

ProPricer 9.6.101.1 Release Notes

Release Date: March 25, 2026

Welcome to the **ProPricer 9.6.101.1 Release Notes**, which describe the new features, enhancements, and fixes introduced in this release.

Version: 9.6.101.1

Current database version: 180

Model version: 9.6.101.0

Current package/stored procedure version: 180

Contains database upgrade: No

Contains server upgrade: No

Companion Product Compatibility

ProPricer 9.6.101.1 is compatible with:

- BOE Pro 3.6.101.1
- Cash Flow Pro 4.6.101.1
- Connect for Web 4.6.101.1
- Cost Volume Pro 3.6.101.1
- GSA Travel Import 4.6.101.1
- Integration Pro 4.6.101.1
- Management Console 4.6.101.1

Fixes

- Resolved a case sensitivity issue in the Import/Export tool's search functionality. The tool now performs case-insensitive searches for Resource Field names, ensuring that existing fields are properly identified and updated regardless of their case.
- Fixed an error that occurred when importing MS Project files into a proposal with Summary Fields assigned to BOE Text. This resolves issues related to task deletion and proposal copying that were caused by this import process.
- Addressed an issue where 12-point font in notes and BOE SOW text was changing to 11-point when printing to Word. The fix ensures that the chosen font size is maintained correctly when generating Word documents from ProPricer.

- Resolved an error that occurred when unlocking a proposal with an open Task View. This fix improves the stability of the application when performing these concurrent actions.
- Fixed an exception that occurred when changing values for Summary Fields assigned to SOW/BOE after adding a copy of a task and undoing without saving. This improves the reliability of Summary Field operations in complex editing scenarios.
- Addressed an issue where disposed tasks were not being removed from the base SOW/BOE associated task collection, which caused various unexpected errors on future task operations. This fix improves the overall stability and consistency of task management.
- Resolved an error that occurred when importing BOE Text in Tasks or Summary Fields with a BOE Source (Read-only BOE). This fix ensures smoother import operations for proposals with read-only BOE elements.
- Addressed an error that occurred when importing tasks with read-only Summary Fields for BOE (due to BOE Source) during the 'Import Tasks with Overwrite' operation. This fix improves the reliability of task imports in proposals with BOE Sources.
- Fixed an issue where the BOE Source information was incorrectly updated when changing the version of a proposal. This issue was causing the Name property to be set instead of the Version property in certain scenarios.
- Resolved an issue with handling permissions when exporting Reports as PDF to shared locations. Previously, some users were encountering a permission error when attempting to save PDF reports to secure shared drives.
- Addressed an issue with the Task Field Editing process to properly handle read-only Summary fields related to BOE. Previously, these fields were not being skipped, resulting in error messages for each task with a read-only Summary field value.

Enhancements

- Updated ProPricer Express version.
- Evaluation keys now have removed restrictions allowing for Prepare for Government and other archives.
