

Deltek Vision® 7.x SF330 Proposals Quick Reference Card for Setup

Before you can start creating an SF330 proposal, you must review the entries in four code tables and configure your proposal firms.

- From the Vision Navigation menu, click **Configuration » General » Code Tables**. If **Code Tables** does not display in the menu list, see your system administrator about your access rights.

Code Tables	
Description	Table Name
Employee Role	CFGEmployeeRole
Employee Skill/Discipline	CFGEMSkill
Project Codes	CFGProjectCode
Vendor Role	CFGVendorRole

- Review the four code tables on the Code Table Maintenance form. To open a table, click the hyperlink in the **Description** column.

- To add a new code to a code table, click the **Insert** option in the table header.
- To see whether a code already exists in the code table, click the table's **Description** column heading. The code table will sort its codes alphabetically by description.

Employee Role			
		Move Down	Move Up
			Insert
Description	Code	Default	
Architect	8	<input type="checkbox"/>	

Employee Skill/Discipline			
		Move Down	Move Up
Description	Code	SF330 Code	
Administrative	01	02	

Project Codes			
Description	Code	SF330 Code	
254 Code	254		
Acoustics; Noise Abatement	001	A01	

Vendor Role		
Description	Code	
Acoustics	25	

- The Employee Role code table is key to proper creation of the Section G matrix. In order for Vision to populate Section G correctly from Sections E and F, each employee's role on a project must be defined on the project's Team tab in the Project Info Center. This code table comes installed with three roles. You must add any other employee project roles your firm uses, before preparing your project records for use in an SF330 proposal.

- Firms may have more disciplines than the standard set provided by the General Services Administration. Before setting up your office locations in **Firm Setup - Proposals**, you may wish to review and modify the discipline list by modifying the Employee Skill/Discipline code table.

- If your firm has a license for the SF254/255 application, the Skill/Discipline and Project Codes tables each display an **SF330 Code** column. For each new code you add, assign it a code and description, but leave **SF330 Code** field blank.

- Firms may wish to use profile codes not in the standard set provided by the General Services Administration. Before selecting profile codes on the SF330 tab of **Firm Setup - Proposals**, you may have to modify the Project Codes code table.

- Section F, Block 25 reflects the role a vendor team member has on a project. You must, therefore, add vendor roles to the Vendor Role code table.

- After you update code tables, you must configure **Firm Setup - Proposals**. This data is used in SF330 proposals. Create or update a record for each of your organization's office locations. To open the form, from the Vision Navigation menu, click **Configuration » Organization » Firm Setup - Proposals**.

Apple & Bartlett, PC, Boston, MA

General	Additional Info	Associated Organizations	SF330
---------	-----------------	--------------------------	-------

Name: Apple & Bartlett, PC

Office Location: Boston, MA

Address 1: 11 Center Square

Address 2: Suite 401

City: Boston State/Province: Massachusetts

- The Firm Setup form opens to the General tab. In new records, **Name** and **Office Location** are highlighted in yellow to indicate that the fields are required.

13. If your company uses Vision Organizations, its Vision data is stored by organization. Organizations are linked to Employee Info Center and Project Info Center records.

For the SF330 application to retrieve this information, each organization whose data will be used in the SF330 proposal must be added to this Associated Organizations tab in the applicable firm record.

A firm may have more than one associated organization, but an organization may be associated with only one firm. If you insert an organization that is already associated with another firm, Vision displays a message and prompts you to select a different organization.
