this field is marked will the islands Budget, Time, and Expense show totals for the lines displayed in the sub-tab.
<b>Week</b>	In this field, you can enter the number of a week. The sub-tab will only display time and expenses registered in the specified week. Note that you should also enter a year in the field "Year" to have the correct week displayed in the sub-tab. If you do not enter a week, this field will have no influence on the number of time and expenses shown in the sub-tab when the field "Show lines" is marked.
<b>Month</b>	In this field, you can enter the number of a month. The sub-tab will only display time and expenses registered in the specified month. Note that you should also enter a year in the field "Year" to have the correct month displayed in the sub-tab. If you do not enter a month, this field will have no influence on the number of time and expenses shown in the sub-tab when the field "Show lines" is marked.
<b>Year</b>	In this field, you can enter a year. The information is used in connection with a specification of weeks and months in the above fields. The sub-tab will only display time and expenses registered in months and weeks within the specified year.
<b>Date Interval</b>	In these fields, you can enter a range of dates. Only jobs for which submitted time sheets or expense sheets exist with registrations within the specified date range will be displayed in the sub-tab. This means that for time sheet lines, all registrations made in weeks with a starting period within the specified date range will be included in the sub-tab, and for expense sheet lines, the entry date of the expense sheet line must be within the specified date range for the expense sheet line amount to be included in the sub-tab. If you change the dates in these fields, the values in the fields "Weeks," "Month," and "Year" will be reset.
<b>Employee No.</b>	In these fields, you can enter a range of employee numbers. The sub-tab will only display time and expenses registered by employees within the specified range.

Field	Description
<b>Project Manager No.</b>	If you specify a project manager number in this field, only those jobs on which the employee specified in this field is assigned as project manager will be displayed in the sub-tab. The default value in this field is the current user's employee number.
<b>Job No.</b>	In these fields, you can enter a range of job numbers. Only jobs with numbers within the specified range will be displayed in the sub-tab. If the current user is not authorized to see all time and expense registrations made in the system, only jobs having the current user as project manager will be displayed in the sub-tab.
<b>Company No.</b>	In these fields, you can enter a range of responsible companies. The sub-tab will only display time and expenses registered by employees belonging to companies within the specified range.
<b>Include Approved Jobs</b>	If you mark this field, jobs on which all time or expense registrations have already been approved will be displayed in the sub-tab, provided that they fulfill the selection criteria specified in this island.
<b>New Approval Status, Time</b>	In this field, you can select one of the three values "Released," "Approved," or "Rejected." If you select one of these values in this field, only jobs with time sheets having the specified approval status will be displayed in the sub-tab. If you leave this field blank, all jobs meeting the selection criteria are displayed in the sub-tab. See the description of the field "New Approval Status, Time" in the sub-tab for further information about the available options.
<b>New Approval Status, Expenses</b>	In this field, you can select one of the three values "Released," "Approved," or "Rejected." If you select one of these values in this field, only jobs with expense sheets having the specified approval status will be displayed in the sub-tab. If you leave this field blank, all jobs meeting the selection criteria are displayed in the sub-tab. See the description of the field "New Approval Status, Time" in the sub-tab for further information about the available options.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	In these fields, you can enter a range of locations. Only jobs with a location within the specified range will be displayed in the sub-tab.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.

Field	Description
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.

### Budget Island

Field	Description
<b>Cost, Enterprise</b>	This field shows the total of all budgeted cost prices of the jobs displayed in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Billing Price, Enterprise</b>	This field shows the total of all budgeted billing prices of the jobs displayed in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.

### Time Island

Field	Description
<b>Time Unit</b>	In this field, you can specify the time unit (Hours or Days) for the display of time in this workspace.

Field	Description
<b>Non-Approved</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on unapproved time sheet lines on the jobs displayed in the sub-tab. If the <b>Show Totals</b> check box in the Selection Criteria island is not selected, this field does not show any value.
<b>Marked For Approval</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered on time sheet lines that have been submitted, but which are unapproved and marked for approval on the jobs displayed in the sub-tab.
<b>Marked For Rejection</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on those time sheet lines that are marked for rejection on the jobs in the sub-tab.
<b>Marked For Release</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on those time sheet lines that are marked for release on the jobs in the sub-tab.
<b>Approved</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) that have been approved on the jobs in the sub-tab.
<b>Rejected</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on those time sheet lines that have been rejected on the jobs in the sub-tab.

Field	Description
<b>Released</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on those time sheet lines that have been released on the jobs in the sub-tab.
<b>Total</b>	This field shows the total number of hours or days (depending on the unit specified in the <b>Time Unit</b> field) registered and submitted on time sheet lines on the jobs displayed in the sub-tab.

### Expenses Island

Field	Description
<b>Non-Approved</b>	This field shows the total amount registered and submitted on unapproved expense sheet lines on the jobs displayed in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Marked for Approval</b>	This field shows the total amount registered on expense sheet lines that have been submitted, but which are unapproved and marked for approval on the jobs displayed in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Marked for Rejection</b>	This field shows the total amount registered and submitted on those expense sheet lines that are marked for rejection on the jobs in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Marked for Release</b>	This field shows the total amount registered and submitted on those expense sheet lines that are marked for release on the jobs in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Approved</b>	This field shows the total amount registered and submitted on those expense sheet lines that have been approved on the jobs in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Rejected</b>	This field shows the total amount registered and submitted on those expense sheet lines that have been rejected on the jobs in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Released</b>	This field shows the total amount registered and submitted on those expense sheet lines that have been released on the jobs in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.
<b>Total</b>	This field shows the total amount registered and submitted on expense sheet lines on the jobs displayed in the sub-tab. If the field "Show Totals" in the island Selection Criteria has not been marked, this field will not show any value.

## Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Job No.</b>	This field shows the number of the job to which the registration on the current line pertains.
<b>Job Name</b>	This field shows the name of the job on the current line.
<b>Project Manager No.</b>	This field shows the number of the employee who is project manager on the job.
<b>Name of Project Manager</b>	This field shows the name of the employee who is project manager on the job.
<b>New Approval Status, Time</b>	<p>In this field you can enter the status you wish to assign to the current line when you select the action "Approve Time."</p> <p>This field can be changed by the project manager or by users who have been given access to changing all time sheets in the window Actions in the Set-Up module. If you have marked the field "Show Totals" in the main tab, the totals in the island Time are updated when you press Return on the current line. The field can have one of five values:</p> <ul style="list-style-type: none"> <li>Blank — The value "Blank" means that you have not yet decided whether to approve or reject the current line. Lines applying to a job with no status in this field are not transferred when you select the action "Approve Time."</li> <li>Approved — If you select this value, the current job's time sheet lines will be approved when you select the action "Approve Time." This means that the job's time sheet lines within the specified selection criteria will be transferred for posting if the supervisor has also approved the time sheets from which the time sheet lines originate, provided that this is required by the approval principle selected for the job in the window Jobs. If the supervisor is not required to approve time sheets pertaining to the current job, the time sheet lines are transferred without the approval of the supervisor.</li> <li>Rejected — If you select this value, the current job's time sheet lines will be rejected when you select the action "Approve Time." This means that the time sheet lines cannot be transferred for posting, and the time sheets from which the lines originate cannot be transferred in the window Time Sheets if the approval principle of the current job requires approval by the project manager.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Released — If you select this value, the current job's time sheet lines will be released when you select the action "Approve Time." If the field "Transf. Non-Appr. Time Sheets" in the window System Information in the Set-Up module is marked, time sheets can be transferred to a job journal before they have been approved. This means that the time sheet lines will be transferred to posting if the supervisor has also approved or released the time sheets from which the lines originate, provided that this is required by the approval principle selected for the job in the window Jobs. The time sheet lines are not approved, however. Select this status if you cannot decide whether the lines should be approved or rejected, but you want them to be released for posting.</li> <li>Misc. — "Misc." cannot be selected manually. However, Maconomy might automatically show the value "Misc." in this field. This value will, for example, be shown if in the window Approve Time Sheets, one line on a time sheet has been marked for approval while other lines on the same time sheet are marked for rejection or have not been marked at all. In such situations, a job cannot be unambiguously marked for approval, rejection, or release in this window. However, when you select the action "Approve Time," the relevant time sheet lines will be released/rejected/approved in accordance with the status specified on the lines in the windows Approve Time Sheets or Approve Time Sheet Lines. If you want to inspect the actual status of the lines before carrying out the necessary actions, the lines can be inspected in the windows Approve Time Sheets or Approve Time/Expense Sheet Lines, where they can also be released, rejected, or approved.</li> </ul>
<b>New Approval Status, Expenses</b>	<p>In this field you can enter the status you wish to assign to the current line when you select the action "Approve Expenses."</p> <p>The functionality of this field is similar to that of the field "New Approval Status, Time"; except that this field concerns amount registrations made on expense sheets. See the description of the field "New Approval Status, Time" for further information about the options in this field.</p>
<b>Cost, Budget, Base</b>	<p>This field shows the total budgeted cost of the job in the base currency of the company being responsible for the job.</p>
<b>Billing Price, Budget, Base</b>	<p>This field shows the total budgeted billing price of the job in the base currency of the company being responsible for the job.</p>
<b>Time, Not Approved</b>	<p>This field shows the number of unapproved hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) that are registered on the job on the line.</p>

Field	Description
<b>Time, Marked for Approval</b>	This field shows the number of unapproved hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) that are registered on the job on the line that have been marked for approval.
<b>Time, Marked for Rejection</b>	This field shows the total number of unapproved hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) which are registered on the job on the line that have been marked for rejection.
<b>Time, Marked for Release</b>	This field shows the total number of unapproved hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) which are registered on the job on the line that have been marked for release.
<b>Time, Approved</b>	This field shows the total number of hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) that are approved on the current job.
<b>Time, Rejected</b>	This field shows the total number of hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) that are rejected on the current job.
<b>Time, Released</b>	This field shows the total number of hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) that are released on the current job.
<b>Time, Total</b>	This field shows the total number of hours or days (depending on the time unit specified in the <b>Time Unit</b> field in the Approve Job Registrations tab) registered on the current job.
<b>Amount, non-approved</b>	This field shows the total amount of unapproved expense sheet lines assigned to the current job. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, marked for approval</b>	This field shows the job's total amount of expense sheet lines that have been marked for approval. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, marked for rejection</b>	This field shows the job's total amount of expense sheet lines that have been marked for rejection. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, marked for release</b>	This field shows the job's total amount of expense sheet lines that have been marked for release. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, Approved</b>	This field shows the job's total amount of expense sheet lines that have been approved. The amount is displayed in the base currency of the company responsible for the job.

Field	Description
<b>Amount, Rejected</b>	This field shows the job's total amount of expense sheet lines that have been rejected. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, Released</b>	This field shows the job's total amount of expense sheet lines that have been released. The amount is displayed in the base currency of the company responsible for the job.
<b>Amount, Total</b>	This field shows the total amount registered on expense sheet lines on the job. The amount is displayed in the base currency of the company responsible for the job.
<b>Base Currency</b>	This field shows the base currency of the company responsible for the job.
<b>Location</b>	This field shows the location assigned to the job.
<b>Entity</b>	This field shows the entity assigned to the job.
<b>Project</b>	This field shows the project assigned to the job.
<b>Purpose</b>	This field shows the purpose assigned to the job.
<b>Spec. 1-3</b>	This field shows the specification 1-3 values assigned to the job.
<b>Local Spec. 1-3</b>	This field shows the local specification 1-3 values assigned to the job.

## Actions

This section shows the actions available in the Approve Job Registrations workspace.

### Top Tab

Field	Description
<b>Mark for Approval of Time</b>	When you select this action, all time sheet registrations on the relevant jobs are marked for approval. This means that the value in the field "New Approval Status, Time" is set to the value "Approved" on the affected lines.
<b>Mark for Rejection of Time</b>	When you select this action, all time sheet registrations on the relevant jobs are marked for rejection. This means that the value in the field "New Approval Status, Time" is set to the value "Rejected" on the affected lines.

Field	Description
<b>Mark for Release of Time</b>	When you select this action, all time sheet registrations on the relevant jobs are marked for release. This means that the value in the field "New Approval Status, Time" is set to the value "Released" on the affected lines.
<b>Unmark Time</b>	When you select this action, all jobs within the selection criteria registered for time approval, rejection, or release will be unmarked; that is, the field "New Approval Status, Time" will be blanked on all the relevant lines.
<b>Mark for Approval of Expenses</b>	When you select this action, all expense sheet registrations on the relevant jobs are marked for approval. This means that the value in the field "New Approval Status, Expense" is set to the value "Approved" on the affected lines.
<b>Mark for Rejection of Expenses</b>	When you select this action, all expense sheet registrations on the relevant jobs are marked for rejection. This means that the value in the field "New Approval Status, Expense" is set to the value "Rejected" on the affected lines.
<b>Mark for Release of Expenses</b>	When you select this action, all expense sheet registrations on the relevant jobs are marked for release. This means that the value in the field "New Approval Status, Expense" is set to the value "Released" on the affected lines.
<b>Unmark Expenses</b>	When you select this action, all jobs within the selection criteria registered for expense approval, rejection or release will be unmarked; that is, the field "New Approval Status, Expense" will be blanked on all the relevant lines.
<b>Approve Time</b>	When you select this action, all status indications in the field "New Approval Status, Time" are put into effect. This means that the action approves, rejects, and releases all time sheet registrations for the jobs displayed in the sub-tab that are marked for time approval/rejection/release. If any time sheet lines are thus fully approved or released — that is, the time sheet from which the time sheet line originates was already approved or released by all the relevant persons, if this is required by the approval principle selected for the job in the window Jobs the lines in question are transferred to a time sheet journal which can then be posted. If the system parameter "Automatic posting of time sheets" is marked, the time sheet journal is posted automatically. If the system parameter is not marked, the journal can be posted in the window Posting in the G/L module. Please see the description of the field "New Approval Status, Time" for more information about the effect of the different status indications. The fields in the main tab are updated upon selection of this action.
<b>Approve Expenses</b>	When you select this action, all status indications in the field "New Approval Status, Expense" are put into effect. This means that the action approves, rejects, and releases all expense sheet registrations for the jobs displayed in the sub-tab that are marked for time approval/rejection/release. If expense sheets are approved or released, the lines in question are transferred to an expense sheet journal which can then be posted. If the system parameter "Automatic posting of expense sheets" is marked, the expense sheet journal is

Field	Description
	<p>posted automatically. If the system parameter is not marked, the journal can be posted in the window Posting in the G/L module.</p> <p>The fields in the main tab are updated upon selection of this action.</p>

## Supervisor Time Sheet Status Workspace

Use this workspace if you are a supervisor or secretary who needs to review the status of his or her employees' time sheets.

The supervisor or secretary chooses a week from the calendar and sees the status of that week's time sheets.

Use the worksheet tab to select a week from the calendar and see a summary of the status of time sheets for that week. The Employees sub-tab shows a one-line time sheet summary for the user (the supervisor or secretary) and all of the user's employees. The employee of the user is also displayed.

### Supervisor Time Sheet Status Tab

This section includes the fields and descriptions for the Supervisor Time Sheet Status tab.

Field	Description
<b>Calendar</b>	Use the calendar to select a period.
<b>Week No.</b>	This field shows the week number that corresponds to the selected period.
<b>Time Unit</b>	This field shows the time unit of employee revision.

### Legend Island

The days in the calendar are color-coded. The colors have the following meaning:

Field	Description
<b>Red</b>	Your time sheet is due or missing.
<b>Green</b>	Your time sheet has been submitted.
<b>Light Blue</b>	Your time sheet has been submitted and approved.
<b>Dark Blue</b>	Your time sheet has been fully approved.
<b>None</b>	Your time sheet is not due, or you are not expected to submit a time sheet for that day according to your week calendar.

## Employees Sub-Tab

This section includes the fields and descriptions for the Employees sub-tab.

Field	Description
<b>Send Email</b>	<p>This link will open up a new email dialog in your operating system default email client. The to email address will be prefilled with the email address of the employee on the status line.</p> <p>Additionally the Subject field and message fields will be prefilled with a short sentence regarding the status e.g. "Missing time sheet for week 2" and "Please create a time sheet for the above week".</p> <p>The current user (the supervisor) must finish the email subject and message and send the email.</p>
<b>Employee</b>	This field shows the name of the supervisor's employee.
<b>Internal Time, Total</b>	This field shows the total time in hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) that this employee registered on internal jobs for the time sheet for the selected period.
<b>External Time, Total</b>	This field shows the total time in hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) that the employee registered on external jobs for the time sheet for the selected period.
<b>Balance, Total</b>	This field shows the difference between registered hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) and fixed hours or days.
<b>Invoiceable Time, Total</b>	This field shows a sum of the number of invoiceable hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) for the employee for the week selected in the tab.
<b>Non-Invoiceable Time, Total</b>	This field shows a sum of the number of non-invoiceable hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) for the employee for the week selected in the tab.
<b>Total Time</b>	This field shows a sum of the total invoiceable and non-invoiceable hours or days (depending on the time unit specified in the Supervisor Time Sheet Status tab) for the employee for the week selected in the tab.
<b>Created</b>	This field shows the name of the user who created the time sheet.
<b>Submitted</b>	This field shows the name of the user who submitted the time sheet.
<b>Approved</b>	This field is marked if the supervisor approved the time sheet. Maconomy automatically marks this field when a time sheet is approved; Maconomy removes the mark if the time sheet is reopened. Even though this field is marked on a time sheet, that time sheet might not be fully approved because a time sheet is not fully approved until it has been approved by all relevant instances.

Field	Description
<b>Transferred</b>	This field is marked if the time sheet has been transferred to a time sheet journal or the time sheet transfer queue (if the Central transfer of time sheets system parameter is marked). Maconomy automatically marks this field when all lines on the time sheet have been transferred. The criteria that determine when a time sheet line is transferred for posting depend on the selected approval principle.
<b>Project Manager Approval</b>	This field gives an overview of the project manager approval status for all lines on the employee's time sheet.

## Central Time Sheet Transfer Workspace

Use this workspace to transfer multiple time sheet journals at the same time, which improves Maconomy's performance during heavy time sheet processing periods.

This workspace is relevant only if you use the **Central transferral of time sheets** system parameter.

### Performance Issue

A performance bottleneck can occur when many time sheets are submitted at the same time. For example, if your company has a policy that all employees must turn in their time sheets every Monday before noon, Maconomy will be very busy processing time sheet journals all of Monday morning, slowing system performance.

### Central Transfer of Time Sheets

If you do not use the **Central transferral of time sheets** feature, each time a time sheet line is transferred, Maconomy creates a journal line. The journal line is attached to a time sheet journal, which can subsequently be posted.

Each journal line is given a transaction number, taken from a number series for the company. Whenever Maconomy creates a journal, the journal is given a journal number, which is taken from another number series for the company.

These two number series are central resources; only one server process at a time can draw a transaction number or journal number from these number series for a given company.

If you use the **Central transferral of time sheets** feature, Maconomy does not create a journal line when a time sheet line is transferred. Instead, Maconomy adds the time sheet line to a queue and, later, creates journal lines from this queue. Until journal lines are created, Maconomy does not need journal numbers and transaction numbers.

Because creating journal lines from a queue is a single-server process, it has little effect on performance. Using the **Central transferral of time sheets** feature also has no effect on how users create and submit time sheets.

### Transfer Process

You can perform the transfer manually, using the **Transfer** action in this workspace, or you can set up a scheduled task on the server that performs the transfer at regular intervals, which is preferable.

### Search Criteria

The tab of this workspace includes a selection criteria island, where you choose the companies and dates for which you want to see time sheet transfer lines. You can only see lines for companies to which you have access.

Maconomy selects all lines for transfer by default, but you can deselect individual lines.

### Central Time Sheet Transfer Tab

This section includes the fields and descriptions for the Central Time Sheet Transfer tab.

#### Selection Criteria Island

Field	Description
<b>Company No.</b>	In these fields you can enter a range of company numbers. The sub-tab will show time sheet lines where a company number within this range is the job's responsible company, and the action "Transfer" will transfer time sheet lines with a company number within this range.
<b>Exec. Company No.</b>	The functionality of these fields is similar to that of the field "Company No." above, but concerns time sheet lines where a company number within this range is the company of the employee.
<b>Date</b>	The functionality of these fields is similar to that of the field "Company No." above. The date is the posting date of the time transfer element.
<b>Show Lines with Errors</b>	If you mark this field, Maconomy will include lines which have given rise to an error in a previous transfer.
<b>Show Lines without Errors</b>	If you mark this field, Maconomy will not show lines which have given rise to an error in a previous transfer.

### Time Transferral Elements Sub-Tab

This section includes the fields and descriptions for the Time Transferral Elements sub-tab.

Field	Description
<b>Company No.</b>	This field shows the company number of the time transfer element.
<b>Date</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Employee No.</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Employee Name</b>	The functionality of this field is similar to that of the field "Company No." above.

Field	Description
<b>Job No.</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Activity</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Task</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Transfer</b>	The current line will only be transferred to posting by the action "Transfer" if this field is marked. The field is marked by default when a time sheet line enters the queue. However, if the line has given rise to an error, it is unmarked. You can mark and unmark lines manually in this field, or you can use the action "Mark All" to mark all lines for transfer.
<b>Error at transferral</b>	If this field is marked, the current line gave rise to an error when it was attempted to be transferred.
<b>Error message</b>	If the field "Error at transferral" above is marked, this field shows the associated error message, which can help you remedy the situation before attempting another transfer.
<b>Exec. Company No.</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Location</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Project</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Company No." above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Company No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Company No." above.
<b>Transaction Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.

## Actions

This section shows the actions available in the Central Time Sheet Transfer workspace.

### Top Tab

Field	Description
<b>Mark All</b>	When you select this action, the field "Transfer" is marked for all lines in the sub-tab.
<b>Transfer</b>	When you select this action, the time transfer elements in the sub-tab that have a mark in the field "Transfer" are transferred to be posted. This is done by one process, eliminating the need for multiple server processes (every user) competing for the right to draw system numbers. This optimizes performance, as explained in the introduction to this window.

## Job Reallocation Workspace

Use this workspace to reallocate job entries.

When you post a reallocation, Maconomy creates an offset entry that is equivalent to the original entry and creates an entry for each job reallocation line.

The Job Reallocation tab displays the job entry to be reallocated and the Job Reallocation Entries sub-tab displays the reallocations. When you approve and post the reallocation, Maconomy does two things:

- Creates an offset entry that is equivalent to the existing entry, using the total quantity and total cost amount from the original entry. The offset entry is selected so that it cannot be offset itself at a later time.
- Creates an entry for each of the job reallocation lines in the sub-tab.

When you create a reallocation entry, you can change either the quantity or the total cost amount to be reallocated. You can then change either the quantity or the unit cost price of the new entries, provided that the total cost amount remains the same as the original entry. The billing prices of the new entries are adjusted so that the gross margin is also the same as the original entry.

If the job entry pertains to an amount activity, and you selected the **Update Prices on Amount Registrations upon Job Reallocation** system parameter in the Set-Up module, Maconomy recalculates the billing prices and standard billing prices on the job entry. A similar recalculation occurs if the job entry pertains to a time activity, and you selected the **Update Prices on Time Registrations upon Job Reallocation** system parameter. The recalculation is based on the reallocation date in the Reallocation island. Otherwise, Maconomy uses the original prices of the entries.

Maconomy cannot automatically reallocate job entries created for activities for which the **External Invoice** field is selected. You must reallocate those manually.

If you select the **Update prices upon dimension change** system parameter, Maconomy recalculates the prices on the job entry if you change the dimensions on the reallocation line or if you change the entry date. The recalculation is based on the reallocation date in the Reallocation island. If you do not select this parameter, Maconomy uses the original prices of the entries.

If you reallocate a job entry to a non-invoiceable job, Maconomy resets the billing price on the created job entry to zero. If you reallocate a job entry from a non-invoiceable job, the billing price on the resulting new entry will also be zero.

If a job entry that you selected for reallocation includes proposed values for invoicing, Maconomy eliminates these values during the reallocation process.

Note, however, that if the original job entry that contains proposed values is only partially reallocated-that is, if only some of the job entry data needs to be reallocated-Maconomy proposes corresponding partial values on the derived offset account. Assume, for example, that an original job entry contains 40 hours, with an invoice proposal of 20 hours. Maconomy proposes a factor of 0.5 of the total hours for invoicing. If you perform a job reallocation for 10 of the 40 hours, Maconomy creates an offset entry of 10 hours. This offset account includes an invoice proposal of 5 hours, because the invoice proposal factor is 0.5. Any invoice proposal that involves the reallocated 10 hours is eliminated.

If you reallocate a job entry to which job surcharges have been assigned, Maconomy automatically reallocates the job surcharges in question along with the job entry. Thus, you do not need to manually reallocate job entries that Maconomy created as a result of job surcharges.

If you selected employee control for the current job in the Jobs workspace, you can only make entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list. For more information, see the description of the **Employee Control** field in the Jobs workspace.

## Job Reallocation Tab

This section includes the fields and descriptions for the Job Reallocation tab.

### Entry Information Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the job entry to be reallocated is assigned.
<b>Trans. No.</b>	This field shows the transaction number of the job entry.
<b>Entry Type</b>	This field shows the entry type of the individual job entry. When a job entry is posted, Maconomy marks it as a certain type. The type will often be "Registration" (for example, time sheet and job journal entries). In the pop-up field "Entry Type" in the Selection Criteria island, you can see the different entry types used by Maconomy.
<b>Origin</b>	This field shows the origin of the individual job entry. When a job entry is created the origin field is filled in according to the registration journal e.g. Time Sheet, Job (for job journal registration) or Expense Sheet etc.
<b>Activity No.</b>	This field shows the number of the activity specified for the job entry.
<b>Task</b>	This field shows the task assigned to the entry.

Field	Description
<b>Description</b>	This field shows the description of the activity specified on the job entry.
<b>Employee</b>	This field shows the name and number of the employee assigned to the job entry.
<b>Vendor</b>	This field shows the name and number of the vendor if the job entry has been assigned to one.
<b>Vendor Invoice</b>	This field shows the number of the vendor invoice if the job entry is derived from one.
<b>Item No.</b>	This field shows the item number if items have been assigned to the job entry to be reallocated.
<b>Description</b>	This field shows the item description if items have been assigned to the job entry to be reallocated.
<b>Remarks</b>	This field shows any remarks which have been assigned to the job entry to be reallocated.
<b>Daily Description</b>	This field shows any daily description associated with the current job entry.
<b>Reallocated from Job No.</b>	If the current job entry has previously been reallocated, this field shows the number of the job from which the job entry was reallocated.
<b>Reallocated from Task</b>	If the current job entry has previously been reallocated, this field shows the task from which the job entry was reallocated.

#### G/L Accrual Island

Field	Description
<b>Accrual Type</b>	This field shows the accrual type of the job entry as given upon registration.
<b>Period From, Accrual</b>	This field shows the accrual period from as given upon registration.
<b>Period To, Accrual</b>	See the field "Period From" above.

#### Company Island

Field	Description
<b>Company</b>	This field shows the name and number of The company for which the entry belongs.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in

Field	Description
	the window Company Information in the G/L module for a detailed description of company base currency and enterprise currency.

### Executing Company Island

Field	Description
<b>Company</b>	This field shows the name and number of the executing company. The executing company is the company which performed the work registered on the job journal line in question. You cannot change the value in this field.

### Entry Island

Field	Description
<b>Quantity</b>	This field shows the quantity of units registered on the job entry to be allocated.
<b>Cost</b>	This field shows the item cost for the job entry.
<b>Cost, Reg.</b>	This field shows the entered cost for the job entry.
<b>Billing Price, Reg.</b>	This field shows the total billing price entered for the entry to be reallocated.
<b>Currency</b>	This field shows the currency of the job. Billing prices are shown in this currency; costs are shown in the base currency of the company shown in the island Company.
<b>Gross Margin %</b>	This field shows the gross margin percentage which has been used in connection with the job entry.
<b>Overtime Spec.</b>	This field shows any specification of overtime on the current job entry.
<b>Period From, Subscription</b>	If the current job entry originates from a subscription order, this field and the field "Period To, Subscription" below show the starting and ending periods of the subscription.
<b>Period To, Subscription</b>	See the description of the field "Period From, Subscription" above.
<b>Trans. No.</b>	This field shows the job entry transaction number from the registration. E.g. expense sheet number if origin is expense sheet.
<b>Trans. Type</b>	This field shows the transaction type of the job entry.
<b>Entry Date</b>	This field shows the date when the job entry was registered.

Field	Description
<b>Invoice No.</b>	This field shows the number on the latest invoice initiated by the job entry.
<b>Closed</b>	This field shows whether the job entry has been completed.
<b>Quantity Inv.</b>	This field shows the quantity of units invoiced for the current job entry.
<b>Billing Price, Inv.</b>	This field shows the billing price invoiced for the current job entry.
<b>Quantity, Up/Down</b>	This field shows the quantity of write-ups and write-downs per item hitherto registered for the job entry. Write-up and write-down are the difference between the registered quantity and the invoiced quantity. Only completed entries will be included in the calculation. Write-ups are shown in positive figures, and write-downs in negative figures.
<b>Billing Price, Up/Down</b>	This field shows the amount by which the billing price has been written up or down. Write-up and write-down are the difference between the registered billing price and the invoiced billing price. Only completed entries will be included in the calculation.
<b>Quantity, Transferred To</b>	If the current entry is the result of a transfer, then this field shows the quantity transferred to the new dimensions on this job entry.
<b>Cost, Transferred To</b>	If the current entry is the result of a transfer, then this field shows the cost transferred to the new dimensions on this job entry.
<b>Billing Price, Transferred To</b>	This field shows the total billing price, if any, transferred to the new dimensions on the job.
<b>Quantity 1</b>	This field shows the quantity entered for the entry to be reallocated.
<b>Quantity 2</b>	This field shows the quantity 2 entered for the entry to be reallocated.
<b>Standard Billing Price, Base</b>	This field shows the standard billing price registered for the current job entry.
<b>Standard Up/Down, Base</b>	This field shows the difference between the registered billing price and the standard billing price for the current entry within the selected period. This information can be used for performance analyses.

### Reallocation Island

Field	Description
<b>Amount Reallocated</b>	This field shows the amount of units hitherto reallocated on the current job entry. It is not possible to reallocate a higher amount of units than the one registered on the current job entry.
<b>Cost Reallocated</b>	This field shows the cost hitherto reallocated on the current job entry. It is not possible to reallocate a higher cost than the one registered on the current job entry.
<b>Quantity 1 Reallocated To Date</b>	This field shows the quantity hitherto reallocated on the current job entry. It is not possible to reallocate a higher quantity than the one registered on the current job entry.
<b>Quantity 2 Reallocated To Date</b>	This field shows the quantity 2 value hitherto reallocated on the current job entry. It is not possible to reallocate a higher quantity 2 value than the one registered on the current job entry.
<b>Reallocation Date</b>	<p>If the current entry can be reallocated, you can enter in this field the date to which the entry should be reallocated. This date will appear as the entry date on the entries created as a result of the reallocation.</p> <p>Maconomy suggests the entry date of the original entry. However, if the system parameter "Set Default Reallocation Date to Today" has been marked, Maconomy suggests today's date instead.</p> <p>If the entry cannot be reallocated, the field shows the date when the last reallocation of the current job took place, or if no reallocations have been made on the job, the entry date of the last job entry. The field can be changed manually, however.</p>
<b>Amount to be Reallocated</b>	This field shows the amount of units to be reallocated.
<b>Cost for Reallocation</b>	This field shows the cost to be reallocated.
<b>Quantity 1 for Reallocation</b>	This field shows the quantity to be reallocated.
<b>Quantity 2 for Reallocation</b>	This field shows the quantity 2 value to be reallocated.

### Dimensions Island

Field	Description
<b>Location</b>	In these fields, you can enter a range of locations. Only jobs with a location within the specified range will be displayed in the sub-tab.

Field	Description
<b>Entity</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location" above.

### Job Reallocation Entries Sub-Tab

This section includes the fields and descriptions for the Job Reallocation Entries sub-tab.

Field	Description
<b>Job No.</b>	<p>In this field, you can enter the number of the job on which the new entry is to be registered. The new entry will be equivalent to a full or partial replacement of the job entry to be reallocated.</p> <p>If you allocate to a job with another responsible company than that of the original job, the reallocation will result in a number of intercompany entries. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p>
<b>Task</b>	<p>In this field, you can specify the task to which the reallocation line is to be assigned. If a task list exists for the job, you must enter a task which exists in the task list in question. If dimension values have been specified in the task list, these dimensions are automatically suggested on new budget lines unless another value has been entered manually. If the window Task Lists specifies that derived dimension values should overwrite existing dimensions values, any manually entered dimensions will be overwritten. If no task list has been assigned to the job, you cannot enter a task.</p>
<b>Act. No.</b>	<p>In this field, you can enter the number of the activity which is to be valid for the new job entry. When the activity has been entered, it cannot be changed. You cannot reallocate from a time activity to an amount activity or vice versa.</p>
<b>Item No.</b>	<p>In this field, you can enter an item number if any items have been assigned to the new job entry.</p>
<b>Empl.</b>	<p>In this field, you can specify the number of the employee to whom the new job entry is to be assigned.</p>

Field	Description
<b>Description</b>	<p>In this field, you can enter an entry description of the new entry.</p> <p>If no description is entered in the field, Maconomy suggests the description from the activity assigned to the new entry. The suggested description can be edited.</p>
<b>Quantity</b>	<p>In this field, you can enter the quantity of units to be registered for the activity which is assigned to the new job entry. If the entry is a time activity, the quantity will be hours.</p> <p>The value of this field will be overwritten if the value of the field "Total Cost" is changed. The new value of this field will be the quantity that, when multiplied by the original unit price, generates the total cost price. Similarly, if you change the quantity specified in this field, the value of the field "Total Cost" will be adjusted accordingly.</p> <p>Depending on the number of decimals shown in this field, you might experience that the quantity displayed in this field is different from the expected quantity. Such a situation can occur if you want to allocate, for example, one-third of an amount to one line and the remaining two-thirds of the amount to another line. If you specify the relevant amounts in the field "Total Cost," this field will show different figures, depending on the number of decimals shown in the field. This means that if the system is set up to show only one decimal, the quantities in this field which would originally be "0.35" and "0.65" will be rounded up and displayed as "0.4" and "0.7" on the lines, even though the total quantity reallocated on the two lines is "1." If the system is set up to show two decimals, the fields on the lines will show "0.35" and "0.65." In both cases, however, Maconomy will post the quantity of "0.35" and "0.65" resulting in a total of "1." The number of decimals to be displayed is defined in the window Preferences in the Edit menu.</p>
<b>Total Cost</b>	<p>In this field, you can enter the total cost price to be reallocated. If you change the total cost price, the value of the field "Quantity" will be adjusted so that it equals the total cost price when multiplied by the original unit price. Similarly, the total cost price in this field will be adjusted if the value of the field "Quantity" is changed.</p>
<b>Billing Price Total</b>	<p>This field shows the original total billing price for the quantity allocated away from the original job entry according to the original job entry unit billing price.</p>
<b>New Quantity</b>	<p>In this field, you can enter a number of units on the new, allocated entry. By default, Maconomy suggests the original quantity specified in the field "Quantity."</p> <p>The value of this field will be overwritten if the value of the field "New Cost Price" is changed. The new value of this field will be the quantity that, when multiplied by the new cost price, generates the new total cost price.</p> <p>Note that if the value of this field is changed, the new quantity multiplied by the new cost price must equal the new total cost price shown in the field "New Total Cost Price" below.</p>

Field	Description
<b>New Cost Price</b>	<p>In this field, you can enter a new unit price for the job entry created upon reallocation. By default, Maconomy suggests the original unit price specified in the field "Cost" in the main tab.</p> <p>If you change the new unit price, the value of the field "New Quantity" will be adjusted so that new quantity multiplied by the new unit price will equal the new total sales price.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the entry date or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change." However, the price is not updated if the quantity is changed at the same time.</p>
<b>New cost price Total</b>	This field shows the new total cost price. The value of the field cannot be changed.
<b>Base Currency</b>	This field shows the base currency for the job being reallocated to.
<b>New Sales Price</b>	This field shows the new unit billing price according to the new job's currency, and whether the new entry will be invoiceable. The value of this field cannot be changed.
<b>New Sales Price Total</b>	This field shows the new total sales price. The value of this field cannot be changed.
<b>Currency</b>	This field shows the currency of the job. Billing prices are shown in this currency; costs are shown in the base currency of the company shown in the island Company.
<b>Receivable Tax Code</b>	This field shows the receivable G/L tax code of the current job entry.
<b>Exec. Company No.</b>	This field shows the number of the company that has carried out the new job entry. The company number is derived from the specified activity or employee. The field cannot be changed.
<b>Executing Company Name</b>	This field shows the name of the executing company. The company number is shown in the field above.
<b>Standard Billing Price, Base</b>	<p>This field shows the standard billing price per unit in the base currency of the company which is responsible for the job.</p> <p>If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the entry date or dimension values. For further information on this and for a complete list of the fields causing the</p>

Field	Description
	price to be updated, see the description of the system parameter "Update prices upon dimension change." However, the price is not updated if the quantity is changed at the same time.
<b>Total Standard Billing Price, Base</b>	This field shows the total standard billing price of the current reallocation line in the base currency of the company which is responsible for the job. If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the entry date or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change." However, the price is not updated if the quantity is changed at the same time.
<b>Company No.</b>	This field shows the number of the company responsible for the new job entry. The company is derived from the specified activity or employee. The field cannot be changed. If you reallocate a job entry for which the executing and responsible companies are the same to a job entry where they are different, Maconomy will find the now necessary intercompany price on the original job entry, where it was saved at posting.
<b>Company Name</b>	This field shows the name of the responsible company. The company number is shown in the field above.
<b>Location</b>	In this field, you can enter a value for the dimension Location. If you do not manually enter a value, Maconomy will attempt to derive a value, using the order of priority set up in the window Dimension Derivation in the G/L module. However, any manually entered value will be overwritten if Maconomy can derive a value for which overwriting has been selected. If no value can be derived, Maconomy transfers the value from the field "Location" in the main tab.  See the section on dimension derivation in the chapter "Introduction to the G/L module," as well as the description of the window Dimension Derivation, for further information about dimension derivation.
<b>Entity</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to the functionality of the field "Location" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to the functionality of the field "Location" above.

Field	Description
<b>Standard Billing Price, Currency</b>	This field shows the standard billing price per unit in the currency of the job. If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the entry date or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change." However, the price is not updated if the quantity is changed at the same time.
<b>Total Standard Billing Price, Currency</b>	This field shows the total standard billing price of the current reallocation line in the currency of the job. If the system parameter "Update prices upon dimension change" has been marked, the price in this field is updated when certain key information on the line is changed, for instance, the entry date or dimension values. For further information on this and for a complete list of the fields causing the price to be updated, see the description of the system parameter "Update prices upon dimension change." However, the price is not updated if the quantity is changed at the same time.
<b>Job Name</b>	Here, the name of the job, to which the new job entry is related, is shown. The value in this field cannot be changed.
<b>Activity Name</b>	Here, the description relating to the activity of the new job entry is shown. The value in this field cannot be changed.
<b>Task Description</b>	This field shows the description associated with the task in the new job entry.
<b>Employee Name</b>	Here, the name of the employee to whom the new job entry has been assigned is shown. The value in this field cannot be changed.
<b>Description</b>	Here, the item description is shown if items have been assigned to the new job entry. The value in this field cannot be changed.
<b>Quantity 1</b>	In this field, you can enter a quantity to be reallocated. The functionality of this field is similar to that of the field "Quantity" above.
<b>New Quantity 1</b>	In this field, you can enter a quantity on the new, allocated entry. The functionality of this field is similar to that of the field "New Quantity" above.
<b>Quantity 2</b>	The functionality of this field is similar to that of the field "Quantity" above.
<b>New Quantity 2</b>	In this field, you can enter a quantity on the new, allocated entry. The functionality of this field is similar to that of the field "New Quantity" above.
<b>Remarks</b>	In this field you can edit any remarks about the current job entry.
<b>Overtime Spec.</b>	This pop-up field shows any specification of overtime on the current job entry. You can change the value in this field.

Field	Description
<b>Employee Category No.</b>	This field shows the employee category number that comes from job budget lines or that you add manually in this window.
<b>Daily Description</b>	This field shows any daily description associated with the current job entry.
<b>Accrual Type</b>	If you select a value in this field, Maconomy will create an accrual entry for each period covered by the interval specified in the fields "Period From" and "Period To." The accrual entries are posted to the relevant, accrual-related posting references on the activity in question or in the window Posting References, depending on whether the field "Post by Activity" is marked in the window System Information. The offset entries are posted to the accounts referenced for the selected accrual type in the window Popup Fields. The amount is distributed evenly on the selected periods. Both cost and billing prices are accrued.
<b>Period From, Accrual</b>	In this field and the field "Period To" you can enter a range of dates. If you select a value in the field "Accrual Type" above, Maconomy will create an accrual entry on the relevant accrual account for each period covered by the interval specified in the fields "Period From" and "Period To." The amount is distributed evenly to the selected periods.  Please note that the last period must be no later than the accrual ending period set up in the field "Accrual Period, Ending" in the information tab of the company specified on the entry. If no ending period has been specified there, the ending period set up in the corresponding field in the window System Information applies instead. If an ending period has not been set up in either the company information card or in the system information, period, you can specify any period in the field "Period To."
<b>Period To, Accrual</b>	See the field "Period From" above.
<b>Period From, Subscription</b>	If the current job entry originates from a subscription order, this field and the field "Period To, Subscription" below show the starting and ending periods of the subscription.
<b>Period To, Subscription</b>	See the description of the field "Period From, Subscription" above.
<b>Transaction Type</b>	This field shows the transaction type of the job entry.

## Actions

This section shows the actions available in the Job Reallocation workspace.

### Top Tab

Field	Description										
Restore Original Unit Price	This action restores the Original Unit Price of a reallocated entry. If the unit price has been changed on the entry, it cannot be reallocated. In that situation, use this action first, to set the unit billing price back to the original amount before proceeding with the reallocation.										
Approve Reallocation	<p>When you select this action, Maconomy either creates entries in an existing posting journal of the type “Job Reallocation Journal” or a journal of this type. Maconomy creates a number of entries in the current job reallocation journal. Once the number of entries in a journal reaches 500, Maconomy automatically creates a job journal for the next 500 entries. If the system parameter “Automatic posting of job reallocations” is marked, the job reallocation journal is posted automatically. If this system parameter is not marked, the journal can be posted in the window Posting in the G/L module.</p> <p>For each reallocated entry, the journal contains two entries: a reversing entry which cancels out the original entry, and a new entry with the values corrected as per the selections in this window. Given that common workflow, there will be no closed entries visible in the window Invoice Selection when you resume the invoicing of the job. If the system parameter “Close Job Entries on Job Reallocation” is not marked, all of the entries remain open, allowing you to include them on your invoices as desired.</p> <p>If this parameter is marked, Maconomy attempts to close the original and the reversing entries according to the following table:</p> <table><tr><th>Original Entry</th><th>New Reallocation Entry Amount</th><th>Result</th></tr><tr><td rowspan="3">Entry is invoiced</td><td>Equal to open amount of original</td><td>Original and reversing entries are closed.</td></tr><tr><td>Greater than open amount of original</td><td>Two entries are created: the reversing entry and a reallocation entry. Both entries remain open.</td></tr><tr><td>Less than open amount of original</td><td>The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.</td></tr></table>	Original Entry	New Reallocation Entry Amount	Result	Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.	Greater than open amount of original	Two entries are created: the reversing entry and a reallocation entry. Both entries remain open.	Less than open amount of original	The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.
Original Entry	New Reallocation Entry Amount	Result									
Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.									
	Greater than open amount of original	Two entries are created: the reversing entry and a reallocation entry. Both entries remain open.									
	Less than open amount of original	The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.									

Field	Description		
	Entry is not invoiced	Equal to open amount of originals	Same as for invoiced entries.
		Greater than open amount of original	It is not possible to increase the amount on uninvoiced entries by reallocation.
		Less than open amount of original	Same as for invoiced entries.
	<p>In principle, Maconomy performs an automatic zero-invoicing of the reallocated entries. For instance, if you are invoicing a job and find an entry with a wrong dimension value, you can mark it for reallocation, enter the window Job Reallocation, assign a new dimension value to the entry, and approve the reallocation.</p> <p>Please note that Maconomy will carry out a normal dimension derivation when reallocating job entries. Therefore, any derived values may overwrite the selections made in the sub-tab. The dimension derivation takes place after Maconomy has transferred the values in the sub-tab to the reallocation line. If no value has been specified in the fields "Location," "Entity," "Project," "Purpose," "Spec. 1-3," and "Local Spec. 1-3" in the sub-tab, these fields are considered blank in connection with the derivation. If any blank fields are not completed in the derivation, the dimension values of the original job entry are used. Any other blank fields in the sub-tab — for example, "Employee No." — inherit the value of the original job entry, with the exception of the field "Task," which only inherits the value from the original entry if a task list is assigned to the job to which the allocation is made. If not, the task field is blank on the allocated job entry.</p> <p>A reallocation cannot be approved if the current entry has also been marked for reallocation in the windows Job Reallocation by Job or Batch Job Reallocation. Moreover, you cannot reallocate entries on a job that has been approved for transfer in the window Job Transfer. This means that entries on jobs which have been approved for transfer are not considered when using this action. The job transfer journal created as a result of the job transfer must hence be posted before entries on the relevant job can be reallocated. See the introduction to the window Job Transfer for further information about job transfers.</p>		
Restore Editing	In case you restore editing made before a change of time unit for invoicing, quantities and unit prices are converted to the current time unit for invoicing.		
Restore Editing from Invoice	Copy to come.		
Copy Editing	This action converts quantities and unit prices to follow the unit of the current draft invoice if necessary. For example, if the job from which the draft is being from has a different time unit for invoicing.		

## Job Reallocation by Job Workspace

Use this workspace to reallocate job entries, one job at a time.

When you post a reallocation, Maconomy creates an offset entry that is equivalent to the original entry and creates an entry for each job reallocation line.

This workspace is similar to the Job Reallocation workspace, but displays entries one job at a time. You can use this workspace to select the job entries that you want to reallocate, or you can use it to reallocate entries that you selected for reallocation in the Invoice Selection or Itemize Invoice Selection workspaces. In those workspaces, you can use the **Reallocation** field to select individual entries for reallocation.

By default, the Job Entries subtab lists all of the job entries that you selected for reallocation by job. You cannot change the entries in the sub-tab directly, but you can choose which of the entries should be reallocated by selecting or deselecting the **Marked** field.

You can also choose to see all of the entries for the current job by deselecting the **Marked Only** field in the Selection Criteria island. You then have the option to select the **Reallocate** field for any job entry in the sub-tab. This has the same effect as selecting the field in the Invoice Selection or Itemize Invoice Selection workspaces- that is, temporarily blocking it for invoicing.

You cannot see entries for closed jobs in this workspace.

On the Job Reallocation by Job tab, you can limit the job entries that you see to those associated with certain activity numbers, employee numbers, and so on.

In the Reallocate To island, you can then specify the values that should be changed for each selected job entry. Assume, for example, that you want to reallocate job entries with a **Location** dimension value of NY so that they have a **Location** dimension value of LA. In the Selection Criteria island, select all of the job entries with a **Location** dimension value of NY. In the Reallocate To island, you enter the location LA and press Return. Then, use the **Approve Reallocation** action to reallocate all of the selected job entries to the LA dimension.

If you select the **Automatic posting of job reallocations** system parameter, Maconomy posts the resulting reallocation journal automatically, and the reallocated job entries are again open for invoicing in the Invoice Selection workspace.

If you selected the **Update Prices on Amount Registrations upon Job Reallocation** system parameter in the Set-Up module, Maconomy recalculates billing prices and standard billing prices on the job entries as a result of the reallocation. The recalculation is based on the reallocation entry date in the Reallocate To island. Otherwise, Maconomy uses the original prices of the entries on the allocation entries.

If you selected the **Update prices upon dimension change** system parameter, Maconomy recalculates the prices on the job entry if you change the dimensions on the reallocation line or if you change the entry date. The recalculation is based on the reallocation entry date in the Reallocate To island. If you do not select the parameter, Maconomy uses the original prices of the entries on the allocation entries.

If you reallocate a job entry to a non-invoiceable job, Maconomy resets the billing price on the created job entry to zero. If you reallocate a job entry from a non-invoiceable job, the billing price on the resulting new entry will also be zero.

If a job entry that you selected for reallocation includes proposed values for invoicing, Maconomy eliminates these values during the reallocation process.

Note, however, that if the original job entry that contains proposed values is only partially reallocated-that is, if only some of the job entry data needs to be reallocated-Maconomy proposes

corresponding partial values on the derived offset account. Assume, for example, that an original job entry contains 40 hours, with an invoice proposal of 20 hours. Maconomy proposes a factor of 0.5 of the total hours for invoicing. If you perform a job reallocation for 10 of the 40 hours, Maconomy creates an offset entry of 10 hours. This offset account includes an invoice proposal of 5 hours, because the invoice proposal factor is 0.5. Any invoice proposal that involves the reallocated 10 hours is eliminated.

If you reallocate a job entry to which Maconomy has assigned job surcharges, you do not need to manually reallocate job entries that were created as a result of job surcharges.

If you selected employee control for the current job in the Jobs workspace, you can only make entries for employees who either appear in the job's budget of a certain type, or who are listed in the job's employee control list.

### Job Reallocation By Job Tab

This section includes the fields and descriptions for the Job Reallocation By Job tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the job entry to be reallocated is assigned.
<b>Project Manager</b>	This field shows the name and number of the employee assigned as project manager of the job.

#### Selection Criteria Island

Field	Description
<b>Open Only</b>	If you mark this field, the sub-tab will only show those entries that meet the selection criteria if there are open amounts on the entries. Please note that the open quantity of the job entry will remain open after reallocation until the entry is invoiced. For more information, please see the description of the action "Approve Reallocation." The field is marked by default.
<b>Marked Only</b>	<p>If you mark this field, the sub-tab will only show those entries that meet the selection criteria and which have already been marked for reallocation in the windows Invoice Selection or Itemize Invoice Selection. The field is marked by default.</p> <p>If you unmark the field, all job entries (or all open job entries) for the current job are displayed, and you can mark or unmark the individual job entries for reallocation directly in the sub-tab.</p>
<b>Trans. No.</b>	<p>In these fields, you can enter a range of transaction numbers.</p> <p>The reallocation will only affect job entries with a transaction number within the specified range. If you leave the range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab.</p>

Field	Description
	If an entry is already fully reallocated, for example, in the window Job Reallocation, it is not included in the entry selection.
<b>Journal No.</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Entry Date</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>G/L Entry Date</b>	In these fields, you can enter a range of G/L Entry Dates. The reallocation will only affect job entries with a G/L Entry Date within the specified range. If you leave this range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab. If an entry is already fully reallocated, for example, in the Job Reallocation window, it is not included in the entry selection.
<b>Exec. Company No.</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Item No.</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Activity No.</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Activity Type</b>	If you select an activity type in this field, the reallocation will only affect job entries with the selected activity type. If you leave the field empty, the activity type does not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab.
<b>Employee No.</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Task</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Overtime Spec.</b>	In this pop-up field, you can specify an overtime specification as defined in the window Popup Fields in the Set-Up module. The reallocation will only affect job entries with the selected overtime specification.
<b>Origin</b>	If you select an Origin in this field, the reallocation will only affect job entries with the selected Origin. If you leave this field empty, the origin does not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab.
<b>Entry Type</b>	<p>If you select an Entry Type in this field, the reallocation will only affect job entries with the selected Entry Type. If you leave this field empty, the entry type does not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab.</p> <p>This is useful if a job entry changes type. If, for instance, a job entry is reallocated, the entry's origin will be preserved, but its type will be changed to</p>

Field	Description
	“Reallocation” or “Reversal.” This way, you can in this window see that a particular entry is, for example, a reallocated time sheet entry.
<b>Accrual Type</b>	<p>If you select a value in this field, the cost will be accrued. You can only accrue a posting if a G/L account or job has been selected.</p> <p>If you select accrual, Maconomy will create a G/L entry on the specified G/L account or job for each G/L period specified in the fields “Period From, Accrual” and “Period To, Accrual.” If you have specified an account number on the line, the accrual entries are posted to the account in question. If you have specified a job and not an account, the accrual entries are posted to the relevant, accrual-related posting references on the activity in question or in the Posting References window, depending on whether the filed “Post by Activity” is marked in the System Information window.</p> <p>The offset entries are posted to the accounts referenced for the selected accrual type in the Popup Fields window. The amount is distributed evenly on the selected periods. For accruals made on job entries, both cost and billing prices are accrued.</p>
<b>Accrual Period From</b>	<p>In this field and the field “Accrual Period To” you can enter a range of dates. If you select a value in the field “Accrual Type” above, Maconomy will create a G/L entry on the specified G/L account for each G/L period specified in the fields “Period From, Accrual” and “Period To, Accrual.” The amount is distributed evenly on the selected periods.</p> <p>Please note that the last period must be no later than the accrual ending period set up in the field “Accrual Period, Ending” in the Posting Period. If no ending period has been specified there, the ending period set up in the corresponding field in the Posting Periods window applies instead. If an ending period has been set up in the Posting Periods window, you can specify any period in the field “Accrual Period To.”</p>
<b>Accrual Period To</b>	See the field “Accrual Period From” field above.
<b>Billing Price Reg.</b>	In these fields, you can enter an amount range. The reallocation will only affect job entries with a registered billing price within the specified range. If you leave this range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab. If an entry is already fully reallocated, for example, in the Job Reallocation window, it is not included in the entry selection.
<b>Cost Price Reg.</b>	In these fields, you can enter an amount range. The reallocation will only affect job entries with a registered cost price within the specified range. If you leave this range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab. If an entry is already fully reallocated, for example, in the Job Reallocation window, it is not included in the entry selection.
<b>Vendor No.</b>	In these fields, you can enter a range of vendor numbers. The reallocation will only affect job entries with a vendor number within the specified range. If you

Field	Description
	leave this range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab. If an entry is already fully reallocated, for example, in the Job Reallocation window, it is not included in the entry selection.
<b>Vendor Invoice No.</b>	In these fields, you can enter a range of vendor invoice numbers. The reallocation will only affect job entries with a vendor invoice number within the specified range. If you leave this range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab. If an entry is already fully reallocated, for example, in the Job Reallocation window, it is not included in the entry selection.

### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Trans. No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Trans. No." above.

### Reallocate To Island

Field	Description
<b>Job</b>	<p>In this field, you can specify if the entries created in connection with the reallocation should be reallocated to another, existing job. If you enter a job name and number in this field, all selected entries are reallocated to that job, unless the field "Reallocate" in the sub-tab is not marked for a particular job entry.</p> <p>Please note that Maconomy performs dimension derivation as usual when reallocating job entries. For this reason, any derived values may overwrite the selections made in the fields in this island.</p> <p>If you allocate to a job with another responsible company than that of the original job, the reallocation will result in a number of intercompany entries. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only</p>

Field	Description
	created if the two companies involved are not both assigned to the same parent company.
<b>Project Manager</b>	This field shows the number of the employee assigned as project manager of the job.
<b>Name</b>	This field shows the name of the project manager employee.
<b>Trans. No.</b>	In this field, you can specify whether the entries created in connection with the reallocation should be assigned a new transaction number. If you enter a number in this field, all the new entries will be assigned this number. If you do not enter a new transaction number in this field or a transaction number series in the field "Number Series" below, the reallocation entries created will preserve their original transaction numbers.
<b>Trans. Type</b>	In this field, you can enter the transaction type to be used for the entries created in connection with the reallocation. If you enter nothing, a transaction type will be derived.
<b>Number Series</b>	In this field, you can specify a transaction number series created in the window Popup Fields (pop-up type "Trans. No. Series"). If you specify a transaction number series in this field, all entries created in connection with the reallocation will draw new transaction numbers from the selected transaction number series. If you neither specify a transaction number series in this field nor a transaction number in the field "Trans. No." above, the created reallocation entries will preserve their original transaction numbers. You cannot enter both a transaction number series and a transaction number.
<b>Entry Date</b>	In this field, you can specify a new entry date for the reallocated entries. If you do not specify an entry date, the entry date on the reallocated entry will default to today's date if the system parameter "Set Default Reallocation Date to Today" has been marked. If this system parameter has not been marked, the reallocation entries will preserve their original entry dates. The entry date must be within the open posting period for job cost entries applying to the company to which the reallocation is made. For further information, please see the description of the island Job Cost in the window Company Information in the G/L module.
<b>Item</b>	In this field, you can specify an item name and number. The reallocated entries will be assigned this value.  Please note that Maconomy performs dimension derivation as usual when reallocating job entries. For this reason, any derived values may overwrite the selections made in the fields in this island.
<b>Activity</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Employee</b>	The functionality of this field is similar to that of the field "Item" above.  If you reallocate to an employee belonging to another company than the one responsible for the job for which the reallocation is made, the reallocation will

Field	Description
	result in a number of intercompany entries. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.
<b>Task</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Task Description</b>	This field shows the description of the task specified in the field "Task" above. If a job number has been specified in the field "Job," the description of the task assigned to the task list for that job is displayed. If no job number is specified, and only one task with the name specified in the field "Task" exists in all task lists in the system, the description of that task is displayed. If multiple tasks with that name exist in the system, a "?" is displayed in this field.
<b>Overtime Spec.</b>	The functionality of this field is similar to that of the field "Item No." above.
<b>No overtime spec.</b>	Mark this field if you want to remove any overtime specification from the reallocated entries.
<b>Accrual Type</b>	<p>If you select a value in this field, the cost will be accrued. You can only accrue a posting if a G/L account or job has been selected.</p> <p>If you select accrual, Maconomy will create a G/L entry on the specified G/L account or job for each G/L period specified in the fields "Period From, Accrual" and "Period To, Accrual." If you have specified an account number on the line, the accrual entries are posted to the account in question. If you have specified a job and not an account, the accrual entries are posted to the relevant, accrual-related posting references on the activity in question or in the Posting References window, depending on whether the field "Post by Activity" is marked in the System Information window.</p> <p>The offset entries are posted to the accounts referenced for the selected accrual type in the Popup Fields window. The amount is distributed evenly on the selected periods. For accruals made on job entries, both cost and billing prices are accrued.</p>
<b>No accrual type</b>	This check box must be marked if the new job entry from the reallocation must have no accrual type.
<b>Accrual Period From</b>	<p>In this field and the field "Accrual Period To" you can enter a range of dates. If you select a value in the field "Accrual Type" above, Maconomy will create a G/L entry on the specified G/L account for each G/L period specified in the fields "Period From, Accrual" and "Period To, Accrual." The amount is distributed evenly on the selected periods.</p> <p>Please note that the last period must be no later than the accrual ending period set up in the field "Accrual Period, Ending" in the Posting Period. If no ending period has been specified there, the ending period set up in the</p>

Field	Description
	corresponding field in the Posting Periods window applies instead. If an ending period has been set up in the Posting Periods window, you can specify any period in the field "Accrual Period To."
<b>Accrual Period To</b>	See the field "Accrual Period From" field above.

#### Reallocate To, Dimensions Island

Field	Description
<b>Location</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Spec. 1-3</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Local Spec. 1-3</b>	The functionality of this field is similar to that of the field "Item" above.

#### For Reallocation Island

Field	Description
<b>Hours</b>	This field shows the total number of hours selected for reallocation.
<b>Cost Price</b>	This field shows the total cost price selected for reallocation.
<b>Billing Price, Currency</b>	This field shows the total billing price selected for reallocation.

#### Job Entries Sub-Tab

This section includes the fields and descriptions for the Job Entries sub-tab.

Field	Description
<b>Reallocate</b>	If the field "Marked Only" in the island Selection Criteria is marked, only job entries that are marked in this field are displayed in the sub-tab. The field is initially marked in the windows Invoice Selection or Itemize

Field	Description
	<p>Invoice Selection. If this field is marked, the current entry will be reallocated when you select the action "Approve Reallocation." Note that it is not possible to mark this field if the current entry is marked for reallocation in the window Job Reallocation but has not yet been approved.</p> <p>When you mark or unmark this field, the field "Marked" below will also be marked or unmarked.</p>
<b>Selected</b>	This field is by default marked if the field "Reallocate" is marked on the same line. However, if you unmark this field, the current job entry will not be included in the reallocation process.
<b>Entry Date</b>	This field shows the entry date of the current job entry. The entries are shown sorted by entry date.
<b>G/L Entry Date</b>	This field shows the date on which the current job entry was entered in the general ledger.
<b>Trans. No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Trans. Type</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Journal No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Activity No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Activity Name</b>	This field displays the activity text from the activity specified in the current job entry.
<b>Empl. No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Employee Name</b>	This field displays the name of the employee specified in the current job entry.
<b>Task</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Task Description</b>	This field displays the task description from the task specified in the current job entry.
<b>Quantity Registered</b>	This field shows how many units were registered in the current job entry.
<b>Quantity Transferred To</b>	If the current entry has been transferred to new dimensions, this field shows the quantity transferred to the job assigned the new dimensions. A job is transferred to new dimensions in the window Job Transfer.
<b>Quantity Open</b>	This field shows the number of open units registered in the current job entry. Please note that the open quantity of the job entry will only remain open after reallocation until the entry is invoiced.

Field	Description
<b>Quantity Reallocated</b>	If the entry is partially reallocated in the window Job Reallocation, this field shows how many units have been reallocated. Fully reallocated job entries are not shown.
<b>Reallocation Date</b>	If the entry is partially reallocated in the window Job Reallocation, this field shows the date of the reallocation.
<b>Item No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Description</b>	This field shows the description of the item registered in the current job entry.
<b>Company No.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Exec. Company No.</b>	The functionality of this field is similar to that of the field "Entry Date" above. Note that if you reallocate a job entry for which the executing and responsible companies are the same to a job entry where they are different, and the system parameter "Update Prices on Amount Registrations upon Job Reallocation" or "Update Prices on Time Registrations upon Job Reallocation" has not been marked, depending on the activity type on the entry, Maconomy will find the now necessary intercompany price in the current price tables. If the prices have been changed since the original job entry was created, the cost and billing price will stem from the original prices and the new intercompany price from the updated prices.
<b>Billing Price, Reg.</b>	This field shows the total billing price entered for the job entry.
<b>Cost, Reg.</b>	This field shows the entered cost for the job entry.
<b>Location</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Entry Date" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Entry Date" above.

Field	Description
<b>Reallocated from Job No.</b>	If the current job entry has previously been reallocated, this field shows the number of the job from which the job entry was reallocated.
<b>Reallocated from Task</b>	If the current job entry has previously been reallocated, this field shows the task from which the job entry was reallocated.
<b>Remarks</b>	The functionality of this field is similar to that of the field "Entry Date" above. The field shows any remark assigned to the current job entry in the window Job Journal.
<b>Internal Job</b>	The functionality of this field is similar to that of the field "Entry Date" above. The field shows if the current job entry belongs to a job for which the field "Internal Job" in the window Jobs has been marked.
<b>Entry No.</b>	The functionality of this field is similar to that of the field "Entry Date" above. Together with the job number, the entry number is a unique reference to the current job entry. The entry number is created automatically by Maconomy.
<b>Overtime Spec.</b>	The functionality of this field is similar to that of the field "Entry Date" above.
<b>Origin</b>	<p>The sub-tab shows job entries that you may want to reallocate. Job entries cannot be changed anywhere, including here. Thus, reallocation, which creates a reversing entry and a new, better entry, is the way to fix errors.</p> <p>This field shows the origin of the individual job entry. When a job entry is posted, Maconomy assigns information about the journal type form which the entry was originally derived to the job entry. This could, for example, be "Time Sheet" or "Job Accrual." Some entries are created without posting journals, such as entries for direct invoicing. To such entries, the origin "Job" is assigned. The origin of a job entry never changes.</p>
<b>Entry Type</b>	<p>This field shows the entry type of the individual job entry. When a job entry is posted, Maconomy marks it as a certain type. The type will often be "Registration" (for example, time sheet and job journal entries). In the pop-up field "Entry Type" in the Selection Criteria island, you can see the different entry types used by Maconomy.</p> <p>This is useful if a job entry changes type. If, for instance, a job entry is reallocated, the entry's origin will be preserved, but its type will be changed to "Reallocation" or "Reversal." This way, you can in this window see that a particular entry is, for example, a reallocated time sheet entry.</p> <p>This is useful if a job entry changes type. If, for instance, a job entry is reallocated, the entry's origin will be preserved, but its type will be changed to "Reallocation" or "Reversal." This way, you can in this window see that a particular entry is, for example, a reallocated time sheet entry.</p>
<b>Accrual Type</b>	This field shows the type of accrual. The type specifies how the accrual was posted.

Field	Description
<b>Period From, Accrual</b>	This field shows the period from which the job entry was accrued.
<b>Period To, Accrual</b>	This field shows the period to which the job entry was accrued.
<b>Period From, Subscription</b>	If the current job entry originates from a subscription order, this field and the field "Period To, Subscription" below show the starting and ending periods of the subscription
<b>Period To, Subscription</b>	See the description of the field "Period From, Subscription" above.
<b>Vendor</b>	This is the vendor number if the current job entry concerns an amount activity, and the vendor of the service was registered on the job entry.
<b>Vendor Invoice No.</b>	If the current job entry is associated with a vendor invoice, the associated vendor invoice may be registered here.

## Actions

This section shows the actions available in the Job Reallocation by Job workspace.

### Top Tab

Field	Description
<b>Mark for Reallocation</b>	When you select this action, all job entries that match the selection criteria are marked. This excludes job entries which belong to closed jobs, job entries marked for reallocation in the windows Job Reallocation or Batch Job Reallocation but not yet approved, job entries of unknown type of origin, and job entries created on the basis of a job surcharge rule. Job entries of the latter are automatically reallocated when the entries that gave rise to the job surcharge are reallocated. Once this action has been selected, Maconomy will issue information as to the number of entries not marked for reallocation.
<b>Unmark for Reallocation</b>	When you select this action, all job entries that match the selection criteria are unmarked. This means that the mark in the fields "Reallocate" and "Marked" is removed for all entries in the sub-tab.
<b>Approve Reallocation</b>	When you select this action, one or more job reallocation journals are created for the job entries that match the selection criteria and which have a mark in the fields "Reallocate" and "Marked" in the sub-tab.  For each reallocated entry, the journal contains two entries: a reversing entry which cancels out the original entry, and an entry with the values corrected as per the selections in this window. If the system parameter "Close Job Entries on Job Reallocation" is not marked, all of the entries remain open, allowing you to include them on your invoices as desired.

Field	Description																	
	<p>If the parameter is marked, Maconomy attempts to close the original and the reversing entries according to the following table:</p> <table><tr><th>Original Entry</th><th>New Reallocation Entry Amount</th><th>Result</th></tr><tr><td rowspan="3">Entry is invoiced</td><td>Equal to open amount of original</td><td>Original and reversing entries are closed.</td></tr><tr><td>Greater than open amount of original</td><td>Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.</td></tr><tr><td>Less than open amount of original</td><td>The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.</td></tr><tr><td rowspan="3">Entry is not invoiced</td><td>Equal to open amount of original</td><td>Same as for invoiced entries.</td></tr><tr><td>Greater than open amount of original</td><td>It is not possible to increase the amount on uninvoiced entries by reallocation.</td></tr><tr><td>Less than open amount of original</td><td>Same as for invoiced entries.</td></tr></table>	Original Entry	New Reallocation Entry Amount	Result	Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.	Greater than open amount of original	Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.	Less than open amount of original	The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.	Entry is not invoiced	Equal to open amount of original	Same as for invoiced entries.	Greater than open amount of original	It is not possible to increase the amount on uninvoiced entries by reallocation.	Less than open amount of original	Same as for invoiced entries.
Original Entry	New Reallocation Entry Amount	Result																
Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.																
	Greater than open amount of original	Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.																
	Less than open amount of original	The reversing entry is closed. The part of the original entry which is reversed by the reversing entry is closed; the remaining part remains open.																
Entry is not invoiced	Equal to open amount of original	Same as for invoiced entries.																
	Greater than open amount of original	It is not possible to increase the amount on uninvoiced entries by reallocation.																
	Less than open amount of original	Same as for invoiced entries.																
	<p>Maconomy will always try to close entries to the greatest possible extent. In principle, Maconomy performs an automatic zero-invoicing of the reallocated entries. For instance, if you are invoicing a job and find an entry with a wrong dimension value, you can mark it for reallocation, enter the window Job Reallocation by Job, assign a new dimension value to the entry, and approve the reallocation. Given that common workflow, there will be no closed entries visible in the window Invoice Selection when you resume the invoicing of the job.</p> <p>If the system parameter “Automatic posting of job reallocations” is marked, the resultant journal is posted automatically, but not printed. If this system parameter is not marked, you can post the journal in the window Posting in the G/L module. Upon posting, Maconomy will still see the job reallocation entry as open.</p> <p>Please note that Maconomy will perform dimension derivation as usual when reallocating job entries. For this reason, derived values may overwrite the selections made in the fields in the island Reallocate To. The dimension</p>																	

Field	Description
	<p>derivation takes place after Maconomy has entered the values in the island Reallocate To. If no value has been specified in the fields "Location," "Entity," "Project," "Purpose," "Spec. 1-3," and "Local Spec. 1-3" in the island Reallocate To, these fields are regarded as being empty at the time of the dimension derivation. If the dimension derivation does not apply to a particular dimension field, the job entry's original value is used. Any other empty fields in the island Reallocate To, for example, the field "Employee No.," inherit the original value of the job entry, with the exception of the field "Task," which only inherits the value from the original entry if a task list is assigned to the job to which the allocation is made. If not, the task field is blank on the allocated job entry.</p> <p>This functionality corresponds to the functionality of the action "Approve Reallocation" in the window Job Reallocation.</p>

## Batch Job Reallocation Workspace

Use this workspace to reallocate job entries in batches.

When you post a reallocation, Maconomy creates an offset entry that is equivalent to the original entry and creates an entry for each job reallocation line.

You might want to reallocate multiple job entries at the same time if, for example, all registrations for job numbers 251433 and 251434 were allocated to the location LA, but should have been allocated to the location NY. Specify a group of job entries to be reallocated and specify the values to which they should be reallocated. If you do not enter a value in a field, the job entries keep the existing value in that field, unless the value is obtained by dimension derivation in Maconomy. You can also specify whether the entries that the reallocation creates should keep the original transaction numbers, have a specific transaction number, or use a transaction number series.

Use the Selection Criteria island to choose the entries that you want to reallocate. Every time that you open the workspace, Maconomy displays the selection criteria that you last used. In the Reallocate To island, enter the new values for the selected entries. You can also specify whether Maconomy should assign a new transaction number to the entries.

Then you can use the **Mark for Reallocation** action to populate the Job Entries sub-tab with all of the job entries that match the selection criteria. In the sub-tab, you can deselect individual entries.

Use the **Approve Reallocation** action to create one or more reallocation journals that are then ready to be posted either automatically-if you selected the **Automatic posting of job reallocations** system parameter-or in the Posting workspace in the G/L module.

Maconomy cannot create job entries automatically for activities for which you selected the **External Invoice** field. You must reallocate them manually.

If the job entry pertains to an amount activity, and you selected the **Update Prices on Amount Registrations upon Job Reallocation** system parameter in the Set-Up module, Maconomy recalculates billing prices and standard billing prices on the job entry as a result of the reallocation. A similar recalculation occurs if the job entry pertains to a time activity, and you selected the **Update Prices on Time Registrations upon Job Reallocation** system parameter.

The recalculation is based on the reallocation date in the Reallocation island. Otherwise, Maconomy uses the original prices of the entries.

If a group of job entries that you select for reallocation includes proposed values for invoicing, Maconomy eliminates these values during the reallocation process.

Note, however, that if the original job entry that contains proposed values is only partially reallocated—that is, if only some of the job entry data needs to be reallocated—Maconomy proposes corresponding partial values on the derived offset account. Assume, for example, that an original job entry contains 40 hours, with an invoice proposal of 20 hours. Maconomy proposes a factor of 0.5 of the total hours for invoicing. If you perform a job reallocation for 10 of the 40 hours, Maconomy creates an offset entry of 10 hours. This offset account includes an invoice proposal of 5 hours, because the invoice proposal factor is 0.5. Any invoice proposal that involves the reallocated 10 hours is eliminated.

If you selected the **Update prices upon dimension change** system parameter, Maconomy recalculates the prices on the job entry if you change the dimensions on the reallocation line or if you change the entry date. The recalculation is based on the reallocation entry date in the Reallocate To island. If you do not select the parameter, Maconomy uses the original prices of the entries on the allocation entries.

## Batch Job Reallocation Tab

This section includes the fields and descriptions for the Batch Job Reallocation tab.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	If you mark this field, the entries which match the criteria in this island are displayed in the sub-tab. Please note that Maconomy includes all selected entries when you select the actions in this window, regardless of whether or not they are displayed in the sub-tab.
<b>Job No.</b>	In these fields, you can enter a range of job numbers. The reallocation will only affect job entries with a job number within the specified range. If you leave the range empty, the fields do not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab if the field “Show Entries” is marked.  If an entry is already fully reallocated, for example, in the window Job Reallocation, it is not included in the entry selection.
<b>Trans. No.</b>	The functionality of these fields is similar to that of the field “Job No.” above.
<b>Journal No.</b>	The functionality of these fields is similar to that of the field “Job No.” above.
<b>Entry Date</b>	The functionality of these fields is similar to that of the field “Job No.” above.
<b>Company No.</b>	The functionality of these fields is similar to that of the field “Job No.” above.

Field	Description
<b>Exec. Company No.</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Item No.</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Activity No.</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Activity Type</b>	If you select an activity type in this field, the reallocation will only affect job entries with the selected activity type. If you leave this field empty, the activity type does not affect the selection of job entries to be reallocated, or which job entries are shown in the sub-tab.
<b>Employee No.</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Task</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Overtime Spec.</b>	In this pop-up field, you can specify an overtime specification as defined in the window Popup Fields in the Set-Up module. The reallocation will only affect job entries with the selected overtime specification.
<b>Accrual Type</b>	In this field, you can select an accrual type. The sub-tab will only show entries marked for accrual of the selected type.
<b>Accrual Period From</b>	In this field, you can specify a G/L period. The sub-tab will only show accrued entries whose accrual period is within the interval specified through this field and the field "Accrual Period To."
<b>Accrual Period To</b>	In this field, you can specify a G/L period. The sub-tab will only show accrued entries whose accrual period is within the interval specified through this field and the field "Accrual Period From."
<b>Reallocated from Job No.</b>	In these fields, you can specify a range of job numbers. The reallocation will only affect job entries previously reallocated from a job within the specified range.
<b>Reallocated from Task</b>	In these fields, you can specify a range of tasks. The reallocation will only affect job entries previously reallocated from a task within the specified range.
<b>Open Only</b>	If you mark this field, the sub-tab will only show those entries that meet the selection criteria if there are open amounts on the entries, and only the open amount will be reallocated. Please note that the open quantity of the job entry will only remain open after reallocation until the entry is invoiced. For more information, please see the description of the action "Approve Reallocation."  This field is marked by default.
<b>Marked Only</b>	If you mark this field, the sub-tab will only show those entries that meet the selection criteria and which have already been marked for reallocation. If

Field	Description
	you wish to transfer a job to new dimensions in the window Job Transfer, the job cannot be transferred if it is assigned entries which have been marked for reallocation. By marking this field, you can get an overview of the entries marked for reallocation on a given job, allowing you to reallocate or unmark the relevant entries so that you can continue with the desired job transfer.

### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Job No." above.

### Reallocate To Island

Field	Description
<b>Job No.</b>	<p>In this field you can specify whether the entries created in connection with the reallocation should be reallocated to another, existing job. If you enter a job number in this field, all selected entries are reallocated to that job, unless the field "Reallocate" in the sub-tab is not marked for a particular job entry.</p> <p>Please note that Maconomy performs dimension derivation as usual when reallocating job entries. For this reason, any derived values may overwrite the selections made in the fields in this island.</p> <p>If you allocate to a job with another responsible company than that of the original job, the reallocation will result in a number of intercompany entries. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p>
<b>Trans. No.</b>	In this field you can specify whether the entries created in connection with the reallocation should be assigned a new transaction number. If you enter a number in this field, all the new entries, including the offset entries created as a result of the reallocation, will be given this number. If you do not enter a new

Field	Description
	transaction number in this field or a transaction number series in the field "Number Series" below, the created reallocation and offset entries will preserve their original transaction numbers. See also the field "Number Series" below and the description of the action "Approve Reallocation."
<b>Trans. Type</b>	This is the entry's transaction type. Transaction types are set up in the Transaction Types window.
<b>Number Series</b>	If you specify a transaction number series in this field, all entries created in the reallocation will pull new transaction numbers from the selected transaction number series. If you neither enter a new transaction number in the field "Trans. No." above nor select a transaction number series in this field, the created reallocation entries will preserve their original transaction numbers. It is not possible to both enter a transaction number in the field "Trans. No." and a transaction number series.
<b>Entry Date</b>	In this field, you can enter a new entry date for the entries selected in the island Selection Criteria. If you do not specify an entry date, the entry date on the reallocated entry will default to today's date if the system parameter "Set Default Reallocation Date to Today" has been marked. If this system parameter has not been marked, the entries will preserve their original entry dates. The entry date must be within the open posting period for job cost entries applying to the company to which the reallocation is made. For further information, please see the description of the island Job Cost in the window Company Information in the G/L module.
<b>Item</b>	In this field, you can enter an item name and number. The entries selected in the island Selection Criteria will be reallocated to this value, unless the field "Reallocate" in the sub-tab is not marked for a particular job entry.  Please note that Maconomy performs dimension derivation as usual when reallocating job entries. For this reason, any derived values may overwrite the selections made in the fields in this island.
<b>Activity</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Employee</b>	The functionality of this field is similar to that of the field "Item" above.  If you reallocate to an employee belonging to another company than the one responsible for the job for which the reallocation is made, the reallocation will result in a number of intercompany entries. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.
<b>Task</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Task Description</b>	This field displays the description of the task specified in the field "Task" above. If a job number has been specified in the field "Job No.," the description of the task assigned to the task list for that job is displayed. If no job number is specified, and only one task with the name specified in the field

Field	Description
	"Task" exists in all task lists in the system, the description of that task is displayed. If multiple tasks with that name exist in the system, a "?" is displayed in this field.
<b>Overtime Spec.</b>	The functionality of this field is similar to that of the field "Item No." above.
<b>No overtime spec.</b>	Mark this field if you want to remove any overtime specification from the reallocated entries.
<b>Accrual Type</b>	In this field, you can select an accrual type. The sub-tab will only show entries marked for accrual of the selected type.
<b>No accrual type</b>	This check box must be marked if the new job entries from the reallocation must have no accrual type.
<b>Accrual Period From</b>	In this field, you can specify a G/L period. The sub-tab will only show accrued entries whose accrual period is within the interval specified through this field and the field "Accrual Period To."
<b>Accrual Period To</b>	In this field, you can specify a G/L period. The sub-tab will only show accrued entries whose accrual period is within the interval specified through this field and the field "Accrual Period From."

#### Reallocate To, Dimensions Island

Field	Description
<b>Location</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Spec. 1-3</b>	The functionality of this field is similar to that of the field "Item" above.
<b>Local Spec. 1-3</b>	The functionality of this field is similar to that of the field "Item" above.

## Job Entries Sub-Tab

This section includes the fields and descriptions for the Job Entries sub-tab.

Field	Description
<b>Job No.</b>	If the field "Show Lines" in the island Selection Criteria is marked, this field shows the job number of the entry.
<b>Reallocate</b>	<p>If this field is marked, the current entry will be reallocated when you select the action "Approve Reallocation." In some instances, it is not possible to mark this field:</p> <ul style="list-style-type: none"> <li>▪ If the current entry belongs to a closed job</li> <li>▪ If the current entry is marked for reallocation in the window Job Reallocation but has not yet been approved</li> </ul> <p>If the current entry has been created on the basis of a job surcharge rule, Maconomy will issue a warning, as such entries are automatically updated when reallocating the entries which gave rise to the job surcharge.</p>
<b>Entry Date</b>	The functionality of this field is similar to that of the field "Job No." above. The entries are shown sorted by entry date.
<b>Trans. No.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Trans. Type</b>	This field shows the transaction type of the entry. This field is for reference only.
<b>Journal No.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Task</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Task Description</b>	This field displays the task description from the task specified in the current job entry.
<b>Activity No.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Activity Name</b>	This field displays the activity text from the activity specified in the current job entry.
<b>Empl.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Employee Name</b>	This field displays the name of the employee specified in the current job entry.
<b>Quantity Registered</b>	This field shows how many units were registered in the current job entry.

Field	Description
<b>Quantity Transferred To</b>	If the current entry has been transferred to new dimensions, this field shows the quantity transferred to the job assigned the new dimensions. A job is transferred to new dimensions in the window Job Transfer.
<b>Quantity Open</b>	This field shows the number of open units registered in the current job entry. Please note that the open quantity of the job entry will only remain open after reallocation until the entry is invoiced.
<b>Quantity Reallocated</b>	If the entry is partially reallocated in the window Job Reallocation, this field shows how many units have been reallocated. Fully reallocated job entries are not shown.
<b>Reallocation Date</b>	If the entry is partially reallocated in the window Job Reallocation, this field shows the date of the reallocation.
<b>Reallocated from Job</b>	If the current job entry has previously been reallocated, this field shows the number of the job from which the job entry was reallocated.
<b>Reallocated from Task</b>	If the current job entry has previously been reallocated, this field shows the task from which the job entry was reallocated.
<b>Item No.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Description</b>	This field shows the description of the item registered in the current job entry.
<b>Company No.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Exec. Company No.</b>	The functionality of this field is similar to that of the field "Job No." above. Note that if you reallocate a job entry for which the executing and responsible company are the same to a job entry where they are different, and the system parameter "Update Prices on Amount Registrations upon Job Reallocation" or "Update Prices on Time Registrations upon Job Reallocation" has not been marked, depending on the activity type on the entry, Maconomy will find the now necessary intercompany price in the current price tables. If the prices have been changed since the original job entry was created, the cost and billing price will stem from the original prices, and the new intercompany price from the updated prices.
<b>Location</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Project</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Job No." above.

Field	Description
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Remarks</b>	The functionality of this field is similar to that of the field "Job No." above. This field shows any remark assigned to the current job entry in the window Job Journal.
<b>Internal Job</b>	The functionality of this field is similar to that of the field "Job No." above. This field shows if the current job entry belongs to a job for which the field "Internal Job" in the window Jobs has been marked.
<b>Entry No.</b>	The functionality of this field is similar to that of the field "Job No." above. Together with the job number, the entry number is a unique reference to the current job entry. The entry number is created automatically by Maconomy.
<b>Overtime Spec.</b>	The functionality of this field is similar to that of the field "Job No." above.
<b>Accrual Type</b>	If you select a value in this field, the reallocated entries will be accrued. If you select a value, Maconomy will create an accrual entry for each period covered by the interval specified in the fields "Period From" and "Period To." The accrual entries are posted to the relevant, accrual-related posting references on the activity in question or in the window Posting References, depending on whether the field "Post by Activity" is marked in the window System Information. The offset entries are posted to the accounts referenced for the selected accrual type in the window Popup Fields. The amount is distributed evenly on the selected periods. Both cost and billing prices are accrued.
<b>Period From, Accrual</b>	In this field and the field "Period To" you can enter a range of dates. If you select a value in the field "Accrual Type" above, Maconomy will create an accrual entry on the relevant accrual account for each period covered by the interval specified in the fields "Period From" and "Period To." The amount is distributed evenly on the selected periods.  Please note that the last period must be no later than the accrual ending period set up in the field "Accrual Period, Ending" in the information tab of the company specified on the entry. If no ending period has been specified there, the ending period set up in the corresponding field in the window System Information applies instead. If an ending period has not been set up in the company information card or in the system information, period, you can specify any period in the field "Period To."
<b>Period To, Accrual</b>	See the field "Period From" above.
<b>Period From, Subscription</b>	If the current job entry originates from a subscription order, this field and the field "Period To, Subscription" below show the starting and ending periods of the subscription

Field	Description
<b>Period To, Subscription</b>	See the description of the field "Period From, Subscription" above.

## Actions

This section shows the actions available in the Batch Job Reallocation workspace.

### Top Tab

Field	Description										
Mark for Reallocation	When you select this action, all job entries that match the selection criteria are marked. This excludes job entries which belong to closed jobs, job entries marked for reallocation in the windows Job Reallocation or Job Reallocation by Job but not yet approved, job entries of unknown type of origin, and job entries created on the basis of a job surcharge rule. The latter type of job entries is automatically reallocated when the entries that gave rise to the job surcharge are reallocated. Once this action has been selected, Maconomy will issue information as to the number of entries that were not marked for reallocation.										
Unmark for Reallocation	When you select this action, all job entries that match the selection criteria are unmarked. This means that the check mark in the field “Reallocate” is removed for all entries in the sub-tab.										
Approve Reallocation	<p>When you select this action, one or more job reallocation journals are created for the job entries that match the selection criteria and which have a mark in the field “Reallocate” in the sub-tab. This takes place even if the field “Show Lines” in the main tab is not marked.</p> <p>For each reallocated entry, the journal contains two entries: A reversing entry which cancels out the original entry, and a new entry with the values corrected as per the selections in this window. The original and the reversing entries are closed according to the following table:</p> <table><tr><th>Original Entry</th><th>New Reallocation Entry Amount</th><th>Result</th></tr><tr><td rowspan="3">Entry is invoiced</td><td>Equal to open amount of original</td><td>Original and reversing entries are closed.</td></tr><tr><td>Greater than open amount of original</td><td>Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.</td></tr><tr><td>Less than open amount of original</td><td>The reversing entry is closed. The part of the original entry which is</td></tr></table>	Original Entry	New Reallocation Entry Amount	Result	Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.	Greater than open amount of original	Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.	Less than open amount of original	The reversing entry is closed. The part of the original entry which is
Original Entry	New Reallocation Entry Amount	Result									
Entry is invoiced	Equal to open amount of original	Original and reversing entries are closed.									
	Greater than open amount of original	Two entries are created: the reversing entry and the reallocation entry. Both entries remain open.									
	Less than open amount of original	The reversing entry is closed. The part of the original entry which is									

Field	Description		
			reversed by the reversing entry is closed; the remaining part remains open.
Entry is not invoiced	Equal to open amount of original	Same as for invoiced entries	
	Greater than open amount of original	It is not possible to increase the amount on uninvoiced entries by reallocation.	
	Less than open amount of original	Same as for invoiced entries.	
<p>Maconomy will always try to close entries to the greatest possible extent. In principle, Maconomy performs an automatic zero-invoicing of the reallocated entries. For instance, if you are invoicing a job and find an entry with a wrong dimension value, you can mark it for reallocation, enter the window Job Reallocation, assign a new dimension value to the entry, and approve the reallocation. Given that common workflow, there will be no closed entries visible in the window Invoice Selection when you resume the invoicing of the job.</p> <p>If the system parameter "Automatic posting of job reallocations" is marked, the resultant journal is posted automatically. If this system parameter is not marked, you can post the journal in the window Posting in the G/L module.</p> <p>Please note that Maconomy will perform dimension derivation as usual when reallocating job entries. For this reason, derived values may overwrite the selections made in the fields in the island Reallocate To. The dimension derivation takes place after Maconomy has entered the values in the island Reallocate To. If no value has been specified in the fields "Location," "Entity," "Project," "Purpose," "Spec. 1-3," and "Local Spec. 1-3" in the island Reallocate To, these fields are regarded as being empty at the time of the dimension derivation. If the dimension derivation does not apply to a particular dimension field, the job entry's original value is used. Any other empty fields in the island Reallocate To, for example, the field "Employee No.," inherit the original value of the job entry, with the exception of the field "Task," which only inherits the value from the original entry if a task list is assigned to the job to which the allocation is made. If not, the task field is blank on the allocated job entry.</p> <p>This functionality corresponds to the functionality of the action "Approve Reallocation" in the window Job Reallocation.</p>			

## Job Accruals Workspace

Use this workspace to create job accruals from purchase orders, one job at a time.

For each job, this workspace displays the job's current purchase order lines. You can create job accruals based on these lines. These accruals are held in a job accrual journal for future posting. You can invoice the job accruals at a later date.

### Two Methods for Creating Accruals

You can work with job accruals in two ways:

- Base accruals on purchase orders. This is the recommended method because it provides more flexibility and control.
- Select individual entries in the Job Journal workspace to use as the basis for accruals.

The **Job Accruals from Purchase Orders** system parameter in the Set-Up module determines which method is used.

### Create Accruals from Purchase Orders

In this workspace, you create job accruals based on purchase orders. The Job Accruals tab displays information about the current job. The Purchase Order Lines sub-tab displays the purchase order lines for the job. Lines appear until they are closed, typically when you enter a vendor invoice.

You can create accruals based on these lines, changing quantities or amounts if necessary. You can select the total amount of purchase orders for accrual or a partial amount. You can also create an accrual can based on the ordered or delivered quantity entered on the line.

When you use the **Create Job Accruals** action, Maconomy creates accruals based on the specified information and creates a job accrual journal. If you selected the **Automatic posting of job accruals** system parameter, Maconomy posts the accrual journal automatically. If you did not select this parameter, you must post the journal in the G/L module. Maconomy uses the Job Accruals number series to assign a transaction number to each journal that you create. After you post this journal, you can see the created job accruals when you create an invoice selection for the job.

In this workspace, you can also specify negative job accruals that can, for example, reverse a job accrual that was created by mistake.

### Reconcile Job Accruals

When you receive a vendor invoice that reconciles a purchase order to which a job accrual is assigned, Maconomy also reconciles the job accrual. Maconomy credits the cost of sales account and debits the job accrual account.

You specify the cost of sales account by using a dimension combination in the Posting References workspace or in the Activities workspace sub-tab. The choice depends on whether you select the **Post by Activity** parameter in the System Information workspace in the Set-Up module.

You specify the job accrual account by using a dimension combination in the Posting References workspace in the G/L module. Dimension combinations can include other dimension values that are to be used in this connection.

You use the cost of sales account because the job entries that are created by the reconciliation are closed when they are created, and therefore do not need to be closed when they are invoiced. If the vendor invoice you receive does not correspond to the purchase order, Maconomy still fully reconciles the job accrual entry, provided that the difference is within a specific margin. Use the **Margin, job accrual reconc.** system parameter to specify the size of this margin.

If the difference is within the margin, Maconomy either writes the job entry up or down. If the difference is not within the specified margin, and the vendor invoice specifies a higher amount than the purchase order, Maconomy reconciles the job accrual with the amount from the vendor invoice and leaves the remainder as an open job entry to be invoiced or credited at a later time. If the vendor invoice specifies a smaller amount than the purchase order, Maconomy reconciles the accrual up to the vendor invoice amount and posts the amount difference on the account for work in progress. The difference can then be credited to the customer in the Invoice Selection workspace. When you subsequently post the credit memo, Maconomy reconciles the cost of sales account.

## Job Accruals Tab

This section includes the fields and descriptions for the Job Accruals tab.

### Job Island

Field	Description
<b>Job</b>	This field displays the name and number of the job to which the purchase order lines in the sub-tab are assigned. If the sub-tab does not display any lines, there are no open purchase orders assigned to the job.
<b>Job Group</b>	This field displays the name of the job group to which the job is assigned.
<b>Responsible</b>	This field displays the name of the employee responsible for the current job as specified in the window Jobs.

### Job Accruals Island

Field	Description
<b>Lines for Accrual</b>	This field displays the number of lines with a mark in the field "Raise Accrual" in the sub-tab. The field is automatically updated by Maconomy and cannot be changed here.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	If this field is marked, the purchase order lines matching the criteria specified in the selection criteria will be shown in the sub-tab. This field is marked by default. Please note that Maconomy does not consider whether the lines are shown in the sub-tab when you use the functions in the Action menu. The purchase order lines that are composed by the selection criteria are affected by the functions, regardless of whether they are shown in the sub-tab.

Field	Description
<b>Purchase Order No.</b>	In these fields, you can enter a range of purchase order numbers. The sub-tab will only display purchase order lines within the specified range of purchase orders. If you do not enter a range in these fields, it will have no influence on the number of purchase order lines shown in the sub-tab when the field "Show lines" is marked.
<b>Purchase Order Line No.</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Activity No.</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Task</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Company No.</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Include Fully Accrued</b>	If this field is marked, purchase order lines which are already fully accrued will also be shown in the sub-tab. A purchase order line being fully accrued means that the accrued amount corresponds to or is greater than the amount of the purchase order line less the amount for which vendor invoices have already been registered. This field is marked by default.
<b>Include Received Only</b>	If this field is marked, only purchase order lines matching the following criteria will be shown: the received quantity is different from zero, and the received quantity is different from a previously accrued quantity plus the quantity from vendor invoices already registered against the purchase order line. By default this field is not marked.

### Customer Island

Field	Description
<b>Customer</b>	This field displays the name and number of the ship-to customer assigned to the current job. The number is registered on the job in the window Jobs and cannot be changed here.
<b>Bill to Customer</b>	This field displays the name and number of the bill-to customer assigned to the job. The number is registered on the job in the window Jobs and cannot be changed here.

### Company Island

Field	Description
<b>Company</b>	This field displays the name and number of the company registered on the job. This value cannot be changed here. See the window Jobs for further information about assigned companies.

Field	Description
<b>Base Currency</b>	This field displays the currency used as base currency for the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of the concepts of company base currency and enterprise currency.

### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Project</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Spec. 1-3</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.
<b>Local Spec. 1-3</b>	The functionality of this field is similar to that of the field "Purchase Order No." above.

### Purchase Order Lines Sub-Tab

This section includes the fields and descriptions for the Purchase Order Lines sub-tab.

Field	Description
<b>Task</b>	This field displays the task on which the current purchase order line is to be registered, when a vendor invoice is registered with a specification of the current purchase order.
<b>Task Description</b>	This field displays the description of the task specified in the field "Task" above.
<b>Activity No.</b>	If the field "Show Lines" in the island Selection Criteria has been marked, this field displays the activity number of the purchase order line.
<b>Activity Name</b>	This field displays the name of the activity shown in the field "Activity No."
<b>Entry Date</b>	In this field, you can see and edit the date used as the entry date for the current purchase order line. The date is filled in if an accrual plan has been assigned to the line, and if you have chosen to transfer the plan to the window using the action "Transfer Accrual Plans." The date in this field is then copied from the field "Cut-Off Date" in the island Transfer Accrual Plan, but you can change the date.

Field	Description
<b>Description</b>	In this field, you can see and edit the text used as the description of the current purchase order line. This text originates from the field "Line Remarks" in the window Purchase Orders in the A/P module, but changes made in the text in this window will not be copied to the window Purchase Orders. The text is used as a description of the line in the job accrual journal.
<b>Purch. Order No.</b>	This field displays the number of the purchase order from which the current purchase order line originates.
<b>Purchase Order Line No.</b>	This field displays the number of the current purchase order line.
<b>Selected for Accrual</b>	If this field is marked, the current purchase order line has been selected for accrual. It is not necessary to accrue the total amount or the total quantity from the purchase order line. The field can be manually marked or marked using the action "Mark for Accrual," which marks all shown purchase order lines for accrual, where the amount in the field "For Accrual, Currency" is different from zero. The field "Lines for Accrual" in the main tab displays the total number of lines with a mark in this field. Only the lines with a mark in this field will be included when the action "Create Accruals" is selected.
<b>Number For Accrual</b>	In this field, you can select the quantity to be accrued. The field "Number Commissioned" shows the ordered quantity. Maconomy automatically suggests the value in the field "Number Commissioned," less the already accrued quantity, less the quantity which already has been received through registration of vendor invoices. However, you can change the value of this field here.
<b>Purchase Order Currency</b>	This field displays the currency used on the purchase order line.
<b>Unit Price, Currency</b>	This field displays the price of one unit of the ordered item. The price is displayed in the currency of the purchase order line.
<b>For Accrual, Currency</b>	In this field, you can select the amount to be registered for accrual. The field "Purchased, Currency" displays the total amount from the purchase order line. Maconomy automatically suggests the value from the field "Purchased, Currency," less already accrued amounts, less amounts already registered via vendor invoices. However, you can change the value of the field here. The amount is displayed in the currency of the purchase order line. In the field "For Accrual, Base" you can also change this amount, except that it is done in the company's base currency.
<b>Base Currency</b>	This field displays the currency used as base currency by the company responsible for the current purchase order line.
<b>Unit Price, Base</b>	The functionality of this field is similar to that of the field "Unit Price, Currency" above, except that the unit price in this field is converted into the

Field	Description
	company's base currency. For a more detailed description of price calculation, please see "Appendix A: Price Calculation in the Job Cost Module."
<b>For Accrual, Base</b>	The functionality of this field is similar to that of the field "For Accrual, Currency" above, except that the unit price in this field is converted into the company's base currency.
<b>Accrual Plan Approved</b>	If this field is marked, an approved job accrual plan exists for the current purchase order line. For more information, please see the description of the window Job Accrual Plans.
<b>Quantity Received</b>	This field displays the quantity received. The value can be changed in the window Purchase Orders or directly in this field. If you select the action "Accruals from Receipts," the value of the field "Number for Accrual" on all lines in the sub-tab will be set to the quantity in this field less any already accrued quantity less quantities already registered via vendor invoices, if the result of this is bigger than zero.
<b>Date Received</b>	In this field, you can enter a date of receipt of the quantity of items specified in the field "Number Received." The date of receipt can also be specified in the field "Received on" in the Purchase Orders window sub-tab.
<b>Quantity Purchased</b>	This field shows the quantity registered on the purchase order line.
<b>Discount, Currency</b>	This field displays the calculated discount on the current purchase order line. The amount is displayed in the currency of the purchase order line.
<b>Purchased, Currency</b>	This field displays the amount for which items have been purchased on the current purchase order line. The amount is displayed in the currency of the purchase order line.
<b>Discount, Base</b>	The functionality of this field is similar to that of the field "Discount, Currency" above, except that the unit price in this field is converted into the company's base currency.
<b>Purchased, Base</b>	The functionality of this field is similar to that of the field "Purchased, Currency" above, except that the unit price in this field is converted into the company's base currency.
<b>Number Accrued</b>	This field displays the quantity previously accrued on the current purchase order line.
<b>Accrued, Currency</b>	This field displays the amount previously accrued on the current purchase order line. The amount is displayed in the currency of the purchase order line.

Field	Description
<b>Accrued, Base</b>	The functionality of this field is similar to that of the field “Accrued, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Quantity Invoiced</b>	This field displays the quantity received via a vendor invoice registered with a specification of the current purchase order.
<b>Invoiced, Currency</b>	This field displays the amount received via vendor invoices registered with a specification of the current purchase order.
<b>Invoiced, Base</b>	The functionality of this field is similar to that of the field “Invoiced, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Vendor</b>	This field displays the number of the vendor assigned to the current purchase order line.
<b>Vendor Name</b>	This field displays the name of the vendor assigned to the current purchase order line.
<b>Company No.</b>	This field displays the number of the company responsible for the current purchase order line.
<b>Company Name</b>	This field displays the name of the company specified in the field “Company No.” above.
<b>Location</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Entity</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Project</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Purpose</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Task” above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Task” above.

## Actions

This section shows the actions available in the Job Accruals workspace.

### Top Tab

Field	Description
<b>Mark For Accrual</b>	When you select this action, Maconomy will mark all purchase order lines having an amount for accrual which is different from zero. At the same time, the mark is removed from lines with the value "0.00" in the field "For Accrual, Currency."
<b>Transfer Accrual Plans</b>	When you select this action, Maconomy transfers amounts from the accrual plans for the purchase order lines in the sub-tab that are marked in the field "Accrual Plan Approved." Accrual plans are created and approved in the window Job Accrual Plans on the basis of purchase order lines assigned to the job in question. Maconomy transfers an amount corresponding to the sum of the accrual plan lines for which the field "Date" has a date which precedes the date specified in the field "Cut-Off Date" in the main tab of this window. This amount is deducted from amounts previously accrued, less the amount for which vendor invoices may have been created on the basis of this purchase order line.
<b>Accruals From Received</b>	When you select this action, Maconomy calculates the job accruals on the basis of the value in the field "Quantity Received." The job accrual on a line is set to the value in the field "Quantity Received" multiplied by the unit price, less previously accrued amounts, less amounts from vendor invoices registered with a reference to the current purchase order line. If the result of this calculation is negative, the value in the "For Accrual, Currency" field will be reset to zero.
<b>Create Accruals</b>	<p>When you select this action, Maconomy will create job accruals for all shown purchase order lines with a mark in the field "Selected For Accrual," and with a value in the field "For Accrual, Currency" different from zero. At the same time, the purchase order line is updated, and the result of the accruals is also shown in the window Purchase Orders in the A/P module.</p> <p>Maconomy creates a job accrual journal with the specified job accruals. If the system parameter "Automatic posting of job accruals" is marked, the accrual journal is posted automatically. If this system parameter is not marked, the journal is to be posted in the G/L module. At posting, the job's open billing price and the account for job accruals are credited. At the same time, the job's open cost price and the WIP account (provided that you are capitalizing at billing price) are debited. After this, it is possible to invoice the specified job accruals to the customer. The open billing price and open cost price accounts are specified by means of a dimension combination in the window Posting References or in the Activities window sub-tab, depending on whether "Post by Activity" has been selected in the window System Information in the Set-Up module. The job accrual account is specified by means of a dimension combination in the window Posting References in the G/L module. The WIP account is specified by a dimension combination in the window Job Groups for the current job's job group. Note that dimension combinations may include other dimension values that are to be used in this connection.</p>

Field	Description
	When the purchase order lines are closed, typically when a vendor invoice reconciling the purchase order is registered, Maconomy checks the purchase order lines for nonreconciled job accruals. If nonreconciled job accruals are found, Maconomy will display an error message.

## Batch Job Accrual Workspace

Use this workspace to create job accruals from purchase orders, for multiple jobs at once.

For each job, this workspace displays the job's current purchase order lines. You can create job accruals based on these lines. These accruals are held in a job accrual journal for future posting. You can invoice the job accruals at a later date.

This workspace is similar to the Job Accruals workspace, except that it lets you perform job accruals for several jobs at a time.

Use the selection criteria on the Batch Job Accrual tab to identify the jobs for which you want to see purchase order lines. The tab also displays the number of lines selected for accrual and the total amount of those lines.

If you select the **Show Lines** field, the Purchase Order Lines sub-tab displays the purchase order lines for the jobs you chose. For each line in the sub-tab, you can specify whether the line should be partly or totally selected for accrual. Note, however, that the actions in the Action menu apply to all purchase order lines identified by the selection criteria, regardless of whether they are displayed in the sub-tab.

The first time that you open this workspace, press Return to open an overview. After you have done this once, Maconomy saves your selection criteria from session to session. Each time that you open this workspace, Maconomy displays the last selection criteria that you used. Maconomy also copies the selection criteria to the Print Job Accrual List workspace when you use the **Print** function in this workspace.

### Batch Job Accrual Tab

This section includes the fields and descriptions for the Batch Job Accrual tab.

#### Selection Criteria Island

Field	Description
<b>Show Lines</b>	If this field is marked, the purchase order lines matching the criteria specified in the selection criteria will be shown in the sub-tab. Please note that Maconomy does not consider whether the lines are shown in the sub-tab when you use the actions in the Action menu. The purchase order lines that are identified by the selection criteria are affected by the functions regardless of whether they are shown in the sub-tab.
<b>Job No.</b>	In these fields, you can enter a range of job numbers. The sub-tab will only display purchase order lines assigned to the specified range of jobs. If you do not enter a range in these fields, it will have no influence on the number of

Field	Description
	purchase order lines shown in the sub-tab when the field "Show lines" is marked.
<b>Purchase Order No.</b>	In these fields, you can enter a range of purchase order numbers. The sub-tab will only display purchase order lines assigned to the specified range of purchase orders. If you do not enter a range in these fields, it will have no influence on the number of purchase order lines shown in the sub-tab when the field "Show lines" is marked.
<b>Purchase Order Line No.</b>	The functionality of these fields is similar to that of the field "Purchase Order No." above.
<b>Activity No.</b>	The functionality of these fields is similar to that of the field "Purchase Order No." above.
<b>Task</b>	The functionality of these fields is similar to that of the field "Purchase Order No." above.
<b>Company No.</b>	The functionality of these fields is similar to that of the field "Purchase Order No." above.
<b>Include Fully Accrued</b>	If this field is marked, purchase order lines which are already fully accrued will also be shown in the sub-tab. When a purchase order line is fully accrued, the accrued amount corresponds to or is greater than the amount of the purchase order line, less the amount for which vendor invoices have already been registered. This field is marked by default.
<b>Include Received Only</b>	If this field is marked, only purchase order lines matching the following criteria will be shown: the received quantity is different from zero and the received quantity is different from a previously accrued quantity plus the quantity from vendor invoices already registered against the purchase order line.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Purch. Order No." above

**Job Accruals Island**

Field	Description
<b>Lines for Accrual</b>	This field displays the number of lines with a mark in the field "Raise Accrual" in the sub-tab. This field is automatically updated by Maconomy and cannot be changed here.
<b>Amount for Accrual</b>	This field displays the total purchase order amount of lines with a mark in the field "Raise Accrual" in the sub-tab. The amount is displayed in enterprise currency. This field is automatically updated by Maconomy and cannot be changed here.

**Purchase Order Lines Sub-Tab**

This section includes the fields and descriptions for the Purchase Order Lines sub-tab.

Field	Description
<b>Job No.</b>	If you have selected the field "Show Lines" in the island Selection Criteria, this field shows the number of the job to which the purchase order line is assigned.
<b>Job Name</b>	This field shows the name of the job to which the purchase order line is assigned.
<b>Task</b>	This field displays the task on which the current purchase order line is to be registered, when a vendor invoice is registered with a specification of the current purchase order.
<b>Task Description</b>	This field displays the description of the task specified in the field "Task" above.
<b>Activity No.</b>	If the field "Show Lines" in the island Selection Criteria has been marked, this field shows the activity number of the purchase order line.
<b>Activity Name</b>	This field shows the name of the activity shown in the field "Activity No."
<b>Entry Date</b>	In this field, you can see and edit the date used as the entry date for the current purchase order line. The date is filled in if an accrual plan has been assigned to the line, and if you have chosen to transfer the plan to the window by means of the action "Transfer Accrual Plans." The date in this field is then copied from the field "Cut-Off Date" in the island Transfer Accrual Plan, but you can change the date. If you do not fill in the field, Maconomy will use today's date as the entry date.
<b>Description</b>	In this field, you can see and edit the text used as the description of the current purchase order line. This text originates from the field "Line Remarks" in the window Purchase Orders in the A/P module, but changes made in the text in this window will not be copied to the window Purchase Orders. The text is used as a description of the line in the job accrual journal.

Field	Description
<b>Purch. Order No.</b>	This field displays the number of the purchase order from which the current purchase order line originates.
<b>Purchase Order Line No.</b>	This field displays the number of the current purchase order line.
<b>Selected for Accrual</b>	If this field is marked, the current purchase order line has been selected for accrual. It is not necessary to accrue the total amount or the total quantity from the purchase order line. This field can be manually marked or marked using the action "Mark for Accrual," which marks all shown purchase order lines for accrual, where the amount in the field "For Accrual, Currency" is different from zero. The field "Lines for Accrual" in the main tab displays the total number of lines with a mark in this field. Only the lines with a mark in this field will be included when the action "Create Accruals" is selected.
<b>Number For Accrual</b>	In this field, you can specify the quantity to be accrued. Maconomy automatically suggests a value based on a calculation of the value in the field "Quantity Requisitioned," less the amount of any already accrued quantity. This means that in this field you can make a partial reconciliation of a purchase order line of which part has already been invoiced and posted. You can change the value in this field manually.
<b>Purchase Order Currency</b>	This field shows the currency used on the purchase order line.
<b>Unit Price, Currency</b>	This field shows the price of one unit of the ordered item. The price is displayed in the currency of the purchase order line.
<b>Discount, Currency</b>	This field displays the calculated discount on the current purchase order line. The amount is displayed in the currency of the purchase order line.
<b>For Accrual, Currency</b>	In this field, you can select the amount to be registered for accrual. The field "Requisitioned, Currency" displays the total amount from the purchase order line. Maconomy automatically suggests the value from the field "Requisitioned, Currency," less already accrued amounts, less amounts already registered via vendor invoices. However, you can change the value of the field here. The amount is displayed in the currency of the purchase order line. In the field "For Accrual, Base" you can also change this amount, except that it is done in the company's base currency.
<b>Base Currency</b>	This field displays the currency used as base currency by the company responsible for the current purchase order line.
<b>Unit Price, Base</b>	The functionality of this field is similar to that of the field "Unit Price, Currency" above, except that the unit price in this field is converted into the company's base currency. For a more detailed description of price calculation, please see "Appendix A: Price Calculation in the Job Cost Module."

Field	Description
<b>Discount, Base</b>	The functionality of this field is similar to that of the field “Discount, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>For Accrual, Base</b>	The functionality of this field is similar to that of the field “For Accrual, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Unit Price, Enterprise</b>	The functionality of this field is similar to that of the field “Unit Price, Currency” above, except that the unit price in this field is converted into the system’s enterprise currency. For a more detailed description of price calculation, please see “Appendix A: Price Calculation in the Job Cost Module.”
<b>Discount, Enterprise</b>	The functionality of this field is similar to that of the field “Discount, Currency” above, except that the unit price in this field is converted into the enterprise currency.
<b>For Accrual, Enterprise</b>	This field shows the amount to be registered for accrual on the line in the system’s enterprise currency.
<b>Accrual Plan Approved</b>	If this field is marked, an approved job accrual plan exists for the current purchase order line. For more information, please see the description of the window Job Accrual Plans.
<b>Quantity Received</b>	This field displays the quantity received. The value can be changed in the window Purchase Orders or directly in this field. If you select the action “Accruals from Receipts,” the value of the field “Number for Accrual” on all lines in the sub-tab will be set to the quantity in this field less any already accrued quantity less quantities already registered via vendor invoices, if the result of this is bigger than zero.
<b>Date Received</b>	In this field, you can enter a date of receipt of the quantity of items specified in the field “Number Received.” The date of receipt can also be specified in the field “Received on” in the Purchase Orders window sub-tab.
<b>Quantity, Requisitioned</b>	This field displays the number of items requisitioned on the current purchase order line.
<b>Requisitioned, Currency</b>	This field displays the amount for which items have been requisitioned on the current purchase order line. The amount is displayed in the currency of the purchase order line.
<b>Requisitioned, Base</b>	The functionality of this field is similar to that of the field “Requisitioned, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Requisitioned, Enterprise</b>	The functionality of this field is similar to that of the field “Requisitioned, Currency” above, except that the unit price in this field is converted into the system’s enterprise currency.

Field	Description
<b>Number Accrued</b>	This field displays the quantity previously accrued on the current purchase order line.
<b>Accrued Amount, Currency</b>	This field displays the amount previously accrued on the current purchase order line. The amount is displayed in the currency of the purchase order line.
<b>Accrued Amount, Base</b>	The functionality of this field is similar to that of the field “Accrued, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Accrued Amount, Enterprise</b>	The functionality of this field is similar to that of the field “Accrued, Currency” above, except that the unit price in this field is converted into the system’s enterprise currency.
<b>Quantity Invoiced</b>	This field displays the quantity received via a vendor invoice registered with a specification of the current purchase order.
<b>Invoiced, Currency</b>	This field displays the amount received via vendor invoices registered with a specification of the current purchase order.
<b>Invoiced, Base</b>	The functionality of this field is similar to that of the field “Invoiced, Currency” above, except that the unit price in this field is converted into the company’s base currency.
<b>Invoiced, Enterprise</b>	The functionality of this field is similar to that of the field “Invoiced, Currency” above, except that the unit price in this field is converted into the system’s enterprise currency.
<b>Vendor</b>	This field displays the number of the vendor assigned to the current purchase order line.
<b>Vendor Name</b>	This field displays the name of the vendor assigned to the current purchase order line.
<b>Company No.</b>	This field displays the number of the company responsible for the current purchase order line.
<b>Company Name</b>	This field displays the name of the company specified in the field “Company No.” above.
<b>Location</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Entity</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Project</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Purpose</b>	The functionality of this field is similar to that of the field “Task” above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field “Task” above.

Field	Description
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task" above.

## Actions

This section shows the actions available in the Batch Job Accrual workspace.

### Top Tab

Field	Description
<b>Mark for Accrual</b>	When you select this action, Maconomy will mark all purchase order lines having an amount for accrual which is different from zero. At the same time, the mark is removed from lines with the value "0.00" in the field "For Accrual, Currency."
<b>Transfer Accrual Plans</b>	<p>When you select this action, Maconomy transfers the accrual plans for the purchase order lines in the sub-tab that are marked in the field "Accrual Plan Approved." Accrual plans are created and approved in the window Job Accrual Plans on the basis of the purchase order lines assigned to the job in question. Maconomy transfers an amount corresponding to the sum of the accrual plan lines for which the field "Date" has a date which precedes the date specified in the field "Cut-Off Date" in the main tab of this window. This amount is deducted from amounts previously accrued, less the amount for which vendor invoices may have been created on the basis of this purchase order line.</p> <p>Use the Cut-Off Date field to specify a date for the transfer of an accrual plan, if any. Maconomy shows today's date by default.</p> <p>A job accrual plan is created in the window Job Accrual Plans and is used for the accrual of purchase order amounts that are accrued over a period of time. By selecting the action "Transfer Accrual Plans," the plan is transferred as per the date specified in this field.</p>
<b>Accruals from Received</b>	When you select this action, Maconomy calculates the job accruals on the basis of the value in the field "Quantity Received." The job accrual on a line is set to the value in the field "Quantity Received" multiplied by the unit price less previously accrued amounts less amounts from vendor invoices registered with a reference to the current purchase order line. If the result of this calculation is negative, the value in the "For Accrual, Currency" field will be reset to zero.
<b>Create Accruals</b>	<p>When you select this action, Maconomy will create job accruals for all shown purchase order lines with a mark in the field "Selected For Accrual," and with a value in the field "For Accrual, Currency" different from zero. At the same time, the purchase order line is updated, and the result of the accruals is also shown in the window Purchase Orders in the A/P module.</p> <p>Maconomy creates a job accrual journal with the specified job accruals. The journal is assigned a transaction number from the number series "Job Accruals." If the system parameter "Automatic posting of job accruals" is marked, the accrual journal is posted automatically. If this system parameter is not marked, the journal is to be posted in the G/L module. At posting, the job's open billing price and the account for job accruals are credited. At the same time, the job's open cost price</p>

Field	Description
	<p>and the WIP account (provided that you are capitalizing at billing price) are debited. After this, it is possible to invoice the specified job accruals to the customer. The open billing price and open cost price accounts are specified by means of a dimension combination in the window Posting References or in the Activities window sub-tab, depending on whether "Post by Activity" has been selected in the window System Information in the Set-Up module. The job accrual account is specified by means of a dimension combination in the window Posting References in the G/L module. The WIP account is specified by a dimension combination in the window Job Groups for the current job's job group. Note that dimension combinations may include other dimension values that are to be used in this connection.</p> <p>When the purchase order lines are closed, typically when a vendor invoice reconciling the purchase order is registered, Maconomy checks the purchase order lines for nonreconciled job accruals. If nonreconciled job accruals are found, Maconomy will display an error message.</p>

## Job Accrual Plans Workspace

Use this workspace to create job accruals from purchase order lines that represent goods and services that are delivered over an extended period of time.

In such a case, it would not be reasonable to create and post an accrual for the whole purchase order line at one time. Instead, accruals occur over a predetermined span of time, corresponding to the period in which the goods and services will be delivered.

This practice helps ensure the accuracy of the job's completion percentage and recognized revenue.

Use this workspace to create a plan for accruing expenses over a span of time. Maconomy can create an accrual plan based on criteria that you define, or you can create an accrual plan yourself.

You can transfer job accrual plans to the Job Accruals and Batch Job Accrual workspaces, where Maconomy performs the job accrual.

The workspace tab displays each individual purchase order line. Use selection criteria to determine which purchase order lines appear in the sub-tab. In the Create Plan island, enter information about that will be used to determine whether the line is part of the accrual plan.

Use the Create Plan action to have Maconomy create the plan automatically. You can later edit the plan. Alternatively, you can create the plan manually in the sub-tab.

### Accruals Based on Fiscal Period Lengths

When you create an accrual plan, you can choose to have Maconomy distribute amounts proportionally, based on the number of days in your fiscal periods. For example, Maconomy can allocate a greater accrual amount for January (which has 31 days) than for June (which has 30 days). The functionality is controlled by the **Equal-sized Accruals in Accrual Plans** system parameter.

If you select this parameter, the **Equal-Sized Accruals** field in the Create Plan island is selected by default, and all periods that you create using the **Create Plan** action are considered to be of equal length, regardless of the actual fiscal period lengths.

If you do not select the **Equal-Sized Accruals** field, you can set up accruals that are proportional to fiscal period lengths.

You can also specify the exact starting and ending dates for accrual plans. If you do, the fiscal periods that are completely covered by the plan's time span received a greater accrual amount than those that are only partially covered.

## Job Accrual Plans Tab

This section includes the fields and descriptions for the Job Accrual Plans tab.

### Purchase Order Island

The fields in this island display information about the individual purchase order line. The information is transferred from the window Purchase Orders and cannot be changed here.

Field	Description
<b>Purch. Order No.</b>	This field shows the number of the purchase order from which the current purchase order line originates.
<b>Line No.</b>	This field shows the number of the current purchase order line.
<b>Activity</b>	This field shows the name and number of the activity specified on the purchase order line.
<b>Quantity</b>	This field shows the number of ordered services.
<b>Purchase Order Currency</b>	This field shows the currency in which the service was ordered.
<b>Unit Price, Currency</b>	This field shows the unit price of the ordered service displayed in the purchase order's currency.
<b>Discount, Currency</b>	This field shows the discount amount, if any, displayed in the purchase order's currency.
<b>Purchased, Currency</b>	This field shows the total amount requisitioned on the current line in the purchase order's currency, corresponding to the unit price multiplied by the quantity less any discount.
<b>Unit Price, Base</b>	The functionality of this field is similar to that of the field "Unit Price, Currency," only the specified amount is converted into the base currency of the company being responsible for the job. For more information about currency conversion in the Job Cost module, please see "Appendix A: Price Calculation in the Job Cost Module."
<b>Discount, Base</b>	The functionality of this field is similar to that of the field "Discount, Currency," only the specified amount is converted into the base currency of the company being responsible for the job.

Field	Description
<b>Purchased, Base</b>	The functionality of this field is similar to that of the field "Purchased, Currency," only the specified amount is converted into the base currency of the company being responsible for the job.
<b>Quantity Invoiced</b>	This field shows the number of units of the ordered service for which vendor invoices have been received.
<b>Invoiced, Currency</b>	This field shows the amount for which vendor invoices have been received to cover the ordered service. The amount is displayed in the currency of the purchase order.
<b>Invoiced, Base</b>	The functionality of this field is similar to that of the field "Invoiced, Currency," only the specified amount is converted into the base currency of the company being responsible for the job. For more information about currency conversion in the Job Cost module, please see "Appendix A: Price Calculation in the Job Cost Module."
<b>Date Received</b>	This field shows the date of the last received delivery of the ordered service.
<b>Quantity, Received</b>	This field shows the quantity received of the ordered service until today's date.
<b>Vendor</b>	This field shows the name and number of the vendor delivering the service in question.

### Company Island

Field	Description
<b>Company</b>	This field displays the name and number of the company registered on the job. This value cannot be changed here. See the window Jobs for further information about assigned companies.
<b>Base Currency</b>	This field displays the currency used as base currency for the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of the concepts of company base currency and enterprise currency.

### Job Island

The fields in this island display information about the job to which the current purchase order line is assigned. The information is transferred from the window Jobs and cannot be changed here.

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the purchase order line is assigned.
<b>Job Group</b>	This field shows the name of the job group to which the job from the current purchase order line is assigned.

Field	Description
<b>Responsible</b>	This field shows the person responsible for the job to which the current purchase order line is assigned.
<b>Project Manager</b>	This field shows the name and number of the employee who is project manager on the job to which the current purchase order line is assigned

### Customer Island

The fields in this island display information about the customer registered on the job to which the current purchase order line is assigned. The information is transferred from the window Jobs and cannot be changed here.

Field	Description
<b>Customer</b>	This field shows the name and number of the customer registered on the job to which the purchase order line is assigned.
<b>Bill to Customer</b>	This field shows the name and number of the customer registered on the job to which the purchase order line is assigned and who is invoiced for work carried out on the job.

### Accrual Island

The fields in this island display information about previously registered accruals as well as the status for the lines shown in the sub-tab. The information in these fields cannot be changed here.

Field	Description
<b>Number Accrued</b>	This field shows the quantity of the ordered service for which accruals have already been created.
<b>Accrued, Currency</b>	This field shows the amount for which accruals have already been created. The amount is displayed in the purchase order's currency.
<b>Accrued, Base</b>	The functionality of this field is similar to that of the field "Accrued, Currency," only the specified amount is converted into the base currency of the company being responsible for the job.
<b>Total Quantity</b>	This field shows the total quantity of the ordered services for which it has been specified in the sub-tab that accruals should be created.
<b>Total Amount, Currency</b>	This field shows the total amount for which it has been specified in the sub-tab that accruals should be created. The amount is displayed in the purchase order's currency.
<b>Total Amount, Base</b>	The functionality of this field is similar to that of the field "Total Amount, Currency," only the specified amount is converted into the base currency of the company being responsible for the job. For more information about currency conversion in the Job Cost module, please see "Appendix A: Price Calculation in the Job Cost Module."
<b>Number of Valid Lines</b>	This field shows the number of valid lines in the job accrual plan. See the description of the island Selection Criteria for an explanation of the term "valid."

Field	Description
<b>Number of Transferred Lines</b>	This field shows the number of lines in the job accrual plan which have been transferred for accrual. See the description of the island Selection Criteria for an explanation of the term "transferred."

#### Selection Criteria Island

Field	Description
<b>Show Only Valid</b>	If this field is ticked then only lines which has been marked Valid is shown in the table.
<b>Show Transferred</b>	If this field is marked then additionally the table will show accrual plan lines that have already been transferred.

#### Status Island

Field	Description
<b>Approved</b>	This field shows whether the accrual plan for the purchase order line has been approved.
<b>Approved by</b>	This field shows the name of the user who approved the accrual plan.
<b>Approval Date</b>	This field shows the date when the current accrual plan was approved.
<b>Reopened</b>	This field shows whether the current accrual plan was reopened.

#### Balance Sheet Island

Field	Description
<b>Quantity</b>	This field shows the difference between the registered quantity on the purchase order line and the total number for accrual on lines in the table.
<b>Amount, Currency</b>	This field shows the difference between the price registered on the purchase order line and the total amount for accrual on lines in the table.
<b>Amount, Base</b>	This field shows the difference between the price registered on the purchase order line and the total amount for accrual on lines in the table.

## Job Accrual Plan Lines Sub-Tab

This section includes the fields and descriptions for the Job Accrual Plan Lines sub-tab.

Field	Description
<b>Date</b>	This field shows the suggested creation date of the accrual. The date can be changed manually, as long as the line is valid and not transferred.
<b>Description</b>	This field shows the description to be assigned to the job accrual. By default, this field contains the description entered in the field "Description" in the island Create Plan, but the description can be changed in this field. The description can be changed as long as the line is valid and not transferred.
<b>Quantity</b>	This field shows the quantity of the planned accrual. The quantity can be changed manually, as long as the line is valid and not transferred.
<b>Amount, Currency</b>	This field shows the amount of the planned accrual displayed in the currency of the purchase order line. The amount can be changed manually, as long as the line is valid and not transferred.
<b>Amount, Base</b>	The functionality of this field is similar to that of the field "Amount, Currency," only the amount is displayed in the company's base currency.
<b>Valid</b>	This field is marked if the current line is valid. See the description of the field "Show Only Valid" in the island Selection Criteria for further information on the term "valid."
<b>Transferred</b>	This field is marked if the current line has been transferred. See the description of the field "Show Transferred" in the island Selection Criteria for further information on the term "transferred."

## Actions

This section shows the actions available in the Job Accrual Plans workspace.

### Top Tab

Field	Description
<b>Create Plan</b>	<p>When you select this action, the job accrual plan is created in the sub-tab on the basis of the information specified in the island Create Plan in the main tab. If a date has been specified in the field "Starting Date," the accruals will be distributed proportionally on the partially or completely covered G/L periods. If you have only specified a number of accruals in the field "Number of Accruals" and a starting period in the field "Starting Period," Maconomy distributes the quantity to be accrued on G/L periods on the basis of the starting period specified. If you have marked the field "Equal-Sized Accruals," all periods included in the plan will be considered to be of equal length. See the description of the field "Equal-Sized Accruals" for further information about the functionality of that field.</p> <p>If lines already exist in the sub-tab when you choose this action, those lines are not marked as valid. Note that if the creation of a plan gives rise to a rounding</p>

Field	Description
	<p data-bbox="401 317 1268 380">difference in the amounts, this difference will automatically be adjusted by Maconomy on the last line in the sub-tab.</p> <p data-bbox="401 390 1040 422">The following fields are part of the Create Plan wizard:</p> <ul style="list-style-type: none"> <li data-bbox="440 436 1377 814"> <p>■ <b>Date</b> — This field has two columns: “Start” and “End.” In the “Start” column, you can enter a starting date. In the “End” column, you can enter an ending date. This range defines the exact date range for the current accrual plan. When you enter a date range, the “Start” and “End” columns of the field “Period” will be filled in with the G/L periods covering the date range specified in these fields. On the basis of the date range specified in these fields, Maconomy calculates the amounts to be distributed in the plan. Note that if you specify an exact starting and ending date for the plan, the G/L periods which might be completely covered by the defined time span will be allocated a higher quantity than any partially covered periods at the start and end of the defined time span. This applies whether or not you have marked the field “Equal-Sized Accruals.”</p> <p data-bbox="485 827 1365 1047">If you have not marked the field “Equal-Sized Accruals” in this island, and you specify a date range of, for example, 01/08/02 to 30/11/02, in which you wish to allocate an amount of USD 100, an amount proportional to the total number of days in the period will be allocated to the four G/L periods in question. This means that longer periods (for example, August 31/365) are allocated a greater accrual amount than shorter periods (for example, September 30/365).</p> <p data-bbox="485 1060 1365 1215">If you have marked the field “Equal-Sized Accruals,” all periods created using the action “Create Plan” will be considered of equal length. Using the above example, the amount of USD 100 will hence be allocated with USD 25 to each of the four G/L periods covered by the date range 01/08/02 to 30/11/02.</p> <p data-bbox="485 1228 1344 1320">If you do not enter an ending date in this field, you can enter a number in the field “Number of Accruals” below to make Maconomy calculate an ending date.</p> </li> <li data-bbox="440 1335 1377 1780"> <p>■ <b>Period</b> — This field determines which G/L periods cover the accrual calculations created when selecting the action “Create Plan.” The field has two columns: “Start” and “End.” In the “Start” column, you can enter a starting period. In the “End” column, you can enter an ending period. The fields are automatically filled in if you have entered a date range in the field “Date” above. If you choose to enter starting and ending periods instead of starting and ending dates, Maconomy will attempt to guess the fiscal year in the field “Fiscal Year” below, but you should check if Maconomy guessed correctly. For instance, if the current year is 2003, and you enter “9” and “2” in the “Start” and “End” columns, respectively, then Maconomy assumes you mean period 9 of fiscal year “01-01-2003” and period 2 of fiscal year “01-01-2004.” See the description of the field “Date” above and the field “Fiscal Year” below for further information about the functionality of this field.</p> </li> </ul>

Field	Description
	<p>If you do not enter an ending period in this field, you can enter a number in the field "Number of Accruals" below to make Maconomy calculate an ending period.</p> <ul style="list-style-type: none"> <li>■ <b>Fiscal Year</b> — This field has two columns: "Start" and "End." In the "Start" column, you can enter a starting fiscal year. In the "End" column, you can enter an ending fiscal year. The fields are automatically filled in if you have entered a date range in the field "Date" above or a range of G/L periods in the field "Period" above. See the description of the fields "Date" and "Period" above for further information about the functionality of this field.</li> <li>■ <b>Number of Accruals</b> — In this field, you can enter the number of accruals to be created on the basis of the current purchase order line. Using the value in this field and the date or period entered in the "Start" column of one of the fields "Date" and /or "Period," Maconomy determines the month/date on which the last accrual should be made as one accrual is made per G/L period starting with the G/L period covered by the date specified in the field "Date."</li> </ul> <p>Note that you cannot enter a number in this field if you have specified both a starting date/period and an ending date/period in this island. See the description of the below field "Equal-Sized Accruals" for information about the consequences of marking/not marking that field.</p> <ul style="list-style-type: none"> <li>■ <b>Equal-Sized Accruals</b> — If you mark this field, all periods created using the action "Create Plan" will be considered being of equal length, and an even quantity is hence distributed to the relevant periods displayed in the sub-tab. Whether or not this field is automatically marked by Maconomy is determined by the marking of the system parameter "Equal-sized accruals in accrual plans." However, the field can always be manually marked or unmarked. If this field is marked, and if you have specified exact starting and ending dates which do not cover entire G/L periods, those G/L periods which are completely covered by the defined time span will be allocated a higher quantity than the partly covered periods, if any, at the start and end of the defined time span.</li> </ul> <p>If you do not mark this field, that is, if you want to make variable-sized accruals, Maconomy will distribute an amount to each relevant period which is proportional to the number of days in the entire period specified in the date or period fields in this island. See the description of the field "Date" for further information about the functionality of this field.</p> <ul style="list-style-type: none"> <li>■ <b>Total Quantity</b> — In this field, you can enter the number of units of the ordered service for which you want to create job accrual suggestions.</li> <li>■ <b>Total Amount, Currency</b> — In this field, you can enter the amount for which you want to create job accrual proposals. The amount is entered in the currency of the purchase order line.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Total Amount, Base — The functionality of this field is similar to that of the field “Total Amount, Currency,” only the amount is entered in the company’s base currency. For more information about currency conversion in the Job Cost module, please see “Appendix A: Price Calculation in the Job Cost Module.”</li> <li>Description — In this field, you can enter a description. When you select the action “Create Plan,” the text is transferred to each line in the sub-tab. The text from the current purchase order line is shown by default.</li> </ul>
<b>Approve Plan</b>	<p>When you select this action, the job accrual plan shown in the sub-tab is approved, and you can no longer edit the fields in the plan. The island Status in the main tab is updated with information about the person who approved the plan and the date of the approval. Moreover, the field “Accrual Plan Approved” is marked in the Job Accruals and Batch Job Accrual windows sub-tabs.</p> <p>You can only approve a job accrual plan comprising everything purchased on the line. This means that at least one of the amount fields in the island Balance Sheet must be “0.” Maconomy will issue a warning if the plan contains rounding differences that must be allocated before the plan can be approved.</p> <p>Only approved job accrual plans can be transferred for accrual in the windows Job Accruals and Batch Job Accrual.</p>
<b>Reopen Plan</b>	<p>When you select this action, the accrual plan in the sub-tab is reopened, and it can then be edited. When you reopen an accrual plan, it is no longer considered approved. The field “Reopened” in the island Status in the main tab is also marked.</p>

## Job Transfer Workspace

Use this workspace to transfer one or more jobs to a new set of dimensions.

For example, use it when you need to transfer a job from one department to another, so that the new department becomes entirely responsible for the job. Maconomy transfers all open entries to the new job, so that financial statistics are still tracked correctly.

Use selection criteria to choose the jobs to transfer. Define the set of dimensions to which the jobs will be transferred and the date on which the transfer should occur.

Select the **Show Lines** field to display information about the jobs in the Jobs sub-tab. You can select or deselect the jobs in the sub-tab.

When you have selected one or more jobs for transfer, use the Approve Transfer action to approve the transfer and create a job transfer journal. When you post this journal, Maconomy:

- Creates new job entries that are associated with the new dimensions. The entry date of the new job entries is the transfer date that you specified in the **Transfer Date** field, or the entry date of the original entry, if that date is after the transfer date.
- Closes the original job entries that are associated with the old dimensions. The G/L entry date of the new entries is the entry date, or the first date in the open G/L posting interval for the job's company and the job's executing company, if that date is after the entry date.

## Invoice Lines

When you transfer an open job entry to new dimensions, Maconomy automatically creates a job invoice line associated with the new dimensions. The invoice date of the invoice line is the G/L entry date of the new job entry.

This means that when you transfer a job, Maconomy transfers the invoicing basis of the job to new dimensions, but does not transfer the actual entries of the job. The entries associated with the new dimensions do not contain any entered amounts or quantities, but instead contain an invoicing basis of open billing prices. This means that you cannot reallocate the new entries after you transfer them. For this reason, a job transfer should be considered as a sale of an invoicing basis, rather than an actual reallocation of the job.

If you transfer a partially invoiced job entry that contains proposed values, Maconomy subtracts the previously invoiced quantity from the proposed quantity before it applies the proposed quantity. For example, an original job entry contains 40 hours with an invoice proposal of 30 hours, of which 25 hours have already been invoiced. When the job entry is transferred, it includes the remaining 15 registered hours, but only 5 hours are proposed for invoicing. Note that the amount to invoice cannot be less than zero and no amount greater than zero can be credited if the job entry includes a negative quantity.

## G/L Postings

The G/L postings that occur as a result of a job transfer depend on the capitalization method that you selected for the job:

- If a job is capitalized at cost price, only the accounts for work in progress receive postings.
- If a job is capitalized at billing price, postings are also made to the accounts for open cost and open billing price and to the two accounts for internally transferred cost and sales.

In the time gap between transferring a job and posting the resulting transfer journal, you cannot approve invoice selections or reallocate entries for the job.

If a job has open entries that you selected for reallocation, you cannot transfer the job. You must complete the reallocations or deselect the entries before you continue with the job transfer. This rule ensures that no work-in-progress entries occur in the original dimensions after you transfer the job entries to the new dimensions.

If you selected the **Automatic posting of job transfers** system parameter, Maconomy posts the transfer journal automatically, and no time gap occurs.

## Job Transfer Tab

This section includes the fields and descriptions for the Job Transfer tab.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	When you mark this field, the sub-tab will display the open jobs which comply with the selection criteria entered in this island. For performance reasons, Maconomy will issue an error message if you have not specified any selection criteria before marking this field.

Field	Description
<b>Job No.</b>	In these fields, you can enter a range of job numbers. Only jobs with a number within the specified range will be included in the sub-tab and hence transferred upon selection of the action "Approve Transfer."
<b>Job Group</b>	In this field, you can select a job group. Only jobs assigned to the selected job group will be included in the sub-tab and hence transferred upon selection of the action "Approve Transfer."
<b>Company No.</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Project Manager</b>	The functionality of these fields is similar to that of the field "Job No." above.

**Selection Criteria, Dimensions Island**

Field	Description
<b>Location</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Entity</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Project</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Purpose</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Spec. 1-10</b>	The functionality of these fields is similar to that of the field "Job No." above.
<b>Local Spec. 1-10</b>	The functionality of these fields is similar to that of the field "Job No." above.

**Transfer Island**

Field	Description
<b>Transfer Date</b>	<p>In this field, you can enter a transfer date. The job entries that will be created upon transfer of a job to new dimensions will have the date specified in this field as their posting date. However, if the posting date of the original entry is after the transfer date, the new job entry will get the same posting date as the original job entry.</p> <p>See the description of the action "Approve Transfer" for more information about the actual transfer of a job.</p>
<b>Description</b>	In this field, you can enter a description to apply to the current job transfer.

Field	Description
<b>Transaction Type</b>	In this field you may select the transaction type for the journal posting new job entries created upon approval of the job transfer.
<b>Allow blocked job dimensions</b>	If you mark this field, you can overrule the blocking of the job dimensions job, activity, task, and employee. This means that it is possible to transfer a job even if some of the dimension values on the job, or the job itself, have been blocked for registration. For instance, you can transfer a job even if a task registered on the job has been blocked for registration.

### Transfer To Island

Field	Description
<b>Location</b>	In this field, you can specify a location. The value entered in this field can determine the "Location" dimension to which each job entry will be transferred when you select the action "Approve Transfer." However, you should note that upon approval of a job transfer, the dimensions on new job entries are determined through the following procedure: First the dimensions are copied from the original entry to the new entry. Second, the dimensions for which values have been specified in this island will be applied to the new entry, and finally, the job will go through the usual dimension derivation procedure on the basis of the set of derived dimensions valid on the relevant posting date. This means that when an entry is transferred to new dimensions, the value entered in this field might be overwritten by another dimension value, depending on the dimension derivation performed by the system on the date of the transfer.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Spec. 1-10</b>	The functionality of this field is similar to that of the field "Location" above.
<b>Local Spec. 1-10</b>	The functionality of this field is similar to that of the field "Location" above.

### Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Transfer</b>	If this field is marked, the job on the line will be transferred when you select the action "Approve Transfer" in the Action menu. The field can be

Field	Description
	marked manually for each line or you can have Maconomy mark all the lines displayed in the sub-tab by selecting the action "Mark for Transfer."
<b>Job No.</b>	This field shows the number of the job represented on the line. The job displayed in this field is hence the job that will be transferred to new dimensions on the date specified in the island Transfer when you select the action "Approve Transfer."
<b>Job Name</b>	This field shows the name of the job on the line.
<b>Job Group</b>	This field shows the job group to which the job is assigned.
<b>Company No.</b>	This field shows the number of the company to which the job is assigned.
<b>Customer No.</b>	This field shows the number of the customer to which the job is assigned.
<b>Project Manager No.</b>	This field shows the number of the project manager assigned to the job.
<b>Name of Project Manager</b>	This field shows the name of the project manager assigned to the job.
<b>Location</b>	This field shows the location assigned to the job.
<b>Entity</b>	This field shows the entity assigned to the job.
<b>Project</b>	This field shows the project assigned to the job.
<b>Purpose</b>	This field shows the purpose assigned to the job.
<b>Spec. 1-3</b>	These fields show the spec. 1-3 assigned to the job.
<b>Local Spec. 1-3</b>	These fields show the local spec. 1-3 assigned to the job.
<b>Submitted Draft</b>	This field indicates whether at least one invoice draft was submitted.
<b>Appr. for inv.</b>	If this field is marked, the job on the line contains entries which have been approved for invoicing. See the description of the action "Approve Transfer" for information about the consequences of approving a job for transfer which is assigned entries approved for invoicing.

Field	Description
<b>Appr. for inv. on main job</b>	If this field is marked, the job on the line contains entries which have been approved for invoicing on a main job. See the description of the action "Approve Transfer" for information about the consequences of approving a job for transfer which is assigned entries approved for invoicing on a main job.
<b>Appr. for inv. editing</b>	If this field is marked, the job on the line contains entries which have been approved for invoice editing. See the description of the action "Approve Transfer" for information about the consequences of approving a job for transfer which is assigned entries approved for editing.
<b>Appr. for inv. on account</b>	If this field is marked, the job on the line contains entries which have been approved for on account invoicing. See the description of the action "Approve Transfer" for information about the consequences of approving a job for transfer which is assigned entries approved for on account invoicing.
<b>Net on Account, Currency</b>	This field shows any open invoices on account for the job on the current line. You should note that transferring a job does not automatically transfer open invoices on account for the job. These invoices must be transferred manually by reconciling it fully and then creating a new on account invoice with the same open amount. The invoices on account are created with the new set of G/L dimensions, as specified in this window. This field serves as a warning that you may not wish to transfer the current job until you have closed the open invoice on account in the window Invoice Selection.

## Actions

This section shows the actions available in the Job Transfer workspace.

### Top Tab

Field	Description
<b>Approve Transfer</b>	<p>When you select this action, all jobs with a mark in the field "Transfer" on the lines in the sub-tab are approved for transfer, and a job transfer journal is created. If the system parameter "Automatic posting of job transfers" is marked, the transfer journal is posted automatically. If this system parameter is not marked, the journal must be posted in the window Posting in the G/L module.</p> <p>Once this journal has been posted, job entries with the open amounts from the "old" set of dimension values are created in the "new" department or division (that is, the unit being responsible for the job which is represented by a specific set of dimension values), and the open entries in the "old" department are subsequently closed; that is, the new entries will have the open amounts from the original entries and they will also be selected for invoicing, if the "old" entries were selected for invoicing before the transfer.</p> <p>The dimensions on the new job entries are determined through the following procedure: First the dimensions are copied from the original entry to the new entry. Second, the dimensions for which values have been specified in the island</p>

Field	Description
	<p>Transfer To will be applied to the new entry, and finally, the job will go through the usual dimension derivation procedure on the basis of the dimensions which are valid on the relevant posting date. This final step of the dimension derivation procedure also includes a consideration of any date-dependent dimensions derivation specified for the job in the window Derived Dimensions. See the description of the window Derived Dimensions and the introduction to the G/L module for further information about how dimension derivation is performed in Maconomy.</p> <p>If the system parameter “Automatic posting of job transfers” is not marked, there may be a time gap between approving the transfer and posting the journal. In this time gap, it is not possible to approve invoice selections or reallocate entries on the job in question. Moreover, if a job is assigned entries which are approved for invoicing or invoice editing or marked for reconciliation, Maconomy will issue a message informing you that such approvals or marks will be removed if you select this action. If you want to ignore such approvals or marks, Maconomy will remove the relevant approvals and marks and carry on with the job transfer.</p> <p>You should note that if you have approved a job reallocation which contains entries assigned to the job that you wish to transfer, and the resulting journal has not yet been posted, you cannot transfer a job to new dimensions until the journal in question has been posted.</p> <p>The last four fields in the sub-tab display the kinds of approvals that might currently be assigned to entries on the jobs displayed in the sub-tab.</p> <p>The G/L postings made as a result of a job transfer will depend on the capitalization method selected for the job in question. If a job is capitalized at cost price, only the accounts for work in progress will be affected. If a job is capitalized at billing price, postings are also made to the accounts for open cost and open billing price and to the two accounts for internally transferred cost and sales.</p>
<b>Mark For Transfer</b>	When you select this action, all lines displayed in the sub-tab are marked for transfer, that is, the field “Transfer” is automatically marked on all lines in the sub-tab.
<b>Unmark For Transfer</b>	When you select this action, all lines displayed in the sub-tab are unmarked for transfer; that is, the field “Transfer” is automatically unmarked on all lines in the sub-tab.

## Revenue Recognition Section

This section includes the fields and descriptions for the Revenue Recognition section workspaces.

### Job Revenue Recognition Workspace

Use this workspace to recognize revenue on jobs, one at a time or as a batch, based on the percent complete of the job budget.

You can also enter revenue recognition amounts manually.

You can recognize revenue for both fixed price jobs and time and materials jobs.

To perform revenue recognition on a job, the job must be in Order status and have the Revenue Recognition job parameter **Revenue Recognition By Completion Percentage** set to **Yes**.

Use the **Calculate Completion % From** job attribute to determine whether Maconomy should base the completion percentage of a job on the entered billing price of the job or the costs incurred on the job.

Use the **Completion % Budget Type** and **Fixed Price Budget Type** job parameters to determine the budgets that Maconomy uses as the basis for calculations.

The Jobs sub-tab displays information about each job, one line per job. Use selection criteria to choose the jobs that are displayed in the sub-tab. Maconomy saves your selection criteria from session to session. Each time that you open this workspace, Maconomy displays the last selection criteria that you used.

You can have Maconomy perform revenue recognition for one job at a time or all jobs in the sub-tab at one time.

In the **Revenue Recognition** type job parameter, you can choose whether revenue should be recognized at the job level or at a more detailed level. If you choose the detailed level, you can perform calculations in this workspace but will need to go to the Job Revenue Recognition Details workspace to review detailed information.

### Calculation Based on Budgeted Cost Prices

If you have Maconomy calculate the completion percentage of a job based on the budgeted costs of the job, Maconomy compares the budgeted costs with the costs that you have entered for the job in the Job Journal, Expense Sheets, and other similar workspaces. Maconomy uses the formula:

$$\text{Completion Percentage} = (\text{Incurred Costs} / \text{Total Budgeted Costs}) \times 100$$

By default, the total budgeted costs are based on the latest approved revision of the job budget. However, if you set **Revenue Recognize According to Approved Budget** job parameter to Yes, Maconomy bases the costs on the latest revision of the budget, whether it is approved or not. Maconomy uses the **Fixed Price Budget Type** attribute in the **Pricing Principle** job parameter to determine a job's budget type.

Maconomy uses the completion percentage to calculate the revenue that can be recognized in the G/L module. Maconomy uses the formula:

$$\text{Amount of Revenue Recognized} = \text{Fixed Price} \times \text{Completion Percentage}$$

When you approve the revenue recognition in this workspace, Maconomy creates a job revenue recognition journal that is ready for posting in the G/L module.

### Calculation Based on Budgeted Billing Prices

If you want Maconomy to calculate the completion percentage of a job based on budgeted billing prices, instead of the budgeted cost prices, Maconomy compares the budgeted billing prices with the billing prices you have entered to date for the job. Maconomy uses the formula:

$$\text{Completion Percentage} = (\text{Registered Billing Price} / \text{Total Budgeted Billing Price}) \times 100$$

Then Maconomy uses the completion percentage to calculate revenue in the same way as it does when you base the completion percentage on cost prices:

$$\text{Amount of Revenue Recognized} = \text{Fixed Price} \times \text{Completion Percentage}$$

### Calculation of Fixed Price

Maconomy can calculate revenue for both fixed-price jobs and time and material jobs. The fixed price of these jobs is determined by either:

- The approved quote price of the job, or
- The total budgeted billing price of the latest approved revision of the budget that is assigned to the job.

Use the **Pricing Principle** job parameter type to specify the fixed-price basis of a job.

### Revenue Adjustment Entry

When Maconomy calculates revenue, it always calculates the revenue to be recognized at the present point in time. If revenue recognition was performed for the job on previous occasions, Maconomy creates a revenue adjustment entry for the activity that adjusts the previous revenue recognition amount to the correct current amount.

The adjustment is performed individually for main jobs and sub-jobs, if any. This is also the case if you specify an allocation percentage for a job in the Distribute to Subjobs workspace.

### Example

Assume you have a fixed price job for which:

- Revenue recognition uses a completion percentage based on budgeted cost prices.
- The fixed price of the job is based on a job budget.
- Capitalization is at the billing price.
- The **Create Invoice Upon Job Closing** job parameter attribute is set to **Yes**.

The job's budget has a total billing price of \$60,000 and a total cost price of \$40,000. This means that the fixed-price basis is \$60,000, and the cost basis is \$40,000.

You make entries to the job through the job journal, time sheets, and so on, that are posted to the work-in-progress account and the open billing price. The total work entered is equal to a billing price of \$36,000 and a total cost of \$20,000. Because you selected capitalization at billing price, Maconomy automatically revenue-recognizes a revenue of \$36,000.

Now you want to recognize revenue based on the percentage completion method. When Maconomy calculates revenue recognition in this workspace, it states that the job is 50% complete, because the entered cost is 50% of the budgeted cost. Maconomy therefore suggests that you recognize 50% of the fixed price, or \$30,000, as revenue. When you approve the revenue recognition, Maconomy creates a Job Revenue Recognition journal that is ready for posting. The journal contains entries that reduce the amount of \$36,000 already recognized to \$30,000 by crediting WIP Account, Adjustment and debiting **Open Billing Price, Adjustment** by \$6,000. Maconomy also creates a job entry that has an open billing price and a billing price up/down of -\$6,000.

Then you enter \$25,000 more costs on the job, with a billing price of \$34,000. This results in revenue recognition of an additional \$34,000, because you selected capitalization at billing price. You have now entered total expenses of \$45,000 and a billing price of \$70,000.

Maconomy now considers the job completed; the completion percentage is 100. You can recognize 100% of the fixed price as revenue. The fixed price was \$60,000, and \$64,000 had already been recognized as revenue. If you approve Maconomy's suggestion to recognize

\$60,000 of revenue on the job, Maconomy creates a journal which, when posted, reduces the revenue recognition by \$4,000 (the total billing price, less the fixed price), so that the job's revenue becomes \$60,000.

Now you make a change to the job budget that changes the fixed price to \$80,000. When a new calculation of revenue is performed, Maconomy still considers the job 100% completed, because the cost price basis remains unchanged. But because you changed the fixed price basis to \$80,000, Maconomy recognizes another \$20,000 in revenue, which is the balance between the previous and the present fixed price, and the job is revalued accordingly.

### Time and Materials Jobs

Because revenue adjustment entries should not adjust the invoicing basis of a time and material job, Maconomy closes any revenue adjustment entries that you create on a time and material job immediately after they are created. Hence, they do not have any effect on the invoice basis of the job. If changes on the job result in adjustments being reversed, the automatic creation of reversing journals ensures that the relevant entries are adjusted in the same way as for fixed-price jobs.

### Limits on Recognized Revenue

If you want to limit the revenue recognized on one or more jobs, you can specify a maximum completion percentage in the **Compl. % Limit** field on the lines in the Jobs sub-tab. If you select the **Limit Revenue** field and specify a completion percentage limit for a given job, Maconomy will not recognize more than this percentage of the fixed price of the job as revenue.

On a fixed price job, you cannot recognize more than 100% of the fixed price as revenue. However, because the revenue to be recognized on a time and material job is not necessarily limited to the "fixed price" of the job, the completion percentage can be larger than 100%, meaning that more than the "fixed price" of the job can be recognized as revenue.

Maconomy determines the default value of the **Limit Revenue** and **Compl. % Limit** fields in the Jobs sub-tab from the corresponding attributes that you specified in the **Revenue Recognition** job parameter type assigned to the jobs. However, because the revenue on a fixed-price job is always limited to a maximum of 100%, you can only change the value of the **Limit Revenue** field for time and material jobs.

### Manual Revenue Recognition

You can also perform manual revenue recognition in this workspace. For example, you can recognize 75% of the billing price as revenue, even though the job is only considered 50% completed.

However, manual adjustments to revenue that is already recognized on a job that uses detailed revenue recognition can only be performed in the Job Revenue Recognition Details workspace.

### Potential Issues

Issues can arise from the fact that you can use the same budget type to determine both the fixed price of the job and the completion percentage used for calculating revenue recognition on the job.

For example, if Maconomy determines the fixed price of a job by a budget that specifies a total billing price of 500 hours at \$100 an hour, the total billing price of the job is \$50,000. As work progresses on the job, it turns out that a total of 600 hours are needed to complete the job, but

this change should not affect the fixed price of the job, which should remain at \$50,000. But when Maconomy calculates the completion percentage, the estimated total number of hours is 600, resulting in a total billing price of \$60,000 .

This illustrates that if the fixed-price budget is identical to the budget used to calculate the completion percentage, you might not be able to calculate both the fixed price of the job and the assigned completion percentage correctly.

You can solve this problem by separating the fixed-price budget from the ongoing job budget, enabling you to have one job budget type determine the fixed price of a job, while another job budget type served as the basis for calculating the completion percentage.

You can specify the budget type to be used for calculating the completion percentage in the **Completion % Budget Type** job parameter attribute in the **Revenue Recognition** job parameter. If you do not specify a budget type there, Maconomy applies the budget type specified in the **Fixed Price Budget Type** attribute in the **Pricing Principle** job parameter when determining both the fixed price of the job and the completion percentage.

To continue our example, assume that 250 hours have now been spent on the job, resulting in an entered billing price of \$25,000. When Maconomy calculates the completion percentage for the job, the ongoing budget, with a total billing price of \$60,000 is considered. The completion percentage is  $\$25,000 / \$60,000 = 41.7\%$ . The fixed price, however, is not \$60,000, but the \$50,000 specified by the fixed-price budget. Because you separated the fixed-price budget from the ongoing job budget, the amount to recognize as revenue is  $41.7\% \times \$50,000 = \$20,850$ .

## Job Revenue Recognition Tab

This section includes the fields and descriptions for the Job Revenue Recognition tab.

### Selection Criteria Island

Field	Description
<b>Show Lines</b>	When you mark this field, the sub-tab shows the lines that match the selection criteria specified in this island. By default, the field is not marked. Please note that Maconomy will not consider whether the jobs are shown in the sub-tab when you use the functions in the Action menu. The jobs that are identified by the selection criteria are affected by the functions regardless of whether they are shown in the sub-tab.
<b>Job No.</b>	In these fields, you can specify a range of job numbers. The sub-tab will only display information about jobs with numbers within the specified range.
<b>Job Group</b>	In this field you can specify a job group. The sub-tab will only display jobs assigned to the specified job group.
<b>Invoicing Method</b>	In this field, you can specify whether the sub-tab should only show fixed-price jobs or time and material jobs. If you do not select one of these options, the sub-tab will show information for both types of jobs.
<b>Customer No.</b>	In these fields, you can specify a range of customer numbers. The sub-tab will only show jobs assigned to customers with a number within the specified range. If you do not enter a range, Maconomy will not select on the basis of the assigned customers of the jobs.

Field	Description
<b>Department</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Customer Group</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Country</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Language</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Currency</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Project Manager No.</b>	In this field, you can specify the employee number of a project manager. The sub-tab will only show jobs to which the specified employee is assigned as project manager.
<b>Company No.</b>	In this field, you can specify the number of a company in Maconomy. The sub-tab will only show jobs for which the specified company is responsible.
<b>Status</b>	In this field, you can choose if jobs with status Quote or Order should be included in the selection. If the field is left blank, jobs of either status are included. Note that the revenue to be recognized is calculated to zero for jobs in Quote.

#### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	In these fields, you can specify a range of locations. The sub-tab will only show jobs with a location within the specified range.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location."
<b>Project</b>	The functionality of this field is similar to that of the field "Location."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."

**Calculated Revenue Island**

Field	Description
<b>Show Latest Approved Revenue Recognition</b>	<p>If you mark this field, the figures in the sub-tab will show the date, amounts and percentages for the latest approved revenue recognition carried out on the job in either this window or the window Job Revenue Recognition Details.</p> <p>If you do not mark this field and select the action "Calculate Revenue Recognition," the figures on the lines in the sub-tab will display the amounts and percentages that have been recognized as revenue on the job, but which have not yet been approved.</p>

## Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Job No.</b>	This field shows the number of the current job in the sub-tab. Maconomy will only show lines in the sub-tab when the field "Show Lines" is marked.
<b>Job Name</b>	This field shows the name of the current job.
<b>To Be Calculated</b>	<p>If you mark this field, the job on the current line should be included in the calculation of the revenue recognition. The calculation is performed when you select the action "Calculate Revenue Recognition." Maconomy will calculate both the completion percentage and the revenue to be recognized, but only if the fields "Calculate Completion Percentage" and "Calculate Revenue," respectively, are marked.</p> <p>This field and the field "Approve" cannot be marked at the same time.</p>
<b>Approve</b>	<p>If you mark this field, the job in the current line is approved when you select the function "Approve Revenue Recognition." Upon approval, Maconomy creates a job revenue recognition journal, which should then be posted in the G/L module. For more information, please see the description of the action "Approve Revenue Recognition."</p> <p>If you remove the mark in this field, the field "Fixed-Price Basis" is updated to show the current fixed price if the price was previously based on a budget with a given revision code.</p> <p>This field and the field "To be Calculated" cannot be marked at the same time.</p>
<b>Percentage, New Revenue Recognition</b>	This field specifies how large a percentage of the fixed price should be recognized as revenue. The percentage can be calculated by Maconomy, and it will then correspond to the ratio between the registered costs/billing prices of the job and the budgeted costs/billing prices of the job. You can also enter a percentage manually, and the amount in the field "Amount for Revenue Recognition" is updated to correspond to the specified part of the fixed price. The maximum percentage in this field is 100% if the job is a

Field	Description
	fixed-price job. If the job is a time and material job, the percentage can be anything from 0 and up. See the description of the fields "Limit Revenue" and "Completion % Limit" for more information about limiting completion percentages. When you specify a percentage manually, Maconomy will reset the date in the field "Date, New Revenue Recognition" as an indication that you must decide yourself on which date the recognition of the calculated revenue should be based. Note that if you need to make a manual change to a job that uses detailed revenue recognition, such changes cannot be made in this window, but must instead be entered in the window Job Revenue Recognition Details. Note that if the job has "Quote" status, the percentage must be 0 in this field.
<b>Amount, New Revenue Recognition</b>	<p>This field specifies the size of the amount to be recognized as revenue on the job. The amount can be calculated by Maconomy, and it will then correspond to the percentage of the fixed price shown in the field "Percentage, Recognized As Revenue." You can also specify an amount manually, and the percentage in the field "Percentage, Recognized As Revenue" will be updated to correspond to the specified amount. If the job is a fixed-price job, the amount specified cannot exceed the fixed price of the job as shown in the field "Fixed Price Basis." If the job is a time and material job, the values in the fields "Limit Revenue" and "Compl. % Limit" will determine how large an amount you can recognize as revenue on the job. Note that if the job has "Quote" status, the amount must be 0 in this field.</p> <p>When you specify an amount manually, Maconomy will reset the date in the field "Date, New Revenue Recognition" as an indication that you must decide yourself on which date the recognition of the calculated revenue should be based.</p> <p>Note that if you need to make a manual change to a job that uses detailed revenue recognition, such changes cannot be made in this window, but must instead be entered in the window Job Revenue Recognition Details.</p>
<b>Date, New Revenue Recognition</b>	The date in this field specifies when the revenue recognition should be registered in the G/L module. The date is transferred from the field "Revenue Recognition Date" when you select the action "Calculate Revenue Recognition." You can, however, change the date here before selecting the action "Approve Revenue Recognition."
<b>Cost Basis, Registered</b>	Upon calculation this field shows the cost of the hours and amounts that are registered for the job up to the date specified in the field "Revenue Recognition Date." Together with the value in the field "Cost Basis, Budget," this amount will form the basis of a calculation of the percentage to be recognized if the completion percentage on the job is to be calculated on the basis of cost prices. Whether the completion percentage of a job should be calculated on the basis of budgeted cost prices or budget billing prices is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition. When you open this window, this field will show the cost basis from the last time the revenue recognition was calculated.

Field	Description
	<p>If the job parameter attribute "Include Outlays in Fixed Price" in the job parameter type "Pricing Method" is assigned the value "No" for the job in question, the amounts from outlay activities and other non-fixed-price entries are deducted from the total cost basis in this field and the fields "Cost Basis, Budget" and "Fixed-Price Basis." See the description of the job parameter attribute "Include Outlays in Fixed Price" in the window Job Parameters for more information about the functionality of this attribute.</p>
<b>Cost Basis, Budget</b>	<p>This field shows the cost price of the hours and amounts budgeted for the job in the budget specified in either the job parameter attribute "Completion % Budget Type" or in the job parameter attribute "Fixed Price Budget Type." Together with the value in the field "Cost Basis, Registered," this amount forms the basis of a calculation of the percentage to be recognized as revenue if the completion percentage on the job is to be calculated on the basis of cost prices. Whether the completion percentage of a job should be calculated on the basis of budgeted cost prices or budget billing prices is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition. If a revision code has been selected, the budget is used with the specified code. Otherwise, the most recently approved revision of the job's budget will be used. If an approved revision of the job budget does not exist, the value in this field will be 0.</p> <p>If the job parameter "Include Outlays in Fixed Price" in the job parameter type "Pricing Method" is assigned the value "No" for the job in question, the amounts are deducted from the outlay activities from the total cost basis in this field and the fields "Cost Basis, Registered" and "Fixed Price Basis."</p>
<b>Fixed Price Basis</b>	<p>This field shows the fixed price of the job. In the job parameter attribute "Invoicing Method" it is specified whether the basis of a fixed price should be a job budget or the quote price of the job. If a budget is specified, the fixed price of the job corresponds to the total billing price of the hours and amounts budgeted for the job in the most recently approved revision of the job budget of the type specified in the relevant job parameter attribute. If an approved revision of the job budget does not exist, the amount in this field will be 0. Billing prices that originate from outlay activities are only included if it is specified on the job that the price includes outlays.</p> <p>If the basis of a fixed price is specified as the quote price, the effective quote price of the job is shown in this field. The effective quote price is the original quote price from the window Jobs or Job Budgets, or the quote price that has been approved most recently in the window Quote Editing.</p> <p>If the job parameter "Include Outlays in Fixed Price" in the job parameter type "Pricing Method" is given the value "No" for the job in question, the amount of outlay activities or, more generally, non-fixed-price entries, is deducted from the total cost basis in this field and the fields "Cost Basis, Budget" and "Cost Basis, Registered."</p>
<b>Budget Type, Fixed Price</b>	<p>This field shows the type of the job budget that includes the cost or billing prices which form the basis of the calculation of the revenue to be recognized on a job. If the fixed-price basis is a job budget (see the</p>

Field	Description
	description of the field "Fixed Price Basis" above), the fixed-price basis will also originate from this budget.
<b>Budget Rev. No., Fixed Price</b>	This field shows the number of the used revision of the job budget shown in the field "Budget Type, Fixed Price" above.
<b>Budget Type, Completion Percentage</b>	This field shows the type of the budget which formed the basis for the calculation of the completion percentage. See the introduction to this window for information about separating the fixed- price budget of a job from the on-going budget of a job.
<b>Budget Rev. No., Completion Percentage</b>	This field shows the number of the used revision of the job budget which formed the basis for the calculation of the completion percentage.
<b>Status</b>	In this field, you can choose if jobs with status Quote or Order should be included in the selection. If the field is left blank, jobs of either status are included. Note that the revenue to be recognized is calculated to zero for jobs in Quote.
<b>Revenue Recognition Date</b>	The date displayed in this field is determined by the value in the field "Show Latest Approved Revenue Recognition" in the island Calculate Revenue. If that field is marked, this field will show the date on which the latest revenue recognition was approved. If that field is not marked, the date in this field will display the date on which revenue was recognized on the job.
<b>Percentage, Revenue Recognized</b>	The percentage displayed in this field is determined by the value in the field "Show Latest Approved Revenue Recognition" in the island Calculate Revenue. If that field is marked, this field shows the approved percentage recognized as revenue on the job. If that field is not marked, the percentage in this field will display the percentage currently recognized as revenue in the job, but which has not yet been approved.
<b>Amount, Revenue Recognized</b>	The amount displayed in this field is determined by the value in the field "Show Latest Approved Revenue Recognition" in the island Calculate Revenue. If that field is marked, this field shows the approved amount recognized as revenue on the job. If that field is not marked, the amount in this field will display the amount currently recognized as revenue in the job, but which has not yet been approved.
<b>Percentage, Adjustment</b>	This field shows the difference between the percentage of the fixed price of the job already revenue-recognized and the potential percentage that will be revenue-recognized if the current revenue recognition is performed. The field thus shows the balance between the fields "Percentage, Revenue Recognized" and the field "Percentage, New Revenue Recognition."
<b>Amount, Adjustment</b>	This field shows the difference between the amount of the fixed price of the job already revenue-recognized and the potential amount that will be revenue-recognized if the current revenue recognition is performed. The field

Field	Description
	thus shows the balance between the fields "Amount, Revenue Recognized" and the field "Amount, New Revenue Recognition."
<b>Limit Revenue Recognition</b>	<p>In this field, you can choose whether the revenue to be recognized on a job should be limited by a given percentage. The percentage is specified in the field "Completion % Limit" on the line. If the job on the line is a fixed-price job, this field is automatically marked, and the mark cannot be removed, as the revenue to be recognized on a fixed-price job is limited to never exceed the fixed price of the job.</p> <p>If the job on the line is a time-and-material job, the field can be marked and unmarked manually. Whether the field is automatically marked on a time-and-material job is determined by the value specified in the job parameter attribute "Limit Revenue" in the job parameter type "Revenue Recognition" assigned to the job in question. However, the value in that attribute is only a default value, meaning that the mark in this field can be removed manually if you do not want the revenue to be recognized on a certain time-and-material job to be limited by a certain percentage.</p> <p>If you mark this field, the revenue to be recognized on the job will be limited to the fixed price of the job multiplied by the completion percentage limit specified in the field "Completion % Limit" on the line. See the description of the field "Completion % Limit" below for further information about limiting revenue recognition on a given job.</p> <p>If this field is not marked, there will be no limit to the revenue to be recognized on a time-and-material job. This means that the completion percentage can be larger than 100% and that more than the "fixed price" of a time-and-material job can be recognized as revenue.</p> <p>Note that if the job uses detailed revenue recognition, you cannot change the marking of this field in this window. If you need to mark or unmark this field on a job that uses detailed revenue recognition, this must instead be done in the Job Revenue Recognition Details window.</p>
<b>Completion % Limit</b>	<p>In this field, you can enter a completion percentage limit to apply to the job on the line. The value entered in this field will only apply if you have marked the field "Limit Revenue Recognition" on the line in question.</p> <p>If the job on the line is a fixed-price job, the value in this field can be a figure between 0 and 100%. If the job on the line is a time-and-material job, the value in this field can be a figure from 0% and up, as the revenue to be recognized on a time-and-material job is not necessarily limited to the "fixed price" of the job.</p> <p>If, for example, you enter the value "85%" in this field, the revenue recognized on both fixed-price jobs and time-and-material jobs cannot exceed 85% of the fixed price of the jobs. If, on the other hand, you enter the value "120%" in this field on a fixed-price job, Maconomy will issue an error message, as it is not possible to recognize more revenue than the fixed price of a fixed-price job that is, 100%, whereas 120% is a valid value for time-and-material jobs. Whether a job is a fixed-price job or a time-and-material job is displayed on each line in the field "Pricing Principle."</p>

Field	Description
	The default value in this field is derived from the job parameter attribute "Compl. % Limit" in the job parameter type "Revenue Recognition." However, this value can be changed manually.
<b>Billing Price Basis, Registered</b>	Upon calculation, this field shows the total billing price of the hours and amounts registered on the job up to the date specified in the field "Revenue Recognition Date." Together with the value in the field "Billing Price Basis, Budget," this amount will form the basis of a calculation of the percentage to be recognized if the job is set up to have the completion percentage calculated on the basis of billing price. This is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition assigned to the job in question.
<b>Billing Price Basis, Budget</b>	This field shows the billing price of the hours and amounts budgeted for the job in the budget specified in either the job parameter attribute "Completion % Budget Type" or in the job parameter attribute "Fixed Price Budget Type" for the current job. Together with the value in the field "Billing Price Basis, Registered," this amount forms the basis of a calculation of the percentage to be recognized as revenue if the job is set up to have the completion percentage calculated on the basis of billing price.
<b>Job Group</b>	This field shows to which job group the current line is assigned.
<b>Invoicing Method</b>	This field shows whether the job on the line is a fixed-price job or a time and material job.
<b>Department</b>	This field shows the department to which the job on the current line is assigned.
<b>Customer Group</b>	This field shows the name of the customer group to which the customer on the job is assigned.
<b>Customer No.</b>	This field shows the number of the bill-to customer assigned to the job on the current line.
<b>Customer Name</b>	This field shows the name of the bill-to customer assigned to the job on the current line.
<b>Currency</b>	This field shows the currency selected for the job on the current line.
<b>Base Currency</b>	This field shows the base currency for the company responsible for the job on the current line.
<b>Country</b>	This field shows the country specified for the customer assigned to the job on the current line.
<b>Language</b>	This field shows the language specified for the customer assigned to the job on the current line.

Field	Description
<b>Project Manager No.</b>	This field shows the number of the employee assigned as project manager for the job on the current line.
<b>Project Manager</b>	This field shows the name of the employee assigned as project manager for the job on the current line.
<b>Company No.</b>	This field shows the number of the company responsible for the job on the current line.
<b>Company Name</b>	This field shows the name of the company responsible for the job on the current line.
<b>Location</b>	This field shows the value for the dimension "Location" which may be assigned to the job in the current line.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location."
<b>Project</b>	The functionality of this field is similar to that of the field "Location."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."

## Actions

This section shows the actions available in the Job Revenue Recognition workspace.

### Top Tab

Field	Description
<b>Mark for Calculation</b>	When you select this action, the field "To Be Calculated" is marked for all jobs in the sub-tab that are not marked in the field "Approve."
<b>Unmark for Calculation</b>	When you select this action, the mark in the field "To Be Calculated" is removed for all jobs in the sub-tab.
<b>Calculate Revenue Recognition</b>	When you select this action, the revenue recognition is calculated for all jobs in the sub-tab that are marked in the field "To Be Calculated." Depending on the selections in the fields "Calculate Completion Percentage" and "Calculate Revenue," the completion percentage and the amount to be recognized as revenue are calculated.

Field	Description
	<p>At the calculation, the value of the field “Revenue Recognition Date” in the island Calculate Revenue is copied to the field “Revenue Recognition Date” in the sub-tab for all jobs to be calculated.</p> <p>If a revision code has been specified in the island Calculate Revenue, Maconomy will only perform calculations for the jobs that have an approved budget with the assigned specified revision code. If you then specify another revision code, this code will apply to the jobs that were not calculated in the first instance. This way it is easy to calculate all jobs for concurrent approval. For jobs for which no budget exists, a revenue of zero is calculated.</p> <p>Once a job has been calculated, Maconomy will automatically unmark the field “To Be Calculated” and mark the field “Approve.”</p> <p>Note that you can always manually edit the calculated percentages and amounts on jobs using revenue recognition by completion percentage. However, on jobs using detailed revenue recognition, the calculated percentages and amounts can only be manually edited in the window Job Revenue Recognition Details.</p> <p>The following fields are part of the Calculate Revenue Recognition wizard:</p> <ul style="list-style-type: none"> <li>■ <b>Revision Code</b> — In this field, you can specify a revision code. When calculating the completion percentage of a job, Maconomy will find the cost-price basis and the fixed-price basis from the most recently approved job budget with the specified revision code. If you do not specify a revision code, Maconomy will use the most recent approved revision of the job budget, irrespective of revision code.</li> <li>■ <b>Revenue Recognition Date</b> — In this field, you can specify a cut-off date for job entries to be revenue-recognized. The revenue recognition is based on job entries that have been created up to and including this date. This way it is, for example, possible to make a fixed, monthly revenue recognition without having to do this on a certain day of the month. When the action “Calculate Revenue Recognition” is selected, the date is copied to the field “Revenue Recognition Date” for the lines in the sub-tab which are calculated. By default, this field shows today’s date.</li> <li>■ <b>Calculate Completion Percentage</b> — If this field is marked, Maconomy will calculate the completion percentage when you select the action “Calculate Revenue Recognition.” If you do not mark this field, the calculation will not be performed, and you should then manually specify a completion percentage. In this case, Maconomy calculates the completion percentage compared to the amount to be revenue-recognized specified manually on the line in the sub-tab, and the fixed price.</li> <li>■ This field and the field “Calculate Revenue” below are marked by default. The mark should only be removed if you do not want to use a fixed percentage or a fixed amount for your calculations.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Calculate Revenue — If this field is marked, Maconomy will calculate the amount to be recognized as revenue when you select the action "Calculate Revenue Recognition." If you do not mark this field, the calculation is not performed, and you should manually specify an amount to be recognized. In this case, Maconomy will calculate the completion percentage compared to the amount to be recognized specified manually in the line in the sub-tab, and to the fixed price.</li> </ul>
<b>Mark for Approval</b>	When you select this action, the field "Approve" is marked for all jobs in the sub-tab that are not marked in the field "To Be Calculated."
<b>Unmark for Approval</b>	When you select this action, the mark in the field "Approve" is removed for all jobs in the sub-tab.
<b>Approve Revenue Recognition</b>	<p>When you select this action, the revenue recognition is approved for all jobs in the sub-tab that are marked in the field "Approve." At approval, the date in the field "Revenue Recognition Date" is transferred to the field "Revenue Recognition Date" in the sub-tab, and the fields "Amount, Revenue Recognized" and "Percentage, Revenue Recognized" are updated with the amount and percentage recognized as revenue on the jobs in question.</p> <p>Upon approval Maconomy checks if a journal of the type "Job Revenue Recognition" exists in the G/L module, and if so, adds the entries created as a result of the approval to this journal, which is then marked as ready for posting. If no such journal exists, Maconomy creates a job revenue recognition journal which is ready for posting and adds the entries to this journal. If the system parameter "User specific job revenue recognition journals" has been marked, Maconomy will maintain separate journals for each user approving revenue recognitions. This means that in the procedure described above, Maconomy checks if any existing journal created by the current user as a result of previous approvals exists, and if so, adds the entries to this journal. If no such journal exists, Maconomy creates a journal for the current user, adding the entries to this journal, even if there were revenue recognition journals created by other users.</p> <p>If the job is not using detailed revenue recognition, but is revenue-recognized at job level, the journal contains entries on the account for the open billing price, and the account "WIP Account, Adjustment" in the G/L module and the activity specified in the job parameter attribute "Activity for Job Revenue Adjustment" in the job parameter type "Revenue Recognition." The posting date for this journal will be the date from the field "Revenue Recognition Date." If the approved job uses detailed revenue recognition, the relevant account references are derived from the activities applied to each revenue adjustment entry in question.</p> <p>Once the revenue recognition for a job has been approved, Maconomy will automatically remove the mark in the field "Approve."</p> <p>The following fields are part of the Approve Revenue Recognition wizard:</p>

Field	Description
	<ul style="list-style-type: none"> <li>Amount — In this field, you can enter a triviality limit to apply to the revenue recognition made in this window. Any amount adjustment which is less than this triviality limit will not result in the creation of an adjustment journal at approval of the revenue recognition. The triviality limit thus allows you to leave out amount adjustments which are considered as being of too small an amount when making revenue adjustments. Note that if the job in question is set up to use detailed revenue recognition, the triviality limit specified in this field is applied to each adjustment entry, rather than the adjustment of the entire job. Revenue recognition detail levels are displayed in the window Job Revenue Recognition Details.</li> <li>Currency — In this field, you can specify the currency of the triviality limit specified in the above field in this island.</li> </ul>

## Job Revenue Recognition Details Workspace

Use this workspace when you perform detailed revenue recognition.

You can also enter revenue recognition amounts manually.

See the description of the Job Revenue Recognition workspace for general information about revenue recognition.

This workspace displays information about all jobs that have a status of Order. However, you can only make changes to those jobs for which revenue is recognized by completion percentage.

For each job, this workspace displays the total revenue recognized on the job, as well as any amounts that you have budgeted and entered for the job. Maconomy splits the amounts into columns that show totals for amounts that are included in the fixed price of the job and amounts that are not included in the fixed price of the job.

Under **Budget, Completion Percentage**, you can see information about the budget that Maconomy used to calculate the completion percentage.

### Detailed Revenue Recognition

With detailed revenue recognition, you group the entries on a job's budget into detail levels, each of which acts as its own basis for revenue recognition. Maconomy calculates the completion percentage and fixed price for each group and not just at the job level. This grouping also ensures that entries are posted very precisely, because Maconomy posts entries to the dimensions of the groups.

To use detailed revenue recognition for a job, you must assign the job to a job parameter of the type **Pricing Principle** in which you have specified that the "fixed price" is determined by the budget of the job, rather than by the quote price of the job. In the **Revenue Recognition** job parameter type, you must assign the Yes value to the attribute **Revenue Recognition by Completion Percentage** before you define any specific revenue recognition detail levels.

To identify the values that Maconomy must use as the basis for performing detailed revenue recognition, use the two **Detail By** job attributes in the **Revenue Recognition** job parameter type. Specify one of the following values: Activity, Task, Location, Entity, Project, Purpose, Specification 1-3, and Local Specification 1-3. The values that you select for these attributes are

determined based on the dimensions used in the relevant job budget. For example, if you use the **Location** dimension to divide the entries in a budget, you might use the dimension **Location** as a parameter for performing detailed revenue recognition.

### Example

The following example shows how you can perform detailed revenue recognition.

Assume that you have a time and materials job. You assign the **Revenue Recognition** job parameter to the job, and indicate that Maconomy should calculate revenue recognition by completion percentage based on the **Task** detail level. You provided a task list for the job.

The "fixed price" of the job is determined by the budget of the job. The job budget looks like this:

Task	Total Cost	Total Billing Price
101	\$40,000	\$80,000
101	\$20,000	\$30,000
204	\$80,000	\$100,000
302	\$10,000	\$10,000
204	\$50,000	\$70,000

Because Maconomy is calculating detailed revenue recognition for the job based on Task, Maconomy consolidates the lines in the budget as follows in the Job Revenue Recognition Details workspace:

Task	Total Cost	Total Billing Price
101	\$60,000	\$110,000
204	\$130,000	\$170,000
302	\$10,000	\$10,000

When Maconomy calculates the revenue to be recognized by completion percentage, it considers each group to be a single unit, and calculates revenue for each group.

If you specified the values **Task** and **Location** in the two **Detail By** job parameter attributes, the budget might look like this:

Task	Location	Total Cost	Total Billing Price
101	A	\$5,000	\$7,000
101	A	\$3,000	\$4,000
101	B	\$7,000	\$10,000
204	A	\$4,000	\$4,000
204	B	\$6,000	\$12,000
204	A	\$1,000	\$1,100

Maconomy consolidates the lines in the budget as follows in the Job Revenue Recognition Details workspace:

Detail Level Task/Location	Total Cost	Total Billing Price
101/A	\$8,000	\$11,000
101/B	\$7,000	\$10,000
204/A	\$5,000	\$5,100
204/B	\$6,000	\$12,000

When Maconomy calculates the completion percentage, it calculates the amounts for each combination of the levels that are displayed on the lines in the Job Revenue Recognition Groups sub-tab. This lets you see a detailed calculation of the completion percentage of the detail levels. Also, any manual adjustments that you made to the revenue that was already recognized apply to the relevant detail levels, whereas Maconomy applies manual adjustments at the job level in the Job Revenue Recognition workspace.

### Calculate and Approve Revenue Recognition Actions

Use the **Calculate Revenue Recognition** action to calculate a new completion percentage for each revenue recognition detail level, as well as the amount to be recognized based on the revenue recognition date specified. Use the **Approve Revenue Recognition** action to approve the resulting revenue recognition. When you approve the revenue recognition, Maconomy creates a Job Revenue Recognition journal for each detail level, ready for posting in the G/L module. When you post revenue adjustments, Maconomy creates one adjusting entry for each revenue recognition detail level that needs to be adjusted.

### Job Revenue Recognition Details Tab

This section includes the fields and descriptions for the Job Revenue Recognition Details tab.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the current job.
<b>Status</b>	<p>This is the current job status. When the job is created, it has "Quote" status, unless you have marked the "Created as Order" field in the System Information window. It is then only possible to make quotes from it, not invoices. This is done in the Quote Editing window.</p> <p>The job status can be changed to "Order" by selecting "Convert to Order" in the Action menu. The field can only have one of the two values mentioned.</p> <p>If the "Created as Order" field in the System Information window is marked, jobs are created with "Order" status, but only if the current user has been given access to convert jobs to orders in the Actions window in the Set-Up module.</p>

Field	Description
<b>Project Manager</b>	This field shows the name and number of the employee who is specified as project manager on the job.
<b>Invoicing Method</b>	This field shows the invoicing principle applying to the job; that is, the field shows whether the job is a fixed-price job or a time and material job. The value is transferred from the job parameter "Pricing Principle" assigned to the job in question.
<b>Fixed Price Basis</b>	This field shows the fixed-price basis applying to the job; that is, the field shows whether the fixed price of the job is based on the latest approved budget of the job or the quote price of the job. The value is transferred from the job parameter "Pricing Principle" assigned to the job in question.
<b>Customer</b>	This field shows the name and number of the customer assigned to the job.
<b>Company</b>	This field shows the name and number of the company responsible for the current job. The value is transferred from the island Company in the window Jobs.

**Budget, Fixed Price Island**

Field	Description
<b>Budget Type</b>	This field shows the budget type which determines the fixed price of the job. The fixed price budget type of a job is determined in the job parameter Pricing Principle.
<b>Revision No.</b>	This field shows the revision number of the budget type which determines the fixed price of the job.

**Budget, Completion Percentage Island**

Field	Description
<b>Budget Type</b>	This field shows the budget type which determines the completion percentage of the job. The budget type on the basis of which the completion percentage of a job should be calculated is determined in either the job parameter Revenue Recognition or the job parameter Pricing Principle depending on the set-up of the job.
<b>Revision No.</b>	This field shows the revision number of the budget type which determines the completion percentage of the job.

**Last Calculation Island**

Field	Description
<b>Revision Code</b>	In this field, you can specify that revenue should be calculated on the basis of a specific revision of the latest approved job budget. If you specify a revision code in this field, revenue recognition will be calculated on the basis of the

Field	Description
	specified revision of the latest approved job budget, rather than the latest approved revision of the job budget. If you do not specify a revision code in this field, revenue recognition is automatically calculated on the basis of the latest approved revision of the job budget.
<b>Revenue Recognition Date</b>	In this field, you specify the date on which revenue should be recognized for the detail levels on the job. The revenue recognition is based on job entries that have been created up to and including this date. When the action "Calculate Revenue Recognition" is selected, the date specified in this field will hence be applied to the revenue recognition entries created.
<b>Calculate Completion Percentage</b>	<p>If this field is marked, Maconomy will calculate the completion percentage of the detail levels displayed in the sub-tab when you select the action "Calculate Revenue Recognition." If you do not mark this field, the calculation will not be performed, and you should then manually specify a completion percentage on each of the lines in the sub-tab. In this case, Maconomy calculates the completion percentage compared to the amount to be revenue recognized specified manually on the line in the sub-tab, and the fixed price.</p> <p>This field and the field "Calculate Revenue" below are marked by default. The mark should only be removed if you do not want to use a fixed percentage or a fixed amount, but instead you want to use the fixed price from a previous budget with a certain revision code.</p>
<b>Calculate Revenue</b>	If this field is marked, Maconomy will calculate the amount to be recognized as revenue for each of the detail levels on the lines in the sub-tab when you select the action "Calculate Revenue Recognition." If you do not mark this field, the calculation is not performed, and you should manually specify an amount to be recognized. In this case, Maconomy will calculate the completion percentage compared to the amount to be recognized specified manually on the line in the sub-tab, and compared to the fixed price.

### Last Calculation, Triviality Limit Island

Field	Description
<b>Amount</b>	In this field, you can enter a triviality limit to apply to each adjustment entry made on the job. Any amount adjustment made which is less than this triviality limit will not result in the creation of an adjustment journal at approval of the revenue recognition. The triviality limit thus allows you to leave out amount adjustments which are considered too small when making revenue adjustments. Note that the triviality limit specified in this field is applied to each adjustment entry, that is, to the detail levels displayed on the lines in the sub-tab. The default value of this field is 0.
<b>Currency</b>	In this field, you can choose the currency to apply to the triviality limit specified in the above field in this island. The default value in this field is the enterprise currency of the system.

## Revenue Recognized Island

Field	Description
<b>Currency</b>	This field shows the currency of the job. The amounts displayed in this island are displayed in the currency shown in this field.
<b>Fixed Price</b>	This field shows the fixed price of the job. A fixed price can apply to both a fixed-price job and a time and material job.
<b>Date Revenue Recognized</b>	Depending on whether you have marked the field "Show Latest Approved Revenue Recognition" in the island Calculate Revenue, this field shows either the date on which revenue has been recognized on the job or the date on which the revenue recognized on the job was approved. If the field "Show Latest Approved Revenue Recognition" is not marked, and you enter a date in the field "Revenue Recognition Date" in the island Calculate Revenue and subsequently select the action "Calculate Revenue," this field will show the date on which revenue is calculated, that is, the date specified in the field "Revenue Recognition Date"
<b>Current</b>	<p>The marking of the field "Show Latest Approved Revenue Recognition" determines the amounts displayed on the rows represented by the fields "Current," "New," and "Adjustment."</p> <p>If you have not marked the field "Show Latest Approved Revenue Recognition," the row represented by this field shows figures concerning the amounts and percentages currently recognized on the job. The column "Incl. In Fixed Price" shows the amount recognized as revenue originating from registrations which are part of the "fixed price" of the job. The column "%" shows the completion percentage of the amount currently revenue recognized on the job. The column "Not Incl. In Fixed Price" shows the amount recognized as revenue originating from registrations which are not part of the "fixed price" of the job, for example, outlay registrations made on the job. The column "Total" shows a summarized total for the amounts displayed on the row, that is, the sum of the fields "Incl. in Fixed Price" and "Not incl. In Fixed Price," hence showing the total amount currently recognized as revenue on the job. If you have marked the field "Show Latest Approved Revenue Recognition," the fields will show figures for amounts approved as revenue recognition on the job.</p>
<b>New</b>	The row represented by this field shows figures concerning the new revenue which will be recognized on the job if the action "Approve Revenue Recognition" is selected; that is, the row reflects any changes made in the sub-tab. See the description of the above field "Current" for information about the figures shown in the different columns.
<b>Adjustment</b>	The row represented by this field shows figures reflecting the differences between the "Current" and the "New" figures in this island. Hence, this row shows the adjustments that will be made to the current revenue recognition if the action "Approve Revenue Recognition" is selected.
<b>Budgeted</b>	The row represented by this field shows job budget figures. The figures derive from the budget type which determines the fixed price of the job. The row thus shows both budget figures included in the fixed price and budget figures which are not included in the fixed price of the job.

**Costs Island**

Field	Description
<b>Base Currency</b>	This field shows the base currency of the job. The amounts displayed in this island are hence displayed in the currency shown in this field.
<b>Budgeted</b>	The row represented by this field shows costs currently budgeted on the job. The column "Incl. In Fixed Price" shows the total budgeted costs which are part of the "fixed price" of the job. The column "Not Incl. In Fixed Price" shows the total budgeted costs which are not part of the "fixed price" of the job, that is, budget entries made on outlay activities. The column "Total" shows a summarized total for the costs displayed on the row, that is, the sum of the fields "Incl. in Fixed Price" and "Not incl. In Fixed Price."
<b>Entered</b>	The row represented by this field shows the costs currently registered on the job. See the description of the above field "Budgeted" for information about the figures shown in the different columns.
<b>Completion Percentage</b>	The row represented by this field shows the completion percentage for each of the three columns "Incl. In Fixed Price," "Not Included In Fixed Price," and "Total." The completion percentage is calculated as the registered amount divided by the budgeted amount multiplied by 100%.

**Billing Price Island**

This island is structured like the Costs island, but instead of costs, it shows figures on budgeted and registered billing prices. See the description of the Costs island for more information about the figures displayed in this island.

**Calculated Revenue Island**

Field	Description
<b>Show Latest Approved Revenue Recognition</b>	<p>If you mark this field, the figures in the island Revenue Recognized will show the date, amounts, and percentages for the latest approved revenue recognition carried out on the job in either this window or the window Job Revenue Recognition.</p> <p>If you do not mark this field and select the action "Calculate Revenue Recognition," the figures in the island Revenue Recognized will display the amounts and percentages currently recognized as revenue on the job. Note that after having entered a new amount or percentage to be revenue-recognized on a line in the sub-tab, you must select the action "Calculate Revenue Recognition" before the new figures are displayed in the island Revenue Recognized.</p>

## Job Revenue Recognition Groups Sub-Tab

This section includes the fields and descriptions for the Job Revenue Recognition Groups sub-tab.

Field	Description
<b>Detail Level 1</b>	<p>This field shows the dimension value of the first revenue recognition detail level. The general dimension value is specified in the first of the two job parameter attributes "Detail By" in the job parameter Revenue Recognition for the job in question. If you have, for example, specified the dimension value "Task" in that attribute, this field will show a grouping of the various tasks of the task list of the job which have been specified on the entries budgeted and registered on the job in question. See the introduction to this window for information about how entries to be recognized can be grouped into detail levels by means of the dimensions shown in this field.</p> <p>If this field does not show any value, the revenue recognition level for the job displayed in the window might be at the job level, or the current line might contain information about a registration and revenue adjustment, if any, which is not covered by a revenue recognition detail level, that is, which is not assigned a task. See the description of the job parameter attributes "Detail By" in the job parameter Revenue Recognition in the window Job Parameters for further information about this attribute.</p>
<b>Detail Level 2</b>	<p>This field shows the dimension value of the second revenue recognition detail level. The general dimension value is specified in the last of the two job parameter attributes "Detail By" in the job parameter Revenue Recognition for the job in question. See the description of the above field "Detail Level 1" for more information about this field.</p>
<b>Cost Basis, Budget</b>	<p>This field shows the total cost price of the hours and amounts budgeted for the detail level in question. The amount is derived from the budget specified in the job parameter attribute "Completion % Budget Type" or, if no budget has been specified in that attribute, from the attribute "Fixed Price Budget Type" assigned to the job. Together with the value in the field "Cost Basis, Registered," this amount forms the basis of a calculation of the percentage to be recognized as revenue if the completion percentage on the job is to be calculated on the basis of cost prices. Whether the completion percentage of a job should be calculated on the basis of budgeted cost prices or budget billing prices is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition.</p> <p>If a revision code has been selected, the budget with the specified code is used. Otherwise, the most recently approved revision of the job budget is used. If an approved revision of the job budget does not exist, the value in this field will be 0.</p>
<b>Cost Basis, Registered</b>	<p>Upon calculation this field shows the cost of the hours and amounts registered for the detail level in question up to the date specified in the field "Revenue Recognition Date." If the completion percentage on the job is to be calculated on the basis of cost prices, this amount will together with the value in the field "Cost Basis, Budget" form the basis of the calculation of the amount to be</p>

Field	Description
	<p>recognized. Whether the completion percentage of a job should be calculated on the basis of budgeted cost prices or budget billing prices is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition. When you open this window, the field will show the cost basis from the last time the revenue recognition was calculated.</p>
<b>Percentage, New Revenue Recognition</b>	<p>In this field, you can specify how large a percentage of the detail level's cost or billing price should be recognized as revenue. The percentage can be calculated by Maconomy, and it will then correspond to the ratio between the registered cost/billing price for the job and the budgeted cost/ billing price. The method specified in the job parameter attribute "Calculate Completion % From" assigned to the job in question determines whether the completion percentage of a job is calculated on the basis of budgeted cost prices or budgeted billing prices.</p> <p>You can also enter a new percentage in this field, and the amount in the field "Amount, New Revenue Recognition" is then updated to correspond to the specified part of the price of the detail level. If the job is a fixed-price job, the maximum percentage in this field is 100%. If the job is a time and material job, the percentage can be anything from 0 and up. The revenue recognition limit applying to each detail level is determined by the value entered in the field "Completion % Limit" on the line. See the description of the fields "Limit Revenue recognition" and "Completion % Limit" for more information about limiting completion percentages. Note that if the job has "Quote" status, the percentage must be 0 in this field.</p>
<b>Amount, New Revenue Recognition</b>	<p>This field specifies the size of the amount to be recognized as revenue. The amount can be calculated by Maconomy, and it will then correspond to the percentage of the price of the detail level shown in the field "Percentage, Recognized As Revenue."</p> <p>You can also specify an amount manually, and the percentage in the field "Percentage, Recognized As Revenue" is subsequently updated to correspond to the specified amount. If the job is a fixed-price job, the amount specified cannot exceed the fixed price of the job as shown in the field "Fixed Price Basis." If the job is a time-and-material job, the values entered in the field "Limit Revenue Recognition" and "Completion % Limit" will determine the maximum amount to be entered in this field. Note that if the job has "Quote" status, the amount must be 0 in this field.</p>
<b>Percentage, Revenue Recognized</b>	<p>This field shows the percentage already recognized as revenue on the detail level in question.</p>
<b>Amount, Revenue Recognized</b>	<p>This field shows the amount already recognized as revenue on the detail level in question.</p>

Field	Description
<b>Percentage, Adjustment</b>	This field shows the difference between the percentage of the fixed price of the job already revenue-recognized and the potential percentage that will be revenue-recognized if the current revenue recognition is performed. This field thus shows the balance between the fields "Percentage, Revenue Recognized" and "Percentage, New Revenue Recognition."
<b>Amount, Adjustment</b>	This field shows the difference between the amount of the fixed price of the job already revenue-recognized and the potential amount that will be revenue-recognized if the current revenue recognition is performed. This field thus shows the balance between the fields "Amount, Revenue Recognized" and "Amount, New Revenue Recognition."
<b>Limit Revenue Recognition</b>	<p>In this field, you can choose whether the revenue to be recognized on the detail level should be limited by a given percentage. The percentage is specified in the field "Completion % Limit" on the line. If the job displayed is a fixed-price job, this field is automatically marked, and the mark cannot be removed, as the revenue to be recognized on a fixed-price job is limited to never exceed the fixed price of the job.</p> <p>If the job is a time-and-material job, this field can be marked and unmarked manually. Whether the field is automatically marked on a time and material job is determined by the value specified in the job parameter attribute "Limit Revenue" in the job parameter type "Revenue Recognition" assigned to the job in question.</p> <p>If this field is marked, the revenue to be recognized on the line will be limited to be calculated on the basis of the fixed price of the job multiplied by the completion percentage limit specified in the field "Completion % Limit" on the line. See the description of the field "Completion % Limit" below for further information about limiting revenue recognition on a given job.</p> <p>If this field is not marked, there will be no limit to the revenue to be recognized on a time-and-material job. This means that the completion percentage of a time-and-material job can be larger than 100%, and hence that more than the "fixed price" of a time-and-material job can be recognized as revenue.</p>
<b>Completion % Limit</b>	<p>In this field, you can enter a completion percentage limit to apply to the detail level on the line. The value entered in this field will only apply if you have marked the field "Limit Revenue Recognition" on the line in question.</p> <p>If the job is a fixed-price job, the value in this field can be a number between 0 and 100%. You cannot recognize more revenue on a fixed-price job than the fixed price of the job. If the job is a time-and-material job, the value in this field can be a number from 0% and up, as the revenue to be recognized on a time-and-material job is not necessarily limited to the "fixed price" of the job.</p> <p>If, for example, you enter the value 85% in this field, the revenue to be recognized on the line, be it assigned to a fixed-price job or a time-and-material job, cannot exceed 85% of the fixed price of the detail level in question. If, on the other hand, you enter the value 120% in this field, Maconomy will issue an error message as the completion percentage limit for detail levels assigned to a fixed-price job cannot exceed 100%. This because it is not possible to recognized more revenue than the fixed price of a fixed-</p>

Field	Description
	<p>price job. For time-and-material jobs, a limit of 120% means that 120% of the fixed price of the job can be recognized as revenue.</p> <p>The default value in this field is derived from the job parameter attribute "Compl. % Limit" in the job parameter type "Revenue Recognition." However, this value can be changed manually.</p>
<b>Billing Price Basis, Budget</b>	<p>This field shows the billing price of the hours and amounts budgeted for the detail level in the budget specified in either the job parameter attribute "Completion % Budget Type" or in the job parameter attribute "Fixed Price Budget Type" for the current job. If the job is set up to have the completion percentage calculated on the basis of billing price, this amount will, together with the value in the field "Billing Price Basis, Registered," form the basis of a calculation of the percentage to be recognized as revenue.</p>
<b>Billing Price Basis, Registered</b>	<p>Upon calculation this field shows the total billing price of the hours and amounts that are registered for the detail level up to the date specified in the field "Revenue Recognition Date." If the job is set up to have the completion percentage calculated on the basis of billing price, this amount will, together with the value in the field "Billing Price Basis, Budget," form the basis of a calculation of the percentage to be recognized. This is specified in the job parameter attribute "Calculate Completion % From" in the job parameter Revenue Recognition assigned to the job in question.</p>

## Actions

This section shows the actions available in the Job Revenue Recognition Details workspace.

### Top Tab

Field	Description
<b>Calculate Revenue Recognition</b>	<p>When you select this action, the completion percentage is calculated for each revenue-recognition detail level displayed in the sub-tab. Depending on the selection in the fields "Percentage, New Revenue Recognition" and "Amount, New Revenue Recognition" in the sub-tab, the completion percentage and the amount to be recognized as revenue are calculated. The results of the calculation are displayed on the lines as well as in the island Revenue Recognized.</p> <p>If a specific revision code has been specified in the island Calculate Revenue, Maconomy makes the calculation on the basis of the approved budget with the assigned specified revision code. The figures calculated by Maconomy can be edited manually in accordance with the completion percentage limit applying to the current line. The completion percentage limit is specified in the field "Compl. % Limit."</p>
<b>Approve Revenue Recognition</b>	<p>When you select this action, the revenue recognition currently entered or displayed on the lines in the sub-tab (and hence summarized in the field "New" in the island Revenue Recognized) is approved to be recognized as revenue on the job.</p>

Field	Description
	<p>Upon approval, Maconomy creates a journal of the type "Job Revenue Recognition" for each of the relevant detail levels, which is then ready for posting in the G/L module. When revenue adjustments are posted, one adjusting entry is created for each revenue-recognition detail level for which the revenue currently recognized does not correspond to the calculated revenue contribution of that detail level. The account references chosen for the posting of the entries are derived from the activities applying to each revenue adjustment entry, or alternatively from the activity specified in the job parameter attribute "Activity for Job Revenue Adjustment."</p> <p>This means that if you have marked the field "Post By Activity" in the window System Information, and you are performing detailed revenue recognition by "Activity" (and possibly another value, such as "Location"), all adjustments created on the activities in question will be posted on the dimension combinations specified in the field "Open Billing Price, Adjustment" on the relevant activities.</p> <p>If you are performing detailed revenue recognition by "Task," and the relevant tasks derive activities, all adjustments created on the tasks in question will be posted on the dimension combinations specified in the field "Open Billing Price, Adjustment" on each of the activities derived from the tasks. If one or more tasks does not derive an activity, such adjustments will be posted on the activity specified in the job parameter attribute "Activity for Job Revenue Adjustment" in the job parameter of the type "Revenue Recognition."</p> <p>The journal created for a job which does not use detailed revenue recognition contains entries to the account for the open billing price and the account "WIP Account, Adjustment" which is specified in the window Job Groups in the Job Cost module and the activity specified in the job parameter attribute "Activity for Job Revenue Adjustment" in the job parameter type "Revenue Recognition."</p> <p>The posting date for this journal will be the date from the field "Revenue Recognition Date."</p> <p>Once the journal has been posted, the field "Current" in the island Revenue Recognized will display the total amount revenue-recognized on the job, as well as the date on which the revenue recognition was made. Any adjustments resulting from the posting of the journal are also displayed in this island.</p> <p>Note that if you are recognizing revenue by activity, and one or more of the activities registered on the job is non-invoiceable, the budgeted and registered billing price for these activities will be zero. In such situations, the detail levels in which such activities are presented will be ignored by Maconomy and hence not be included in the amount recognized.</p> <p>If you are recognizing revenue by Task and another dimension which is not Activity, any non-invoiceable activities derived from the tasks in question will not be included in the revenue recognized. However, in such situations Maconomy will automatically replace the derived, non-invoiceable activities with the activity specified in the job parameter attribute "Activity For Revenue Adjustment" in the job parameter Revenue Recognition assigned to the job in question, thus allowing you to include the relevant amounts in the revenue recognized.</p>

Field	Description
	If the job is assigned the job parameter attribute "Revenue Recognition at Missing Budget" with the value "No," and a registration has been made on a certain detail level (for example, activity or task), Maconomy will not include this entry in the resulting revenue adjustment journal, if no budget line assigned to the job contains a specification of a corresponding detail level which is to be included in the fixed price of the job. If the attribute is assigned the value "Yes," Maconomy will make a revenue adjustment at every detail level, even though no corresponding budget line has been created for the job in question. See the description of the job parameter attribute "Revenue Recognition at Missing Budget" for further information about the functionality of this attribute.

## Evaluation of Work in Progress Workspace

Use this workspace to re-evaluate the work in progress (WIP) of a job, based on the sum of open entries on the job.

You can specify a fixed amount or a percentage of the WIP to be recognized as revenue for the job.

The process of reevaluating the WIP of a job is similar to the revenue recognition process that you perform in the Job Revenue Recognition workspace. However, whereas Maconomy calculates revenue recognition using a completion percentage that is based on a job budget, the evaluation that you perform in this workspace does not require the presence of a job budget. The evaluation is based solely on the sum of open entries for the job.

The WIP of a job that uses capitalization at billing price is equal to the open billing price of the job—that is, the sum of entries made that have not yet been invoiced. However, out of caution, you might want to recognize only a part of the WIP as revenue.

You can use this workspace to specify a fixed amount or a percentage of the WIP that should be recognized as revenue. When new entries are made on the job, you can adjust the revenue recognition here. When you close the job, Maconomy creates a revenue recognition journal that ensures that the amount that has been recognized as revenue equals the amount that you actually invoiced.

When you approve the evaluation, Maconomy creates a revenue recognition journal that is ready for posting in the General Ledger module. The journal contains entries to the accounts for open billing price and for work in progress.

You can report on WIP at the employee level, in addition to the project level. You can set the employee as a detail on the revenue recognition job parameter. When you calculate revenue recognition, Maconomy creates a job revenue journal entry for each relevant job / employee combination.

If you specify additional details (D), Maconomy creates a job revenue journal entry for each relevant job / employee / additional detail combination when you evaluate WIP.

However, because the WIP evaluation is specified at the project level, you cannot enter a different WIP amount or WIP percentage for different employees.

### Job Selection

Only jobs that you set up correctly for WIP evaluation can be displayed in this workspace.

You can enter selection criteria to choose the jobs that you want to see. After you have done this once, Maconomy saves your selection criteria from session to session. Each time that you open this workspace, Maconomy displays the last selection criteria that you used.

The Jobs sub-tab displays information about the selected jobs, one line per job.

### Posting of Variance

Maconomy posts any variance to a special activity, identified in the **Activity for Revenue Recognition on Job** job parameter attribute (of the type **Revenue Recognition**). This job must have certain **Revenue Recognition** job parameter settings:

- **Capitalization Method** — At Billing Price
- **Evaluate Work in Progress** — Yes
- **Revenue Recognition By Completion Percentage** — No
- **Handling of Overrun** — No

Also, the **Invoicing Method** job parameter attribute of the **Pricing Principle** job parameter type must have the value Time and Material.

### Entries Evaluated

Maconomy only evaluates entries that are part of the fixed price of a job. In this context, "fixed price" means all job entries that are not explicitly specified as being excluded from the fixed price, and should not be confused with the term "fixed-price job," which cannot be evaluated in this workspace. You can specify which entries are included in fixed price or not by using the **Fixed-Price Inclusion Setup** job parameter in the System Parameters workspace in the Setup module.

You can also control inclusion in fixed price in tasks and activities by using the **Included in Fixed Price** field in tasks, and the **Included in Fixed Price Default For Tasks** field in activities.

### Methods for Adjusting WIP

You can use the following methods to adjust WIP:

- **By Percentage** — Assume that you created a job and entered a total of \$10,000 on it. The open billing price and the WIP are now both \$10,000. If you use this workspace to specify that the job's revenue should be recognized at 85%, and you approve the adjustment, the open billing price is still \$10,000, but Maconomy adjusts the WIP to 85% of that or \$8,500.  
  
Next you make another entry of \$10,000 on the job, which still has not been invoiced. The open billing price is now \$20,000 and the WIP is \$18,500—that is, 92.5% of the open billing price. When you open this workspace and use the **Calculate** action, the amount that Maconomy suggests for revenue recognition still corresponds to 85% of the open billing price, or \$17,000.
- **By Amount** — Assume that you created a job and entered a total of \$10,000 on it. The open billing price and the WIP are now both \$10,000. When you open this workspace and use the **Calculate** action, Maconomy suggests that you recognize the full amount as revenue. However, you change the amount to \$8,000 and approve the adjustment. The open billing price is still \$10,000, but Maconomy adjusts the WIP to \$8,000.

Next you make another entry of \$10,000 on the job, which still has not been invoiced. The open billing price is now \$20,000, and the WIP is \$18,000. When you open this workspace and use the **Calculate** action, the amount that Maconomy suggests for revenue recognition is equal to the work in progress, or \$18,000.

When you adjust by amount, you must perform the evaluation manually every time. When you adjust by percentage, Maconomy suggests the same, relative amount automatically.

### Evaluation of Work in Progress Tab

This section includes the fields and descriptions for the Evaluation of Work in Progress tab.

#### Selection Criteria Island

Field	Description
<b>Show Lines</b>	When you mark this field, the sub-tab shows the lines that match the selection criteria specified in this island. By default, the field is not marked. Please note that Maconomy will not consider whether the jobs are shown in the sub-tab when you use the functions in the Action menu. The jobs that are identified by the selection criteria are affected by the functions, regardless of whether they are shown in the sub-tab.
<b>Job No.</b>	In these fields, you can specify a range of job numbers. The sub-tab will only display information about jobs with numbers within the specified range.
<b>Job Group</b>	In this field, you can specify a job group. The sub-tab will only display jobs assigned to the specified job group.
<b>Customer No.</b>	In these fields, you can specify a range of customer numbers. The sub-tab will only show jobs assigned to customers with a number within the specified range. If you do not enter a range, Maconomy will not select jobs on the basis of the assigned customers of the jobs.
<b>Department</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Customer Group</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Country</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Language</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Currency</b>	The functionality of this field is similar to that of the field "Job Group."
<b>Project Manager No.</b>	In this field, you can specify the employee number of a project manager. The sub-tab will only show jobs to which the specified employee is assigned as project manager.

Field	Description
<b>Company No.</b>	In these fields, you can specify a range of company numbers. The sub-tab will only show jobs with a responsible company within the specified range.
<b>Status</b>	This is the current job status. The status is either "Quote" or "Order," and it cannot be changed here.

### Selection Criteria, Dimensions Island

Field	Description
<b>Location</b>	In these fields, you can specify a range of locations. The sub-tab will only show jobs with a location within the specified range.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location."
<b>Project</b>	The functionality of this field is similar to that of the field "Location."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."

### Jobs Sub-Tab

This section includes the fields and descriptions for the Jobs sub-tab.

Field	Description
<b>Job No.</b>	This field shows the number of the current job in the sub-tab. Maconomy will only show lines in the sub-tab when the field "Show Lines" is marked.
<b>Job Name</b>	This field shows the name of the current job.
<b>To Be Calculated</b>	If you mark this field, the job on the current line is included in the calculation of the WIP adjustment. The calculation is performed when you select the function "Calculate" in the Action menu. This field and the field "Approve" cannot be marked at the same time.
<b>Approve</b>	If you mark this field, the WIP adjustment on the current line is approved when you select the function "Approve Adjustment" in the Action menu. Upon approval, Maconomy creates a job revenue recognition journal, which should then be posted in the G/L module. For more information, please see the description of the action "Approve Adjustment." This field and the field "To Be Calculated" cannot be marked at the same time.

Field	Description
<b>Job Group</b>	This field shows the job group to which the job on the current line is assigned.
<b>Status</b>	This is the current job status. The status is either "Quote" or "Order," and it cannot be changed here.
<b>Open Billing Price</b>	This field shows the current open billing price of the job on the current line, that is, the sum of non-invoiced registrations on the job. The first time that you evaluate the job, this amount corresponds to the work in progress. Entries which are not part of the fixed price of the job are excluded.
<b>WIP</b>	This field shows the current work in progress of the job on the current line. The first time that you evaluate the job, this amount will be equal to the open billing price. After the first evaluation, the difference between the open billing price and the WIP is displayed in the field "Amount, Adjustment." Entries which are not part of the fixed price of the job are excluded from the WIP.
<b>Percentage, WIP</b>	This field shows the percentage ratio between the amounts in the fields "Open Billing Price" and "WIP" that is, $(\text{WIP} / \text{Open Billing Price}) \times 100$ . The first time that you evaluate the job, this percentage will be "100," as the open billing price and the WIP by definition are equal for jobs that can be evaluated in this window.
<b>Percentage, New WIP</b>	<p>In this field, you can enter a percentage by which you want to adjust the WIP. You can use the action "Transfer Percentage" to transfer the percentage specified in the field "Percentage, New WIP" to this field for all jobs in the sub-tab. For more information, please see the description of the action "Transfer Percentage." The new WIP is calculated as this percentage of the open billing price, and the actual amount is displayed in the field "Amount, New WIP."</p> <p>If you change this field, the field "Amount, New WIP" will be updated to reflect the percentage change. Conversely, if you change the field "Amount, New WIP," this field will be updated to reflect the change of WIP amount as a percentage value.</p>
<b>Adjustment Type</b>	In this pop-up field, you can specify whether you want to adjust the WIP by percentage or by amount. If you specify a percentage, Maconomy will suggest the same percentage for adjustment the next time you want to make a WIP adjustment on the job. If you specify an amount, Maconomy will suggest a value corresponding to 100% of the open billing price the next time that you want to make a WIP adjustment on the job. See the introduction to this window for examples of the difference between the two methods. If you change the field "Percentage, New WIP," the value of this field will automatically change to "Percentage." If you change the field "Amount, New WIP," the value of this field will automatically change to "Amount."
<b>Amount, New WIP</b>	In this field, you can enter an amount by which you want to adjust the WIP. When you approve and post the adjustment, the value in this field will be the new WIP on the job.

Field	Description
	If you change this field, the field "Percentage, New WIP" is updated to reflect the change as a percentage of the open billing price. Conversely, if you change the field "Percentage, New WIP," this field will be updated to reflect the change of WIP as an amount value.
<b>Date, New WIP</b>	In this field you can enter a date on which the current adjustment should be performed. If you enter a date in the field "Evaluation Date," the date is copied to this field when you select the action "Calculate." However, you can change the date for the current job in this field before approving the evaluation. When you approve the evaluation, the date in this field will be the effective date of the adjustment in the General Ledger.
<b>Amount, Adjustment</b>	This field shows the amount by which the WIP of the current job will be adjusted if you approve the evaluation. The amount corresponds to the difference between the fields "WIP" and "Amount, New WIP."
<b>Percentage, Adjustment</b>	This field shows the percentage by which the WIP of the current job will be adjusted if you approve the evaluation. The percentage corresponds to the difference between the fields "Percentage, WIP" and "Percentage, New WIP."
<b>Date, Latest Appr.</b>	This field shows the date entered in the field "Date, New WIP" when you last approved a WIP evaluation for the current job. The field is updated with the date currently entered in the field "Date, New WIP" when you select the action "Approve Adjustment."
<b>Open Billing Price, Latest Appr.</b>	This field shows the amount of the open billing price as of the date entered in the field "Date, New WIP" when you last approved the WIP evaluation.
<b>WIP, Latest Appr.</b>	This field shows the amount of WIP as of the date entered in the field "Date, New WIP" when you last approved the WIP evaluation.
<b>Latest Appr. Percentage</b>	This field shows the new percentage of WIP as of the date entered in the field "Date, New WIP" when you last approved the WIP evaluation, that is, the adjusted WIP percentage at the time of approval.
<b>Latest Appr. WIP</b>	This field shows the new amount of WIP as of the date entered in the field "Date, New WIP" when you last approved the WIP evaluation, that is, the adjusted WIP at the time of approval.
<b>Department</b>	This field shows the department to which the job on the current line is assigned.
<b>Customer Group</b>	This field shows the name of the customer group to which the customer on the job is assigned.
<b>Customer No.</b>	This field shows the number of the bill to customer assigned to the job on the current line.
<b>Customer Name</b>	This field shows the name of the bill to customer assigned to the job on the current line.

Field	Description
<b>Currency</b>	This field shows the currency selected for the job on the current line.
<b>Base Currency</b>	This field shows the base currency for the company responsible for the job on the current line.
<b>Country</b>	This field shows the country specified for the customer assigned to the job on the current line.
<b>Language</b>	This field shows the language specified for the customer assigned to the job on the current line.
<b>Project Manager No.</b>	This field shows the number of the employee assigned as project manager for the job on the current line.
<b>Project Manager</b>	This field shows the name of the employee assigned as project manager for the job on the current line.
<b>Company No.</b>	This field shows the number of the company responsible for the job on the current line.
<b>Company Name</b>	This field shows the name of the company responsible for the job on the current line.
<b>Location</b>	This field shows the value for the dimension "Location" which may be assigned to the job in the current line.
<b>Entity</b>	The functionality of this field is similar to that of the field "Location."
<b>Project</b>	The functionality of this field is similar to that of the field "Location."
<b>Purpose</b>	The functionality of this field is similar to that of the field "Location."
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Location."

## Actions

This section shows the actions available in the Evaluation of Work in Progress workspace.

### Top Tab

Field	Description
<b>Transfer Percentage</b>	When you select this action, the percentage selected in the field "Percentage, New WIP" is transferred to the field "Percentage, New WIP" in the sub-tab for all selected jobs.

Field	Description
	<p>The following field is part of the Transfer Percentage wizard:</p> <ul style="list-style-type: none"> <li>Percentage, New WIP — In this field you can enter a percentage. When you select the function “Transfer Percentage” in the Action menu, the value in this field will be transferred to the field “Percentage, WIP” in the sub-tab for all selected jobs which are not marked for approval. For more information, please see the description of the field “Percentage, WIP” in the sub-tab.</li> </ul>
<b>Mark for Calculation</b>	When you select this action, the field “To Be Calculated” is marked for all jobs in the sub-tab that are not marked in the field “Approve.” Please note that all jobs that match the search criteria are included, even if they are not shown in the sub-tab (if the field “Show Lines” is not marked).
<b>Unmark for Calculation</b>	When you select this action, the mark in the field “To Be Calculated” is removed for all jobs that match the search criteria.
<b>Mark for Approval</b>	When you select this action, the field “Approve” is marked for all jobs in the sub-tab that are not marked in the field “To Be Calculated.” Please note that all jobs that match the search criteria are included, even if they are not shown in the sub-tab (if the field “Show Lines” is not marked).
<b>Unmark for Approval</b>	When you select this action, the mark in the field “Approve” is removed for all jobs that match the search criteria.
<b>Approve Adjustment</b>	<p>When you select this action, the WIP adjustment is approved for all jobs that match the search criteria and which are marked in the field “Approve.” At the same time, the fields “Date, Latest Appr.,” “Open Billing Price, Latest Appr.,” “WIP, Latest Appr.,” “Latest Appr. Percentage,” and “Latest Appr. WIP” are updated to the values of the currently approved adjustment.</p> <p>Upon approval, Maconomy creates a journal of the type “Job Revenue Recognition,” which is then ready for posting in the G/L module. The journal contains entries on the account for the open billing price and the account “WIP Account, Adjustment” in the G/L module and the activity specified in the job parameter attribute “Activity for Job Revenue Adjustment” in the job parameter type “Revenue Recognition.” The posting dates for this journal will be the dates from the fields “Date, new WIP” in the sub-tab.</p> <p>Once the WIP evaluation for a job has been approved, Maconomy will automatically remove the mark in the field “Approve.”</p> <p>The following fields are part of the Approve Adjustment wizard:</p> <ul style="list-style-type: none"> <li>Amount — In this field, you can enter a triviality limit to apply to each adjustment entry made on the job. Any amount adjustment made which is less than this triviality limit will not result in the creation of an adjustment journal at approval of the evaluation. The triviality limit thus allows you to leave out amount adjustments which are considered too</li> </ul>

Field	Description
	<p>small when making WIP evaluation. Note that the triviality limit specified in this field is applied to each adjustment entry, that is, to the jobs displayed on the lines in the sub-tab. The default value of this field is 0.</p> <ul style="list-style-type: none"> <li>■ <b>Currency</b> — In this field, you can choose the currency to apply to the triviality limit specified in the above field in this island. The default value in this field is the enterprise currency of the system.</li> </ul>

## Employee Revenue Distribution Workspace

Use this workspace to review and redistribute the revenue earned by employees on a job.

When Maconomy calculates revenue recognition, it suggests an "even" revenue recognition which, if approved, gives all employees the same realization rate. This is the realization rate of the job as a whole. Use this workspace to make changes to the suggested revenue for one or more employees.

Maconomy does not change the revenue that is recognized for the job; it only redistributes it among employees. For each change that you make for an individual employee, Maconomy adjusts the revenue to be recognized for the other employees, to maintain the same total amount.

Use this workspace to calculate revenue recognized on a job up to a specified date. The result displays in the Employees sub-tab, one line per employee. In the sub-tab, you can specify changes in revenue to be recognized for individual employees. You must then submit and approve these changes, which produces a Job Revenue Recognition journal.

On the Task Lists (and in the Job Tasks workspace you can specify a standard task for the job entry that is created from this workspace.

In the Actions workspace you can specify whether an employee should be able to approve employee revenue distributions.

The functionality in this workspace is controlled by the Employee Revenue Distribution job parameter type.

### Revenue Included

The revenue that is distributed is for time-related activities. It includes only the revenue generated as a result of invoicing and not the revenue that is recognized as the result of capitalization at billing price.

### Jobs Tab

This section includes the fields and descriptions for the Jobs tab.

### Job Island

Field	Description
<b>Job</b>	This field shows the job number and job name.

Field	Description
<b>Customer</b>	This field shows the customer number and customer name.
<b>Project Manager</b>	This field shows the name and number of the employee assigned as the project manager for the current job in the window Jobs.
<b>Closed</b>	This field indicates if the job is closed.
<b>Currency</b>	This field shows the currency of the job.

**Latest Invoice (not on account) Island**

Field	Description
<b>Invoice No.</b>	This field shows the invoice number of the latest invoice on the job.
<b>Invoice Date</b>	This field shows the date of the latest invoice on the job.
<b>Billing Price</b>	This field shows the billing price for the latest invoice on the job.
<b>Write Up/Down</b>	This field shows the amount of write up or write down incurred in the latest invoice on the job.

**Latest Job Invoice Allocation Island**

Field	Description
<b>Allocation No.</b>	This field shows the number of the latest job invoice allocation.
<b>Allocation Date</b>	This field shows the date of the latest job invoice allocation.
<b>Billing Price</b>	This field shows the billing price for the latest job invoice allocation.
<b>Write Up/Down</b>	This field shows the amount of write up or write down incurred in the latest job invoice allocation.

**Latest Distribution Island**

Field	Description
<b>Transaction No.</b>	This field shows the transaction number for the latest distribution.
<b>Cut-off Date</b>	This field shows the cut-off date for the latest distribution.

Field	Description
<b>Entry Date</b>	This field shows the entry date for the latest distribution.
<b>Invoiced Work in Progress</b>	This field shows the amount of invoiced work in progress for the latest distribution.
<b>Revenue Recognized</b>	This field shows the amount of revenue recognized for the latest distribution.
<b>Realization Rate</b>	This field shows the realization rate for the latest distribution.
<b>Submitted by</b>	This field shows the name of the user who submitted the latest distribution.
<b>Submitted on</b>	This field shows the date the latest distribution was submitted.
<b>Approved by</b>	This field shows the name of the user who approved the latest distribution.
<b>Approved on</b>	This field shows the date the latest distribution was approved.
<b>Context</b>	This field shows the context of the latest employee revenue distribution. More precisely, it shows you if the distribution was carried out directly from this window, or as part of invoicing, job invoice allocation, or job closure. The three latter options are set up on job parameters of the 'Employee Revenue Distribution' type.

### New Distribution Island

Field	Description
<b>Cut-off Date</b>	This field shows the cut-off date for the new distribution.
<b>Entry Date</b>	This field shows the entry date for the new distribution.
<b>Invoiced Work in Progress</b>	This field shows the amount of invoiced work in progress for the new distribution.
<b>Revenue Recognized</b>	This field shows the amount of revenue recognized for the new distribution.
<b>Realization Rate</b>	This field shows the realization rate for the new distribution.
<b>Submitted by</b>	This field shows the name of the user who submitted the new distribution.
<b>Submitted on</b>	This field shows the date the new distribution was submitted.

## Employees Sub-Tab

This section includes the fields and descriptions for the Employees sub-tab.

Field	Description
<b>Employee No.</b>	This field shows the employee number of the person for whom revenue is recognized.
<b>Employee Name</b>	This field shows the name of employee.
<b>Trans. No.</b>	This field shows the transaction number of the employee revenue distribution. It shows the transaction number of the latest distribution after a distribution has been approved, and before a new calculation is made. In general, this field provides you with detailed information about the distribution for each employee. After calculation, the table shows the calculated figures and this field shows "0" as the transaction number until you approve the distribution.
<b>Invoiced WIP</b>	This field shows the amount invoiced measured as the work in progress (WIP) that was invoiced/released at the original rates. This window includes time activities only.
<b>Revenue Recognized</b>	This field shows the revenue recognized. This amount includes only the time entries that have been invoiced and previous revenue redistributions.
<b>Realization Rate</b>	This field shows realization rate –the revenue recognized as a percentage of the invoiced work in progress (WIP).
<b>New Revenue Recognized</b>	This field shows the new revenue that will be recognized for the employee when you submit and approve the revenue distribution. You can adjust the value in this field.  If you change the amount, the line is selected as Locked and the amount on the other lines (employees) is updated to keep the same total new revenue recognized for the job. To revert to the calculated new revenue recognized, undo the Locked field.
<b>New Realization Rate</b>	This field shows the new revenue recognized as a percentage of the invoiced work in progress (WIP).  You can update the New Revenue Recognized indirectly by changing the new realization rate.
<b>Locked</b>	The new revenue recognized on all lines in the table has the same sum as the current revenue recognized. When you change the new revenue recognized (or new realization rate), the Locked field is selected and Maconomy adjusts the new revenue recognized in the other lines (without adjusting the ones marked as locked). The adjusted lines then get the new realization rate and the total new revenue recognized shows the correct sum for the lines.

Field	Description
	If you deselect this field, the new revenue recognized on the line is adjusted together with all the other lines that are not locked.
<b>Adjustment</b>	This field shows the difference between the new revenue recognized and the current revenue recognized.

## Actions

This section shows the actions available in the Employee Revenue Distribution workspace.

### Top Tab

Field	Description
<b>Submit</b>	This action will submit the current suggested employee revenue distribution for approval.
<b>Unsubmit</b>	This action will unsubmit the current employee revenue distribution.
<b>Approve</b>	This action will approve the current employee revenue distribution and a Job Revenue Recognition journal will be created.

## Invoicing Section

This section includes the fields and descriptions for the Invoicing section workspaces.

### Invoicing Plans Single Dialogs Workspace

Use this workspace to create plans for invoicing or pre-invoicing jobs on account in the Job Cost module.

You can create one plan per job. Invoicing plans are useful if you have agreed with a customer on a certain invoicing scheme, because you can use the plans for numerous invoicing principles.

The invoice amount can be specified as an amount or a percentage of the quote price, and the invoicing can be triggered by a date or the completion of a job phase.

The invoicing plan is assigned to the job and is deleted if the job is deleted.

Invoicing examples include:

- You want to invoice 40% of the effective quote price of a fixed-price job immediately, and 20% on the first date of the month for the next three months.
- On a time and materials job, you agree to invoice on account USD \$3,000 every month for six months, after which you will invoice by time and materials.
- The customer is invoiced USD \$9,000 for a fixed-price job on acceptance of the job quote. After this, 20% of the remaining quote price is invoiced every time a job phase is completed.

### Transferring Plan Lines for Invoicing

The invoicing process is not performed in this workspace, but in the Invoice Selection or Approve Invoice Selection workspace. When you select the Transfer Invoicing Plan action in the Invoice Selection workspace or in the Approve Invoice Selection workspace, the amount due is transferred for invoicing.

Use the job parameter **Transfer Invoicing Plan to Invoice Selection** to determine whether the invoice plan is transferred for Invoicing On Account, Direct Invoicing, or Over Invoicing.

If the **Transfer Several Invoicing Plan Lines** system parameter is selected, all due invoicing plan lines are transferred. If the system parameter is deselected, only the first due line of the invoicing plan is transferred.

When the lines have been transferred, you can edit them in the Invoice Editing workspace. At the same time, the Invoicing Plans workspace is updated to reflect the progress of the invoicing process.

If the **Approval of Invoicing Plan Lines** job parameter has been set to **Yes** for the current job, invoicing plan lines must be approved in this workspace before they can be transferred for invoicing.

### Invoicing Plans Tab

This section includes the fields and descriptions for the Invoicing Plans tab.

#### Job Island

The job type and job duration are displayed on the first line.

Field	Description
<b>Ship to Customer</b>	This field shows the name and number of the ship-to customer to which the current job pertains.
<b>Bill to Customer</b>	This field shows the name and number of the bill-to customer to which the current job pertains.
<b>Company</b>	This field shows the name of the company responsible for the job.
<b>Settling Company</b>	<p>This field shows the name of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in the chapter "Introduction to the G/L module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

Field	Description
<b>Responsible</b>	This field shows the name of the employee responsible for the current job. The employee is specified in the window Jobs.
<b>Job Collection</b>	If the job belongs to a job collection, this field shows the number of the job collection.

### Price Island

Field	Description
<b>Currency</b>	This field shows the currency and the invoice currency specified for the job.
<b>Fixed Price</b>	This field shows the fixed price of the job, specified in the job currency. Depending on the selected basis for fixed price in the job parameter attribute "Fixed Price Basis" in the job parameter type "Pricing Method" assigned to the current job, the price in this field can originate from the quote price specified for the job and which can be edited in the window Quote Editing, or from the job's budgeted sales price registered on the most recently approved revision of the job budget of the type specified in job parameter attribute "Fixed-Price Budget Type."
<b>Invoicing Plan</b>	This field shows the sum total of job currency amounts entered on all invoicing plan lines. The field is automatically updated when lines are entered in the table part of this window.
<b>To be Planned</b>	This field shows the part of the fixed price not planned for invoicing in the table part of this window. This field is automatically updated when lines are entered in the table part of this window.
<b>Invoiced on Account</b>	This field shows the amount (fixed price) invoiced on account.
<b>To be Invoiced</b>	This field shows the remainder of the fixed price to be invoiced. This field is automatically updated when lines are invoiced or entered in the table part of this window.

### Invoicing Plan Lines Sub-Tab

This section includes the fields and descriptions for the Invoicing Plan Lines sub-tab.

Field	Description
<b>Date</b>	In this field you can specify a date. The date in this field determines when the current line is transferred for invoicing. When the action "Transfer Invoicing Plan" in the window Invoice Selection or the action "Transfer Invoicing Plans" in the window Approve Invoice Selection is selected, lines in the invoicing plans with a date on or before the current date are transferred. When the line has been transferred, the date in this field can no longer be changed.

Field	Description
	If you enter a date in this field and a job phase in the field "Phase," the current line can be transferred for invoicing on or after the date or when the job phase is completed, whichever comes first.
<b>Description</b>	In this field you can enter text to be displayed on the invoice line when the amount has been transferred for invoicing on account. The description can be edited in the window Invoice Editing.
<b>Amount, Currency</b>	<p>In this field you can enter the amount to be invoiced when the specified date is due or the specified job phase is completed. The amount is entered in the job's currency. The sum of the amounts entered in this field on the lines in the table part is displayed in the card part of the window in the island Price. The amount is not limited to any quote price. When you have entered the amount, Maconomy shows the amount as a percentage of the quote price in the field "Percent."</p> <p>Unlike the field "Amount for Invoicing on Account, Currency," in the window Invoice Selection, the amount in this field does not follow any exchange rate changes. This means that when an invoicing plan line has been transferred, the amount in this field stays the same.</p>
<b>Amount, Invoice Currency</b>	Enter the amount for invoicing on account for the job. The amount is specified in invoice currency. When you change the price, the total amount is updated accordingly. The total sum is displayed in the Price island on the Invoicing Plans tab. The amount is not limited to any quote price. When you enter the amount, Maconomy shows the amount as a percentage of the quote price in the <b>Percent</b> field. if you change the total price, the billing price is updated accordingly. It is not possible to change both billing price and total price at the same time.
<b>Quantity</b>	Use this field to enter a quantity for invoicing. When the quantity is changed, the billing price is updated accordingly, so that Quantity x Billing Price = Amount. The default value is 1.
<b>Billing Price, Invoice Currency</b>	Use this field to enter a Billing Price. When you change this price, the total amount is updated accordingly. It is not possible to update both billing price and total price at the same time.
<b>Invoice Currency</b>	This field shows the currency specified for the invoice.
<b>Percent</b>	In this field you can enter a percentage of the effective quote price to be invoiced when the specified date is due or the specified job phase is completed. The effective quote price is displayed in the island Price in the card part. When you have entered the percentage, Maconomy will show the amount in the field "Amount." The percentage is not limited to any quote price, and is not limited to 100.
<b>Original Date</b>	This field will be assigned the date first time entered in the Date field. Thus remembering the original chosen date for the invoicing plan line.

Field	Description
<b>Expected Payment Date</b>	<p>This field shows the expected payment date. You can change the value in this field.</p> <p>When you create a line with a date, Maconomy calculates the expected payment date based on the expected days to payment that was set up for the company-specific customer on the job. If you specify a bill-to customer on the line in the plan, then Maconomy looks up the expected days to payment for this company-specific customer. If the expected days to payment is zero, the expected payment date will be the same as the due date, based on the planned date on the line.</p>
<b>Task Name</b>	This field shows the name of the task.
<b>Task Description</b>	This field shows the description of the task specified in the field "Task Name" on the current line.
<b>Employee No.</b>	This field shows the number of the employee.
<b>Employee Name</b>	This field shows the name of the employee.
<b>Bill to Customer No.</b>	<p>In this field you can specify a bill-to customer for the invoicing plan line. Only this bill-to customer will be invoiced.</p> <p>If you do not assign any bill-to customer, the amount will be split among all bill-to customers.</p>
<b>Bill to Customer</b>	This field shows the name of the bill-to customer.
<b>Phase</b>	<p>In this field, you can specify a job phase or a milestone. Job phases and milestones are created and maintained in the window Job Phases. By entering a job phase you indicate that the amount should be transferred for invoicing when the particular job phase is completed and ended in the window Job Phases. If you enter a milestone, the amount can be transferred for posting when the milestone is approved in the window Job Phases. When the line has been transferred, the job phase in this field can no longer be changed.</p> <p>If you enter a job phase in this field and a date in the field "Date," the current line can be transferred for invoicing on or after the date or when the job phase is completed, whichever comes first.</p>
<b>Line Type</b>	<p>Select the line type to indicate whether the line should give rise to an invoice on account or a pre-invoice. Select one of the following options:</p> <ul style="list-style-type: none"> <li>On Account — Select this option to create an invoice on account.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Pre-Invoice — This option can be selected only if the job is set up for pre-invoicing. If the job is set up for pre-invoicing by default, this option is automatically selected.</li> </ul>
<b>Selected Manually</b>	If you mark this field, the line can be transferred for invoicing regardless of date or completion status of a specified job phase.
<b>Transferred</b>	If this field is marked, the line has been transferred for invoicing in the window Invoice Selection or Approve Invoice Selection. The line can no longer be changed in this window.
<b>Approved</b>	<p>If you mark this field, the current invoice line is approved and the name and date of the approver is shown in the fields “Approved” and “Approved By” below. If you choose to unmark this field, these two fields will be cleared.</p> <p>If the attribute “Approval of Invoicing Plan Lines” of the job parameter “Invoice Approval” has been set to “Yes,” this field must be checked before the line can be transferred for invoicing.</p>
<b>Approved by</b>	This field shows the name of the user who approved the invoice line for invoicing. The name of the approver is automatically saved when the invoice line is approved by marking the field “Approved” on the line. The field is cleared if the invoice line is unmarked for approval.
<b>Approval Date</b>	This field shows the date on which the invoice line was approved. The approval date is automatically saved when the invoice line is approved by marking the field “Approved” on the line. The field is cleared if the invoice line is unmarked for approval.
<b>Invoiced, Currency</b>	This field shows the amount that has been invoiced for the line. The amount is shown in the job currency.
<b>Invoiced, Invoice Currency</b>	This field shows the amount that has been invoiced for the line. The amount is shown in the invoicing currency.
<b>Text 1-5</b>	These fields show invoicing plan texts that are transferred to on account invoice selection.

## Invoicing Plans by Bill To Customer Single Dialogs Workspace

Use this workspace to see an overview of invoicing plans for a specific bill-to customer.

Use the Invoicing Plans by Bill To Customer tab to navigate through bill-to customers listed in the Bill To Customers sub-tab of the Bill To Customer Distribution workspace.

The Invoicing Plan Lines sub-tab of the Invoicing Plans by Bill To Customer workspace shows invoicing plan lines for a specific bill-to customer and job.

**Note:** You cannot create, change, or remove bill-to customers here.

The Invoicing Plan Lines sub-tab of this workspace has many fields in common with the Invoicing Plan Lines sub-tab of the Invoicing Plans workspace, but only invoicing plan lines for a specific bill-to customer and job are displayed in this workspace.

### Invoicing Plans by Bill to Customer Tab

This section includes the fields and descriptions for the Invoicing Plans by Bill to Customer tab.

#### Bill to Customer Island

The name of the bill-to customer is displayed on the first line.

Field	Description
<b>Appropriation</b>	This field shows the bill-to customer appropriation. You cannot change the appropriation.
<b>Blocked</b>	A check mark in this field indicates that the bill-to customer has been blocked.

#### Job Island

Field	Description
<b>Job</b>	This field shows the name and number of the job to which the invoicing plan in the table part of the window applies.
<b>Company</b>	This field shows the name of the company responsible for the job. The value in this field cannot be changed. For more information, please see the description of the window Jobs.
<b>Settling Company</b>	<p>This field shows the number of the settling company that applies to the current job.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in the chapter "Introduction to the G/L Module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

#### Price Island

Field	Description
<b>Currency</b>	This field shows the currency and the invoice currency specified for the job.
<b>Fixed Price</b>	This field shows the fixed price of the job currency. Depending on the selected basis for fixed price in the job parameter attribute "Fixed Price Basis" in the job parameter type "Pricing Method" assigned to the current job, the price in this field can originate from the quote price specified for the job and which can be edited in the window Quote Editing, or from the job's budgeted sales price

Field	Description
	registered on the most recently approved revision of the job budget of the type specified in job parameter attribute "Fixed-Price Budget Type."
<b>Invoicing Plan</b>	This field shows the sum total of job currency amounts entered on all invoicing plan lines. The field is automatically updated when lines are entered in the table part of this window.
<b>Invoiced on Account</b>	This field shows the amount (fixed price) invoiced on account.

### Invoicing Plan Lines Sub-Tab

This section includes the fields and descriptions for the Invoicing Plan Lines sub-tab.

Field	Description
<b>Date</b>	<p>In this field you can specify a date that determines when the current line is transferred for invoicing. When the action "Transfer Invoicing Plan" in the window Invoice Selection or the action "Transfer Invoicing Plans" in the window Approve Invoice Selection is selected, lines in the invoicing plans with a date on or before the current date are transferred. When the line has been transferred, the date in this field can no longer be changed.</p> <p>If you enter a date in this field and a job phase in the field "Phase," the current line can be transferred for invoicing on or after the date or when the job phase is completed, whichever comes first.</p>
<b>Description</b>	In this field you can enter text to be displayed on the invoice line when the amount has been transferred for invoicing on account. The description can be edited in the window Invoice Editing.
<b>Amount, Currency</b>	In this field you specify the amount for invoicing on account in job currency. When the line has been transferred, the amount in this field is no longer updated from the amount in invoice currency according to exchange rate changes, but the amount in job currency at the time of the transfer is saved.
<b>Amount, Invoice Currency</b>	In this field you specify the amount to be invoiced on account for the job. The amount is specified in invoice currency. The sum of the amounts entered in this field on the lines in the table part is displayed in the card part of the window in the island Price. The amount is not limited to any quote price. When you have entered the amount, Maconomy shows the amount as a percentage of the quote price in the field "Percent."
<b>Invoice Currency</b>	This field shows the invoice currency for the line. If a bill-to customer is specified on the line, then the invoice currency of this bill-to customer is shown. If no bill-to customer is specified, then the field shows the invoice currency of the job.
<b>Percent</b>	In this field you can enter a percentage of the effective quote price to be invoiced when the specified date is due or the specified job phase is

Field	Description
	completed. The effective quote price is displayed in the island Price in the card part. When you have entered the percentage, Maconomy will show the amount in the field "Amount." The percentage is not limited to any quote price, and is not limited to 100.
<b>Expected Payment Date</b>	This field is similar to the Expected Days to Payment field in the table part of the Invoicing Plans window. However, the lines shown in the table part of the Invoicing Plans by Bill To Customer belong to a specific bill-to customer on the job. Therefore, Maconomy calculates the expected payment date based on the expected days to payment on this particular company-specific customer.
<b>Activity No.</b>	This field shows the activity number associated with the job entry.
<b>Activity Name</b>	This field shows the name of the current activity.
<b>Task Name</b>	This field shows the name of the task.
<b>Task Description</b>	This field shows the description of the task specified in the field "Task Name" on the current line.
<b>Employee No.</b>	This field shows the number of the employee.
<b>Employee Name</b>	This field shows the name of the employee.
<b>Phase</b>	<p>In this field, you can specify a job phase or a milestone. Job phases and milestones are created and maintained in the window Job Phases. By entering a job phase you indicate that the amount should be transferred for invoicing when the particular job phase is completed and ended in the window Job Phases. If you enter a milestone, the amount can be transferred for posting when the milestone is approved in the window Job Phases. When the line has been transferred, the job phase in this field can no longer be changed.</p> <p>If you enter a job phase in this field and a date in the field "Date," the current line can be transferred for invoicing on or after the date or when the job phase is completed, whichever comes first.</p>
<b>Line Type</b>	<p>Select the line type to indicate whether the line should give rise to an invoice on account or a pre-invoice. Select one of the following options:</p> <ul style="list-style-type: none"> <li>On Account — Select this option to create an invoice on account.</li> <li>Pre-Invoice — This option can be selected only if the job is set up for pre-invoicing. If the job is set up for pre-invoicing by default, this option is automatically selected.</li> </ul>

Field	Description
<b>Selected Manually</b>	If you mark this field, the line can be transferred for invoicing regardless of date or completion status of a specified job phase.
<b>Transferred</b>	If this field is marked, the line has been transferred for invoicing in the window Invoice Selection or Approve Invoice Selection. The line can no longer be changed in this window.
<b>Approved</b>	If you mark this field, the current invoice line is approved and the name and date of the approver is shown in the fields "Approved" and "Approved By" below. If you choose to unmark this field, these two fields will be cleared. If the attribute "Approval of Invoicing Plan Lines" of the job parameter "Invoice Approval" has been set to "Yes," this field must be checked before the line can be transferred for invoicing.
<b>Approved by</b>	This field shows the name of the user who approved the invoice line for invoicing. The name of the approver is automatically saved when the invoice line is approved by marking the field "Approved" on the line. The field is cleared if the invoice line is unmarked for approval.
<b>Approval Date</b>	This field shows the date on which the invoice line was approved. The approval date is automatically saved when the invoice line is approved by marking the field "Approved" on the line. The field is cleared if the invoice line is unmarked for approval.
<b>Original Date</b>	This field will be updated with the date in the "Date" field the first time that a date is entered in the "Date" field.
<b>Invoiced, Currency</b>	This field shows the amount that has been invoiced for the line. The amount is shown in the job currency.
<b>Invoiced, Invoice Currency</b>	This field shows the amount that has been invoiced for the line. The amount is shown in the invoicing currency.

## Invoice Selection Single Dialog Workspace

Use this workspace to view and update invoicing and pre-invoicing activities for jobs managed in the Job Cost module.

You can also use this workspace to create invoices on account—invoices for work that has not yet been performed.

**Note:** The description of this workspace assumes that you are creating invoices, but most of the features also apply to creating credit memos.

You can only see information about a job in this workspace if the job has "Order" status.

### Contents of Workspace

The Invoice Selection tab provides general and account information about the current job.

The Job Invoice Selection Lines sub-tab displays all job entries, summarized according to the invoice layout rule selected for the job. In the Invoice Layout Rules workspace, you can choose how entries are summarized—for example, by Activity at the first level and by Task at the second level. The sub-tab only displays values for the dimensions that are used in the summarization.

You can invoice just part of an entry, or you can change the invoice amount or quantity in the Itemize Invoice Selection workspace.

If you create a line in Invoice Selection and the job is set up with a task list, you will be prompted to specify a task.

If a job is set up with a surcharge rule, all lines that match the surcharge rule get a surcharge. You can also update a budget with the surcharge.

### Employee Control

If you specified employee control for the current job in the Jobs workspace, you can only create entries for employees who appear in the job's budget or who are listed in the job's employee control list.

If the **Use Fixed Budget Type for Employee Control** system parameter is selected, Maconomy uses a budget of the type specified in the **Budget Type No. for Employee Control** system parameter. Otherwise Maconomy uses the planning budget.

### Approvals

When you finish reviewing and updating selected entries, you must approve the entries before they can be invoiced. Use the **Approve Invoice Selection** or **Approve for Invoicing On Account** action. Maconomy saves the date of approval and name of the approver and displays this information in the Status island.

Next you can edit the invoice in the Invoice Editing workspace. Editing may be mandatory, depending on the settings in the **Invoice Approval** job parameter. If you change any information after approving the selected entries, you must approve them again before they can be invoiced.

The invoice layout (headers, detail, subtotals, and so on) is determined by the settings in the Invoice Layout Rules workspace in Job Cost » Set-up.

### Applying Invoice Proposals

If a project manager or employee has proposed different hours, quantities, or billing prices for one or more job entries, use the **Apply Invoice Proposals** action to apply these changes.

To review the proposed values before applying them, open the Itemize Invoice Selection workspace and view the values in the **Proposed Quantity**, **Proposed Billing Price**, **Unit** and **Proposed Billing Price, Total** fields.

### Invoicing

To invoice an approved invoice selection, use the **Print Invoice** action in either this workspace or the Invoice Editing workspace.

If the invoice selection is a credit, use the **Print Credit Memo** action in either this workspace or the Invoice Editing workspace.

You can also invoice several jobs at the same time in the Job Invoicing workspace, as long as the invoice selections have been approved in this workspace or in the Approve Invoice Selection or Invoice Editing workspaces.

If you are using split billing for a job (meaning that multiple bill-to customers are selected for the job in the Bill to Customer Distribution workspace), one invoice is created for each bill-to customer. You can edit each of these invoices in the Invoice Editing workspace.

### Credits

You can also prepare credit memos in this workspace. If the amount is negative in the **Total** field in the Invoice Selection island, Maconomy considers it a credit.

If the current job is a main job, and the job's invoice layout rule specifies Main Job Invoicing and Main Job Invoice Selection, Maconomy looks at the total of the main job and its sub-jobs to determine whether a job should be credited or invoiced.

You can also create a credit based on a job invoice for the current job. Use the **Invoice to Credit Memo** action. When you base a credit memo on an invoice, you can also restore job entries, restoring the job status to the way it was before invoicing.

### Main Jobs and Sub-Jobs

If you are displaying information for a main job, and the invoice layout rule for the main job specifies Main Job Invoicing, the lines in the sub-tab are the sum of the entries for the main job and all sub-jobs. The lines are summarized according to the invoice layout rule of the main job.

### Entries Included in Fixed Price

You can set up a job so that some entries are included in the fixed price of the job and others are considered "outlays" and are invoiced as separate amounts. Several settings control what is included in the fixed price of a job, including the **Fixed-price Inclusion Setup** job parameter and the settings in the Job Allocation Combinations workspace.

The **Fixed-price Inclusion Setup** job parameter gives you the option to have inclusion controlled by an entry's cost type, an entry's task, or by the Job Allocation Combination selected for the job.

Entries included in the fixed price of a job are displayed in the Invoice Selection workspace with quantities and amounts of zero.

You cannot manually change the job entries for fixed-price jobs in this workspace. This is to ensure that the job is not invoiced by mistake. However, you can create invoices on account.

When you invoice outlays in this workspace, amounts invoiced on account for fixed-price jobs are included in the suggested on-account reduction.

### Review Job Entries

Use this workspace to review and modify job entries that correspond to a given line in the Job Invoice selection Lines sub-tab of the Invoice Selection workspace.

### Job Entries for Activities

If the **Only Open Activities** option is selected in the Selection Criteria island of the Invoice Selection workspace, this workspace only displays activities that have open entries.

### Write-Ups and Write-Downs

If a job has the **Transfer Write-Up/Down to Fixed Allocation Combination** job parameter set to **Yes**, any write-up or write-down of the job using the **Transfer Desired Sales Price** or **Transfer Fixed Price** action is allocated to a separate allocation combination. In other words, the change in the sales price is not transferred proportionally to the entries selected for invoicing. Instead, the difference is allocated to a single new entry whose dimensions are determined by the **Write-Up/Down** job parameter.

Depending on the current invoice layout, the write-up or write-down may be displayed on a separate line in the invoice selection and possibly on the invoice itself.

If a job has the **Allow Write-Up/Down at Transfer Billing Price Only** job parameter set to **Yes**, you cannot change quantities, billing prices, or markup percentages by editing the invoice lines directly in this workspace. You must use the **Transfer Desired Sales Price** or **Transfer Fixed Price** actions.

### Invoice Selection Tab

This section includes the fields and descriptions for the Invoice Selection tab.

#### Job Island

Field	Description
<b>Job</b>	This is the name of the job in the window. The value cannot be changed here. You can only retrieve a job if there are entries to it and if it is still open.
<b>Job Group</b>	This is the job group to which the job is assigned. The job group is selected in the window Jobs and cannot be changed here.
<b>Status</b>	This is the job status. The value will always be "Order." It cannot be changed here.
<b>Responsible</b>	This is the name of the employee responsible for the job. The name is retrieved from the window Jobs.
<b>Open Purchases</b>	In this field, you can see whether there are any open purchase orders for the job. If this field is marked, there are open purchase orders in the window Purchase Orders in the Accounts Payable module.

#### Customer Island

Field	Description
<b>Customer</b>	This is the name and number of the customer the job is for.
<b>Bill to Customer</b>	This is the name and number of the customer who is paying for the job.

## Invoice On Account Selection Island

Field	Description
<b>Job Currency</b>	<p>This field shows the currency of the job.</p> <p>If the job parameter attribute “Allow Invoice on Account in Multiple Currencies” is set to “No,” then the invoice currency of all bill-to customers on the job will be equal to the currency of the job indicated in this field. If the currency is changed, then all invoice currencies will be changed accordingly.</p> <p>If the job parameter attribute “Allow Invoice on Account in Multiple Currencies” is set to “Yes,” then changing the currency on the job will have no consequences on invoice currencies of bill-to customers.</p> <p>Note that prices in the window Job Price Information will remain in the currency of the job, even if the invoice currency differs.</p>
<b>Invoice Currency</b>	<p>This field shows the invoice currency for invoicing on account the bill-to customer on the job.</p> <p>You can set up more than one bill-to customer for a job in the window Bill To Customer Distribution. The Invoice Currency field only represents the invoice currency for the bill-to customer specified directly on the job and not all bill-to customers on the job.</p> <p>If you change the invoice currency, and invoicing plan lines exist for the bill-to customer or for split billing all bill-to customers in the window Invoicing Plans, the amount in invoice currency on the lines will be recalculated. A warning will tell you that you must reconsider the amounts on invoicing plan lines.</p> <p>If the job parameter attribute “Allow Invoice on Account in Multiple Currencies” is set to ‘No,” the invoice currency cannot be changed but will remain the same as the currency of the job.</p> <p>When an invoice selection is currently approved you cannot change the invoice currency.</p>
<b>Exchange Rate</b>	<p>This field shows the exchange rate between job currency and invoice currency for the bill-to customer specified on the job.</p> <p>By default, the exchange rate is the current exchange rate specified in the table for the job on the preferred invoice date (or current date if no preferred invoice date is set), but if the field Specify Exchange Rate is marked, then the exchange rate is fixed at the rate you specify.</p> <p>If you change the exchange rate, the field Amount for Invoicing on Account, Currency will be recalculated and a check mark will be placed automatically in the field Specify Exchange Rate. If the exchange rate deviates from the exchange rate table by more than 10%, a warning will be displayed.</p> <p>Note: The base currency for the exchange rate is based on the rate specified in the field Exch. Rate in Ref. Currency in the window System Information.</p> <p>Note: There may be unblocked bill-to customers in the window Bill To Customer Distribution who may not be set up to use the same invoice currency and exchange rate.</p>

Field	Description
<b>IoA, Fixed Price</b>	Enter the fixed price amount (fixedprice) invoiced on account.
<b>Default 1-2 (n/a)</b>	<p>These fields are relevant if the job parameter of the type "Invoicing on Account" attribute "Activity required for Invoicing On Account" is "Yes." Either the same job parameter defines one or two activity numbers in the attributes "Default Activity for Invoicing On Account 1/2" or the job task list defines one or two standard tasks for "Invoicing On Account 1/2."</p> <p>These two fields enable you to add amounts for invoicing on account on the predefined tasks or activities.</p> <p>Note that the titles of the two "Default (n/a)" fields are dynamic and will show the task or activity titles.</p>

### Invoice Selection Island

The fields in this island show the totals of the lines shown in the table part. If the current job is a main job, and the field "Includes Subjobs" in the island Main Job Invoicing below is marked, the amount fields in this island will show totals for the main job only or for the main job and its associated subjobs. If the invoice layout rule for the current main job specifies that invoice selections should be made from the main job only (the field "Main Job Invoice Selection" is selected on the invoice layout rule), the fields in this island show the totals of all jobs in the main job/subjob structure. If the field is not marked on the invoice layout rule, the fields in this island show invoice selection totals for the current main job only.

Field	Description
<b>End Invoice</b>	If you mark this field, the field "End Invoiced" will be marked when an invoice is created from the selection. If you have also marked the field "Close at End Invoicing" on the job, the job will be closed upon invoicing, provided that the job has no open entries, no open purchase orders, no open invoices on account, and no unapproved time sheets.
<b>Invoice Discount %</b>	<p>In this field, you can enter a discount percentage. Maconomy suggests the value from the window Job Information, but you can change it.</p> <p>The invoice discount is automatically deducted from the total invoice/credit billing price. Invoice discount, however, is not deducted from invoices on account.</p>
<b>Time</b>	These fields show the sums of hours, costs, billing prices, GM, and GM % of the time activities that are being invoiced in the table. The GM % is calculated from the billing price and GM. Gross margin is calculated from cost and billing price.
<b>Amount</b>	These fields show the sums of costs, billing prices, and GM % of amount activities that are being invoiced in the table. The GM % is calculated from the billing price and GM. Gross margin is calculated from cost and billing price.
<b>Total</b>	These fields show the sums of costs and billing prices of all activities being invoiced in the table. They also show GM and GM %. The GM % is calculated

Field	Description
	from the billing price and GM. Gross margin is calculated from cost and billing price.
<b>Hereof Outlays</b>	These fields show the sum of registered cost prices for all amount activities with the cost type "Outlays." For further information on outlay activities, see the window Activities in the Set-Up module.
<b>Excluding Outlays</b>	These fields show the sum of cost prices and billing prices for all activities which have been transferred for invoicing in the table part of the window, less amount activities with the cost type "Outlays." The column "Billing Price" hence shows the sum of the registered billing prices, less any cost price for amount activities for which the cost type has been set to "Outlays." In addition, the fields show the resulting gross margin and the resulting gross ratio excluding outlays.
<b>Prev. Invoiced</b>	These fields show the cost, billing price, GM, and GM % of the invoices that previously have been made for the job.
<b>On Drafts</b>	These fields show the cost, billing price, GM, and GM % of the draft invoices. Recently created drafts are not included in the sums.
<b>Total for Job</b>	These fields show the total sum of billing prices in the current invoice and all previous invoices, that is, the sum of the amounts in the "Total" and "Prev. Invoiced" fields. They also show the resulting GM and GM %.
<b>Budget</b>	This field shows the total budgeted cost, billing price, GM, and GM % of the job. The figures are retrieved from the window Job Budgets.
<b>Limit</b>	These fields show the budget limit for cost and the billing prices of the job. The limits are retrieved from the job's budget in the window Job Budget.
<b>Fixed Price</b>	<p>This field shows the effective quote price of the job as defined in the window Quote Editing. Depending on the selected basis for fixed price in the field "Basis" on the current job's invoice layout rule, the price in this field can originate from the quote price specified for the job and which can be edited in the window Quote Editing, or from the job's budgeted sales price registered on the most recently approved revision of the job budget of the type specified in the window Invoice Layout Rules.</p> <p>For time and material jobs, this field shows a quote price, if any.</p>
<b>Desired Sales Price</b>	<p>In this field, you can enter a value if you wish to invoice a job at a certain price. This can, for example, be relevant in connection with writing up a job for which you want to allocate the amount written up proportionally to all activities involved. The amount in this field can also be the result of a calculation of the fields "Desired Markup" or "Desired Markup %" (see below).</p> <p>If you enter a desired sales price, the invoice selection cannot be approved if the value in this field is different from the sum of the sales price on the invoice selection lines.</p> <p>Two system parameters concern the desired sales price. Note that both system parameters may be marked.</p>

Field	Description
	<ol style="list-style-type: none"> <li>1. If the system parameter "Transfer desired sales price when changed" is marked, the table part will be updated (that is, the desired sales price is transferred) immediately when you press Return after updating the amount in this field (if the amount fulfills the criteria for transfer). If this parameter is not marked, you have to select the action "Transfer Desired Sales Price" when you want to transfer the desired sales price to the entries in the table part.</li> <li>2. If the system parameter "Transfer Sales Price to Desired Sales Price" is marked, the desired sales price in the card part (this field) is updated to match the sum of the billing prices in the table part. This update takes place immediately when you change the billing price in the table part, either directly or indirectly by, for example, changing the field "Action." If this parameter is not marked, this field is not updated when you change the table part.</li> </ol> <p>The adjustment of the activities can be limited to include only time activities as described in the action "Transfer Desired Sales Price."</p> <p>For more information, please see the description of the action "Transfer Desired Sales Price."</p>
<b>Desired Markup</b>	<p>In this field, you can enter an amount if you wish to calculate a desired sales price by adding a certain markup to the cost price. When you press Return, Maconomy calculates a new desired sales price and a markup percentage. These figures will then be transferred to the table part of the window as described for the field "Desired Sales Price" above. For more information, please see the description of the action "Transfer Desired Sales Price" and the description of the field "Desired Sales Price" above.</p>
<b>Desired Markup %</b>	<p>In this field, you can enter a percentage if you wish to calculate a desired sales price by adding a certain markup percentage to the cost price. When you press Return, Maconomy calculates a new desired sales price and a markup amount. These figures will then be transferred to the table part of the window as described for the field "Desired Sales Price" above. For more information, please see the description of the action "Transfer Desired Sales Price" and the description of the field "Desired Sales Price" above.</p>

### Main Job Invoicing Island

Field	Description
<b>Includes Subjobs</b>	<p>This field is maintained by Maconomy. If the field is marked, it means the following:</p> <ul style="list-style-type: none"> <li>■ The current job is a main job.</li> <li>■ The current job is marked for blanket invoicing in the window Job Information.</li> </ul>

Field	Description
	<ul style="list-style-type: none"> <li>Some or all of the subjobs of the current main job are marked for blanket invoicing.</li> <li>The invoice layout rule for the current job specifies that subjobs should be invoiced as part of the main job (the field "Main Job Invoicing" is selected on the invoice layout rule).</li> </ul> <p>If this field is marked, Maconomy will treat the main job and its associated subjobs as one job with regard to invoicing. When you approve the invoice selection of the main job, entries from the subjobs are approved also, and when you print an invoice from the main job, the subjobs are also printed. Furthermore, some of the functions in the Action menu will be disabled or have a different effect. For more information, please see the description of the individual actions.</p> <p>If this field is not marked, one or more of the criteria listed above is not fulfilled.</p>
<b>Invoiced on Main Job</b>	<p>This field is maintained by Maconomy. The field is marked if:</p> <ul style="list-style-type: none"> <li>The current job is a subjob.</li> <li>The main job of the current job fulfills the criteria specified in the description of the field "Includes Subjobs" above.</li> <li>The criteria for blanket invoicing are fulfilled for the current job.</li> </ul> <p>If this is the case, you will not be able to perform any actions in this window, and the fields in the card and table parts are either closed for entry or without effect. If you want to create a job entry, for example, for direct invoicing, and assign it to a subjob, you must use the window Itemize Invoice Selection.</p> <p>The remaining fields in this island are similar to the fields in the island Invoice Selection above. If the field "Includes Subjobs" is marked, the fields in the island show the totals for all jobs in the main job/subjob hierarchy which fulfill the criteria for blanket invoicing.</p>
<b>Time</b>	<p>These fields show the sums of hours, costs, billing prices, GM, and GM % of the time activities that are being invoiced in the table. The GM % is calculated from the billing price and GM. Gross margin is calculated from cost and billing price.</p>
<b>Amount</b>	<p>These fields show the sums of costs, billing prices, and GM % of amount activities that are being invoiced in the table. The GM % is calculated from the billing price and GM. Gross margin is calculated from cost and billing price.</p>
<b>Total</b>	<p>These fields show the sums of costs and billing prices of all activities being invoiced in the table. They also show GM and GM %. The GM % is calculated from the billing price and GM. Gross margin is calculated from cost and billing price.</p>
<b>Hereof Outlays</b>	<p>These fields show the sum of registered cost prices for all amount activities with the cost type "Outlays." For further information on outlay activities, see the window Activities in the Set-Up module.</p>

Field	Description
<b>Excluding Outlays</b>	These fields show the sum of cost prices and billing prices for all activities which have been transferred for invoicing in the table part of the window, less amount activities with the cost type "Outlays." The column "Billing Price" hence shows the sum of the registered billing prices, less any cost price for amount activities for which the cost type has been set to "Outlays." In addition, the fields show the resulting gross margin and the resulting gross ratio excluding outlays.
<b>Prev. Invoiced</b>	These fields show the cost, billing price, GM, and GM % of the invoices that previously have been made for the job.
<b>Other Drafts</b>	These fields show the cost, billing price, GM, and GM % of the invoices on draft.
<b>Total for Jobs</b>	These fields show the total sum of billing prices in the current invoice and all previous invoices, that is, the sum of the amounts in the "Total" and "Prev. Invoiced" fields. They also show the resulting GM and GM %.
<b>Budget</b>	These fields show the total budgeted cost, billing price, GM, and GM % of the job. The figures are retrieved from the window Job Budgets.
<b>Fixed Price</b>	<p>This field shows the effective quote price of the job as defined in the window Quote Editing. Depending on the selected basis for fixed price in the field "Basis" on the current job's invoice layout rule, the price in this field can originate from the quote price specified for the job and which can be edited in the window Quote Editing, or from the job's budgeted sales price registered on the most recently approved revision of the job budget of the type specified in the window Invoice Layout Rules.</p> <p>For time and material jobs, this field shows a quote price, if any.</p>

### Charges Island

Field	Description
<b>Charge Table</b>	Specify the charge table on the job.

Field	Description
<b>Charge Discount %</b>	In this field, you can enter a discount percentage, if you have entered a charge table in the Charge Table field. The discount will be subtracted from the charge amount calculated from the charge table.

### Delimitation Island

Field	Description
<b>Extend Selection</b>	If you mark this field and then select the action "Delimit," Maconomy will extend the invoice selection to also include uninvoiced entries within the types and ranges specified in the other fields of this island. You can specify, for example, "10-20" as a range of employee numbers and then select "Delimit." Then you

Field	Description
	<p>can specify "40-50" as a new range of employee numbers, make sure that this field is marked, and then reselect the action "Delimit." In this way, you have extended your selection to cover job entries for the employees "10-20" and "40-45."</p> <p>If you do not check this field and then select the action "Delimit," Maconomy will reset the invoice selection and only select the uninvoiced entries specified in the fields in this island for invoicing.</p> <p>For the entries to be selected for invoicing, they have to match all criteria in this island.</p>
<b>Cut-off Date</b>	In this field, you can enter a date. After extending the selection, the invoice selection will include all activities with non-invoiced entries up to the date entered here. Maconomy suggests the last day of the previous month, unless the system parameter "Open Invoice Selection Without Cut-off Date" is marked. If it is marked, Maconomy will not complete this field automatically.
<b>G/L Entry Date</b>	In this field you can delimit the invoice selection by the entry date on job entries. Only entries with an entry date up to this date will be invoiced.
<b>Employee Type</b>	In this field, you can specify an employee type. When you select the action "Delimit," uninvoiced entries for activities carried out by an employee of the chosen type will be selected for invoicing. Employee types are created in the window Popup Fields in the Set-Up module.
<b>Employee No.</b>	In these fields, you can enter a range of employee numbers. If you select the action "Delimit," uninvoiced entries for activities by employees within the chosen range will be selected for invoicing.
<b>Activity Type</b>	In this field, you can specify the activity types: "Time," "Amount," or "Sum." If you select the action "Delimit," uninvoiced entries on activities of the chosen type will be selected for invoicing.
<b>Job No.</b>	In these fields, you can specify a range of job numbers. If you select the action "Delimit," uninvoiced entries for jobs with numbers within the chosen range will be selected for invoicing. The fields can hence be used for delimiting an invoice selection of a main job to include only a range of the subjobs assigned to the main job when making an invoice selection.
<b>Invoicing Group</b>	In these fields, you can enter a range of invoicing groups. If you select the action "Delimit," uninvoiced entries for activities by invoicing groups within the chosen range will be selected for invoicing.
<b>Activity No.</b>	In these fields, you can specify a range of activity numbers. If you select the action "Delimit," uninvoiced entries for activities with numbers within the chosen range will be selected for invoicing.
<b>Task</b>	In these fields, you can enter a range of tasks. If you select the action "Delimit," uninvoiced entries on a task within the chosen range will be selected for invoicing.

Field	Description
<b>Task Group 1-6</b>	The functionality of these fields is similar to that of the field "Task" above. You can enter the value manually or select a value in the pop-up list. For further information on work breakdown structure and task groups, see the descriptions under "Job Tasks" and under "Job Budgets."

**Delimitation, Dimensions Island**

Field	Description
<b>Location</b>	The functionality of this field is similar to that of the field "Task" above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Task" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Task" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Task" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task" above.

**Job Budget Island**

Field	Description
<b>Budget Realization Rate</b>	This field shows the budget realization rate. This is based on the Billing Price and the WIP for Invoicing fields for time.
<b>Budget Text 1-5</b>	These fields show the value of extra text fields in the latest job budget revision.

**Status Island**

Field	Description
<b>Open for Invoice Selection</b>	This field indicates whether the invoice selection is open (this is the default). You can only change the invoice selection when the invoice selection is open. The invoice selection is closed after you select one of the actions that creates a draft, and it is opened after you print invoices or credit memos. You can also open the invoice selection by using the action "New Selection," provided that the job is set up to allow multiple drafts.
<b>Drafts for Editing</b>	If the job parameter of the type Invoice Approval for the current job specifies that invoice editing is required, this field is marked by Maconomy when the invoice selection is approved using the approval functions in the Action menu. If invoice editing is not required according to the job parameter type "Invoice

Field	Description				
	<p>Selection,” the functionality of this field is similar to that of the field “Approved for Invoicing” below.</p> <p>A subjob which is invoiced on the main job can be approved from the main job only (see the description of the field “Approved for Invoicing on Main Job” below). However, this will not cause this field to be marked as well, as such invoices must also be edited from the main job.</p> <table> <tr> <th>Field</th><th>Description</th></tr> <tr> <td><b>Blanket Drafts for Editing</b></td><td>This field indicates whether there are blanket draft invoices for editing. Blanket drafts are created when you approve invoice selection in Blanket Invoice Selection or apply the "Create Blanket Drafts" action in Blanket Invoicing Overview.</td></tr> </table>	Field	Description	<b>Blanket Drafts for Editing</b>	This field indicates whether there are blanket draft invoices for editing. Blanket drafts are created when you approve invoice selection in Blanket Invoice Selection or apply the "Create Blanket Drafts" action in Blanket Invoicing Overview.
Field	Description				
<b>Blanket Drafts for Editing</b>	This field indicates whether there are blanket draft invoices for editing. Blanket drafts are created when you approve invoice selection in Blanket Invoice Selection or apply the "Create Blanket Drafts" action in Blanket Invoicing Overview.				
<b>Submitted Drafts</b>	This field shows the number of submitted invoice drafts.				
<b>Approved for Invoicing</b>	This field shows whether or not the job is approved for invoicing using the approval functions in the Action menu in this window or the window Approve Invoice Selection. However, the job parameter of the type “Invoice Approval” for the current job may require that the invoice is edited in the window Invoice Editing before this field is marked. For more information, please see the description of the field “Approved for Editing” above and the job parameter type “Invoice Approval.”				
<b>Approved for Inv. on Main Job</b>	This field shows whether or not the job is approved for invoicing on its main job. The field will be marked by Maconomy if the current job is a subjob, the field “Invoiced on Main Job” in the island Main Job Invoicing is marked, and the main job is approved in this window or the window Approve Invoice Selection.				
<b>Submitted by</b>	This field shows the name of user who submitted this draft.				
<b>Submitted Date</b>	This field shows the date when the draft was submitted.				
<b>Approved by</b>	This field displays the name of the user who approved the job for invoicing. The name of the approver is automatically saved when the job is approved by one of the actions “Approve Invoice Selection” and “Approve for Invoicing on Account.” The field will be cleared if the invoice is reopened for editing. For subjobs approved for invoicing on the main job, this field displays the name of the person who approved the main job.				
<b>Approval Date</b>	This field displays the date on which the job was approved for invoicing. The approval date is automatically saved when the job is approved by one of the actions “Approve Invoice Selection” and “Approve for Invoicing on Account.” The field will be cleared if the invoice is reopened for editing. For subjobs				

Field	Description
	approved for invoicing on the main job, this field displays the date the main job was approved.
<b>Task Group Status</b>	<p>This field indicates whether the job entries associated with the present job are assigned to the correct task groups. If the value in this field is "Not Up to Date," this indicates that the task group structure is not up to date. To update the task group information, select the action "Transfer Task Groups" in the Action menu. The value will then change to "Up to Date."</p> <p>This functionality is relevant if you use a work breakdown structure in your budget, and the invoice layout rule of the job specifies that invoice selections or invoices should be grouped by task groups.</p> <p>In Maconomy, a task is associated with each job entry, containing information about the task groups assigned to the task against which the job entry is posted. The information is expressed as a task group level, ranging from task group 1 to 6, where level 1 is the top level in the hierarchy.</p> <p>If you change the job budget structure after posting job entries, Maconomy does not automatically update the entries with the new budget structure information, as the number of entries to update could be enormous. Updating all entries after each structural change could therefore be very time-consuming. Thus, if you change the work breakdown structure in the Job Budgets window, the budget must be resubmitted for these structural changes to be reflected in the Invoice Selection window. By resubmitting the budget or selecting this action, the task group status in this field will automatically be updated. Additionally, the task group status is automatically updated when the following actions are performed: Close All, Delimit, Apply Invoice Proposals, Transfer Fixed Price, Transfer Desired Sales Price, Transfer Budget, and Print Invoice.</p> <p>For further information on work breakdown structures and task groups, see the descriptions under "Job Tasks" and under "Job Budgets."</p>
<b>Job Contains Pre-Invoices</b>	This field indicates whether or not there are pre-invoices, in any state, on this job.

### Selection Criteria Island

Field	Description
<b>Only Open Activities</b>	<p>You can mark this field if you only wish the card part to show the job's open activities, that is, activities with open entries.</p> <p>If you want the field to be checked by default, you can set this up in system parameters.</p>

## Invoice Island

Field	Description
<b>Invoice Type</b>	<p>Use this field to specify the type of invoice to approve when you approve the invoice selection. The available options include:</p> <ul style="list-style-type: none"> <li>■ T&amp;M On new jobs, the Invoice Type defaults to T&amp;M.</li> <li>■ On Account</li> <li>■ T&amp;M and On Account</li> <li>■ Pre-Invoice — Selecting this option instructs Maconomy to create a pre-invoice instead of an invoice on account or a time and material invoice. If a job is set up for pre-invoicing by default, Maconomy automatically populates the <b>Invoice Type</b> field with <b>Pre-Invoice</b> when you enter a positive amount in the <b>Total</b> field.  If a job is not set up for pre-invoicing, this invoice type cannot be selected.</li> </ul> <p>If you set an amount for invoicing/crediting on account, the field updates to On Account, and reverts to T&amp;M if the amount for invoicing/crediting on account is changed back to zero.</p> <div style="border: 1px solid blue; padding: 5px;"> <p><b>Note:</b> You must manually select the third option of combined invoicing, T&amp;M and On Account.</p> </div>
<b>Combine T&amp;M, On Account by Default</b>	<p>This check box is selected on a new job if the "Combine T&amp;M with On Account by Default" job parameter is set to Yes. If this check box is selected, the <b>Invoice Type</b> field switches to T&amp;M and On Account when you set an amount for invoicing on account.</p>
<b>Preferred Invoice Date</b>	<p>In this field, you can enter the preferred invoice date. The date must be within the open posting interval, which is specified in the window System Information in the Set-Up module. If you do not enter a date, Maconomy inserts the current date when the invoice is printed.</p> <p>If the job is assigned the job parameter type "Invoice Approval" in which the job parameter attribute "Pref. Inv. Date From Plan" has been given the value "Yes," and if an invoice plan has been created for the job in question, the date in this field will be transferred from the assigned invoicing plan when you select the action "Transfer Invoicing Plan" in the Action menu. If the plan consists of several invoicing plan lines, Maconomy will use the date specified on the line most recently created. The date considered for invoicing plan lines with job phases or milestones is the completion date of the phase/milestone in question.</p> <p>If split billing is used (that is, there are multiple bill-to customers on the job), changing the preferred invoice date in this field will change the date on all invoices approved from this invoice selection. However, if the date is changed on one of the invoices in the window Invoice Editing, this field will be blank</p>

Field	Description
	<p>unless the date is the same on all invoices approved from this invoice selection. For more information, please see the description of the window Invoice Editing.</p>
<b>Invoice Name</b>	<p>Here you specify the name of the invoice. When you approve the invoice selection, this name will appear in the window Invoice Editing, where you can update it. The invoice name can be added to prints of invoice and credit memos and their corresponding drafts.</p> <p>The invoice name is merged into the customer entry text and the finance entry on the customer.</p> <p>The field is cleared when you run the action "New Invoice Selection."</p>
<b>Show Write-Down Separately</b>	<p>Use this field to control whether to show a possible write-down separately, on its own line in the draft. Select this check box to show write-downs separately. The default behavior for how write-downs appear comes from the main invoice layout rule. If the job is set up to create a detailed invoice specification, selecting this field affects both the cover part and the detailed part of the invoice.</p> <p>If the invoice layout rule is set up to show amounts on lines, the draft invoice created when you approve an invoice selection on a job will show the amount being invoiced, including any write-up/-down that you may have selected. You can show write-down on a single, separate line, and then instead show the billing price, excluding write-down, on the specification. This is enabled by selecting this field.</p> <p>The text on this line (such as Courtesy discount) can be set up in the Language Texts window on the entry with key1 @JobWriteDownLine.</p>
<b>Show on Invoice, Customer Balance</b>	<p>Select this field to indicate that you want to see the customer's prior and new balance on the job invoice printout.</p> <p>The default value is inherited from the customer / company-specific customer; however, you can override it in the Invoice Selection, On Account Invoice Selection, and Blanket Invoice Selection windows.</p>
<b>Show on Invoice, Customer Statement</b>	<p>Select this field to indicate that you want to see the customer statement on the job invoice printout.</p> <p>The default value is inherited from the customer / company-specific customer; however, you can override it in the Invoice Selection, On Account Invoice Selection, and Blanket Invoice Selection windows.</p>
<b>Show on Invoice, Customer Aging</b>	<p>Select this field to indicate that you want to see the A/R aging on the job invoice printout.</p> <p>The default value is inherited from the customer / company-specific customer; however, you can override it in the Invoice Selection, On Account Invoice Selection, and Blanket Invoice Selection windows.</p>

**Invoiced on Account Island**

Field	Description
<b>Net Invoiced on Account</b>	<p>This field shows how much of the total job price has been invoiced on account. The amount is shown in the job's currency. It is possible to invoice part or all of the job in this window, either before the first job entries have been made or during its completion and irrespective of job entries.</p> <p>When the job is finally invoiced, Maconomy deducts the amount invoiced on account. However, the invoice price cannot be less than "0.00." The amount here is deducted from the invoiced amount and cannot be changed here.</p>
<b>Tax Invoiced on Account</b>	<p>This field shows how much tax has been added to the job's invoices on account. It cannot be changed here. The amount is deducted from the tax total of the invoice selection. When the job is finally invoiced, Maconomy deducts the tax on account. However, the invoice amount cannot be less than "0.00."</p>
<b>Approved reconciliation</b>	<p>This field shows the currently approved amount for reconciliation across drafts. There is a slight difference between the interpretation of "approve reconciliation" in the window Invoice Selection and in the window Job Invoices On Account. In Invoice Selection the restriction applies to the reconciling job, whereas in Job Invoices On Account the restriction applies to the job (the job of the invoices on account).</p> <p>You will receive a warning if you remove a job from a job collection where a cross-job draft reconciliation exists that involves the given job.</p> <p>Since a job invoice on account may have some draft reconciliation that goes to a job that has been removed from the job collection, you will receive a warning if you try to set a larger amount for reconciliation directly on the invoice.</p>
<b>Available for Reduction</b>	<p>This field shows the sum of previously on-account-invoiced amounts less any amount already used for reducing invoice entries. Thus, this field represents the amount available for further on-account reduction.</p>
<b>On Account Reduction</b>	<p>In this field, you can enter the maximum amount by which the "Net Invoiced On Account" can be reduced at the next normal invoicing or crediting. This value must be positive for invoicing or negative for crediting. Maconomy seeks to arrive at the reduction by going through any non-reconciled invoices and credit memos on account for the job. If the amount in this field is positive, Maconomy seeks to reconcile on-account invoices; if the amount is negative, Maconomy seeks to reconcile on-account credit memos. Maconomy will not automatically reconcile both invoices and credit memos on account. To do this, see the window Job Invoices On Account, in which you can fully control the reconciliation of invoices and credit memos on account. Changes made in that window are reflected in this field.</p> <p>If you have previously edited the amount for an account reduction in the window Job Invoices On Account, the changes will be canceled if you enter an amount directly in this field, and existing invoices on account or credit memos on account will be settled with the oldest first. For more information, please see the description of the window Job Invoices On Account.</p>

Field	Description
	<p>If the current job is a fixed-price job, and the job is assigned the job parameter attribute "Allow Invoicing On Account Only" having the value "Yes," this field cannot be changed, as invoices on account for such jobs are always reconciled when the job is closed.</p> <p>If the current job is set up for split billing (that is, there is more than one bill-to customer on the job), you cannot change the on-account reduction in this window. However, you can do this in the windows Bill to Customer Distribution and Job Invoices On Account. For more information, please see the description of the window Bill to Customer Distribution and the window Job Invoices On Account.</p> <p>Note: If the job has been set up to use invoice allocation, the amount for on-account reduction does not cover the invoices included in the fixed price. This is because these invoices are part of the invoice allocation.</p>

### Work in Progress Island

Field	Description
<b>WIP Available</b>	This field shows the WIP available for invoicing for time activities and amount activities as well as the total WIP.
<b>WIP for Invoicing</b>	<p>In this field, you can enter the amount of WIP to invoice.</p> <p>When you change the amount of WIP to invoice, Maconomy selects entries for invoicing, with the oldest entries first, to reach the specified amount.</p>
<b>Carry Forward</b>	In this field, you can enter the amount of WIP to carry forward.
<b>Billing Price</b>	<p>In this field, you can change the billing price of the WIP to invoice.</p> <p>When you change the billing price, Maconomy adjusts the hourly rate proportionately to the registered rate, so as to obtain the specified total billing price.</p> <p>A change in billing price is only applied to time-related activities.</p>
<b>Write-Up/Down</b>	<p>In this field, you can enter the amount of WIP to write down.</p> <p>When you change the amount for Write-Up/Down, Maconomy adjusts the hourly rate proportionately to the registered rate, so as to obtain the specified total billing price.</p> <p>A change in Write-Up/Down is only applied to time-related activities.</p>
<b>Realization Rate</b>	<p>This field shows the realization rate. This is based on the Billing Price and the WIP for Invoicing fields for time. You can change the Realization Rate which will adjust the Billing Price and Write-Up/Down accordingly.</p> <p>When you change the realization rate, Maconomy adjusts the hourly rate proportionately to the registered rate, so as to obtain the specified total billing price.</p> <p>A change in Realization Rate is only applied to time-related activities.</p>

Field	Description
<b>Exclude Entries for Carry Forward</b>	<p>If this field is selected, entries in the table part marked for carry forward will not be included in the billing adjustment when changing the WIP for Invoicing.</p> <p>The field can only be marked simultaneously with a change in the WIP for Invoicing field.</p>

**Up/Down Island**

Field	Description
<b>To Date</b>	These fields show the write-up/-down quantity and billing price of invoicing lines already invoiced. The "Quantity" column shows how many units have already been invoiced for the job. The "Billing Price" column shows how much has been invoiced for the job activity.
<b>Selection</b>	<p>These fields show the write-up/-down quantity and billing price resulting from invoicing the current invoice selection that has been transferred for invoicing in the table part.</p> <p>Write-up and write-down are the differences between the registered quantity/amount and the invoiced quantity/amount. Write-ups are shown as positive figures, and write-downs as negative figures.</p>
<b>Other Drafts</b>	These fields show write-up/-down of draft invoices with the possible exception of recently created drafts.
<b>Total</b>	<p>These fields show the total write-up/-down quantity and billing price for the job after invoicing the current invoice selection that has been transferred for invoicing in the table part.</p> <p>Write-up and write-down are the differences between the registered quantity/amount and the invoiced quantity/amount. Write-ups are shown as positive figures and write-downs as negative figures.</p>

**Company Island**

Field	Description
<b>Company</b>	This field shows the name and number of the company responsible for the current job. You cannot change the value here.
<b>Base Currency</b>	This field displays the currency used as base currency in the company specified in the field "Company No." above. See the field "Base Currency" in the window Company Information in the G/L module for a detailed description of the concepts of company base currency and enterprise currency.

**Settling Company Island**

Field	Description
<b>Settling Company</b>	<p>This field shows the name and number of the settling company that applies to the current job.</p> <p>If the number in this field is different from the one specified in the island Company, Maconomy will automatically create intercompany entries at the posting of job invoices. In the intercompany entries, the company in this field will be the intercompany company. However, if the system parameter "Create intercompany entries for companies with same parent company" is not marked, intercompany entries are only created if the two companies involved are not both assigned to the same parent company.</p> <p>For further information about the influence of a settling company and how such a company is selected, please see the section "Multiple Companies" in the chapter "Introduction to the G/L Module." Intercompany entries are described in the window Intercompany Accounts in the G/L module.</p>

**Payment Island**

Field	Description
<b>Pmt. Terms</b>	These are the payment terms that apply to the invoices for this job. Payment terms are chosen in the window Job Information and cannot be changed here.
<b>Blanket Invoice</b>	<p>This field is marked if the invoices (or credit memos) made for the job are to be blanket invoiced (or credited). Maconomy retrieves the value from the window Job Information, and you cannot change this field manually.</p> <p>Blanket invoicing means that all non-invoiced but approved invoice selections are placed in one invoice when you print from one of the windows Job Invoicing or Blanket Invoicing Overview, and, provided the jobs involve the same company, department, bill-to customer, company tax code, currency code, and invoice currency code, and depending on whether they are taxed or not (check mark in the field Tax). If the layout rule selected for the job specifies main job invoicing, you can also include invoices on account or invoices that are to reconcile invoices on account in the blanket invoice. To blanket credit a customer, the same requirements apply. However, a credit memo selection will not be included in a blanket crediting if it was created from an invoice.</p> <p>To blanket invoice or blanket credit jobs which are not part of a main job/subjob structure with main job invoicing, you must use the windows Job Invoicing or Job Crediting, respectively. For more information, please see the description of the window Invoice Layout Rules.</p> <p>Note that if the system parameter "Blanket Invoicing per Main Job" is set to "Yes," the jobs must be placed in a hierarchy to be blanket invoiced.</p>
<b>Tax</b>	This field shows whether the invoices are subject to tax. Maconomy retrieves the value from the window Job Information and it cannot be changed here.
<b>Currency</b>	This field shows the currency of the invoice. Maconomy retrieves the value from the window Job Price Information and it cannot be changed here.

**Credit Memo Island**

Field	Description
<b>From Invoice No.</b>	<p>This field is used when you select the <b>Invoice to Credit Note</b> action.</p> <p>Enter a job invoice number. Maconomy verifies whether the number is assigned to an existing job invoice associated with the current job. If the entered invoice number belongs to an invoice on account, the <b>Restore Job Entries</b> check box is automatically selected.</p> <p>An invoice number cannot be entered in this field when corresponding to a pending or cancelled pre-invoice.</p>
<b>Type</b>	Choose to show invoice lines for T&M invoices or Invoice on Account for invoices on account.
<b>Restore Job Entries</b>	<p>This field is used when you select the action "Invoice to Credit Memo." If you mark this field and select the action "Invoice to Credit Memo," the job invoice specified in the field "From Invoice No." will be reversed, returning the status of the job to the way it was before invoicing. If you specify a blanket invoice, only invoice lines regarding the current job are reversed. However, if the specified blanket invoice involves a main job/subjob hierarchy with main job invoicing and invoice selection from main job, the invoice lines from all jobs in the invoice will be reversed. For more information, see the description of the field "Includes Subjobs."</p> <p>If the invoice to be credited has reconciled job invoices on account and/or credit memos on account, these are reopened when crediting. If the field is not marked, job entries are created when the amount is credited.</p> <p>This field is automatically marked if the invoice number in the field "From Invoice No." belongs to an invoice on account, and the mark cannot be removed. In this case, crediting the invoice causes the specified invoice on account to be reopened. The reopened invoice can be seen in the window Job Invoices On Account.</p> <p>When crediting an invoice which covers both T&amp;M and on account, the field only affects the crediting of the T&amp;M part of the invoice. This field has no effect when crediting an invoice on account.</p>
<b>Restore Pre-Invoices</b>	<p>Select this check box when crediting a T&amp;M invoice to reverse the cancellation of any pre-invoices that were cancelled on that invoice.</p> <p><b>Note:</b> The cancellation of a pre-invoice is reversed only if the most recent cancellation is due to the invoice being credited. For example, if a pre-invoice is cancelled by printing a T&amp;M invoice, then the cancellation of the pre-invoice is manually reversed. If this pre-invoice is cancelled again by another T&amp;M invoice, crediting the first T&amp;M invoice will have no effect on the pre-invoice.</p>

**Reallocate Selected Entries Island**

Field	Description
<b>To Job No.</b>	This field must be considered filled in before using the action Reallocate Selected Entries.

Field	Description
<b>To Task</b>	This field must be considered filled in before using the action Reallocate Selected Entries.
<b>To Entry Date</b>	This field must be considered filled in before using the action Reallocate Selected Entries.

### Print Specification Island

Field	Description
<b>Invoice Layout</b>	<p>In this pop-up field you can select an invoice layout rule to apply to the invoice selection. The layout selected for the current job in the Jobs window is used by default. For more information about invoice layout rules, please see the description of the window "Invoice Layout Rules."</p> <p>If the current job is a main job and has already been invoiced, you can only change the rule in this field if the selected rule has the same selections regarding invoicing subjobs as part of main jobs. This means the "Main Job Invoicing" and "Main Job Invoice Selection" fields must have the same value as the initially used invoice layout rule.</p> <p>Task group information can be shown on the invoice layout if this has been selected in the Invoice Layout Rules window. For further information on task groups in invoice layouts, see the description of the "Level 1" field in the Invoice Layout Rules window.</p>
<b>Detailed Invoice Specification</b>	Use this field to select a detailed invoice specification.
<b>Include Detailed Specification</b>	Select this box to include detailed specification in the invoice. You can select this box only if the job is set up to create a detailed invoice specification.

### Job Collection Island

Field	Description
<b>Job Collection</b>	This field shows the description of the job collection for jobs included in a job collection. The field is also displayed in the Jobs and Blanket Invoice Overview windows.

### Job Invoice Selection Lines Sub-Tab

This section includes the fields and descriptions for the Job Invoice Selection Lines sub-tab.

Field	Description
<b>Level 1: Activity</b>	These fields show the values by which information on the current line is grouped at level 1-4. If, for instance, the invoice layout rule selected in the field "Invoice Layout" in the card part specifies that the invoice selection

Field	Description
	<p>should be grouped by task at level 1, the “Level 1” field shows the task number of the entries summarized on the current line.</p> <p>The headings of these fields indicate the types of values by which the invoice selection is grouped at level 1-4. For instance, if the invoice selection is grouped by Task at level 1, the heading of this field will be “Level 1: Task.”</p> <p>For further information on task groups in invoice layouts, see the description of the “Level 1” field in the Invoice Layout Rules window.</p>
<b>Activity No.</b>	<p>This field shows the number of an activity, if the current invoice layout rule specifies that the invoice selection should be summed by activity.</p> <p>There is only one line per activity, which means that all activity entries are grouped and summed in the table part of this window. For this reason, the field cannot be changed on existing lines, but it is possible to create a line and enter an activity number in this field. However, if the invoice layout rule used for the current job indicates that invoice selection lines should be grouped by activity, you cannot create a line on which you enter an activity or combination of activity which is identical to that of an existing summary line. Similarly, if the invoice layout rule indicates that invoice selection lines should be grouped by a combination of activity and another field value — for example, location — you cannot create a line on which the combination of activity and the field in question matches that of an existing summary line. If you want to create such a line for direct invoicing, you can either do this in the window Itemize Invoice Selection, in which the underlying job entries can be seen, or you can mark the field “Dir. Inv.” on the existing line and make the desired changes there.</p>
<b>Activity Name</b>	<p>This is the activity text which was entered when the activity was created in the window Activities.</p>
<b>Invoice Quantity</b>	<p>In this field, you can enter the quantity to invoice when the selection is approved. Maconomy shows the quantity specified to be invoiced in the windows Itemize Invoice Selection, Job Journal, Time Sheets, or Expense Sheets. If the current job is a fixed-price job, and the job is assigned the job parameter attributes “Allow Invoicing On Account Only” and “Close Job Upon Job Invoicing,” both having the value “Yes,” the number in this field is always zero, as such jobs are to be invoiced on account.</p> <p>If the job parameter attribute “Allow Write-Up/Down at Transfer of Billing Price Only” of the type “Write-Up/Down” is not marked, you can change the number if you wish to invoice the customer for less or more than the registered quantity (that is, write the job up or down). If you change it, Maconomy will recalculate the field “Billing Price to Inv.”</p> <p>If you enter a negative number, the quantity of the activity is credited when you approve the selection for invoicing or crediting. Maconomy automatically changes the values in the fields “Quantity Inv.,” “Billing Price to Inv.,” and “Close Balance” on underlying job entries which have not been marked for direct invoicing.</p> <p>If the system parameter “Prioritize Partial Invoicing when Changing Quantity for Invoicing” is marked, Maconomy will unmark the field “Close Balance”</p>

Field	Description
	<p>when the number in this field is reduced to less than the open quantity for invoicing. This means that the line will be carried forward, instead of being written off when the invoice selection is approved. If, for example, the open quantity is 10, and the quantity for invoicing in this field is changed from 10 to 8, the field "Close Balance" is unmarked, but if the quantity for invoicing is changed from 12 to 10, the field is not unmarked.</p>
<b>Billing Price to Inv.</b>	<p>In this field, you can enter the activity billing price to invoice. Maconomy suggests the sum of the billing prices from open entries on the job, as entered in the windows Itemize Invoice Selection, Job Journal, Time Sheets, or Expense Sheets. If the current job is a fixed-price job, and the job is assigned the job parameter attributes "Allow Invoicing On Account Only" and "Close Job Upon Job Invoicing," both having the value "Yes," the number in this field is always zero, as such jobs are to be invoiced on account.</p> <p>If the job parameter attribute "Allow Write-Up/Down at Transfer of Billing Price Only" of the type "Write-Up/Down" is not marked, you can change the billing price in this field. If you do, Maconomy will change the amounts in the field "Invoice Quantity." However, the two system parameters "Keep quantity on write-downs" and "Keep quantity on write-ups" may change this behavior. If "Keep quantity on write-downs" is marked, Maconomy will not change the quantity when the billing price is reduced. If "Keep quantity on write-ups" is marked, Maconomy will not change the quantity when the billing price is increased. Note that both parameters may be marked, in which case Maconomy will never adjust the invoice quantity of the affected activities to match the current billing price to invoice.</p> <p>You can never change the values in both this field and the "Invoice Quantity" field at the same time.</p> <p>If you enter a negative number, the amount is credited when you approve the selection for invoicing or crediting. Maconomy automatically changes the values in the fields "Quantity Inv." and "Billing Price to Inv." on underlying job entries.</p>
<b>Markup</b>	<p>In this field, you can enter or change the markup amount for the current line. The field "Close Balance" must be marked. Maconomy suggests the difference between the cost and the billing price of the current table line. When you change the field and press Return, the fields "Billing Price to Inv." and "Markup %" on the current line are updated, and the fields relating to the desired sales price in the card part are updated as well to reflect the new billing price to invoice (see the description of the field "Desired Sales Price").</p>
<b>Markup %</b>	<p>In this field, you can enter or change the markup percentage for the current line. The field "Close Balance" must be marked. Maconomy suggests the percentage which corresponds to the difference between the cost and the billing price of the current table line. When you change the field and press Return, the fields "Billing Price to Inv." and "Markup" on the current line are updated, and the fields relating to the desired sales price in the card part are updated as well to reflect the new billing price to invoice (see the description of the field "Desired Sales Price").</p>

Field	Description
<b>Close Balance</b>	<p>The functionality of this field depends on whether the field “Dir. Inv.” is marked and whether the system parameter “Allow over invoicing” has been marked in the Set-Up module. If this parameter has not been marked, the field “Close Balance” cannot be unmarked. Furthermore, if the job parameter attribute “Allow Write-Up/Down at Transfer of Billing Price Only” of the type “Write-Up/Down” is marked for the current job, this field can only be selected if doing so does not give rise to any write-up or write-down of the job.</p> <ul style="list-style-type: none"> <li>■ If the field “Dir. Inv.” (Direct Invoicing) is not marked — Mark the field “Close Balance” if you want all underlying job registrations to be closed when you approve the invoice selection. The field “Close” will be marked accordingly on all the underlying job registrations, which can be seen in the window Itemize Invoice Selection. If you mark that field, all open entries will be invoiced and closed. If you do not mark the field, the underlying entries will be closed until the quantity specified in the field “Invoice Quantity” or “Billing Price to Inv.,” with the oldest entries being selected for invoicing first. If the quantity exceeds the open entries, an entry for direct invoicing is created in the window Itemize Invoice Selection.</li> <li>■ If the field “Dir. Inv.” (Direct Invoicing) is marked — If the field “Close Balance” is marked, an entry for invoicing is created and then closed. Any job entries with the same allocation combination in the window Itemize Invoice Selection are not closed, but are excluded from the invoice selection, as the quantity to invoice and the billing price to be invoiced are always set to zero. See also the description of the field “Dir. Inv.” below. If you do not mark that field, the open billing price for the current allocation combination will be negative the next time that you create an invoice selection. For further information, please see the description of the field “Close” in the window Itemize Invoice Selection.</li> </ul>
<b>Dir. Inv.</b>	<p>This field is used for choosing direct invoicing, that is, invoicing without underlying job registrations. If you mark this field, you can enter quantity and billing price irrespective of open job entries, and these will not be affected by the invoicing or crediting. Job entries with the same allocation combination are no longer shown in this window, but only in the window Itemize Invoice Selection. The values in the fields “Invoice Quantity” and “Billing Price to Inv.” on existing job entries are set to 0 to indicate that they are no longer selected for invoicing. When you mark this field, the field “Close Balance” is automatically marked too, but you can remove the mark manually if the system parameter “Allow over invoicing” has been marked in the Set-Up module.</p> <p>You can also enter a negative quantity and a negative credit memo amount for direct crediting, that is, crediting without underlying job registrations. When you enter manual activity lines for which there are no job entries, Maconomy will mark this field automatically.</p>

Field	Description															
	As job entries for direct invoicing do not have underlying job registrations, Maconomy will set the invoicing date to the entry date when the invoice is printed. The entry date cannot be changed in the window Itemize Invoice Selection.															
Action	<p>This pop-up field serves two purposes: It tells you at a glance what the effect of the selections on the current line is, and it is a shortcut to performing various common operations on the current line. A corresponding field exists for all underlying job entries in the window Itemize Invoice Selection.</p> <p>The “Action” field reflects the value of the fields “Billing Price to Inv.” and “Close Balance” on the current line. However, if the current job is a time and material job, the value suggested is the one specified in the attribute “Standard invoicing action for job entries on time and material jobs” in the job parameter “Registration.”</p> <p>This field can have four values. You can change a field on the line manually to see the effect in this field, or you can change this field to change the other fields automatically. The following table shows the available options.</p> <table><tr><th>Billing Price to Inv.</th><th>Close Balance</th><th>Action</th></tr><tr><td>&gt;0</td><td>Yes</td><td>Invoice</td></tr><tr><td>0</td><td>Yes</td><td>Write Off</td></tr><tr><td>0</td><td>No</td><td>Carry Forward</td></tr><tr><td colspan="2">Other Combinations</td><td>Blank</td></tr></table> <p>The following section describes the effect of selecting the different values in this field. Note that if you select a value that does not have any effect (such as “Invoice” when there is nothing to invoice), the value will revert to reflect what will actually take place when you approve the invoice selection.</p> <ul style="list-style-type: none"><li>■ Invoice — If you select this value on a line where the billing price to invoice is greater than zero, the field “Close Balance” is marked on the current line. This means that all open entries to the current job allocation combination are closed when you approve and print the invoice; the line is invoiced in full. For more information, please see the description of the field “Close Balance.”</li><li>■ Write Off — If you select this value, the field “Close Balance” is marked on the current line, and the fields “Invoice Quantity” and “Billing Price to Inv.” are reset to zero. This means that all open entries to the current job allocation combination are closed when you approve and print the invoice, but nothing is invoiced; the line is written off completely, and the job is written down by the current line’s amount. Note that this action cannot be selected if the job parameter attribute “Allow Write-Up/Down at Transfer of Billing Price Only” of the type “Write-Up/Down” is marked for the current job.</li></ul>	Billing Price to Inv.	Close Balance	Action	>0	Yes	Invoice	0	Yes	Write Off	0	No	Carry Forward	Other Combinations		Blank
Billing Price to Inv.	Close Balance	Action														
>0	Yes	Invoice														
0	Yes	Write Off														
0	No	Carry Forward														
Other Combinations		Blank														

Field	Description
	<ul style="list-style-type: none"> <li>Carry Forward — If you select this value, any mark in the field “Close Balance” is removed on the current line, and the fields “Invoice Quantity” and “Billing Price to Inv.” are reset to zero. This means that nothing is invoiced on the current line when you approve and print the invoice, but the balance is not closed; that is, the balance is carried forward, and the job entry will reappear at the next invoicing.</li> <li>Blank — This is the default value if the job is a fixed-price job. Please note that if you have selected a non-blank value in this field, it may be reset to blank in a number of cases: <ul style="list-style-type: none"> <li>If you select an action with a possible effect on the table lines, such as “Transfer Fixed Price.”</li> <li>If you change the field “Close Balance,” either manually or using the action “Close All.”</li> <li>If the underlying job entries of a line in the table are changed in the window Itemize Invoice Selection.</li> </ul> </li> </ul> <p>Note again that this field is merely a shortcut to actions which can also be performed by changing the affected fields manually.</p> <p>If the system parameter “Keep delimitation when changing invoice selection” is not marked, the action you choose in this window is transferred to all the underlying job entries in the window Itemize Invoice Selection. If this parameter is marked, only entries within the delimitation parameters you have specified in the card part of this window (if any) are affected. If, for instance, you have chosen to see job entries before a certain date by specifying the cut-off date in the island Delimitation, and you choose the “Invoice” action on a table line, no underlying job entries after the specified date will be invoiced.</p>
<b>Reallocate</b>	<p>If you mark this field, all open, underlying job entries are marked for reallocation. When an invoice selection line is marked for reallocation, it cannot be invoiced. The same applies if any of the underlying job entries is marked in the window Itemize Invoice Selection. The quantity and amount for invoicing is reset to zero, and any mark in the fields “Close Balance” and “Dir. Inv.” is removed.</p> <p>To be able to invoice the invoice selection line, you must first either perform the reallocation in the window Job Reallocation by Job or unmark the field in this window.</p>
<b>Remarks</b>	<p>In this field, you can enter a remark to describe the current job invoice line. This could, for example, be a note about the reason for writing down an entry. The remark entered in this field is copied to all underlying job entries and can be seen in the window Itemize Invoice Selection. If any remarks have already been entered in that window for the individual job entries, they are overwritten by the remark in this field. If a remark is changed in the window Itemize Invoice Selection so that there are different remarks for each</p>

Field	Description
	job entry, the “Remarks” field in this window is blanked for that invoice selection line.
<b>Empl. No.</b>	<p>This field must be completed for time activities if you mark the field “Dir. Inv.” above. Maconomy automatically suggests the employee specified in the system parameter “Employee No. for direct invoicing.” The employee number is transferred to the job entry created when the job is invoiced.</p> <p>If the invoice layout rule specifies that invoice selections are to be grouped by employee, there is only one line per employee, which means that all entries by a given employee are grouped and summed in the table part of this window. When this is the case, the field cannot be changed on existing lines, but it is possible to create a line and enter an employee number in this field. However, you cannot create a line on which you enter an employee which is identical to that of an existing summary line. Similarly, if the invoice layout rule indicates that invoice selection lines should be grouped by a combination of employee and another field value — for example, location — you cannot create a line on which the combination of employee and the field in question matches that of an existing summary line. If you want to create such a line for direct invoicing, you can either do this in the window Itemize Invoice Selection, in which the underlying job entries can be seen, or you can mark the field “Dir. Inv.” on the existing line and make the desired changes there.</p>
<b>Employee Name</b>	This field displays the name of the employee entered in the field “Empl. No.”
<b>Employee Category No.</b>	This field shows the number of the employee category for the line in question.
<b>Employee Category Name</b>	This field shows the name of the employee category for the line in question.
<b>Quantity, Open</b>	This field shows the number of units that has been entered but not yet invoiced or closed. This number, which cannot be changed in this window, is the sum of the “Quantity, Open” values for the entries in the window Itemize Invoice Selection.
<b>Billing Price, Open, Currency</b>	This field shows the open billing price, that is, the sum of the prices of the number of entered units that have not yet been invoiced or closed. This amount, which cannot be changed in this window, is the sum of the “Billing Price, Open” values for the entries in the Itemize Invoice Selection window.
<b>Quantity Inv.</b>	This field shows the total quantity that has already been invoiced.
<b>Billing Price, Inv., Currency</b>	This field shows the total billing price that has already been invoiced.

Field	Description
<b>Quantity, Total</b>	This field shows the total invoiceable quantity when the invoice has been approved. It is the sum of the "Quantity Inv." and "Invoice Quantity" fields.
<b>Billing Price, Total</b>	This field shows the total billing price when the invoice has been approved. It is the sum of the "Billing Price, Invoice" and "Billing Price to Inv." fields.
<b>Quantity, Budget</b>	This field shows the total quantity from the budget type selected as the current budget in the Job Budgets window.
<b>Billing Price, Budget, Currency</b>	This field shows the total billing price from the budget type selected as the current budget in the Job Budgets window.
<b>Quantity, Reg.</b>	This field shows the quantity that has been entered.
<b>Billing Price, Reg.</b>	This field shows the total registered billing price, that is, the sum of the billing prices registered to the individual entries.
<b>Quantity, Up/Down, To Date</b>	This field shows the write-up/-down quantity already invoiced for the activity until today's date. Write-up and write-down are the differences between the registered quantity and the invoiced quantity. Write-ups are shown as positive figures, and write-downs as negative figures.
<b>Billing Price, Up/Down, To Date</b>	This field shows the write-up/-down billing price already invoiced for the activity until today's date. Write-up and write-down are the differences between the registered billing price and the invoiced billing price. Write-ups are shown as positive figures, and write-downs as negative figures.
<b>Quantity, Up/Down, Selection</b>	This field shows the potential write-up/-down quantity resulting from invoicing the current invoice selection. Write-up and write-down are the differences between the registered quantity and the invoiced quantity. Write-ups are shown as positive figures, and write-downs as negative figures.
<b>Sales Price, Up/Down, Selection</b>	This field shows the potential write-up/-down sales price resulting from invoicing the current invoice selection. Write-up and write-down are the differences between the registered sales price and the invoiced sales price. Write-ups are shown as positive figure, and write-downs as negative figures.
<b>Hours, Up/Down, Total</b>	This field shows the total write-up/-down number of hours for the job after invoicing the current invoice selection. Write-up and write-down are the differences between the registered number of hours and the invoiced number of hours. Write-ups are shown as positive figures, and write-downs as negative figures.
<b>Sales Price, Up/Down, Total</b>	This field shows the total write-up/-down sales price for the job after invoicing the current invoice selection. Write-up and write-down are the differences between the registered sales price and the invoiced sales price. Write-ups are shown as positive figures, and write-downs as negative figures.

Field	Description
<b>Quantity, Available</b>	<p>This field shows how many times quantities have been written up or down. These are the differences between the entered quantity and the invoiced quantity. Only closed entries are included in this figure.</p> <p>Positive figures mean a quantity has been written up, negative figures that it has been written down.</p>
<b>Billing Price, Available</b>	<p>This field shows the sum of up- or-down written billing prices. The sum corresponds to the difference between the entered billing price and the invoiced billing price. Only closed entries are included in this figure.</p> <p>A positive figure means a billing price has been written up, a negative figure that it has been written down.</p>
<b>Direct Invoicing Tax Code</b>	In these fields, you can enter tax codes for direct invoicing.
<b>Tax Code</b>	This field shows the tax code of the current activity.
<b>Task Name</b>	<p>This field shows the name of a task, if the current invoice layout rule specifies that the invoice selection should be summed by task.</p> <p>There is only one line per task, which means that all task entries are summed in the table part of this window. For this reason, the field cannot be changed on existing lines, but it is possible to create a line and enter a task name in this field. If you want to create a line for direct invoicing using the same task name, this must be done in the window Itemize Invoice Selection, in which the underlying job entries can be seen.</p>
<b>Task Description</b>	This field shows the task description which was entered when the task was created.
<b>WIP Available</b>	This field shows the WIP available for invoicing.
<b>WIP for Invoicing</b>	In this field, you can enter the amount of WIP to invoice.
<b>Carry Forward</b>	In this field, you can enter the amount of WIP to carry forward.
<b>Billing Price</b>	<p>In this field, you can change the billing price of the WIP to invoice.</p> <p>When you change the billing price, Maconomy adjusts the unit price, so as to obtain the specified total billing price.</p>
<b>Write-Up/Down</b>	<p>In this field, you can enter the amount of WIP to write down.</p> <p>When you change the amount for Write-Up/Down, Maconomy adjusts the unit price, so as to obtain the specified total billing price.</p>
<b>Realization Rate</b>	This field shows the realization rate. This is based on the Billing Price and the WIP for Invoicing fields. You can change the Realization Rate which will adjust the Billing Price and Write-Up/Down accordingly.

Field	Description
	<p>When you change the realization rate, Maconomy adjusts the hourly rate proportionately to the registered rate, so as to obtain the specified total billing price.</p> <p>A change in Realization Rate is only applied to time-related activities.</p>
<b>Exclude Entries for Carry Forward</b>	<p>Select this check box to exclude selected entries in the table part that are marked for carry forward from the billing adjustment when changing the WIP for Invoicing.</p> <p>You can only select this check box simultaneously with a change in the WIP for Invoicing field.</p>
<b>Total Base Salary, Currency</b>	This field shows the total base salary from job entries included in the invoice selection line.
<b>Base Salary Markup %</b>	If the system parameter "Use markup % for time activities" is selected, markup percentages in price lists are also applied to time registrations. This field shows a markup percentage relative to the base salary rate.
<b>Location</b>	The functionality of this field is similar to that of the field "Task Name" above.
<b>Entity</b>	The functionality of this field is similar to that of the field "Task Name" above.
<b>Project</b>	The functionality of this field is similar to that of the field "Task Name" above.
<b>Purpose</b>	The functionality of this field is similar to that of the field "Task Name" above.
<b>Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task Name" above.
<b>Local Spec. 1-3</b>	The functionality of these fields is similar to that of the field "Task Name" above.
<b>Task Group 1-6</b>	<p>The functionality of these fields is similar to that of the field "Task Name" above. Task groups are used for reflecting the work breakdown structure of the job budget in the invoice selection.</p> <p>For further information on work breakdown structures and task groups, see the descriptions under "Job Tasks" and under "Job Budgets."</p>
<b>Overtime Specification</b>	This field shows any overtime specification associated with the current job entry.
<b>Accrual Type</b>	<p>If you select a value in this field, the invoicing of the entry will be accrued. If you select a value, Maconomy will create an accrual entry for each period covered by the interval specified in the fields "Period From" and "Period To."</p> <p>The accrual entries are posted to the relevant accrual-related posting references on the activity in question or in the window Posting References, depending on whether the field "Post by Activity" is marked in the window</p>

Field	Description
	System Information. The offset entries are posted to the accounts referenced for the selected accrual type in the window Popup Fields. The amount is distributed evenly on the selected periods. Both cost and billing prices are accrued.
<b>Period From, Accrual</b>	<p>In this field and the field "Period To" you can enter a range of dates, provided that the current line is marked for direct invoicing. If you select a value in the field "Accrual Type" above, Maconomy will create a G/L entry for each G/L period specified in the fields "Period From" and "Period To" when the invoice is posted. The amount is distributed evenly on the selected periods.</p> <p>Please note that the last period must be no later than the accrual ending period set up in the field "Accrual End" in the window Posting Period Setup. If no ending period has been specified in that field, you can enter any ending date in the field "Period To, Accrual."</p>
<b>Period To, Accrual</b>	See the field "Period From" above.

## Actions

This section shows the Actions available in the Invoice Selection workspace.

### Top Tab

Field	Description
<b>Close All</b>	<p>This action is used to create an invoice selection for all activities with open entries. It is typically used when a job is being closed to gather all uninvoiced open entries in one invoice selection.</p> <p>The action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft.</p> <p>When you select "Close All," the "Invoice Quantity" values will be the same as the open quantity for all entries, and the "Close" field will be marked in the window Itemize Invoice Selection. At the same time, any mark in the fields "Dir. Inv." and "Reallocate" is removed on all lines.</p> <p>For fixed-price jobs on which all entries should be invoiced as part of the fixed-price job, it applies that if the job parameter attributes "Allow Invoicing On Account Only" and "Create Invoice Upon Job Closing" are both assigned the value "Yes," the lines in the window will always display a "0" in the field "Invoice Quantity," as such jobs are invoiced on account and are reconciled when the job is closed. If non-fixed-price entries are invoiced separately on fixed-price jobs, using this action will only include the non-fixed-price entries of the fixed-price job for invoicing. Outlays on the job are displayed as invoiceable job entries if the</p>

Field	Description
	<p>job parameter attribute "Include Outlays in Fixed Price" on the job parameter type "Pricing Method" is assigned the value "No."</p> <p>If the current job is a main job, and the job's invoice layout rule specifies Main Job Invoicing and Main Job Invoice Selection, selecting this action will include all subjobs of the current main job which are to be blanket invoiced on the main job. If the current job is a subjob to a main job with the above setup, this action cannot be selected. For more information, please see the description of the window Invoice Layout Rules.</p>
<b>Delimit</b>	<p>This action is used for creating an invoice selection for all open entries selected in the Delimitation island. It is typically used when you wish to partially invoice a job for work already completed.</p> <p>The action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft.</p> <p>If the Extend Selection field in the Delimitation island is marked, all entries selected by the criteria in the island Delimitation will be added to the entries already selected. In this way an invoice selection can be constructed in stages; that is, you can select entries registered for various ranges of employees. If the Extend Selection field is not marked when this action is selected, all existing invoice selections will be deleted and one is created containing the criteria selected in the Delimitation island. See also the Extend Selection field in this window.</p> <p>For fixed-price jobs on which all entries should be invoiced as part of the fixed-price job, it applies that if the job parameter attributes "Allow Invoicing On Account Only" and "Create Invoice Upon Job Closing" are both assigned the value "Yes," no invoiceable lines will be shown in this window, as such jobs are invoiced on account and are reconciled when the job is closed. However, outlays on the job will be included in the delimitation and displayed as invoiceable job entries if the job parameter attribute "Include Outlays in Fixed Price" associated with the job is assigned the value "No." If non-fixed-price entries are invoiced separately on fixed-price jobs, using this action will only delimit the non-fixed-price entries of the fixed-price job. See the description of the window Job Allocation Combinations for further information on non-fixed-price entries on fixed-price jobs.</p> <p>When this action is selected, any marks in the fields "Close Balance" and "Reallocate" on the individual invoice selection lines will be removed.</p> <p>If the current job is a main job, and the job's invoice layout rule specifies Main Job Invoicing and Main Job Invoice Selection, selecting this action will include all subjobs of the current main job which are to be blanket invoiced on the main job. If the current job is a subjob to a main job with the above setup, this action cannot be selected. For more information, please see the description of the window Invoice Layout Rules.</p>

Field	Description
<b>Apply Invoice Proposals</b>	<p>This action is used for applying all values proposed by the project manager and/or the employee on the selected job entries. The employee and, subsequently, the project manager can propose different hours, quantities, and billing prices for invoicing, pending approval by the invoicing department.</p> <p>This action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft.</p> <p>If a job entry has been partially invoiced before the invoice proposal values are applied, the previously invoiced quantity will be subtracted from the proposed quantity before the proposed quantity is applied. Please note that the amount to invoice cannot be less than zero. Similarly, no amount greater than zero can be credited if the job entry includes a negative quantity.</p>
<b>Transfer Fixed Price</b>	<p>This action is used to create an invoice selection in such a way that the invoiced amount will match the fixed price quoted for the job. The fixed price is transferred to the number of entries selected for invoicing and which are included in the fixed price using the island Delimitation and the action "Delimit." If the job parameter attribute "Include Outlays in Fixed Price" is assigned the value "No" on the job in question, the fixed price is transferred to all the selected job entries. If outlays should not be included in a job's fixed price, the price is transferred to the job entries that do not pertain to outlays, as outlays are invoiced separately.</p> <p>This action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft. The action transfers the difference between the fixed price and the amount already invoiced. If drafts exist on the job, the action will also subtract the amount already on drafts.</p> <p>When you select this action, Maconomy suggests that all open entries be closed to make the sum of the billing prices of registered entries equal to the fixed price, less the already invoiced amount. Any difference between the billing price sum and the fixed price will be distributed proportionally to the open entries so that amounts written up and down will be allocated to activities and employees in equal amounts (see also below for information about the effect of the job parameter attribute "Transfer Write-Up/Down to Fixed Allocation Combination").</p> <p>The adjustment of the job entries depends on whether the field "Do Not Adjust Amount Activities" is marked in the window System Information in the Set-Up module. If that field is marked, the adjustment will affect time activities only. If the field is not marked, both time and amount activities will be affected by the adjustment.</p> <p>If the job parameter attribute "Transfer Write-Up/Down to Fixed Allocation Combination" is assigned the value "Yes" on the job in question, any write-up or write-down of the job will be displayed on a separate line in the invoice selection. This way, the write-up or write-down will be shown as a separate line on the</p>

Field	Description																
	<p>invoice which is eventually sent to the customer. For more information, please see the description of the job parameter type "Write-Up/Down."</p> <p>If the current job is a main job, and the job's invoice layout rule specifies Main Job Invoicing and Main Job Invoice Selection, selecting this action will include all subjobs of the current main job which are to be blanket invoiced on the main job. When calculating the distribution of the fixed price to the subjobs, Maconomy uses the total fixed price for the main job and the associated subjobs. The fixed price is then distributed to the main job and subjobs relative to the contribution of each job to the total main job/subjob structure.</p> <p>This is best illustrated with an example:</p> <table><tr><th>Job</th><th>Fixed Price</th><th>Registered Entries</th><th>Transferred Fixed Price</th></tr><tr><td>A1 (main job)</td><td>200</td><td>150</td><td>150</td></tr><tr><td>A2 (subjob)</td><td>100</td><td>150</td><td>150</td></tr><tr><td>Total</td><td>300</td><td>300</td><td>300</td></tr></table> <p>Main job "A1" has a fixed price of USD 200. Subjob "A2" has a fixed price of USD 100. Entries worth USD 150 have been entered on both jobs. When the fixed price is transferred to the main job (which is using Main Job Invoice Selection), Maconomy checks the ratio of registered entries per job to the total fixed price. In this case, both jobs have contributed 50% to the total fixed price of the main job/subjob structure. Hence, 50% (USD 150) of the total fixed price (USD 300) is transferred to each job.</p> <p>If the current job is a subjob to a main job with the above setup, this action cannot be selected. For more information, please see the description of the window Invoice Layout Rules.</p>	Job	Fixed Price	Registered Entries	Transferred Fixed Price	A1 (main job)	200	150	150	A2 (subjob)	100	150	150	Total	300	300	300
Job	Fixed Price	Registered Entries	Transferred Fixed Price														
A1 (main job)	200	150	150														
A2 (subjob)	100	150	150														
Total	300	300	300														
Transfer Desired Billing Price	<p>When you select this action, the desired billing price from the field "Desired Billing Price" in the card part is transferred to the invoice selection in the table part. The desired billing price can be entered directly or be the result of a calculation of a markup amount or a markup percentage (see the description of the field "Desired Billing Price").</p> <p>This action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft.</p> <p>The transfer can take place without selecting this action if the system parameter "Transfer desired billing price when changed" is marked. However, the transfer takes place according to the principles outlined in this section.</p> <p>The billing price is transferred to the number of entries selected by means of the island Delimitation and the action "Delimit." The adjustment of the job entries depends on whether the field "Do Not Adjust Amount Activities" is marked in the window System Information in the Set-Up module. If that field is marked, the</p>																

Field	Description
	<p>adjustment will affect time activities only. If the field is not marked, both time and amount activities will be affected by the adjustment.</p> <p>Note that the effect of the billing price transfer can be seen on the individual lines in the table part, as the quantities and billing prices can be written up or down as described for the actions "Transfer Fixed Price" above (see also below for information about the effect of the job parameter attribute "Transfer Write-Up/Down to Fixed Allocation Combination").</p> <p>The method by which the billing price is adjusted depends on the system parameters "Keep quantity on write-downs" and "Keep quantity on write-ups." If these parameters are not marked, Maconomy will adjust the invoice quantity of the affected activities to match the desired billing price. If "Keep quantity on write-downs" is marked, Maconomy will not change the quantity when the billing price is reduced. If "Keep quantity on write-ups" is marked, Maconomy will not change the quantity when the billing price is increased. Note that both parameters may be marked, in which case Maconomy will never adjust the invoice quantity of the affected activities to match the current billing price to invoice.</p> <p>If the job parameter attribute "Transfer Write-Up/Down to Fixed Allocation Combination" is assigned the value "Yes" on the job in question, any write-up or write-down of the job will be displayed on a separate line in the invoice selection. This way, the write-up or write-down will be shown as a separate line on the invoice which is eventually sent to the customer. For more information, please see the description of the job parameter type "Write-Up/Down."</p> <p>If the current job is a main job, and the job's invoice layout rule specifies Main Job Invoicing and Main Job Invoice Selection, selecting this action will include all subjobs of the current main job which are to be blanket invoiced on the main job. If the current job is a subjob to a main job with the above setup, this action cannot be selected. For more information, please see the description of the window Invoice Layout Rules. The desired billing price will be distributed to entries for all jobs in the main job/subjob hierarchy.</p>
<b>Transfer Budget</b>	<p>When you select this action, the quote prices from the current budget are transferred to the activity lines of the invoice selection, which can subsequently be invoiced. The transfer of prices is carried out for each activity, and amounts that are already invoiced will be balanced. If no open entries exist for the current activity, the job activity is marked for direct invoicing.</p> <p>This action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft. The action transfers the difference between the fixed price and the amount already invoiced. If drafts exist on the job, the action will also subtract the amount already on drafts.</p> <p>You cannot select this action if the job parameter attribute "Transfer Write-Up/Down to Fixed Allocation Combination" is assigned the value "Yes" on the job in question. For more information, please see the description of the job parameter type "Write-Up/Down."</p>

Field	Description
<b>Transfer Invoicing Plan</b>	<p>This action is not available when the invoice selection is closed.</p> <p>Use this action to allow Maconomy to transfer due lines in the invoicing plan of the current job to the invoice selection. However, if the <b>Transfer Several Invoicing Plan Lines</b> system parameter is disabled, only the first due line of the invoicing plan is transferred.</p> <p>The amount is shown in the <b>Amount for Invoicing on Account</b> field in the sub-tab. Once the lines have been transferred, use the <b>Approve for Invoicing on Account</b> action to approve the on account invoice selection for further processing in the Invoice Editing tab. For further information, see the description of the Invoicing Plans workspace.</p> <p>Note: Invoicing plan lines must be approved in the Invoicing Plans workspace before they can be transferred for invoicing in this workspace if the <b>Approval of Invoicing Plan Lines</b> job parameter is enabled for the current job.</p> <p>If the current job is a subjob to a main job, and the main job's invoice layout rule specifies Main Job Invoicing, this action cannot be used.</p> <p>If the invoicing plan contains a mix of lines for invoicing on account and pre-invoicing, running this action transfers only one type of line at a time. Once the transferred lines are invoiced, the action can be run again to transfer the remaining lines of a different type.</p>
<b>Calculate Invoice Surcharge</b>	<p>Use this action to calculate the surcharge based on the Job Surcharge Rule specified on the job. The surcharge is calculated based on the current invoice selection (T&amp;M, On Account, or both). Directly created job entries (<b>direct invoicing</b>) are included in the calculation of surcharges.</p> <p>The action is enabled if the job has the job parameter "Surcharge at Invoicing" set to Yes and if the job is open for invoice selection.</p>
<b>Undo Transfer Invoicing Plan</b>	<p>Lines created using the action "Transfer Invoicing Plan" are protected from being deleted. Instead you must use the undo action. When you select this action, Maconomy will undo the transfer from the invoicing plan.</p> <p>This action is not available when the invoice selection is closed.</p>
<b>Reallocate Selected Entries</b>	<p>Select this action to choose to which job and task the selected entries should be reallocated.</p>
<b>Transfer Task Groups</b>	<p>When you select this action, the task group information on job entries associated with the job will be updated to reflect the current work breakdown structure of the job budget. After this action has been selected, the value in the "Task Group Status" field will change from "Not Up to Date" to "Up to Date." This functionality is relevant if the invoice layout rule of the job specifies that invoice selections or invoices should be grouped by task groups, and if the work breakdown structure has been updated in the Job Budgets window.</p> <p>This action is not available when the invoice selection is closed. When the invoice selection is open, and drafts exist on the job, this action only affects job</p>

Field	Description
	<p>entries that are available in the present invoice selection. In other words, the action does not include job entries that are for invoicing on a draft.</p> <p>For further information on work breakdown structures and task groups, see the descriptions under “Job Tasks” and under “Job Budgets.”</p>
<b>Approve Invoice Selection</b>	<p>When you select this action, you approve the invoice selection shown in the window, and the field “Approved for Editing” is marked. If invoice editing is not required for the invoice (specified in the job’s job parameter of the type “Invoice Approval”), the field “Approved for Invoicing” is marked as well.</p> <p>This action is not available when the invoice selection is closed.</p> <p>If the current job is a main job, and the job’s invoice layout rule specifies Main Job Invoicing, selecting this action will approve job entries for the current main job and all its subjobs for invoicing. If the current job is a subjob to a main job with the above setup, this action cannot be selected.</p> <p>If the current job is set up for split billing (that is, there are more than one bill-to customer on the job), selecting this action will generate invoice lines for each bill-to customer on the job with an amount greater than zero selected in the field “Selected Amount” in the table part of the window Bill to Customer Distribution. Please note that when distributing the billing price of the job entry lines on customers, a small rounding correction may be made on one of the entry lines. However, the total billing price will not change. If the total billing price of the job is zero, selecting this action will generate a zero invoice for each bill-to customer on the job. For more information, please see the description of the window Bill to Customer Distribution.</p> <p>You can edit an invoice selection after approving it and before invoicing it. This is done in the window Invoice Editing. If you change anything in this window, the approval is canceled, and the invoice selection must be approved again. Maconomy issues an alert if the approval is canceled. Note that if the job is set up for split billing (that is, there are more than one bill-to customer on the job), multiple invoices may be generated for the current invoice selection, which all may need editing.</p> <p>Maconomy gives a warning if there are open purchase orders on the job. If the field “Show Markup Separately” on the current job’s invoice layout rule in the window Job Information is marked, the use of this action will lead to the creation of an invoice on which the costs of all amount activities will be shown in the table part with an extra line at the bottom of the invoice showing the markup.</p> <p>If a positive amount is shown in the field “On Account Reduction,” the printed invoice will be reduced by that amount. However, an invoice cannot be reduced by more than the invoiced amount; that is, the invoice amount cannot be less than zero. If the amount in the field is negative, it is ignored.</p> <p>A warning is issued if the value in the field “Desired Sales Price” in the card part is different from zero, and it does not match the sum of the sales price on the invoice selection lines.</p> <p>You can either invoice an approved selection by choosing “Print Invoice” in this window or by choosing “Print Invoice” in the window Invoice Editing. You can also invoice selected invoices for several jobs at a time in the window Job</p>

Field	Description
	Invoicing. However, the job parameter of the type "Invoice Approval" for the current job may require that the invoice is edited in the window Invoice Editing before being printed.
<b>Approve Credit Memo Selection</b>	<p>When you select this action, you approve the crediting selection shown in the window, and the field "Approved for Editing" is marked. If invoice editing is not required (specified in the job parameter attribute "Invoice Editing Required" in the job parameter type "Invoice Approval"), the field "Approved for Invoicing" is marked as well.</p> <p>This action is not available when the invoice selection is closed.</p> <p>You can only select this action if the value in the field "Billing Price, Total" is negative. If a negative amount is shown in the field "On Account Reduction," the printed credit memo will be reduced by that amount. However, an invoice cannot be reduced by more than the credited amount; that is, the credit memo amount cannot be greater than zero. If the amount in the field is positive, it is ignored. If non-fixed-price entries are invoiced separately on fixed-price jobs, using this action will only approve the non-fixed-price entries of the fixed-price job for crediting. See the description of the window Job Allocation Combinations for further information on non-fixed-price entries on fixed-price jobs.</p> <p>The functionality of this action with respect to main jobs, editing, and printing, is similar to that of the action "Approve Invoice Selection" above.</p>
<b>Approve</b>	This action approves the invoice selection and/or on account specification depending on the <b>Invoice Type</b> field in the Invoice Selection tab.
<b>New Invoice Selection</b>	This action is available when the invoice selection is closed, that is, after creating a draft, and provided the job is set up to allow multiple drafts. When you have run this action, the job is open for invoice selection. The quantity and amount for invoicing will be reset to zero on job entries that are approved for invoicing, and remaining job entries will be set for invoicing. The amount for invoicing on account will also be reset to zero.
<b>Print Draft</b>	<p>This action is available whenever a draft invoice or a draft credit memo exists on the job.</p> <p>When you select this action, Maconomy prints a draft copy of the current invoice or credit memo. No postings are made when you select this action.</p>
<b>Print Invoice</b>	<p>This action is available whenever a draft invoice exists on the job which has been approved for invoicing.</p> <p>When you select this action, you create and print an invoice or invoice on account on the basis of the invoice selection in this window.</p> <p>Maconomy includes any previous invoices on account and credit memos on account in the calculation of the invoice amount.</p> <p>It is only possible to select this action if the invoice selection has been approved using the action "Approve Invoice Selection" or "Approve for Invoicing on Account," and only if the value in the field "Billing Price, Total" is positive. Furthermore, the job parameter of the type "Invoice Approval" for the current job</p>

Field	Description
